After the evil principle which is supposed to reside in marshes, the chief of the demons appears to be one called *Kina-shut-un-guru*, or 'The person dwelling among the grass roots.' The demons which follow are very difficult to define,

and are very numerous. *Toi-pok-un-chiri*, i.e. 'The underground bird,' is especially called upon for help by hunters in times of danger; but whom he represents, no one appears to know. Akin to this one is *Toikunrari-kuru*, with whom is associated his wife *Toikunrari-mat*. These names mean 'He (or She) close upon the surface of the earth.' These two are looked upon as the friends of hunters, and are called upon in times of danger. *Hopokike-ush*, who stands next in order, is said to be the demon who causes stones to rattle down the cliffs and mountain sides. These are but classes of demons, for such creatures are very numerous indeed. They inhabit all kinds of places, such as the tops and bottoms of mountains, the flat surfaces of rocks, all kinds of flora, stony places, and localities where dust or sand prevails. The winds also have their demons, good and bad, and so have rain, mist, snow, hail, sleet, frost, ice, etc. (see *AF*, ch. 51).

21. Gods and demons of the sea and rivers.—All the larger kinds of fishes and sea animals have divine honours paid them, as, for example, whales, sea-leopards, sea-lions, sword-fish, salmon, trout, sea-tortoises, and so forth. These are all worshipped. So far as one can learn, the principal deities of the sea are as follows:—*Rep-un-riri-kata inao uk Kamui*, 'The god upon the waves of the sea who receives fetishes.' Whenever he allows himself to be seen, it is said to be in the form of a whale. He is looked upon as the head of all sea-deities, and has many servants, of whom the tortoise and the albatross are his favourites. Prayers are said to this god quite frequently, and the two servants just mentioned are said to act as go-betweens. Messages are conveyed through them and offerings of fetishes and beer are sent by them to him. The heads of these creatures are often to be seen kept as charms, and worshipped by the fishermen. The deity who is supposed to be next in order is called *Kai-pe-chupka-un-kuru*, i.e. 'The person who resides in the eastern surf.' As the name implies, he is said to have his home somewhere near the shore towards the east. We are informed that in bodily form he is like a large fish of some kind; but what kind of fish is not now known. He is supposed to be very good, and is therefore often worshipped, and given presents of fetishes and beer. The spirits next in order are the *Shi-acha* and *Mo-acha* mentioned in § 16.

There is an Ainu controversy about this couple, for by some the two names are said to represent one object only, and that object the whale! *Mo*, meaning 'peace' or 'calm,' is made to apply to the lee side of him, and *shi*, which means 'great' or 'rough,' is said to be his weather side. Or, some say again that he is called *mo* because he is gentle, and *shi* because he is very large. A legend regarding him is as follows. 'Once upon a time two Ainus were out at sea fishing, when they were suddenly overtaken by a severe storm. As their boat was in great danger of being swamped, they gave themselves to earnest prayer. Every known god of the sea was called upon for help, but all to no purpose. At length a very large whale, a whale as big as a mountain, was seen to rise out of the water, and gradually came to the side of the boat. It remained there till the storm was over, sheltering the boat from the wind and waves. This was no other than *Mo-acha* or *Shi-acha*. He was not known before that time, but has ever since been honoured with the prayers of the Ainu fishermen.' Other names given him are *Mo-acha-ahunge-guru*, 'The bringer in of the uncle of peace,' and *Shi-acha-ahunge-guru*, 'The bringer in of the uncle of roughness' or 'storm.'

The next deity of the sea is a goddess who is known by the name of *Chiwash-ekot-mat*. This name means 'The female possessor of the places where the fresh and salt waters mingle.' It is said to be her duty to watch at the mouths of rivers and allow the fish, particularly the spring and autumn salmon, to go in and out.

The specially evil demons of the sea are numerous. The name of the chief is *Ko-notu-ran-guru*, or 'He who descends upon the calm sea.' He, it is said, causes storms. Any abnormal fish, whether it be abnormal in form or colour, is supposed to be unlucky, and to belong to this demon. When caught, such fish are immediately tossed back into the sea. They are called *Ikonnup*, or 'things of misfortune.' This demon is married, and his wife's name is the same as his own, excepting that it has a feminine suffix. All mermaids are supposed to be her offspring, and are called *Ruru-koshinpuk* and *Atui-koshinpuk*.

These names mean 'Salt-water' and 'Sea-mermaids.' A young fisherman gave the present writer the following fact illustrating this matter. He said that he and his father while fishing once caught a kind of tortoise which the Ainus call *kinapo*. On examination it was found to have one foot very much whiter than the others, and this the father considered ought not to have been. On making the discovery, the old man declared it to be 'a misfortune-giving thing.' He therefore cut the foot off, and, letting the tortoise drop into the sea, said, '*Nani Ko-notu-ran-guru akore na, pirika no eyam yan*; 'O Ko-notu-ran-guru, I give this directly to you, take good care of it.' Next follows the demon called *Kai-pok-un-guru*. He is married, and together with his consort is said to 'reside under the surf' upon the seashore. *Ota-patche-guru* and his wife come next, and they are supposed to be the spirits who 'make the sand fly.'

The river demons are also very numerous, and their names indicate their work. They are: *Konupki-ot-guru*, or 'dwellers in muddy places.' They are said to reside specially near the river banks. *Chiuka-pinne Kamui rametok* ('the brave and divine male current') comes next. Then there are *Chiu-range guru* and his wife ('they who send the current'), and *Kochiu-tunash guru* with his wife, *i.e.* 'persons of the swift current,' and others too numerous to mention. The river deities are called *Wakka-ush-Kamui* ('water gods'). All rivulets and tributaries are said to be their offspring. They are named *Kamui poteke*, i.e. 'the little hands of the deities,' and *Kamui matnepo*, *i.e.* 'daughters of God.' Then there is *Petru-ush-mat* ('the female of the waterways'), together with *Pet-etok-mat* ('the female source of rivers'). Mermaids are called *Pe-boso-ko-shinpuk*, i.e. 'mermaids who pass through the water.' They are also called *Mimtuchi* and *tumnunchi*, i.e. 'fat' and 'fleshy devils.'

22. The demons of diseases.—Although, as was shown in § 20, many demons are supposed to have their origin and homes in marshes, yet the Ainus believe that demons of disease come in great measure from the sea, as the following lore shows:

'Various diseases from time to time attack the body. Such, for example, are ague, fever, heavy colds, stomach-ache, and consumption. Now, when these complaints arise, the men should meet together and go to the villages up and down the rivers, and take from each hut a small quantity of millet, fish, tobacco, skunk-cabbage, and cow-parsnip. These should all be brought to an appointed place, where the men should also come together and pray. After prayer they should carry them to the seashore, and, having made fetishes, reverently place them by their side. When this has been done, they should pray, saying, "O ye demons of sea harbours, have mercy upon us. O ye demons of disease, ye are fearful beings: we have, therefore, with one accord met together and decided to enrich you with fetishes and various kinds of food. Do ye wait upon those of your kind who have afflicted us, and on our behalf entreat them to take their departure. We present these articles of food for you to eat, and the fetishes are paid as fines. O all ye demons who watch over the harbours, cause the demons of disease to be taken away from our village."'

23. Fetishism.—The specific doctrines of Ainu religion as relating to the nature of their supposed superior spirits being such as that now stated (see especially §§ 10-13, 16, 17), the way to fetishism is short, direct, and logical. But fetishism is a term which has its difficulties, and must, to save confusion of thought, be defined before going further. The name is a Portuguese term derived from *feitiços*, and has long been in use in Portugal to designate the relics of saints, amulets, and charms in general use by the Roman Catholics. It was applied by Portuguese merchants to objects of many varieties to which the natives of the West Coast of Africa paid religious honour.* In

* See Jevons, *Introduction to the History of Religion*, London, 1896, p. 169.

Rouquetti's Portuguese Dictionary *feitiços* is explained by the French equivalent *sortilège, maléfice, enchantement, charme*. The term *Fétichisme*, as the name of the corresponding religion, was first employed by President de Brosses in his *Du culte des Dieux Fétiches* (1760). Among the Ainus a fetish is looked upon as a medium employed by a person by which one spirit (*ramat*, see § 13) is caused to act upon another for good or ill. It may be, and often is, by way of courtesy called a *Kamui* ('deity'), but it is only a deity of a lower order, and simply used as a go-between. Thus, for example, should a man desire to worship a good river deity or to propitiate an evil one, or should he wish to harm another person or have him blessed, he would make some fetishes out of sticks of wood or other substance and send them with messages to the gods or demons. This is the use of fetishes among the Ainus. They may, therefore, well be called media, for they are just as much media as persons who take verbal messages from one to another. The term by which the principal fetishes are known in Ainu quite agrees with this definition. It is *inao*, i.e. 'message-bearer.' Its roots are *ina* ('message,' 'request'), and *o* ('bear,' 'contain'). It appears to lie at the root of the word for prayer, which is *inonno* in Ainu and *inori* in Japanese. It is curious to remark that in ancient Japanese *inori* meant 'to curse.' As the word carries this meaning, we are not at all surprised,—nay, we should rather expect to find Ainu fetishes used for both good and evil purposes, and sent to gods and demons alike.

24. Fetishism in Ancestor-worship.—One of the most important and relatively highest fetishes the Ainus possess—and every family must have this one—is called *Chisei koro inao* ('the fetish who possesses the house'), also called *Chisei cpungine ekashi* ('ancestral caretaker of the house'). It is the province of the spirit of this fetish to assist the goddess of the fire (see § 17) in looking after the general well-being of the family. His special abiding-place is in the sacred north-east corner of the hut, at the back of the family heirlooms. He is not only worshipped where he stands, but is also sometimes brought out from his abiding-place and stuck in a corner of the hearth, where prayers are actually addressed to him as the husband of the fire, which in its turn is called the 'ancestress,' i.e. *fuji* or *huchi*. The way this fetish is made is as follows: A piece of hard wood, such as lilac, say an inch or two in diameter, is taken. This is to form the stem, and is usually about two feet in length. One part is shaved with a sharp knife from top to bottom to represent the front. Near the top a gash is cut across in imitation of a mouth, and a little below this the so-called heart is carefully bound in. This heart, when first given to it, consists of a warm black cinder freshly taken from the hearth and firmly tied with a string made of twisted willow shavings to the stem, which is called the *netoba*, i.e. 'body.' After the heart has been bound in, a number of willow shavings are hung all round so that the stem with its mouth and heart is quite hidden from view. After it has been respectfully made, it is reverently stuck in the ground by the fireside, and the following dedicatory prayer is devoutly said to it: 'O fetish, you are henceforth to reside in this house with the goddess of fire; you are her husband, and your place will be in the treasure corner. Please help her to watch over us, and do you bless us.'

All this reminds us forcibly of the *Lares* and *Penates* of the ancient Romans, the one great difference being that the 'fire' and 'household' gods of the Ainus are more clearly defined by their names. At the present day the Ainus do not seem to look upon this as ancestor-worship; they do not, indeed, know what it is. But the names given them go to show that in its origin it was such.

A curious thing about the fetish is the fact that it is thought to be connected in some psychological way with the present living head of the family in which it has been dedicated. The following piece of lore explains this:

'The chief fetish should be made, in so far as its stem is concerned, of lilac, because this is found to be a hard kind of wood and does not quickly decay, even if stuck in the damp ground out of doors. It is not considered wise to use any other wood than lilac for this purpose, for in olden times a certain man made one of *cercidiphyllum*, the end of which rotted after a short time, so that it fell over. Not many months after, the owner himself became weak and died. This was owing to the influence of the fetish having been withdrawn. For this reason it is now known that the stem should be made of lilac only, that being the most durable wood of all. However, should a person happen to be in a place where he cannot obtain lilac, he may use either willow or *cercidiphyllum*, but these must not be kept long for fear they should rot away. When they become a little old, they should either be cast right away into the forest or reverently burnt upon the hearth before they have a chance of decaying. Others should then be made in their place.'

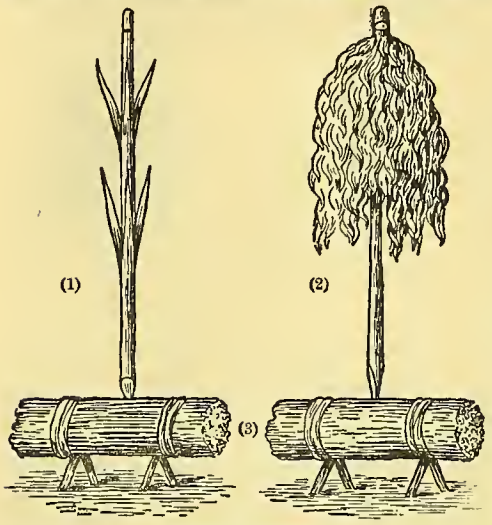
THE STEM.

THE HOUSEHOLD FETISH.

25. Ancestor-worship in general.—Prayers to the dead form a fairly strong feature in Ainu religion. The necessity for them is taught the people thus:

'If a person cultivates a spirit of selfishness, and offers nothing by way of food and drink to his deceased ancestors, the elders of the people should warn him, saying, "Foolish and wicked person, thou art a fool, and thou dost not understand; thou shalt die a hard death." If this be said, all the people, young and old alike, will be careful to worship the dead.' Another short counsel runs thus: 'Should a person leave his home and go away and die in a strange land, some of his relatives must surely go to his grave and there worship and offer libations. The dead observe all deeds, good and bad. Those who do what is right are blessed, and those who do what is evil are cursed by them.

Women are not allowed to take part in religious exercises in so far as the deities are concerned, but they are commanded to make offerings to their deceased husbands and ancestors. The words they are usually taught to say on such occasions are as follows: 'O ye honourable ancestors, I am sent to present this beer and food to you.' On being asked why this ceremony should take place, an Ainu gave this piece of lore:



'The divine *Aioina* said, "If the people do good while upon the earth and not evil, though they die young they go to heaven. When there, they have good hunting." It is good for people on this earth to offer those who have gone before to Paradise food, beer, and lees. Not to do so shows lack of filial respect. Those who have departed still live and take an interest in those left behind. They should, therefore, be reverenced; unless respect is paid to them, they will come to this earth again and bring misfortune. When, therefore, ye have food, remember your ancestors. This will please them, and they will send you good health and prosperity! So spake *Aioina*.'

The ceremony of ancestor-worship is called *shinnurappa*, i.e. 'libation-dropping,' and takes place outside the huts by the east-end window and a little towards the west. Fetishes and beer are offered, and a prayer such as this said: 'O ye ancestors now dwelling in the underworld, we offer you beer and lees; receive them and rejoice.

Your grandchildren have met together specially to offer these things. Rejoice. Watch over us, and keep us from sickness. Give us a long life so that we may continue to offer such gifts.'

26. **Private or tutelary fetish.**—The fetish mentioned in § 24 was shown to belong to the family as a whole, but there is another very important one which is quite personal. It is always made of willow. Why it is regarded as of so high importance the following legend will show: 'When God made man, He formed his body of earth, his hair of chickweed, and his spine of a stick of willow.' And so, the backbone being regarded as the principal part of the human body, it is looked upon as the seat of life. It is said that no warrior of old could be killed unless his spine was injured.

When a child has been born, some very near blood relative of the male sex gets a nice clean stick of willow and shapes it into a fetish. When it is made, he proceeds to worship it, after which he reverently carries it to the bedside, and there

TUTELARY FETISH.

sets it up as the tutelary deity of the child. The accompanying illustrations show what it is like. That marked (1) is the willow stick itself, and is called the *shutu*, i.e. 'club'; that marked (2) is the club with the willow shavings attached, which are called *inao-kike*, i.e. 'fetish shavings'; the bundle of reeds marked (3) is called *Kamui-set*, 'the divine seat' or 'throne.' The end is stuck into this so as to keep it dry, and thus prevent it from rotting. That this fetish may be rightly called the angel of the child's growth the following folklore makes clear:

'As the backbone of man is made of willow wood, the men should hasten to make *inao* of this tree as soon as a child has been born. After it has been properly whittled, it should be addressed thus: "As thou, O fetish, art divine, we worship before thee. When God formed man in the beginning, He made his spine out of a piece of willow wood. We therefore call upon thee, O willow fetish, to watch over this child while he is growing up. Guard him and give him strength, together with long life." After this prayer has been said, the fetish should be reverently stuck in its "seat" and placed by the child's side. When the child has grown up, he should frequently procure beer and worship this, his guardian angel.' As might be expected, this fetish is particularly worshipped in time of sickness by the individual for whom it was made. The following is a prayer taught some children for their use on such an occasion: 'O thou willow god, as thou art my spine and backbone, do thou hasten to heal me and make me strong. O thou dear deity, I am ill, and my body is weak; pray help me soon.' If this prayer is said devoutly, it is supposed that the sufferer will soon recover from his malady.

So, too, when older people fall sick, willow fetishes are made by the old men and worshipped, after which some of them are sent to the Creator and other superior deities with messages. And, when all is done, they are taken outside to the sacred place at the eastern end of the hut. Here they are carefully stuck in the ground, and libations of beer offered them. It is, therefore, not surprising to find that the Ainus formerly used to reverence the willow almost as much as the Papuans did the *waringen* tree; who, we are told, had such an affection for it that the wilder tribes of Ceram used to lodge, and almost live, among its branches (Earl, *Papuans*, 116, 160).

NITNE-INAO, OR 'EVIL FETISH.'

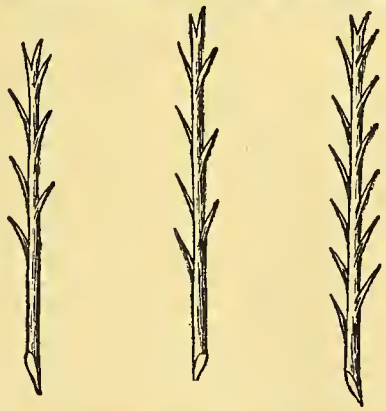
27. **Demon-worship.**—The worship of demons is one of fear among this people, and is as a rule performed by way of propitiation. This becomes very clear when a certain kind of fetish called *nitne-inao* or *nitne-hash-inao*, i.e. 'evil fetish' or 'evil bush fetish,' is made and used. The purpose of it may be gathered from the prayer which follows. This kind of fetish is used especially in times of sickness, for on such occasions an afflicted person is supposed to be possessed by a demon of disease. It is called an evil fetish, not because it is itself regarded as being of an evil nature, but rather because the occasion on which it is used is a bad one. It is sent to the wicked demon of disease; this is why it is called evil. When it is made, a kind of stew called *nitne-haru*, i.e. 'evil stew,' is prepared and offered with it. This consists of bones of fish, some vegetables, and the remnants of any kind of food, mixed together and well boiled. When all has been prepared, the fetish is stuck in the ground upon the hearth, and the stew, which has by no means an inviting smell, is placed before it. Then a so-called prayer is said as follows:

'O evil fetish, take this evil food, together with the disease of this sick person, and also the demon who has possessed him, and go with them to hell. When you arrive there, please make it so that the demon will not return to this earth again.

NUSA, OR CLUSTER OF INAO.

I have supplied you with food; take it to the demon and propitiate him; please feed him with it.'

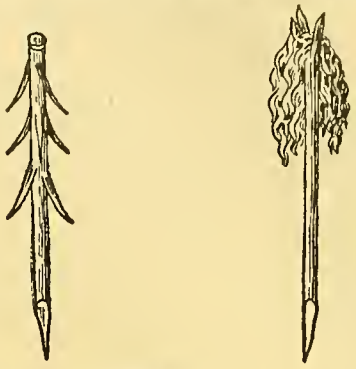
After this the patient is beaten with *takusa*, a bunch of grass; and if the fetish is successful in his errand, it is supposed that a cure will follow. After the worship has been performed, the fetish is taken outside the hut and stuck up at the *nusa* place, where the stew is set before it. Here the following prayer is said to the demon of the rubbish-heap: 'O thou angry demon, O thou demon of the rubbish-heap, accept this fetish and food; make



haste and heal this sick person.' The man who officiates at this ceremony then returns to the hut, where he again exorcizes the demon by brushing the patient down with the *takusa* mentioned above.

Fetishes of the following shape are also sometimes used for this purpose. The present writer has several times seen them set up in the huts of sick people, and very earnestly worshipped. After having been prayed to, the spirit of the fetish is supposed to wander about in the earth and visit the various demons of evil on behalf of the sick man, and, after having found them, is said to consult with them as to what is best to be done for the patient.

SHUTU-INAO, *i.e.* 'CLUB FETISH.'



28. Special fetishes for epidemic disease.—In the event of any village being attacked by an epidemic disease, but more especially if the disease be of a severe and dangerous nature, as, for example, smallpox, the Ainus of the villages immediately surrounding the infected one get sticks of elder or cladrastis, about four feet in length, and make them into fetishes or charms. These instruments are called *chikappo-chiko-mesup*, i.e. 'little carved birds,' by some, and *rui-shutu-inao*, i.e. 'thick club fetish,' by others. They are also named *kotan-kikkara-inao*, i.e. 'fetishes for village defence.' As soon as set up they are devoutly worshipped, when the people call upon them to drive the dread disease away. They are supposed to represent the eagle-owl, which is thought to have power over this particular evil. The slit in the top of the fetish given in the illustration is said to represent the mouth, and the shavings left on the sides are intended for feathers. Food is sometimes placed in the mouth as an offering to the demons to whom the fetish is sent. That which the writer has seen consisted in one case of putrified fish mixed with brimstone, and in another of *cynanchum Caudutum*. It is said that the

CHIKAPPO-CHIKO-MESUP, OR 'LITTLE CARVED BIRDS.'

demons, being unable to withstand the smell of these things, will flee from them.

29. Fetishes for the sea-gods.—The fishermen have one kind of fetish which is a special favourite with them. It is called *hash-inao*, i.e. 'bush fetish.' This kind is made by cutting a short stick, and either splitting it at one end and inserting a shaving in the opening so made, or else by cutting a few gashes in it in an upward direction, as shown in the illustration. The gashes cut across the top are said to represent the mouth. Though willow is the favourite wood used, yet they may be made of dogwood, lilac, cercidiphyllum, ash, magnolia, or oak—indeed, of almost any wood which happens to be nearest to hand. When being set up, a good representative prayer said to them runs thus: 'O ye gods who govern the waters, O ye water deities, we are now about to go fishing. Please accept

HASH-INAO

these fetishes and watch over us. Grant that we may catch many fish to-day.'

30. Religious charms.—In so far as their purpose is concerned, the dividing line between the fetishes mentioned in the preceding sections and the various kinds of charms in use among this people is not very clearly defined, so that it is often most difficult to distinguish between them; that is to say, he would be a bold person who should venture to put his finger first on one and say, 'This is a fetish,' and then on another and say, 'This is a charm'; for either may be both, and both either, according to the time and purpose for which they are made. The charms are very numerous, and are used for many purposes. Among other objects, rocks *in situ* and also stones of various shapes and sizes may be found employed both for purposes of personal protection against evil, and as a means for working harm to others (*AF* 398); the skins, bones, feathers, and beaks of birds are sometimes kept as love-charms (75, 76); snake skin is thought to be a special talisman, energetic, if properly treated, in working good in the storehouses and garden seeds (209); birds' eggs and nests are special cereal charms, while the heads of some kinds of birds are kept and used for driving away disease (219); the heart of the 'dipper' is a charm supposed to bestow eloquence and quick sight (336); bears' eyes swallowed whole are said to produce long and clear sight in hunters. The skulls of bears, foxes, bats, falcons, owls, kites, and the fore-feet of hares are also all worshipped at times and used as charms (*AF*, ch. 34). The horns of deer, and the stones sometimes found in the bladders of animals, are also thought much of as charms supposed to bring good luck to the happy finder and possessor (401).

31. Magic.—Following close upon the subject of fetishes and charms, and very nearly related to these objects in principle and nature, comes magic, sometimes called sympathetic magic. This has been defined by Zimmern as 'the attempt on man's part to influence, persuade, or compel spiritual beings to comply with certain requests or demands' (see Aston's *Shinto*, London, 1905, p. 327). Bearing in mind the meaning of the word for 'spirit' (*ramat*; § 13), and that all things are supposed to have spirit in them, and remembering the definition of *Kamui* (God) and the various objects to which this term is applied (§ 4), and not forgetting the fact that the Ainus do not so much worship the visible objects to which their prayers are addressed, as pray to the spirits, good and evil, supposed to animate them, we find this

definition very apt in so far as this people is concerned.

The Ainu terms for magic are *ichashkara*, i.e. 'a shutting up,' or 'enclosing in a fence,' and *ishirishina*, i.e. 'binding up tightly,' and it usually implies the binding together with a curse of two objects, a person and some selected fetish supposed to be evil. The following are some common methods in vogue among the Ainus of practising this art. The effigy of an enemy may be made of mugwort or straw, then cursed and either buried head downwards in a hole in the ground or placed under the trunk of a fallen and rotting tree. This kind of effigy is called *inoka*, i.e. 'the image.' When it is buried, the devil should be called upon to lay hold of the soul (*ramat*) of the person it is supposed to represent and take it to hell. By this act it is supposed that the person will sicken so that his body will gradually die as the image decomposes (*AF*, chs. 30, 31). Sometimes the effigy is found to be not buried but fastened to a tree with nails or wooden pegs driven into its head and other parts of the body. Again, another plan is to make an *inao* fetish of the guelder-rose and ask it to depart at once with the soul to the region inhabited by the demons. Sometimes a little boat is made of rotten wood, and the effigy of an enemy is placed in it together with an idol supposed to be a demon. When made, the demon is worshipped and asked to row the soul of the cursed one to hell. Sometimes, again, the headdress of a person is taken, wrapped up in a bag in the shape of a corpse prepared for burial, and placed in a hole in the ground to rot. It is supposed that as this decomposes, the enemy to whom it belonged will sicken and die. The demons of some kinds of trees are also at times asked to curse one's enemies by seizing their souls and turning them into devils.

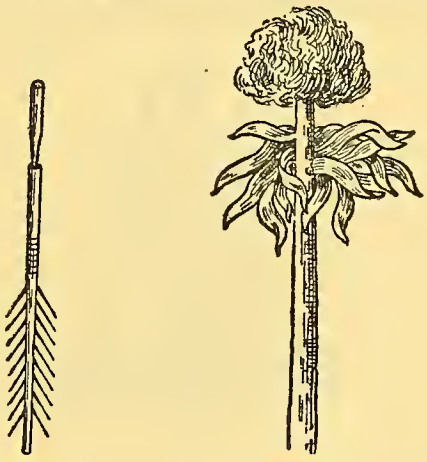
But magic, as one would naturally expect, may also be used for good purposes. Thus, for example, upon returning one very cold night from a journey with the Ainu head of a family, we found some convolvulus roots set up in a warm place before the fire upon the hearth. Upon making inquiries as to the meaning of this, we were informed that it was intended as a charm to prevent our feet from being frozen during the journey. Of the frequent use of trees in magic, a full account may be found in *AF*, ch. 30; cf. also § 33 below.

32. **Bewitching, divination, and exorcism.**— That bewitching people, exorcizing demons, and finding out things by divination are integral parts of Ainu religious superstitions cannot be doubted. A case of bewitching, by cutting holes in the garments of another person with a pair of scissors, which came under the writer's own observation, will be found in *AF*, p. 341 ff. Similarly a case of divination, by means of a fox's skull, is recorded (*ib.* pp. 350, 379 ff.). A case of exorcism by means of a tree, together with cutting clothes and beating with mugwort, will be found described on p. 315 of *AF*; while an account of a curious method of exorcizing the demon in madmen, by cutting their bodies with a sharp stone, shell, knife, or razor, and then thoroughly dipping them in a river, will be found set forth on p. 312. Cats are supposed to bewitch people in some instances (294, 507); dogs in some (507); and birds, such as the cuckoo, woodpecker, night-hawk, goat-sucker, and owl, in others (409); while such animals as hares (515), squirrels (500), otters (512), and various kinds of fish (522) are also supposed to possess this power. Indeed, there is no reason to suppose that there is any living creature in the earth which cannot bewitch, should it desire to do so.

33. **Tree-worship.** — The Ainus suppose not only that every tree has its own personal spirit (*ramat*), but that the roots also, the stem, bark, wood, heart, forks, knots, buds, leaves, twigs, crown, and every other part as well, are themselves each peopled with innumerable spirits, some of a good, and others of an evil, disposition. That the willow is regarded as a deity, and as such worshipped, has already been shown in § 26. Other kinds of trees also, such as the actinidia and grape vines, which are supposed to have had their origin in Paradise (156–158), dogwood, oak, spruce, spindle-wood, prunus, hornbeam, black alder, lilac, magnolia, yew, ash, azalia, cercidiphyllum, chestnut and mulberry, and others, are all worshipped on occasion (380). Some of these, as has already been shown in §§ 31, 32, are also used in cursing people and for the purpose of witchcraft, being at such times entreated to bring misfortune to one's enemies. For this purpose the guelder-rose, alder, poplar, elm, birch, hydrangea, and walnut are particularly employed (331, 332, 281). There are, however, other purposes, and those good religious ones, to which the Ainus put trees. The general name one usually hears applied to this cult is *Kim-o-chipaskuma*, i.e. 'the doctrine of the mountains,' and this particular part of it is named *Chikuni-akoshiratki orushpe*, i.e. 'news about preservation by trees.' Regarding this the Ainus say: 'When those Ainus who are acquainted with the cult of the mountains are about to start on a hunting expedition, they first, after having worshipped at the *nusa** cluster, go and select a large tree and worship its spirit, saying: "O thou great possessor of the soil, we are about to go and kill animals, pray help us; O see that we meet with no accidents, and prosper us." After this has been done, they set out fully expecting to come across much game.' This is tree-worship in its baldest form (cf. also § 26), and we see by it that the hunters regard the tree genii, for the time being, as their tutelary deities and guardians. In times of sickness, also, trees are worshipped. On such occasions the tree genii are called upon under various names, as, for instance, *Topochi*, 'the wise one,' and *Shirampa*, 'the one upon the earth.' Or, in case of an attack from a bear or wolf, they are worshipped under the name *Niashrange guru*, 'the person of the standing tree,' and *Kisara-range shinupuru Kamui*, 'the precious demon of the rough bark' (*AF*, ch. 33).

34. **Cereal worship.** — Like trees and other vegetable life, cereals also are supposed to contain living spirits (*ramat*), some of which are thought to be of the masculine and others of the feminine gender (*AF* 204), and the worship of them often takes place. Never are the gardens sown with seed without prayer being first made to the Creator (see § 5), then to the sun, and lastly to the very seed itself. Many years ago, Cicero asked, in his *de Natura Deorum*, whether any one was mad enough to believe that the food we eat is actually a god. The Ainus would answer, 'Yes,' and 'What else, indeed, can it be?' The prayer used at the ceremony of eating new millet at the harvest thanksgiving is very interesting, and shows clearly that it is the spirit of the food partaken of that is worshipped, and not God, the Giver of all good gifts. The prayer runs thus:

'O thou cereal deity, we worship thee. Thou hast grown very well this year, and thy flavour will be sweet. Thou art good. The goddess of fire will be glad, and we also shall rejoice greatly. O thou God! O thou divine cereal! do thou nourish the people.' The person who officiates then continues, 'I now partake of thee. I worship thee and give thee thanks.' After having thus prayed, the persons present take a cake and eat it among them, and from this time the new millet is common food. Commenting on this, Aston says (*Shinto*, p. 160): 'Gratitude in the first place to, and then for, our daily bread, is an important factor in the early growth of religion. Without it



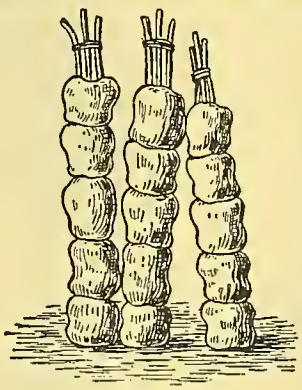
* See illustration under § 27.

we should have had no Roman Ceres, no Mexican Maize-god Centliotl, and no Ukemochi' (cf. also p. 277, Nihi-name).

But eating the god is by no means limited to cereals among the Ainus, for the bear sacrifice partakes of quite the same nature, to which subject we shall now proceed.

35. The bear festival. — Although animals of many kinds, and birds also (see *AF*, chs. 36–39), even down to a tiny sparrow, are at times first worshipped and then killed in sacrifice, it is (when considering this phase of the subject) to the bear festival that we must look for the highest expression of Ainu religion. The general name given for 'sacrifice' is *iyomande*, which means 'to send away,' so we must expect that when a living object is sacrificed, the spirit is supposed to be 'sent' somewhere, and for some purpose. And here it may be well to ask, To whom is the bear sent, and why? To this question it must be replied in the first place that, so far as can be ascertained, there is now (whatever there may have been in olden times) no idea of substitution underlying the practice; nor, secondly, is it piacular, for the people know nothing of the 'shedding of blood for the remission of sins.' All thoughts, therefore, connected with the old Jewish notion of sacrifice must be left out of the question when considering Ainu ideas concerning it. The very essence of Ainu religion consists in communion with the greater powers, and the people imagine that the most complete communion they can possibly hold with some of their gods—animals and birds, to wit*—is by a visible and carnal partaking of their very flesh and substance in sacrifice. At the time of offering, the living victim is said to be sent to his ancestors in another place. Still, at the same time, the bear festival is a kind of mutual feast—a feast of friendship and kinship—in which Bruin himself also participates. Indeed, the bear is offered to himself and his worshippers in common, and they are supposed to have a good happy time of communion together. But as this is a very difficult and, in some ways, a very important subject, it has been thought best to give a simple description of the festival as now practised, and let it speak for itself.

That the Ainus rear bear cubs in cages and often pay them divine honours is a well-known fact. The present writer once visited a village where as many as ten cubs were caged. After they have come to the age of two, or rarely three, years, and it has been decided that a sacrifice is to take place, the owner sends out an invitation to the people, which runs thus: 'I, so and so, am about to sacrifice the dear little divine thing from among the mountains. My friends and masters, come ye to the feast; we will then unite in the great pleasure of *iyomande*, "sending the god away." Come.' This is certain to be heartily responded to. When the guests have all arrived, the men make many fetishes (*inao*), stick them in the hearth, and perform worship. When this has been properly done, most of the *inao* are reverently taken up and carried by the men to the *nusa* place outside the hut and there stuck up. Next, two long, thickish poles are carefully laid at their base. The men now come reverently out of the hut, ornamented with their crowns, and solemnly approach the cage containing the bear. The women and children follow singing, dancing, and clapping their hands, for all are in anticipation of having a jolly time. Having reached their appointed place, all sit in a circle, the old men in front and the women and children behind. After all this has been arranged, an Ainu is chosen, who, having approached the bear, sits down before it and tells it that they are about to send it forth to its ancestors. He prays pardon for what they are about to do, hopes it will not be angry, tells it what an honour is about to be conferred upon it, and comforts it with the consolation that a large number of *inao* and plenty of wine, cakes, and other good cheer will be sent along with it. He also informs it that if it be a good and proper bear, it will appear again later to be treated in like manner. The last address we heard of ran thus: 'O thou divine one, thou wast sent into the world for us to hunt. O thou precious little divinity, we worship thee; pray hear our prayer. We have nourished thee and brought thee up with a deal of pains and trouble, all because we love thee so. Now, as thou hast grown big, we are about to send thee to thy father and mother. When thou comest to them, please speak well of us and tell them how kind we have been; please come to us again, and we will once more sacrifice thee.' After such a prayer the bear is taken out of its cage with ropes and made to walk about in the circle formed by the people. Here it is shot at for some time with blunt arrows called *hepere-ai*, i.e. 'cub-arrows,' and so teased till it becomes quite furious. After this the poor animal is securely tied to a stake for the last scene before its death. This stake, which is ornamented at the top with tufts of arundinaria, is called *tush-op-ni*, *i.e.* 'tree with rope affixed.' After it has been further worried, a young Ainu previously selected suddenly rushes forward and seizes the brute by the ears and fur of the face, while at the same time a second man rushes behind and lays hold of its hind quarters. Next a third man runs forward with a stick, about two feet in length and two inches in diameter, which he thrusts between the jaws of the cub. Next two other men come and catch hold of the two hind legs while others seize the forefeet. When all this has been done, the two long poles which were laid by the *nusa*, and which are called *ok-numba-ni*, i.e. 'poles for the strangling,' are brought forward. One of these is placed under the brute's throat, and the other upon the nape of its neck. A good shot with the bow now comes forward and shoots an arrow into the beast's heart, and so ends its misery. In some instances, however, the bear is shot before its head is placed between the poles. But this seems to be the case only when the animal is dangerous. Care has to be taken so to strike the bear that no blood is allowed to fall upon the earth. Should any be spilled, it must be quickly wiped up with some of the sacred willow shavings.



HEPERE-AI. TUSH-OP-NI.

* The same principle holds good with regard to cereals; see § 34.

Why the shedding of blood should be thus tabued no one seems to know.* In some instances, however, the men (particularly those who are hunters) catch the blood in their cups and drink it while reeking warm. This is said to be done with the object of thereby obtaining the courage and other virtues possessed by the victim. On one or two occasions some of the blood taken at a feast has been sent, sprinkled on paper, to sick Ainus staying in our house! It has been smelled and licked with great eagerness, the recipient expecting to receive great bodily and spiritual good from it. Indeed, even the writer himself has, to his great astonishment, had some reserved and sent him.

As soon as dead, the victim is skinned and its head cut off, the skin, however, being left attached to the head. This is taken to the east window and placed upon a mat called *inao-so*, and ornamented with shavings, ear-rings, beads, and other things. On one occasion the present writer even saw a Japanese mirror placed before it, and some old sword hilts and guards! After all this has been performed, a piece of the animal's flesh is cut off and placed under its own snout. This is called *Not-pok-omap*, i.e. 'that under the jaw.' Then a piece of dried fish called *Sat-chep-shike*, i.e. 'the bundle of dried fish,' and a moustache lifter, with some millet dumplings, some strong drink,

IMOKA-SHIKE.

either rice or millet beer, and a cup of its own flesh boiled, are placed before it. The cup of boiled meat is called *Marapto-itangi*, i.e. 'the cup of the feast.' This having been finished, a man worships, saying: 'O Cub, we give you these fetishes, cakes, and dried fish; take them to your parents, and say: "I have been nourished for a long time by an Ainu father and mother, and have been kept from all trouble and harm. As I am now grown big, I am come to thee. I have brought these *inao*, cakes, and dried fish. Please rejoice." If you say this to them, they will be very glad.' This prayer is only representative; others are said, but all are after the same model. Next, millet dumplings are threaded on sticks and placed by the head. These are said to be for the feast in the new world, for it would never do for the cubs to appear before their ancestors without a small present to provide viands for another meal. They are called *Imoka-shike*, i.e. 'remnants of the feast.' This having been finished and the dancing over, the people return to the hut, where new fetishes (*inao*) are made and placed reverently upon the bear's head. In the meantime some of the cub's flesh has been boiled. A cup of this is now taken and set before the beast's snout, and he is then said to be partaking of the *marapto-itangi*, 'the cup of the feast,' and *ipuni-itangi*, 'the cup of offering.' After a little time has elapsed, the man who presides at the feast says: 'The little divinity has now finished eating; come, ye friends, let us worship.' He then takes the cup, salutes it, and divides the contents—to every guest a very small portion—for it seems to be absolutely essential that each person should take a little. Other parts of the beast are stewed and eaten, while the entrails are cut up fine, sprinkled with salt, and eaten raw. This, like the drinking of the blood, is said to be for the purpose of obtaining the prowess and other virtues of the bear. For the same reason also some of the men besmear themselves and their clothes with blood. This latter custom is called *yai-isho-ushi*, i.e. 'besmearing oneself with good sport.'

The head of the brute is at length detached from the skin and taken to the *nusa* heap, where it is set up upon a pole called *Ke-omande-ni*, i.e. 'the pole for sending away.' All the skulls of animals set up along with that of the bear, and there are many of them, are called *Akoshiratki Kamui*, i.e. 'Divine preservers,' and are at times worshipped. The feast lasts several days as a rule; indeed, it is not quite over till the whole of the cub has been devoured and all the strong drink swallowed.

KE-OMANDE-NI.

36. **Totemism.** — The word 'totem' is said to be derived from the Ojibwa (Chippewa) word *totam* (see *EBr*, art. 'Totemism'). 'As distinguished from a fetish, the totem is never an isolated individual, but always a class of objects, generally a species of animals or plants, more rarely a class of inanimate natural objects, very rarely a class of artificial objects.' Judging from the very few survivals of totemism still in existence among this people, and from their language, one is led to the conclusion that this cult never attained the proportions among them that it did among Africans, or South Australians, or the North American Indians. The Ainus, for example, are very seldom heard to speak of themselves or others as belonging to a bear, a wolf, a turtle, a snipe, a hawk, or an eagle clan, and never of any vegetable clan. Still, there are some grounds for believing that their faith was, in the distant past, somewhat tinged with the totemistic superstition. But it was a totemism which differed from that of the Indians and many others, inasmuch as the Ainus in some instances think it a praiseworthy act to kill and eat their totem if it be an animal (see § 35), and cook and eat it if it be a cereal (see § 34; and cf. *AF* p. 206). According to the general ideas of totemism as practised elsewhere, this ought not so to be. For among the Indians it was thought that, the connexion between the man and his totem being mutually beneficent, the totem protecting the man and the man respecting the totem, it should not be killed if it was an animal, or cut if it was a plant. But the Ainus consider it a very great mutual benefit to kill and eat their totem where possible. Indeed, by feeding upon it they imagine they can get the closest communion with it,—their totem and their god,—sometimes, for example, the bear.

The clearest instance of a genuine belief in totemistic descent the present writer has ever come across among the Ainus was that of a young man who held that his forbears were, one or

* The same tabu is found in other religious systems, and seems based on the belief that the ground is rendered tabu by the sacred blood falling upon it (Jevons, *Introduction to the History of Religion*, pp. 73–74; Frazer, *GB* i. 178 ff.).

both, descended from an eagle. (The account of this will be found on p. 10 of *AF*). Just as the bear may very possibly have represented the national totem of the Ainos, so the present illustration may be an example showing the eagle to have been the totem of a family. An example of the individual totem is found in the willow tree, with which it is shown the Ainos consider themselves to be very closely connected (*AF* 83 ff.). The vines, grape and actinidia, used for ear-rings (156), also seem to have been looked upon as totems; while the images of foxes, wolves, birds, and fish sometimes found carved on the moustache lifters used by the men when drinking, and upon the crowns worn by them at their feasts (158–159), may point to clan totemism.

37. **Ophiolatry.**—Although snake-worship is still practised to some extent among the Ainus, there is not sufficient evidence to go upon to justify us in saying that this cult ever attained such elaborate proportions of worship as that among the Danhglwe in the serpents' house at Dahomey,* or among the Indians, or even among the ancient Japanese.† Nevertheless, that which is now seen is probably the last remnant of what was once a somewhat complete system.

According to Ainu ideas, the first snake that ever was, belonged not to this earth but came down from heaven, though others of the ophidian tribe had their origin otherwise. In this we are reminded of St. John in Rev 12[7-9]; and also of Zoroastrian mythology, in which Ahriman descended earthwards in the form of a serpent.‡ But among the Ainus the original serpent is supposed to have been a good being, and in this respect differs from that of both St. John and the Persians (*AF*, ch. 32).

IMOKA KAMUI, OR IMAGE OF SNAKE USED FOR WORSHIP.

Serpents are worshipped most frequently at the time of childbirth, but especially when there is any difficulty in the matter. On such occasions the image of a snake, which is called *Imoka Kamui*, i.e. 'the divine image,' is made out of sedge (*Carex rhynchaphysa*), worshipped, and then suddenly placed upon the shoulders of the patient. The reason given for this is said to be that, according to Ainu belief, all such difficulties are brought about by the king of the evil offspring of serpents himself; and they say that rather than propitiate the evil one, they should go directly to the chief serpent and ask him to keep his wicked subordinates in check and remove the evil they have done.

In cases of ague also snake-worship has taken place, as well as in instances of snake-bite. These reptiles are also sometimes worshipped as a means for cursing people, being asked to bite one's enemies. The prayer said to them on such an occasion takes some such form as the following:

'O snake, I have a word to say to you: pray listen. I have an enemy So-and-so by name. Remember the name. If you ever see him coming along this road, please bite him, possess him, poison him, and kill him. I will then make *inao* out of walnut wood, and also offer you many libations. Pay attention to what I say.'

Snake-possession is called *okokko-parat*, i.e. 'snake punishment,' and the women especially are very much afraid of it. There is no particularly specified manner in which it shows itself, for almost any disease may, so they think, be owing to possession by one or more of these reptiles.

Ophiomancy also appears to have left traces behind. The writer of this article once knew of a woman who professed to foretell future events by means of the image of a snake she kept stowed away in a box near by. She called it her guardian angel, and used to pray to it frequently. By its inspiration she professed to be able to tell the reasons for any sickness people were afflicted with, and to discover the proper remedies for them. But, so far as real ophiomancy is concerned, we have never yet heard of any Ainu, man or woman, who professed to predict future events by means of a genuine serpent, dead or alive, whether by its manner of eating or by its coils.

38. **Tabu.**—Besides the various small matters forbidden in relation to one's attitude towards fire (see § 17), the Ainus have other tabus of a religious and semi-religious nature which should be mentioned. Thus the blood of a bear must not be spilt at a bear-feast (see § 35); a woman must not pronounce the name of her husband lest she thereby cause him harm in some way (*AF*, 252); the cry of certain birds, as, for instance, the cuckoo, woodpecker, night-hawk, goat-sucker, and owl, should not be imitated for fear of being bewitched by them (409, 427); at childbirth also *couvade* is practised, during part of which time the father of the child is forbidden to eat and drink except very sparingly; nor must he worship the gods, hunt, fish, or work till after the purification of the wife, which takes place on the seventh day after parturition (235–241).

39. **The future life.**—There is no idea more firmly fixed in the Ainu mind than the notion that the spirit is appointed to live for ever in another world—a world which, for the good, is the counterpart of this, only much better, and free from pain, and, for the evil, is dark, wet, cold, and dreary. The very word in use for the spirit (*ramat*) demands that such a place as heaven should exist, for a living being can neither, it is thought, lose his life nor get rid of his own proper personality for ever (see § 13). But the spirit is there supposed to be clothed with a spiritualized body resembling the present, and to exist under like conditions to those of the present life. In the other world the spirit will require a house to live in, tools to work with, as well as boats and hunting and fishing implements. That the Ainus really think this is proved not merely from their words, but also from some of their customs practised at the time of death. The most common word for 'to die' is *ra-i oman*, i.e. 'a going to the lower place.' This does not necessarily mean that the spirit is in every case supposed to descend into the bowels of the earth (*pokna moshiri*, 'the lower world') when it leaves the body, though sometimes it may do so;* and, to hear the people talk, one might be tempted to believe that the Ainus think heaven itself to be in Hades. But, according to their expressed cosmological ideas, they really suppose there are six (*AF* 60) heavens above and six hells (ᾅδαι) below us, and that the best place is in heaven above and the worst in Gehenna below. *Ra-i oman*, 'a going to the lower place,' is not the only term for death. There are others, such as 'to pierce the skies'; 'to make a clearance'; 'to have space for thought'; 'to sleep the other sleep,' and so on (548).

When a person is about to be buried, whether it be a man, woman, or child, the spirit is still spoken to as if it were present in the corpse, and is supposed to partake of the burial feast together with

* Bouley, *Religions of the Africans*, p. 46.
† Griffis, *The Religions of Japan*, New York, 1895, pp. 30, 33, 278.
‡ Hardwick, *Christ and other Masters*, p. 553.

* Stories of supposed journeys to Hades may be seen recorded both in *AF* (570, 572) and in 'The Language, Mythology, and Geographical Nomenclature of Japan viewed in the light of Ainu studies,' *Memoirs of the Literature College, Imperial University of Japan*, No. 1.

the mourners. Many of the possessions belonging to the deceased, such as bows and arrows, clothing, means for obtaining fire, pipes, tobacco boxes, knives, cups, ornaments, and so forth, are killed (!) by being cut or broken, and so sent to the nether world for future use (*AF* 554–566). Huts too, which, as has already been pointed out, are supposed to be living creatures (117–132), are sent off to the other world by being burned; they are to be for the use of those who occupied them in this life.

40. The future judgment.—After death the Ainus assuredly look for judgment. All must appear, they say, before the tribunal where God the Creator is said to be the judge of all men, and the goddess of fire the chief witness for or against them (see § 17). Those who are accounted worthy go to the happy land, called *Kamui-kotan* or *Kamui-moshiri*, i.e. 'the land' or 'country of the gods'; while the wicked must be sent to *Tei-nei-pokna-moshiri*, i.e. 'the wet underground place,' where they will be for ever unhappy and perhaps frozen up in a block of ice. Whether the punishment will be in reality fire, ice, or swamp, the Ainus are not certain and do not pretend to know; but that their Gehenna is not the same as the hell of the Buddhist is very clear, for there are no purgatorial fires thought of among them.

LITERATURE.—No books have been specially devoted to Ainu religion, though notices of the subject occur in almost all works which touch upon the Ainus. In the year 1893, A. H. Savage Landor published his *Alone with the hairy Ainu*. This book is sometimes quoted as authoritative on the matter, and, were all his remarks true to fact, it would be of the utmost importance. In ch. xxviii. Landor says that the Ainus recognize no 'supreme God and no intelligent creator.' . . . 'The Ainu worship nothing.' . . . 'The Ainu have no religion.' . . . 'They are decidedly not moral, for nothing is immoral with them,' and much more to the same effect. On p. 282, again, he says: 'The Ainu language is as poor in words as the Ainu brain is deficient in thoughts. Thus it is no easy matter to explain to an Ainu what is meant by "religion," by "divinities," and by "worship."' But the Ainu language is by no means so deficient in words as Landor imagined. Dobrotvorsky gives as many as 10,930 words and phrases in his *Ainsko-Russkiĭ Slovar* (Kazan, 1875), while nearly 14,000 words alone are to be found in Batchelor's *Ainu-Eng.-Jap. Dictionary*[2] (Tokio, 1905). Landor's idea of the Ainus as a non-religious people will not bear looking into.

A much less pretentious, but far more reliable, work on the subject is that written by B. Douglas Howard, in 1893, and entitled *Life with the Trans-Siberian Savages*. This is a pleasantly written little book of 209 pages, and treats mostly of the Saghalien Ainus. The account therein contained shows the religion of these people to be the same as that of the Yezo Ainus; and subsequent personal contact with them has shown Mr. Howard to be correct in his description and generally reliable in his deductions. Indeed, so much alike did he find the two tribes in the matter of religion and religious practices, that he was, by reading the present writer's work, *The Ainu of Japan*, able to give the 'probable meaning' of what he saw and heard on that island (Howard, p. 17).

Miss Bird also, in her very pleasantly written *Unbeaten Tracks* (1885, abridged, Letter 37, pp. 273, 277), speaks of Ainu religion. She says, 'There can be nothing more vague and destitute of cohesion than Ainu religious notions.' . . . 'They have no definite ideas concerning a future state, and the subject is evidently not a pleasing one to them.' . . . 'Such notions as they have are few and confused.' All this is not quite correct; and it would be unreasonable to suppose that Miss Bird could—even had she claimed to do so—in the short three weeks she was actually with the Ainus, have explored every dark nook and corner in the mind of the people. She laboured under the great disadvantage also of being obliged to obtain all her information at second hand through a Japanese interpreter; and if there is any one thing the Ainus are naturally reticent and secretive about before strangers, it is their religion.

J. BATCHELOR.

AIR and GODS OF THE AIR.—Here it is proposed to deal only with those invisible beings who are supposed to hover between heaven and earth,—that is, whose proper abode is the circumambient atmosphere. They are called *Air-gods* rather than *Sky-gods*, the better to distinguish them from the true celestial deities who dwell aloft in the ethereal regions, either in or above the blue vault of heaven, and have no direct contact with the earth and its enveloping waters. But the air is the least stable of the elements, ever fluctuating to and fro, with upward and downward contacts, and restlessly filling all the intermediate spaces, so that the world itself was by our imaginative forefathers called the *middangeard*—the middle region floating in the boundless ether. Hence there are necessarily continuous overlappings and interminglings everywhere, and it often becomes difficult or impossible to draw a clear line between the aërial and celestial deities on the one hand and the aërial, the earthly, and even the underground gods on the other. How true this is may be seen in the protean forms attributed by the ancients to the Olympian Jove himself. Although Zeus was primarily a sky-god, he also filled many other functions, as shown by such epithets as Χθόνιος, Ὄμβριος, Θαλάσσιος (Earth-, Rain-, Sea-god), while Homer speaks even of the Ζεὺς καταχθόνιος, the 'Underground Zeus' (*Il.* ix. 457). So also his consort, the earth-goddess Dione, whose 'variations show how readily sky-goddess, sea-goddess, and earth-goddess might pass from one province into another' (A. B. Cook, *ClR*, April 1903, where the subject is dealt with fully).

Of the aërial beings proper, such as those spirits dismissed by Prospero 'into air, into thin air,' or those others who 'on the beached margent of the sea . . . dance their ringlets to the whistling wind,' or those again who 'hover through the fog and filthy air,' the genesis appears to be twofold, as partly suggested in Hemsterhuis's oft misquoted epitaph (in his *Lucian*):

> 'Bis duo sunt homines; manes, caro, spiritus, umbra;
> Quatuor has partes tot loca suscipiunt.
> Terra tegit carnem, tumulum circumvolat umbra,
> Orcus habet manes, spiritus astra petit.'

First come the *manes*, a euphemistic expression meaning the 'Good Ones,' like the Greek *eumenides*, the 'Well-disposed,' *i.e.* the Erinyes or Furies, and the Irish *Duine Matha*, 'Good People,' *i.e.* the mischievous fairies who would resent being spoken of disrespectfully. These *manes*, originally the ghosts of the dead, and worshipped by the greater part of mankind, constitute, with the following *umbra* and *spiritus*, the first great category of aërial beings. Many were consigned to Orcus, as already noted, and many to the grave; but others remained to hover round the tombs (*umbra*), or to be wafted aloft as the 'other-self' (*spiritus*), and fill the aërial spaces with good and evil genii. (For these distinctions between the personal soul and the other associated entities, see art. ETHNOLOGY, § 9).

Here it should be noted that the *umbra*—the human shadow—was originally regarded as a distinct being, and the belief still survives, even amongst cultured peoples, as in the English saying, 'No man can escape from his shadow.' So also Lucian: 'They [the shadows], when we die, become accusers and witnesses against us, and convictors of crimes perpetrated during life, and they have the reputation of being exceedingly trustworthy, since they are always associated with and never separated from our bodies' (*Menippus, or the Oracle of the Dead* in H. Williams' *Lucian*, p. 273).

Naturally these arbiters of human destinies eventually received divine honours, although it was found impossible to assign any fixed abodes either to them or to the other spirits of the air belonging to the first category, that is, those representing departed souls and their concomitants. They are, however, very numerous, and the Talmudists, who have taken the trouble of counting them, find that the bad ones (only about 7,406,000) are vastly outnumbered by the good, who are roughly estimated at 1 quadrillion, 64 trillions, and 340 billions.

If not so numerous, the aërial gods belonging to the second category, *i.e.* those derived directly from the air itself, may be regarded as by far the more important of the two classes. These may, by contra-distinction, be called the Wind-gods in a pre-eminent sense, and among them must be included the winds themselves. Thus the very

first of the six groups mentioned by Epicharmos are the winds: Ὁ μὲν Ἐπίχαρμος τοὺς θεοὺς εἶναι λέγει ἀνέμους, ὕδωρ, γῆν, ἥλιον, πῦρ, ἀστέρας (Stobæus, *Floril.* xci. 29), and the deification of the four quarters whence blew the chief winds formed the very basis of the religious systems of many primitive peoples.

This was specially the case in the New World, where the Virginian Algonquians had only five gods, and of these four were the 'Four Winds which keep the four corners of the earth' (see art. AMERICA). Constant reference is made to these four deities of the cardinal points, the fundamental idea being that they are the props of the universe, controllers of the seasons and the weather, and senders of rain and sunshine, on whom, in fact, all good and evil things depended. Hence in *Hiawatha* (xiv):

> 'Gitche Manito the Mighty,
> He, the Master of Life, was painted
> As an egg, with points projecting
> To the four winds of the heavens';

and to him is opposed

> 'Mitche Manito the Mighty,
> He the dreadful Spirit of Evil,' etc.

Ratzel, a leading authority on these questions, remarks comprehensively that 'in the place held by the winds among the precursors of creation, based upon the association between breath (or soul) and wind, the pervading sanctity of the number four in the quarters of the heaven, and generally the elements of astronomy and meteorology are alike conspicuous. The Winnebagoes [a Siouan people] say that the Great Spirit created four men and one woman, and that the former created the four winds, the latter the earth. Everywhere they are among the beneficent creative spirits, and often they precede in time even sun, moon, and stars. As to the sun, so also to the four quarters of the world, tobacco is offered from the sacred pipe. The winds, as messengers of the sun, who bring rain, growth, and refreshment, have their share of veneration next after the moon. We further meet with four servants of the Mexican Air- and Sun-god (Quetzalcoatl), four supporters of the earth, who survived the deluge, four corners of the world—whence the Sioux get their pipe of council, four brothers who produced the floor [read vault, sky]—as in the Arawak legend, and so forth. Hence was developed the universal notion of the sanctity of four and its multiples, and hence the cross on American monuments' (*Hist. of Mankind*, ii. p. 146). In their creation legend the Hare Amerinds, members of the Athapascan family, tell us how the Father dwells overhead, and the Mother underfoot, while the Sun moves up and down in mid-air between them, and thus becomes an aërial god. One day, during his wanderings in the heavens, he noticed the earth, a mere islet lost in boundless space, and thereupon cried out: 'O my father on high, kindle thy heavenly fire for my brothers on that little island who have long been unhappy. Look on them, father, and take pity on men.' Then the sun became the day-star, and gladdened the sight of mortals. Amongst other Amerinds the encompassing air is peopled, not by pure spirits, but by disembodied souls, which flit about, for example, above the Chiloe Islands, while in French Guiana the Rucuyenne Caribs send the good to the haven of bliss and envelop the wicked in the clouds as in a kind of purgatory.

In the myths and traditions of the Hopi (Moqui) Pueblos, leading parts are played by the great cloud-god Cotokinuñwû, who dwells in the firmament, and by the four quarters, which have their animal embodiments—Puma, Bear, Wildcat, and Wolf—for N., W., S., and E., with the corresponding colours, yellow, green or blue, red, and white for the several cloud-gods. Thus, in the myth of the Maiden and the Coyote, the Yellow Cloud Chief, the Blue Cloud Chief, the Red Cloud Chief, and the White Cloud Chief try, each in his turn, to win the heroine of the story, but all without success (H. R. Voth, *The Traditions of the Hopi*, p. 157).

But it was in Mexico and Central America, where astronomic lore had made such marked progress, that these notions acquired their greatest expansion and almost formed the very framework of the more advanced religious systems. Everywhere the *teocalli* (temples always erected on pyramids) faced the four cardinal points which supported the heavens; in the Aztec cosmology one of the four cataclysms was caused by the air; and Orozco y Berra identifies Quetzalcoatl himself with *el dios de los vientos* ('the god of the winds'), since he was often represented as moving through the air laden with a wind-bag which was always inflated with destructive gales, and he was born of the cloud-snake Mixcoatl, or at least of his consort Coatlicue—she of the 'snake-robe.'

To Quetzalcoatl corresponds the Kukulcan of the Mayas, a universal deity of many functions, enthroned on the clouds of heaven and on the cross-shaped tree of the four points of the compass, also figured in the pictorial codices as dwelling in the air, above rain, storm, and the death-bringing clouds from which the lightning falls. He is associated, too, with the four colours—yellow, red, white, and black—which, as in the Hopi myth (see above), though in a different way, correspond to the cardinal points—yellow, air; red, fire; white, water; black, earth. 'Kukulcan,' writes Dr. P. Schellhas, 'is represented with all the *four cardinal points*; he appears as ruler of all the points of the compass; north, south, east, and west, as well as air, fire, water, and earth are subject to him' (*Deities of the Maya MSS*, p. 17). Here we see the interminglings of divers functions and provinces above referred to. It may be added that Kukulcan shares his many-sidedness with three other Maya gods, one unnamed who is connected with the symbolic colours of the cardinal points, a second the war-god, of frequent occurrence in the codices, and a third identified by Förstemann with a storm-deity, whose features are intended to symbolize the blast of the tempest. Thus each of the four winds would appear to have been originally deified, or presided over by divinities whose functions and ethereal realms afterwards became confused.

Lastly, the Cakchiquels, one of the most cultured Maya-Quiché nations of Guatemala, paid special homage to the four wind-gods, to whom even human sacrifices were offered. 'Sanchēz y Leon states that the most usual sacrifice was a child. The heart was taken out, and the blood was sprinkled toward the four cardinal points, as an act of adoration to the Four Winds, copal being burned at the same time as an incense' (*Historia de Guatemala*, quoted by Brinton in the *Annals of the Cakchiquels*, p. 45).

In Madagascar the Four Winds are, or were, fully recognized, and, as amongst the northern Amerinds, worshipped in their order next after the supreme deity. Little is now heard of them, and they are scarcely mentioned in the missionary records; but in Robert Drury's time (early in the 18th cent.) they were invoked in all solemn oaths, thus: 'I swear by the great God above, by the Four Gods of the Four Quarters of the World, by the Spirits of my Forefathers, that,' etc. (*Journal*, p. 103 of Oliver's ed.). And Drury tells us that at their meals the people 'take a bit of meat and throw it over their heads, saying, "There's a bit for the Spirit." Then they cut four more little bits, and throw to the lords of the four quarters of the earth' (*ib.* p. 280).

It is, however, to be noted that this belief may have been introduced by the later (Hova) immigrants from Malaysia, where the worship of the wind-gods had long been established under Hindu influences. In the island of Bali, east of Java, where alone Brāhmanism and Buddhism still persist, the four have expanded, as later in Greece (Aristotle, *Meteorologica*), to eight, that is, the eight gods or demi-gods of the Rāmāyana — Indra, Yama, Sūrya (for Nirriti), Chandra (for Ishāni), Anila, Kubera, Varuna, and Agni. Of these, however, only three — Indra, Yama, and Varuṇa —are still worshipped, and these as forms of Śiva, and since in Bali the worship of Śiva has in a way absorbed that of all the other gods of the Hindu pantheon, the eight cardinal points themselves are now also attributed to corresponding forms of Śiva. Of the three specially mentioned, Indra has been raised to the heights of Olympus, just as Jupiter has become a chthonic and katachthonic god (see above). Nevertheless, it would be incorrect to regard Indra as the supreme object of adoration in the Vedic system, and he still remains a true rain and air god with his cortège of maruts and storm devas, since his heaven (Indraloka or Svarga) lies beneath that of Viṣnu, and Viṣnu's beneath that of Śiva, where at last the soul attains repose and release from transmigration. In fact, Svarga still has earth contacts athwart the empyrean; its inhabitants are liable to become mortal again, and Indra himself is only the prince of these devas, who need the *amṛta* (ambrosia) to keep them alive, yet may still be attacked and vanquished by demons, or by ascetics who acquire supernatural power by self-mortification.

In North Celebes the four wind-gods are held in honour, and play a great part in the local cosmogonies.

Lumimuüt, mother of mankind, met the rock-born priestess Kareima, who ordered her to turn her face to the south. 'While she did this the priestess prayed, "O Cause of the East Wind, fertilize this woman." Lumimuüt, however, perceived nothing. Then, on the command of the priestess, she turned to the east, to the north, and finally to the west, and each time the priestess prayed that the deity of the wind would fertilize her. Her prayer was answered, and Lumimuüt by the god of the west wind begat a son named Toar. When Toar grew up, Kareima took two sticks, one of the plant called *tuis* and one of the plant called *assa*, and cutting them of the same length gave one (tuis) to Lumimuüt and one (assa) to Toar, saying, "See, here are two sticks of the same length. Go you, Lumimuüt, to the right, and you, Toar, to the left, and whenever you meet any one measure sticks. Then if they are of the same length you are mother and son, but if one is longer than the other come to me immediately at the centre of the earth."' Both went on their way, but after a time Lumimuüt and Toar met without knowing one another, and on measuring sticks they found that Lumimuüt's was longer than Toar's, for the tuis atick had sprouted out and grown. Thereupon they returned to Kareima, and when she had measured the sticks she said, 'You are not mother and son, therefore you must become man and wife. Be fruitful and populate the earth.' So Lumimuüt and Toar begat many children, twice nine, three times seven, and once three. The three are the Pasijowan, of whom one was the priest at Warendukan *in the air*; from the other two the people of Minahassa [North Celebes] trace their descent. This legend of the origin of the earth and its people is full of interest to the student of cosmologies. The story of the conception of Lumimuüt by the god of the West Wind exhibits traces of the very common myth of the marriage of Heaven and Earth. Lumimuüt is the earth goddess, the fruitful mother of all things; the West Wind is the one which brings the rain and fertilizes the earth (S. J. Hickson, *A Naturalist in North Celebes*, p. 241).

In Celebes, besides the four wind-gods, there are numerous aërial beings, which are somewhat vaguely described as 'free wandering spiritual forms of various ranks, powers, and capabilities for good or evil.' These are distinguished from the spirits by which certain trees, rocks, waterfalls, and other objects are supposed to be animated, and, as 'the religion of the Minahassers was a differentiated form of Animism' (*ib.* p. 247), it may be conjectured that the wandering forms are believed to be disembodied souls of the dead rather than spirits derived directly from the air. This view is strengthened by the further statement that the spiritual world is inhabited by the souls of deceased chiefs, who live for ever 'in the form of wandering ghosts haunting the scenes of their former triumphs and experiences. They believed in a series of ancestral ghosts of the rank of first-class gods, and in a crowd of lesser deities, protecting spirits and demons' (*ib.* p. 248). And as all alike were called *Empung*, the generic name for the gods, but literally meaning a 'grandfather' (cf. the African *Munkulunkulu*, which has the same meaning), it is obvious that ancestor-worship prevailed over pure psycholatry in Celebes, and that the ancestral spirits dwelt to a great extent in the ethereal regions. In fact, four heavenly villages were expressly set apart as their residence, and these villages—Kasosoran, Kalawakan, Kasendukan, and Karondoran—were so contiguous to the earth that formerly the empungs would often return and mingle with mortals, rich blessings ever following in their footsteps. In these celestial villages rice was grown, and it was from this source that the cereal now thriving in Minahassa was orginally procured.

Now, the return of the departed spirits is dreaded, and at funerals the relatives blacken each others' faces with charcoal. This custom is called *mahawuwuringan*, and the object is to prevent any recognition by the ghosts who may be hovering about the graves or returning to their former abodes. Obviously for the same reason black peoples, such as the Australians and Andamanese, often try to disguise themselves by daubing their faces with white bands or patches, and white is the mourning colour in China. On this subject Hickson aptly remarks that 'whatever they may be intended to express in civilized communities, there can be little doubt that the customary suits of solemn black originated, not in grief or respect for the departed friend, but in the fear of his returning spirit. At the funeral the priest drives it away with a sword, and the maiden who sits upon the bier [in Minahassa] frightens it by the sound of bells. Then everything is done to confuse the spirit if it attempts to return to its accustomed haunts. The ghost is always supposed to come back to the house by the same route by which the corpse was taken away. We can see the reason, then, why the corpse is let down through a hole in the floor and carried three times round the house before being conveyed to the grave. The spirit is so much more perplexed in finding its way back home by this circuitous route. Then, again, the nearest relatives do not attend the funeral, in order that the ghost, if it is hovering around, may not suspect that it is its own funeral that is taking place. Care must be taken, too, that if the spirit should return to the house, it should not recognize the inmates. The friends and relatives, therefore, disguise themselves by painting their faces black [the Minahassers are Indonesians of a light brown or cinnamon colour], by wearing black hats, leaving their hair loose and unkempt, and in other ways. It must not be supposed that black is the universal mourning colour. Among white and fair-skinned people it naturally is, because it affords them the most effectual disguise. Among the black-skinned Andamanese white is the mourning colour. They paint themselves with stripes of white paint. The Spaniards at the time of the conquest of the Philippines found that many of the inhabitants used white as a mourning colour. Many of the races of Luzon and the Sulu islands use white to the present day for this purpose' (*op. cit.* p. 299).

Another curious survival—the almost universal custom of whistling for the wind—finds its explanation in the belief of the Minahassers that the souls of the living as well as of the dead may at times take refuge in the surrounding atmosphere. This

is especially the case with sick people, whose ailments are supposed to be caused by their spirits leaving the body and fluttering about somewhere in the neighbourhood. Then the *walian* (priest or shaman) is sent for to diagnose the patient, while all his friends go out to the fields and villages to look for his soul. 'They make a fire in a likely spot, and entice the spirit back by cooking rice and chicken, or by whistling and calling as they would for a dog, whilst the priest goes through the list of gods and gives the ceremony a religious character. This goes on for some time; a rich patient who can afford many chickens has usually to wait a longer time for his spirit to return than a poor one. At last the walian sees it! It shows itself clearly here or there by a movement in the grass or by some other sign. The walian advances with the greatest caution, and catches it in a sarong [the broad Malay cloth worn as a wrap], just as a schoolboy catches a butterfly in his hat. They now turn homewards; a child leads the way, carrying a woka leaf (*Livistonia*) to prevent the priest and spirit from getting wet; the priest follows, carrying the spirit in the sarong, and then another priest armed with *sago-sago* and *mumu* [swords and sticks], which he swings backwards and forwards to keep away the spiteful *sakits* [demons of the air] who wish to recapture the patient's spirit. When they have reached the chamber, the priest opens the sarong over the head of the patient, and says with great satisfaction and assurance, "Now is your soul returned." This being done, the patient should get well again, but if he does not, it is a sign that his time has come, and his spirit can no longer be retained' (*ib.* p. 295). Thus we see that whistling for the wind, still practised by all seafaring peoples, from the English captain to the Malay skipper, originally meant whistling for the truant souls lurking in the wind. Innumerable other survivals, could they be traced to their source, would also be found to be deeply rooted in the superstitious beliefs of primitive man.

Nowhere can this be seen better than in China, where the aërial spaces still swarm with countless good and evil spirits, the belief in which has influenced the development of the very arts, especially of architecture. The fundamental notion is that the good spirits move through the air in curved, the bad in straight, lines. Hence the former are welcomed, the latter baffled by the curved form given to the roofs of the houses, pagodas, gateways, and all other conspicuous structures. For the same reason, no straight highways can be laid down, and partly on this ground great objections were for years raised against the development of railway enterprise. The danger of desecrating the ancestral graves was also urged; but both difficulties were overcome when it was pointed out that the burial-places could be avoided by cleverly designed curves, and that these curves would at the same time serve to thwart the wicked and encourage the beneficent genii.

So also in Korea the air is infested by many malevolent beings, such as the smallpox devil, the typhus devil, and the cholera devil. As after death some of these might again enter the corpse and revive it to kill the living, they are scared off by the vigorous beating of gongs, drums, pots and cans, which is kept up incessantly for three days and nights after the funeral. These demons always travel on the north wind, and the good spirits on the south wind. Hence the graves are usually situated on the sunny slopes of a hill, whither all good influences are wafted on the balmy southern breeze. The family vaults of the better classes are also sheltered from the evil spirits by horseshoe-shaped mounds turned northwards, that is, towards the quarter whence come the demons riding on the icy arctic blasts. Here again we seem to divine why the horseshoe is still a lucky object even among the cultured peoples of the West, where it is nailed to the stable door to protect the farmyard from evil influences. Originally there were no horseshoes; hence it was not the shoe itself, but its peculiar shape, that was regarded as propitious, because earthworks so constructed may have been thought favourable to the good and adverse to the evil genii.

That the demons of epidemics wander about in mid-air is a belief not confined to Korea, but pervading the religious thought of the whole Eastern world. To the Chins of Upper Burma cholera and smallpox are real devils who 'hover through the fog and filthy air,' and when some of the tribe visited Rangoon in 1895 they carried their *dahs* (knives) unsheathed to scare off the pestilent *nat*, and passed the day hiding under bushes to escape its notice. Some even wanted to pacify it by the sacrifice of a slave boy, but were talked over to substitute a few pariah dogs (Carey and Tuck, *The Chin Hills*, i. *passim*). So also in India, the belief in the same cholera and smallpox demons, who 'are supposed to be always wandering about in mid-air' (*Census Report* for 1901), is almost universal amongst the Kolarian and Dravidian aborigines. For details the reader must be referred to art. ASIA.

In Greece the four chief winds were known to Homer, who in the *Iliad* groups them in pairs (Εὖρός τε Νότος τε, ii. 145; Βορρῆς καὶ Ζέφυρος, ix. 5), and in the *Od.* (v. 295–296) mentions them consecutively:—

Σὺν δ' Εὖρός τε Νότος τ' ἔπεσον Ζέφυρός τε δυσαὴς
Καὶ Βορέης αἰθρηγενέτης, μέγα κῦμα κυλίνδων.

Here all are personified poetically, but not yet deified, unless the 'ether-born' Boreas is already to be taken as an air-god. Even their king Æolus is still only the 'friend of the gods,' as in *Od.* x. 2:—

Αἴολος Ἱπποτάδης, φίλος ἀθανάτοισι θεοῖσιν

whereas in the *Æneid* he is enthroned amongst the Immortals ('celsa sedet Æolus arce, sceptra tenens,' i. 56–57), although still subordinate to Neptune ('Non illi imperium pelagi, sævumque tridentem, sed mihi, sorte datum,' i. 138–139). But in the interval between Homer and Virgil the rich Hellenic mythology was developed, and then, of course, divine or semi-divine origins and genealogies were discovered for all the winds personified by Homer. Thus Herodotus tells us (vii. 189) that by his marriage with Oreithyia, daughter of their (legendary) king Erechtheus, the Athenians claimed kinship with Boreas, and that they invoked and offered sacrifices both to him and to his consort (ἔθυόν τε καὶ ἐπεκαλέοντο τόν τε Βορῆν καὶ τὴν Ὠρειθυίην). Another highly honoured wind-god was balmy *Zephyrus*, bearer of fruits and flowers, who, with *Notus* and others, was born of the Titan Astræus and the goddess Eos (Aurora). To Zephyrus the Athenians raised a temple, where his effigy was that of a gentle winged youth wreathed in flowers. Later, under the discriminating analysis of Aristotle, the four became eight and even twelve (*Meteorol.* 2-9). Of the last four little is afterwards heard; but the eight appear to have retained their rank as air-gods at Athens, where was raised to them the still existing octagonal Horologium of Antonius Cyrrhestes, popularly known as the 'Temple of the Winds.' On each of the eight walls a bas-relief symbolizes the wind which it faces, and 'an additional element of interest is supplied by the dress and accompaniments of these figures, by which the character attributed by the Greeks to the winds which they represent is described. Boreas, for instance, is depicted as a bearded man of stern aspect, richly clad and wearing strong buskins, and he blows a conch shell as a sign of his tempestuous character. Cæcias, another cold and inclement wind, carries a shield, the lower part of which is full of hailstones. Notus, the most rainy wind, holds an inverted urn, the whole contents of which he is pouring out upon the earth. Zephyrus, on the other hand, who is the

harbinger of spring, appears as a graceful youth, almost unclothed, with the fold of his robe filled with flowers' (H. F. Tozer, *Hist. of Anc. Geography*, p. 195).

Italy also had its complete category of wind-gods, quite independently of the Greek, as shown by their old Italic names, such as *Corus*, *Aquilo*, *Auster*, and *Favonius*. To Zephyrus corresponded Favonius, of whom Horace sings (*Od.* I. iv. 1) that 'Solvitur acris hiemps grata vice veris et Favoni,' and whom Plautus contrasts with 'rainy Auster': 'Hic Favonius serenu'st, istic auster imbricus: hic facit tranquillitatem, iste omnis fluctus conciet' (*Mercator*, v. ii. 35, 36). From this we see that Auster answers to the Greek Notus, while Virgil makes it equally clear that Aquilo represents Boreas, as in *Geor.* iii. 196—

'Qualis Hyperboreis Aquilo cum densus ab oris
Incubuit, Scythiaeque hiemes atque arida differt
Nubila.'

It may here be stated that in Italy, as in Greece, Olympian Jove himself had at an early date extended his sway to the earth, or rather to the nether world. Of Umbrian, a sister language of Latin, some lengthy liturgical texts survive on the seven *Tabulæ Iguvinæ* found in 1444 at Gubbio, where they are still preserved in the town-hall. On Tab. II., which may date from B.C. 500, the epithet *hunte* is twice applied to Jove (*Hunte Iuvie ampentu*, l. 21; and *Hunte Iuvie vestikatu*, l. 35), and this epithet, being clearly connected with *hondra*=infra, means 'Infernus,' so that Hunte Iuvie answers exactly to the Homeric Ζεὺς κατα-χθόνιος. With this compare the stem *huntro-*, which in Oscan, another sister tongue, means *inferus*, leaving no doubt as to the force of Hunte (*The Curse of Vibia*, l. 11 in R. S. Conway's *Italic Dialects*, i. p. 127).

A few miscellaneous references may now be given to complete the subject, and show how thickly primitive peoples packed the encompassing atmosphere with gods, demons, and spirits of all kinds. These are nowhere more numerous and varied than in Arabia and surrounding lands, where the most dreaded are the ghouls (properly غول = *ghul*), who, however, are denizens not so much of the air as of woods and deserts. They assume divers shapes and colours, and show a certain kinship with both the wer-wolf and the vampire, being supposed to devour men, animals, and dead bodies. These ghouls range through Persia and Muslim India into the Malay lands, where there is a special 'storm fiend who rides the whirlwind,' and also 'a vile fiend called *penangalan* who takes possession of the forms of women, turns them into witches, and compels them to quit the greater part of their bodies, and fly away at night to gratify a vampire craving for human blood. This is very like one of the ghoul stories in the *Arabian Nights' Entertainments*' (Miss Bird, *The Golden Chersonese*, p. 354).

The other supernatural beings of the Arabs, and now generally of all Muslim peoples—Iblis 'Prince of Darkness,' the afrits, sheitāns, and the whole host of jinns—existed in pre-Muhammadan times, as is evident from Job 1⁶, where הַשָּׂטָן is rendered ὁ διάβολος in LXX and *Satan* in the Vulgate. So universal was the belief in their existence, that they had to be admitted with modifications into the Muhammadan system, which recognizes three created intelligences under Allah—the angels formed of light, the jinns of subtle fire, and man of the dust of the earth. The jinns are commonly supposed to be mischievous goblins hostile to man. Some, no doubt, are wicked elves or demons, whose chief is the fallen angel Iblis. These reside in the lowest firmament, that is, the surrounding air, and haunt the caves, the wells, the woods, the hill-tops, and the wilderness. They have the power of putting on any form they please, but not grosser than the essence fire and smoke, and of thus making themselves visible to mortals. They may even take possession of living people, from whom they have then to be exorcised by charms and incantations. But others bear a good character, and frequent the habitations of man in a friendly way; they are addressed by him in kindly language; and they, too, in virtue of their subtle essence, pervade the solid mass of the earth and the whole space of the firmament. They are also believed to inhabit rivers, wells, ruined houses, ovens, and other places, and in letting down a bucket to a well, or in lighting a fire, the magic formula is pronounced, 'Permission, ye blessed' (Featherman, *Social Hist. of the Races of Mankind*, iv. p. 388). Jaffeer Shurreef, who speaks from personal knowledge, goes so far as to say that the belief of the Indian Muhammadans is that it is not a jinn, but a sheitān, who does evil deeds (*Moosulmans of India*, pp. 324–325). This, however, does not apply to Arabia, where the bad certainly predominate over the good genii, and where the above-quoted 'soft words' may be merely euphemistic. In any case, both classes belong to our second category, inasmuch as they are not of human origin but are directly created by Allah.

In general, witches and magicians, who have the power of assuming strange forms, everywhere infest the air as well as the land and water. In Aurora, Pentecost, and other Melanesian Islands, they fly about disguised as owls, eagles, or even blow-flies, and then they are most dangerous. 'In Lepers' Island the wizards who practise it [the magic art] are believed to have the power of changing their shape. The friends of any one suffering from sickness are always afraid lest the wizard who has caused the disease should come in some form, as of a blow-fly, and strike the patient; they sit with him, therefore, and use counter-charms to guard him, and drive carefully away all flies, lest his enemy should come in that form' (R. H. Codrington, *The Melanesians*, p. 207). This observer mentions the case of Molitavile, a noted magician who turned himself into an eagle, or rather whose soul went out of him, and in this shape flew a long way after a ship which had carried off some natives of Lepers' Island, and in that way was able to tell their relatives what had become of them. He reported that all had fared well except one who had died. 'Long afterwards, when some of those who were then on board returned, they said that he had brought back the truth, one of them by that time had died' (*ib.* p. 208).

In Guiana, not only the sun and moon, but also the wind and storms are deified, or, it would be more correct to say, are 'humanized' by indwelling spirits of an essentially anthropomorphic type. 'On one occasion, during an eclipse of the sun, the Arawak men among whom I happened to be rushed from their houses with loud shouts and yells. They explained that a fight was going on between the sun and moon, and that they shouted to frighten and so part the combatants. In many other countries exactly this proceeding of making a noise to separate the sun-spirit and the moon-spirit, or the sun-god and the moon-god, has been noticed; and it is generally supposed that in such cases a high degree of authority is attributed to these spirits. But I see nothing in this or in anything else which shows that savages distinguish, by attributing greater authority to them, such beings as sun and moon, and very many other natural phenomena, as wind and storms, from men and other animals, plants and other inanimate objects, or from any other being whatsoever. All beings—and under this heading are included all personified natural phenomena—are, in fact, of the same kind, each with a body and a spirit. It is the old story—they differ from each other only in that some are more powerful than others in the mere matter of brute force, and none have any sort of authority over others' (E. im Thurn, *Among the Indians of Guiana*, p. 364). By the Brazilian Botocudos the air is well stocked with spirits, mostly of a malevolent disposition—thunder-gods, storm-gods, and the moon itself, the 'night-fire' (*toru-guenket*), which they look upon as a sort of evil principle. All baneful manifestations are attributed to the moon, which causes the thunder-storm, and is supposed at times itself to fall on the earth, crushing the hill-tops, flooding the plains, and destroying multitudes of people. During storms and eclipses arrows are shot upwards, not, as by the Caribs and Arawaks, to frighten the sun, the 'day-fire' (*toru-shompek*), which for the Botocudos is the beneficent principle of good, but to scare away the demons of the air, just as the Indo-Chinese wild tribes shoot skyward at the devouring dragon trying to swallow both sun and moon in the mid-day darkness (A. H. Keane, 'The Botocudos,' in *JAI*, Nov. 1883).

Among the Eskimos the air, usually reserved for departed souls, is replaced by the surrounding ice-fields as the chief abode of the hosts of wicked trolls and goblins. The Greenlander especially has a superstitious terror of the inland ice-cap. 'It is the home of his evil spirits, his ghosts, his apparitions and shades (*tarajuatsiak*), his trolls (*timersek* and *erkilik*), his ice-men who are supposed to be twice as tall as ordinary people, and a whole host of other supernatural beings' (Brögger and Rolfsen's *Fridtiof Nansen*, p. 130). In pagan times there were numerous *bugalak*, or good genii, whom the Western Greenlanders, since their conversion to Christianity, have degraded to evil spirits now inhabiting the lower regions of the atmosphere and the nether world, while Torngarsuk, the Great Spirit, has become the Christian Satan. Elsewhere the souls of the departed sometimes lead a restless existence in their aërial abodes, and during their hunting expeditions the Alaskan Eskimos often see phantoms gliding over the heights; these are the ghosts of the departed returning to scare or injure their living relatives. The people of the Barrow Point district are much troubled by such apparitions, as also by Kiolya, the demon of the aurora borealis, and by Tunya, the Eskimo Zeus, who, like his classical prototype, reigns in the earth, the water, and the heavens. This is one of those numerous instances of overlapping where it becomes impossible to distinguish clearly between chthonic, celestial, and air gods.

LITERATURE.—There appears to be no work specially devoted to the subject of this article. Hence the references must be to a few of the more important treatises in which incidental mention is made of the gods of the air. Such are—A. B. Cook, 'Zeus, Jupiter, and the Oak,' in *CR*, April 1903; Lucian, ed. Hemsterhuis and H. Williams; Stobæus, *Florilegium*; F. Ratzel, *Hist. of Mankind*, Eng. ed. 3 vols. 1897; H. R. Voth, *The Traditions of the Hopi*, 1905; P. Schellhas, *Deities of the Maya Manuscripts*, 1905; D. G. Brinton, *Annals of the Cakchiquels*, 1885; R. Drury, *Madagascar Journal*, etc., ed. P. Oliver, 1890; S. J. Hickson, *A Naturalist in North Celebes*, 1889; T. Belt, *A Naturalist in Nicaragua*, 1874; Brögger and Rolfsen, *Fridtiof Nansen*, 1896; R. Friedrich, 'Bali' in *Papers relating to Indo-China*, 1887; *Anales del Museo Nacional de Mexico*, 1900–1907; Carey and Tuck, *The Chin Hills*, etc. 1896; H. F. Tozer, *A Hist. of Anc. Geography*, 1897; R. S. Conway, *The Italic Dialects*, 2 vols. 1897; A. Featherman, *Social Hist. of the Races of Mankind*, 7 vols. 1885–1891; R. H. Codrington, *The Melanesians*, 1885; E. im Thurn, *Among the Indians of Guiana*, 1883; A. H. Keane, 'The Botocudos,' in *Man, Past and Present*, 1900; H. Rink, *The Eskimo Tribes*, 1887.

A. H. KEANE.

AIYANAR.—Among the most widely known and popular of the deities of the village, the *grāma-devatā*, of Southern India is Aiyanar, the tutelary god of the fields, who protects the crops from harm and drives off from them by night the evil spirits of blight and ruin. His name and worship seem to be little, if at all, known north of the Deccan. In the south, however, almost every village has its shrine dedicated to Aiyanar, where offerings are presented and prayers made for the safety of the crops from drought and disease. Grouped around the shrine, and near the village, are usually to be found rude models in terra-cotta of horses, often life-size, or more rarely of elephants, on which Aiyanar with his troop of attendants is supposed to ride when in mad career he chases away the demons. The Indian villager avoids approaching the shrine of Aiyanar after dark, lest he should be mistaken for a demon and slain.

The god is represented roughly carved in human form, either seated with crown and sceptre, or on horseback, and is sometimes accompanied by his two wives, Pūraṇī and Pudkalā, who join him in the rout of the evil spirits. He is also propitiated in times of distress or pestilence, when animal sacrifices are offered on rude stone altars in front of the shrine and libations are poured out. The priests who officiate belong invariably to the lowest castes. The clay models of the horses are presented by the villagers in acknowledgment of aid rendered, as thank-offerings for recovery from sickness, or in fulfilment of a vow. Except, however, at harvest-time, there do not seem to be any regular festivals held in his honour, or any definite periods of worship prescribed. Sir Monier Williams' account of his visit to Aiyanar's shrine at Parmagudi, on the road from Madura to Rāmnād, may serve in general as a description which would apply to the majority of the places sacred to the god in Southern India.

> The shrine 'was situated close to a grove of small trees not far from the village. Under a rough stone canopy was a rudely-carved stone male idol. . . . About twenty-five toy-like terra-cotta horses, some as large as life, were ranged on each side. . . . I saw no signs of any recent offerings, nor was a single worshipper of the god to be seen anywhere. I noticed, indeed, that all the shrines of A. had a deserted appearance, the fact being that he is never worshipped, in our sense of the word. He is only propitiated in emergencies. Every year after harvest-time a festival is kept in his honour, when numerous animals are sacrificed, and images of the god are decorated with ornaments, and drawn about through the village streets on the rude clay horses' (*Brāhmanism and Hinduism*[4], p. 219 f.).

The name *Aiyanar* is said to be a combination or corruption of the two names *Hari-Hara*, or Viṣṇu-Śiva; and the god is popularly regarded as the son of Śiva by Viṣṇu, when the latter had assumed a female form. It is more probable, however, that he represents a primitive Dravidian deity, recognized and more or less adopted by the incoming Āryans, and provided with an orthodox parentage. A figure of Ganeśa, one of the other two sons of Śiva, sometimes stands near his shrine. But, unlike his brother, Aiyanar does not seem ever to be invoked in the strict sense of the term, or to have prayers addressed to him for blessing or positive good.

LITERATURE.—Papers on Religious Reform, I. *Popular Hinduism*, Madras, 1887, p. 8 f.; Monier Williams, *Brāhmanism and Hinduism*[4], London, 1891, pp. 209, 218–220, 245; W. Crooke, *Popular Religion and Folk-lore of Northern India*, new edition, 1896, vol. i. pp. 97, 262, quoting from Oppert, 'Original Inhabitants,' p. 505.

A. S. GEDEN.

AJANTA.—Ajanta is the Anglo-Indian form of the native name Ājūṇṭhā, a village and ravine celebrated for its cave temples, situated in N. lat. 20° 32′ 30″, E. long. 75° 48′, near the frontier of the British province of Berār, but within the dominions of the Nizām of Hyderābād. It lies at the head of one of the passes (*ghāṭ*) that lead down from the Indhyādrī hills, dividing the table-land of the Deccan from the British district of Khāndesh in the valley of the Tāptī. The only early reference to the caves is that of the Buddhist pilgrim Hiuen-Tsiang, or as Watters, the latest translator and editor of his journal, transliterates his name, Yüan Chwâng. He writes, speaking of the kingdom of Mo-ha-la-cha (Mahāraṭṭha): 'In the east of this country was a mountain range, ridges one above another in succession, tiers of peaks and sheer summits. Here was a monastery, the base of which was in a dark defile, and its lofty halls were quarried in the cliff and rested on the peak, its tiers of halls and storied terraces had the cliff on their back, and faced the ravine. This monastery had been built by the A-chē-lo (Āchāra [or perhaps rather Achala]) of Western India.' The pilgrim then relates the circumstances in Āchāra's life which led to the building of the monastery. 'Within the establishment,' he adds, 'was a large temple above 100 feet high, in which was a stone image of the Buddha above 70 feet high; the image was surmounted by a tier of seven canopies unattached and unsupported, each canopy separated from the one above it by the space of 3 feet. The walls of this temple had depicted upon them the incidents of the Buddha's career as Bodhisattva, including the circumstances of his attaining Bodhi, and the omens attending his final passing away; all, great and small, were here delineated. Outside the gate of the monastery, on either side north and

south, was a stone elephant, and the pilgrim was informed that the bellowing of these elephants caused earthquakes' (Watters, ii. 239 f.).

Burgess and other authorities believe that this account, dated A.D. 642, refers to the Ajanta caves. Watters admits that this view is probable, but he doubts whether the Achala of the inscription recorded by Burgess is the A-chē-lo of the pilgrim's narrative. This inscription merely states that 'the ascetic Sthavira Achala, who glorified the faith and was grateful, caused to be built a mountain-dwelling for the Teacher, though his wishes were fulfilled.'

The place was visited for the first time by Europeans in 1819, and the earliest account of its monuments, by Alexander, appeared ten years later (*Trans. R. A. S.* 1829). The first scientific survey was made by Fergusson, and appeared in the same journal in 1843. His account of the wall-paintings aroused much interest, and led to an appeal to the Indian Government that careful copies of them should be made. This was done by Major R. Gill; but his drawings, except the five last executed, were unfortunately destroyed in a fire at the Crystal Palace, where they were being exhibited, in 1866. All that remains of his work now seems to be small copies, in Mrs. Spiers' *Ancient India*, of two of his pictures and of eight detached fragments from others. In 1872 the work of copying the frescoes was started afresh by Griffith, and his work, in two splendid volumes, was published by the Secretary of State for India in 1896–97.

The caves are excavated in the face of an almost perpendicular rocky scarp, about 250 feet high, sweeping round in a semicircle, and forming the north side of a wild glen traversed by a small stream, the Vāghur. Above the caves the valley terminates abruptly at a waterfall with seven leaps, the total height being about 200 feet. The site is lonely and picturesque, and, at the same time, close to a main line of ancient traffic, thus combining the three leading characteristics which guided the excavators of the rock caves of Western India in selecting places for their establishments.

The series consists of 24 monasteries (*vihāra*) and 5 temples or meeting-halls (*chaitya*). According to Burgess, who has made a careful survey and compiled an exhaustive report on the caves (*Arch. Survey Reports, W. India*, iv. 43 ff.), the earliest group consists of two Chaitya caves (numbered IX., X., according to Fergusson's plan of the site) and two Vihāras (XI., XII.), all of which were excavated certainly before the commencement of the Christian era. Of the later caves, Burgess forms two groups. Nine (VI., VII., VIII., XV. to XX.) range in date from the 5th to the end of the 6th cent. A.D. The second group (I. to V., XXI. to XXVII.) were all excavated, or at least finished, within the limits of the 7th century. This second, and by far the largest, series belongs to the Mahāyāna school of Buddhism, and can be distinctly marked off from those of the earlier group. Cave No. I. is specially to be noted. Burgess describes it as the most handsomely ornamented Vihāra at Ajanta, or, indeed, in all India, and at the same time it is one of the most modern, having been constructed probably in the beginning of the 7th cent., and not completely finished before A.D. 650.

The most interesting and valuable of the remains at Ajanta are the series of frescoes in the caves. These generally represent passages from the legendary history of Buddha, and from the Jātakas, or stories of the Buddha's former births, the visit of Asita to the infant Buddha, his temptation by Māra and his forces, legends of the Nāgas, or serpent race, hunting scenes, battle pieces, the carrying of the relics to Ceylon, and other incidents in the Buddhist legend. Many of the frescoes represent incidents taken from the Jātakas, of which some twelve have been identified by S. F. Oldenburg (*Journ. American Oriental Society*, xvii. 183 f.; *JRAS*, 1896, p. 324). Of these, perhaps the most important are the Ummadantī Jātaka of king Sibi or Sivi (Cowell's Cambridge trans. v. 107 ff.) and the Chaddanta Jātaka, or tale of the six-tusked elephant (*ib.* v. 20 ff.). A recent discovery in one of these caves has brought to light a picture which depicts the Nidānas, or Causes, in concrete form. This picture, supplemented by Tibetan versions and Lamaistic explanations, is certainly a diagram of human life in the form of the wheel (Waddell, *JRAS*, 1894, p. 367; *Buddhism of Tibet*, 105 ff.). In the mountain scenery of the frescoes are depicted figures of birds and monkeys, and sometimes of Bhīls and other forest tribes, and the fabled inhabitants of the hills—Guhyakas, Kirātas, and Kinnaras, the last of whom are musicians to the mountain gods, with human busts and legs and tails of birds. The whole series of frescoes is of the greatest historical value as illustrating the religious and social life of India between the 3rd and 8th cents. of the Christian era.

All critics have fully recognized the artistic value of these frescoes. 'The condition of mind,' writes Griffith (in Burgess, *Notes*, 4 f.), 'which originated and executed these paintings at Ajanta must have been very similar to that which produced the early Italian paintings of the 14th cent., as we find much that is common to both. Little attention paid to the science of art—a general crowding of figures into a subject; regard being had more to the truthful rendering of a story than to a beautiful rendering of it; not that they discarded beauty, but they did not make it the primary motive for representation. There is a want of aërial perspective, the parts are delicately shaded, not forced by light and shade, giving the whole a look of flatness, a quality to be desired in mural decoration. Whoever were the authors of these paintings, they must have constantly mixed with the world. Scenes of everyday life, such as preparing food, carrying water, buying and selling, processions, hunting scenes, elephant fights, men and women engaged in singing, dancing, and playing on musical instruments. Many are most gracefully, and all most graphically depicted upon these walls; and they could only have been done by men who were constant spectators of such scenes; by men of keen observation and retentive memories.' Of the famous painting of the 'Dying Princess,' in cave XVI., the same authority writes: 'For pathos and sentiment and the unmistakable way of telling its story, this picture, I consider, cannot be surpassed in the history of art. The Florentine could have put better drawing, and the Venetian better colour, but neither could have thrown greater expression into it' (*ib.* 58 f.).

In many of the paintings there is ample evidence of Sasanian or Persian influence. One wall scene (Griffith's drawing No. 5) appears to represent the reception of a Persian embassy at the Court of an Indian king, and, according to Burgess (*ib.* 27), can hardly be earlier than the 7th cent. of our era.

LITERATURE.—The literature dealing with the Ajanta caves and their wall-paintings is very extensive. References to the older accounts of travellers and the comments of critics upon their narratives have been collected by Campbell, *Bombay Gazetteer*, xii. 480, where a good account of the site will be found. The later and better authorities are: J. Burgess, *Notes on the Bauddha Rock-Temples of Ajanta*, Bombay, 1879, in *Archæological Survey of Western India*, No. ix.; J. Fergusson and J. Burgess, *The Cave Temples of India*, London, 1880, pp. 280–347; J. Burgess and Bhagwanlal Indraji, *Inscriptions from the Cave-Temples of Western India*, Bombay, 1881; J. Burgess, *Report on the Cave-Temples and their Inscriptions*, London, 1883; L. A. Waddell, 'Note on the Ajanta Paintings' in *Indian Antiquary*, xxii. 8 ff. The wall-paintings are reproduced by J. Griffiths, *The Paintings in the Buddhist Cave-Temples of Ajanta, Khandesh*, 2 vols., London, 1896–97.

W. CROOKE.

ĀJĪVIKAS.*

[A. F. R. HOERNLE].

1. **Introduction.**—The sacred books, both of the Buddhists (*e.g. A.N.* iii. 276; *Dial.* pp. 71, 220) and the Jains, inform us of the existence, contemporary with the foundation of Buddhism and Jainism, about the end of the 6th cent. B.C., of a community of religious mendicants, whom they call Ājīvikas. From certain Jain Scriptures we further learn that the founder of this community was a man called Gosāla Maṅkhali-putta (Pāli *Makkhali-putta*, Skr. *Maskari-putra*). In the seventh Aṅga (*U.D.* ii. 133), a man, Saddāla-putta, is said to have been received by Gosāla into the Ājīvika community, and the *Bhagavatī Sūtra*, the fifth Aṅga, gives us an account of the life of Gosāla, as the acknowledged head of that community. Though the Buddhist Scriptures (*e.g. M.N.* i. 198, 250, 515; *S.N.* i. 68, iv. 398; *D.N.* i. 52; *Jāt.* v. 246) also frequently mention Gosāla Makkhali-putta as one of the leaders of the six religious mendicant communities whom Buddha singles out for special animadversion, they never explicitly connect him with the Ājīvikas, or state that he was their leader. But that on this point the Buddhist tradition did not really differ from the Jain, is shown by the fact that both attribute to him the holding of the religio-philosophical doctrine of the negation of free will and moral responsibility.

On the exact signification of the name 'Ājīvika' we have no information. The Skr. word *ājīva* means the mode of life, or profession, of any particular class of people, whether they live as 'householders' in the world or, as religious mendicants, have renounced the world. Thus 'right-livelihood' (*samyag-ājīva*) was in the Buddhist system (*Dial.* 221; *B.S.* 147; O.B. 146) one of the eight 'paths' incumbent on the mendicant. The word *ājīvika*, being a derivative of *ājīva*, means one who observes the mode of living appropriate to his class. We shall see in the sequel that there is some ground for believing that Gosāla held peculiar views as to the *ājīva* of a mendicant who was truly liberated from the fetters of *karma*. It was probably for this reason that he and his adherents came to be known as *Ājīvikas*, or the men who held the peculiar doctrine of *ājīva*. All the indications that we have tend to show that, as usual in such cases, the name was not taken by themselves, but given to them by their opponents, and that in their mouth it was meant to be opprobrious. As we shall see, Gosāla, by his conduct, laid himself open to the charge of insincerity, in that he practised religious mendicancy, not as a means of salvation (*mokṣa*), but as a means of gaining a livelihood, as a mere profession (*ājīva*). The name 'Ājīvika,' it appears, was originally meant to stigmatize Gosāla and his followers as 'professionals'; though, no doubt, in later times, when it became the distinctive name of a mendicant Order, it no longer carried that offensive meaning.

2. **Personal History of Gosāla.**—The fifth Aṅga of the Jains, commonly known as the *Bhagavatī Sūtra*, gives us a fairly connected and detailed account of the life of Gosāla (*Bh.S.* xv. 1, tr. in *U.D.* App. 1). According to this account, Gosāla's father was a *maṅkha*, a kind of professional beggar, whose name was Maṅkhali. Hence he was known as the *Maṅkhali-putta* or the son of Maṅkhali. His other name, Gosāla, he received from the circumstance of having been born in a cowshed (*gośālā*), in which his parents, failing to obtain any other refuge during a certain rainy season, had taken shelter. When he grew up, he adopted his father's profession of a *maṅkha*. In the course of his journeyings he repeatedly fell in with Mahāvīra, who, just about that time, had commenced the wandering life of a *Niggantha** ascetic. Seeing the great respect in which Mahāvīra was held by the people, Gosāla determined to attach himself to him. Though at first repulsed, he succeeded at last by his importunity in being accepted as a disciple by Mahāvīra. But the two men were so different in character and temper, that after six years, owing to the insincerity and trickery of Gosāla, the companionship was dissolved. Gosāla now set up as the rival leader of a separate community of religious mendicants, called *Ājīvikas*, and with his followers established his headquarters on the premises of a potter woman in the town of Sāvatthī (Śrāvastī). After the lapse of sixteen years, Mahāvīra, who never in the meantime appears to have met his former companion, happened to visit Sāvatthī, and, hearing of the influence which Gosāla was wielding there, he took occasion to expose the false character of the professing ascetic. On learning this, Gosāla, threatening vengeance, at once proceeded with his followers to where Mahāvīra with his Nigganthas was lodging. Here he began the dispute by putting forward an ingenious argument to prove that Mahāvīra was mistaken in his identity, and that, in reality, he was a totally different person from the Gosāla whom Mahāvīra had once known as his companion. On Mahāvīra contemptuously brushing aside this sophistry, the infuriated Gosāla grossly abused his adversary; and the two rival factions came to blows. In the fight two of Mahāvīra's disciples were disabled, but in the end Gosāla, being discomfited by Mahāvīra in a personal encounter, was compelled to retire in disgrace. The taunts of his rivals, and the consequent distrust of the townspeople, now made Gosāla's position in Sāvatthī untenable. This preyed on his mind so much that it became utterly unhinged, and, throwing aside all ascetic restraint, he gave himself up to drinking, singing, dancing, soliciting the potter woman, and besprinkling himself with the cool muddy water of the potter's shop. Six months of this riotous living brought on his end; and with it came a momentary return of

reason and the sense of remorse. His last act was to acknowledge to his disciples the truth of Mahāvīra's statement respecting himself, and to instruct them to bury him with every mark of dishonour and publicly to proclaim his shame. The disciples, it is added, refrained from carrying out the dying instructions of their master.

Such is the substance of the story of Gosāla's life in the Bhagavatī Sūtra. The Buddhist references to his life are much briefer. Buddhaghoṣa (*c.* 410 A.D.), in his commentary on the Dīgha Nikāya (*S.V.* pp. 143, 144, tr. in *U.D.* App. II.), tells us that Maṅkhali was the name of Gosāla, and that the latter name was given to him because he was born in a cowshed. Having broken an oil vessel through carelessness, and fearing chastisement from his angry master, who had caught him, he broke away, leaving his garments in his master's hands. He fled naked to a village, where the people offered him clothes; but he refused them, hoping to make a better living as a naked *arhat*, or holy man.

The two accounts—so far as we are able to judge—are quite independent of each other. One is Buddhist, the other is Jain; and the Buddhists and Jains, being antagonistic sects, would not adopt each other's views. Moreover, Buddhaghoṣa wrote in Ceylon, while the Jain Scriptures, as we now have them, were composed probably in Western India. All the more valuable are the two accounts, both in respect of the points in which they agree and in which they differ. They agree in two points: first, that Gosāla was born of low parentage in a cowshed, and subsequently took up the profession of a naked religious mendicant; and, secondly, that this profession of his was not sincere, but adopted merely for the sake of getting an idle living. The ground for the belief in Gosāla's insincerity, as will be shown in the sequel, was, according to both the Buddhists and the Jains, that Gosāla not only taught but also practised antinomian doctrines.

The point on which the two accounts differ is the meaning of the name 'Maṅkhali' or 'Maṅkhali-putta.' According to the Jains, Maṅkhali is the name of Gosāla's father, and a derivative from *maṅkha*. According to the Buddhists, it is the name of Gosāla himself. The derivation from *maṅkha* is indefensible. The Prākrit word *maṅkhali* is the equivalent of the Skr. word *maskarin*; but there exists no word *maska*, the equivalent of *maṅkha*. The latter word, in fact, has not been found anywhere but in the passage of the Bhagavatī Sūtra which adduces it as the source of the name Maṅkhali, and it is presumably an invention *ad hoc*. Moreover, the meaning of the hypothetical word *maṅkha* was not certainly known to the old commentators. Thus, while Abhaya Deva (*c.* 1050 A.D.), in his commentary on the Bhagavatī Sūtra, explains it to mean 'a kind of beggar that tries to extract alms from the people by showing them pictures of (malignant) deities which he carries about with him,' Hemachandra (*c.* 1140 A.D.), in his commentary on the Abhidhāna Chintāmaṇi (B. and R. verse 795), says that it is a synonym of the well-known word *magadha*, 'a bard.' The truth, no doubt, is that *maṅkhali-putta* is a formation like *Nāya-putta*, 'a man of the Nāya-clan' (the epithet of Mahāvīra), or *Niggantha-putta*, 'a mendicant of the Niggantha Order.' It describes Gosāla as having originally belonged to the Maṅkhali, or Maskarin, class of religious mendicants. The very early existence of this kind of mendicant in India is proved by the fact that the celebrated grammarian Pāṇini (*c.* 350 B.C.), in his *Grammar* (vi. I, 154), explains the formation of the name. According to him, a Maskarin was so called because he carried in his hand a bamboo staff (*maskara*). On account of this practice of carrying a staff, he was known also as *Eka-daṇḍin*, or a 'one-staff-man.' Patañjali, in his comments on Pāṇini's statement (K.Mah. iii. 96), further explains that this kind of wandering mendicant (*parivrājaka*) was called Maskarin not so much because he carried a staff, as because he professed to have renounced all activities. The reference in these two statements is to the fact that there were two grades of these Maskarins or *Eka-daṇḍins*. In the lower grade, the ascetic carried an actual staff, in addition to a begging bowl and a strip of loin-cloth (*kaṭi-bandhana*). In the higher grade of *Paramahaṁsa*, he abandoned even these three possessions, claiming absolute renunciation as his only staff of reliance (W.I.St. ii. 174-75).

In ancient India, at one time, the tendency appears to have been very prevalent to adopt the life of a homeless wandering ascetic. Often this life was adopted from sincere religious motives; but probably as often it was due to a mere love of vagrancy and dislike of honest work. It was not limited to any particular class of people; but it was probably more prevalent among the lower classes. Among the upper classes (the so-called 'twice-born') the Brahmanic law-givers attempted to regulate it by enacting that the early years should be devoted to education and the middle years to rearing a family and pursuing a profession, while only the declining years might be given up to the ascetic life. It may be doubted whether this wholesome regulation ever was much observed in Indian society; the tendency to devote the whole life to religious mendicancy was too strong among the people. The Maskarin, as a rule, led a solitary life, and the adoption of this manner of life was open to very grave abuses. Hence some men of commanding personality conceived the task of regulating the tendency to the ascetic life, not by checking it, or restricting it to a certain period of life, but by organizing the mendicants into communities governed by strict rules of conduct. Such men were the founders of Buddhism and Jainism. Gosāla, from all accounts, was hardly a man of that stamp. He seems, by natural disposition, to have belonged to the baser sort of Maskarins, who made religious mendicancy a pretext for an idle and self-indulgent life. The existence of this baser sort of mendicants in ancient India is vouched for by a curious piece of folklore. It occurs in the Tittira Jātaka (No. 438 in *Jāt.* iii. 542). The verses occurring in the Buddhist Jātakas embody the most ancient folklore—of a much older date than Buddhism itself. In the 12th and 13th verses of that *Jātaka* a mendicant of the baser sort is described, among other things, as carrying a bamboo staff (*vetāchāra*), which shows that he must have belonged to the class of mendicants who were known as Eka-daṇḍins, or Maskarins. But what gives particular significance to this notice is that the much later commentary identifies that mendicant as an Ājivika It is clear that in the mouth of the Buddhists, 'Ājīvika' was a term of reproach applicable to a Maskarin or Eka-daṇḍin of the baser sort. This seems to explain why it was that both Buddhists and Jains call Gosāla a Maṅkhali, and say that he was a leader of Ājīvikas; and very possibly he was not only himself a Maṅkhali, but also, as the Jains say, the illegitimate son of a Maṅkhali.

It is difficult to determine the motive which induced Gosāla to attach himself to Mahāvīra. It may be that the contact with that religious enthusiast temporarily woke up the better instincts in Gosāla's nature; or it may be that, as the Jain account suggests, he hoped to learn from Mahāvīra more potent 'tricks of his trade.' In the former alternative, his association with Mahāvīra had no permanent effect on him. There seems to be no reason seriously to question the truth of the Jain statement that Gosāla took up his headquarters on the premises of a potter woman. That act of open defiance of one of the strictest rules of religious mendicancy, confirmed as it is by Buddha's well-known abhorrence of Gosāla, throws an informing light on the real character of the man. There is, no doubt, something tragic in the closing scene of Gosāla's life: the open exposure of his shame by Mahāvīra in the face of his own disciples and fellow-townspeople, the consequent mental derangement, and the final momentary remorse. But the feeling of pity will be measured by the view taken of Gosāla's real character.

The Bhagavatī Sūtra (fol. 1250*a*, 1269*a*) states that Mahāvīra survived Gosāla sixteen years. It also states that Gosāla's death was coincident with the great war which King Kuṇiya (Ajātaśatru) of Magadha waged with King Chedaga of Vaiśālī for the possession of an extraordinary elephant (*U.D.*, App. I. p. 7). From these two statements the year of Gosāla's death may be approximately determined. The traditional date of Mahāvīra's death is B.C. 527. This would place Gosāla's death in B.C. 543. But that date is rather too early. The elephant above mentioned was given by King Seniya (Bimbisāra) of Magadha to his younger son Vehalla in disregard of the superior claim of his elder son Kuṇiya. It may be assumed as certain that Kuṇiya only awaited his entrance into the exercise of regal power before commencing the war for the possession of the elephant. Now Seniya made over the throne to his son Kuṇiya some years before the latter

murdered him by a slow course of starvation. This murder happened in the year B.C. 490, or eight years before the death of Buddha, which itself took place, as is now practically certain, in B.C. 482. Mahāvīra died some time, it is not known how long, before Buddha. But Gosāla died sixteen years before Mahāvīra, in the year of the war, and that war must have taken place in the year of Kuṇiya's accession to regal power, and that accession cannot well be placed at a very long interval before the murder of Seṇiya. All these conditions are best satisfied by assuming that Mahāvīra died in B.C. 484, two years earlier than Buddha, and that consequently the death of Gosāla and the war took place in B.C. 500, sixteen years before the death of Mahāvīra, and ten years before the murder of Seṇiya. Accordingly that year, B.C. 500, may be taken as the approximate date of the death of Gosāla.

3. Doctrines and practices of Gosāla.—Neither Gosāla nor any of his Ājīvika followers has left us any record of their doctrines and practices. Accordingly we are reduced to the necessity of forming our opinion on those two points from the occasional references to them in the records of their rivals, the Buddhists and Jains. Their statements must, of course, be accepted with some caution; but their general trustworthiness is guaranteed by their agreement in all essential points. This agreement possesses all the more value, as the statements, coming from two mutually hostile sects, constitute two independent sources of information.

In the Buddhist Majjhima Nikāya (i. 514ff., N.R. ii. 284) there occurs a very instructive statement. Buddha is represented as dividing the ascetic systems which differed from his own into eight classes. Four of these he condemns as 'living in incontinency' (*abrahma-charya-vāsa*); of the four others he says only that they are 'unsatisfying' (*anassāsika*). Among the latter he classes the system of Mahāvīra, while among the former he places the system of Gosāla. The distinction is clear. Buddha objected to Gosāla on ethical grounds—for holding principles theoretically and practically immoral. His system, indeed, he conceived to be the most mischievous (*A.N.* i. 286; O.B. 82, 199; *Dial.* 71), and its author he stigmatized as 'the bad man' (*mogha-purisa*), who, like a fisherman, caught men merely to destroy them.

The fundamental thesis of the system of Gosāla is stated, in the Buddhist and Jain Scriptures alike, in slightly varying but substantially identical phraseology. The Jain Uvāsaga Dasāo (i. 97, 115, ii. 111, 132) gives it as follows: 'There is no such thing as exertion or labour, or power, or energy, or human strength; all things are unalterably fixed' (cf. *S.N.* iii. 210; *A.N.* i. 286). In the Buddhist Dīgha Nikāya (p. 53; *Dial.* 71) the pith of Gosāla's system is more fully stated as follows:

'There is no cause, either proximate or remote, for the depravity of beings; they become depraved without reason or cause. There is no cause, either proximate or remote, for the purity of beings; they become pure without reason or cause. Nothing depends either on one's own efforts or on the efforts of others; in short, nothing depends on any human effort, for there is no such thing as power or energy, or human exertion or human strength. Everything that thinks (*i.e.* the higher animals), everything that has senses (*i.e.* the lower animals), everything that is procreated (*i.e.* all animals), everything that lives (*i.e.* all plants), is destitute of force, power, or energy. Their varying conditions, at any time, are due to fate, to their environment, and their own nature; and it is in accordance with their position in one or other of the six classes (see below, p. 262a) that men experience ease or pain.'

How this system, in its theoretical aspect, was worked out in detail, we do not know. The Buddhist and Jain Scriptures give us no further information. It is evident, however, that, in principle, it was a thorough-going kind of determinism, denying the free will of man and his moral responsibility for any so-called good and evil. It is equally obvious that, if carried out in practice, the principle would be most mischievous. Both the Buddhists and the Jains agree that Gosāla did carry his principle into practice. Buddha, as before stated, charged him with incontinency. Mahāvīra is equally emphatic. He accuses him of teaching that 'an ascetic commits no sin if he has intercourse with women' (*J.S.* ii. 411). He charges his followers with being 'the slaves of women' (*ib.* ii. 270), and says that 'they do not lead a life of chastity' (*ib.* ii. 245). To this charge Gosāla laid himself open by his own action in choosing for his headquarters the premises of a woman.

From the fact that the Jain Scriptures maintain that originally Gosāla was a disciple (*śiṣya*) of Mahāvīra, it would appear that, beyond his determinism with its practical application, there was, in the main, no difference between his doctrines and those of Mahāvīra. This conclusion is also suggested by the statement of the Jain Bhagavatī Sūtra (*U.D.*, App. I. p. 4), that Gosāla's system was 'taken from the eight Mahānimittas, a portion of the Puvvas.' These Puvvas (*Pūrvas*), or 'Originals,' were believed to be the original sacred texts taught by Mahāvīra himself to his disciples (*IA* xvii. 280, xx. 170, 171). The general identity of Gosāla's system with that of Mahāvīra is further confirmed by a curious scheme of classification of 'all beings' (*sarva-sattva*), which in the Buddhist Dīgha Nikāya (p. 54; *Dial.* 72) is attributed to Gosāla. The extreme conciseness with which the scheme is stated makes it very difficult to understand it, and to compare it effectively with the system of Mahāvīra as set forth at large in the Jain Scriptures. But two important particulars can be definitely identified which are specially claimed by the Jains as doctrines of Mahāvīra.

In this connexion it is worth noting that the very same scheme, with the exception of Gosāla's concluding moral, is, in the Buddhist Majjhima Nikāya (*M.N.* i. 517, N.R. ii. 289) and Saṁyutta Nikāya (*S.N.* iii. 211, 212), attributed to the religious mendicant Pakudha Kachchāyana, and in the Tibetan Dulva (R L.B. p. 103) to the religious mendicant Ajita Kesa-kambala. These two men, together with Gosāla Maṅkhali-putta, belonged to that group of six mendicant leaders whom Buddha often prominently names as his rivals. The other three were Mahāvīra Nātaputta, the leader of the Niggaṇṭhas, Pūraṇa Kassapa, and Sañjaya Belatthiputta. It would appear, therefore, that that classificatory scheme was in reality common to all the six mendicant leaders, but that each gave to it an application peculiar to himself. In the case of Gosāla the application took the determinist line; and this, indeed, is explicitly suggested by the determinist moral appended to the scheme in the Dīgha Nikāya. With regard to one item of the scheme,—that which refers to the 'conscious soul' (*saññī*, Skr. *saṁjñī*)—its general agreement, with differences in detail, is directly affirmed by the Buddhist Scriptures. In the Majjhima Nikāya (iv 398), as explained in the Dīgha Nikāya (p. 31; *Dial.* 44, 46), it is stated that all the six mendicant leaders alike taught, in opposition to Buddha, that the conscious soul continues to exist after death, though they differed among themselves as to the exact mode of existence. Gosāla is said (by Buddhaghoṣa) to have held that the soul 'had form' (*rūpī*), while Mahāvīra held that it was 'formless' (*arūpī*), but what these terms exactly imported we do not know.

The scheme of classification itself is as follows (*D.N.* 54; *Dial.* 72; cf. *U.D.*, App. II. pp. 17-29): 'There are 1,400,000 principal sorts of birth, and again 6000 (or 60,000 according to the Dulva, R.L.B. p. 103) others, and again 600. There are 500 sorts of *karma*, and again 5 (according to the 5 senses), and again 3 (according to act, word, and thought); and there is a whole *karma* and a half *karma* (the whole being a *karma* of act or word, the half a *karma* of thought). There are 62 modes of conduct, 62 periods, 6 classes (*abhijāti*) among men, 8 stages of a man's life, 4900 sorts of livelihood (*ājīva*), 4900 sorts of wandering mendicants, 4900 regions inhabited by Nāgas, 2000 faculties, 3000 purgatories, 36 dust depositories, 7 productions from conscious souls (*saññī*), 7 from unconscious beings, and 7 from parts between two joints (*e.g.* of sugar-cane), 7 sorts of devas, 7 of men, 7 of *paiśāchas* (goblins), 7 of lakes, 7 large and 700 minor precipices, 7 important and 700 unimportant

dreams. There are 8,400,000 great periods during which both fools and wise alike, wandering in transmigration, shall at last make an end of pain.' To this scheme Gosāla is represented as appending his own determinist warning: 'Though the wise should hope that by some particular virtue or performance of duty or penance or righteousness he may make mature the (inherited) *karma*, that is not yet mature, or though the fool should hope by the same means to get rid of *karma* that has matured, neither of them can do it. The ease and pain, measured out as it were with a measure, cannot be altered in the course of transmigration; there can be neither increase nor decrease thereof, neither excess nor deficiency. Just as a ball of string, when it is cast forth, will spread out just as far as and no farther than it can unwind, so both fools and wise alike, wandering in transmigration exactly for the allotted term, shall then, and only then, make an end of pain.'

The two items in the foregoing scheme which can definitely be identified in the Jain system are —(1) the division of all living beings into those possessing one, two, three, four, or five senses, which is fully set out in the Jain *Uttarādhyayana Sūtra* (*J.S.* ii. 213, 219; also *ib.* i. 3, footnote 2); and (2) the division of mankind into six classes (*abhijāti*). The latter division, as held by Gosāla, is explained by Buddhaghoṣa in his commentary on the Buddhist *Dīgha Nikāya* (*S.V.* 162, tr. in *U.D.*, App. II. p. 21). According to his account, Gosāla distinguished the six classes by six colours—black, blue, red, yellow, white, and supremely white. The black class were the hunters, butchers, murderers, thieves, in short, all evil-doers. The blue were the mendicants known as Bhikṣu, that is, the Buddhist monks. The red were the mendicants known as Niggantha, who wore (at least) a strip of loin-cloth. The yellow were the lay adherents of the mendicants known as Achelaka, that is, those mendicants who wore no clothing whatsoever. The white were the mendicants, male as well as female, who were known as the Ājīvikas. The supremely white were the leaders of the latter: Nanda Vachchha, Kissa Saṅkichcha, and Gosāla Maṅkhali-putta.

In Mahāvīra's system, the six classes, which he termed *leśyā*, were also distinguished by a series of six colours differing but slightly—black, blue, grey, red, yellow, and white (*J.S.* ii. 196). In the interpretation of these colours, the two systems, on the first view, seem to differ considerably; but the underlying principle is, on closer inspection, seen to be the same. According to Mahāvīra, the black are those who injure living beings, *i.e.* those who contravene the first of the five vows of the Law (*ahiṁsā*). The blue are those who indulge their greed or their passions, *i.e.* those who contravene the fourth and fifth of the vows (*akiñchana* and *brahma-charya*). The grey are those who are deceitful and thieving, *i.e.* those who contravene the second and third of the vows (*satya* and *asteya*). The red are those who strive to control themselves so as to keep the law, *i.e.* the lay adherents. The yellow are those who are firm in controlling themselves, *i.e.* the 'professed' mendicants. The white are those who have attained absolute self-control, *i.e.* the so-called *Jina-kalpika*, like Mahāvira himself (*J.S.* ii. 199, 200). Gosāla's interpretation is practically the same, with the exception that he illustrates his meaning by quoting types. Thus for him the Buddhists, or Bhikṣus, are the type of the blue class; for among their rivals the Buddhists had the reputation of being 'the preachers of ease' (*sāta-vādin*) who favoured 'the way of comfort' (*puṣṭi-mārga*, *J.S.* ii. 269, footnote 3; and *V.O.J.* iii. 332, footnote 2). The Nigganthas were the type of the red class; for they were superior to the Buddhists in renouncing comfort, but inferior to the Ājīvikas in adhering to a loin-cloth. The lay adherents of himself, the Achelaka, or 'totally naked' leader, were the type of the yellow (or Mahāvīra's red) class. The 'professed' adherents of himself, the so-called Ajīvikas, who apparently also walked totally naked, were the type of the white (or Mahāvīra's yellow) class. He himself, and other leaders, who walked totally naked, were the type of the supremely white class. In this connexion it is interesting to note that Buddhaghoṣa's interpretation of Gosāla's classification is based on the Aṅguttara Nikāya (iii. 383), where, however, it is attributed to the mendicant leader Pūraṇa Kassapa. If this is not a mere textual error, it confirms the observation already made that the classificatory scheme was common to all the six prominent rivals of Buddha (cf. *Mahābhārata*, xii. 280, v. 33 ff.).

It has already been stated (above, p. 261[b]) that, in the main, there was no doctrinal difference between Gosāla and Mahāvīra. There was, however, one point on which, according to the Jain tradition, there was a marked difference between them. They both accepted the so-called *Puvvas*, or Original Sayings. These were, later on, embodied in the *Dṛṣṭivāda*, or the twelfth Aṅga of the Jains. The first portion of this Aṅga is said to have explained 'the preparations necessary to grasp the meaning of Mahāvīra's system correctly' (*IA* xx. 173). With respect to this preparatory discipline (*parikamma*) we are told that some counted six, while others counted seven groups. The former count was that of the orthodox Jains, while the latter belonged to certain schismatics, called Ājīvikas or Terāsiyas, that is, as Abhayadeva (*c.* 1050 A.D.) explains, to the sect (*pāsaṇḍa*) founded by Gosāla. These men had their name *terāsiya* (Skr. *trairāśika*) from their practice of treating everything under three aspects (*tray-ātmaka*)—assertion, negation, and indifference. Thus they would say, *e.g.* that a thing may be true, or untrue, or partake of both while being neither (*sat*, *asat*, *sad-asat*). This tenet, technically known as the *syādvāda*, or the 'it may be' principle, is distinctive of the Jains generally. It follows that the Terāsiyas must have made use of it in some special way, and that this special way constituted their seventh group of preparatory discipline (*parikamma*). It may further be surmised that this seventh group was concerned with the *ājīva*, or 'profession' of men; and that for this reason the Terāsiyas had received their alternative name of Ājīvikas, or 'Professionals.' The substance of their teaching on this head is explained by Śīlāṅka (*c.* 876 A.D.) to have been that, besides the two states of man (admitted by Mahāvīra), in which he was 'bound' by *karma*, and in which he was 'liberated' from *karma*, there was a third state in which he was neither truly bound nor truly liberated (*J.S.* ii. 245, footnote 2). The men of the 'bound' state were those who lived in the world. To the intermediate state belonged those who had renounced the world (like Mahāvīra); but these men, owing to their spiritual arrogance, were not truly liberated; they had yet to pass through an innumerable series of transmigrations before they could reach that state of true liberation from *karma* which Gosāla claimed himself to have attained. In the Bhagavatī Sūtra (fols. 1237–1252; R.L.B. p. 253; *U.D.*, App. II. p. 18; see also *Dial.* 72) the latter is represented as himself explaining his theory of transmigration.

'According to my doctrine,' he says, 'all those who have become, or are now becoming, or will hereafter become, perfected, have to finish 8,400,000 great periods (*mahākalpa*), during which they have to be born, in regular alternation, seven times as a deva in a firmament (*saṁjūhā*) and seven times as a 'conscious being' (*saṇṇigabbha*, man) on earth, finishing up with seven reanimations in seven different bodies; and having, in the course of these re-births, rid themselves of the effects of the five sorts of *karma*, and of the three sorts of *karma*, and of the fraction of a *karma* (see above, p. 261[b]) in the proportion, respectively, of 100,000 and 60,000 and 600 (of the 8,400,000 great periods) they attain final perfection.'

To give an idea of the immeasurable length of time involved in this process, Gosāla adds:

'The bed of the river Gangea measures 500 *yojanas* in length, half a *yojana* in breadth, and 50 *dhanu* in depth (a *yojana* = 4½ miles, a *dhanu* = 6 feet). Taking a series of seven Ganges rivers of which each succeeding has seven times the dimensions of the preceding, the last of the series is equal to 117,649 Ganges rivers. If now every hundred years one grain of sand be removed, the time required to exhaust the whole of the sand of those seven Ganges rivers would be one *saras* period; and 300,000 of such *saras* periods make one *mahākalpa*, or great period' (*U.D.*, App. II. p. 27, footnote 21).

In the course of its last conscious existence on earth, the soul has to pass through seven changes of body by re-animation; that is to say, the soul successively passes into, and thus re-animates, the

dead body of seven different persons. In his own case, Gosāla explains, he left near the town of Rājagiha the body of Udāī Kuṇḍiyāyanīya (when the latter died), and passed into the (dead) body of Enejjaga, re-animating it for the space of 22 years. When the latter died, he passed into and re-animated the body of Mallarāma for 21 years. Similarly, he re-animated in succession the four dead bodies of Maṇḍiya, Roha, Bhāraddāī, and Ajjuṇaga Goyamaputta for the space of 20, 19, 18, and 17 years respectively. 'Finally,' Gosāla continues, 'with the seventh change I left in Sāvatthī, on the premises of the potter woman, the body of Ajjuṇaga, and entered that of Gosāla Maṅkhali-putta for the space of 16 years. So I have fulfilled the seven changes in the course of 133 years, according to my doctrine.'

This insistence by Gosāla on the theory of re-animation being his own doctrine is of particular importance. It is one of those theories which Jain tradition states to have been quite peculiar to Gosāla, and to have originated in connexion with certain incidents in his life. It is clearly a somewhat incongruous supplement made by Gosāla to his general theory of transmigration. It must have been added for a particular purpose. What that purpose was is practically admitted by Gosāla himself. It was to refute Mahāvīra's aspersions on his character. In the Bhagavatī Sūtra (fol. 1237; *U.D.*, App. I. p. 5) we are informed that, in his last encounter with Mahāvīra in Sāvatthī, Gosāla said to him:

'You have called me your pupil, but that pupil of yours, Gosāla Maṅkhali-putta, is long since dead and re-born in the world of Devas, while I, who am really Udāī Kuṇḍiyāyanīya, have only in the seventh of the changes of body entered into the re-animated body of Gosāla, which body I am still retaining.'

This repudiation of identity certainly seems to suggest that the dissolution of the early companionship of the two men had taken place not so much by reason of a mere theoretical difference in doctrine, as on the ground of some course of conduct which was regarded by Mahāvīra, as well as by the people generally, as discreditable and unworthy of an ascetic.

Though the theory of re-animation was employed by Gosāla for the purpose of repudiating his identity, the incident which suggested it to him occurred, according to the Bhagavatī Sūtra (fol. 1214 ff.; *U.D.*, App. I. p. 3), at an earlier time, when Gosāla was still associated with Mahāvīra.

Once, while wandering together from Siddhatthagāma to Kummagāma, the two men passed a large sesame shrub in full bloom. Seeing it, Gosāla asked Mahāvīra whether or not the shrub would perish, and where its seeds would reappear. Mahāvīra replied that the shrub would perish, but that seeds would form in seed-vessels of the same shrub. Gosāla would not believe it; so, thinking to prove him a liar, he quietly returned to the shrub, tore it up by the roots, and threw it away. As chance would have it, just then a shower of rain fell. In consequence of it, the shrub was able again to take root; and so the seeds after all formed in its seed-vessels. In the meantime the two men had passed on to Kummagāma. On their return some time afterwards they passed the identical sesame shrub; and seeing it, Gosāla reminded Mahāvīra of his prophecy, adding that it was clear that the shrub had not died, and that the seeds had not formed. Mahāvīra replied that his prophecy had come true; for the shrub had perished, seeing that Gosāla himself had pulled it out by the roots and thrown it away, but that owing to a timely fall of rain the shrub had come to life again, and the seeds had formed in the seed-vessels. He added that similarly all plants were capable of re-animation. Still Gosāla would not believe it, and went up to the plant to examine its seed-vessel; but finding, on opening it, that Mahāvīra had been correct, he drew the further conclusion that not only plants but in fact all living beings (*jīva*, 'souls') were capable of re-animation. To this generalization of the theory of re-animation, however, Mahāvīra would not assent.

In this connexion another doctrine may be mentioned which is stated in the Bhagavatī Sūtra (fols. 1254, 1255; *U.D.*, App. I. p. 7) to have been quite peculiar to the Ājīvika followers of Gosāla. It was known as 'the Eight Finalities' (*aṭṭha charamāiṁ*), that is, the doctrine of the last drink, the last song, the last dance, the last solicitation, the last tornado, the last sprinkling elephant, the last fight with big stones as missiles, and the last Tirthāṅkara, viz. Maṅkhali-putta himself. The incidents which gave rise to this doctrine are those which attended the closing days of Gosāla's life. The first four were his last personal acts as related already in the story of his life (above, p. 259 f.). The next three are said to have been remarkable events which happened just about the time of Gosāla's death. The tornado refers to one of those fierce cyclonic storms, accompanied with torrential rain, which still occasionally visit Bengal, but which are almost unknown in other parts of Northern India. The 'sprinkling elephant' is said to have been a huge creature which had been trained to amuse the ladies of the royal harem when they bathed in the river Ganges, and the claim to the possession of which, as has already been related, occasioned a war between the kings of Magadha and Vaiśālī. In this war those stone missiles are said to have been employed (*N.S.* § 17 ff.) which evidently must have been thrown by some kind of powerful catapult. The *raison d'être* of this curious doctrine, no doubt, is that the dubious death of their master was felt by his disciples to require investment with some kind of rehabilitating glamour.

The incidents attending Gosāla's death gave rise to another peculiar doctrine, reported in the Bhagavatī Sūtra (fol. 1255 ff.; *U.D.*, App. I. pp. 8, 9). In the heat of his feverish excitement, Gosāla is said to have held a mango in his hand, and to have wetted himself with the muddy water which is always present on a potter's premises. This action is said to have suggested the doctrine of 'the Four Potables and the Four Impotables' (*chattāri pāṇagāiṁ, chattāri apāṇagāiṁ*), that is, the four things that may be used as drinks, and the four things that may be touched, but may not be drunk. The former refer to what is excreted by the cow, what is soiled by the hand (*e.g.* water in a potter's vessel), what is heated by the sun, and what drips from a rock. The latter refer to such things as water-jars, mangos, beans, etc.

With regard to the practices of the Ājīvikas, we have an instructive statement in the Buddhist Majjhima Nikāya. In the 36th chapter (*M.N.* i. 238; N.R. i. 376), Sachchaka, a member of the Niggantha community, is represented as explaining to Buddha the practices observed among the adherents of Gosāla Maṅkhali-putta and his friends Nanda Vachchha and Kissa Saṅkichcha. These three men, as we have seen (above, p. 262[a], also below, p. 267[a]), were the leaders of the Ājīvikas. Respecting them and their adherents, Sachchaka says:

'They discard all clothing (*achelaka*); they dispense with all decent habits (*muttāchāra*); they lick their food out of their hands (*hatthāpalekhaṇa*, p. 265[a]); they listen to no call to come or wait for food; they permit no food to be brought to them, or to be specially prepared for them, or to be received by them on invitation; they accept no food from the mouth of the pot or pan in which it is cooked, nor food placed within the threshold or among the firewood or among the pestles, nor food from a couple eating together, or from a woman with child, or a woman giving suck, or a woman in intercourse with a man; nor food which is reduced (in times of drought), or when a dog is standing by, or where flies are swarming round; they will not eat fish or flesh, nor drink liquor made from rice or the flowers of *Woodfordia floribunda*, nor sour gruel made of unhusked barley; some of them beg only at one house and accept but one handful of food, others beg at two houses and accept two handfuls, others beg at seven houses and accept seven handfuls; some subsist on one gift of food, others on two, others on seven; some take food only once a day, others only once every two days, others only once every seven days, others only once every half-month; in this manner they observe various routines of fasting.'

In the Dīgha Nikāya (p. 166; *Dial.* 227) this account of the Ājīvika practices is placed in the mouth of a naked ascetic

(*achelaka*) Kassapa. This may refer to the mendicant leader Pūraṇa Kassapa (above, p. 261b), one of the six rivals of Buddha; and it may indicate that the practices in question were more or less common to all those six rival communities of religious mendicants, thus confirming what has already been said with regard to their common doctrines. In any case, with respect to Mahāvīra and his Niggaṇṭhas, the identity of several of their observances with those of the Ājīvikas has been pointed out by Professor Jacobi in his Introduction to the Jaina *Uttarādhyayana* (*J.S.* ü. p. xxxi).

Another point is worth noticing in connexion with Sachchaka's statement of the Ājīvika practices. When he had finished it, Buddha inquired whether the Ājīvikas were really able to sustain life on such conditions, and Sachchaka contemptuously replied that, of course, at other times they indulged in copious and excellent food and drink, and thus regained bodily vigour and grew fat. This remark is significant of the repute in which the sincerity of Gosāla and his Ājīvikas was held by their contemporaries. It only serves to confirm the suspicion of Gosāla's insincerity on the far more serious point of sexual conduct, which, there is good reason to believe, caused the rupture between him and Mahāvīra.

From the way the Terāsiyas, or Ājīvikas, with their peculiar doctrine respecting the seventh group of preparatory discipline (above, p. 262b), are spoken of, it is clear that they were not regarded as outside the pale of the Niggantha community. Their doctrine might not be acceptable to the majority, it might even be schismatic, but it was not condemned as heretical. It might cause friction between its propounder, Gosāla, and his associate, Mahāvīra, who rejected it; but it would not have caused that total separation and intense hostility which we see taking the place of the early association of the two men. For this change clearly there must have existed a special cause not essentially connected with the Terāsiya or Ājīvika doctrine. What this cause was we are nowhere explicitly told. The Buddhists are silent on the point. Buddha, we know, disliked Gosāla, but he had never been in personal touch with him, and the quarrel of Gosāla with Mahāvīra did not greatly interest him or the Buddhists. It was different with Mahāvīra. In the earlier years of their ascetic life he and Gosāla had been associates. The subsequent difference and total separation could not but be a matter of importance to the Jains. Yet even in their Scriptures—so far as we know them at present—no explicit statement of the cause or reason of the separation is recorded. We are left to draw conclusions from some indirect indications; nor are these at all obscure in their suggestiveness. The reported choice of Gosāla's headquarters on the premises of a woman, and his attempt to repudiate his identity, clearly point to, not a doctrinal, but a practical ground of separation, to some discreditable feature in the conduct of Gosāla. What this feature was is plainly enough indicated in the Sūtra-kṛtāṅga (*J.S.* ii. 245). Answering the contention of Gosāla (above, p. 262), that men who, like Mahāvīra, had renounced the world belonged to the intermediate state, and were still liable to be involved in *karma*, just as clarified water again becomes defiled, while he, Gosāla himself, had reached the state of perfect liberation, Mahāvīra points to the conduct of Gosāla and his followers: 'These men do not lead a life of chastity.' That fact, he means to say, should be enough to satisfy 'a wise man' as to the truth, or otherwise, of Gosāla's contention. In this connexion it may be noted that, in the Bhagavatī Sūtra (fols. 1275–1291; *U.D.*, App. I. pp. 11–14), Mahāvīra is represented as ironically applying to Gosāla his own doctrine of transmigrations, and showing how Gosāla, instead of being in the state of true liberation, had after his death to pass through an interminable transmigratory series, the several steps of which he specifies, before he really attained perfection.

There is, however, a passage in the Sūtra-kṛtāṅga which is even more explicit in its suggestiveness. It records (*J.S.* ii. 409–413) a disputation which Ārdraka, a follower of Mahāvīra, held with Gosāla respecting the points on which the latter differed from Mahāvīra. These are, first, a charge of inconsistency against Mahāvīra, that he at first wandered about as a single monk, but afterwards surrounded himself with many monks; secondly, a charge of misplaced severity, that he insisted on four restrictions which Gosāla rejected; thirdly, a charge of spiritual arrogance as well as spiritual cowardice. The four restrictions refer to:

(1) Drinking of cold water.
(2) Eating of (unboiled) seeds.
(3) Accepting things specially prepared.
(4) Having intercourse with women.

Mahāvīra forbade these actions as sinful, but Gosāla maintained that an ascetic committed no sin in doing them. The same four restrictions are mentioned in another place of the same Sūtra-kṛtāṅga (*J.S.* ii. 267), though with a notable difference. Here they run as follows:

(1) Drinking cold water.
(2) Eating (unboiled) seeds.
(3) Accepting things specially prepared.
(4) Serving a sick brother with food brought to him in the vessel of a householder.

The ethical item of sexual intercourse is here replaced by the ceremonial item of eating from the vessel of a lay adherent. The significance of this difference will be explained in the sequel (p. 267a). At this point it is important to notice only that none of the matters in dispute is concerned with doctrine; they are all concerned with conduct.

Considering that it was the conduct of religious ascetics that was in question, the most striking point in dispute is that respecting sexual intercourse. To understand the position, we must remember that Pārśva, the precursor of Mahāvīra, had enjoined only four vows (*vrata*) on his followers (*J.S.* ii. 121). These were—(1) not to injure life (*ahiṁsā*), (2) to speak the truth (*sūṇṛtā* or *satya*), (3) not to steal (*asteya*), (4) not to own property (*aparigraha* or *akiñchana*). That is, Pārśva enjoined the vows of kindness, truth, honesty, and poverty. To these Mahāvīra added the fifth vow of chastity (*brahma-charya*, *ib.* ü. 91, 109, 139, 204). His reason for making this addition is explained in the Uttarādhyayana Sūtra (*ib.* ii. 122, 123). Before Mahāvīra it had been understood that chastity was implicitly enjoined by the other vows; but in reality they left a loop-hole. The wife being accounted a species of property, marriage was forbidden by the vow of poverty, and adultery by the vow of honesty; but the case of fornication was left open. On this specious ground, laxity of morals crept in among the intellectually or morally weaker members of the Niggantha community founded by Pārśva. Mahāvīra's fifth vow of chastity was designed to reform that evil. On this point he encountered the opposition of his associate, Gosāla. The latter sympathized with the lax party; and he appears to have justified his own and their laxity of morals by the double argument that the truly 'liberated' ascetic could commit no sin, and that, as there was no free will, there was no moral responsibility. Indeed, there is good ground for believing that it was this very laxity of conduct on the part of Gosāla that gave the occasion to Mahāvīra to introduce the fifth vow, and thus to force the withdrawal of Gosāla. It will be noticed that the two statements of the four restrictions, above quoted, have the first three restrictions in common, while they vary with respect to the fourth. This points to something peculiar in those three restrictions. Now, in one place of the Sūtra-kṛtāṅga (*J.S.* ü. 313) these particular three restrictions (regarding cold water, seed, and non-acceptance of specially prepared food) alone are mentioned, and in the Āchārāṅga Sūtra (*J.S.* i. 63) we find Mahāvīra described as 'the wise man who enjoined three restrictions' (*yāmā tiṇṇi**). On the other hand, in the Buddhist Dīgha Nikāya (p. 57; *Dial.* 74), Mahāvīra is made to describe himself as 'the man of four restrictions' (*chatur-yāma*). The explanation of this discrepancy which suggests itself is that Mahāvīra originally enjoined only three restrictions on his followers, and that he added the fourth at a later time when he quarrelled with Gosāla. This fourth restriction respecting intercourse with women is, in fact, identical with Mahāvīra's fifth vow of chastity, which, as has already been remarked, is an addition made by him to the four vows of Pārśva. If the surmise is correct that it was Gosāla who provided the occasion for the institution of the fourth restriction (*yāma*), that is to say, the fifth vow (*vrata*) of Mahāvīra's system, it goes a long way to prove that it was Gosāla's laxity

* In *J.S.* i. 63 the phrase is wrongly translated by 'three vows,' following herein the commentators; but *vrata*, 'vow,' is something different from *yāma*, 'restriction.'

of morals that was the real cause of Mahāvīra's separation from him. Speaking on the ascetic's duty to avoid intercourse with women, Mahāvīra is represented in the Sūtra-kṛtāṅga (*J.S.* ii. 273) as saying concerning Gosāla: 'In the assembly of the monks he pronounces holy words, yet secretly he commits sin; but the wise know him to be a deceiver and great rogue.' It was Gosāla's hypocrisy in the matter of sexual conduct that caused the breach between him and Mahāvīra.

This, then, was the main cause; but, no doubt, there were other subsidiary causes which exacerbated the friction between the two men. They had reference to the three restrictions regarding the use of cold water and unboiled seeds, and the acceptance of specially prepared food. In order to realize the significance of these seemingly trivial matters, we must remember that among all Indian ascetics abstention from action (*karma*) was held to be the paramount rule of conduct, because *karma* bound the soul in the cycle of transmigrations. But to this rule there was one exception: seeing that without the body one cannot go through the whole of the discipline which secures salvation (*mokṣa, nirvāṇa*), such actions as are necessary for the preservation of the body (*dharm-ādhāra-śarīra-rakṣanāya* in the commentary to *S.K.* ii. 6, § 7, in *J.S.* ii. 411), *e.g.* the begging and eating of food, are innocuous and do not operate as a fetter (*karma-bandha*; see Bh. Rep. pp. 94, 99). Every vow (*vrata*) or restriction (*yāma*) taken on himself by the ascetic was considered tacitly subject to that rule and its exception. The differences among the ascetics arose when it came to the practical application of this tacit reference. Thus, while all agreed that storing food was forbidden, but that begging one's daily allowance of food was permitted, some ascetics qualified that permission by certain restrictions (*yāma*). Mahāvīra forbade the use of cold water and of seeds in their natural state, lest injury should be done to any 'life' (*jīva*) in either; both should be used only after boiling, or other safeguarding process. He also forbade the acceptance of any food specially prepared for the mendicant, lest the privilege of begging should degenerate into indulgence. Gosāla, on the other hand, rejected these three restrictions.

Again, while all ascetics were agreed that besides the body the ascetic should own no other possessions, Mahāvīra permitted the possession of a bowl for the reception of the begged food. Gosāla denied the justice of this permission, because the ascetic could and should make use of his hand for that purpose (cf. *J.S.* i. 57, footnote 2, and ii. 267, footnote 2). The food should be received into the bowl made by the palms of the joined hands, and out of this natural bowl it should be licked up. Hence ascetics of this stricter observance were known as the 'hand-lickers' (*hatthāpalekhana, D.N.* 166; *Dial.* 227). If food, however, was required for a sick monk, it was to be carried to him in the vessel of the householder. Mahāvīra objected to this practice as open to the risk of injury to any 'life' that might be in the householder's vessel (*J.S.* ii. 303).

In this connexion the treatment of the question of clothing may be mentioned. Some ascetics (like Pārśva) permitted the use of wrappers; others permitted only the irreducible minimum of a pudic cover (*kaṭi-bandhana*); while, again, others went about absolutely naked. To the second class appear to have belonged the Nigganthas, or the immediate followers of Mahāvīra (*J.S.* i. 73), who, accordingly, are called by Gosāla the 'one-strip men' (*eka-sāṭaka*), and placed in his red class (above, p. 262[a]). Though conceding to his Nigganthas the use of a loin-cloth, for himself Mahāvīra discarded the use of all clothing. On this point there was no difference between him and Gosāla; both were mendicants of the *achelaka*, or 'clothless,' class. Indeed, it is just possible that on this point Mahāvīra may have been influenced by Gosāla. For we are told in the Jain Scriptures that at first, when Mahāvīra adopted the ascetic life, he attached himself to the clothed community of Pārśva; it was only in the second year of that life, about the time when he fell in with Gosāla, that he adopted the strictest observance of absolute nakedness. The coincidence suggests that Mahāvīra adopted that observance from Gosāla, and that it was this circumstance that formed the bond of their early companionship, until the discovery of Gosāla's hypocrisy caused the subsequent and final separation. It appears probable, however, that within the Niggantha community the general rule was to wear the loin-cloth, and the practice of total nakedness was limited to that section of it which formed the party of Gosāla, and had adopted his doctrine on *ājīva* as formulated in the seventh group of the preparatory discipline (above, p. 262[b]), and which hence was known as the Ājīvikas.

On this point there is an instructive story related in the Buddhist *Vinaya Piṭaka* (i. 291; *V.P.Tr.* ii. 216 ff.). Once, when Buddha was staying in Sāvatthi, he and his Bhikṣus were invited by a wealthy woman, Visākhā, to a meal in her house. When the meal was ready, she sent her maidservant to call her guests. While the maid went on her errand, a heavy shower of rain fell, and on her arrival at Buddha's lodging she found the Bhikṣus standing disrobed and enjoying the rain. Thinking that there was a mistake, she returned to inform her mistress that at the place to which she had been directed there were no Bhikṣus, but Ājīvikas. The misunderstanding, of course, was cleared up; but the incident, which happened at Sāvatthi, shows that the Ājīvikas were naked monks, and that they were the followers of Gosāla, who, as we have seen, had established his headquarters at Sāvatthi, after he had separated from Mahāvīra. The same point is illustrated by Gosāla's sixfold classification of men (above, p. 262[a]), in which the white class is represented by his own party, the naked Ājīvikas, while the red class is typified by the party of Mahāvīra, the one-strip 'Nigganthas.' Total nakedness, however, must have been the mark of the whole Ājīvika party among the Nigganthas; not only of that portion which seceded with Gosāla, but also of the other portion which continued in the connexion. For, as will appear in the sequel, it was the latter that formed the nucleus, from which, at a later date, the Digambara Order took its rise (below, p. 266[b]).

It remains briefly to consider the two other charges preferred by Gosāla against Mahāvīra (above, p. 264[b]). The reference in the first of these is not quite clear. Mahāvīra is accused of having first 'wandered about as a single monk,' but having afterwards 'surrounded himself with many monks' (*J.S.* ii. 409,410). On the other hand, Gosāla claims to 'live alone and single' (*ib.* p. 411). As a fact, however, Gosāla also was 'surrounded by many monks,' who were known as the Ājīvikas. It is clear, therefore, that the mere fact that a leader wandered about or lived with a company of personal disciples did not count as an offence. The gravamen of Mahāvīra's procedure, in the eyes of Gosāla, appears to have been that, like Buddha, he instituted an Order (*saṅgha*) of monks. The followers of Mahāvīra were scattered in various places in larger or smaller groups, but they were all organized in one community, under one Law, and one leader (Mahāvīra). Gosāla's followers formed but a small group that always accompanied its leader. There were, indeed, other groups of ascetics of a similarly dubious character who also bore the name of Ājīvikas, or 'Professionals,' but they lived apart under separate leaders, the names of two of whom, Kissa Saṅkichcha and Nanda Vachchha, are recorded in the Buddhist Scriptures (*M.N.* i. 238, 524; *A.N.* iii. 384). But the Ājīvikas of this dubious kind, who must be distinguished from the later Ājīvika Order of monks (below, p. 268), formed no organized community like the Nigganthas (or Jains) and Buddhists. It is obvious that the antinomian tenets and practices of Gosāla, and other men of his way of thinking, would form a natural bar to the formation of a widespread public organization. It may have been the consciousness of his disability in this respect that prompted Gosāla's accusation against his more successful rival.

The second of the two charges against Mahāvīra accused him at once of spiritual arrogance and spiritual cowardice. The reference in this charge is to Gosāla's theory of the three spiritual states of men (see above, p. 262[b]). According to him, Mahāvīra was in the intermediate state; his soul, though free from *karma* in a sense, was not truly liberated, for it was full of spiritual arrogance in thinking that his system alone was correct and condemning those who differed from him (*J.S.* ii. 411, §§ 11–14, and Śīlāṅka's comment on Sūtra-kṛtāṅga, i. 1, 3, § 12; *J.S.* ii. 245). It was also full of spiritual cowardice in being eager to win converts among the common people, but afraid to meet learned men who might refute him (*J.S.* ii. p. 412, §§ 15–18, and p. 413, §§ 19–25). The advocate of Mahāvīra replies that, first, his master only teaches, as others do, what he believes to be true and right, and while condemning false doctrines, he does not condemn those who entertain them. Secondly, he never refuses to meet honest and worthy opponents, and is void of hypocrisy himself, while trying to win people for his doctrines.

4. History of the Ājīvikas.—The earliest mention of the Ājīvikas occurs in a brief record incised on the walls of two rock-hewn caves on Barabar Hill near Gayā (*IA* xx. 361 ff.; S.A. 144). According to its own statement, it was made in the 13th year of the reign of the Emperor Aśoka, that is to say, in B.C. 251. It runs as follows: 'King Piyadassi, in the 13th year of his reign, bestowed this cave on the Ājīvikas.'

The next mention occurs in the seventh of the celebrated Pillar Edicts of the same Emperor Aśoka, incised in the 28th year of his reign, or in B.C. 236 (S.I.P. ii. 82, 97; *Ep. Ind.* ii. 270, 272, 274; S.A. 155). It runs as follows: 'I have arranged that my Censors of the Law of Piety shall be occupied with the affairs of the Buddhist Order (*saṅgha*) as well as with the Brāhman (ascetics), the Ājīvikas, the Nigganthas, and, in fact, with all the various mendicant communities (*pāsaṇḍa*).'

A further early mention occurs in a brief record, incised on the walls of three rock-hewn caves on Nagarjuni Hill in the first year of the reign of Aśoka's successor Daśaratha, that is, in B.C. 227 (*IA* xx. 361 ff.; S.A. 145). It runs as follows: 'This cave was bestowed by his Majesty Daśaratha, immediately after his accession, on the venerable Ājīvikas, to be a dwelling-place for them as long as the sun and moon endure.'

After this we meet with no mention of the Ājīvikas till we come to the 6th cent. A.D. In that century, about A.D. 550, Varāha Mihira, in his astrological works Bṛhaj-jātaka (xv. 1) and Laghu-jātaka (ix. 12), names them as one of seven classes of religious mendicants. These are—(1) the Śākyas or Raktapaṭas (men of the red robe), *i.e.* the Buddhist monks; (2) the Ājīvikas, or, as the commentator Bhaṭṭotpala (*c.* 950 A.D.) explains, the Ekadaṇḍins, or 'men of one staff'; (3) the Nirgranthas, or Jaina monks; (4) the Tāpasas (ascetics) or Vanyāśanas (eaters of wild fruits), *i.e.* Brāhmans of the third *āśrama*, living as hermits in the forest; (5) Bhikṣus (mendicants), *i.e.* Brāhmans of the fourth *āśrama*, living as homeless wanderers, and following, according to the commentator, the Mīmāṁsā system; (6) the Vṛddha-śrāvakas; and (7) the Charakas, who appear also to have been two kinds of wandering religious mendicants. That these seven classes of devotees, and therefore the Ājīvikas among them, were actually existing in Varāha Mihira's time, is evident from the fact that he teaches that a person is destined to enter into one of them according to the indications of his horoscope.

In the 9th cent. we have the testimony of the great Jain commentator Śīlāṅka (*c.* 876 A.D.) to the continued existence of the Ājīvikas. And here we first meet with the interesting fact of the identity of the Ājīvikas with the Digambara Jains. Commenting on the objection made by some to Mahāvīra's four 'restrictions' in the Sūtra-kṛtāṅga (*J.S.* ii. 267), Śīlāṅka states that the reference is to the Ājīvikas or Digambaras. Seeing that, in his comment on another passage of the same work (*ib.* ii. 245), he identifies the followers of Gosāla, that is, the Ājīvikas, with the Terāsiyas (Sanskr. Trairāśikas), it follows that in Śīlāṅka's view the followers of Gosāla, the Ājīvikas, the Terāsiyas, and the Digambaras were the same class of religious mendicants.

In the 10th cent. we have a further testimony to the identity of the Ājīvikas and the Digambaras. In his vocabulary, called the Abhidhāna Ratnamālā (ii. 189, 190), Halāyudha (*c.* 950 A.D.) enumerates a large number of names of the two Jain divisions, the Śvetāmbaras (or white-clothed ones) and the Digambaras (or sky-clad, *i.e.* naked ones), or, as he calls them, the Śvetavāsas and Digvāsas. The latter, he says, are also known as the Ājīva, which is only a shorter form of Ājīvika.

Lastly, in the 13th cent. we have, in certain temple records, a mention of the Ājīvikas as a sect then actually existing in South India. These records are inscriptions on the walls of the Perumāl Temple at Poygai near Virinchipuram (*S.I.Inscr.* i. 88, 89, 92, 108). They refer to grants of land to the temple together with 'the tax on Ājīvikas,' made by the Chola king Rājarāja in the years A.D. 1238, 1239, 1243, 1259. By the editor of the inscriptions these Ājīvikas are, on the authority of modern Tamil dictionaries, identified with the Jains. This, of course, means the Digambara sect of the Jains; for it is this sect whose principal seat, in those times, was in Southern India, and colonies of them are still to be found there (*IA* xxxii. 459; *JGOS* xxxviii. 17). The statements on the subject in the Tamil dictionaries appear to be based on the Tamil literature, and possibly on modern usage. The older Tamil literature (*teste* Dr. Pope) certainly uses the term Ājīvika in speaking of the Jains, *i.e.* the Digambaras. There can be no doubt, therefore, that since the 6th cent. A.D., when Varāha Mihira used the term, the name has signified the Digambara sect of the Jains.

As to Varāha Mihira's use of the term, it is to be noted that his commentator Bhaṭṭotpala, whose date is about A.D. 950, identifies the Ājīvikas with the Ekadaṇḍins. This identification is based on a Prākrit verse which he quotes from a Jain writer called Kālakāchārya. That writer, who lived about A.D. 450, that is, about a century earlier than Varāha Mihira, names the same seven classes of ascetics with the one exception that he writes Ekadaṇḍins for Ājīvikas (*Tr.C.O.* iii. 2, p. 553). Bhaṭṭotpala on his own part adds that the Ekadaṇḍins or Ājīvikas are devotees of Nārāyaṇa, that is, of Viṣṇu. On the other hand, Śīlāṅka, speaking of the Ekadaṇḍins in another connexion, declares them to be devotees of Śiva (*J.S.* ii. 245, 417). It is clear from this apparent discrepancy that what these two commentators had in their mind was the class of ascetics who are still known as the Daṇḍins, or 'Men of the Staff.' These ascetics are usually classed as belonging to the Śaivite division of Hindus; but they are rather eclectics, in that they invoke not only Śiva but also Viṣṇu as Nārāyaṇa. They carry a staff (*daṇḍa*) with a piece of reddish cloth attached to its top, wear only a narrow strip of cloth or go entirely naked, and are enjoined to live solitary. They hold Vedāntist doctrines; and any man, caste or no caste, may join them (*BG* ix. pt. i. 542). They must not be confounded with the Daśanāmi Daṇḍins, who are a comparatively modern class of ascetics, having been founded by the reformer Śaṅkarāchārya and his disciples in the 9th cent. A.D., and who live in convents (*maṭha*), and pay some regard to caste in the matter of admission (*JBAS* lix. 55, note).

From the fact that Gosāla is called Maṅkhali-putta, or Maṅkhali (Maskarin), *i.e.* the man of the bamboo-staff, it is clear that originally he belonged to the class of Ekadaṇḍin (or Daṇḍin) ascetics; and, though he afterwards joined Mahāvīra and adopted his system, he held some dis-

tinguishing tenets of his own, and also retained his old distinguishing mark, the bamboo-staff. On account of these distinctions his party within the Niggantha community was known as the Terāsiya or Ājīvika (above, p. 262), and apparently also as the Ekadaṇḍin, or the One-staff men. Still later, by reason of his evil life, when it was discovered, Gosāla was expelled by Mahāvīra from the community; and with him, it would appear, were ejected also a few others of the Ājīvika party who were his intimate friends and shared his evil practices. The Buddhist Scriptures name two of these friends, Kissa Saṅkichcha and Nanda Vachchha (above, p. 263[b]). These three men, after separating from Mahāvīra, appear to have lived a comparatively solitary life at Sāvatthī at the head of small groups of like-minded followers. But there is no reason to believe that, with the expulsion of the black sheep, the Ājīvika or Terāsiya party as such ceased to exist within the Niggantha Order. In fact, whatever evidence there is points the other way. Thus, in this connexion, the difference already noted (above, p. 264[b]) between the two versions of the 'four restrictions' possesses a peculiar significance. The reference to sexual delinquency occurs in that version which is concerned more especially with Gosāla and his faction; while the other version, which substitutes the reference to the use of the householder's vessel, is, according to the commentator Śīlāṅka, concerned with the Ājīvikas or Digambaras. The discrimination, in the two versions, tends to show that there was a portion of the Ājīvika party within the Niggantha Order which was not implicated in the antinomies of Gosāla's faction. As a matter of fact, the Digambaras differ, to the present day, from the Śvetāmbaras on the points implied in the four restrictions. Thus the restrictions respecting the use of cold water and natural seeds were intended to enforce extreme regard for any kind of 'life' (*jīva*); but the Digambaras are said to be 'only moderately careful of animal life,' while the Śvetāmbaras are extremely so (*IA* xxxii. 460). With respect to the fourth restriction, while both sects insist on the vow of chastity, they differ in regard to the possession of the alms bowl. While the bowl belongs to the regular outfit of the Śvetāmbara monks, the Digambaras are not permitted to carry it, but must receive their food in the palms of their hands (Oman, p. 151). As to the point of nakedness, the difference between the two divisions is sufficiently indicated by their names.

Further evidence in the same direction is afforded by the subsequent revival of the Terāsiya trouble within the Niggantha community, and by the retention to this day of the distinguishing mark of the staff among the Digambaras. On admission, we are told, 'the novice is supplied with the articles allowed to an ascetic by the Jain Scriptures, a black rod or *daṇḍ* about five feet long,' etc., and 'the Sādhu (or professed monk) always carries his staff (*daṇḍ*)' (*BG* ix. pt. i. p. 107).

The case, then, stands thus: Ekadaṇḍin is a general term for a class of ascetics which includes two subdivisions, the orthodox Śaivite Daṇḍins and the heterodox Jain Ājīvikas or Digambaras. The Jain writer Kālakāchārya, of course, meant to indicate the latter by the word Ekadaṇḍin; and Varāha Mihira, therefore, to preclude misunderstanding, substituted the more definite term Ājīvika. The orthodox commentator, Bhaṭṭotpala, misunderstanding the position, confused the heterodox Ājīvika with the orthodox Daṇḍin.

According to the tradition of the Digambaras, an acute antagonism between their own party and the party of the Śvetāmbaras arose during the life of Bhadrabāhu, who appears to have been the last head of the united Niggantha, or Jain community (*JGOS* xxxviii. 14, xl. 92; *IA* xxi. 59). Soon after his death, about B.C. 314 (*i.e.* 170 years after Mahāvīra's demise in B.C. 484, above, p. 261[b]), the differences between the two parties grew into a final and definite rupture, which the Śvetāmbara tradition in the Kalpa Sūtra (*J.S.* i. 290) ascribes to a man called Chhaluka Rohagupta. This man is said to have been a disciple of Mahāgiri, who was at the head of the Śvetāmbaras from 269 to 239 B.C., and it was he who is said to have founded the Terāsiya schism. The Terāsiyas, as we have seen (above, p. 262), are the same as the Ājīvikas, and the latter are identical with the Digambaras. It follows, therefore, that the Ājīvika or Digambara Order was already in existence in B.C. 251, when Aśoka dedicated the Barabar Hill cave to the Ājīvikas. As to Aśoka's successor Daśaratha (or Samprati, as the Jains call him), we are expressly told that he was converted to Jainism. It is true that the Śvetāmbaras claim him as a convert of their own leader Suhastin (*K.S.* 10; *J.S.* i. 290), a contemporary (B.C. 269-223) and co-leader with the above-mentioned Mahāgiri (*JGOS*, xxxvii. 501). But from the fact that Daśaratha dedicated, in B.C. 227, the Nagarjuni Hill caves to the Ājīvikas, perhaps his conversion is to be placed to the credit rather of the Digambaras; although, of course, he may, like his predecessor Aśoka, have distributed his favours impartially to the principal mendicant Orders of his time. Of Aśoka we know from his seventh Pillar Edict that he was a patron equally of the Buddhists, Nigganthas, Ājīvikas, and Brāhmaṇas. It is evident now, from what has been said, that the terms Niggantha and Ājīvika denote the two Jain Orders which are known to us as the Śvetāmbaras and Digambaras. It has been asserted (by Professors Kern and Bühler, *Ep. Ind.* ii. 274, *IA* xx. 362) that the term Brāhmaṇa in the Edict qualifies the Ājīvikas, describing them as being a 'Brāhmanical' Order. Irrespective of the difficulty whether at that early time there existed any orthodox Brāhmanical Order similar to the Buddhist and Jain (Nigganthas), the Edict speaks of 'Brāhmaṇas.' That word does not mean 'a person connected in some way with Brāhmanism,' but it denotes 'a person of the Brāhman caste,' and in the context of the Edict it means 'a Brāhman ascetic,' that is, a person of the Brāhman caste who had adopted the rule of the fourth Brāhmanic *āśrama* or way of living. Such a person took on himself to live a homeless wandering life as a religious mendicant. The appeal to the statement of Bhaṭṭotpala, as has been already shown (above, p. 266), is unavailing. A Vaiṣṇava or Saiva ascetic may belong (or rather, may have belonged before joining) to any caste (W.M.H. pp. 59 ff., 83 ff.). These men may be said to be 'Brāhmanical' ascetics because they profess to be devotees of Brāhmanical deities, but no Indian would call them 'Brāhmaṇas.' The word 'brāhmanical' expresses a Western idea, quite foreign to the word *brāhmaṇa*.

The history of the Ājīvikas may be briefly summed up as follows: Gosāla commenced his ascetic life as a Maṅkhali, or Maskarin, that is, as an individual of the ancient well-known class of religious mendicants which was distinguished by the carrying of a bamboo staff. After a time he made the acquaintance of Mahāvīra, who belonged to another class of religious mendicants known as the Nigganthas, or Unfettered Ones (*i.e.* unfettered from the bonds of *karma*), the followers of Pārśvanātha. The two men, holding kindred views on the stringency of ascetic requirements (*e.g.* on the point of nakedness [*achelaka*]), associated, and elaborated a common system, to which, however, Gosāla added some particulars of his own. Each of them had his own party among their common following; and Gosāla's party was known as the Ājīvikas, or 'Professionals,' on account of its leader's peculiar views on the *ājīva*, or 'profession,' of a religious mendicant. In course of time Gosāla developed antinomian proclivities; and this produced ill-feeling between the two associates and ultimately led to a total rupture. Gosāla departed, together with those of the Ājīvika party who actively sympathized with him. There is no reason to suppose that the seceders formed a large group, or that as a group they survived the death of their leader Gosāla. The others of the Ājīvika party who had not shared Gosāla's antinomian tenets and practices remained within the Niggantha community; but they retained their peculiar views on the points of total nakedness, non-possession of a bowl, imperfect regard for life, distinctive mark of a staff, and probably other matters. On account of these differences, there no doubt existed some amount of friction between the Ājīvika party and the rest of the Niggantha community. It manifested itself especially in the time

of Bhadrabāhu, whose sympathies appear to have been rather with the Ājīvikas. But the friction came to a head only in the earlier part of the 3rd cent. B.C., when that party, which was known also as the Terāsiya (Trairāśika), definitely and finally separated to form the distinct Order which is now known as the Digambaras. It thus appears that the Jain division into Digambaras and Śvetāmbaras may be traced back to the very beginning of Jainism, it being indirectly due to the antagonism of the two associated leaders, Mahāvīra and Gosāla, who are the representatives of the two hostile sections.

It remains only to notice a few detached references to Ājīvika mendicants occurring in the Buddhist Scriptures and elsewhere. The Vinaya Piṭaka (i. 8; *SBE* xiii. 90) and Majjhima Nikāya (i. 170; N.R. i. 271, ii. 454) relate how Buddha, immediately after his enlightenment, met an Ājīvika of the name of Upaka, who, however, received Buddha's account of his spiritual experiences rather contemptuously. The Majjhima Nikāya (i. 31; N.R. i. 45) further relates the story of an Ājīvika Panduputta who had been originally a carriage-builder, and who was converted by Buddha to his own belief. In the Vinaya Piṭaka (ii. 284; *SBE* xx. 370) we are told also of an anonymous Ājīvika mendicant who gave the Buddhist monk Kassapa the first information of his master's death. These three men probably were members of the Ājīvika party in the Niggantha community. In another place the Vinaya Piṭaka (ii. 130; *V.P.Tr.* xx. 132) relates how on one occasion certain Ājīvikas, meeting with some Buddhist monks who walked under the protection of sunshades, jeered at the un-ascetic conduct of their rivals. In the Mahāvaṁsa (T.Mv. 67) there is a curious notice of a group of Ājīvikas which existed in Ceylon in the time of King Paṇḍukabhaya about B.C. 426, and on whose behalf that king is said to have built a house (*gaha*). This notice, however, considering the very early date to which it refers, must be accepted with much reserve. Another very curious notice of the Ājīvikas occurs in a little book on *Hindu Logic as preserved in China and Japan*, by Sadajiro Sugiura (ed. by Mr. Edgar A. Singer, jr., in the Philosophical Series [No. 4] of the Publications of the University of Pennsylvania).

In the Introduction, p. 16, the author says: 'Two more schools are frequently included by Chinese and Japanese authors among the great ones (*i.e.* the well-known six Indian). They are called Nikendabtra and Ashibika, and are quite similar to each other. They both hold that the penalty of a sinful life must sooner or later be paid; and since it is impossible to escape from it, it is better that it should be paid as soon as possible, so that the life to come may be free for enjoyment. Thus their practices were ascetic: fasting, silence, immovability, and the burying of themselves to the neck (*Nyakuro-so*, i. 22), were their expressions of penance. They were probably offshoots of the Jainist or some other Hindu sect.'

The 'Nikendabtra and Ashibika' of this statement are obviously the Niganthas and Ājīvikas, that is, the Śvetāmbara and Digambara Jains.

LITERATURE.—There exists no connected account of the Ājīvikas; but, in addition to the works mentioned in the text, short detached remarks on the sect occur in the following works:—Bühler, *Epigraphia Indica* (Calcutta, 1894), ii. 272, 274, 323, and *IA* xx. 361 ff.; Burnouf, *Lotus de la bonne loi* (Paris, 1852); Grimblot, 'Sept Suttas Pâli' in *IA* (Bombay, 1879), viii. 312; Jacobi, 'Jaina Sûtras,' *SBE*, vols. xxii. and xlv. (Oxford, 1884–95), pt. i. pp. 16, 18, pt. ii. pp. 19, 22–26, 29–32, and *IA* ix. 161 ff.; H. Kern, *Hist. de Bouddhisme*, i. (Paris, 1901–3), 15, 121, 151, ii. 6,41, 337, and *Manual of Indian Buddhism* (Strassburg, 1896), pp. 72 and n. 2, 74, 82, 112, 116; Leumann, *V.O.J.* iii. (Vienna, 1889), 328 ff., *Actes du Sixième Congrès Or.* 1883, pt. iii. p. 554 ff., and *Aupapâtika Sûtra* (Leipzig, 1883), pt. i. p. 80, par. 120; Oldenberg, *Buddha* (4th ed., 1903), pp. 82, 93, 199; O. Schrader, *Stand der Ind. Philosophie* (Strassburg, 1902), pp. 12, 34 ff.; Rhys Davids, *Buddhist India* (London, 1903), pp. 143, 146, 290, and *Dialogues of the Buddha* (London, 1899), pp. 71, 219, 220, 227, 232; Rockhill, *Life of the Buddha* (London, 1884), pp. 101, 249 ff.; Senart, *Inscriptions de Piyadassi* (Paris, 1886), ii. p. 209 ff.; V. A. Smith, *Asoka* (Oxford, 1901), pp. 106, 144 f.; Weber, *Catalogue of the Royal Library, Berlin, Index*, p. 1280 (1892).

AJMĒR, AJMĪR (the *meru*, or sacred mountain, of Ajayarājā, who is said to have founded the city in the 2nd cent. A.D.).—The capital of the British district of Ajmēr-Mhairwārā, in the province of Rājputāna. It is noted for two important religious buildings, a mosque, and the shrine of a noted faqīr, or Musalmān saint. The former, which bears the name of Arhāī Din kā Jhoñprā, 'the shed of two and a half days,' is a converted Jaina temple; and the most probable explanation of the name is that the Sultān Quṭb-ad-dīn or Altamsh, when he visited the place, ordered that within that period the original Jaina temple should be converted into a mosque for his devotions. It is now the finest existing specimen of the early style of Musalmān mosque in India. Inscriptions fix the date of its erection between A.D. 1211 and 1236, in the reign of Altamsh. It is thus of the same age as the celebrated mosque near the Kutb Minār in Old Delhi, and Cunningham supposes that both were probably planned by the same architect and erected by the same body of workmen.

The faqīr's shrine, or *dargāh*, marks the resting place of the famous Musalmān saint, Khwājah Mu'īn ad-dīn Ḥasan Chishtī (A.D. 1142–1236), who was born in Sijistān or Sīstān, eastern Persia, whence he journeyed to India in 1193, and retired to the seclusion of a hermitage at Ajmēr. In the mass of hagiologic literature which has grown up round this personage, many wonders and miracles wrought by him are recorded. The Emperor Akbar made a pilgrimage to his tomb, and to the present time the merchants of the Dargāh Bāzār, which adjoins the tomb of the saint, daily lay their keys on the steps of the shrine before they open their shops. The custody of the shrine is in the hands of the eldest lineal descendant of the holy man, and all the descendants of the Khwājah still enjoy such consideration throughout India that the Nizām of Hyderābād will not sit in their presence, and even the Hindu Mahārājās of Jaipur, Gwālior, and Jodhpur place them on the same seat with themselves. The annual festival of the Saint is held in the month Rajab, when enormous cauldrons of rice, butter, and other condiments are filled at the expense of rich pilgrims to the shrine, and while the food is still in a state of boiling heat it is scrambled for by the mob of fanatical devotees who attend the fair, and who highly value even a small particle of the sacred food. It is counted among the miracles of the Saint that no lives have been lost on such occasions, though burns are frequent.

LITERATURE.—La Touche, in *Rajputana Gazetteer* (1879), ii. 61 ff.; Fergusson, *Hist. of Ind. and Eastern Architecture* (1899), 263, 510 ff.; *Indian Antiquary* (1897), xxvi. 164. For the history of the saint, *Ain-i-Akbari*, tr. Jarrett (1894), iii. 361.

W. CROOKE.

AKĀLĪS.—The sect of the *Akālīs* differs essentially from all the other Sikh orders in being a militant organization, corresponding to the Nāgas or Gosains among the Hindus. Their foundation is ascribed to Guru Govind* himself, and they steadfastly opposed Banda's attempted innovations. The term *akālī*, or 'immortal,' is said† to be derived from *akālī-puruṣa*, 'worshippers of the eternal,' but probably it is a self-assumed title, bearing its obvious meaning. The Akālīs wear blue chequered dresses,‡ with bangles or bracelets of steel round their wrists, and quoits of steel in their lofty conical blue turbans, together with miniature daggers, knives, and an iron chain.§

* The tenth and last Guru of the Sikhs, 1675–1708.

† Murray's *Hist. of the Panjâb*, i. p. 130; Cunningham's *Hist. of the Sikhs*, p. 117. But *akāl* means 'deathless,' *i.e.* 'God,' and *Akālī* is simply 'God's worshipper.'

‡ Malcolm points out that Kṛṣṇa's elder brother, Bala Rām, wore blue clothes, whence he is called Nīlāmbar, or 'clad in dark blue,' and Śitivas, or 'the blue clad' (*Asiatic Researches*, xi. p. 221).

§ A few Akālīs wear the *jaṭā* or top-knot, but not all. Those who do not, only use '*ḍur* and *loṭā*' water; and also smoke.

In their military capacity the Akālīs were called Nihangs, or reckless,* and played a considerable part in Sikh history, forming the Shahīds, or first of the four *dehṛas*. At the siege of Multān in 1818 a few Akālī fanatics† carried the fausse-braye by surprise, and precipitated the fall of that fortress. The career of Phūlā Singh illustrates both their defects and their qualities. This Akālī first came into notice as the leader of the attack on Metcalfe's escort at Amritsar in 1809. He was then employed by Ranjīt Singh, who stood in considerable awe of him, as a leader in the Indus valley, where he was guilty of atrocious cruelty towards the Muhammadan population, and in Kashmīr.‡ Finally, Phūlā Singh and his Akālīs contributed to, or rather virtually won for Ranjīt Singh, the great Sikh victory over the Yūsufzais at Terī in 1823. In this battle Phūlā Singh met with a heroic death, and his tomb at Naushahra is now an object of pilgrimage to Hindus and Muhammadans alike.

Under Phūlā Singh's earlier leadership, and perhaps before his rise, the Akālīs had become a terror to friends and foes alike, and they were dreaded by the Sikh chiefs, from whom they often levied contributions by force.§ Ranjīt Singh, after 1823, did much to reduce their power, and the order lost its importance.

The Akālī headquarters were the Akāl Būnga‖ at Amritsar, where they assumed the direction of religious ceremonies¶ and the duty of convoking the Gurūmatā; indeed, they laid claim to exercise a general leadership of the Khālsa. Since Ranjīt Singh's time Anandpur has been their real headquarters, but their influence has to a large extent passed away, and some of them have degenerated into mere buffoons.

As an order the Akālīs are celibate. They have, says Trumpp, no regular chief or disciple, yet one hears of their *gurus*, whose leavings are eaten by their disciples (*sewak* or *chela*). They do not eat meat or drink spirits, as other Sikhs do, but consume inordinate quantities of *bhang*.

LITERATURE.—The general histories of the Sikhs, see art. SIKHS; J. C. Oman, *Mystics, Ascetics, and Saints of India*, London, 1903, pp. 153, 198–201; A. Barth, *Religions of India*[2], London, 1889, p. 248 f.; Monier Williams, *Brāhmanism and Hinduism*[4], London, 1891, p. 175; W. Crooke, *Things Indian*, London, 1906, p. 431; Panjāb Census Reports, Sir Denzil Ibbetson (1881) and E. D. Maclagan (1891).

H. A. ROSE.

AKBAR.—1. *Life.*—The emperor Akbar, whose full name was Abū-l-fatḥ (or Abū-l-Moẓaffar) Jalāl-ad-dīn Akbar Ghāzī, was born at Umarkoṭ ('the fort of Umar') in Sind on 15 Oct., O.S., 1542. His birthday was on a Sunday, a circumstance to which importance was afterwards attached, as it seemed to connect him with the sun and with the Messiah, whose birth was traditionally said to have taken place on that day. He was the son of Humāyūn, the second king of India of the Moghul dynasty, and grandson of Bābar, the conqueror of India. His mother, Ḥamīda Bānū, was of Persian origin, and was descended from the famous saint Aḥmad of Jām, and she was also related to Sulṭān Husain Baiqara, the celebrated king of Herāt. But though of noble lineage, her father was neither rich nor distinguished, and was in the service of Mīrzā Hindāl, a younger brother of Humāyūn, as a religious teacher.

After his father's defeats by the Afghans and flight from his brother 'Askarī, the infant Akbar was left behind in camp, and was taken possession of by his uncle 'Askarī and conveyed to Kandahār. He was then about fifteen months old, and did not see his parents again till he was four or five years of age. This was when Humāyūn succeeded, with the aid of the king of Persia, in defeating his brothers and in establishing himself in Afghanistan. When Akbar was twelve or thirteen years of age, he accompanied his father on his expedition to India, and was present at the decisive battle of Machīwārah, Jan. 1555, when Humāyūn, or rather his general Bairām Khān, defeated the Afghan Sikandar Sūr. This was followed by Humāyūn's entry into Delhi and his resumption of power; but his good fortune was not of long continuance. In Jan. 1556 he was killed by falling down the steps leading from the roof of his library, and Akbar, who was then in the Panjāb with his guardian Bairām Khān, was crowned at Kalānūr on 14 Feb. 1556. On 5 Nov. following, Akbar and his guardian Bairām Khān won a victory at Pānīpat—the Indian Armageddon—over Hemū, the Hindu general of the Afghan king; and though the boy Akbar refused, like Gideon's sons, to slay Hemū with his own hands, he earned the title of *ghāzī*, or 'holy warrior,' and retained it to his death, in spite of all his changes of creed. For some years after this Bairām was regent; but in 1560 a palace-intrigue enabled Akbar to rid himself of his guardian and to assume direct power. For a time, however, he deferred greatly to his nurse Māham Anaga, a Turkish lady of great ability. But the misconduct and punishment of her son Adham Khān put an end to her power and her life in 1561, and after this Akbar became really his own master. From that time forward his career was one of almost uninterrupted success. He gradually became master of Upper India, including Kashmīr and Afghanistan, as well as of Bengal, Bihār and Orissa, Gujarāt and Sind, and part of the Deccan. He died, after a reign of fifty years, on his birthday or the day following, in 1605, at Agra, and was buried at Sikandra.

2. *Religious opinions.*—This side of Akbar's character has received what is perhaps a disproportionate amount of attention. No doubt the question of his beliefs is a most interesting one, but the almost exclusive attention which has been paid to it has tended to obscure the emperor's real greatness. After all, Akbar was a king immersed in affairs, and religion was only the occupation of his leisure hours. He was a great conqueror and administrator, and was more in his place at the head of his troops, or when engaged in revenue-reforms, than when seated in his Hall of Worship. It is certain, too, that he never seriously entertained the idea of becoming a Christian, and that the devoted Italian and Portuguese missionaries were sadly deceived in their hopes about him.

Father Goldie very sensibly remarks: 'How far Akbar was sincere in his search for truth, how far he had towards it a

which the *jaṭā*-wearers may not do. Others, again, wear a yellow turban beneath the blue one, so as to show a yellow band across the forehead. The story goes that a Khatrī of Delhi (Nand Lāl, author of the Zindagā-nāma) desired to see the Guru in yellow, and Govind Singh gratified his wish. Many Sikhs wear the yellow turban at the Basant Panchmī. A couplet erroneously ascribed to Bhai Gurdās says:

Siāh, sufed, surkh, zardāe,
Jo pahne, soi Gurbhāī.

'They who wear dark blue (the Akālīs), white (the Nirmalas), red (the Udāsīs), or yellow, are all brothers in the Guru.'

* Ibbetson, § 522. Cunningham (p. 379) says *nihang* = 'naked' or 'pure,' and it has that meaning literally (cf. Platts, *s.v.*); but in Sikh parlance the word undoubtedly means 'free from care,' 'careless,' and so 'reckless.' In Hinduism it bears its original meaning.

† They were headed by one Jassa Singh, called Mālā ('rosary') Singh, from his piety. 'He denied himself the use of *bhang*, the only intoxicating drug in use among the Akālīs.' See Carmichael Smyth's *Reigning Family of Lahore*, p. 188.

‡ Prinsep, on the *Sikh Power in the Panjāb*, p. 111, and *Phoola Singh, the Akālī*, in Carmichael Smyth, *op. cit.* 185–192.

§ Contemporary writers had a low opinion of their character. *E.g.* Osborne describes their insolence and violence (*Court and Camp of Ranjīt Singh*, pp. 143–146, 181).

‖ One of the *takhts*, or thrones, of the Sikhs.

¶ M'Gregor (*Hist. of the Sikhs*, i. 238) says that on visiting the *temple* (*sic*) of the Akālīs at Amritsar, the stranger presents a few rupees, and in return receives some sugar, while a small mirror is held before his face so as to reflect his image. This practice, if it ever existed, is now obsolete.

feeling akin to the agnosticism of our day, or whether he was merely bent, from the very first, on making for his subjects an eclectic religion, which would fuse into one the various creeds under his sceptre, and over which he determined to place himself as the supreme prophet and infallible teacher, it is hard to say. Certain it is that Blessed Rudolf, to whom such universal toleration was a new experience, very naturally made the same mistake about Akbar that many a zealous foreign priest makes about English non-Catholics when first he meets with them, and is captivated by their courteous respect for his views, and their kind interest in his work. The sovereign was quite willing to pay homage to the Holy Scriptures, and pleased to see the 'ulamā beaten on their own ground. But from this to submission in heart and deed to the authority of the Church was a long step, and one of which he very probably never dreamt.'

Akbar's religious opinions have been discussed by Hindus, Muhammadans, Parsis, Christians, and freethinkers, and we have details about them in the Akbar-Nāmah, Badayūnī, the Dabistān, and in the writings of Du Jarric, Bartoli, Vans Kennedy, Wilson, Elphinstone, Rehatsek, Blochmann, Count Noer, General Maclagan, and others. We have also Tennyson's poem *Akbar's Dream*. Undoubtedly Akbar has received more credit than he deserves for the depth and fervour of his religious feelings. He had an active mind and delighted in discussions. As he himself said, 'Discourses on philosophy have such a charm for me that they distract me from all else, and I forcibly restrain myself from listening to them, lest the necessaries of the hour should be neglected.' But he was the reverse of a fanatic or an enthusiast. He was, before all things, a man of the world.* His real belief was that forms of religion were of little consequence. He saw that men were good or bad from causes quite remote from their religious tenets, and that there were good men in all religions. He had no overpowering conviction that there was salvation or destruction in any creed; and not being a one-sided enthusiast himself, he could not establish a new religion or make any ardent proselytes. He was a sincere inquirer after truth, but he was not a profound thinker, and his book-knowledge was exceedingly small. Altogether, he was very badly equipped for religious or philosophical discussions; for, as Badāyūnī says, though he had an acute† mind and was a seeker after truth, he was exceedingly ignorant. He had not, like Julian the Apostate, studied in the schools, and was not competent, therefore, to arbitrate between contending sects. At the same time he was wiser and less superstitious than Julian, and did not, like him, try to turn the clock back and to revive a dead paganism. Julian was a fanatical polytheist, and disliked freethinkers as much as he disliked Christians; but Akbar was made of calmer stuff.

Though Badāyūnī in one place (Lowe, 312) ascribes Akbar's heresies to his having been associated from boyhood with Hindus and to his early marriages with Rajput princesses, there seems to be no doubt that Akbar, like many other freethinkers, began by being pious after an orthodox fashion. But perhaps Badāyūnī, by his jingling expression *Hinūd ranūd*, does not mean so much that the Hindus with whom Akbar associated were men of bad character, as that they were devotees and ascetics, for *ranūd* is the plural of *rand*, a word which has a double meaning, and signifies both a libertine and a devotee. In this sense the charge is true, for Akbar was from his youth up fond of the society of *yogīs* and *sannyāsīs*. Writing of the sixth year, when Akbar was still under twenty,

* On one occasion he remarked, 'Divine worship in monarchs consists in their justice and good administration'; and added that mortifications of the body and spirit were for the elect (Jarrett, iii. 399).

† '*Jauharī nafīs u ṭālib-i-ḥaqq būd ammā amī maḥz*,' lit. 'He was a rare jeweller (*i.e.* a connoisseur), and a seeker after truth, but totally ignorant.' Akbar was ambitious of the character of a prophet or an apostle, and seems to have flattered himself that his own ignorance was an advantage for playing such a part. One of his sayings (Jarrett, iii. 385) is: 'The prophets were all illiterate. Believers should therefore retain one of their sons in that condition.'

Abū-l-Faẓl tells us that one night Akbar went out from his palace in Agra incognito, in order to mix with the crowd of good and bad people who were assembled together to make a pilgrimage to Bahraich in Oudh to the shrine of Sālār Mas'ūd. He was nearly recognized by one of the vagabonds, but escaped by improvising a squint. In the same year he went off one night from Agra on a hunting expedition, and at Mandakhor, a place between Agra and Fatḥpūr, he fell in with some singers who were chanting in Hindu ballads the praises of Mu'īn ad-dīn, the great saint of Ajmīr. He had often listened to tales of this saint, and now the songs inspired him with a desire to visit his tomb. He felt what Abū-l-Faẓl calls *jāzibat tawajjuh*, or 'attraction towards visiting'; and in that same year he accomplished the journey to Ajmīr, in spite of the remonstrances of his courtiers. For many years afterwards he paid an annual visit to the same shrine. Though in both these instances the gathering was ostensibly Muhammadan, yet then, as now, many Hindus took part in it, and doubtless Akbar met many Hindus on such occasions.

In 983 Hijra (A.D. 1575), Akbar built his '*Ibādatḫāna* or Hall of Worship. Badāyūnī tells us that the cause of this was that Akbar had been filled with gratitude to God for his successes.

'Victory had followed upon victory, and the extent of his empire had increased daily. Not a single enemy remained. He associated much with *faqīrs*, and spent much time in discussions about the Word of God and the word of the Prophet. He engaged in questions about *Ṣūfiism* and theology, and spent many nights in repeating the name of God (*Ẓikr*) and in uttering the words *Yā Hū* and *Yā Hādī*, "O He" and "O Guide," in which exercises he had become skilful.'

At this time too Akbar would often seat himself in solitude on a stone bench near his palace in Fatḥpūr, and spend the hours of the early dawn in prayer and contemplation.* It seems that Akbar, who was always of an imitative turn of mind, was induced to make these exercises by what he heard about Sulaimān Kararānī,† the able ruler of Bengal, Bihār and Orissa, who used to spend the later hours of the night in prayer and in the company of 150 *sheikhs* and *'ulamā*. He was also influenced by the news that his aged relative, Sulaimān Mīrzā of Badakhshān, was coming to visit him. Sulaimān was an old warrior who had fought seventy-two battles with the Uzbegs, but he became a *ṣūfī* in his later years, and used to discuss points of ritual with Badāyūnī.

In the following year, 984 (or 1576), Akbar's devotion carried him so far that he wished to make a pilgrimage to Mecca, and was restrained only by the remonstrances of his officers. As it was, he made a show of going, polled his hair, bared his head and feet, donned the pilgrim's dress, and walked some distance with the caravan. He also appointed a *mīr ḥajj*, or superintendent of pilgrims, supplied him with funds, built or purchased pilgrim-ships, and otherwise assisted his subjects to go to Mecca. In 1575 he had also shown his interest in pilgrimages by enabling his aunt Gulbadan Begam, and one of his chief wives, Selīma Begam, and other ladies to proceed to Mecca *via* Surat.

In the 23rd year of his reign, May, 1578, Akbar

* The Jesuits, who had studied Akbar carefully, reported of him that 'Il était mélancolique de sa nature et sujet au mal caduc, tellement que pour se tenir joyeux il s'entretenait en divers exercices, plaisirs et récréatifs, comme à voir combattre des éléphants, etc.' (Du Jarric). Compare also Akbar's saying, 'On the completion of my twentieth year, I experienced an internal bitterness, and from the lack of spiritual provision for my last journey, my soul was seized with exceeding sorrow' (Jarrett, iii. 38[b]). [The reading seems doubtful, and perhaps the 20th year means the 20th year of the reign]. Cf. also Jarrett, iii. 388: 'One night my heart was weary of the burden of life.'

† Sulaimān Kararānī died in 980, some three years before the '*Ibādatḫāna* was begun. So Badāyūnī must either be confusing things new and old, or he must be referring to some posthumous accounts of Sulaimān's behaviour.

had a remarkable experience which is described as a case of *jaẕba*, or attraction. He had gone out to the banks of the Jhelum—the Hydaspes of Alexander—to enjoy hunting, and had appointed officers to organize an immense *qamargāh*, or battue. It was to extend over some fifty miles of country from Girjāk—supposed to be the Bucephala of Alexander—to old Bhera. They were ten days engaged in driving the game, and had nearly completed the work, when something came over Akbar, and he suddenly broke up the hunt and set free all the animals, even, says Abū-l-Faẓl, to the finches. Niẓām ad-dīn, who by mistake puts the event into the 24th year, calls it a case of a strong attraction (*jaẕba qawī*), and says that Akbar bestowed alms on *faqīrs* and others, and ordered a garden to be laid out and a house built on the spot where he had sat under a tree and experienced the call. Shortly afterwards he made a rapid ride to Ajmīr, in order to pay his annual visit to the shrine and to be present at the anniversary of the saint's death. In this year also he revived the discussions in the *'Ibādatḫāna*, and we are told that the Ṣūfī, the philosopher, the rhetorician, the lawyer, the Sunnite, the Shī'ite, the Brāhman, the Yātī, the Buddhist, the atheist, the Christian, the Jew, the Sabæan, the Zoroastrian, and others enjoyed the pleasure of seeing Akbar place himself in the pulpit and preside over the debates. The date given for the commencement of these discussions is 20 Mihr A.H. 986 or 3 Oct. 1578. Abū-l-Faẓl puts Father Rudolf Acquaviva's appearance in the Hall of Worship into this year, and tells an apocryphal story about the Father's challenging the Muhammadan doctors to the ordeal of fire; but unless Abū-l-Faẓl is giving a consecutive account of the discussions and so has departed from a chronological order, there is a mistake in his narrative, for Acquaviva did not arrive at Fatḫpūr till February, 1580. According to Abū-l-Faẓl, Akbar spoke at one of the meetings as follows:

'Formerly, from assenting to the opinions of specious, wicked men, we thought that outward conformity and the letter of Muhammadanism profited even in the absence of inward conviction. Hence we by fear and force compelled many believers in the Brāhman (*i.e.* Hindu) religion to adopt the faith of our ancestors. Now that the light of truth has shone upon our soul, the brilliant illumination has possessed us that in this distressful spot of contrarieties (the world), where the darkness of understanding and the blackness of presumption are gathered together, fold upon fold, a single step cannot be taken without the torch of proof, and that creed only is profitable which is adopted with the approval of the intellect. To repeat the words of a creed, to remove a patch of skin (*i.e.* to become circumcised), and to place the extremity of one's bones (*i.e.* the adoring head) on the ground out of dread of the Sultan is not the seeking after God.

'Obedience is not the placing your forehead in the dust;
Put Truth forward,* for sincerity does not dwell in the forehead.

'The first step in this perilous desert is with a high courage and a lofty resolve to do battle with the protean and presumptuous carnal soul, and by rigorous self-knowledge to bring Anger and Lust into subjection to Sultan Reason, and to erase from the soul the images of evil habits. Mayhap the Sun of Proof shall emerge from behind the veil of Error and convert one into a worshipper of the Truth. Afterwards, he may by inward influences draw to himself some inquirer after the Path. Such loadstones are quarried in the mines of asceticism. Or he may, by virtue of a talisman and might of incantations, bring him into his circle. Should the latter, by an error of judgment, fall into the pit of heresy, assuredly he shall not be stained with the dust of blame. We blame ourselves for what we did in accordance with old rules and before the real truth about Faith had been made known to us.'

These words may be compared with two sentences in Akbar's Memorabilia at the end of the *'Ain*. 'Formerly,' he states, 'I persecuted men into conformity with my faith and deemed it Islām. As I grew in knowledge, I was overwhelmed with shame. Not being a Muslim myself, it was unmeet to force others to become such. What constancy is to be expected from proselytes on compulsion?' . . . 'The first step in this long road is not to give the rein to desire and anger, but to take a measured rule and align one's actions thereon.' †

Akbar went on to introduce the subject of the tenets of opposed religions, and described their various excellences. He gave no weight, says Abū-l-Faẓl, to the foolish talk of the vulgar, but seized upon whatever was good in any religion. He often said, 'He is truly a man who makes Justice his leader in the path of inquiry, and who culls from every sect whatever Reason approves of. Perchance in this way that lock whose key has been lost may be opened.' In this connexion he praised the truth-choosing of the natives of India, and eloquently described their comradeship in the day of disaster, and how they played away, in the shade of Fidelity, Goods, Life, Reputation, and Religion—those four things which are prized above all others in the world's market. He also dwelt on the wonderful way in which the women of India reduce themselves to ashes whenever the day of calamity arrives. To the learned Christians he said:

'Since you reckon the reverencing of woman part of your religion, and allow not more than one wife to a man, it would not be wonderful if such fidelity and self-sacrifice were found among your woman. The extraordinary thing is that it occurs among those of the Hindu religion. There are many concubines, and many of them are neglected and unappreciated, and spend their days unfructuously in the privy chamber of chastity, yet in spite of such bitterness of life they are flambeaux of love and friendship.'

In the 24th year of his reign, in the month of Bahman, Jan. 1580, he sent a force under Quṭb ad-dīn to capture the ports held by the Portuguese, on the ground that they hindered the pilgrims on their journey. Probably this refers to the exactions which the Portuguese made under the guise of the issue of safe-conducts, and also to their issuing tickets bearing representations of the Virgin and Child. Zealous Musalmāns objected to these as being marks of idolatry. A remarkable thing is that at about the very time that Akbar was organizing this expedition against the Portuguese, Rudolf Acquaviva, the Italian priest, and his companions were, at Akbar's request, journeying from Goa to his court, and were indulging in fond hopes of his conversion! His invitation had been received in Sept. 1579, and they left in November of that year and arrived at Fatḫpūr in Feb. 1580. They came therefore too late to make any impression on Akbar, or at least too late to persuade him to be a Christian. The great year of Akbar's change was 1579, when he mounted the pulpit one Friday at Fatḫpūr Sīkrī and recited a stanza of Faiẓī's, and when he obtained a document from the *'ulamā* certifying that he was more than a *mujtahid* and that the people were bound by his religious decrees. Apparently the pulpit-incident took place in June 1579, and the signing of the document was in September of the same year. According to Abū-l-Faẓl, the idea of becoming supreme pontiff occurred to Akbar at an even earlier period. In describing the events of the 23rd year (986 or 1578), he says that about this time the idea of the primacy (*peshwāī*) of the spiritual world took possession of him. He seems to ascribe this to the influence of music. Further on in the same chapter he mentions the wonderful effect produced upon Akbar by the singing of one Bakhshū, or Bachū, who was perhaps the famous minstrel of Bahādur Shāh of Gujrāt.

The document seems to have been signed by the 'ulamā on 2 September 1579. Copies of it are given by Niẓām ad-dīn and Badāyūnī, but Abū-l-Faẓl contents himself with giving a short abstract of it, and, curiously enough, he says nothing about his father Mubārak's share in it, though, according to Badāyūnī, he was the prime mover in the matter, and the person who drafted the paper. It certainly was an extraordinary document, and one which did little credit to Mubārak as an honest man. It declared that Akbar (who could neither read nor write) was a most learned theologian (*'alam ba Allah*), and that, if *mujtahids* differed in opinion about any religious point, he could decide between them, and that his decision was final: also that if he issued any new order, the nation was bound to obey it, provided that it was not opposed to the Qur'ān, and should be for the public benefit. If any one opposed such an order, he would be ruined spiritually and physically, and be subject to final damnation.

Badāyūnī tells us that the *'ulamā*, with the

* There is a play here on the words *pesh* and *peshānī*.
† Jarrett, iii. 384.

exception of Mubārak, signed this document unwillingly, but that Mubārak added to his signature the statement that he was heart and soul in agreement with the paper, and that he had for years been awaiting its execution. Badāyūnī adds that after Akbar had procured this document, the road of *ijtihād* (decree-giving) became open, the supremacy of the *imām's* intellect was established, and no place remained for opposition. There was an end to the resolving of questions and to prohibitions. The intellect of the *imām* became the Law, and Islām was called bigotry.

Abū-l-Faẓl's account of the execution of the document and of its effects is naturally very different from Badāyūnī's. According to him, all the doctors were eager for its execution, and the reluctance was on the part of Akbar, who was unwilling, as he expresses it, to come out from behind the veil. He yielded to their entreaties only because he came to perceive that, in leaving his position as commander of the spiritual world, and accepting the rank of *mujtahid*, he was in reality placing a veil over himself. The result of the document was, he says, that the wanderers in the desert of doubt attained certitude, and that distracted souls obtained repose. Almost immediately afterwards, however, he admits that Akbar's conduct gave rise to many misconceptions, and that he was accused of claiming the Godhead, of disliking the Muhammadan religion, and of being a Hindu. He says that one special reason for such ideas was the appearance of Christian philosophers in the meetings, and the discomfiture by them of the pretenders of learning.

It was probably in order to counteract these ideas that Akbar, shortly after this, paid a visit to the shrine at Ajmīr* (he did not go there at the usual time, that is, at the saint's anniversary), and that he paid extraordinary reverence to a stone which was brought from Mecca and was said to bear an impression of the Prophet's foot. Abū-l-Faẓl tells us that the impression was not genuine and that Akbar knew this, yet that he completely silenced calumnies by his politic conduct on this occasion.

Akbar's innovations in religion, added to his interference with the fief-holders, led to the rebellion of Bihār and Bengal. Maulānā Muhammad Yezdī, the chancellor of Jaunpūr, issued a decree to the effect that it was a duty to rebel against Akbar. Akbar retaliated by having him and another leading rebel—Mu'izz al-mulk of Mashhad—arrested, and contrived that they should be drowned in the Jumna. This rebellion made Akbar proceed more carefully with his new religion, and the Christian missionaries found him less disposed to listen to them. After the rebellion was suppressed, however, he advanced further in the path of heresy, and formally instituted the Divine Faith and practised sun-worship. At the same time he was intolerant to some heretics. A sect calling themselves *Ilāhīs* sprang up, but Akbar had the members seized and sent off to Sind and Afghanistan, where they were bartered for horses!

Akbar had a theory that the Muhammadan religion could last for only a thousand years from its origin. This was apparently a part of the Mahdavī movement which, as Blochmann's preface to the translation of the *'Ain* shows, began in A.H. 900, that is, at the beginning of the 10th cent. (Muham.). In accordance with his belief in the approaching termination of the Muhammadan religion, Akbar proceeded in the year A.H. 990 still further with his innovations. Among other things, he ordered a history to be written which he called the *Tārīkh Alfī*, or 'Chronicle of a thousand years.' At this time only ten years were wanting to complete the chiliad according to the ordinary reckoning from the Flight to Medina, but Akbar disliked this era, on the ostensible ground that the word 'Flight' was of ill omen, and that it implied the success of the enemies of the Faith. He therefore directed that the history should begin ten years later, from Muhammad's death. It appears, however, from a passage in the *Dabistān*, that he was also inclined to date the thousand years from the commencement of Muhammad's apostleship, *i.e.* when he was forty years old. If this were the date, then the thousand years would begin in A.D. 610; and so in 1582 the thousand Muhammadan years were more than complete, for each of them is eleven days shorter than the solar year. Next, he prohibited the killing of cows, and interdicted, or at least greatly restricted the use of, beef. In the same year, also, he wrote to Goa, asking for missionaries and for copies of the Pentateuch, the Psalms, and the Gospels in Arabic and Persian. This letter has been translated by Rehatsek in the *Indian Antiquary*, but it first appeared in an English dress in James Fraser's *History of Nadir Shāh*, London, 1742.

Elphinstone remarks that Akbar's religion seems to have been pure Deism, in addition to which some ceremonies were permitted in consideration of human infirmity. This, however, is too favourable a view of the matter. Akbar mixed up a good deal of Hindu and Parsi superstition with his Deism, and, like Muhammad, he was unable to dispense with what Gibbon terms a necessary fiction. If his creed was that there was only one God, he added to it that Akbar was God's Vicar. He even went further than Muhammad, for he claimed to have the power of working miracles. In the beginning of his religious career, indeed, he had the good sense to refuse to pray for rain, on the ground that God knew, without being asked, what men had need of. But flattery gradually corrupted him, and he claimed to have the power of healing diseases, of causing rain to fall or to cease, and allowed it to be said of him that he had spoken in his cradle. This last was intended as a proof that he was like Jesus Christ (*Masīḥwār*, 'like the Messiah'), regarding whom a similar tradition existed. It would seem that Akbar was ambitious of establishing the fact of such a resemblance. He was born on a Sunday, which was the traditional birthday of Jesus Christ, and he styled his mother, or at least approved of her being styled, *Miriam-makānī*, i.e. 'of the household of Mary.' It must also be said that Akbar carried the principle of being all things to all men very far. His biographer, Abū-l-Faẓl, *more suo*, makes this a virtue, saying in *Akbar-Nāmah*, iii. 260, that Akbar kept such a guard over himself that every one, whether a secularist or a spiritualist, thought that he was his own peculiar leader. But most people will regard it as a proof that he was not strongly attached to any form of religion. The letter to the Jesuits at Goa is immediately preceded in the collection of Abū-l-Faẓl's letters, by one to the *sharīfs* at Mecca, in which he expresses great reverence for Muhammad, etc., and indignantly repudiates the charge that some one had addressed an unorthodox writing to him. The juxtaposition of these two letters does not prove that they were written about the same time, but this is evident from other circumstances. The letter to the Jesuits was written in Rabi'-al-awwal, A.H. 990,* Apr. 1582;

* On his way back from Ajmīr, Akbar seems to have been ostentatiously pious, fitting up a large tent furnished with prayer-niches, and praying in the congregation five times a day. Cf. extracts from the *Zubdatu-t-Tawarikh* (Elliot, vi. 189).

* The date of the letter to the Jesuit Fathers is, however, not quite certain. One MS. (B. M. Add. 16, 844) gives the date as 999, and if it be true that Jerome Xavier was sent in consequence of this letter, this date is likely to be correct.

that to the *sharīfs* is not dated, but it evidently was written about the same time, for it refers to the year 989 as having passed away.

Some years afterwards, viz. in A.H. 994 (1586), we find him writing a letter repelling the charge of impiety brought against him by 'Abdullāh Khān, the ruler of Transoxiana. 'Abdullāh had been so dissatisfied by the reports about Akbar's heresies that he had dropped correspondence with him. In reply Akbar wrote two long letters to him, denying the charge and asserting his orthodoxy. Blochmann (p. 468) represents Akbar as contenting himself with sending an Arabic quatrain which 'Abdullāh could construe into a denial of his apostasy; but the letter goes farther than this, and is a serious denial, backed by supposed proofs, of the charge that he was no good Muslim. In it he appeals to his temporal successes as proofs of his being sound in the Faith, for otherwise God would not have favoured his arms; he refers to his having introduced Islām into places where it was previously unknown, and speaks of churches and temples of infidels and heretics having been turned by his instrumentality into mosques and holy shrines for the orthodox. He also speaks of his great desire to destroy the Feringhis, *i.e.* the Portuguese, who oppressed the pilgrims to Mecca. The truth probably is that, though Akbar had become disgusted with the *'ulamā* on account of their greed and their quarrels among themselves, and also because they held that he had more wives than the Law allowed, and though he was determined to be the head of the Church and the supreme arbiter in religious matters, he never entirely divested himself of his early religious beliefs. He was a *dipsychus*, like his secretary and panegyrist Abū-l-Faẓl, who, while professing a new religion, and presiding over a fire-temple, was yet secretly engaged in the pious work of multiplying copies of the Qur'ān, and was sending copies of his father's commentary thereon to foreign princes. Akbar, too, was before all things a politician and a man of the world, and was in no mood to endanger his sovereignty for the cause of religious truth. He was willing that his followers should exhibit what he called the four degrees of devotion, *i.e.* to sacrifice Life and Property, Religion and Reputation for him, but he showed no eagerness to make such sacrifices himself. He was not an enthusiast about the Divine Religion, and hence, though he was a mighty monarch, he was far less successful than his humble contemporary Bayāzīd in making proselytes, and founded no enduring school.

In the *Dabistān-al-Mazāhib*, a singular work written in the time of his grandson Dārā Shikoh by a Sūfī who apparently professed Muhammadanism, but was at heart a Parsi or a follower of the *Dīn Ilāhī* of Akbar, we have what purports to be a specimen of the disputes which were carried on in the *'Ibādatẖāna*, but they are probably imaginary. For real accounts of them we must go to Badāyūnī and Abū-l-Faẓl. The chapters in the *'Ain* (Blochmann's tr.) which bear on the point are the *'Ain* 18 of the 1st book, on 'Illuminations,' and *'Ain* 77 of the same book on 'His Majesty as the Spiritual Guide of the People.' To the latter there is a short supplement entitled 'Ordinances of the Divine Faith.' There are also two valuable chapters on the subject in the third volume of the historical part of the *Akbar-nāmah*. The gist of them is Monotheism, but then this was combined with a worship of light and fire, especially as represented by the sun, which is not to be distinguished from the religion of the Parsis. Indeed, it was Parsis from Nausārī in Gujrāt and from Persia who taught Akbar. Upon this point the interesting article on 'The Parsis at the Court of Akbar' by Jīvānji Jamshedji Modī, Bomb. Branch of the *RAS* (1902 f.) may be consulted. Reference, too, may be made to the chapter in the *Dabistān* on the worship of the constellations and planets. As Blochmann remarks in a note (p. 210), the author gives prominence to the idea that the successes of Chingiz Khān and his descendants were due to their worship of the stars, and that conversion to Islām brought about their decline.

Akbar never published any catechism of his religion, and, though Abū-l-Faẓl meditated writing a separate book on the subject, he never did so. We therefore have to draw our knowledge of his tenets from scattered passages in Badāyūnī and from the short section in the *'Ain* entitled 'Ordinances of the Divine Faith' (Blochmann, 166). Akbar called his religion *Dīn Ilāhī*, or 'the Divine Faith,' and also the *Tauḥīd-i-Ilāhī*, or 'Divine Monotheism,' in allusion to his leading doctrine of the Oneness of the Deity. With this, however, he coupled the statement that Akbar was God's *Khalīf*, or Vicar. Badāyūnī writes: 'His Majesty had now (A.H. 987, or A.D. 1579) determined to use publicly the formula "There is no God but God, and Akbar is God's representative." But as this led to commotions, he thought better of it, and restricted the use of the formula to a few people in the Harem.' Akbar also adopted the doctrine of transmigration, and observed: 'There is no religion in which the doctrine of transmigration has not taken firm root.' Perhaps, in making this remark, he was thinking not only of the Hindu and Buddhist religions, but also of the Nuṣairis, who, as we learn from the work of Réné Dussaud (p. 120), have always strongly held the doctrine. At p. 271 of the *Akbar-nāmah*, vol. iii., Abū-l-Faẓl refers to the presence at Fatẖpūr of adherents of Nuṣair, and says that the language used by them led some people to suppose that Akbar was claiming to be God. Certainly the expressions used by Abū-l-Faẓl and his brother might well give rise to Mullā Sherī's sarcasm—

'The King this year has laid claim to be a Prophet;
After the lapse of a year, please God, he will become God.'

Akbar paid homage to the sun, and it is difficult to say that he did not worship it. Abū-l-Faẓl says in the *'Ain* (Blochmann, p. 48): 'His Majesty maintains that it is a religious duty and Divine praise to worship fire and light; surly, ignorant men consider it forgetfulness of the Almighty, and fire-worship. But the deep-sighted know better.' He also believed that Royalty was a light emanating from God, and a ray from the sun. 'Modern language calls this light *farr-īzidī*, "the Divine light," and the tongue of antiquity called it *Kiyān Khwarah*, "the sublime halo"' (Blochmann, iii.). Evidently Persia and the old Persian religion had a strong influence over him. Parsīs came to him from Nausārī in Gujrāt, and he also sent to Persia and fetched a learned Zoroastrian named Ardashīr. He adopted the Persian Naurūz (New Year) festival and some twelve others, and enjoined their observance on his provincial officers (see his *firmān* of A.H. 992 [1584], *Akbar-nāmah*, iii. 10, and his instructions to the viceroys and to the police [Jarrett, iii. 41, etc.]). In the *firmān* he also gives his reasons for establishing a new era, which he called the Divine era, and in his instructions to the kotwal (Jarrett, iii. 43) he becomes so bigoted in his asceticism as to direct that whoever should eat or drink with a butcher should lose his hand. If the association did not go so far as this, the penalty was the loss of a finger. This, as Elphinstone well remarks, was a law worthy of Manu, and no doubt it was prompted by the zeal of his Hindu advisers who wished to put down the killing of cows. Widows were not to be compelled to perform *satī*, but were not to be prevented from voluntary immolation. Circumcision was to be deferred till the age of twelve, the object being not to make children Musalmāns until they could judge for themselves.

Some of the flatterers suggested that he should introduce the New Faith by force, but his natural mildness and tolerance prevented him from following their advice. As Badāyūnī says, 'His Majesty was convinced that confidence in him as a leader was a matter of time and good counsel, and did not require the sword.'

The mode of initiation into the new religion is described in the *'Ain* (Blochmann, 165). Akbar, we are told, did not readily admit disciples, but if one showed earnestness of purpose he was accepted, and the ceremony took place on a Sunday when

the sun was in the meridian. In the *Akbar-nāmah*, iii. 354, one instance of such initiation is recorded. Fath Dost, the son of the Bārhegī or Master of Requests, importuned Abū-l-Faẓl and Akbar to be admitted, and at length Akbar consented and recited over him the formula 'The pure *shast* and the pure glance err not.' But the initiation was not a success, for two days afterwards Fath Dost was caught and killed under such disgraceful circumstances that his father declined to prosecute (Iqbālnāma).

Father Rudolf Acquaviva left when he found Akbar bent on establishing a new faith. He and other missionaries saw they made no impression on Akbar, who refused to accept Christianity unless the mysteries of the Trinity and of the Sonship of Jesus Christ were made intelligible to him. He also withdrew from their society when he found that his alleged heresies were provoking a rebellion in Bengal. He returned to playing with the subject when the danger was over, and Father Jerome Xavier was with him to the end, and wrote for him a Life of Christ and a Life of St. Peter, and also some controversial tracts. But Akbar never was so well-disposed to Christianity as his son Jahāngīr, and died as he had lived—a sceptic.

AḲIBA BEN JOSEPH (50–135 A.D.).—A great Rabbi who largely modified Jewish thought after the destruction of Jerusalem, and was not without influence on the early Christians. Graetz describes Aḳiba as beyond doubt the most gifted and influential of the Tannaim. Much legendary material clusters round his early history. He was a great traveller. He went to Rome in the autumn of 95 as one of an embassy to dissuade Domitian from a cruel edict, only stopped by the emperor's death. His companions were Gamaliel, Eliezer ben Asaria, and Joshua (*Erubin*, 84; and *Sukka*, 23). When on board ship, he erected a tabernacle, which was blown down in a gale, and his companions laughed at him for being over-righteous. At Rome he was in favour at the court of the Emperor Nerva, where Flavius Clemens (consul and Domitian's nephew) and Domitilla and Akylas (or Aquila), afterwards Aḳiba's pupil, became proselytes. But when Trajan succeeded, bad times arose for the Jews, and he returned to Palestine. Thence he went to Babylon, and preached and taught in Nehardea (see *Jebamoth, ad fin.*). Afterwards he lived at Gazakha (*'Ab. Zara*, 34*a*).

Before the outbreak of Bar Cochba's rebellion, Aḳiba made a final journey throughout Parthia and Asia Minor, and spread the Messianic propaganda, preaching against Hadrian and his legions. We read of him as in Phrygia, Galatia, Galicia, and Cappadocia (*Rosh Hashanah*, 26*a*; *Jebamoth*, 121*a*; *Baba ḳamma*, 113*a*; *Sifre*, Nu 5[8]). The earthquake which had just destroyed Cæsarea inspired Aḳiba and the Jewish rebels with confidence; for as its rise had coincided with Jerusalem's fall, so should its fall result in the restoration of the Jewish capital.

The disastrous failure of Bar Cochba's rebellion resulted in Aḳiba's imprisonment and execution by the Romans.

E. A. Abbott, in *From Letter to Spirit*, quotes the Talmudic description of his martyrdom. The Talmud Babli (*Berakh.* 61*b*) tells how, when Aḳiba 'was being led out to execution, it was the time for reciting the Shema' ("Hear, O Israel, the Lord our God is ONE GOD"), and they were combing his flesh with combs of iron; but he persisted in reciting it. His disciples remonstrated with him, saying that he had endured enough. Aḳiba replied, "All my days I have been troubled about this verse: Thou shalt love the Lord with all thy soul (or life), even if He should take away thy spirit (or breath). When, said I, will it be in my power to fulfil this? Now that I have the occasion, shall I not fulfil it?" As he was lengthening out the word ONE, till he expired at ONE, the Bath Ḳol went forth, saying, "Happy art thou, Aḳiba, that thy spirit went forth at ONE."'

It is interesting to compare this with the account in the Jerus. Talmud (*Berakh.* ix. 7): 'R. Aḳiba was on the point of undergoing the extremity of the law in the presence of the impious Turnus Rufus, when the moment arrived for reciting the Shema'. He began it, and it filled him with joy. "Old man, old man!" cried the pro-consul, "art thou a sorcerer (so that thy tortures cause thee no suffering), or dost thou defy me by showing joy in the midst of thy pains?" "Calm thyself," replied Aḳiba; "I am neither sorcerer nor mocker; but all my life long I have read this verse of the Pentateuch, and sorrowfully said to myself, When shall I fulfil the three ways of worshipping God set forth in this profession of faith: Thou shalt love the Lord thy God with all thy heart, with all thy soul, and with all thy powers? I have proved that I love him with all my heart and with all my means, but I had not yet undergone the test of love with all my soul, as I undergo it at this moment, and that is the moment in which I thus recite the Shema'. I delight in this occasion of proving my faith; and I have shown my joy." With these final words he gave up his soul (to God).'

The story of the 'ten martyrs,' including Aḳiba, still forms the theme of a touching *Seliḥa*, and of an elegy in the Jewish ritual for the Day of Atonement and the Fast of the Ninth of Ab.

But legend does not leave Aḳiba with his death. As with so many saints, there is something miraculous about his burial. A Midrash, quoted by Jellinek (vi. 27. 8), tells how, after Aḳiba's execution, Elijah, accompanied by Aḳiba's faithful disciple Joshua, entered the prison where the body lay, removed it thence, and, escorted by many angels, brought it to Cæsarea. They entered a cavern containing a bed, table, chair, and lamp, and laid the body on the bed. No sooner had they left the cave than it closed of its own accord, and no man has ever seen it since. A hundred years after Aḳiba's death, about 250, we get the first mention of a Messiah ben Joseph, in contradistinction to the Messiah ben David. R. Dosa tells of this in *Sukka*, 52*a*. The Messiah ben Joseph must die first, and then will be the advent of the real Messiah. This idea is perhaps due to the legendary talk which encircled either Jesus or Aḳiba, and genuine Jewish folk-lore is at the bottom of it.

Aḳiba was much opposed to the new Christian heresy, and it is not surprising that Jerome puts him at the head and front of the offending Rabbis.

'Duas domus Nazarei—duas familias interpretantur Saummai et Hilliel ex quibus orti sunt scribæ et Pharisæi, quorum suscepit scholam Achibas (quem magistrum Aquilæ proselytæ autumant) et post eum Meir cui successit Johanan filius Zachai et post eum Eliezer, et post ordinem Delphon (=Tarphon) et rursum Joseph Galileus, et usque ad captivitatem Jerusalem Josue.'

Perhaps his most famous pupil was Aquila, whose literally literal translation of the Hebrew text of Scripture was held in high esteem by all Jews, though Jerome sneers at it. Every enclitic את is translated by συν. And the Talmud of Jerusalem (*Ḳidd.* i. 59[a]) says: 'Aquilas the proselyte made his Targum (תרגום) in Aḳiba's presence.' This was because of his practice of Aḳiba's theory, and accounts for the popularity of his translation amongst the Jews, who in Talmud and Haggādah quote Aqnila no less than fourteen times (see de Rossi, *Meor Enaiim*, vi. 45). But that popularity did not preserve his Targum, for the Jews soon forgot their Greek; and it was not till 1903 that Burkitt was able to rescue and identify an important fragment out of the Cairo Genizah. Of Aḳiba's other pupils, we must mention the Jewish Æsop, Meir, who was the link between his Mishna and

ours, and Simeon ben Jochai the mystic, to whom the foundation of the Ḳabbala is attributed.

With mysticism, however, as with gnosticism, Aḳiba had no sympathy. He is the only one of the four Rabbis who is said to have entered the פרדס, the mystic garden, and come out again without hurt. One died, one became insane, and one an apostate —probably to Christianity. The last was the famous Aḥer, Elisha ben Abuyah. There was much coquetting with Christianity in those times. Even the famous Eliezer ben Hyrcanus, Aḳiba's teacher, was taunted with being a Christian because he listened with pleasure to a parable recited to him in the name of Jesus. But Aḳiba's was an exact science which left no room for eschatological speculations. He sought for mathematical proofs of his principles of the Jewish religion, and found them in the apparently superfluous terms, words, letters, and ornaments of Scripture upon which tradition and usage were to found new legislation. This method he derived from his teacher, Nahum of Gimzo, but Philo had applied it a century earlier to the relations of ethics and philosophy. Aḳiba applied it to Halākhah, and Aḳiba's view ultimately prevailed in the Talmud. It is in reference to this doctrine that Mt 5^{18} and Lk 16^{17} record that 'till heaven and earth pass, one jot or one tittle shall in no wise pass from the law' (*ἰῶτα ἓν ἢ μία κεραία* and *τοῦ νόμου μίαν κεραίαν πεσεῖν*). Sharpe translates *κεραία* by 'one tip of a letter.'

Aḳiba's chief antagonist was R. Ishmael. The two are throughout Rabbinical literature regarded as opponents, like Hillel and Shammai, and other pairs such as those described in *Aboth*, cap. 1. The fundamental distinction between them was in their treatment of pleonasms in Scripture: Ishmael regarded these as the mere rhetoric of ordinary language, Aḳiba held them to be essential portions of the Law. He never took the particle את as a sign of inflexion, but 'expounded (דורש) all the אתין in the Torah,' and his pupil Nehemiah of Emmaus seceded from his school in consequence of the risk which such an interpretation involved in such a passage as 'Thou shalt fear (את) the Lord thy God,' which, according to R. Aḳiba's view, implied fearing somebody or something *with* the Lord. Aḳiba said this meant the Torah, but, objected his pupil, it might just as well mean another god. Another of such rules was that dealing with the word 'saying' (לאמור): 'Wherever the word לאמור is used it must be expounded' (*Sifre*, Nu 5^{8}). Finally, he interpreted the letters ה and ו wherever they seemed pleonastic in the text. 'R. Aḳiba expounded the ין' (*Jebamoth*, 58*b*). A further difference between the men was that whereas R. Aḳiba did, R. Ishmael did not allow himself to treat conclusions out of Scripture as the premises for further conclusions (Jerus. *Ḳidd.* i. 2, and *Nazir*, 57*a*).

It was in opposition to this perhaps extravagant mode of interpretation that the more sober R. Ishmael altered all rules of interpretation to his famous 13 *Middoth*, so that he represented logic and his great opponent allegory. These thirteen principles are really based upon the seven rules laid down by Hillel.

The *Middoth* were originally drawn up as abstract rules by Hillel, and were variously interpreted and modified by his successors, but Aḳiba and Ishmael and their scholars specially contributed to their definition, Aḳiba on the grammatical and exegetical side, and Ishmael on the logical. In their final form these *Middoth* are seven of the thirteen exegetical principles by which the Law is expounded, and which constitute the *Baraïtha de R. Ishmael* to be found in the Jewish Daily Prayer-Book.

(1) The inference from minor to major.

(2) The inference from similarity of phrases.

(3) and (4) A general law derived by induction from a common feature in (*a*) the same passage, (*b*) different passages.

(5) If an enumeration of particulars succeeds a general proposition, such general proposition is limited to articles *ejusdem generis*, but if it precedes, the general proposition may be extended.

(6) Interpreting a passage according to one of similar content in another place.

(7) Deducing a passage from its context.

In (5) and (7) Aḳiba and Ishmael disagree. Where two Scripture passages conflict, a third passage would be adduced to confirm one of the two conflicting dicta and reject the other, but Ishmael would thereby modify both such dicta. This opposition of the two schools gradually decreased and finally vanished, so that the later Tannaïm do not discriminate between Aḳiba's axiome and Ishmael's.

The effect of Aḳiba's system was epoch-making. He really gave his contemporaries a new point of view. The Temple had been destroyed, the country vanquished, and the Jews of the time were like sheep without a shepherd, having lost all hope and all belief. Scripture seemed insufficient to provide for one's daily needs or satisfy anybody's ideals. The Oral Law was doubted. It had enemies without and within. The forces of barbarism and Rome had conquered, and Christianity was a redoubtable foe from within, which, with its Messianic mysticism, must have offered comfort to the hopeless exiles. Then came R. Aḳiba, and showed that there was authority for all the Oral Law. He gave the solid rock of Scripture as the foundation for all the structure of observances, rules, and usages prevalent in his time, and at the same time enabled his pupils and followers to build up afresh. No wonder he surprised and dazzled his contemporaries, and even his teachers, so that R. Joshua, once his teacher, could ask (*Sota*, 27*b*), 'Who will remove the earth from the eyes of R. Jochanan ben Zaccai, so that he may see how vain was his fear that Halākhah would have to be abandoned because it wanted Scripture support. Behold R. Aḳiba hath found Scripture support.' Everybody agreed that, but for R. Aḳiba, the whole Law must have been forgotten or, at any rate, neglected. Aḳiba's literalism not only justified tradition, it enabled the Oral Law to be rounded off and ordered and completed, and thus he is the true Father of the Talmud. His mnemonic method was twofold: first, to divide the laws according to their subject-matter, property, marriage, divorce, Sabbath, and so on, each such division constituting a treatise (*Masekhta*); and, secondly, to arrange the material for each treatise according to numbers, so as to make them easier to remember. Thus there are *four* kinds of damage to property, there are *five* classes of people who may not enjoy the Priests' *terūmah*, *fifteen* women are excluded from the levirate, *thirty-six* crimes are punishable with excision. This arrangement of the Halākhah was called *Mishna*, afterwards known as R. Aḳiba's Mishna, to distinguish it from the Mishna now extant, and this was translated by the Christian theologians, such as Epiphanius, as Aḳiba's *Deuterosis*. There had been other Mishnas earlier in date, but Aḳiba's superseded all. Thus it is frequently stated in the Talmud that 'This (meaning the dogma there set forth as the Law) is R. Aḳiba's Mishna, but the first Mishna said . . .' (cf. *Sanhedrin*, 27*a*, and *Rosh Hashanah*, 17).

Mnemonic grouping, into numbers, was applied by Aḳiba to his ethical sayings also. These, collected by Bacher in his *Agada der Tannaïten*, throw considerable light upon the social conditions of the Palestine of Aḳiba's time. Some of them are culled from Sirach, an interesting fact, when it is remembered that Aḳiba was one of the Rabbis who settled the canon of Scripture, and objected to the use of extraneous books, including Ben Sira. In something like the spirit of Omar he said that Scripture was enough. If books contravene Scripture, destroy them; if they support Scripture, they are not needed. Some of Aḳiba's logia are given in the 3rd chapter of *Aboth*, but his ethics is scattered throughout Talmud and Midrash. Specimens of these are the following:—

'Three people are happy, and their consciences may be tranquil, namely, (1) he whose prayer is glib in his mouth, for prayer must come free from the heart, not from the mouth; (2) he in whom men have satisfaction, God has satisfaction, and he in whom men have not satisfaction, God has not satisfaction; (3) he who is satisfied with that he possesses, that is a good sign for him; but he who is dissatisfied, that is a bad sign.

As for sin, at first it is like a thread of a spider's web, but in the end it is as strong as a ship's rope. He who in anger tears his clothes and breaks his crockery, he will serve idols in the end, for this is how the evil inclination works. It says to-day "tear thy clothes," and to-morrow "serve idols."'

Akiba is very hard upon passionate anger. 'He who in anger throws his bread on the ground and scatters his money, he will not leave the world before he has had to beg his neighbours for bread and for money.' Akiba mocked at the weaklings who could not withstand the inclination to sin, but there is an Aramaic legend to the effect that he himself had once nearly succumbed to temptation (*Kidd.* 81*a*), when Satan presented himself to him in the guise of a lovely woman.

Like Hillel's, Akiba's great principle was that of Lv 19^{18}, 'Love thy neighbour as thyself,' and this principle he applied with characteristic ingenuity to marriage. An unequal match he condemns as offending against this principle. 'He that marries a wife who is not fitting to him commits five sins. He transgresses the three commandments, not to bear a grudge, or hate his brother in his heart, as well as the two as to loving one's neighbour. If he hates his wife, he defeats the object of marriage.' It is better to save one's own life rather than that of a stranger, because it is said 'Fear thy God that thy brother may live with thee.' 'The greatest sin is usury, the greatest virtue visiting the sick.' At Gazaka Akiba noticed three things that pleased him much. 'The Medians carve at table, they kiss the hand only, their meetings are in the open field.' (These preferences reflect his fears as a conspirator against Rome).

'There are five persons whose sin can never be forgiven: (1) he who is always repenting and repeating his sin; (2) he who sins much; (3) he who sins in pious times; (4) he who sins in order to repent; (5) he who desecrates God's name by his sin.'

Akiba was no laughing philosopher. He lived in serious times, and therefore it is that he says laughter and levity lead to immorality, and, further, that tradition is a fence for the Law, vows for piety, silence for wisdom.

To his son Joshua he gave the following seven rules of life (*Pesahim*, 112*a*): (1) 'Do not live in the heights of the city; (2) do not live in a city whose ruler is a learned man; (3) do not enter a house suddenly—either a stranger's or thine own; (4) do not walk barefooted; (5) eat an early breakfast, in summer because of the heat, in winter because of the cold; (6) better do without a Sabbath meal than take charity from thy neighbours; (7) keep friendly with the man whose hour smiles upon him.'

Five rules he gave to his pupil Simeon ben Jochai when he was in the Roman prison: (1) 'If thou wouldst hang thyself, hang on a large tree; (2) teach thy son out of a correct book; (3) do not cook in a pot in which thy neighbour has cooked; (4) seek to keep thy capital and have an income besides; (5) it is both mirth and pleasure to have a wife and children.' In *Aboth de R. Nathan* other six rules are laid down: (1) 'Go not into the society of mockers, lest thou learn from their actions; (2) eat not at the table of a priest who is an idiot, lest he give thee that which is not holy; (3) be not free with thy promises, lest thou break thine oath; (4) accustom not thyself to be a guest with others, lest thou have to eat at the kitchen of the poor; (5) commit not thyself to doubtful things, lest thou art found wanting in that of which there is no doubt; (6) go not to foreign countries, lest thou be tempted to serve strange gods.'

With regard to diet he advised (*Sanh.* 17. v), 'Live only in a city where there is fruit, for fruit is good for the eyes. He that eats foods that disagree with him transgresses three commandments. He disgraces himself, he disgraces the food, and he makes a *Berākhah* (blessing) in vain.'

'Shameful is he who allows his daughter to remain at home unmarried.'

'Take heed of him who gives advice without being asked for it.'

ALAKHNĀMĪS, ALAKHGĪRS, or ALAKHIYĀS (Skr. *alakṣya*, 'unseeable,' and *nāman*, 'name'; hence Hindūstānī *Alakh-nāmī* 'one who calls upon the name of the Unseeable.' In *Alakhgīr*, *gīr*=Skr. *giri*, an honorific title employed by one of the orders of the *Dasnāmī* Śaiva sect. *Alakhiyā* is simply a Hindūstānī derivative of *Alakh*, meaning 'a follower of the Unseeable').—A name applied in Northern India to various sects of Śaiva mendicants. The name *Alakhiyā* is applied to all, but *Alakhnāmī* is generally reserved for those who claim to be a subdivision of the Purī division of the Dasnāmī sect, while *Alakhgīr* is reserved for those belonging to the Giri division. They are all popularly known as *Alakh-kō jagānēwālē*, or 'Wakers of the Unseeable,' in allusion to their habit of crying out His name. Adherents of other Śaiva forms of belief also call themselves Alakhiyā, but the true Alakhiyās consider themselves as belonging to a sect apart, and do not follow customs (such as slitting the ears among Gōrakhpanthīs [*q.v.*]) which are retained by Alakhiyās of other professions.

All these Alakhiyās have tenets much in common, based on the central idea that the Supreme Deity is incomprehensible, or, as they say, 'unseeable.' In this respect Powlett's account (see Literature at end) of the Alakhgīrs of Bīkānēr in Rājputānā may be taken as applying to all. This particular sect was founded by a Chamār (or low-caste leather worker) named Lāl, to whom his followers gave the title of Lāl-gīr. He denounced idolatry, and taught his followers to call only upon 'the Unseeable.' Their sole worship consisted in repeatedly ejaculating the name *Alakh*. Charity was to be practised; the taking of life and the use of meat as food were forbidden; asceticism was encouraged. His doctrine was that there is no future state. All perishes with the body, which is finally dissolved into the elements. The sole rewards which he held out to his disciples were confined to this life, and consisted in the attainment of purity, untroubled contemplation, and serenity. There being no future life, heaven and hell (or, in other words, happiness and misery) were within the man himself.

Alakhiyās wear a peculiar garb, consisting of a long blanket coat and a round, or high conical, cap. Although mendicants, they never beg directly. They come to a man's door and raise their characteristic cry of '*Alakh kahō; Alakh-kō lakhō*,' 'Tell of the Unseeable; see the Unseeable.' If alms are then offered, they accept them; otherwise they go away at once. They are looked upon as a quiet, harmless class of beggars.

Lāl-gīr's date is unknown, nor is there any record of the origin of the special theory which is the basis of the religion. That the Supreme Deity is indiscrete, void of all qualities, and incomprehensible, is a commonplace of nearly all phases of Hindu belief, but this has been materially qualified during the past thousand years by the spread of the Bhakti-mārga [*q.v.*], which superadds to it the idea of devotion to a personal God, who is the Supreme Deity become incarnate in cognizable form out of pity for man's weakness and sin. The greatest exponent of the Bhakti-mārga, Tulsī Dās (1532–1623 A.D.), was never weary of dwelling on the incomprehensible nature of the Supreme Deity, and arguing from the fact that He was *mana-krama-bachana-agōchara* (*i.e.* beyond the reach of thought, act, and speech) to the conclusion that the only way of salvation open to finite beings was the exclusive worship of a personal incarnation of that Deity under the form of Rāma. The tenets of the Alakhiyās, based as they are upon the rejection of the idea of a personal God, may well have been put forward as a protest against the view of the Bhakti-mārga, and as a counter attempt to popularize the idealistic theology of the *advaita* Vedānta philosophy, the aim of which is knowledge of the unknowable, rather than the adoration of the comprehensible. In this connexion the termination *gīr* in 'Lāl-gīr,' 'Alakh-gīr,' is important, as, amongst Śaivas, it is employed only by those who claim spiritual descent from Śaṅkarāchārya [*q.v.*], the great founder of the *advaita* Vedānta. Lāl-gīr was also probably influenced by the doctrine of the Jains (with which his teaching has much in common), who are a

numerous and influential body in Rājputānā. Still more striking is the agreement of his teaching with some of the doctrines of Buddhism, but we have no reason to suppose that he can have been alive when that religion flourished in India. The earliest mention of the Alakhiyās that the present writer has seen is in a short poem attributed to Tulsī Dās. That reformer is said to have entered into a controversy with one of them, and his argument, as contained in the poem, was that the only way to 'see the Unseen' was to see him through the personality of Rāma.

A modern sect, akin to the Alakhiyās, was founded about the year 1850, in Orissa, by one Mukund Dās, who was, according to his followers, an incarnation of Alēkh (*sic*) himself. He, however, claimed only to be in special communication with this Alēkh, whom he described as a formless, spiritual being, omnipresent and omniscient. In other respects his teaching was identical with that of the Alakhiyās of Northern India. He died in 1875, and the sect then dwindled, but is still in existence in some force in the district of Sambalpur, immediately to the west of Orissa.

LITERATURE.—Regarding Lāl-gir, see p. 195 of the *Gazetteer of Bikānēr*, by Major P. W. Powlett (1879); also W. Crooke, *The Tribes and Castes of the North-Western Provinces and Oudh* (1896), i. p. 78 (mostly based on Powlett); cf. also H. H. Wilson, *Essays on the Religion of the Hindus* (ed. 1861), i. pp. 235, 236, 238; and the present writer's 'Notes on Tulsī Dās' in *Indian Antiquary*, xxii. (1893) p. 271. As for the followers of the Alēkh sect, see *Proceedings of the Bengal Asiatic Society* for 1882, p. 2ff. GEORGE A. GRIERSON.

ALAKNANDĀ (Skr. *alaknandā*, 'a young girl').—A sacred river in the district of British Garhwāl, one of the tributaries of the Ganges. It has several sacred junctions (*saṅgama*) along its banks, at which religious bathing fairs are held—Nandprayāg, where it is joined by the Nandākinī; Karnaprayāg, by the Pindar; Rudraprayāg, by the Mandākinī; Devaprayāg, by the Bhāgīrathī, after which it is styled the Ganges (which see). Though the Alaknandā in volume and position is superior to the Bhāgīrathī, the latter is popularly regarded as the source of the sacred river.

LITERATURE.—Raper in 11th vol. of *Asiatic Researches*; Oakley, *Holy Himalaya* (1905), 141 f. W. CROOKE.

ALBIGENSES.—A sect which derived its name from the cathedral city of Albi (Lat. *Albiga*), situated on the south bank of a confluent of the Garonne in France called the Tarn, which gives its name to the modern department. The 'civitas' of the bishopric was conterminous with those of Carcassonne and Toulouse, all the three dioceses being in the province of Narbonne, and owing a common allegiance to the metropolitan of that city (Longnon, *Géog. de la Gaule*, pp. 520–521; Devic and Vaissète [ed. 1872], vi. 6). The associations of Albi were consequently chiefly with the country to the south; but when, in the 11th cent., it was placed under the rule of a vicomte, his jurisdiction extended north as far as the course of the Aveyron. Its earlier history, however, like that of Toulouse, is connected mainly with that of Septimania, the extensive region between the Rhone and the Pyrenees.

As early as the 5th cent. St. Amarand had been the patron saint of Albi, and with his worship was associated that of Eugenius, the bones of both being interred at Vieux, some 18 miles west of the city. Diogenianus, its third bishop, is the first with respect to whom we have any information; he is referred to by Gregory of Tours (*Hist. Franc.* ii. 12) as one of the ablest guardians of the faith in the first half of the 5th century. Septimania, from the 5th to the 8th cent., was ruled by the Visigoth, who had his capital at Toulouse, and the territory is consequently, at this period, often referred to as Gothia. The Goths professed the Arian faith, and supported it, although not coercively, among the populations whom they had reduced to subjection, but whom they aimed at assimilating rather than effacing. They were themselves industrious cultivators of the soil, and understood the working of metals; the Roman cities remained intact beneath their sway, and the Roman law was administered concurrently with their own. The chief impediment to peaceful relations between the two races was the pertinacity with which the Catholic bishops of the conquered opposed the religious creed of the conquerors. Arianism, however, continued to spread, and, during the reign of Theodoric II. (453–466), became the national faith of the Suevi in northern Spain and of the populations of Cantabria and the Spanish March. If, indeed, the same conciliatory spirit towards the Roman clergy as was shown by Theodoric the Ostrogoth in Italy, had been shown by the Catholic bishop towards the upholders of the Arian creed in Septimania, it is probable that the Albigensian crusade would have been averted. In the 5th cent., under King Euric, the Visigoths had extended their rule over the greater part of the Spanish peninsula, while in Gaul it reached the Loire; but the persistently aggressive policy of the Catholic towards the Arian clergy roused the latter to a retaliatory course of action, which still further embittered the relations between the respective adherents of the two chief religions of Western Christendom. In the following century, on the other hand, the envoy of the Ostrogoths in Italy to Belisarius, could defy their enemies to prove that their monarch had ever resorted to unprovoked aggression on those professing the Catholic faith (Procopius, *de Bell. Goth.* ii. 6), while the rule of Theodoric the Great was characterized by such exceptional tolerance towards his Jewish subjects as to make them his firm supporters against the common enemy (Vaissète, *Hist. de Languedoc*, i. 656–660; Dahn, *Urgesch. d. german. u. roman. Völker*, i. 362–368, 240–250; Milman, *Lat. Christianity*[4], bk. iii. ch. 3).

It is to be noted, again, that political aims weighed considerably with Clovis, the Frankish monarch, when, after his defeat of the Alemanni in 496, he embraced the Catholic form of the Christian belief. Ten years later, when he marched against the Visigoths, it was as 'Arian heretics' that he proposed to sweep them out of the land (Gregory of Tours, ii. 27), and the immediate result, consequently, was to rouse the Burgundian and other Teutonic monarchies, which professed Arianism, to a common resistance. From the struggle which ensued, Theodoric emerged lord of Provence as well as of Italy, while Gothia became yet more closely allied to the Visigothic power in Spain. In both these great monarchies, aversion from, and a spirit of resistance to, the Frankish invader became a tradition alike with the Teutonic conqueror and the native element—an element which in turn was largely modified by ethnic admixture.

The Albigeois, probably recovered by the Goths in the early part of the 6th cent., was again wrested from them a few years later, and the capture by the Franks of Alais, Uzès, Lodève, (*Luteva*), and Carcassonne followed shortly after. The last-named city was thus constituted a Catholic see,—Sergius, the first bishop, afterwards appearing as a supporter of the Roman creed at the third Council of Toledo in 589, over which Reccared, the Visigothic monarch, presided. Reccared had recently been converted to Catholicism; and, stimulated by his example, and aided by the great preponderance of the ecclesiastical over the lay element, the Roman party secured on that

memorable occasion an easy victory, eight bishops of Septimania, those of Maguelonne, Lodève, Agde, Beziers, Narbonne, Carcassonne, and Elne, headed by the metropolitan of Nîmes, making their submission and subscribing the condemnation of their former Arian tenets. Reccared's example was reluctantly followed, however, by many of his subjects, and in Septimania frequent risings ensued [Mansi, *Concilia* (ed. 1644), xiii. 128–130; Dahn, *op. cit.* i. 393–394].

Early in the 8th cent. the kingdom of the Visigoths was overthrown by the Saracen, and the new conqueror maintained his ground in Gothia for fifty years. In certain features, Muhammadanism and Arianism are alike, especially in their common denial of the Divinity of Christ, and also in the aversion with which both regarded the innovations which were then taking place in the Roman Church, in the direction of saint-worship and the concomitant veneration of images and relics. The new conquest was attended also by another racial admixture which would imperceptibly incline the population of Septimania to listen favourably to the discourse of those Paulician teachers from whom many of them were, before long, to imbibe the doctrines of Manichæism. Fauriel has pointed out how, during this period, the industries, architecture, language, and learning of Septimania were modified by the influence of the dominant race (*Hist. de la Poésie Provençale*, iii. 312–316). Of this approximation between the two races, an historical incident and a traditional reproach afford alike a noteworthy illustration. In the following century, a leader of the Paulicians is to be found advancing to battle side by side with a Saracen emir, to join in the defeating of the forces of the Catholic Greek beneath the walls of Samosata (Cedrenus, ii. 153; Zonaras, ii. lib. xiv.). In the 12th cent., the Catholic persecutor could assume it as a recognized fact that, in consequence of the Gothic and Saracen occupations, the inhabitants of Septimania, and more especially those of the Toulousain, had inherited a taint of heresy from which many of them were still unpurged (Peter de Cernay, Migne, *PL* ccxiii. 541; Milman, *op. cit.* v. 439; Luchaire, *Innocent III., la Croisade des Albigeois*, 159).

The obscurity which attaches to the history of the different Italian States in the 10th cent. and the earlier part of the 11th renders it impossible to trace with precision the dates and circumstances of those successive migrations of Paulicians (or 'Publicani,' as they are frequently termed), who, quitting their homes in Bulgaria (or Thrace), appeared at this era in Italy and from thence passed on to Western and Central Europe. The connexion between these emigrants from the Eastern Empire (or its dependencies) and the Albigenses of a later period, was first pointed out by Ussher, and more fully afterwards by Limborch (*Hist. Inquisitionis*, Amsterdam, 1692; tr. by Chandler, 1731), who also explained the features of divergence or agreement between the Albigenses and the Waldenses. But a more critical account of both sects and of the literature relating to them appeared in 1832 from the pen of S. R. Maitland, who, following up the line of inquiry indicated by Gibbon (in his 54th chap.), argued from evidence derived from *place*, *time*, and *name*, that 'the persons called Albigenses, in the south of France, were Paulician emigrants' (*Facts and Documents*, p. 92). 'In all essentials,' says Lea, 'the doctrine of the Paulicians was identical with that of the Albigenses' (*Hist. of the Inquisition in the Middle Ages*, i. 91). A recent critic, however—Professor Karl Müller of Giessen—is of opinion that the tenets of the Cathari (as we must now term them) are to be regarded as the outcome of a fusion of Paulician doctrines with those of the Euchites, a process which he considers had been brought to completion in Thrace (or Bulgaria), and subsequent to which the same emigrants, proceeding westward, carried with them doctrines which had a Gnostic-dualistic tendency (*ThLZ* (1890) p. 355).

As early as 1012, when the Emperor Henry II. was at Mainz, 'refutata est insania quorundam hæreticorum,' whom Hauck (*Kirchengesch.* iii. 431) assumes to have been Manichæans (Pertz, *Monumenta Germ. Hist.*, iii. p. 81); but the earliest authentic instance appears to belong to 1017, when certain canons of Orleans and other ecclesiastics of that city, thirteen in number, were brought before a specially convened Synod, and on being convicted of Manichæan tenets, which they refused to abjure, were burnt outside the city gates. Various features gave to this case a peculiar interest,—the fame of Orleans as a seat of learning, the facts that King Robert himself caused the inquiry to be instituted, that the heresy had been imported from Italy and Perigueux, and not least that it was by artifice, on the part of a Norman knight, that the necessary evidence was ultimately obtained from the admissions made by the victims themselves. The heresies to which they confessed—as involved in the denial of the Virgin-birth of Christ, of the efficacy of baptism, and of prayers to the saints, of the Real Presence in the Eucharist, and of the lawfulness and duty of marriage (in opposition to the Petrobrusians)—were unquestionably those of the Albigenses (D'Achéry [1723], i. 604–605; Döllinger, *Beiträge*, i. 62–65; Bouquet, *Recueil*, x. 36–38).

There is, however, strong presumptive evidence of the existence of such doctrines in northern France before the 11th century. In 991, the eminent Gerbert, on being consecrated to the archbishopric of Rheims, made solemn declaration of his belief in the articles of the Catholic faith, at the same time expressly specifying certain other tenets which he accepted with no less sincerity,—the resurrection of Christ and also that of all mankind, the Divinely inspired origin of both the OT and the NT, the existence of an evil spirit (which was evil *non per conditionem sed per arbitrium*), the lawfulness of marriage and of second marriage, and of the eating of meat, the remission of original sin by the rite of baptism (*Gerberti Epistolæ*, ed. Havet, 161–162; *ib.* ed. Olleris, 245–250; Schmidt (C.), *Hist. et Doct. des Cathares ou Albigeois*, i. 33). As all these were tenets specially repudiated by the Cathari, it is difficult not to concur in the view of Schmidt, Havet, and others, that Gerbert's declaration was designed as a protest against the growing activity of the sect in the province which he had been called upon to administer. As uttered by the metropolitan of the French kingdom, Gerbert's pronouncement acquired special importance, and it is probable that any manifestations of such heresy within the royal domain were repressed with exceptional rigour. But all around the comparatively circumscribed limits of the realm of France in those days, we have evidence that the doctrines of the Cathari were spreading rapidly. At Arras, in Flanders (whose counts rendered to the French Crown a homage that was purely external), there appeared in 1025 an Italian named Gundulf, whose preaching attracted so large a following that Reginald, the bishop of the city, ordered his arrest. He succeeded, however, in effecting his escape, and the bishop decreed it politic to deal mercifully with the perverts. He condescended to argument, but was baffled by the discovery that they admitted no written authority in doctrine save the NT, while they altogether rejected the OT. His inquiries failed to elicit any expression of opinions which could be pronounced

Manichæan, a fact which Schmidt (i. 36) explains by supposing that the humble *textores* of Arras were not yet fully initiated. Yielding to Reginald's gentle persuasions, they abjured their errors and implored forgiveness, whereupon they were again admitted to the fold. Among the tenets to which they confessed was the denial of the worship of the Cross and of its use as a sign—an early instance of opposition to this feature in the Roman ritual (Mansi, *Concilia* (1759), xix. 423; Schmidt, *op. cit.* i. 35; Döllinger, *Beiträge*, i. 66–67). In 1043, we find Roger, bishop of Chalons-sur-Marne, consulting Wazon, bishop of Liège (an ecclesiastic in high repute both for his learning and piety), with respect to certain *secret meetings* frequently held by the Cathari in his diocese, especially at the fortress of Montwimer, near Chalons. Wazon advised that, in the first instance, Roger should limit his interference to simply instructing the faithful throughout his diocese to abstain from communion and intercourse with such as were known to attend the gatherings. As, however, no satisfactory result followed, the Council of Rheims, in 1049, determined to issue a sentence of excommunication against not only those who were known to be members of the sect, but also against all who should encourage or protect them (Mansi, *op. cit.* xix. 742). This stringent measure appears to have had the designed effect; and, for some sixty years after, all traces of Catharists in northern France entirely disappear.

The above instances may here suffice to exemplify the treatment of heresy under the earlier Capets—a treatment far more rigorous than that to be noted, in the 11th cent., elsewhere. Both Hugh and his son Robert II. were strenuous supporters of the Church, while the archbishops of Rheims and Sens were immediate feudal lords of not a few of the civil magnates in the French kingdom. In Burgundy, Normandy, and Aquitaine, on the other hand,—provinces which in the 11th and 12th cents. were held by their rulers in what was virtual independence of the French Crown,—although there is evidence of a continuous growth of Catharist doctrines, the evidence that would have necessarily resulted from active measures for their repression appears to be comparatively rare. A decree of the Council convened at Toulouse by Calixtus II. in 1119, and re-enacted at the Lateran Council of 1139, throws considerable light on the general situation. The 'secular powers' are thereby enjoined to take active measures against those whom the Church has visited with its anathema; should they, on the contrary, endeavour to protect them, they are to be regarded as accomplices (Mansi, *op. cit.* xxi. 226, 532). The researches of Luchaire supply an excellent commentary on those edicts. The attitude of the seigneur in his fief, as well as that of the citizen in his walled town, was at this time becoming less and less friendly towards the Church; the former often found his territorial claims in conflict with those of the bishop, or with those of some adjacent monastery exempted from local control by virtue of papal charter, while the latter's chief pride was in the newly acquired freedom and privileges of his *ville franche*; both were thus inclined to sympathize with the persecuted sectary rather than with the imperious persecutor. In 1147, Bernard of Clairvaux, accompanied by the cardinal legate of Ostia, made a progress through Septimania, in the hope that, by means of his powerful oratory, he might succeed in winning back the population to the paths of orthodoxy. He found the churches deserted, for the most part, by their congregations, and in many cases by their clergy. The laity, on the other hand, whether seigneurs or artizans, were firm supporters of heresy, if not actually professed schismatics, while the powerful count of Toulouse and the almost equally powerful vicomte of Beziers could only be regarded as sympathizers with the movement [*Opera* (ed. 1719), i. 238]. According, indeed, to William of Neuburg, writing in 1160, the Cathari, 'commonly called Publicani,' existed in 'countless numbers' not only in France, but also in Spain, Italy, and Germany (*Hist. Rerum Anglic.*, ed. Hamilton, i. 120). And at nearly the same time, Hildegarda, the 'inspired' abbess of St. Rupert's Mount, near Bingen, addressed to the clergy of Mainz and Cologne her fervid appeals; enjoining them, 'if they would not that destruction should come upon them,' to eject from their territories these 'nefarious men, worse than Jews, and like unto the Sadducees,' whom she further describes as 'contemptuous of the Divine command to increase and multiply,' 'meagre with much fasting and yet addicted to incestuous lusts,' and 'despisers not only of God's commands as made known through Moses and the Prophets, but also of those of Christ' (Migne, *PL* xcvii., *Epp.* 47 and 48, pp. 247–253; Trithemius, *de Viris Illus. Ord. S. Benedicti*, ii. 119). At the Council of Tours in 1163, like tenets are described as emanating from Toulouse and extending over southern France, and bishops are enjoined to use all possible means to prevent their flocks from being brought under the influence of the preachers of such heresy (Mansi, *op. cit.* xxi. 1177). At the Lateran Council of 1179, Alexander III. enacted a sentence of excommunication against both preacher and pervert, and commanded the secular power to proceed against these heretics,—'quos alii Catharos, alii Patrinos, alii Publicanos, alii aliis nominibus vocant'—while all are forbidden, under peril of incurring an anathema, to give them shelter, either in their houses or on their lands (Mansi, *Concilia* [1644], xxvii. 460–461). If we may trust the Church History published at Leyden in 1599 with the sanction of the Vigniers, large numbers of heretics, *bearing the same appellations*, were burned in Flanders and various parts of France about the year 1183 (Vignier, *Hist. de l'Église*, p. 391). Two years later, we find the cardinal bishop of Albano placing himself at the head of an armed force with a view to their forcible suppression. But the first organized measures of this kind date from the decree of the Council of Verona in 1184, where, although the Cathari are indicated only in general terms, the doctrines prescribed are those by which they were especially distinguished, and the bishop of each diocese is instructed to *search out heretics*, and, on due further inquiry, to hand them over to be dealt with by the secular authorities (Lavisse and Rambaud, ii. 272).

It was not, however, until the pontificate of Innocent III. (1198–1216) that the decree of the Council of Verona appears to have been put into execution. A member of an illustrious Roman house, he applied himself with singular ability and penetration to the task of building up a spiritual despotism. Even Otto IV. was constrained to promise his co-operation in a religious Crusade before he could receive his imperial crown in Rome (Oct. 1209), and by that time the dangers which confronted the Church had assumed a yet more menacing aspect, for the Catharists now represented a movement which threatened the Roman pontificate itself with overthrow. From their various centres in southern Europe, following the courses of the great rivers,—the Danube, the Rhone, the Rhine, and the Saone,—they appeared, in yet greater numbers than before, in Picardy and Flanders. Industry, and especially the weaver's craft, attracted them to the more important industrial centres,—the desire of con-

vincing their foes by argument, to the famous schools of Paris, Chartres, Chalons, Orleans, Rheims, and Soissons (Hauréau, *Innocent III.*, p. 12). In Spain, it was rumoured, they were seeking to form an alliance with the Saracen against Christianity, and, like Hildegarda, the pontiff in Rome and the troubadour in Languedoc alike denounced their heresy as the worse of the two (Joachim *in Apocalyp.*, f. 134; Fauriel, *Hist. de la poésie provençale*, i. 77).

It is now that the territory of the Albigeois, having become their chief centre in Languedoc, appears first to have given its name to the sect; but in distant centres or districts they were still generally known as Cathari, and often, specifically, by some local name, wherever they congregated in large numbers—in Flanders and Picardy, for example, as *Piphili*, a corruption of Pauliciani; farther south, as *Bulgari* or *Bougres*. But their most widely spread designation, after that of Cathari, was Patarini, the name which they had brought with them from Italy, where again, at certain centres, they sometimes bore a local appellation, such as *Concorricci*, from Concorrazzo near Monza, *Albanenses*, from Alba in Piedmont, and *Bagnolenses*, from Bagnolo near Brescia. Even Agen, though but a few miles distant from the Albigeois, gave them a distinctive appellation,—*Agennenses* [see in Döllinger's *Beiträge* (ii. 53–84), the text of a MS compiled in 1235, and entitled *Supra Stella*].

It does not, however, appear that these widely scattered communities were at variance among themselves, as was notably the case, in the 17th cent., with those Puritan representatives of the Cathari who settled, as exiles, in Holland and in Germany. They are rather to be regarded as successive waves of a great exodus from Hungary, Croatia, Bosnia, Bulgaria, and Dalmatia, breaking now on the north-western shores of the Adriatic (where Venice became their chief centre), and now on the coast of Apulia, but finding, both among the rising communes of Lombardy and the unruly barons of the south, a sympathy which deepened into admiration and bore fruit in numerous converts to their doctrines. The state of the Catholic Church, indeed, whether in the lands which these exiles had quitted or in those in which they settled, was not such as to inspire them with much reverence for its institutions. In Bosnia there was but one Catholic bishop, and the clergy were poor and ignorant. In Hungary, a public official might be a Jew, a Muhammadan, or a pagan; and the monasteries there, which professed the Benedictine rule, were fain to seek their novices in Germany and Italy, and existed in almost complete isolation from the surrounding populations. Those of the Greek Church, on the other hand, while regarded with dislike by the Latin clergy, often sheltered within their walls not a few for whom the refined subtleties of the Manichæistic dualism possessed almost a fascination; while over those rude natives to whom the Perfects of the Cathari were able to preach in the vernacular, their simpler faith and ascetic life exercised a scarcely less potent influence. Among those of them who became converts to Bogomilism (see BOGOMILS) the aversion from the doctrines and example of the Old Rome was so strong that large numbers became converts to Muhammadanism. The Paulicians, however, who formed an important body in the New Rome, migrated to Italy and to France. With regard to what might there be observed of the life of the higher ecclesiastics and the state of discipline in the Church at large, it may here be sufficient to cite the declarations of a contemporary Pope and the candid admissions of a living Catholic prelate. It was in May, 1204, that Innocent III. addressed to his legate in Narbonne a letter calling attention to the demoralized condition of the clergy in that province, a state which he attributes largely to the misrule of the metropolitan, Berenger II. He describes the superior clergy as 'dumb dogs who had forgot how to bark, simoniacs who sold justice, absolving the rich and condemning the poor, themselves regardless of the laws of the Church, accumulators of benefices in their own hands, conferring dignities on unworthy priests or illiterate lads.' '*And hence*,' he adds, '*the insolence of the heretics* and the prevailing contempt both of seigneurs and the people for God and for His Church.' 'Nothing,' he goes on to say, 'was more common than for monks even, and regular canons, to cast aside their attire, take to gambling and hunting, consort with concubines, and turn jugglers or doctors' (*Epist.* bk. viii. No. 75, Migne, *PL* ccix. 355–357). 'We are bound, in good faith, to admit,' writes Mgr. Douais, 'that the clergy of the 12th cent. were not simply wanting in the power to withstand the revolutionary designs of the new Manichæans, *but themselves afforded them at once a pretext and an excuse*' (*Les Albigeois*[2] [1880], p. 287). In the year in which Innocent himself was elected Pope, the citizens of Lodève, in the territory of Beziers, had plundered the palace of their bishop, and compelled him, by threats on his life, to grant them fresh privileges (Luchaire, *Innocent, III.*, p. 27). It is, indeed, undeniable that at this time most of the chief seigneurs in Languedoc regarded Catholicism with indifference, if not hostility, and were friendly at heart to the Catharists; while, if their arch-accuser, Peter of Cernay, may be credited, the counts of Foix, Beziers, Toulouse, and Béarn took special delight in encouraging the desecration of churches and in offering insults to the officiating clergy (*Historia Albigensium*, Migne, *PL* ccxiii. cols. 565, 566, 579, 600–602). That such outrages were instigated by the Catharists themselves, or that they were the result of their teaching, is, however, at least doubtful, although there certainly are instances of similar action on their part under extreme provocation. But, generally speaking, by the admission of the same writer, they were known among their supporters as the *boni homines*, the 'bons hommes,' whose simple blameless life offered, in most respects, the strongest contrast alike to the self-seeking and self-indulgent habits of the clergy, and to the dissolute and reckless careers of the majority of the seigneurs (*ib.* col. 553).

Prior to the reign of Louis VII. (1130–1180), the counts of Toulouse had been among the most independent of all the vassals of the French Crown; but in 1154 the marriage of Raymond V. with Constance, the sister of Louis, ushered in a material change in these relations. Shortly after, and for the first time within a century, a French monarch visited Languedoc in person; in 1158 his aid was invoked to repel the forces of Henry II. of England from the Toulousain. From that day, it became the policy of Louis and of his successor, Philip Augustus, to cultivate direct and friendly relations with the clergy of these southern provinces; and a series of charters granted to the bishops of Maguelonne, Narbonne, Nîmes, Uzès, and Agde, and to the churches and abbeys of Toulouse, raised them to comparative independence of the local seigneurs with respect to their temporalities,—the King and the Pope thenceforth representing their suzerains (Luchaire, *Instit. des premiers Capétiens*, ii. 281).

It was at the time when this important political change was becoming operative, about the year 1167, that the chief leader of the Paulicians in Constantinople, whose name was Nicetas (or Niquinta), arrived in the Toulousain to preside

over a Synod of the teachers of the Catharists which had been convened in St. Felix de Caraman near Toulouse. His account of the prospects of the sister Churches in the East was well calculated at once to reassure those whom he addressed, and to rouse the apprehensions of those of the local Catholic clergy to whose ears it might come. His own church of Melangia, in close proximity to Constantinople, stood firm; as also did each of four others, among which he had made a visitation before crossing the Mediterranean: (1) that known as the Drugurian, (2) that in Roumania, (3) the Bulgarian (with Philippopolis as its centre), (4) the Dalmatian,—at the head of each being its duly appointed bishop, duly fortified for the spiritual life by the reception of the *Consolamentum*. Before he left the Toulousain, Nicetas had either confirmed or instituted five new bishops for Septimania and the adjacent counties, among whom was Sicard Cellerier, bishop of Albi (Vignier, *Histoire de l'Église*, 1601; Döllinger, *Beiträge*, i. 116, 121, 123 and n.).

According to Döllinger (*ib.* p. 200), the above-named Synod reasserted the Manichæistic doctrines of the sect in their most aggressive form; and in 1201, another 'Perfectus,' one Julian of Palermo, a teacher of the same school, appeared at Albi. He had long been known by his labours among the warlike race which sheltered in the gloomy gorges of Albania, and his fervid oratory now so wrought upon the Albigenses, that almost the entire population accepted his teaching, while his emissaries were received with open arms in most of the chief towns of Septimania. It is to be noted, accordingly, that at the very time when Innocent resolved upon the Crusade in Languedoc, the doctrines of the Cathari had assumed a form which can only be described as subversive, not merely of the teaching of the Western Church, but of Christianity itself.

The Church of the Cathari most resembled, perhaps, that of Rome, with respect to its organization. It appears to have had its Pope, although this is somewhat doubtful (see Schmidt, *Histoire*, ii. 145); but it is certain that, in the New Rome, Niquinta had been styled 'Papa,' and Julian of Palermo, known as *Maior Hæreticorum*, appears to have been regarded as his successor. The functions of the Catholic bishop were vested in the Perfectus, the person in each separate community or congregation of *credentes* who, by virtue of a lengthened course of ascetic discipline which included periods of complete isolation from society, had won for himself the recognized right to bear a designation which implied his superiority to human frailties and passions. Under his teaching his flock learned to repudiate the Divinely instituted ordinance of marriage and to ignore the rights of individual proprietorship, the ties of social existence and of civic organization being alike thus cast aside. Self-detachment from the world, while engaging in secular duties and pursuits, appears, indeed, to have been their dominant conception of the religious life, all contact with the material involving a certain defilement, while life itself was a kind of purgatory, of which the Catharists rejected the Roman doctrine, maintaining that the soul, after death, entered forthwith into a state either of perfect happiness or of eternal suffering (see Eckbertus, Migne, *PL* clxxii. col. 15). Their abstention (of Manichæistic origin) from all animal food included even milk and eggs, all matter being regarded as the creation of the Spirit of Evil, but especially that which was the outcome of sexual propagation. Labour was justifiable so far as it served to sustain life; carried beyond that point, it was useless for those who were debarred from the possession of anything that could be called personalty (Schmidt, ii. 84, 85). Such was the creed imposed by the Perfectus on the believers (*credentes*); but besides the believers there were the 'hearers' (*auditores*), who listened to the words of the teacher but failed adequately to put in practice what he taught. With regard to their theology, the evidence is perplexing, not to say contradictory. Their Christology, while evidently influenced by Arianism, differed from it in some important respects. Christ, they held, was not God, but a creation of the Divine Nature, and one with it only in respect of will and intention,—an Archangel among the angels and appearing upon earth in this celestial form (see DOCETISM), but neither Incarnate nor Ascended, the very miracles which He wrought being explained away as purely metaphorical, and designed simply to symbolize the power of the spiritual over the earthly nature. At the time of the commencement of the Crusade, indeed, the dualistic and anti-materialistic theory had obtained such influence in Languedoc, owing, possibly, to the teaching of Nicetas and Julian, that, according to some teachers, the Christ of the Evangelists was really an emanation of the Spirit of Evil, permitted to appear on earth as the Tempter, seeking to lead mankind astray and to undo that work of man's salvation which was being accomplished by the true Christ in heaven (Peter of Cernay, *op. cit.* col. 546; Schmidt, ii. 37). The views inculcated with respect to the Third Person in the Trinity, so far as discernible, are not altogether intelligible, and the dualist can hardly but have found his main theory accompanied with exceptional difficulties in connexion with this question.

If the above tenets were calculated to scandalize and alarm the devout Catholic, the theory of the *Consolamentum* must have added yet further to his dismay, supplanting as it did the ordinances of the Church in relation to baptism, to the Eucharist, and to absolution. This singular and elaborate ceremony, described at length by Schmidt (ii. 119–129), commencing with the renunciation of the Church of Rome and followed by a declaration of acceptance of the Catharist faith, and a solemn promise to observe all the conditions imposed with regard to chastity, diet, and companionship, terminated in the formal admission of the believer into the number of the Perfecti. He then, after a rigid fast extending over three days, retired for forty days more into complete solitude. In cases where the *Consolamentum* had been granted to one who was seriously ill, the individual, we are told, would not infrequently refuse all food, and either voluntarily or at the behest of the Perfecti submit himself to the *endura*, so as to die of starvation, and thereby expedite his immediate passage into eternal felicity (*Liber Sentent. Inquisitionis Tolosanæ*, p. 134; Schmidt, ii. 102, 129). With the *Consolamentum* were associated two other doctrines which may be said to have completed the alienation of the Catharist from all that savoured of Roman Catholicism,—the above-mentioned repudiation of the doctrine of Purgatory, and the theory that the efficacy of the ceremony would be lost, if the officiating Perfectus were not himself pure from sin. The admiration, indeed, with which the teaching of the Perfecti was listened to, alike by the seigneurs of Septimania and the citizens of Milan and Toulouse, is largely to be attributed to the fact that the Perfecti actually exemplified in their lives the austere virtues which they inculcated, thereby presenting a marked contrast to the life and aims of the great majority of the Roman clergy. The attitude, again, of the Catharist towards those who were not of his persuasion cannot be described as intolerant; he

preached and he prayed, but he did not persecute; and here, again, he contrasted favourably with the Catholic, and won the sympathy of the seigneur. It is, indeed, implied by William of Puylaurens (*Chronica, passim*), that under the protection of the knights of Languedoc a man could profess almost any religion that he pleased. To Innocent III., however, such laxity of belief and diversity of tenets appeared only to call imperatively for intervention; and his experiences, since his accession, in his own dominions might well seem to show that such intervention, if judiciously carried out, might be relied upon to accomplish the desired results. In Italy itself the increasing numbers of the Patarini and the defiant attitude of many of their leaders had already roused him to active measures. At Verona, on the petition of the archbishop, he had promulgated a sentence of excommunication, but it had been treated with contempt (Baluze, ed. Mansi, i. 191). It was yet more ominous when, within the limits of the Patrimony itself, a succession of cities had given evidence of like infection. At Orvieto, in 1200, his intervention having been solicited by the Catholic party, he had sent Parentio, a high-spirited young Roman noble, to assume the office of *podestà;* but the unsparing severity with which his representative had exerted his authority had given rise to a conspiracy, and Parentio had been dragged from his house and put to death outside the city walls (*Acta SS.* vol. lxviii. Mai). At Viterbo (one of his favourite residences), in 1205, several Catharists had been elected consuls, and their Perfectus, one John Tiniosi, had been returned for the office of papal chamberlain. Remonstrances having proved ineffectual, Innocent himself, in 1207, had repaired to the city; the leaders fled on his approach; he commanded that their houses should forthwith be demolished and their property confiscated; while the podestà and the consuls were compelled to swear that, in future, they themselves would mete out like punishment to all heretics (*Epist.* x. Nos. 105, 130, 139; Migne, *PL* ccxv. cols. 1200, 1220, 1231). Like punishment was inflicted on Orvieto, and with the close of the year 1207 the submission of the cities was complete, and penitent Viterbo had been raised to the rank of a cathedral city; while Innocent was now able to direct his attention to where it seemed most required, namely, to Languedoc. His intervention in that province was materially aided by a political change which had taken place since his accession (Schmidt, i. 148–149).

In 1137, the kingdom of Aragon had been acquired by the count of Barcelona, Raymond-Berenger IV., and the crown had become hereditary in his house. In 1204, his descendant, Pedro II., following the example of the French monarch, had proclaimed himself the vassal of the Roman pontiff; and, in consequence, various fiefs which had before done homage to the counts of Toulouse (among them those of Carcassonne, Albi, and Nîmes) became detached from their former fealty to that of the kings of Aragon, the first two cities, it is to be noted, being in the same episcopal province, with Narbonne as their common metropolis (B. Hauréau, *Bernard Délicieux*, p. 12).

It was now, therefore,—when the Fourth Crusade had resulted in the reduction of the Eastern Empire to the condition of a French dependency, when the disastrous ten years' war between France and Germany had been ended, and Otto IV., under solemn promise to restore the lands which he had wrested from the Holy See, was looking forward to his coronation in Rome,—that the time seemed to have arrived for effective measures in the Toulousain.

Throughout his letters, Innocent lays emphasis on the fact that his great aim is the conversion of the heretic, not his destruction; and in Nov., 1206, three legates had been sent by him from Rome to Narbonne instructed to make yet another attempt to bring the Cathari to reason by force of argument. They were at the same time directed to lay aside all pomp and ostentation, and to aim at winning the sympathy of observers by a humble demeanour, to go meanly clad, imitating the poverty of their great exemplar, and by the force of their own example and convincing speech (*documentum sermonis*) to recall the heretic from his errors (*Epist.* ix. No. 185). It is noted by Luchaire that four months before this letter was written, Diègo de Acevedo, the bishop of Osma in Spain, accompanied by Dominic de Guzlan, the founder of the Dominican Order, had had audience of Innocent in Rome, and on their return journey had, by accident, fallen in with the above three legates (one of whom was Peter of Castelnau) at Castelnau, when the bishop of Osma had given them much the same advice as that which soon after reached them as a mandate from Rome. As Dominic was one of the bishop's chapter, and was present when this advice was given, we may fairly accept the assertion of Vignier that the self-denial, self-devotion, and fervid oratory which distinguished the Dominican friars were, to a great extent, evoked by the urgent necessity of combating the success which had attended the exhibition of the same characteristics on the part of the teachers of the Catharists (*Histoire de l'Église*, p. 405; Luchaire, *Innocent III.*, 90–91). Dividing themselves into little bands, the Dominicans now appeared at different centres,—Servian, Beziers, Verfeil, Montréal, and Pamiers,—inviting the leaders of the Catharists to amicable disputation on the chief points of disagreement. At each of these centres the disputation extended over from seven to fourteen days, and was listened to with intense interest by crowded audiences; but as the only accounts which have come down to us are those preserved in Catholic sources, they can hardly be supposed to be impartial. But if it be true that at Montréal, Oton, the Catharist protagonist, affirmed and maintained as his *quæstio* the identity of the Church of Rome with the Babylon of the Apocalypse, and even ventured to style the former 'the Synagogue of the Devil' (Vignier, pp. 407, 410), the Catharist can hardly be credited with any real desire to conciliate his opponent [Devic and Vaissète (1879), vi. 249]. At the expiration of two years thus spent, Dominic is recorded to have expressed himself deeply chagrined at the small result of their collective labours (Pierre de Cernay, *op. cit.* cc. 1–5; Schmidt, i. 211–217; Luchaire, *Innocent III.*, 92–99).

But however sanguine Innocent may originally have been of their success, he had already determined on the employment of other means, and, early in 1207, Peter of Castelnau had received instructions to urge upon certain seigneurs of Septimania (of whom Raymond of Toulouse himself was one) that they should lay aside the feuds which, unhappily, were rife among themselves, and combine in a Crusade against the heretics. That it was designed, by this proposal, to isolate Raymond admits of little doubt, and he was himself fully aware of the net that was now closing round him. The other barons, allured by the prospect of rich plunder, to be reaped at small risk, readily assented; but the count of Toulouse, apart from his open sympathy with the Cathari, who composed a large proportion of his own subjects, recoiled from the prospect of seeing his own domains overrun by the enemies of his house, and very naturally refused. Thereupon Peter pronounced him excommunicate, and placed his

territory under an interdict, at the same time justifying this extreme course by alleging the count's laxity and extortion in the administration of his seigneury,—laxity, as shown in his partiality to Jews and heretics; extortion, as attested by his encroachments on the temporalities of the Church (Vaissète, iii. 146; Devic and Vaissète [1879], vi. 249–250). Innocent followed up the action of his legate by confirming the sentence of excommunication, and, addressing to Raymond a letter in which he upbraided him with seeking 'to preserve peace with his neighbours while he allied himself with the foes of Catholic truth' (*Epist.* x. No. 99; cf. Devic and Vaissète, *op. cit.* vi. 255–257).

In the first instance, Raymond is said to have feigned submission, but he failed to give practical effect to the promises which he is alleged to have made; and Innocent now, for the fourth time, proceeded to invoke the aid of King Philip, entreating him to come in person and place himself at the head of the Crusade. The latter, although himself involved in hostilities with John Lackland, at length feigned compliance, but in doing so he stipulated that Innocent, in turn, should undertake to bring about a two years' truce between France and England, and should also decree the levying of a subsidy from the clergy and nobles of the French kingdom to defray the expenses of the Crusade. This, however, was altogether beyond Innocent's power; and it was while he was probably hesitating as to the course he should next pursue that his perplexities were suddenly terminated by the assassination of Peter of Castelnau, when on his way to St. Gilles, by one of Count Raymond's officers. The incident itself is enveloped in obscurity, and not less so the extent of the count's complicity in the deed. But, according to the statement made by Innocent to King Philip, Raymond, feigning penitence, had invited Peter to St. Gilles, there to receive his submission, and had then contrived the murder. But this statement is invalidated, to a certain extent, by the pontiff's admission, when referring to the subject some four years later, that positive proof was wanting (*Epist.* xi. No. 26, xii. No. 106). His immediate action, however, assumed the count's complicity, and in a circular letter (10 March, 1208) to the churches of Languedoc, Raymond was again excommunicated, his person and his territory were declared to be no longer under the protection of the law, and his subjects and allies alike absolved from their vows of fidelity or compact (*Epist.* xi. No. 26). Should he, however, give proof of his penitence, he might even yet be received again into the bosom of the Church, but only on condition that he expelled the heretic from his dominions (*ib.* Migne, *PL* ccxv. col. 1557).

A Crusade was then proclaimed, Arnold Amalric being appointed chief leader, with Simon de Montfort as his lieutenant, while all who refused to listen to the summons were forbidden the enjoyments of social life and interdicted from Christian burial at their death. To the Dominicans was confided the duty of preaching the great expedition throughout the realm, and for the fifth time an appeal was made to Philip (Devic and Vaissète, vi. 263–267). The king, however, still stipulated that the two conditions which he had before specified should be carried out, while he at the same time intimated (in a letter subsequently erased from the royal registers) that, as he was advised by his councillors (Raymond's guilt as a heretic being still unproven), the pontiff had exceeded his powers in declaring his lands subject to confiscation. Such, indeed, was the attitude which he continued to maintain until his death, influenced partly by his disinclination to appear personally as the abettor of religious bigotry, but still more by the desire to employ the military resources at his command for other purposes, and not least by the apprehension lest, under the rule of a too powerful vassal, Languedoc might recover its former virtual independence (Luchaire, *u.s.* 126–127).

The first phase of the Crusade, accordingly, was that of a religious war, directed mainly by the papal legate and headed by French nobles, among whom, next to de Montfort, the duke of Burgundy, and the counts of Nevers, Auxerre, St. Pol, and Geneva, were the most conspicuous,—the Dominican, like Peter the Hermit more than a century before, lending his aid as an orator to rouse the enthusiasm of the multitude, while his efforts were seconded by the Troubadour, who, in his *Chanson de la Croisade*, vaunted that more than 20,000 fully armed knights and 200,000 foot had rallied to the standard of the Cross (*ib.* p. 129). Raymond himself, completely dismayed, now again made his submission, and (18 June, 1209), after a humiliating ceremony, was reconciled to the Church by the papal legate in the cathedral at St. Gilles; he was compelled to swear on the Gospels and in the presence of holy relics that he would treat all heretics as personal foes, expel the Jews, proclaim a Truce of God, and himself take part in the Crusade (for the oaths taken by Raymond and Milo, the legate, on this occasion, see Devic and Vaissète, vi. 277–279; Migne, *PL* ccvi. cols. 90–91). A like submission made by the vicomte of Beziers was not accepted, although he was a nephew of Raymond and brother-in-law of Peter, the king of Aragon. In July, Beziers itself was taken by storm, when a general massacre of the inhabitants took place. Raymond Roger, the vicomte, fled to Carcassonne, and shortly after died a prisoner in the fortress, not without suspicion of foul means having been employed. It was at the capture of Beziers that Arnold, the papal legate, on being appealed to by the soldiery to guide them in the work of butchery (for fear that loyal Catholics might otherwise perish unrecognized) is narrated to have made reply, 'Slay them all, the Lord will recognize his own.' The story, however, is at least doubtful (Hurter, *Gesch. Pabst Innocenz des Dritten*[2], ii. 343; Devic and Vaissète, vi. 288–289, 313; Migne, *PL* ccxvi. cols. 138–141). Narbonne saved itself from a like fate only by an anticipatory execution of a number of the Cathari. Montpellier, owing to its long and approved loyalty to the Church, altogether escaped; but Innocent could vaunt that 500 towns and castles had been wrested from the enemies of the Faith, while the greater part of Septimania was reduced to the appearance of a desert. So great, indeed, was the scarcity of supplies, that the French leaders, having completed their forty days' term of service, and seeing no prospect of further plunder, were fain to return home. Simon de Montfort, fourth earl of Leicester, alone remained. In the Île de France he held only a petty seigneury, and having been appointed successor to Raymond Roger in the viscounty of Beziers and Carcassonne, he found himself virtually an autocrat in the government of the desolated province. Although he was by education and conviction an ardent Catholic, his religious enthusiasm was probably fanned by a sense of personal wrong. In 1107 he had been mulcted by John of England of all the estates which he inherited through his mother in that country. Raymond of Toulouse, on the other hand, had married Joan, John's sister, and daughter of Eleanor of Aquitaine. If we add to these considerations the fact that King John of England was at this very time excommunicate, owing to his maltreatment and defiance in England of that same episcopal order whose power de Montfort was pledged to restore in Languedoc, we

cannot but see that hatred of heresy can hardly have been the sole motive which urged on the stern Norman knight in his merciless career. Before the year 1210 had passed, John himself received intimation that his own barons were plotting to place the crown which he wore on the head of Simon de Montfort.

The circumstances under which Simon was now called upon to administer his territory were, however, sufficiently discouraging. Funds began entirely to fail him, and this at the very time when the few knights who had remained with him were demanding double pay, to indemnify them for the absence of the plunder which the country no longer afforded. In his difficulties he appealed to Innocent. The pontiff, already overburdened by the demands consequent upon the Fourth Crusade (see CRUSADES), was unable to respond with pecuniary aid, but wrote to the Emperor Otto, the Kings of Aragon and Castille, and 'numerous powerful knights and ladies,' to invoke their assistance (Migne, *PL* ccvi. cols. 141–157). At the same time, we find him gratefully acknowledging the service which Simon had rendered in restoring to the papal exchequer the hearth tax of three pennies *per annum* which the lawless barons of Languedoc had, in many cases, been diverting to their own uses.

In the meantime, Raymond, sorely pressed by the demands imposed on him by the papal envoys, was reduced almost to desperation by being for a third time excommunicated, the sentence having been pronounced by a Council at Avignon, 6 Sept., 1209. He resolved on a personal appeal to Innocent, before whom (Jan., 1210), having been admitted to an audience in the Lateran, he laid a statement of his grievances. Accounts differ with regard to what actually took place on this occasion; but it is probable that the pontiff deemed it prudent to disown, to some extent, the relentless proceedings of his legates, one of whom, Milo, had just died, and he now enjoined that Raymond, who had complied with all the conditions originally imposed, should be reinstated in possession of his castles, and that his lands should be relieved from further requisitions (Migne, *PL*, *ib.* cols. 171–173). His instructions, however, either arrived too late, or were wilfully disregarded by his legates, to whom Toulouse was now called upon to surrender its count. But the dwellers in the city and in the faubourg alike, holding themselves bound by their oath of allegiance to their seigneurs, refused compliance; and it was with difficulty that the archbishop of the city, a staunch supporter of Simon, succeeded in inducing a certain number of the citizens to support the latter, under whose leadership there now ensued, throughout the Toulousain and Septimania (June, 1210 to Sept., 1212), a long series of plunderings and massacres, accompanied by almost unprecedented atrocities, wherever the defenceless victims refused to abjure their errors. At the strong fortress of Minerve, near Narbonne, 140 Perfecti were hurled or threw themselves on to the burning pyre (Devic and Vaissète, vi. 329–331). At Lavaur, taken after a stubborn defence, the well is still shown into which the widowed 'Lady of the City,' the bounteous Giralda, and her daughter, were flung, and stones rolled down upon their bodies. The governor and eighty knights were either suspended on the gallows or put to the sword. Termes, Castres, and other towns were the scenes of similar horrors, Toulouse and Montauban being, eventually, the only two which remained in the possession of Raymond [Guillelmi de Podio Laurentii *Hist. Albig.*, cc. 17, 18 [in Duchesne (A.), *Hist. Franc. Script.*, v.]; Devic and Vaissète, vi. 342, 356–358, 384; Peter of Cernay, Migne, *PL* ccxiii. cc. 37, 52, 53; *La Chanson de la Croisade*, stanzas lxvii.–lxxiv. (ed. Paul Meyer, ii. 83–91); *Voyage en France* (35ème série), 269].

The war itself must now be regarded as assuming another phase, and Innocent himself became aware that a reaction was setting in throughout Languedoc, as, to quote the expression of Paul Meyer, 'it became clear that the Crusade was designed to accomplish nothing less than the substitution of some enterprising adventurers from France for the ancient seigniorial families of the South' (*La Chanson*, etc., Introd. p. xxiv; Fauriel, *Hist. de la Croisade*, Introd. pp. xlviii–l).

The doctrines of the Catharist were again openly espoused, as a powerful incentive to renewed resistance. The Count de Foix, Raymond Roger, reverted to his former defiant attitude. The Catholic leaders, on the other hand, perceiving how closely political supremacy was involved in the suppression of heresy, began to assert their position with increased emphasis. Arnold Amalric, the abbot of Citeaux, usurped to himself the title of duke of Narbonne (Luchaire, *Innocent III.*, p. 188), and imposed oaths of fidelity and homage on the former subjects of Raymond of Toulouse. Simon, however, with his habitual astuteness, professed, in the first instance, to ignore his own position, and, writing to Philip (Aug., 1211), said that he had instructed his envoys to assume possession of all the territory wrested from Raymond, and to hold the same until the rightful owner should be declared (*ib.* 178). By the middle of the following year, however, his representatives in Rome preferred the demand for his recognition as lord of Languedoc; in a charter of 14 Sept., 1212, granted by the abbot of Moissac, that dignitary expressly declared that 'God has justly assigned to Simon de Montfort the territory of his adversary' (*ib.* 189). In the following December, Simon himself convened an assembly at Pamiers, to which the seigneurs, the clergy, and the citizens of the province were alike summoned,—the great political revolution which was in process being thinly disguised by their being themselves invited to become members of the Commission which was then appointed, and by whose action the 'customs' of Paris, the 'use' of Northern France, and the supremacy of the Church (acting through its ecclesiastical courts), were substituted for the feudal liberties and the civic freedom which had before existed. As Luchaire points out, however, Simon de Montfort posed as the saviour of the land, whose mission it was to establish order, centralization, and peace; and for a time there were those who firmly believed that they should obtain these blessings at his hands.

The king of Aragon was still Simon's suzerain, and, with the support of Innocent, was able to assert his rights. He regarded with no small alarm his great vassal's monopoly of influence and the impending political changes. As soon, accordingly, as the Crusade was pronounced by Innocent to be at an end (Jan., 1213), Peter's first endeavour was to submit to a Council convened at Lavaur (16 Jan.) a memorandum, drawn up with the design of showing that Raymond himself had never been proved a heretic, and that neither he nor his cousin, the count of Comminges, nor the count of Foix, nor Gaston de Béarn, had ever accepted the Albigensian doctrines. It was the design of the Council, however, to complete the count's ruin rather than to afford him the opportunity of regaining the confidence of Innocent, and counter-representations were made at the Lateran, couched in terms of such urgency, that the pontiff, notwithstanding his distrust of Simon and the Norman party, was prevailed upon

to change his attitude completely. 'The supporters of heresy,' he now wrote to King Peter, 'are more dangerous than the heretics themselves,' at the same time plainly intimating that further obduracy would be visited with another Crusade (*Epist.* xvi. No. 48; Migne, *PL* ccxvi. col. 851). Soon after, hostilities were resumed; and Peter, along with his allies, now appeared at the head of a great army outside the walls of the strong fortress of Muret, where Simon, with a small body of knights, awaited their attack. The disastrous defeat which the confederates there sustained, involving, as it did, the death of the king and the dispersion of his forces (12 Sept., 1213), sealed the fate of Raymond's party. He himself is next heard of at the court of John Lackland, at Périgueux, proffering a now worthless homage. Simon's son, Amaury, now married Beatrice, the heiress of Dauphiny; Toulouse surrendered to Montfort, and the whole of southern France became incorporated with the French kingdom. Towards the close of the year, the Troubadour, William of Tudela, gives place (line 2768) to his successor in the *Chanson*, which henceforth becomes of primary value as a contemporary historical source, being at once highly original and always to be trusted (P. Meyer, Introd. vol. i. xci–xciii).

In 1214, Innocent rescinded the prohibition to preach the Crusade, and in the course of the year a hundred thousand 'pilgrims' poured into Languedoc. Their first military achievement was the capture of Maurillac, on which occasion we find a reference to the Waldenses, seven of whom were burnt 'with great joy' as incorrigible in the attestation of their errors (Devic and Vaissète, vi. 445). Concurrently with this movement, the victory achieved by the royal forces over Otto IV. at Bouvines (27 July, 1214) broke the power of the barons throughout the realm, and was hailed by the clergy as an auspicious triumph for the cause of unity in the Church. At the Council of Montpellier (8 Jan., 1215), Simon was unanimously elected 'prince and sovereign' of Languedoc; and in the following April, Prince Louis, accompanied by the new lord of the province and by Peter of Beneventum, the new papal legate, set out on a progress through the scenes of the war. The towns, still secretly hostile to de Montfort, threw open their gates to the representatives of the Crown and the Holy See. Innocent, however, although he formally acknowledged the new governor of the conquered territory, would never recognize him as its rightful lord, and subsequently, when called upon to arbitrate in the fierce contention between Simon and the abbot Arnold for the dukedom of Narbonne, gave his decision in favour of the monastic dignitary.

At the memorable Lateran Council of Nov., 1215, Raymond was once more, and finally, confronted with his accusers; and here, again, we find the pontiff strongly urging that the exiled count should be reinstated in the Toulousain. His advice was supported by a small minority of bishops, whose counsel Peter of Cernay does not scruple to stigmatize as that of an 'Ahithophel' (*Hist. Albig.* c. 83; Migne, *PL* ccxiii. col. 700), and it was rejected by a vast majority. The brief allusion of the monkish chronicler to the fact of this divergence of opinion is illustrated at length by the contemporary Troubadour, in a manner which brings home to us the fact that this famous Council, to quote the language of Fauriel, was really 'nothing less than a great political congress, at which the passions, ideas, ambitions, and secular aims of the time are to be discerned, for the moment, in actual open conflict' (*Hist. de la Poésie Provençale*, iii. 159). In the sequel, Innocent himself was under the necessity of issuing a decree whereby Raymond was adjudged to have forfeited his right to govern, and condemned to pass the remainder of his life as a penitent, only a small annuity being granted him, which, together with his wife's dowry, was deemed sufficient for his maintenance. The Council assigned to de Montfort all the territory which he had wrested from the heretics, along with Toulouse and Montauban, but it was ordered that the unconquered lands 'in Provincia' (beyond the Rhone) should, for a time, be held in commission, and that in the event of the count's only son (a youth of fifteen, against whom no imputation of heresy had been preferred) giving proof, by his 'fidelity and upright conversation,' of genuine merit, provision should ultimately be made for him therefrom (*Hist. Albig.*, col. 701; Guill. de Pod. Laur., c. 34; Vaissète, iii. 280; Devic and Vaissète, vi. 475, 477).

To all outward seeming, Raymond was now permanently excluded from a public career. The decisions of the Lateran Council had, however, been received throughout both the Toulousain and Provence with a general dissatisfaction which emboldened both father and son to sail, in the spring of 1216, for Marseilles, where they were received with enthusiasm, and a rising in their favour took place, which forthwith extended up the Rhone and into Aragon, while large subsidies arrived from England. A conflict ensued, of which the Provençal poet supplies us with an animated description, but the incidents of which are of military rather than religious interest; though it is deserving of notice that the weapons of ecclesiastical approval and censure were wielded by both parties, in entire contempt for the attitude of the Roman pontiff. At Beaucaire (*Bellum-quadrum*) the insurgents, after capturing that important fortress, were stimulated to the work of reconstructing the defences by the promise of indulgences held out by Raymond's chaplain, and both knights and ladies applied themselves assiduously to the toil; while, in the following year, when Simon de Montfort appeared outside the walls of revolted Toulouse, he stood scarcely in happier relations to the Church than Raymond himself, having been excommunicated by his own ecclesiastical superior, Arnold, duke of Narbonne, on some pretext arising out of their bitter contention for the dukedom (Fauriel, *Hist. de la Croisade*, 3995–4014; Lea, *Hist. of the Inquisit.* i. 184). As Innocent had died in the preceding year (July, 1216), and his successor, Honorius III., sustained his policy in Languedoc with increased vigour, it is evident that the broader questions at issue were almost lost sight of in those of purely local importance.

On commencing operations, for the third time, against Toulouse, Simon prayed that if he failed to recapture the city he might perish in the attempt, while, if successful, he vowed that he would reduce it to ashes (Fauriel, *ib.* 7835–7855). The citizens, on the other hand, conscious that mercy was not to be looked for at his hands, repelled his attacks with a desperate energy, which, after a siege of nine months, was rewarded by his being killed (25 June, 1218) by a huge stone hurled from the wall by a mangonel, his brother Guy having only a minute before fallen by his side,—*Ez escridan la joya, car es Dieus mercenars* ('shouts of joy arise, for God is merciful'), exclaims the Troubadour (*ib.* 8434–8456, 8475; Meyer, i. 342, also ii. 421; Sandys, *Hist. of Classical Scholarship*[2], i. 549). At the news of the tyrant's death, the Catharists and their supporters now flew to arms throughout Languedoc; and Honorius, alarmed at the prospect, addressed to Philip an urgent remonstrance, which resulted

in the appearance of Prince Louis at the head of an army, whose achievements in the field are remembered only by the massacre at Marmande, when 5000 men, women, and children were put to death by order of the bishop of Saintes, on the sole ground of their assumed heretical beliefs, and the city itself was burnt (Guill. de Pod. Laur. p. 685; Fauriel, *ib.* 9306–9320). An endeavour to inflict like exemplary punishment on Toulouse was baffled, and, after laying siege to the city for forty days, on 1 Aug., 1219 Louis struck his camp and returned to France. The Albigeois took fresh heart, and many of the towns which had been wrested from them by the sword of Simon were now recovered. Eventually, after a war extending over two more years, Amaury de Montfort was fain to bribe the French monarch to renewed interference, by offering to surrender to him the entire territory which had been adjudged to his late father. It was at this juncture that Raymond VI. died (Aug., 1222); his interment in consecrated ground was forbidden; and for nearly a century and a half the remains, denied the rites of burial, were exposed to sight within the precincts of the Hospital of the Knights of St. John, outside Toulouse (C. Molinier, *L'Ensevelissement de Raimond VI.*).

During Simon's rule, large numbers of the Catharists had fled to Bulgaria and Croatia,—to return, at his death, inspired with renewed zeal by the exhortations of their Pope, or metropolitan, in those regions,—while they were encouraged and sustained in the renewal of the conflict in the Narbonnaise by the teachings of his delegate, one Bartholomew of Carcassonne (Devic and Vaissète, vi. 567–568). The disputations with the Catholics were again held; and in the years 1225–1226 the famous Franciscan, Antony of Padua, had appeared in the Toulousain and the Narbonnaise to urge on the persecutor the resumption of hostilities (*ib.* vi. 591–595). In the national archives of Paris are still to be seen the letters, written in 1227 by the metropolitan of Sens and the bishop of Chartres, offering contributions towards a new Crusade against the Albigenses (Lea, *Hist. of the Inquisition*, i. 201). Eventually, after a long and gallant struggle, Raymond VII. submitted; and was compelled, by the Treaty of Meaux (1229), to accept a series of onerous and humiliating conditions — the demolition of the greater part of the walls of Toulouse, the cession to the French Crown of territory amounting to two-thirds of his father's dominions (of which, however, a part had been included in the surrender, above mentioned, by Amaury), the cession to the Roman See of the marquisate of Provence (the portion of Provence on the left bank of the Rhone), while in Toulouse itself he was required to institute a school of studies, which subsequently developed into the university, but was now conceived on lines designed to ensure the predominance of strictly Catholic teaching (Martin, *Hist. de France*[4], iv. 149–150).

In assenting to the foregoing conditions, Raymond can have been actuated by no other sentiment than a conviction of the political unwisdom of prolonging a racial conflict against forces which were overwhelming; but in promising his active and unsparing co-operation in the extirpation of heresy, and subsequently befriending the two great Mendicant Orders (he is said even to have urged on the papal legate in the work of organizing the Inquisition within his own diminished territory), it is probable that he was giving expression to a contrite sense of the paternal folly which had brought such ruin on his house, and that the manner in which Innocent had compassionated his helpless boyhood may have instilled into the young count a genuine admiration of his protector, and sympathy with his designs. That sagacious pontiff had seen very clearly, some years before his death, that, however effective fire and sword might prove in the temporary effacement of heresy, something more was needed to prevent the recrudescence of an ancient faith sincerely, however wrongly, held. Notwithstanding his habitual tendency to temporize, he had accordingly drawn up a series of instructions which represent an important innovation upon preceding methods (Douais, *L'Inquisition*, 1906, p. 6). The mode of procedure in a judge's court, at that time, was still that of the old Roman tribunal; the magistrate always awaited the appearance of an accuser before he intervened to punish the malefactor. But, however adequate such a method might be found in dealing with offences against the person or against property, Innocent perceived that it failed altogether to reach a particular class of citizens, distinguished generally by their blameless life and inoffensive conduct, but lying under grave suspicion owing to their abstention from the prescribed forms of public worship, and their secret gatherings. If such conduct were really a shelter for rumoured malpractices, it was certain that stronger motives were required to induce the *accusator* to come forward, and hence the institution of the *inquisitio*, a system of inquiry, authorized in legal form and terminology, for bringing home to the offender a definite charge. As early as 1183, Lucius III. had enjoined upon the bishop of each diocese the necessity of seeking out and passing sentence on heretics (Mansi [1644], xxviii. 6), although Luchaire appears to be in error in supposing that his instructions were actually formulated as a decretal (Douais, *op. cit.* pp. 18–20); the *inquisitio*, moreover, postulated the *inquisitor*, and it was not until the wide-spread activity and devotion of the Dominican Order had become manifest that Innocent could discern the instrumentality for which he had been looking. Between the years 1204 and 1213 he issued four decretals [subsequently re-enacted by Gregory IX. (1227–1241)], in which the system of *secret inquiry* was formally recognized (*ib. op. cit.* 6, 7), and direction given that investigations should be instituted throughout the province of Arles, and in the dioceses of Agde, Lodève, Verceil, Tarragona, and Geneva (Potthast, *Regesta*, 2516, 2672, 2876, 4628). It is, however, maintained by Douais that even these instructions were general in their scope, specifying, as they do, no particular offence or persons. But when the dioceses to which they were sent (as specified by himself, pp. 6–8), together with the time of their promulgation, are considered, it is difficult not to infer that they must have been directly aimed at the Albigensian heresy. By the machinery thus brought into operation, the Inquisition (which may be considered to date from the year 1229) obtained the evidence on which its first proceedings were grounded, and was enabled to arrogate to itself a function beyond the power of the already existing ecclesiastical courts; while the Inquisitor, if we accept the view of Douais, represented an authority which the supreme pontiff alone had the power to delegate (*L'Inquisition*, pp. 9–13).

From the year 1229, accordingly, the history of the Albigenses becomes mainly associated with the proceedings of the Inquisition, and will be found treated under that heading; while for an admirable illustration of this later period, the experiences of *Bernard Délicieux*, as described by B. Hauréau (1877), should also be consulted. With the advance of the fourteenth century, the Catharist almost disappears in Western Europe,

although occasionally showing a bold front against the Dominicans in Toulouse. In the East, in their ancient home in Bosnia, on the other hand, they more than held their ground, even compelling the Franciscans to retire from the kingdom (see BOGOMILS); and so recently as 1875 a paragraph in *Le Temps* stated that members of the sect were still to be found in that country. They were also to be met with, long after the Inquisition had done its work, secluded in the valleys of the Pyrenees; but for the last four centuries they have often been confused with the Waldenses, and their independent existence becomes, in consequence, more difficult to trace. In Germany the Catharist becomes lost in the 'Ketzer' [Schmidt, *Hist.* i. 141, ii. 232–233; Lombard (Alex.), *Pauliciens*, etc. (1899), 269–275]. In Albi itself, their final disappearance may, perhaps, be inferred from the fact that in 1404 the bishop of Amboise is to be found giving orders that the bones of St. Amarand should be brought from Vieux (*supra*, p. 277[a]) and deposited in the cathedral church of St. Cecilia, as in a city no longer tainted with heresy (Gregory of Tours, ed. Ruinart, col. 787–788 n.).

LITERATURE. — I. *CONTEMPORARY.* — (i.) Anna Comnena, *Alexias*, lib. iv. ch. 4, xiv. cc. 8 and 9, xv. ch. 8. (ii.) Peter of Vaux-Cernay (Petrus Sarnensis), *De factis et triumphis Simonis comitis de Monteforti* (to Simon's death in 1218), Migne, *PL* ccxiii., Paris, 1855. Peter was the nephew of Guy, the abbot of the monastery of Vaux-Cernay, with whom he went to Provence in 1206; he was the partial admirer of Simon, and is his apologist throughout. (iii.) William de Puylaurens (Guillelmus de Podio Laurentii), *Historia Albigensium* (to the year 1272). William was chaplain to Count Raymond VII., and wrote long after the Crusade. Although not always strictly impartial, he is entitled to the highest credit as an accurate and honest writer. (iv.) *La Chanson de la Croisade contre les Albigeois*, first made known and edited by C. Fauriel (Paris, 1837). This edition is altogether superseded by that of Paul Meyer (2 vols., Paris, 1875–1879); the editor in his Preface (i–cxix) has established the following conclusions: (1) The *Chanson* is the production of two writers, differing considerably in their diction, style, and ideas, the former being one William of Tudela (in Navarre), an ardent partisan of the Crusaders; the latter, who commences line 2768 and carries on the narrative to the siege of Toulouse (June, 1219), was a native of that city, and shows himself throughout a devoted adherent of the party of the seigneurs who opposed the Crusade. Notwithstanding some important omissions, he supplies us with a narrative of the highest value in relation to the subject and of great historical merit. (2) In the course of the 15th cent. the whole poem was reproduced in a prose version (which, like the original, is in a mixture of Provençal and Romanic). This version is generally cited as by *L'Anonyme*, and is printed by Devic and Vaissète among the *Preuves* (vol. viii. 1–203). It has small literary merit, and, since its claim to be regarded as an original production has been thus refuted, can no longer be regarded as of any historical value. (v.) The Letters, or Registers, of Innocent III. (Migne, *PL* ccxiv.–ccxvii.) are of primary importance. (vi.) The treatise by Eckbert, abbot of Schaunang, in the diocese of Trèvea, entitled, *Sermones XIII. adversus pestiferos fœdissimosque Catharorum damnatos errores et hæreses* (Migne, *PL* cxcv. 11), and the Letter of Everwin of Steinfeld to Bernard of Clairvaux, *De hæreticis sui temporis* (Migne, *PL* clxxxii. 676), both written *circ.* 1150, are recognized sources for the doctrinal belief of the Catharists of that period. That of Alanus de Insulis, bishop of Auxerre, *De Fide Catholica contra hæreticos sui temporis* (*ib.* ccx. 305) deals specially with the Albigensian heresy. It appeared towards the close of the century, and was shortly followed by the *Libellus contra Catharos* (*ib.* cclv. 772–792) of Bonacursus, a heretic who had returned to the Church, and who gives, along with the doctrines of the Catharists, the recognized arguments for their refutation. It was owing to a conviction that the arguments advanced by Monéta in his *adversus Catharos et Waldenses Libri V.* (Rome, 1743) were also largely applicable to Lutheran tenets, that the Dominican Ricchini first published this treatise, together with two noteworthy dissertations on the Catharists and Waldenses. The *Summa de Catharis et Leonistis* of Reinerius Sacchoni (*cir.* 1300) is printed in Martène et Durand, *Thesaurus Novus*, vol. v.; and another text, largely interpolated and with a different title, is given by the Jesuit Gretser (*Opera*, XII. ii.).

II. *MANUSCRIPTS.*—Chiefly the collection Doat, now in the Bibliothèque Nationale in Paris, forming 258 vols. in folio; these relate solely to the proceedings of the Inquisition. For critical account of same, see Molinier (Chas.), *L'Inquisition, etc. Étude sur les sources de son Histoire*, Paris, 1881.

III. *MODERN LITERATURE.*—Catel (G. de), *Histoire des Comtes de Toulouse*, Tonlouse, 1623; Benoist (Jean), a Dominican, published at Paris in 1691 his *Histoire des Albigeois et des Vaudois*, 2 vols. [a eulogium of persecution, containing, however, important documents]; Limborch (Phil.), *Historia Inquisitionis*, Amsterdam, 1692; D'Achéry, *Spicilegium veterum aliquot Scriptorum*, ed. de la Barre, 3 vols., Paris, 1723; Jas (P.), *de Waldensium secta ab Albigensibus bene distinguenda*, Leyden, 1834; Maitland (S. R.), *Facts and Documents illustrative of the History, Doctrine, and Rites of the ancient Albigenses and Waldenses*, London, 1838; Compayré, *Études historiques et documents inédits sur l'Albigeois*, etc., 1841; Hurter (Fried.), *Gesch. Pabst Innocenz des Dritten*, 4 vols., Hamburg, 1842; Schmidt (C.), *Histoire et doctrine de la Secte des Cathares ou Albigeois*, 2 vols., Paris, 1849; Teulet and de Laborde, *Layettes du Trésor des Chartes*, 3 vols., Paris, 1863–1875; Devic and Vaissète, *Histoire générale de Languedoc*, 1872–1890, 10 vols., Toulouse, 1873 [this edition refers to the correaponding paasages in the edition of 1733–1755, and embodies in the *Preuves* a large amount of new material]; the *Annuaire* for 1879 of *Bull. de la Soc. de l'Hist. de France* (pp. 233–285) contains *Le Débat d'Izarn et de Sicart de Figueiras* with Introd., notes, and tr. by Paul Meyer. The 'disputation' (in Provençal) is between an Inquisitor (Izarn) and a heretic bishop (Sicart), and turns successively on nine of the chief Catharist tenets held heretical by the Church; Hauréau (B.), *Bernard Délicieux et L'Inquisition Albigeoise*, Paris, 1877; Lombard (Alex.), *Pauliciens, Bulgares et Bons-Hommes en Orient et en Occident*, Geneva, 1879; Molinier (Charles), *L'Inquisition dans le Midi de la France au xiiie et au xive siècle*, Paris, 1881; Douais (Mgr.), *Les Albigeois, leurs Origines*[2], etc., Paris, 1880, *L'Albigéisme et les Frères Prêcheurs à Narbonne au xiiie siècle*, Paris, 1894, *L'Inquisition: ses Origines, sa Procédure*, Paris, 1906; Lea (H. C.), *History of the Inquisition of the Middle Ages*, 3 vols., London, 1888; Luchaire (Achille), *Innocent III., Rome et Italie*, Paris, 1905; *Innocent. III., la Croisade des Albigeois*, Paris, 1905; Cartellieri (Alex.), *Philipp II. August.* vols. i. and ii., Leipzig, 1906; Guiraud (J.), *Cartulaire de Notre-Dame de Prouille*, 2 vols. Paris, 1907 [the first volume contains an *Étude sur l'Albigéisme Languedocien aux xiie & xiiie Siècles* by M. Guiraud, grounded chiefly on the MSS Doat, with criticisms on the original sources, and also notes on the following questions:—The distinctive features of the Albigenses and the Waldenses; the latter, the writer points out, sometimes upheld the teaching of the Church in opposition to the former (pp. xxix–xxx); the universal belief of the Catharists that there was no salvation within the pale of the Jewish Church, not excepting even the Patriarchs (xlix–lvii); their estimate of the Catholic Church as absolutely corrupt and incapable of originating either what was morally good or socially salutary (xlix, lx); the *endura*, as a faintly disguised mode of suicide,—although the writer admits that such a charge finds no support in the indictments of the Inquisition (lxiii); he holds, however, that the Catharists, by their rejection of the sacraments of the Church and their denial of the lawfulness of marriage, of oaths, and of capital punishment, undermined the foundations of social life as conceived in the Middle Ages (lxxx–lxxxiv). In the sixth ch. he defines more precisely the limits and activity of the Catharist Churches both in France and in Germany; in the ninth he represents the whole movement as originating in the ancient faiths of the East, through the media of Gnostic and Manichæistic teaching]; *Acta Aragonensia: Quellen zur Kirchen- u. Kulturgeschichte aus der diplomatischen Korrespondenz Jaymes II.* (1291–1327), ed. H. Finke (Berlin, 1907).

J. BASS MULLINGER.

ALCHEMY (Greek and Roman).—At present our knowledge of ancient alchemy is based upon a collection of chemical recipes in a Leyden Papyrus (X, ed. Leemans, *Papyri Musei Lugduno-Batavi-ensis*, ii., 1885), and a number of manuscripts in several libraries, containing a Byzantine and Mediæval collection of chemical treatises. Chief among these are a Marcianus in Venice, dating from the 10th or 11th cent., and a Parisinus in the Bibliothèque Nationale, written in 1473. The material contained in these manuscripts was edited by Berthelot and Ruelle in the *Collection des Alchimistes Grecs*, Paris, 1888. Unfortunately, this latter edition is without any critical value, not only as regards the constitution of the text, but as regards the writings of the most important among the authors contained in the collection. For, instead of retaining the order, or at least the treatises as they are given in the MS, the editors have attempted an arrangement by ages; and to attain this aim they have cut up the collection, so that it is with the greatest difficulty that one can obtain an idea of the treatises as they were given in the original collection. The difficulty is increased by the fact that even our best manuscript, the Marcianus, is in reality a second edition, with omissions and additions, of an earlier collection, perhaps of the 9th cent., while the younger codices contain much material of very doubtful character. A final judgment must therefore be postponed until some

scholar has re-edited the *Corpus Chemicorum* in a manner to conform to modern demands. (On this question compare W. Meyer, *Verzeichnis der Handschriften im preussischen Staate*, i. 1, 5, 1893).

The notices of the ancients themselves in regard to the history of alchemy are scarce. The alleged mentions of the 'science' in the poet Manilius (under Tiberius), iv. 243 ff., and in Pliny's *HN* xxxiii. 79, referring to an attempt of Caligula to make gold, are more than doubtful. The first authentic testimony points to the time of Diocletian. According to Suidas (Διοκλητιανός and Χημεία), the emperor ordered all Egyptian books on the making of gold and silver to be burnt. We are thus taken back to the beginning of the 3rd cent. of our era, a period which teemed with secret, magical, and astrological writings. To the same time points a notice of the Byzantine historian Georgios Synkellos (8–9 cent.), that Julius Africanus mentioned the science of chemistry (676, 10, ed. Bonn). During the 4th cent. the possibility of alchemy was denied by Themistius (*Or.* iv. 214, ed. Petau), and Æneas of Gaza (5th cent.) is undoubtedly well acquainted with its existence. None of these authors, however, uses the modern name. This was formerly believed to be secured by a passage in the astrologer and Christian writer Firmicus Maternus (5th cent.), but the passage is a late interpolation (cf. the edition by Kroll-Skutsch, Leipzig, 1898).

The notice in Suidas points to Egypt as the original home of alchemy. To the same country the legendary history of the pseudo-science also points. The ancient alchemists knew a great many stories about the mystic origin of their art. It was said to have been taught by the fallen angels, by Isis, by Miriam the sister of Moses (the last trace of that legend has been preserved in the 'bain-marie' of modern chemistry), and so forth. But even their best tradition ascribed the invention of the 'holy mystery' to the philosopher Democritus of Greece. This tradition takes us at once to Alexandria, where a luxuriant growth of forgeries under the name of the atomistic philosopher had sprung up, largely ascribed to a certain Bolos of Mendes, living about the beginning of our era. (The literature in Berthelot, *Hist. de l'alchimie grecque*, Paris, 1885; cf. Pauly-Wissowa, i. *s.v.* 'Alchemie'). To Egypt the very name also points (Hoffmann, *Hdwtb. der Chemie*, ii. 516 ff., and Wissowa, *l.c.*).

The extant works on alchemy fall into two classes, roughly represented by the Leyden Papyrus and by the Collection. The former class is purely technical, not yet infected by mystical ideas, and designed for practical purposes. The second class starts likewise from practical work, but from the outset is indissolubly interwoven with mystical thoughts. As time went on without bringing the alchemists any nearer to the solution of the eagerly sought mystery, speculations and fantastic hallucinations overlay the practical nucleus in ever increasing masses, until towards the end of the Middle Ages the writings of the adepts had become one vast farrago of allegories, each one in its turn calling forth a still more allegorical commentary, until the 18th cent. brought about a revolution and a return to practical work, and began the modern science of chemistry.

We shall now rapidly pass in review the extant works. The Leyden Papyrus belongs to a group of papyri found together in Egypt in the early part of the 19th cent. and purchased by the Leyden Museum. Among these, three stand out prominent as a related group. They are known by the letters X (our papyrus), V, and W. The last two have of late come into greater prominence by the excellent treatment to which they have been subjected by Albrecht Dieterich ('Papyrus Magica V' in *Jahrb. f. Philologie*, Suppl. xvi.; *Abraxas, Studien zur Religionsgesch. des späteren Altertums*, 1891). They are our most valuable source for studying the syncretistic religion of later antiquity as reflected in the mind of the vulgar. With these our X must be grouped, as it was found with them. The great mass of its recipes, it is true, contain nothing but prescriptions for the apprentices of some cheating gold- and silver-smith. But these prescriptions are interspersed with others referring to superstition. Small wonder, for the art of the metal-worker from the earliest times was considered to be specially connected with magic; witness the legends of the miraculous creations of Hephæstus, of his Telchines and Daktyloi (see on these Roscher's *Lex. der gr. u. röm. Mythologie, s.v.*), and the northern legends of the smith Wieland. Traces of this belief have lasted into our own times. Even to-day the village blacksmith is usually 'the wise man,' if not actually the wizard, of his village.

Alchemy in the proper sense of the word cannot be said to be found in X. But a large number of its recipes have for their end to produce an alloy of baser metals which cannot be distinguished from the genuine article, so much so that even a member of the guild shall not be able to detect the fraud. But two of its prescriptions use a 'never-ending material' and a special kind of *asemon*. This *asemon*, originally the Egyptian name (*asem*) of an alloy of gold and silver, perhaps the so-called *elektron*, is here conceived as a material which can give the *qualities* of the precious metals to the base ones. It acts, so to speak, as a leaven, changing the base foundation into gold as leaven changes flour into bread; in other words, we are face to face with a real *chemical* action.

At this point the second group of chemical literature sets in. Its most important, nay fundamental, treatise indeed, that of 'Democritus,' bears in its recipes the closest resemblance to the prescriptions of the papyrus (cf. Berthelot's analysis, both in the *Histoire* and in the Introduction to the *Collection*). In close analogy to the papyrus, this treatise also included originally not only the science of commutation of metals, but likewise that of imitating precious stones, and of dyeing cloth. The mystic element, however, is already in full force. Not only is the technical part proper introduced by a fabulous tale, giving the miraculous history of the alleged recovery of the treatise from a secret vault, but it repeats again and again, in the fashion of a refrain, the mystic saying: 'Nature rejoices in nature, nature conquers nature, nature rules over nature'—a saying to which we shall return later on. Other pieces, too, in the *Collection*, according to Berthelot's expert analysis, are more or less closely related to the papyrus, but as some of them do not occur in the oldest MS, we shall leave them undiscussed. One step forward, it is true, has been taken by the author of the pseudo-Democritean work; he is no longer conscious of the fraudulent character of his practices, but honestly believes in the possibility of transmutation.

We have called the above work fundamental. And so, indeed, it must be called, in view of the fact that after its existence nothing new was written, and that all successors either had no higher ambition than to comment upon it, or started from it as their basis. Here belong the works of Synesius (not the Cyrenæan bishop of this name, although a contemporary of his), of Olympiodorus (of doubtful age, but perhaps living under Justinian), and of Zosimus (the most important of them all, though the most elusive). The question of the latter's personality, as well as of his time, is so perplexing because for his writings more than for anything else the editorial method of the French Collection has been confusing. In the several hundred quarto pages filled by pieces ascribed to him, many parallel and even contradictory pieces from old as well as from new codices are jumbled together. This much is sure, however, and borne out by the Index of the Marcianus, that of all the commentators he was the most important. Certain indications in his writings allow us to conjecture that he lived after the philosopher Porphyrius, and before Olympiodorus. He also seems to allude to Mani, the founder of Manichæism. We shall therefore not err very much one way or the other, if we assign him to the early years of the 4th cent. of our era. Suidas (*s.v.*) tells us that he came from Panopolis in Egypt, and lived in Alexandria.

The later Greek alchemists can find only a passing mention in this article. Such are Stephanos, contemporary of the emperor Heraclianus, and the alchemistic poets, four in number, who in Byzantine trimeters revamp the scanty ideas of Stephanos. Numerous smaller treatises, preserved in MSS, cannot even be mentioned here. The question of their value is indissolubly bound up with that of the value of our tradition.

We shall now be able to trace in a very few words the development of alchemy. Starting from the purely practical basis of fraudulent craftsmanship, in Egypt, famed from olden times for her knowledge of metalwork and crude chemical knowledge (cf. the Egyptian porcelains and glasses), it found its further development in that home of all mystic humbug, Alexandria. Here it fell under the influence of that mixture of religions, of mysticism, and of philosophy which we call either Syncretism or Gnosis, and pursuing that kind of knowledge found its 'Bible' in the forged treatise ascribed to Democritus. Also in the manner of that kind of literature, counter-claim met claim; hence the various traditions as to the real inventors of alchemy. Conforming partly in ideas and in expressions to Christianity, it escaped the

fate of other superstitions,—the condemnation of the Church,—was carried to Constantinople, and there vegetated in peace in the dust of libraries. On the other hand, through Syrian translations it found its way to the Muslims, was by them carried to the West, and so reached Europe, where it was received with credulous avidity, and flourished until superseded by truly scientific methods, thus finally flowing into the broad stream of true and modern chemistry.

It remains now to speak of the relations between alchemy and philosophy and religion. The researches of Usener (*Religionsgeschichtl. Untersuchungen*, Bonn, 1889–1897), of Dieterich (*l.c.*), and of Schmekel (*Untersuchungen zur Geschichte der Mittlern Stoa*) have shown how enormous was the influence of the Stoic school on the development of popular beliefs in the last cent. B.C. and the 1st cent. A.D. In regard to alchemy, however, the proof had been furnished as early as 1856 by Prantl (*Deutsche Vierteljahrsschrift*, 1856) in an article which still contains the best exposition of the philosophical elements in ancient alchemy. The Stoics, in their endeavour to prove that the whole cosmos was permeated by the Divine, and that all phenomena of life were only emanations of it, could not afford to reject any claim to the supernatural raised by these pseudo-sciences, and so they became the ardent defenders of magic, alchemy, and astrology (for the latter see Bouché-Leclercq, *Hist. de l'Astrologie grecque*). *Vice versa* these sciences gratefully adopted the apparent aid to be got from the Stoic arsenal of proofs. When the Democritean theory constantly harps on the refrain: 'Nature overcomes nature, nature rejoices in nature, nature rules over nature,' the alchemists simply followed Stoic precedent. Nay, this very tenet is considerably older than the extant works on gold-making. It is ascribed to the mythical Egyptian king Nechepsos, the patron saint of astrology, whose forged works found their entrance into the world of letters about the beginning of our era. The maxim, too, upon which the Leyden Papyrus bases its prescriptions, that a little leaven leavens a whole loaf, belongs here. When later, in the 2nd and 3rd cents. of our era, that jumble of all philosophies, from the Ionians to Neo-Platonism, which we call Hermetic philosophy, gained ascendency, it too was eagerly adopted by the alchemists. Hermes now becomes the great protagonist and inventor of the science. Nor were the alchemists averse to borrowing from other pseudo-sciences. They were deeply indebted to Astrology, again under the influence of Stoic ideas. Not only do some treatises take account of favourable planetary aspects, but the theory that the planets exercise a profound sympathetic influence over the component parts of the universe found its expression in the small but significant fact that the metals are written in the manuscripts by a sort of planetary notation: for gold they wrote the sign of the sun, for silver that of the moon, and for quicksilver that of Hermes, whence the English name 'mercury.' No less strong is the influence of that syncretism which we are accustomed to call Gnosis. The greatest of all commentators, Zosimus, explains the title of his last chapter, *Omega*, by telling us that it belongs to the sphere of Kronos, but only *κατὰ ἔνσωμον φράσιν*, while the *ἀσώματος φράσις* is known only to the great and hidden Nikotheos. Not only the name itself is Gnostic, but still more so the distinctions between a corporeal and an incorporeal expression; for this distinction between Jesus in the body and without a visible body forms the very foundation of Gnostic speculations.

This leads us into the sphere of religion. Now we must not expect to find in the alchemists any new information about the religious speculations of their time. These men, locked up as they were in their narrow laboratories, were simply receptive, and only reflected what was saturating the air around them. In this sense only may we go to the alchemists as a source of religious information. And here we find what we should expect. All religions have been jumbled into a great chaotic mass. Everything is 'One and All.' But nevertheless, individual deities, like Hermes, Kronos, Aphrodite, play their part. Nor were the alchemists averse to calling in the help of Judaism, and of Christianity as it appeared to them. Zosimus embodied in his commentary a piece containing highly interesting speculations about Adam. But, on the whole, we may repeat what Usener says about the speculations of the Gnosis: like a sultry breath of air carrying to us wondrous scents from an unapproachable garden, such is the impression of the Gnostic (and alchemistic) teachings.

Philologie*, Suppl. xvi., and *Abraxas*, 1891; Berthelot, *Origines de l'Alchimie*, 1885, *Journal des Savants*, 1884, 1893; Berthelot and Ruelle, *Les Alchimistes Grecs*, 1888 (partly reprinted, with independent pagination, in Berthelot, *La Chimie au moyen âge*); Hoffmann in Ladenburg, *Hdwtb. der Chemie*, ii. under 'Chemie'; Tannery, *Revue des Études Grecques*, iii.; Jahn, *Revue de Philologie*, xv.; Bouché-Leclercq, *Hist. de l'Astrologie Grecque*; Schaefer, *Die Alchemie*, 1887; Pauly-Wissowa, i. *s.v.* 'Alchemia.'

E. RIESS.

ALCHEMY (Muhammadan). — **1. Authors.** — The most ancient Arabic author who wrote about alchemy was a royal personage — Ḫālid, son of Yazīd, son of Mu'āwīya—who died A.H. 85 (A.D. 704). There are three letters on alchemy ascribed to him; his master is said to have been a Syrian monk, Morienus or Marianus, and to have dedicated a treatise on alchemy to him: *Liber de compositione Alchemiæ, quem edidit Morienus Romanus Calid regi Ægyptorum*, tr. in 1182 by Robert Castrensis (cf. Leclerc, i. 64). Compositions ascribed to Ḫālid and translated into Latin are published in the *Theatrum Chemicum* and in the *Bibliotheca Chemica*; the Arabic text of these is not extant.

The historian Ibn Ḫaldūn, in his *Prolegomena* (iii. 207 in de Slane's Fr. translation), questioned the authenticity of the alchemical works of Ḫālid the Umayyad, on the ground that this prince was a Bedawī Arab who lived before the time of the scientific activity of the Arabs, and that therefore he could not have been acquainted with such a complicated science as alchemy. However, the tradition is very exact, both in the *Book of Songs* (*Kitāb al-Aghānī*, xvi. 88–98), and in Mas'ūdi (*Les Prairies d'or*, ed. and tr. into Fr. by Barbier de Meynard, viii. 176). This historian says that alchemists acknowledge Ḫālid, son of Yazīd the Umayyad, as one of their elder brothers.

The second name to be mentioned is that of Geber. This famous person, who became illustrious and legendary in the Christian Middle Ages, is known under the Arab name of Abū Mūsā Jābir, son of Ḥaiyān; his tribal name is 'the Azdite'; from the place of his birth he is named 'of Ṭūs' or 'of Ṭarṭūs'; he is sometimes called al-Ḥarrānī, which agrees with the tradition connecting him with the Sabæans of Ḥarrān. The surname 'al-Umawī, the Umayyad,' which is sometimes given him, represents a tradition according to which he had Ḫālid, son of Yazīd, as master; but other accounts describe him as a pupil of Ja'far aṣ-Ṣādiq, who is also credited with a profound knowledge of occult sciences, and to whom bibliographers ascribe works on science and divination (cf. Ḥajjī Ḫalfa, v. 277, 280; Ibn Ḫallikān, No. 130). Lastly, there is occasionally coupled with the name of Geber the epithet 'Ṣūfī'; this is explained by the fact that Geber, having been converted from Sabæism to Islām, is said to have exhibited great zeal for the Musalmān faith; the title must have been added, however, at a later period.

We should clearly pay no heed to a view mentioned in the *Fihrist* (p. 354 ff.), according to which

Geber is a mythical personage. This famous alchemist did certainly exist; but very little is known about his life. A reliable tradition represents him as usually residing at Kūfa; he is sometimes connected with the Barmecides (*Fihrist* and Ḥajjī Ḫalfa, iii. p. 588). He flourished about the year A.H. 160 (A.D. 776). A whole series of works is attributed to him; their titles are generally symbolical, and their number exceeds two hundred. There are twenty-two Arabic works placed under his name in our libraries. Berthelot and Houdas have published five of these treatises under the titles of: *Book of Royalty; Small Book of Balances; Book of Mercy*, a work revised by a pupil; extracts from the *Book of Concentration;* and *Book of Oriental Mercury*. The Latin treatises ascribed to Geber do not correspond to the Arabic works; besides, they exhibit a more advanced stage of chemical science. Some of these are: *Geberi regis Arabum summa perfectionis ministerii*, Gedani (Dantzig), 1682; *Geberi philosophi de alchemia libri iii.*, Nuremberg, 1545 (cf. Steinschneider, *ZDMG* xiii. 649). The Latin treatise, entitled *Book of the Seventy* of Jo (John), is the only one which seems to have preserved some fragments of Geber or his pupils, judging from the resemblance between the titles of its chapters and those of a work of the same name which the *Fihrist* mentions and ascribes to Geber (Latin MS 7156, Paris; cf. Berthelot, *La Chimie au moyen âge*, i. 323).

There were several alchemists in the 3rd cent. A.H.; the two most famous are the ascetic Dhū-n-Nūn al-Miṣrī of Ikhmīm (d. 245=A.D. 859) and Ibn al-Waḥshīya, the imaginative author of the *Nabatæan Agriculture*, who wrote during the second half of that century. We possess three works of Dhū-n-Nūn on alchemy—in poetry, dialogue, and miscellany (cf. R. A. Nicholson in *JRAS*, 1906, p. 311 ff.). We have various works of Ibn al-Waḥshīya, especially a *Treasury of Wisdom* or *Secrets* (*Kanz al-ḥikma* or *Kanz al-asrār*), which is a system of alchemy. We may add to these names that of Muḥammad, son of Umail (rather than Amyal) at-Tamīmī, who composed, among other things, an essay on ancient Egyptian paintings; and that of Uthmān, son of Suwaid al-Ikhmīmī, who disputed with Ibn al-Waḥshīya.

In the 4th cent. (10th A.D.) appears the medical philosopher 'Razes,' Abū Bakr Muḥammad, son of Zakarīya ar-Rāzī. He was an enthusiastic student of alchemy, and almost a martyr to this science. As he had dedicated his famous book on medicine, *al-Manṣūri*, to the Sāmānid prince Abū Ṣāliḥ Manṣūr, son of Isḥāḳ, he afterwards also presented him with his plea, 'The Establishment of Alchemy' (*Kitāb ithbāt al-kīmīya*). The prince asked him to verify some of his experiments, and, finding him unable to do so, he struck him across the face with a whip, and blinded him. He died in A.H. 311 or 320. We may mention his *Kitāb al-asrār*, 'Book of Secrets,' on alchemy; a *Preparatio Salis Aromatici*, placed under his name, is published in the *Theatrum Chemicum*, iii. No. 64.

To the same century belongs another important writer, Maslama al-Majrīṭī, *i.e.* of Madrid. This learned encyclopædist (d. 395 or 398=A.D. 1004 or 1007), after travelling in the East, brought thence to his native country a collection of the famous works of the 'Brethren of Purity,' of which he probably made a new recension. Being skilled in alchemy, he wrote specially on this subject a *Kanz al-faḍā'il*, 'Treasury of Accomplishments,' dated 348.

We may mention in passing another prince, who was reputed to be an alchemist, the celebrated Fāṭimid Ḫalīfa al-Manṣūr al-Ḥākim (d. 411=A.D. 1020), the founder of the religion of the Druzes. The only famous names that we find after him are those of Ghazzālī the great philosopher, Ṭughrā'ī, and Jildakī. Ghazzālī (451–505=A.D. 1111) believed in alchemy, and wrote some articles on the subject; one of them is extant at Berlin, *Maqāla al-fauz*, 'Lecture on Preservation.' Ṭughrā'ī (al-Ḥasān, son of 'Alī), who died about 515, wazīr of the Seleucid Sultan Mas'ūd at Mosul, became famous as an alchemist, wrote on alchemy, *Jāmī al-asrār*, 'Compendium of Secrets,' an article on the philosopher's stone, and a commentary on Geber's *Book of Mercy*. Jildakī ('Alī, son of Aidamur, son of 'Alī), who died in 743=A.D. 1342), is the author of several works on alchemy and the search for 'the elixir' (cf. on this author S. de Sacy, *Notices et extraits*, iv. 108; Leclerc, ii. 280).

Alchemical studies continued in Islām during the time of the literary decline and down to the present day. In the 10th cent. A.H. (16th A.D.) authors like Muṣliḥ ad-Dīn Bostān Efendi of Aidīn, or 'Alī Beg of Iznīḳ, are found writing 'Alchemies,' and in the 11th cent. the physician Maulā Ṣāliḥ, son of Naṣrallāh al-Ḫalabī, adapted Paracelsus. It is said that there are still alchemists in Morocco and at Mecca.

2. Doctrine.—The doctrine of alchemy appears among the Arabs under very philosophical aspects; it implies certain ideas on the nature of physical matter which are derived from general philosophy. This connexion with philosophy is so very close, that we come upon treatises beginning with real philosophical introductions; *e.g.* the 'Treatise on Concentration' goes so far as to speak expressly of the doctrine of the 'categories,' which it ascribes to Pythagoras, saying that there are ten things which form the universe: essence and its nine accidents.

It is not difficult to see with what philosophical school the alchemists are, as a rule, connected. It is with the great school of Neo-Platonic origin, which developed in the Musalmān world when the Greek sciences were being studied there, and attained its height about the 10th cent. of the Christian era (4th A.H.). The alchemists are connected more especially with the branches of this school which professed the so-called 'illuminative' doctrines. In these sects a disposition to syncretism prevailed: according to them, truth was possessed in the different nations by wise men who expressed it in different ways, and who are at one time mythical personages, at another well-known philosophers of very different opinions. The same inclination towards syncretism is shown in the alchemical writings. The alchemistic authors do not know whether they owe their art to Egypt rather than Persia, or to India rather than China. The ancestors whom they claim are at one time quite mythical, *e.g.* Hermes and Agathodæmon; at another historical or semi-historical, *e.g.* Qārūn, the Korah of the Bible, brother-in-law of Moses, whose treasures are mentioned in the Qur'ān (xxviii. 76, 79, xxix. 38, xl. 25); or, again, queen Cleopatra, the emperor Heraclius, or Bilqīs, the queen of Sheba. To these soothsayers and kings the alchemists add the philosophers and scholars of classical antiquity, especially Pythagoras, Plato, Aristotle, Democritus, Dioscorides, and Galen. This grouping would not give any very clear information, if we did not know from the history of philosophy that the list is framed according to the usage of the Alexandrians and the Sabæans, and that therefore it was in these two groups of scholars that the Muslims found their masters. As regards the Sabæans, we have already remarked that Geber probably belonged to their sect; they carried the practice of syncretism to a great length; they collected and fixed a large number of legends of various origins. The addition of the Talmudic legends of Qārūn and of Bilqīs, of the Persian names of Jāmāsp and of

Maghis the sage, to the Egyptian legends of Hermes and Agathodæmon, must have been their work. More especially Alexandrian are the legends, of frequent occurrence in the alchemical writings, which refer to the Pyramids and the great ruins of Egypt, and represent these monuments as ancient laboratories, or at least as having been used as deposits for the secrets of the sciences. The tradition which makes Cleopatra a scientist is undoubtedly Alexandrian, as is also the one which represents another woman, Mary the Copt, as lecturing on alchemy in the presence of various learned men (cf. Kopp, *Beiträge*, i. p. 402; Steinschneider, *Mathem.* § 140; Berthelot, *La Chimie au moyen âge*, iii. *passim*). One of the Arabic treatises published by Berthelot and Houdas bears the name of an Egyptian sage Ostanes.

Another tendency which appears from time to time in the alchemical writings certainly arises from Neo-Platonism, viz. the tendency to mysticism. It makes itself evident in two ways: (1) by founding the art of alchemy on a revelation which was received by the ancient prophets, *e.g.* by Hermes or by Qārūn; or (2) by making moral conditions intervene in the production of the great work: God co-operates in the undertaking, and the alchemist must prepare himself for this Divine co-operation by purity of heart. Even in the cases in which this condition is not formally laid down, the alchemistic writings bear a strongly religious stamp.

It is a very wide-spread custom among writers on occult subjects to connect the metals with the planets. Gold is held to correspond with the sun, silver with the moon; the other metals, mercury, iron, tin, lead, correspond respectively to Mercury, Mars, Jupiter, and Saturn. This connexion was made long ago, but the Muslims ascribe it more especially to the Sabæans; and this provides a new proof of the important part which that sect took in the transmission of ancient ideas, Greek as well as Jewish and Chaldæan.

The part played by Syrian scholars in this work of preserving and handing down scientific knowledge was greater even than that of the Sabæans; and it is better known. It was through Syrian works that the Muslims became acquainted with the chief Greek alchemists, especially Zosimus (cf. Berthelot, *La Chimie au moyen âge*, ii.).

Now, what exactly is the doctrine, or rather the postulate, on which alchemy is based? This postulate, in its essential elements, is very simple. It holds that metals differ from each other in degree, but not in nature, and that any one of the baser metals, like lead or copper, may be transmuted into a more perfect metal like silver or gold. This postulate is connected with or implies a curious idea frequently expressed by alchemists, that of the 'life' of the mineral. The metal or the mineral is really regarded as a living being, which is engendered and develops in the womb of the earth, where it is subjected to various conditions, such as help or hinder its perfection. This theory is expressed, *e.g.*, in the treatise of the 'Brethren of Purity' devoted to mineralogy. Dieterici, the editor of that treatise, remarks that it is conceived on Aristotelian, one might say rather, Neo-Platonic principles, and that it is inserted in a series of treatises based on those of Aristotle, although we do not know any work on minerals by that philosopher.

In that treatise the doctrine is presented thus. From the elements which lie like potentialities in the womb of the earth, there are first of all formed, as energies, mercury and sulphur; from those two there are afterwards formed, as entelechies, metals which are good or bad, noble or base, according to circumstances. It is only in consequence of certain injuries undergone that the material does not become silver or gold instead of lead or tin. Alchemy endeavours to repair these injuries (Dieterici, *Die Abhandlungen der Ikhwân es-Safâ*, Leipzig, 1886, Vorwort, p. 18, and text, p. 137). The same idea is expressed in the *Cosmography* of Qazwini (ed. Wüstenfeld, i. p. 207), and in this work also it is ascribed to Aristotle; the metals in their mines undergo certain injuries which cause their imperfections: *e.g.* lead is a kind of silver which has three defects—an unpleasant odour, softness, and a disagreeable sound. In this book also, means of getting rid of these defects are suggested.

In the works of Geber published by Berthelot, and especially in the *Book of Mercy*, whose authenticity appears most certain, this notion of the life of metals is consistently expounded; a regular anthropomorphic theory is applied to mineralogy; not only the idea of 'generation' applies to metal, but also the ideas of 'marriage, pregnancy, and education'; all these conditions, it is said, are necessarily the same as in the case of a human being. This doctrine is expressed with equal force in the treatise by al-Ḥabib, published in the same collection and apparently quite ancient. According to these various alchemists, the formation and the life of metals require time, like our own; to bring the metal in the womb of the earth to its perfect state, which is the state of gold, nature takes a very long time, more than a thousand years, according to the most wide-spread alchemistic tradition; the work of alchemy is to imitate nature, and at the same time to discover more rapid means than hers for the development of the metal.

The anthropomorphic theory of alchemists has one more aspect; it applies to chemical bodies the ideas of life and death, of body and soul, of matter and mind. In this sense the idea of occult forces is very interesting; these subtle, intangible, invisible forces are compared to 'spiritual forces'; the force of the magnet, which attracts iron through other materials, and that of poison, which permeates the organism, are called 'spiritual forces' (Berthelot, *Geber: 'Traité de la miséricorde,'* p. 175). In bodies there are some substances earthly and gross, and others pure and light; the former are called 'dead,' the latter 'living'; these notions of death and life are also employed in a relative way: *e.g.* sulphur and arsenic are living when they are mixed with substances inferior to them, such as talc; but they appear earthly and dead when they are united with live mercury (*ib.* p. 178). In every body, and *a fortiori* in every combination, it may be supposed that there is a material part and a spiritual part, a soul and a body. The soul is infused into the body; its nature is superior to that of the body, refines it, and gives it a kind of immateriality. A common task for chemists consists in giving a soul to each body, by first purifying souls and bodies, and then infusing into each body the soul which suits it. Geber, still following the idea that there were certain injuries caused by nature, even speaks of 'restoring' to the body the soul which 'has gone out of it'; this is another aspect of a chemical operation; thus, mercury is the soul which suits gold and the other metals. The spirit also is capable of a sort of education; not only must it be fit to unite forcibly with its body, and for that reason be pure, but it must also be firm, it must resist fire, and to this end must, as far as possible, partake of the nature of fire.

In practice, the aim of the alchemist's efforts is to find the substance, a living substance, 'elixir' or spirit, which, when combined with the body of the imperfect metal, previously prepared and purified, will change it into perfect metal. Alchemists use various means, and look in various places to find this substance; they do not regard it as exclusively mineral; they even make use of organic bodies in its preparation; they discuss whether it is 'excrement, blood, hair, or egg'; as a rule, they describe it as a stone; it is 'the Philosopher's stone, the very precious stone.' This stone is afterwards ground down, and during the grinding it is sprinkled with

water mixed with drugs and simples. The liquid obtained in this way is the 'elixir.'

3. Discussions of the doctrine. — During the course of Arabic literary history, various persons assumed an attitude of opposition to the alchemical doctrine. This opposition led to discussions. It must, however, be stated that the objections raised were not directed against the study of bodies and their properties, but only against the assumption peculiar to alchemists, concerning the possibility of the transmutation of metals. In the 3rd cent. A.H. the philosopher al-Kindī declared himself against the alchemists. He wrote a treatise on 'the error of those who think that gold and silver can be obtained otherwise than in their mines,' and another on 'the deceits of alchemists.' A pupil of al-Kindī, Dubais, took up the cause of the alchemists, however, and wrote two treatises on their science, cited in the *Fihrist*. Razes composed a 'refutation' of the objections of al-Kindī. Fārābī believed in alchemy, but Avicenna (Ibn Sīnā), was opposed to it (see AVICENNA). Ṭughrā'ī afterwards defended alchemy against Avicenna.

Avicenna's chief objection consisted in saying that the seven metals differ in their specific qualities, each of them forming a definite species with real characteristics; Fārābī believed, on the contrary, like the alchemists, that all metals were of the same species, and he considered their qualities merely as accidents. Ṭughrā'ī, bringing in the Divine power, observes, in addition, that it is not a question of producing a specific difference in the metal treated, but of making it fit to receive this difference from its Creator. Avicenna also objects, like al-Kindī, that it is incredible that there can be a shorter way of bringing metals to their perfect state than that which is followed by nature.

The other objections brought forward against alchemy are: that no one has ever been pointed out with certainty as having achieved the great work; that it is especially poor people who study alchemy; that alchemists circulate counterfeit gold, and in that way wrong the public, and are liable to punishment by law. This latter accusation refers to the cases in which alchemists succeeded in giving to metal what they called a dye, *i.e.* in covering it with a layer which had the appearance and some of the properties of gold. The alchemists replied, weakly enough, it is true, to these objections, by saying that this 'dye' was fast, and would last several centuries.

The cosmographer Dimishqī (ed. Fraehn, p. 97) and the historian Ibn Ḫaldūn (*Prolegomena*, de Slane's Fr. tr. iii. 207 ff.), opponents of alchemy, speak in an interesting way about alchemists, and relate the objections which were raised against them.

4. Special contribution of Muslims to alchemy. —It is very difficult to determine exactly the share due to Muslims in the progress of chemical discoveries. It was, apparently, very slender. The most ancient Arabic works are adaptations of, or commentaries on, Greek works; that of Crates is typical. The discoveries which Western tradition has ascribed to Geber, those of *aqua regalis*, of sulphuric acid, nitric acid, and nitrate of silver, are not found in the Arabic works placed under this alchemist's name, but only in some Latin pamphlets at the end of the 13th cent.; it seems, therefore, that the admiration affected by the Western peoples for Muslim alchemists is due not so much to their real worth, as to the general custom of looking to the East for masters, especially of the occult sciences.

It is probable, however, that Muslims made progress in chemistry as applied to medicine, in dyeing, and in the art of enamelling. Al-Kindī, besides others, wrote about colouring matters, glass-making, the processes of removing stains from cloth, and other similar subjects. These particular industries have not yet been studied minutely enough.

Every one knows that our languages are indebted to Arabic chemistry for certain words, which are in some cases Arabic words, in others Greek words preceded by the Arabic article; *e.g. alchemy, alembic, aludel, alcohol, elixir*. The word *alchemy* has been derived from *χυμεία*, 'mixture.' Wiedemann has shown that this word originally denoted the very substance which has the property of accomplishing transmutation, the elixir, and not the sum of the ways which help to find it (Wiedemann, *Beiträge*, ii. p. 351; J. Gildemeister, *ZDMG*, 1876). The *kohl*, which has given its name to alcohol, was originally a very fine powder; it is the black powder which Oriental ladies use for blackening round their eyes. The use of the word was generalized and extended to various powders and to liquids. *Elixir* is said to be derived from Greek *ξήριον*, 'dry powder' (J. Gildemeister, *l.c.*); it is possible, however, from the point of view of the grammatical form, that it is an Arabic word and belongs to the root *kasara*, 'to grind,' *al-iksīr* being 'the thing ground,' 'the powder.'

LITERATURE. — Berthelot, *La Chimie au moyen âge*, 1885, pt. i., *Essai sur la transmission de la science antique au moyen âge*, Paris, 1893, pt. iii. with the collaboration of O. Houdas, *L'Alchimie arabe*, 1893; Eilhard Wiedemann, *Beiträge zur Gesch. der Naturwissenschaften*, i.-iv., Erlangen, 1904–1905. On the Arabic authors see Brockelmann, *Gesch. der arab. Litteratur*, 2 vols., Weimar and Berlin, 1897–1902. Latin works on alchemy given as translations from Arabic are found in the following collections: *Theatrum Chemicum*, 6 vols., Strassburg, 1659–61; *Bibliotheca Chemica*, Geneva, 1702; *Artis auriferæ quam chemiam vocant duo vol.*, Bâle, 1572; *Artis chemicæ principes*, Bâle, 1572. A famous work, entitled *Turba philosophorum*, is found in two different versions in the collection *Artis auriferæ*; an 'Alchemy' ascribed to Avicenna, *Liber Abuali Abincinæ de anima in arte Alchimiæ*, is found in the *Artis chemicæ principes*. On several of these works and on mineralogy, cf. F. de Mély, *Les Lapidaires de l'antiquité et du moyen âge*, pt. iii. No. 1, Introduction, Paris, 1902.

BON. CARRA DE VAUX.

ALCHEMY (European).—The study of alchemy in Europe is traceable to the schools of Spain. J. Ferguson, in his notes to the 'Catalogue of the Alchemical, Chemical, and Pharmaceutical books of James Young of Kelly and Durris,' notes which form the latest storehouse of information on the history of alchemy in Europe, says, under the head of Michael Scott: 'It was in Spain, to which it had been brought by the Arabs, that the art first found place in Europe' (*Bibliotheca Chemica*, Glasgow, 1906).

The Khalīfate of Cordova reached its highest splendour under the rule of Abderrahman III. (A.D. 912–961) and Al-Ḥakam II. (961–976). The libraries of the rulers, the nobles, and persons of importance, numbering in some cases 400,000 volumes, attracted students from all parts of Europe (Rafael Altamira of Crevea, *Historia de España*, i. 275).

1. Among the first to profit by this revival of learning was **Gerbert**, afterwards Pope Sylvester II. (999–1003). While still a student in the Abbey of Arvillac in Auvergne, he attracted the attention of Borel, Count of Barcelona. He returned with him to Spain, and is said to have visited Cordova during the reign of Al-Ḥakam II. It was in the schools of Spain that he studied the sciences of arithmetic, geometry, astrology, and chemistry, which at a later date brought him into disrepute as a wizard. During the Papacy of John XIII. (965–973) he visited Rome in the company of Count Borel and Hatto, Bishop of Vich. He then made the acquaintance of the Emperor Otho I., and was recommended by him to the notice of Adalbero, Archbishop of Rheims. By Otho II. (973–983) he was

appointed Abbot of Bobbio. Driven from Bobbio by the neighbouring nobles, he returned to Rheims, where he taught the 'whole range of human science.' On the degradation of Arnulf, he was made Archbishop of Rheims in 991. Forced to resign the see in 996, he took refuge at the Court of Otho III. (983–1002), and by his influence in 998 he became Archbishop of Ravenna. In the following year he succeeded to the Papacy. Thus by the close of the 10th cent. the learning of Spain was introduced into France and Italy and the Imperial Court (Milman, *Lat. Chr.* iii. pp. 331–345).

2. The influence of Gerbert did not end with his death. His pupil, Fulbert of Chartres (1007–1028), carried on his work. Adelmannus, Bishop of Brescia, in a letter to Berengarius, speaks of their joint studies 'in Academia Carnotensi, sub nostro illo venerabili Socrate, nempe Fulberto' (Bar. *Ann. Eccl.* 1004, 6). The Schools of Berengarius in Tours and Angers to some extent carried on the same work. Behind the theological controversy of the early Scholasticism of the 11th cent., the tradition of the wide learning of Gerbert may be traced as one cause of the recognition of the philosophical studies of Spain in the 12th cent. (Neander, *Gesch. der Chr. Rel. u. Kirche*, iv. 283).

3. The fall of the Khalifate of Cordova in 1031 did not check the progress of learning in Spain. The kings of Seville, Cordova, Malaga, Granada, Almeria, Denia, Zaragoza, Toledo, and Badajos vied with one another in the patronage they gave to philosophy and science. The studies of the former period were continued, and special attention was given to the natural sciences—medicine, chemistry, botany, and astronomy. Ibn al-Baiṭar of Malaga made a large collection of minerals and plants, and under the Muwaḥḥid Khalif Ya'qūb al-Manṣūr (1196) the Giralda of Seville became the chief observatory in Europe. In philosophy, Averroës of Cordova (1126–1198) won a European reputation as the commentator of Aristotle and Plato.

4. The conquest of Toledo by Alfonso VI. of Castile in 1085 was another step in the propagation of the Arabic learning in Europe. A school of translators was founded at Toledo which reached the highest point of its fame in the reign of Alfonso VII. (1130–1150). Among those who were attracted to Spain were Hermann of Dalmatia and Hermann of Germany, Gerard of Cremona, the Englishmen Daniel of Morlay, Robert the Archdeacon, and Michael Scott (Raf. Altamira Crevea, *op. cit.* i. 484–514). It was in 1182 that Robert Castrensis translated the *Liber de compositione Alchemiæ*, associated with the names of Ḫālid and Morienus. To the same period belongs the teaching of Alain de Lille, known as 'Doctor universalis,' who had been a monk at Clairvaux, and was afterwards Bishop of Auxerre.

5. **Michael Scott** was among the first to bring alchemy into prominence in Europe under the patronage of Frederick II. (1194–1250). He dedicated his *de Secretis* to Frederick in 1209. He studied Arabic in Sicily, and spent ten years in Spain. At Toledo he translated Aristotle's treatise on Natural History from the Arabic, with the help of a Jew. In 1217 he translated an Arabic work on the sphere. This is a link with the studies of Gerbert, who in a letter to Remigius, a monk of Trèves, excuses himself for not sending a sphere, owing to his time being occupied with civil business.

'Sphæram tibi nullam misimus, nec ad præsens ullam habemus, nec est res parvi laboris tam occupatis in civilibus causis. Si ergo te cura tantarum detinet rerum, volumen Achilleidos Statii diligenter compositum nobis dirige, ut Sphæram, quam gratis propter difficultatem sui non poteritis habere, tuo munere valeas extorquere' (Gerberti *Ep.* 134, *ap.* Duchesne, *Hist. Franc. Script.* ii. 820).

From Toledo he went to Cordova; in 1220 he returned to Sicily, and in 1230 he was at Oxford. He died in 1235. Ferguson says of him:

'At Toledo he learnt magic for which the city was famous—natural magic or experimental physics or jugglery, as well as black magic, involving the invocation of the infernal powers. There, too, he experimented in Alchemy' (*Bibl. Chem.*, art. 'Michael Scott').

His *Liber de Alchimia* is the result of these studies.

6. **Albert the Great** has the merit of having brought the study of alchemy as a branch of philosophy into touch with the Scholasticism of the Middle Ages. The Great Chronicle of Belgium in 1480 speaks of him as 'magnus in magia, major in philosophia, maximus in theologia.' Born at Lauingen in Swabia, he studied at Paris and Padua, and in the early part of the 13th cent. taught in the Schools at Cologne. In 1228 he was called to Paris, but after three years returned to Cologne. He was the most distinguished amongst the Dominicans of Germany. In 1260 he was summoned to Rome by Pope Alexander IV., and was made Bishop of Ratisbon. He resigned the see after three years, and retired again to his studies and his lectures at Cologne, where he died in 1280. He was the master of Thomas Aquinas (Milman, *Lat. Chr.* ix. 122). His *Libellus de Alchimia* (Alb. Magn. *opp. omn.*, Paris, vol. xxxvii.) is a practical treatise on the transmutation of metals, the structure of furnaces, and the various methods to be used in the study of alchemy. The Preface is valuable as indicating the wide-spread interest which was then shown by all classes in the study:

'Inveni multos prædivites litteratos, Abbates, Præpositos, Canonicos, Physicos, et illiteratos, qui pro eadem arte magnas fecerunt expensas atque labores, et tandem deficiebant quoniam artem investigare non valebant.'

He persevered where others had failed:

'Ego vero non desperavi, quin facerem labores et expensas infinitas' (*Lib. de Alch.*, Præf.).

He considers it a true art:

'Probat artem Alchimiæ esse veram' (*l.c.* c. 3).

He believes all metals can be transmuted into gold and silver, represented in astrological terms as Sun and Moon:

'Et ut breviter dicam, omnia metalla transubstantiantur in Solem et Lunam' (*ib.* c. 10).

He speaks of the Elixir:

'De his quatuor spiritibus fit tinctura quæ dicitur Elixir arabice, fermentum latine' (*ib.* c. 10).

Fermentation and chemical reaction seem to be used as equivalent terms.

7. **Thomas Aquinas** was the pupil of Albert the Great at Cologne and at Paris. He, like his master, was a member of the Dominican Order. He graduated at Paris, and taught not only at Cologne under Albert, but at Paris, at Rome, and at other cities in Italy. He refused the Archbishopric of Naples, and died at the Abbey of Fossa Nuova near Piperno on his way to the Council of Lyons in 1274. Ferguson, in his *Bibl. Chem.*, discusses the authenticity of the *Thesaurus Alchemiæ secretissimus ad fratrem Reinaldum* which is attributed to him, and leaves it an open question. The *Summa* contains one or two passages which directly or indirectly refer to alchemy, although his similes are drawn from animal and plant life rather than from the mineral world. The principle of the transmutation of metals may be inferred from one of the earliest definitions of the *Summa*:

'Respondeo dicendum quod solus Deus est omnino immutabilis, omnis autem creatura aliquo modo est mutabilis. Sciendum est enim, quod mutabile potest aliquid dici dupliciter. Uno modo per potentiam, quæ in ipso est. Alio modo per potentiam, quæ in altero est' (*Summa*, pt. i. qu. ix. art. ii.).

God alone is immutable; all else is mutable, in different ways. In one place Aquinas refers to the relation that exists between the minerals and the stars:

'Ad primum ergo dicendum, quod effectus aliquis invenitur assimilari causæ agenti dupliciter. Uno modo secundum

sandem speciem, ut homo generatur ab homine, et ignis ab igne. Alio modo secundum virtualem continentiam: prout scilicet forma effectus virtualiter continetur in causa. Et sic animalia ex putrefactione generata, et plantæ et corpora mineralia assimilantur soli et stellis, quorum virtute generantur' (*Summa*, pt. i. qu. cv. art. i.).]

In discussing the question of the sale of adulterated goods, he says that to sell gold and silver made by the alchemist, if it have not the nature of true gold and silver, is a fraudulent transaction. If, however, this gold of the alchemist is true gold, the transaction is lawful. He recognizes the possibility of fraud, but at the same time witnesses to his belief in the production of gold by the art of the alchemist. The passage is sometimes only partially quoted. It is of importance in its bearing on the alchemical knowledge of Thomas Aquinas:

'Ad primum ergo dicendum quod aurum et argentum non solum cara sunt propter utilitatem vasorum, quæ ex eis fabricantur, aut aliorum hujusmodi; sed etiam propter dignitatem et puritatem substantiæ ipsorum. Et ideo si aurum vel argentum ab alchimicis factum, veram speciem non habeat auri et argenti, est fraudulenta et injusta venditio; præsertim cum sint aliquæ utilitates auri et argenti veri, secundum naturalem operationem ipsorum, quæ non conveniunt auro per alchimiam sophisticato. Sicut quod habet proprietatem lætificandi, et contra quasdam infirmitates medicinaliter juvat. Frequentius etiam potest poni in operatione, et diutius in sua puritate permanet aurum verum quam aurum sophisticatum.'

This contrast between real gold and counterfeit gold implies some knowledge and experience of the art of alchemy:

'Si autem per alchimiam fieret aurum verum, non esset illicitum ipsum pro vero vendere, quia nihil prohibet artem uti aliquibus naturalibus causis ad producendum naturales et veros effectus: sicut August. dicit in 3. *de Trinit.* de his quæ arte dæmonum fiunt.'

The art of alchemy is not unlawful if it confine itself to the investigation of natural causes and natural effects, though some think it demoniacal (pt. ii. 2, qu. lxxvii. art. ii.).

8. **Roger Bacon**, born about 1214, spent his youth at Oxford before joining the Franciscan Order. He began his studies in alchemy and the kindred sciences before 1250, and by 1267 had spent more than 2000 libræ 'on secret books and various experiments and languages and instruments and tables.' He left Oxford for Paris some time before 1245, and returned to Oxford soon after 1250. About 1257 he was exiled, and placed under strict supervision at Paris for ten years. On June 22, 1266, Clement IV. wrote to him, bidding him send him his works secretly and without delay, notwithstanding any restrictions of the Order. Within fifteen or eighteen months he sent to the Pope the *Opus Majus*, the *Opus Minus*, and the *Opus Tertium*. By the Pope's influence he returned to Oxford and began to labour at a great Summa Scientiæ, the *Compendium Philosophiæ*. In 1278 he was condemned 'propter quasdam novitates,' and remained in prison for fourteen years. His last known work was written in 1292.

The *Opus Majus* is silent on the subject of alchemy. The *Opus Minus*, of which only fragments exist in the Bodleian (Brewer, *Opera Inedita*, 311–390), deals with practical alchemy in pt. ii., and speculative alchemy, or *de rerum generationibus*, in pt. v. There is no reference to it in the *Opus Tertium*, but in the *Compendium Philosophiæ* it is the subject of bk. iii. of vol. iii. Speculative alchemy, according to the definition of Roger Bacon, is the science of the generation of things from elements; practical alchemy teaches 'how to make noble metals and colours,' and 'the art of prolonging life.' Some other works of his on alchemy are regarded as genuine.

The different titles of the *Breve Breviarium* give some idea of the scope and aim of his work; it is entitled, *De naturis metallorum in ratione alkimica et artificiali transformatione*, or *Cœlestis alchymia*, or *De naturis metallorum et ipsorum transmutatione*. The date is uncertain. On the subject of old age is the *Libellus Rogerii Baconi . . . de retardandis senectutis accidentibus et de sensibus conservandis*. It is assigned to the year 1276. The *Antidotarius* is a second part of this work. The *De consideratione quintæ essentiæ*, the *Speculum alchemiæ*, the *Speculum secretorum*, the *Secretum secretorum naturæ da laude lapidis Philosophorum*, the *Semita recta alchemiæ*, and the *Thesaurus spirituum*, are wrongly attributed to Bacon (Little, 'The Grey Friars in Oxford,' *Oxf. Hist. Soc. Publ.* vol. xx. pp. 191–211).

9. The most prominent names among the alchemists of the last part of the 13th cent. are Raymondus Lullius and Arnold of Villanova. The former of these, the Raymond Lully of the later English alchemists, was born of noble parentage in Catalonia, and held, in his early years, a high position in the Court of Aragon. Disappointed in a romantic attachment, he renounced the world, and gave himself up to a life of study and mission work in Africa. His work witnesses to a remarkable combination of spiritual devotion and scientific research, with a passionate enthusiasm for the conversion of the Moors. He devoted himself at first to the study of Arabic. He undertook his first mission to Africa in 1271, but met with little success. He was at Paris in 1281, where he became acquainted with Arnold Villanova. In 1287 he visited Rome, and in 1291 Montpellier. During these years he wrote his great works, the *Ars Generalis sive Magna* and the *Libri xii. Principiorum Philosophiæ contra Averroistas*. In 1292 he went to Africa a second time, and was imprisoned at Tunis. In 1293 he was in Naples; and after journeying to Cyprus and Armenia he was again in Paris in 1308, where he is supposed to have met Duns Scotus. In 1309 he made another missionary journey to Africa, and succeeded in converting seventy disciples of Averroës at Bona, the ancient Hippo, the see of St. Augustine. Once again, as an old man of eighty, he made a last journey to Africa, in 1315, to be stoned and maltreated at Bugia. He lived only to see the shores of the island of Majorca, where he was buried in a chapel on one of his own estates. In his last will, the *Codicillus seu Vade Mecum quo fontes alchemicæ artis ac philosophiæ reconditioris traduntur*, he says that he converted 22 tons of quicksilver, lead, and tin into gold. The tradition that he was brought from Rome by Cremer, Abbot of Westminster, and that he coined the rose-nobles for Edward III., does not seem to rest on historical fact (Ferguson, *Bibl. Chem.*).

Arnold of Villanova, his contemporary, was probably also a Spaniard. He was born in 1245, and died in 1310. He studied amongst the Arabs of Spain; and it is stated, on the authority of John André, that he succeeded in the genuine conversion of iron bars into pure gold at Rome (*Bibl. Chem.* p. 95). At least these alchemists of the 13th cent. in their researches seem to have discovered the secret of a long and useful and strenuous life. Albert the Great died at the age of 87, Roger Bacon at about 78, Raymond Lully at 80, and Arnold Villanova at 65, at a period when the average life was not so long as it is now.

10. The most distinguished pupil of Lully and Villanova was Pope John XXII. (1316–1334), who also lived to the age of 90. He worked at alchemy in the Papal palace at Avignon, and is said to have left behind him 25,000,000 florins. At the same time he wrote a letter in which he censured the black magic which was practised 'in nostra curia' by certain clergy,—Joannes de Lemovicis, 'Jacobus dictus Brabantinus,' and a barber-surgeon, described as 'Joannes de Amanto, medicus,' or, in another place, 'barberius' (Raynald, *Ann. Eccl.* 1317, 53).

11. The practice of the art of alchemy was continued throughout Europe in the 14th cent. on the lines laid down by the masters of the 13th cent. John Cremer, Abbot of Westminster, after studying the art for thirty years, worked at Westminster in the reign of Edward III. (1327–1377). John

Rupecissa, or Jean de Roquetaillade, was a Franciscan of Aurillac in Aquitaine. He was imprisoned by Innocent VI. in 1356–1357. He quotes Geber, Lullius, and Villanova. In his *Liber lucis* is the picture of a furnace, in which was practised 'the incubation of the philosophic egg whence issued the marvellous quintessence.' Petrus Bonus of Ferrara was the author of the *Preciosa Margarita novella de Thesauro ac pretiosissimo Philosophorum Lapide*. It was written in 1330, and published at Venice in 1546. The term 'fermentum,' used by Albert the Great as the Latin of elixir, is applied by Petrus Bonus to the philosopher's stone. It is also used as the means of perfecting it:

'Apud philosophos fermentum dupliciter videtur dici: uno modo ipse lapis philosophorum et suis elementis compositus et completus in comparatione ad metalla; alio modo illud quod est perficiens lapidem et ipsum complens.'

The chemical reactions due to it are compared with the working of yeast:

'De primo modo dicimus quod sicut fermentum pastæ vincit pastam et ad se convertit semper, sic et lapis convertit ad se metalla reliqua. Et sicut una pars fermenti pastæ habet convertere partes pastæ et non converti, sic et hic lapis habet convertere plurimas partes metallorum ad se, et non converti' (Petrus Bonus, *ap.* P. Schützenberger, *On Fermentation*, p. 11). Schützenberger adds: 'This property of transmitting a force to a large mass without being itself weakened by the process was precisely that which ought to characterize the philosopher's stone, which was so much sought after.' Since these words were written, the discovery of radium has given to chemistry an element which also appears to have the property 'convertere plurimas partes metallorum ad se, et non converti.'

Nicolas Flamel belonged to the latter part of the 14th century. He was born in Pontoise about 1330, and died in 1418 at the age of 88. His discovery of the elixir of life in 1382 seems to have met with its reward.

12. Among the prominent names of the 15th cent. are Basil Valentine and Isaac of Holland. The former is considered the author of the *Triumphal Car of Antimony*, but there is considerable doubt as to the facts of his life and the authorship of the works attributed to him. The chief fact is a record in an Erfurt Chronicle under the year 1413: 'Eadem ætate Basilius Valentinus in Divi Petri monasterio vixit.' There is a similar doubt as to the identity of Isaac of Holland. The life of Bernard, Count of Treviso, covers the whole century. Born in 1406, he died in 1490 at the age of 84, another instance of the secret of long life won by the alchemists probably by means of study, method, and application to work. He distinguishes between the results of the labour of the true alchemist and the counterfeit products of sophistical alchemists. Here there is some echo of the phrase of Thomas Aquinas: 'aurum sophisticatum.'

England produced three prominent alchemists in this century. George Ripley was born about 1415, and was a Canon Regular of St. Augustine at Bridlington. He visited Rome in 1477, and returned in 1478 after having discovered the secret of transmutation. He is the author of *The Compound of Alchemy, or the Ancient Hidden Art of Alchemie: Containing the right and perfectest Means to make the Philosopher's Stone, Aurum potabile, with other excellent Compounds.* His Twelve Gates of Alchemy give some insight into the methods of the art in England in the 15th century. They are: Calcination, Solution, Separation, Conjunction, Putrefaction, Congelation, Cibation, Sublimation, Fermentation, Exaltation, Multiplication, Projection. He died in 1490 at the age of 75. Thomas Dalton lived in the middle of the century, and received a powder from a Canon of Lichfield under a promise not to use it until after his death. Thomas Norton of Bristol wrote his *Crede Mihi*, or *Ordinal of Alchemy*, in 1477. He says:

'I made also the Elixir of life,
Which me bereft a merchant's wife;
The Quintessens I made also,
With other secrets many moe,
Which sinful people took me fro
To my great pain and much more woe.'

13. The 16th cent. saw a further development of alchemy into the more exact sciences of chemistry and medicine. Paracelsus, in his student wanderings an alchemist, became by practice a physician, by experience a chemist. He was at once adept and wizard, sceptic and critic. He wrecked his work by his bombast, his life by his self-indulgence. At the same time, to use Browning's words, 'the title of Paracelsus to be considered the father of modern chemistry is indisputable.' Gerardus Vossius says of him: 'Nobilem hanc medicinæ partem, diu sepultam avorum ætate, quasi ab orco revocavit Th. Parcelsus' (*de Philosophia et Phil. sectis*, ix. 9). It appears also from his treatise *de Phlebotomia* that he had discovered the circulation of the blood. Lavater says that 'though an astrological enthusiast,' he was 'a man of prodigious genius' (*de Natura Rerum*, Holcroft's tr., vol. iii. p. 179). There is a reference to his use of laudanum on the evidence of his secretary, Oporinus:

'Alii illud quod in capulo habuit, ab ipso Azoth appellatum, medicinam fuisse præstantissimam aut lapidem Philosophicum putant' (Melch. Adam). Browning adds: 'This famous sword was no laughing matter in those days, and it is now a material feature in the popular idea of Paracelsus. . . . This Azoth was simply "laudanum suum." But in his time he was commonly believed to possess the double tincture—the power of curing diseases and transmuting metals. Oporinus often witnessed, as he declares, both these effects, as did also Franciscus, the servant of Paracelsus, who describes, in a letter to Neander, a successful projection at which he was present, and the results of which, good golden ingots, were confided to his keeping.'

Paracelsus, otherwise Philippus Aureolus Theophrastus Bombastus ab Hohenheim, was born at Einsiedeln in 1493. He studied medicine under his father at Villach, and alchemy under Tritheim, Bishop of Spanheim, at Würzburg. The character of his studies at Würzburg is best seen in the letter dedicatory, written in 1510, by Agrippa to Tritheim:

'Quam nuper tecum, R. P. in cœnobio tuo apud Herbipolim (Würzburg) aliquandiu conversatus, multa de chymicis, multa de magicis, multa de cabalisticis, caeterisque quæ adhuc in occulto delitescunt, arcania scientiis atque artibus una contulissemus,' etc.

It was partly in rebellion against these traditional methods, partly to gain as wide an experience as possible, that Paracelsus spent his early life in travel:

'Patria auxilio primum, deinde propria industria doctissimos viros in Germania, Italia, Gallia, Hispania, aliisque Europæ regionibus, nactus est præceptores' (Melch. Adam, in *Vit. Germ. Medic.*). The passage illustrates the wide interest in alchemy throughout Europe at the close of the 15th century.

Under the patronage of Sigismond Fugger, Paracelsus learnt much in the mines of Bohemia, and himself speaks of his researches into folk-lore:

'Ecce amatorem adolescentem difficillimi itineris haud piget, ut venustam saltem puellam vel fœminam aspiciat' (*Defensiones Septem adv. æmulos suos*, 1573: 'de peregrinationibus et exilio').

In 1526 he was called to a chair of physic and surgery at Basel. Here his over-bold denunciation of Avicenna and Galen made him many enemies. In 1528 his fall was brought about in the case of a canon of Basel named Liechtenfels. This man was cured by Paracelsus, but refused to pay the recognized fee. His refusal was supported by the magistrates, and Paracelsus fled to Colmar. He was at Nuremberg in 1529, at St. Gall in 1531, at Pfeffers in 1535, and at Augsburg in 1536. He then visited Moravia, Arabia, and Hungary. In 1538, when at Villach, he dedicated his 'Chronicle' to the States of Carinthia, in gratitude for the many kindnesses with which they had honoured his father. He died at Salzburg in 1541, at the early age of 48. He seems to have been generous in the practice of medicine. His epitaph says of him: 'Bona sua in pauperes distribuenda collo-

candaque erogavit.' A sceptic and fierce critic in alchemy, he appears to have been no less so in theology. Quenstedt says of him: 'Nec tantum novæ medicinæ, verum etiam novæ theologiæ autor est' (*de Patr. Doct.*). Delrio places him among those who were: 'partim atheos, partim hæreticos' (*Disquis. Magicar.* i. 3). At the same time, Browning is justified in the last words he places in the mouth of Paracelsus:

> 'If I stoop
> Into a dark tremendous sea of cloud,
> It is but for a time; I press God's lamp
> Close to my breast; its splendnur, soon or late,
> Will pierce the gloom: I shall emerge one day.
> You understand me? I have said enough?'

An inventory taken at his death shows that the only books he left were the Bible, the New Testament, the Commentaries of St. Jerome on the Gospels, a printed volume on medicine, and seven manuscripts. His works were published by F. Bitiskius in 3 vols. fol. in 1658; the Hermetic and Alchemical writings by A. E. Waite in 2 vols. in 1894. Jules Andrieu says of him: 'He is the pioneer of modern chemists, and the prophet of a revolution in general science' (*Encyc. Brit.* art. 'Alchemy'). Browning sums up his study of Paracelsus in the words:

> 'Meanwhile, I have done well, though not all well.
> As yet men cannot do without contempt;
> 'Tis for their good, and therefore fit awhile
> That they reject the weak, and scorn the false,
> Rather than praise the strong and true, in me:
> But after, they will know me.'
> (*Paracelsus*, 1835, and notes).

The new influence in the 16th cent. is shown by the violent death of Beuther, who was alchemist to the Elector Augustus of Saxony from 1575 to 1582, and in the title of Libavius' great work published in 1595—*Alchymia recognita, emendita, et aucta.* It has been called the 'first text-book of chemistry.' It contains a chapter on the philosopher's stone. In England, Thomas Charnock published his *Breviary of Philosophy* in 1557, his *Exigue of Alchemy* in 1572, and his *Memorandum* in 1574. He was instructed in the use of gold-making powder by Bird, who received it from Ripley. It was only those who were well-to-do who could carry on these experiments. The furnace alone cost Charnock £3 a week. The *Alchemical Testament* of John Gybbys of Exeter in the time of Elizabeth has been published by James O. Halliwell (London, 1854).

There does not seem to have been much interest taken in alchemy at Oxford in the early part of the century. The Day Book of John Donne in 1520 contains but few references to alchemical works. There is one copy of the *Commentum Arnoldi de Villanova* (fol. 3, a. 1); there are three copies of a *Chiromantia de manu* (fols. 1. a. 1, 8. b. 2, 13. a. 1), and two copies of Albertus, *de mineralibus* (13. a. 1, 13. b. 2). There is also a copy of *Theoretica planetarum* (15. b. 1) (Fletcher, *Collectanea Oxf. Hist. Soc.* vol. v. p. 71 ff.). In the catalogue of books belonging to William Grocyn, drawn up by his executor, Linacre, in the same year, there is the same absence of such books (Mont. Burrows, *Collect. Oxf. Hist. Soc.* vol. xvi. p. 317 ff.). Oxford had at this time other interests, especially the new learning associated with the names of Grocyn, Linacre, Foxe, and others. The training of Linacre, the founder of the English College of Physicians, the friend of Politian and Chalcondylas, and the great Venetian publisher, Aldus Manutius, is in marked contrast to the restless wanderings of Paracelsus.

14. It was long before the new sciences cut themselves altogether adrift from the ideas of the alchemists. In the early part of the 17th cent. the brotherhood of the Hermetic philosophers known as the Rosicrucians (wh. see) brought the occult mysteries of the earlier alchemists again into notice. The brotherhood claimed descent from Christian Rosencreutz in 1459; but no evidence for this exists beyond their own publications. The controversy centred round a work entitled, *Chymische Hochzeit Christiani Rosencreutz anno 1459*, written by Johann Valentin Andreä in 1616, and published at Strassburg. Among the most prominent of the Rosicrucian brotherhood was Michael Maier, physician to the Emperor Rudolph II. (1576–1612). He published *Examen fucorum Pseudochymicorum* in 1617, *Atalanta fugiens* in 1618, *Symbola aureæ mensæ* in 1617, and the *Tripus aureus* containing three treatises — the *Basilii Valentini Practica ex Germanica*, the *Crede Mihi seu Ordinale* of Thomas Norton, and the *Testamentum* of Cremer, Abbot of Westminster. Robert Fludd introduced the brotherhood to the notice of English physicians. Born in Kent in 1574, he matriculated at St. John's, Oxford, on November 10, 1592, and took his M.A. degree in 1598. One of the three questions discussed by him for Inception in Medicine in 1605 was: 'Chymicum extractum minus molestiæ et periculi affert quam quod integrum et naturale' ('Reg. Univ. Oxon.,' *Oxf. Hist. Soc.* vol. ii. pt. i. 193, ii. 191, iii. 194). In the same year is discussed in Comitiis: 'Incantatio non valet ad curam morbi.' Fludd went abroad and studied the works of Paracelsus and the mysteries of the Rosicrucians. On his return he practised as a physician in London, and died in 1637.

The Hon. Robert Boyle, one of the first promoters of modern chemistry, and a leading member of the Royal Society on its incorporation in 1662, believed in the transmutation of metals. In 1659 he brought to Oxford 'the noted chemist and Rosicrucian, Peter Sthael of Strasburgh.' Anthony Wood began a 'course of chemistry' under him April 23, 1663, paying 30s. in advance, and the balance of 30s. at the conclusion of the class, May 30, 1663. 'A. W. got some knowledge and experience; but his mind was still busy after antiquities and music.' Among the members of this famous chemistry class at Oxford was 'John Lock, a man of turbulent spirit, clamorous, and never contented,' and 'Mr. Christopher Wren, afterwards a knight, and an eminent virtuoso.' In 1664, Mr. Sthael was called away to London, and became operator to the Royal Society; and continuing there till 1670, he returned to Oxford in November. (Clark, 'Wood's Life and Times,' *Oxf. Hist. Soc.* vol. xix. pp. 290, 472). The *Sceptical Chemist*, by Robert Boyle (Oxford, 1680), contains the first statement of the molecular or atomic idea in chemical philosophy (H. C. Bolton, *Catalogue of Works on Alchemy and Chemistry*, exhibited at the Grolier Club, New York, 1891). He was made 'Dr. of Phisicke' in 1665, and died in 1691.

The Rosicrucian ideas and alchemistical methods survived to some extent at Oxford. Elias Ashmole was the contemporary of Robert Boyle at Oxford, but as a member of Brazenose, and not as 'a sojourner.' In 1650 he edited a work of Dr. John Dee, who died *c.* 1608, of whom Wood says: 'I have heard some say that he was a mere mountebank in his profession' ('Wood's Life and Times,' *Oxf. Hist. Soc.* vol. xix. p. 308). In 1654, Ashmole wrote *The Way to Bliss in three books.* 'The author says that motion is the father of heat, and doth beget and purchase it of nothing, theoretically anticipating modern doctrines' (Bolton, *Catalogue*). Bk. iii. ch. ii. treats of the Philosopher's Stone. In 1677 he offered his curios and MSS to the University, on the condition that it would build a Museum and Chemical Laboratory. The foundation-stone was laid September 14, 1679, and the building was finished March 20, 1682–1683.

The inscription describes this first public laboratory in Oxford: 'Musæum Ashmolesanum: Schola Naturalis Historiæ: Officina Chemica.' The three largest rooms were public: 'The uppermost . . . *Musæum Ashmoleanum*. The middle room is the *School of Natural Historie*, where the professor of chymistry, who is at present Dr. Robert Plot, reads three times a week. The lower room, a cellar . . . is the Laboratory, perchance one of the most beautiful and useful in the world' ('Wood's Life and Times,' *ib.* vol. xxvi. p. 55).

It was thus under the direction of Ashmole, perhaps the last of the Oxford alchemists, that the study of chemistry was placed on a sound and public footing. Ashmole died in June 1692, a year after Robert Boyle.

In the sister University, at the same period, Newton, who became Fellow of Trinity in 1667, directed his studies for some little time to alchemistical methods, and investigated the Philosopher's Stone. But at Cambridge, as at Oxford, the newer scientific methods set aside the dreams and theories of the older alchemists, and opened the way to modern chemistry.

15. In the 18th cent. alchemy was finally discredited in the person of Dr. Price of Guildford, the last of the alchemists, a distinguished amateur chemist, and Fellow of the Royal Society. In May 1782 he professed to transmute mercury into silver and gold in the presence of a select company. Some of the gold thus obtained was presented to George III., and Price was made M.D. of Oxford. The Royal Society then pressed him to repeat the experiments in their presence. He hesitated, refused, and only on the pressure of the President, Sir Joseph Banks, at last reluctantly consented. He withdrew to Guildford, prepared an ample amount of laurel water, and then began to manufacture his projection powder. On the 3rd of August he invited the Royal Society to Guildford. Only three Fellows responded to the invitation. He received them, and then committed suicide in their presence.

In Germany, alchemy was laughed out in the person of Semler. He received the 'Salt of Life' from Baron Hirschen, and, treating it as the Philosopher's Stone, was surprised to find gold deposited in the crucible. Klaproth analyzed the 'Salt of Life,' and found it to consist of Glauber's salt and sulphate of magnesia. In the 'Salt' sent by Semler, however, Klaproth discovered gold, though not in combination. Klaproth again consented to analyze Semler's solution before the Court, when, instead of gold he found a kind of brass called tombac. On further investigation, it was discovered that Semler's old servant, eager to humour his master, had slipped pieces of gold leaf into Semler's chemical mixtures. The servant entrusted the secret to his wife, that in his absence she might purchase the gold leaf as before. She, however, bought brass instead of gold, and spent the balance on drink. In this way alchemy was laughed out of Germany (Chambers, *Book of Days*, i. 602).

The theories of the alchemists did not die out at once. They were still held by the adepts at the close of the 18th century. The Antiquary says that Dousterswivel 'exhibits himself as a perfect charlatan—talks of the *magisterium*—of sympathies and antipathies—of the cabala—of the divining-rod—and all the trumpery with which the Rosicrucians cheated a darker age, and which, to our eternal disgrace, has in some degree revived in our own' (Scott, *Antiquary*, ch. xiii.). The *Lives of the Adepts in Alchemystical Philosophy* was published in London in 1814, and contained reports and extracts of many works on alchemy. Bulwer Lytton's *Zanoni* was written in 1842 as a study in the mysteries of the Rosicrucians.—George Eliot in 1871 wrote: 'Doubtless a vigorous error vigorously pursued has kept the embryos of truth a-breathing: the quest of gold being at the same time a questioning of substances, the body of Chemistry is prepared for its soul, and Lavoisier is born' (*Middlemarch*, vol. iii. ch. xlviii.).

16. But it was the establishment of the Atomic Theory by Dalton in the beginning of the 19th cent. as a working hypothesis in practical chemistry that set on one side the theories of the alchemists:

The observation of the Law of Equivalents and the Law of Multiples 'led to the idea that the elementary bodies are made up of indivisible particles called *atoms*, each having a constant weight peculiar to itself; and that chemical combination takes place by the juxtaposition of these atoms, 1 to 1, 1 to 2, 1 to 3, 2 to 3, etc., a group of atoms thus united being called a *molecule*. This is the atomic hypothesis of Dalton' (H. Watt, *Inorganic Chemistry*, 1883, p. 267).

Immutability has been the recognized law of the elements:

'Our molecules, on the other hand, are unalterable by way of the processes which go on in the present state of things, and every individual of each species is of exactly the same magnitude. . . . In speculating on the cause of this equality, we are debarred from imagining any cause of equalization, on account of the immutability of each individual molecule. It is difficult, on the other hand, to conceive of selection and elimination of intermediate varieties, for where can these eliminated molecules have gone to, if, as we have reason to believe, the hydrogen, etc., of the fixed stars is composed of molecules identical in all respects with our own?' (Clark-Maxwell, *Theory of Heat*, 1885, p. 331).

Thus, under the most advanced theory of Chemistry and Physics in the 19th cent., the transmutation of elements was inconceivable. Yet there were masters of chemical philosophy who entered a caution against the exclusion of possibilities.

Tilden writes: 'The molecular theory has been adopted in a somewhat rigid form, not by reason of any special conviction of my own regarding its permanence as a scientific truth, but because I am satisfied by long experience that, whatever form it may ultimately assume, it is even now a most important and almost indispensable aid to teaching chemistry' (*Introd. to Chemical Philosophy*, London, 1876, p. vii). In treating of the Periodic Law and Mendelejeff's Table, he says: 'This table requires a few remarks. In the first place, there are some elements, as, for instance, copper, silver, and gold, for which a place cannot readily be found. Silver is undoubtedly allied, though not very closely, with sodium, whilst it is also connected with copper on the one hand and with mercury on the other. Gold again is unquestionably triad, whilst the platinum metals to which it is most nearly related exhibit even atomicity' (*ib* p. 243). There still remained something behind which was not altogether clear, and this, too, in the important metals, silver and gold.

17. The discoveries of the Becquerel rays and the isolation of the element radium by M. and Mme. Curie in the opening years of the 20th cent. have opened up far-reaching possibilities, and have induced many leading chemists to conceive the idea of the transmutation of the elements. At the Leicester Meeting of the British Association on Aug. 1, 1907, Lord Kelvin challenged these inferences. He maintained that it was almost absolutely certain that there are many different kinds of atom, each eternally invariable in its own specific quality, and that different substances, such as gold, silver, lead, iron, etc., consist each of them of atoms of one invariable quality, and that any one of them is incapable of being transmuted into any other. He thus combated the recent assertion regarding the transmutation of metals, and continued to regard an atom as the ultimate indivisible unit of matter, and the electron, or electrion, as an electrical atom.

The discussion on 3rd Aug. 1907 was an event in the history of chemical science. Professor Rutherford, in opening the debate, held that the discovery of the electron had not as yet disproved the atomic theory. All attempts to find an electron with a positive charge of electricity had failed. 'Though we can liberate the electrons of matter very freely, there is no evidence that the liberation of the electron tends to the disintegration of an atom.' Sir William Ramsay, as a chemist, disagreed with Lord Kelvin and Professor Rutherford. The latter had said that there was no evidence that the loss of electrons altered the atom. Perhaps not. *But there was evidence that the gain of electrons did so.* He declared that, by placing radium hermetically closed in a glass vessel, the electrons, emanating from the radium through the glass, and falling on a nickel bar placed in juxtaposition, had the effect, after a certain time, of covering the bar with a film of radio-active matter, which could be separated by chemical treatment. His conclusion was that some kind of transmutation took place, converting the nickel into some other substance, this being characterized by its radio-activity. Lord Kelvin, in his reply, said that the discovery of the properties of radium had been most suggestive, and had opened our eyes to other discoveries, never suspected or dreamed of. Sir William Ramsay then announced a further discovery. He had proved that when radium was isolated in a bottle, after a lapse of time it gave off an emanation, and the new gas helium. When again that emanation was isolated, it produced helium and something else, which is conjectured on possible grounds to

be lead. Again, when that emanation was dissolved in copper solution it produced the new element called argon, but now, when the radium emanation was dissolved in water, and the gases were extracted from the water, the resulting production was not helium, but its kindred element neon. These marvellous properties of radium thus described by Sir William Ramsay seem almost to realize the ancient dreams of the alchemists. Has it after all been reserved for the chemists of the 20th cent. to find in radium the Philosopher's Stone, and to prove it to have the power of transmuting yet unknown elements into gold?

LITERATURE.—M. Berthelot, *Les Origines de l'Alchimie*, Paris, 1885; J. Ferguson, *Bibliotheca Chemica: a Catalogue of the Alchemical, Chemical, and Pharmaceutical books in the Collection of the late James Young of Kelly and Durris, Esq.*, 2 vols., Glasgow, 1906; H. C. Bolton, *Catalogue of works on Alchemy and Chemistry exhibited at the Grolier Club*, New York, 1891; Anon., *Lives of the Adepts in Alchemystical Philosophy*, London, 1814; A. E. Waite, *The Hermetic and Alchemical Writings of Philippus Aureolus Theophrastus Bombast, of Hohenheim, called Paracelsus the Great*, 2 vols., London, 1894. THOMAS BARNS.

ALCHERINGA.—The name applied by the Arunta, Kaitish, and Unmatjera tribes of Central Australia to the mythical past in which their ancestors were formed, and their ceremonies and regulations instituted. According to Spencer-Gillen (*Nor. Tr.* p. 745), the word *alcheri* means 'dream' (but cf. *FL* xvi. 430), and *Alcheringa* is equivalent to 'Dream Times.' Analogous beliefs are found in other tribes to the north of the Arunta; the Warramunga term corresponding to *Alcheringa* is *Wingara*.

1. In the Alcheringa existed at the outset, according to the Arunta myth, the ancestors whose spirits they regard as incarnated in the men of the present day; they were at most semi-human, but possessed more than human powers, and are credited with the formation of natural features such as the Macdonnell Ranges; in the Alcheringa period these amorphous *inapertwa*, who were transformed into human beings and later underwent initiation ceremonies, travelled over the country in totem companies, each carrying a *churinga* (see AUSTRALIANS), and at the spots where they camped are the present *oknanikilla*, or local totem centres. The Arunta distinguish four Alcheringa periods: (*a*) creation of man from the *inapertwa*; (*b*) institution of circumcision with the stone knife; (*c*) of the *arilthа* or mica operation; (*d*) of regulations regarding marriage. Originally the country was covered with salt water, which was withdrawn towards the north; two *ungambikula* (= 'self-existing') in the western sky saw to the east some *inapertwa*; with their knives they released the half-formed arms and legs, slit the eyelids and so on; after circumcising the men they became lizards. Some of the uncircumcised men were eaten by *oruncha* (evil spirits), who were killed by men of the lizard totem. In the next two stages an *oknirabata* (sage) introduced circumcision with the stone knife, and taught the little hawk totem group to perform the operation; they also formed the four intermarrying classes, but without associating them with marriage regulations. More *inapertwa* were transformed; men of the wild cat totem instituted the mica ceremony, and the order of the initiation ceremonies was arranged. Finally, the Emu people introduced the present marriage restrictions. According to the Unmatjera and Kaitish, the *inmintera* (the Arunta *inapertwa*) were formed into human beings by an old crow; he returned to get his stone knife with which to circumcise them, and in his absence two lizard men from the south circumcised and subincised the men, and performed the corresponding operation on the women. Another Kaitish tradition makes the transformers two boys to whom Atnatu (a god) sent down stone knives. Some of the ancestors were men (*ertwa*) when they were first formed. In the Kaitish tribe the travels of the groups of totemic ancestors are almost wanting, or possibly forgotten; the various spots are said to have been peopled by one or two ancestors, who sometimes carried *churinga*.

2. The Urabunna, the neighbours of the Arunta on the other side, also have their mythic period, named Ularaka; the ancestors of the totemic groups were semi-human and lived on the earth or beneath it; they had superhuman powers. The ancestors of each totemic group at the present day were few in number, and there is no myth of the *churinga* being carried. The Urabunna belief thus differs widely from that of the Arunta and Kaitish, and comes near that of the Warramunga (see below). The semi-human ancestors wandered about the country putting *mai-aurli* (spirit individuals) into rocks and pools, and these subsequently became men and women, who formed the first totem groups. These *mai-aurli* are continually undergoing re-incarnation; as a rule, with the Arunta they inhabit different localities according to their totem; but in the Urabunna and other tribes those of two or more totems may inhabit the same place. Each re-incarnated individual is held to change his phratry, totem, and sex on re-incarnation; after death he goes back to the spot where he was left in the Ularaka, and this regardless of the totem to which he may for the time being belong. In the Wonkgongaru tribe, north-west of Lake Eyre, the Urabunna beliefs prevail, with the exception that they accept the Arunta belief as to the *inapertwa*.

3. The Unmatjera hold that every totemic ancestor had his class as well as his totem; the totem changes in their belief, as in that of the Arunta, in successive incarnations, the class seldom or never.

4. The Warramunga, Walpari, Tjingilli, and other tribes hold that every one is the incarnation of a Wingara ancestor; but these latter are regarded as having been fully formed men, and all the members of a totemic group at the present day are looked on as the descendants of one ancestor who wandered over the country leaving spirit children in trees and rocks; they believe that if a woman strikes one of these trees with an axe, the spirit child will enter her body. The ancestor began his travels under ground, and then came up to the surface; *churinga* are known in this tribe, but not associated with individuals. These beliefs are shared by the Umbaia and Gnanji, but the latter hold that women have no *moidna*, or spirit part; consequently spirit female children, though they exist, do not take human form. The Binbinga also hold that one totemic ancestor formed members of a group, and left Ulanji spirits which emanated from his own body.

5. In the Arunta tribe at the present day a man marries a woman of his own or any other totem; in the other tribes totemic exogamy is enforced. Tradition says that in the Alcheringa times men invariably married women of their own totem; the classes, too, were originally non-exogamous, and the present regulations came down from the north. It seems clear that the progress of social changes from north to south corresponds with the facts; but there is much division of opinion as to the value of the remainder of the myths. They are treated as mere ætiological myths by Andrew Lang and others, as genuine historical traditions by Spencer and others. It seems clear that some part of them cannot be historically true; for the totem groups are represented as living exclusively upon their totems; and some of these, such as grubs and plants, are not in season for more than a portion of the year.

LITERATURE.—Spencer-Gillen, *Native Tribes*, 1899, pp. 119–127, 387–422, *Northern Tribes*, 1904, pp. 145–175, etc. *FL* xvi. 428–433, gives the views of the Southern Arunta. For remarks on the Alcheringa legends see Lang, *Social Origins*, 1903, and *Secret of the Totem*; Durkheim's art. in *ASoc* iii. (1901) 20, etc.; see also Van Gennep, *Mythes et Légendes d'Australie*, 1906, p. xliv f. N. W. THOMAS.

ALCOHOL.—The use of alcohol in some form or other has been familiar to man from a very early period in his race-existence; in all ages of which we have any record, in all climates, amongst tribes of the most varied degrees of culture, it has been and still is an agent with marked effects on the individual and the race. The name is Arabic in origin (*al-kohl*, 'collyrium,' the fine powder used to stain the eyelids).

Alcohol, as we know it in ordinary use, is properly named 'ethyl alcohol,' and is one of a series—distinguished in their properties from one another by their boiling point, their specific gravity, and their poisonous effect—consisting of carbon, hydrogen, and oxygen. Their names and chemical formulæ are:—Methyl alcohol (CH_3OH), ethyl alcohol (C_2H_5OH), propyl alcohol (C_3H_7OH), butyl alcohol (C_4H_9OH), and amyl alcohol ($C_5H_{11}OH$). Methyl alcohol is obtained from distillation of wood, and, being nauseous in taste, it is added to ethyl alcohol, so that the latter may be sold for industrial purposes without tax as methylated spirits. Fusel oil contains amyl and ethyl alcohol as well as other by-products of fermentation, and is usually present along with other analogous substances in distilled alcoholic liquors; but as their amount is small and their action subsidiary, they will not be further referred to.

Alcohol is formed from sugar by the action of the yeast-fungus, a unicellular organism which excites fermentation in saccharine solutions. A molecule of sugar is thus split up into alcohol and carbonic acid (along with some collateral products). There is a natural limit to the strength of the alcoholic liquor which is thus formed (apart from the amount of sugar present); when alcohol reaches a strength of 16 p.c. by volume, it stops further fermentation. Most 'natural' wines, such as claret, contain only from 8 to 12 p.c. alcohol, as it is but rarely that the grape-juice is sugary enough to allow of the formation of alcohol to the highest possible extent. Stronger wines, such as port and sherry, are 'fortified' by the addition of alcohol. It should be noted that mankind has in all ages made naturally fermented drinks from any available material. By more complicated processes, beer or ale is produced either from barley-malt or some substitute, the strength in alcohol varying from 3 p.c. or less up to 8 or 9 p.c. The strongest drinks, such as brandy, whisky, rum, gin, and liqueurs, are manufactured with the aid of distillation.

1. Physiological effects of alcohol.—Alcohol is a poison for protoplasm, that is, for the soft plastic material which is the essential constituent of every one of the minute cells that make up living organisms, whether animal or vegetable. Its poisonous effect in very dilute solution is easily shown on lowly organisms (Ridge, *Med. Temp. Review*, 1898, vol. i. p. 148; Woodhead, 'Pathology of Alcoholism' in Kelynack's *Drink Problem*, pp. 52–56), and the more finely organized cells are most susceptible (Overton, *Studien über die Narkose*, Jena, 1901). Let us briefly trace the effects of alcohol when taken into the human body in moderate quantity.

(1) With the feeling of warmth in the stomach, there is an increased secretion of gastric juice such as is produced by any irritant. Of the two constituents of the gastric juice, it is not so much the pepsin as the hydrochloric acid that is thus secreted, and recent research indicates that the digestive quality of the secretion depends very largely on the nature of the stimulus. Hence it is probable that alcohol is of but slight value as a digestive aid. By quickening the movements of the stomach and intestines, it helps the expulsion of gases. If taken in concentrated form or in too great quantity, it decidedly retards digestion, and frequent repetition of such doses is apt to bring on gastric catarrh.

(2) Alcohol passes in about 15 minutes into the blood and lymph vessels, and is thus rapidly diffused through the various tissues; it forms a compound with the colouring matter of the blood which takes up and gives off oxygen less readily (Woodhead, *l.c.* p. 57). Hence the normal changes in the tissue cells are interfered with, and this is one of the causes of the accumulation of fat in certain alcoholics. The waste products are apt to be retained too long by the cells.

(3) The nerve-cells of the brain, the most highly organized and delicate of the tissues, very early show the effect of alcohol. Many of the best observers of their own mental processes, such as Helmholtz and Huxley, have expressed themselves strongly as to the harmful effect of minute doses of alcohol on brain work. It would seem that the 'stimulating' effect is really due to paralysis of the very highest nerve-centres, so that cheerfulness, wit, and recklessness have freer play. Large numbers of psychometric experiments under conditions of the greatest accuracy prove that alcohol in small dietetic doses exercises a distinctly paralyzing effect on the working of the brain. Some mental processes are quickened for a short time, and then a retarding effect shows itself, which is prolonged and much more than cancels the apparent beneficial result. With the early facility there is apt to be loss of accuracy (Horsley, 'Effects of Alcohol on the Human Brain,' *Brit. Journ. of Inebriety*, Oct. 1905; Rüdin, *Psychol. Arbeiten*, ed. E. Kraepelin, 1901–1902; Neild, 'Psychometric Tests on the Action of Alcohol,' *Brit. Journ. of Inebr.*, Oct. 1903). The greater the demands made on psychic activity, the more marked is the interference caused by alcohol. An invariable result is that the person experimented on has the delusion that he is doing better with alcohol than without it. The depressing results of a slight intoxication may last from 24 to 36 hours (Fürer, *Transactions of the Internat. Anti-alcohol Congress*, Basel, 1906). The effect of the regular consumption of alcohol—say 1 to 2 litres of lager beer *per diem*—is distinctly prejudicial to all kinds of intellectual effort (Kürz and Kraepelin, *Psychol. Arbeiten*, 1900); and in general the more difficult mental operations are more impaired than the easier. As for the idea that habituation produces a certain immunity to alcohol, this is probably due to a blunting of the nerves. Such a result is apt to be associated with a dangerous tendency to augment the dose in order to experience the agreeable effect, just as with morphine (Kraepelin, *Münch. Med. Woch.*, 17th April, 1906). Experiments on the *sensory* functions (sight, hearing, simple touch, etc.) show, from the first, diminution in accuracy and rapidity. The *motor* functions of the body are generally influenced favourably by alcohol at first (Frey, *Alcohol und Muskelermüdung*, Leipzig, 1903; Schnyder, Pflüger's *Archiv*, 1903; Destrée, *Journ. Méd. de Bruxelles*, 1897); the amount of work is increased, and is more easily performed; but after a brief period extending at most to 20 or 30 minutes, there comes a prolonged reaction, so that the total effect is distinctly disadvantageous. The popular belief that alcohol strengthens and increases working capacity is accountable for a vast amount of drinking among the working classes.

(4) The effect of alcohol on the circulation (Monro and Findlay, 'Critical Review of work on Alcohol and the Cardio-Vascular System,' *Med. Temp. Rev.* 1903–1904; Abel, 'Pharmacological Action of Ethyl Alcohol,' *Med. Temp. Rev.* 1904–1905) is to cause first a dilatation of the small vessels, especially of the skin, shown by flushing of the face and a feeling of warmth. A slight acceleration of the pulse is frequently, but not always, produced by small doses, but the average for the whole day may be lowered. If the pulse tension is low to begin with, alcohol will not raise it. On the whole, experiments show that alcohol does not

strengthen the heart, but rather the reverse. There may be a short stimulating effect through reflex action just after its administration. Large doses are strongly depressive.

(5) The tissues, we have seen, have their oxidation interfered with by alcohol. There is, further, increased loss of heat from the body, with lowering of temperature through the dilatation (paralysis) of the blood-vessels. Hence comes quickened and deeper respiration, so that alcohol is indirectly a respiratory stimulant (Binz, *Therapie d. Gegenwart*, 1899).

(6) The *nutritive* value of alcohol is still the subject of keen discussion (Rosemann, Pflüger's *Archiv*, 1901, vol. 86, also vols. 94, 99, and 100). All admit that large quantities of alcohol are poisonous, and it would seem that the most minute doses that have any demonstrable effect act prejudicially on the nervous tissues. Still it is conceivable that in other ways alcohol may be serviceable to the body. In small doses, from 90 to 98 p.c. is oxidized; heat is thereby produced, and alcohol, it is said, can thus take the place of other materials, such as fat or carbohydrate (Atwater and Benedikt, *Experiments on Metabolism of Matter and Energy*, Washington, 1898). The same may be said about glycerine, or fusel oil (amylic alcohol), whose total effect is distinctly poisonous. Alcohol can neither build up nor repair the tissues, and any favourable action that it has in producing energy is probably much more than counterbalanced by its poisonous effect, either directly or by means of intermediate products, while the tissues are dealing with it (Schäfer, *Textbook of Physiology*, vol. i. p. 882). This conclusion of physiological science is in harmony with the experiences in actual life of army leaders, travellers, climbers, employers of labour, etc. The good effects of alcohol are similar to those obtained from other more or less dangerous stimulants and narcotics.

2. **Acute alcoholism (Intoxication).** — When enough alcohol is taken to produce intoxication, judgment, self-control, perception, and the other higher faculties are affected first. With greater facility in thought and speech, there is a certain disregard of the environment; a quiet person may become lively and witty, unwonted confidences are given, and there may be assertiveness and quarrelsomeness. Singing, shouting, and other noisy demonstrations indicate the free play of the emotions; then comes motor impairment, shown by indistinct speech and staggering gait; drowsiness, muscular paralysis, and even coma may supervene; the temperature may become dangerously low, and in the worst cases respiration and circulation may be paralyzed. Short of this, after 6 to 12 hours the man awakens from his drunken sleep with furred tongue, loss of appetite, thirst, flushed face and eyes, headache, and mental confusion. These phenomena vary according to the amount, strength, and purity of the liquor, the time occupied in consuming it, and the stability or resisting power of the person imbibing. Persons with a special cerebral susceptibility may develop wild maniacal excitement with a comparatively small dose. Such persons may suffer from an insane or alcoholic heredity, epilepsy, injuries to the head, or antecedent insanity. An automatic dream-state, in which complicated, it may be criminal, actions are performed quite unconsciously, is sometimes induced by acute alcoholism (Sullivan, *Alcoholism*, pp. 41–43).

3. **Chronic alcoholism.**—Excess has been defined as anything over that amount of alcohol which the body can completely dispose of in 24 hours, but a complete definition must include cases where any permanent mischief is produced during a lifetime. Since 1864, when Anstie declared 1½ oz. of absolute alcohol to be the physiological limit, the tendency amongst scientific writers has been steadily towards reduction of this. Abel (*l.c.* Sept. 1905, p. 275) concludes that the 'moderate' or average permissible quantity of alcohol is represented by one, or at most two, glasses of wine (10 p.c.) in the 24 hours; that is about half an ounce of absolute alcohol at the outside. Others (*e.g.* Max Grüber, quoted by Woodhead, *Brit. Journ. of Inebriety*, Jan. 1904, p. 166) hold that as even such a small quantity may impair function, it would be rash to assert that this would be harmless to the vast majority of mankind if taken habitually and indefinitely. The ordinary signs of chronic alcoholism are due to the habitual taking of much larger quantities. Such are loss of appetite, especially for breakfast, foul tongue, bad breath, with often a peculiar easily recognizable odour, morning vomiting, expectoration of yellow tough mucus, dyspeptic and intestinal disorders. Very fine tremors, most marked in the morning, are present in tongue, fingers, and lower limbs. Sleeplessness is frequent; speech shows a loss of crispness; memory, especially for names, is defective; there is a difficulty in coming to a decision or in concentrating the attention, and a disinclination for bodily or mental exertion. The victim of alcohol shows a want of initiative, and may give promises with the intention, but without the power, of keeping them. Self-respect becomes impaired, and by selfishness, neglect of wife, children, and other dependants, loosening of self-control and want of truthfulness, the moral deterioration is signalized.

Dipsomania, or periodical inebriety, is more frequently shown in women than in men. After an interval of abstinence, complete or relative, comes an overmastering impulse to drink. The time of recurrence may be quite irregular, in other cases it may be every week, fortnight, month, or at even longer intervals, and the duration of the attack is also variable. We are all subject to periodicity, even in regard to our brain force, and in dipsomaniacs there is usually a more than average instability of nerve. They show a close analogy to the condition found in epileptics.

Delirium tremens is a form of acute alcoholism supervening almost invariably on a chronic condition. There may have been a period of specially heavy drinking without taking food, or the onset may have been precipitated by some shock to the nervous system (mental, physical, or acute disease such as pneumonia). A frequent early symptom is distaste for drink, whilst hallucinations, with restlessness, nervousness, and insomnia, become more and more marked. The hands are constantly at work, picking at the bedclothes, going through the actions of some occupation, etc. Tremors become coarser, and are present all over the body. The mind is incessantly active, talking incoherently, seeing horrifying visions, hearing whispers, plottings, insults. Terror and suspicion are constant; the bodily functions are all deranged, the temperature is raised, and complicating diseases are apt to supervene. After an acute stage of 3 or 4 days the patient usually falls into a refreshing sleep, and awakes a different man. But the risk of a fatal result increases with each succeeding attack. *Delirium tremens* is comparatively rare in women, and is much more common amongst drinkers of spirits than amongst those who take wine or beer. Closely allied to *delirium tremens* is a form of continuous alcoholic delirium (*delirium ebriosum, mania a potu*), which often sends patients to asylums. *Alcoholic dementia* is not uncommon as the final state of chronic drinkers of alcohol; the symptoms point to an exaggeration of the ordinary mental state, developed by alcohol, as described above. Loss of memory, irritability, lowering of

mental tone, and loss of self-control may become so marked as to require asylum treatment.

Besides those definite forms of alcoholic insanity, alcohol may be the *exciting* cause in various forms of mental disorder. It is probably the most powerful *predisposing* factor, after syphilis, in causing general paralysis of the insane. Kraepelin (*Münch. Med. Woch.*, April 1906) argues that 80 p.c. of cases of general paralysis would not occur if alcohol were banished from the world. The exact percentage of asylum inmates due to alcohol is somewhat difficult to ascertain, owing to varying ways of compiling statistics, and difficulties in getting at the facts of the patients' history. From 15 to 20 p.c. of the insane are so through drink, and in recent years this percentage has tended to increase, especially in large cities (Clouston, *Mental Diseases*[8], p. 483). The proportion of women to men thus afflicted is in Italy 1 to 11, in Germany 1 to 16, in Austria 1 to 5, in New York City 1 to 2, in Paris and Edinburgh about the same. Taking Great Britain all over, the proportion of women to men is about 1 to 2½, significant evidence of the amount of drinking amongst women in this country (Hoppe, *Tatsachen*, etc. p. 274 ff.; Rowntree and Sherwell, *Temp. Problem*, Appendix, p. 465). Allowance must be made for the likelihood that many who succumb to alcohol would in its absence break down mentally in some other way, in virtue of their unstable nervous system, and it has been noted that the habitual inebriates of the London police courts rarely become certifiably insane (Carswell, *Scottish Med. and Surg. Journ.* 1903, ii. p. 385). Genuine epilepsy may be produced by alcohol; if present already, it is inevitably made worse by drink. Not seldom one sees cases of epileptiform convulsions coming on after a long course of inebriety; they are induced by a specially severe bout. Not the brain only, but the other divisions of the nervous system, are very apt to be damaged by chronic alcoholism. Most characteristic is *multiple neuritis*, an inflammation of the nerves beginning in the feet and hands, and advancing upwards if the cause persists, till a fatal result occurs. There are changes in sensation, such as numbness, 'needles and pins,' pains, great muscular tenderness, diminished sensibility to touch; there is loss of power going on to complete paralysis, and there is mental deterioration. The disease may be brought on by alcohol in any form; it is often associated with the steady secret drinking of women. It is much aggravated by small quantities of arsenic, as was shown in an epidemic which occurred recently in Liverpool, Manchester, and other towns in the north of England. The cause here was the excessive drinking of beer manufactured from invert-sugar, in which arsenic was present as an impurity. Several other neuralgic and spinal-cord affections are caused or aggravated by chronic alcoholism.

4. **Tissue changes caused by alcohol.** — Most of the disorders that we have been describing are associated with pathological changes, easily recognized through the microscope. The various parts of the body are able to recover from the poisonous effect of even a large dose of alcohol. And, so far, the functional disturbance in the cell eludes the best methods of examination that we possess. If, however, the poisonous dose is repeated indefinitely, there comes a time when organic changes occur, and these are usually irremediable. Thus degeneration, indicated by changed microscopic appearance, may be found in the cells of the brain, cord or spinal nerves, in the heart muscle, the walls of the blood-vessels, the liver-cells, etc.; and at the same time there may be an increase of fibrous tissue, 'the lowest structure in the body' (Woodhead in Kelynack's *Drink Problem*).

5. **The effect of alcohol on morbidity.**—Besides the purely alcoholic forms of disease, such as cirrhosis of the liver and alcoholic neuritis, a large proportion of the illness found in hospital and in private practice is indirectly due to alcohol (Jacquet, *Presse Méd.*, 1899, p. 338). Not only are the tissues directly damaged, but the resisting power of the body to disease is greatly lowered by excessive drinking.

Acute pneumonia, for instance, is more apt to occur, and more likely to be fatal, in alcoholic persons. If the body is weakened in its resisting power, by starvation, by chill, or by a poison such as alcohol, microbes get a lodging in the system. Pneumonia in drinkers is about 3 times as fatal as amongst the temperate. So also with cholera, plague, yellow fever, malaria, and other microbe diseases. As for tuberculosis, the great mass of present-day medical opinion is opposed to the view that alcohol diminishes the likelihood of its onset. If the nervous system is lowered in tone, alcohol greatly helps the development of the disease. This is proved by the death-rate from phthisis in alcoholic insanity (R. Jones). Amongst traders in drink, tubercle is from 1½ to 3 times more frequent in every organ of the body liable to it than amongst persons following other occupations (Dickinson, *Transactions of Path. Soc.* vol. xl. 1889). When one further takes account of the unhealthy conditions in which chronic alcoholics live, one cannot doubt that drink is largely responsible for the wide-spread prevalence of tuberculosis. Venereal diseases are very frequently acquired in the intoxicated state, when the lower passions become supreme. In the army they are much less frequent among abstaining soldiers than among non-abstainers. In their treatment, abstinence from alcohol is usually enjoined. Syphilis is much more destructive among chronic drinkers. From the *surgeon's* point of view, the worst cases for operation are those of chronic drinkers. They take anæsthetics badly, their tissues do not heal well, and they are liable to septic complications. Clinical experience is confirmed by numerous experiments on animals; rabbits, guinea-pigs, fowls, etc., have been shown, if treated for a time with alcohol in even moderate doses, to be much more susceptible to the germs of tetanus, splenic fever, tuberculosis, diphtheria, etc., than non-alcoholized animals (Abbot, Déléarde, Laitinen—work summarized by Woodhead in *loc. cit.*).

Certain Friendly Societies in the United Kingdom consist entirely of total abstainers, and the amount of sickness amongst them is, to a marked degree, less than in Societies where abstinence is not compulsory, although in both classes the men are medically selected, and show, by the very fact that they join those Societies, that they are prudent and careful. The average duration of sickness per member among abstainers (Rechabites, Sons of Temperance, etc.) is only from a half to a third of that in other Societies. Alcoholics, when once put on the books of Trade Societies, whether through disease or injury, are notoriously slow in recovering.

6. **Alcoholism and mortality.** — The mortality returns of the United Kingdom give a very imperfect idea of the number of deaths due to alcohol (Vacher, *Practitioner*, Nov. 1902). Seeing that certificates of death are not treated as confidential documents belonging to the State, deaths are often attributed to diseases of the liver, kidneys, lungs, or nervous system, instead of to their primary cause —alcoholism. The Swiss returns of mortality, on the other hand, are reliable, and they show a death-rate from alcoholism, amongst men, of 10 p.c. or more. In Swiss communities of over 5000 inhabitants, there dies between the ages of 20 and 40 every seventh or eighth man directly or indirectly from alcohol, and between 40 and 60 every sixth, and above 60 every seventeenth man (Hoppe, p. 230). It is estimated that in this country alcohol accounts for 100,000 to 120,000 deaths per annum (Kerr, *Inebriety*, p. 381).

Certain British Insurance Societies have separate columns for abstainers and non-abstainers. In both sections the members are drawn from precisely the same class in all essential and important particulars, and the non-abstainers assured are good average lives. But the abstaining section in all cases shows a very much greater longevity. Thus in the United Kingdom Temperance and General Provident Institution the mortality in the general section has been, on an average, 36 p.c. higher than in the temperance section (Whittaker, 'Alcoholic Beverages and Longevity,' *Contemp. Rev.*, March 1904). Of course the 'general section' represents an average which includes at one end of the scale men who are extremely moderate, and at the other those who are free drinkers. In the absence of any accepted standard of moderation, the class of 'moderate drinkers' must suffer statistically.

7. **Alcoholism and crime.** — There is universal testimony as to the close relationship between excessive drinking and breaches of the moral law and the laws of the State. This is a direct consequence of the paralysis of the higher faculties, intellectual and moral, and the resulting free play given to the lower inclinations. Alcohol is not only a direct cause of crime, but it acts powerfully along with other conditions, such as hereditary nervous weakness or instability of the brain. Again, crime may be due to loss of work, poverty, and starvation, so often the results of indulgence in alcohol.

A distinction has rightly been drawn between the lighter and the graver violations of the law which are due to drink. It is fortunately true that the great majority are of the former class. To them, however,—in order to give some idea of the degrading effect of excessive drinking,—we must add the vast number of cases where similar offences are committed with impunity, escaping the notice of the police through the sheltering influence of friends. Moreover, these offences are so common that there is a disposition on the part of the police, magistrates, the public generally, and the relatives to regard them with the utmost leniency. The large proportion of habitual inebriates charged time after time shows that many, perhaps most, of the petty offences are really due to chronic alcoholism plus a heavier bout than usual. In 9 cases out of 10, the drunkard of our police courts figures also as the wife-beater, the beggar, the prostitute, or the thief. As for the graver offences, the bulk of crimes of acquisitiveness are not connected with alcoholism. On the other hand, alcoholism is probably the cause of some 60 p.c.

of homicidal offences, and of a smaller, though still considerable, proportion of crimes of lust. Nearly always in homicidal crimes, and very frequently in sexual crimes, the alcoholic condition which generates the criminal impulse is chronic intoxication and not casual drunkenness. (Sullivan, *Alcoholism*, 1906, ch. ix.).

8. Alcoholism and the future of the race.—Alcohol is specially dangerous to children, as their delicate tissues are highly susceptible to the poison. Most disastrous results follow its administration in the early years of life—a practice which is far from uncommon amongst the ignorant. Besides the direct effects, such as stunting of growth, blunting of intellectual and moral faculties, and organic changes, we must attribute to alcohol the multifarious evil influences of the social environment in drinking families. Hence the incidence of sickness and mortality in the families of parents who are one or both given to drink is extremely heavy.

The Report on Physical Deterioration (1904) remarks on the increase of drinking amongst women of the working-classes, with consequences extremely prejudicial to the care of the offspring, not to speak of the possibility of children being born permanently disabled. If the mother drinks heavily during lactation, the quality of her milk is much impaired, and there may be present in it a certain amount of alcohol. Still more serious for the child is drinking on the part of the mother during pregnancy. Not only is the fœtus badly nourished, but alcohol is found to pass freely into its blood from the mother's. Hence we find in such conditions a great predisposition to abortion and premature labour; and if the infant is born viable, it is apt to be the subject of disease or deformity. There is passed on in many cases not only a nervous excitability, but a tendency to give way to drink sooner or later. While it may be true that 80 to 85 p.c. of all children are born apparently healthy, whatever the antecedent condition of the mother, it is highly probable that the first 10 or 15 years of life, even under the best conditions, would reveal diseased tendencies that were present in a latent condition from the first. Notwithstanding the ancient and wide-spread belief that the condition of intoxication in one or both parents at the time of conception has a malign influence on the germ-plasm, this cannot be said to be scientifically proved. The prevailing scientific view is that no acquired characters can be transmitted from parents to child; but when poisons are circulating in the blood, such as the syphilitic or alcoholic, it is practically certain that they have a modifying effect on the germ-cells (Saleeby, *Heredity*, p. 73). On the other hand, the tendency to degeneration through alcohol would be at once arrested by the removal of the cause, and civilized races would rapidly improve in physique. Races that have been accustomed only to their own fermented drinks, such as the North American Indians and the West Africans (Külz, *Archiv für Rassen- und Gesellsch. Biologie*, ii. 1905), have shown a tendency to die out when habitually taking imported distilled liquor. Previously there was no race alcoholism under conditions which had lasted for hundreds of years, their relatively weak drink being obtainable only at special seasons of the year, and on special occasions. The undoubted increase in insanity in this and other countries is largely due, according to the best authorities, to alcoholism. Mott's investigations (*Alcohol and Insanity*, London, 1906) show clearly that those who become insane in this way have their balance upset by an amount of alcohol much less than can be taken with comparative impunity by persons of more stable nervous system. In such cases alcohol reveals some latent defect, just as in other cases the imbecile, the epileptic, or the degenerate, through marked susceptibility to alcohol, join the criminal classes. *Suicide* (Sullivan, *Alcoholism*; Prinzing, *Trunksucht und Selbstmord*, Leipzig, 1895) has become more frequent in recent years in almost all civilized States, its rate being specially heavy amongst persons who are exposed to alcoholism. Great Britain has a larger proportion of women suicides than other lands, this being connected with the greater amount of female drunkenness. 80 p.c. of all cases of attempted suicide in England are alcoholic, while only 30 p.c. of cases of completed suicide are so classified. Alcoholic suicide may result from one of the diseased mental states, such as *delirium tremens*, melancholia, the automatic dream-state, or some other condition associated with hallucinations; or it may come from the poverty, misery, and indifference to life that alcohol is apt to produce. The association of alcohol with *accidents* of all sorts is brought home to us by the daily newspapers and otherwise, but no statistics can show the vast number of cases where lowering of the mental functions by alcohol without admitted excess, is responsible for some catastrophe. Many railway companies in America have an absolute rule against drinking on the part of their officials, and more or less strict measures of this nature are taken by British companies. Comparatively slight impairment of attention, presence of mind, and efficiency in the railway servant may endanger hundreds besides himself. The more strict the rule against drinking on any particular railway, the more free is it from accident. Again, accidents are much more common on Saturdays and holidays; any hospital can prove this, and also that the reason for this is drink. Accident insurance societies often give abstainers a discount of 10 p.c.

9. Alcoholism and poverty.—Drink, according to Charles Booth (*Pauperism and the Endowment of Old Age*), is the most prolific cause of pauperism, and it is the least necessary. From one-third to one-half of those who receive poor relief owe their position directly to drunkenness as the principal cause. (The total cost of poor relief in England and Wales annually is about £12,000,000). To this should be added a large percentage in which drink is the indirect cause of pauperism, through disease or injury; and besides this, just above the pauper class is the enormous amount of comparative poverty from misspent earnings, loss of working time, and general impairment of efficiency. It is calculated that at least half the taxes accruing from drink are expended by the State in preventing, punishing, and repairing evils which are the direct consequence of the consumption of that drink. Of the £170,000,000 or so annually spent in this country on liquors, about £100,000,000 come from the pockets of the working-classes. Many working men spend 6s. or 7s. a week on drink, and some very much more. The average drink expenditure per head in 1905 was £3, 15s. 11½d., and per family of 5 persons £18, 19s. 9½d.; but it must be remembered that millions of adults drink no alcoholic liquor, and that over 15,000,000 of the population are children. Hence amongst those who take drink to excess the expenditure is enormous, and means such a deduction from an income which is little better than a living wage, that not enough is left for food, clothing, good housing, etc. Here we are face to face with the tremendous waste of earnings, which, spent productively, would raise the general standard of living, check physical deterioration, provide better houses, clothing, food, furniture, and stimulate the desire for healthier and higher recreations. Greater demands on the genuine productive industries of the country would have to be satisfied, and the tremendous addition to the national efficiency would help to solve the grave social and industrial problems with which we are confronted.

10. Treatment.—In dealing with *acute alcoholism*, the skill of the physician and attendants is often severely taxed. Apart from purely medical measures, the main reliance is to be placed in complete withdrawal of alcohol, administration of liquid nourishment in abundance, and the procuring of mental and bodily rest. In *chronic alcoholism* the patient may be helped by full explanations of the action of alcohol on the body, by appeals to his better nature, by any measure that will strengthen the will power, whether religious or social (such as joining a temperance society), or by being removed for a sufficiently long time (one to three years) from temptation. In the way of prevention much is to be hoped for from the wider diffusion of scientific knowledge, along with the spread of education (see 'The Teaching of Temperance,' by E. Claude Taylor in Kelynack's *Drink Problem* [a good bibliography of teaching manuals is given]). Improvements in housing and domestic cookery, higher rates of pay, and the consequent bettering of bodily, mental, and moral health, all favour temperance. Total abstinence should be enjoined on certain classes: those who are hereditarily predisposed, through inebriety in parents or in grandparents, or through want of nerve stability; those whose occupations are closely associated with a heavy drink mortality; those who have given way to drink; persons who have suffered from diseases of the brain or nerves, or injuries to the head; and all children and juveniles. See also artt. DRUNKENNESS, INEBRIATE ASYLUMS.

J. MACKIE WHYTE.

ALEUTS.—1. The religion, mythology, and folk-lore of the natives of the Aleutian Islands—the 'stepping-stones' from Alaska to Kamtchatka—and of the north shore of the long narrow peninsula of Alaska as far as the river Ugashik, are especially important, since their long isolation in a peculiar environment has caused them 'to develop in particular directions more than any other known branch of the Innuit (Eskimo) stem,' this variation being 'especially evident in their language, religious exercises, and certain details of handiwork, such as embroidery and grass-fibre weaving' (Dall). The language is rich in verbal forms and has many peculiarities of vocabulary, but is, nevertheless, undoubtedly Eskimoan in type, not 'transitional between Samoyed and Eskimo' (Henry). The harpoon attains in the southern portions of the Aleutian area 'a *finesse* in structure and appearance nowhere else seen'; the arrow also is 'delicately complex,' neat and beautiful; and the 'exquisite weaving' displayed in the Aleutian beach-grass work 'will compare with that of any basketmakers in the world' (Mason). The *kayak*, the characteristic skin-boat of the Eskimo men, reaches the minimum in size and height among the Aleuts. The lamp, which with the Eskimos generally is the analogue of the fireplace, or the hearth, with many other peoples, is crudest and rudest among the Aleuts,—'the most primitive lamps on earth are those of the ancient Aleuts; many of them are merely unmodified rock fragments' (Hough). Yet the modern Aleuts use small lamps in their fishing boats at sea for warming chilled hands and bodies. They seem to have used the lamp mostly outside the house, preferring, when possible, a fire in the open air, though they are said to have done much less cooking than the other Eskimo tribes. When first discovered by the whites, both men and women among the Aleuts wore labrets, or lip-ornaments, a custom borrowed, perhaps, from the adjacent American Indians, and primarily confined to the female sex. Dall reports the practice of wearing labrets as having 'died out within two generations' (*ante* 1878). Besides labrets, the Aleuts possessed masks, which figured in their dances and religious ceremonies, and were also placed on the faces of the dead. In physical type the Aleuts differ somewhat from the Eskimos proper, being rather brachycephalic and of darker complexion: in facial expression also some difference has been noted. Their constant use of the *kayak* and the cramped position they are forced to assume for long hours have affected their gait and the condition of their limbs. In the management of these boats the Aleuts have been very skilful. Veniaminov, the Russian priest who was among them in the early part of the 19th cent., styled them 'sea Cossacks, riders of marine mares'; they were bow-legged, too, like the famous horsemen of the Czar. The Aleuts have been in their present environment, into which they came from the interior of Alaska (the probable scene of the primitive dispersion of the Eskimo race, or, at least, of a considerable part of it), for a very long time. Dall's investigations of the ancient village-sites, shell-heaps, mummy-caves, etc., of the Aleutian Islands demonstrate the continuity of occupation of the region by this people, and their apparent progress through three periods of culture (littoral, fishing, hunting). The earliest forms of some of their art-objects (*e.g.* labrets) are preserved in the burial-caves and shell-heaps, and their variations may be traced down to the times of the modern Aleuts and the advent of white influences, in consequence of which their ancient culture has tended more and more to disappear.

Like the Eskimos of continental Alaska, the Aleuts seem to have been influenced in several ways by the peoples of north-eastern Asia. To such contact Dr. Franz Boas attributes the use of property-marks on arrows, harpoons, etc., something as yet unrecorded of the Eskimo tribes outside of Alaska (*Amer. Anthrop.* vol. i., N.S., 1899, p. 613). By inspection of the harpoons in a dead, stranded whale, it is possible to discover the community to which the killer belongs, who, when notified, takes possession of the animal, dividing it with the finders. These property-marks 'occur almost exclusively on weapons used in hunting, which, after being despatched, remain in the bodies of large game,' and 'in each village the natives of a certain group—a boat's crew, family, house community, or any other social unit—use a certain decoration for their implements, which, in connexion with certain lines, forms their property-mark.' From the Russians, through the Siberian natives, and not from the Indians, the Aleuts and Alaskan Eskimos acquired the knowledge and use of tobacco, according to Murdoch (*Amer. Anthrop.* vol. i., 1888, p. 328). The modern Aleuts 'use nothing but civilized methods of smoking,' and are great smokers. The absence of ceremonial connected with the use of tobacco among the Aleuts, is another evidence of the non-American mode of its introducton. On the other hand, the Aleuts have adopted something from the American Indian tribes, as, *e.g.*, in all probability, the habit, just mentioned, of wearing lip-ornaments, some art-*motifs*, etc. The institution of slavery prevailed among them as it did among certain Indian tribes of the North Pacific coast.

2. The *puberty-ceremonies* and *marriage-customs* of the Aleuts are of special interest. When a girl reaches the age of puberty, she is isolated from the rest of the community in a small *barrabarra*, or hut, and no one except her slave, if she possesses one, is permitted to visit her. This confinement lasts seven days, and the breaking of the tabu by a man is the theme of one of the most wide-spread tales, which has many variants.

The couple concerned are often brother and sister, and sometimes the woman is forcibly ravished, while at other times she yields consent readily enough. After the discovery of the offence the two young people flee, pursued by their parents and others (who resent the infraction of the tabu as an unpardonable crime), and ultimately hurl themselves from a cliff into the sea, becoming the first two sea-otters, or (in some versions) hair-seals. In one version of the tale, reported by Golder, the girl, who is ravished in the dark, after the fire has gone out, cuts the sinews of her assaulter's legs as he escapes

through the roof. The man, who dies from a fall on the rocks, turns out to be her own brother. She finds him dead on the floor of her parents' house, with all his friends mourning. Instead of taking part in the mourning herself, she sings a joyous song, the burden of which is, 'Get up, my brother, get up!' and, approaching her brother's corpse, uncovers herself. Gradually movement returns to him; first, his toes wriggle, then, as she dances and sings again, the life-colour re-enters his cheeks; and, when she has gone through her conjuration a third time, he suddenly jumps up and seeks to embrace her. She flees, pursued by him, and both followed by the people, until, reaching a cliff overhanging the sea, the brother and sister are compelled to leap from it into the water, and, when they are caught sight of again, they have become two sea-otters, the first of those creatures known in the world. In another tale, the first sea-otters are represented to be a woman and her paramour (the nephew of her husband), with whom she has sworn to die. The sun and moon legend of the Greenland Eskimos seems to belong, partly at least, to this cycle. It is curious to find among the Aleutians that improper sexual relations are connected with the violation of the tabu of girls at the age of puberty. The version of the legend with this theme is perhaps the oldest, as it is the most detailed form. The early Aleuts, Veniaminov informs us, looked upon incest with horror (later accounts disagree on this point), esteeming it the worst of crimes. Such intercourse was believed to result always in monstrous offspring (children disfigured with the tusks and beard of sea-animals, etc.). They had no prejudice against the intermarriage of cousins.

The Aleuts had no marriage ceremony, apparently, though children were sometimes betrothed to each other. The recognition of the marriage came with the birth of a child. The primitive custom seems to have been for a man to take to wife a young woman from the next village (or one not his own), but not to set up housekeeping with her until she had borne him a child. Until that event happened, the woman remained at the house of her father, where she was visited from time to time by her husband. Among the early Aleuts, girls, or married females, giving birth to illegitimate children, were put to death, and their bodies hidden away, so much was such conduct despised. Infanticide was regarded as something likely to cause great misfortune to the whole community. Wives were exchanged sometimes for food, clothes, etc., and were often lent as a mark of hospitality. They could also be divorced or sent home, when unsatisfactory to the husband. In some cases, the children were taken by the mother. The re-marriage either of widowers or widows was not permitted until some time had elapsed since the death of their consorts. Both polyandry and polygamy seem to have occurred among the Aleuts. With those of Unalaska, in cases of polyandry the husbands agreed amicably to the terms upon which they were to share the woman, or, the first married was the chief husband, the second, and inferior, being 'a hunter or wandering trader.' Since polygamous families depended for their maintenance upon the wealth of a single husband, it appears to have been permissible for him to return his wives to their parents, if his fortune decreased to such an extent as to make it impossible for him to support them all properly. Wives could be obtained by purchase and by rendering services to the father; but, in the case of purchase, certain other relatives besides the father had to be compensated. Marriage by capture was reported by Coxe, at the close of the 18th cent., among the natives of Unimak, the largest island of the Archipelago. With certain of the Aleuts (*e.g.* those of Atkha) the man took the widow of his dead brother, such action being compulsory rather than facultative. Among these natives great jealousy is said to have existed. From various parts of the Aleutian area the existence was reported of men who adopted the ways and habits of women, dressing like them, etc., and never marrying.

3. The *burial customs* of the Aleuts also deserve special mention, by reason of the great care often bestowed on the disposal of the dead. Memorial feasts, lasting sometimes for several days, were held, and, according to the details in the stories, slaves were often sacrificed. The bodies of the dead were sometimes hung up in the hut, or suspended in the open air from a pole to which the cradle or mat was attached. When the bodies were laid away in some rock-shelter, protective masks were often put over their faces to guard them from the too inquisitive glances of the spirits. The bodies of certain rich individuals and people of importance in the tribe were washed in running water after the entrails had been removed, then dried, wrapped in furs, grass-matting, etc., and hung up in some cave, or other place dry and sheltered from the rain. Some of these mummies are very old, being found with all the marks of great age. Sometimes the dead Aleuts were placed in these caves and rock-shelters in lifelike postures, dressed and armed, as if active in some favourite occupation—hunting, fishing, sewing, or the like; and with them were placed figures representing the animals of the chase, wooden imitations of their weapons, etc. According to Elliott, the mummified bodies of celebrated whale-hunters used to be removed from their resting-places in the caves and dipped in the running water of streams, those about to venture forth on the hunt drinking of the water that flowed over the remains, to obtain the good-luck and the skill of the dead. It is also said that sometimes the body of a celebrated whale-hunter, who had died, was cut into small pieces, each living hunter taking one, which, when carefully dried, was kept for the purpose of rubbing the head of the whale-spear. The Aleuts seem to have had other superstitious proceedings of a similar nature connected with the transference of the qualities of the great dead to the living. Famous hunters and mighty chiefs were especially honoured in this way.

4. The early Aleuts had very many *songs*, the old stories being nearly always accompanied by or containing some. According to Veniaminov and Golder, there were historical songs, songs of ancestors and heroes, songs used only on religious occasions (strictly religious songs accompanying the spirit-ceremonies, etc.), and songs dealing with the ordinary affairs of life. Very often songs were extemporized. Golder is of opinion that the democratic shamanistic *régime* which 'allowed any Aleut to think he could compose a song,' is 'a condition of degeneracy as compared with the earlier time when the making of the songs was more or less in the hands of shamans of distinction'; but this is hardly the case. As both men and women could be shamans, they were likewise both song-makers. There were numerous conjuring-songs for hunting, fishing, 'raising the dead,' calling and dispersing the spirits, etc. Songs were accompanied by the drum, the only musical instrument of the Aleuts. Stories were usually accompanied by one or more songs, but the Aleuts of to-day have forgotten the songs, though they continue to narrate some of the stories.

5. The early Aleuts were very fond of *dances* and *dance-festivals*, some of which were carried out by the whole village, with other villages as guests, or participants to some extent. After the evening meal the men are said sometimes to have danced naked until exhausted. Dances of naked men, and of naked women, from which the other sex was rigidly excluded on pain of death, and masked dances of various kinds were in vogue. Successive dances of children, naked women, and women in curious attire, which were followed by shamanistic incantations, feasting, etc., are also reported as having occurred among the Aleutians. The dances in which the sexes took part together are reputed to have been more decorous. Their most

remarkable performance of this sort, however, was the great moonlight dance held in December, which had considerable religious significance. In connexion with these dances, wooden figures or images were set up, one for the women and one for the men. The sexes danced apart from each other, masked and naked, on the snow under the moonlight. The huge masks employed on these occasions were so made that the wearer could look only at the ground, since to see or look at the images, upon which the spirits were believed to descend during the ceremonies, was death to the individuals so doing. After the dance was over, the images and masks, which seem generally to have been made for the particular occasion, were broken in pieces and thrown into the sea. Although mention is made of wooden figures carried from island to island, and associated with certain ceremonies, permanent 'idols' and 'temples' hardly existed. There were, it appears, certain 'sacred' high places, or rocks, where, with mysterious ceremonies, old men, or men only (women and youths not being allowed to approach these spots), made offerings. Events like the casting up of a whale on the beach were the cause of dancing and other festivities. In some of the dances the participants put on all their ornaments and finery, while in others they danced naked, except for the large wooden masks, which came down to their shoulders, and often represented various sea-animals. The masks used in the ordinary dances were different from those used in religious ceremonies, the former being evidently copied from the Aleut type of face, while the others, when human faces are represented, seem to differ much from it. The dancing-masks are often grotesque. Some of the carved masks used in certain ceremonies were deposited in caves. Masked ceremonies were also connected with the spring-time festivals.

6. Besides their religious dances and like ceremonies, the Aleuts had others of a *dramatic* and *educational* nature. Myths and legends were acted out in pantomime and dance by the members of one village, who would invite the inhabitants of another to witness the 'play.' On such occasions special songs would be composed and sung. In these 'plays' men and animals alike were imitated and represented. Similar events on a smaller scale took place in individual huts, the larger ones in the 'village-house.' Veniaminov and Golder give an account of a performance called *kugan agalik*, or 'the appearance of the devils,' the object of which was to frighten the women into obedience and 'keep them under' properly. The essentials of the performance were as follows: —When it was thought necessary to impress the women and girls, certain of the men left the village on a pretended hunt. At night, after they had been gone a few days, the men at home made believe some calamity was about to overtake the community, and, by pretending great fear, made the women remain in the huts. While they were thus frightened, strange noises were heard, and the 'devils' arrived, against whom the men made the show of a valiant defence. After the 'devils' had been driven away, it was found that one of the villagers was missing, and a woman, previously agreed upon, was carried out as a ransom for him. By and by both were brought back, the man apparently dead. He was gradually revived by being beaten with inflated bladders, addressed with invocations, etc., and was given by his relatives to the woman who had saved him. The lost hunters then came in and expressed surprise at what had occurred. This 'play' is clearly analogous to the 'Mumbo Jumbo' ceremonies of the Negroes of West Africa and to the initiation rites of the Australian aborigines.

7. The early Aleuts had very many *stories* and *legends* and much *folk-lore*. According to Veniaminov and Golder, their tales and legends were chiefly of three kinds: purely narrative, satiric or moralizing, and mythological. Comparatively few of the stories of the Aleuts have been preserved,—of those recorded nearly all are due to Veniaminov (1820–1840), and Golder at the close of the last century.

One of the Aleutian ancestor stories tells of the adventures, so disastrous to the people, of Chief Agitaligak of Adus and his son Kayulinach. Another is concerned with the doings of the son of 'the woman fond of intestines.' One of the origin-legends ascribes the beginnings of the Aleuts to a being who fell down from the sky in the form of a dog. Another version of this myth of canine ancestry, found also elsewhere in the Eskimo territory, makes the Aleuts descend from a female dog belonging to Unalaska and a great dog which swam over to her from the island of Kadiak. Still another account traces them back to the dog-mother, called Mahakh, and an old man named Iraghdadakh, who came from the north to visit her. Another legend makes the ancestors of the Aleuts two curious creatures, male and female, half-man and half-fox,—the name of the male being Acagnikakh. Some legends also attribute to the 'Old Man' the power to create human beings by throwing stones on the earth; birds, beasts, and fishes being made by throwing stones over the land, into the water, etc.

Golder calls attention to the fact that the Aleutian stories are very realistic, there being 'not a single story that could not have happened in real life.' Supernatural incidents occur, to be sure, but they come in only at the end of the tale. It is, as Golder remarks, 'as if the gods were called in to help out the story-teller, when he gets into a tight place.'

8. As may be seen from their religious ceremonies and other practices, as well as from the evidence in their tales and legends, the Aleutians had much *spirit-lore*. The shamans were able to obtain the assistance of spirits by their incantations, and the spirits (*kugan*) of power descended into the 'idols' during the great religious dances. The Aleuts believed that their dead relatives acted as guardian spirits, helping them out in all dangerous situations and trying conditions. They also relied much upon these spirits in their schemes of revenge, etc. Belief in amulets of various kinds was common,—the warrior, *e.g.*, wore a belt of sea-weed with magic knots. Mention is also made of the *tkhimkee*, a marvellous pebble, which all animals were unable to resist when it was thrown into the sea. The Aleuts of to-day have little of the rich mythology and folk-lore of their ancestors, the conversion to the Greek Church, which took place in the time of Veniaminov, and the course pursued by the Russian priesthood having resulted in the passing away of institutions and beliefs, ceremonies, customs, and habits of the olden time. To this process the Aleuts appear to have taken somewhat readily, a fact which further hastened the disappearance of what was purely national and racial.

ALEXANDER F. CHAMBERLAIN.

ALEXANDER OF ABONOTEICHOS in Paphlagonia owes his fame to a treatise of Lucian, who was his contemporary. The piece is full of the minutest details of Alexander's life. But Lucian makes no concealment of the contempt and hatred which he felt for one whom he regarded as a venal and impudent impostor, trading on the selfish superstition of an ignorant and credulous people. In his war against the credulity of his age, Lucian has evidently exerted all his art to blacken the character of one who seemed to him to represent its worst excesses of superstition. Yet, apart from the charges against Alexander's morals, Lucian's life of Alexander is probably more trustworthy than his life of Peregrinus.

Alexander was a Greek of Abonoteichos, with splendid gifts of mind and body, and a charm of manner which, Lucian admits, left on casual acquaintances the impression of a high and simple character. He began his career with a wizard physician connected with the circle of Apollonius of Tyana. On his death, Alexander formed a partnership with a Byzantine adventurer, and during their travels in Macedonia, the pair, seeing the passion of the time for any means of forecasting the future, determined to exploit its hopes and fears by founding an oracle which should rival the fame and wealth of the old seats of prophecy. They brought a tame serpent from Macedonia, and in the precincts of Apollo at Chalcedon they buried two tablets, predicting that Asklepios would come to Pontus with his father, and make his home at Abonoteichos. Alexander knew his countrymen. The promise of the epiphany soon spread, and the people of Abonoteichos at once began to build a temple for the coming god. Soon Alexander appeared among them, with white tunic and purple cloak, and a scimitar in his hand, reciting an oracle which proclaimed him 'the seed of Perseus, dear to Apollo.' Fits of prophetic frenzy still further raised the general excitement. One morning at dawn, almost naked and scimitar in hand, he bounded into the market-place in all the orgiastic excitement of a votary of the Great Mother, leapt upon the altar, and, with a strange jumble of Hebrew or Chaldæan phrases, announced the coming of the god. He then rushed to a ditch which ran round the foundations of the new temple, fished up a goose's egg in which a young snake had been skilfully enclosed, broke the shell, and displayed to the awestruck crowd the nascent deity.

Multitudes thronged to Abonoteichos, and Alexander, sitting on a divan, held a levée, in which he displayed, coiled about his shoulders, the trained serpent from Macedonia, to which a very simple art had attached a human head. Crowds poured through the darkened room, jostling one another to see the new god so miraculously mature, so human and so divine. The great miracle drew crowds from Bithynia, Thrace, and Galatia, and even from remote barbarian regions. Artists flocked to the spot to express the likeness of the new deity in colours, or bronze or silver, 'Glycon the third of the seed of Zeus, a light to men.'

Alexander had studied the system of the older oracles, and he determined to found a new one, while he carefully displayed a reverence for the ancient seats of Claros or Didyma. For a small fee of 2 obols he received on stated days sealed packets, which he ceremoniously returned apparently unopened, with the needed answer. A hot needle and a delicate hand concealed the imposture, although Lucian by means of an obstinate seal once exposed the fraud. The oracle, like so many of the time, was mainly one of healing, and, skilfully managed, with an army of officials and interested envoys and missionaries to spread the fame of its efficacy throughout the Empire, it gathered in a revenue of nearly £7000 a year. Its fame spread to Rome, and great nobles like Severianus the governor of Cappadocia, and Rutilianus, one of the most experienced statesmen of the age, were drawn into the net. Alexander had many questions of a dangerous political curiosity put to him, which would not bear disclosure. Rutilianus, at the mature age of sixty, even condescended to marry Alexander's daughter, his boasted offspring by an amour with Selene, who had been captivated as by another Endymion.

In the great plague of A.D. 167, a magical verse, dictated by the new oracle, was inscribed over the doors of houses throughout the Roman world. Even the circle of the philosophic Emperor yielded to the imposture. When the Marcomannic war was at its height, an oracle from Abonoteichos was received at headquarters, ordering two lions to be thrown into the Danube. The ceremony was followed by a disaster to the Roman arms, which was glibly explained by classical precedent.

Alexander, with all his daring and ingenuity, was scrupulously conservative in adhesion to ancient forms. He crowned his achievements by establishing mysteries on the approved model, from which Christians and Epicurean freethinkers were excluded under a solemn ban. The ceremonies lasted for three days. Scenes from old and new mythologies were presented with striking effect—the labour of Leto, the birth of Apollo and Asklepios, the epiphany of Glycon, and the celestial origin of Alexander himself. Lucian believed that the new religion was tainted with the foulest immorality. Alexander had many enemies, and there is no doubt that he was surrounded by large numbers who, like Lucian, scorned and derided the superstition of the time. They openly assailed the new oracle, and strove to convict it of deceit. For his own scornful incredulity, Lucian once nearly paid with his life. And Alexander, by the mouth of the god, ordered that the blasphemies of the atheists should be punished by stoning. He finally triumphed over all opposition, and rose even to divine honours. His statue was an object of worship at Parium in the time of Athenagoras. Inscriptions of Dacia and Mœsia attest the wide extent of his influence. In the third century, the religion of Glycon still flourished at Ionopolis, the new name which Alexander had given Abonoteichos, and which still survives under altered form. Coins of Nicomedia and Ionopolis bear the device of the serpent with a human head.

LITERATURE.—Lucian, *Alexander*; Athenagoras, *Legatio pro Christianis*, ch. 26; *CIL* iii., 1021 f.; 'Ephem. Epigr.' in *CIL*, suppl. ii. 331; Renan, *L'Eglise chrétienne* (1878), 428 f., and *M. Aurèle* (1880), 50; Gregorovius, *Hadrian* (1884), ii. ch. 15.

S. DILL.

ALEXANDER THE GREAT (his place in the history of religion and ethics).—**1. Synopsis of his reign.**—Alexander III., afterwards surnamed the Great, was born at Pella, B.C. 356. He was the son of Philip II., king of Macedonia, and Olympias, a Molossian princess. In 336 he succeeded to the throne, and two years afterwards set out on his Eastern expedition. S.W. Asia was subdued by his victories at the Granicus (B.C. 334) and at Issus (B.C. 333). His attention was then turned to Egypt, and in the course of the expedition an opportunity occurred for a visit to Jerusalem, which may perhaps be regarded as historical. Alexandria was founded in B.C. 331. Campaigns against the northern provinces of Bactria and Sogdiana followed, and gradually all the districts over which the kings of Persia exercised sovereignty were subdued. Alexander then forced the Khyber Pass, or, more probably, another pass 80 miles to the north-east, crossed the Indus, and occupied the Panjāb; but his further designs were thwarted by

the discontent of his army, and in 323 at Babylon his brief and meteoric career was brought to a close.

2. Preparations for Alexander's work.—Alexander's greatest work was the spread of Greek influence, less from set purpose than as a result of his methods of recruiting his armies and organizing his conquests, and in ways that made this influence permanent and controlling. The conception of such spread may be found before his day as a part of the political theories of men who were feeling the defects of the various kinds of autonomy prevalent within Greece, or were eager for a fuller and richer life than was possible there. Isocrates in his letter to Philip of Macedon transcends the limits of city patriotism, and contemplates the spread of Greek culture, possibly also of the Greek race, by means of conquest. The school of Socrates was familiar with wide views, and impatient of parochial strife and politics. Xenophon was one of his disciples, who never ceased to be a Greek, but yet considered travel and military service abroad, with eventual settlement in some district where he might at once rule in comfort and disseminate his own views, as the natural career for a man of ambition or leisure. The employment of Greek soldiers as mercenaries by Eastern sovereigns was an ancient practice in the days of Cyrus; and, whilst among these soldiers poor Greeks formed the more numerous section, there were included also adventurers from the leading cities, who were men of parts as well as enterprise. Whatever their treatment was at first, they had ceased before the days of Alexander to be regarded merely as means of defending a weak satrap or adding to the dominions of a strong one. To Cyrus and his associates and successors they were friends to be courted; and a Persian policy of encouraging Greek settlements coincided with the increasing Greek demand for expansion. Emergence from the narrow area and narrower interests of the little native cities was becoming a necessity. Agesilaus might have effected it but for the dissensions and rivalries that showed the impossibility of Greek overlordship on any large scale. And in political theory on the part of thinkers, both as a practical means of escape from the *impasse* to which the affairs of Greece had been brought, and as the continuation of a process that had been going on for several generations, a preparation for Alexander's schemes of conquest was laid long before he was born.

3. Policy of Alexander, and its general results.—The rapidity of Alexander's conquests was too great to allow of the establishment of a fully organized administration in the districts which he traversed and subdued. At first he appears to have appointed merely a military governor and a fiscal agent, who were supported by a small band of veterans capable of acting as minor officials in the maintenance of order, in the collection of the taxes, and in the training of recruits. As opportunity served, this temporary arrangement was supplemented and made effective by the foundation of a number of settlements or cities, each of which was designed to serve as a centre of defence or influence. Seventy such cities, ranging from Kandahar to Alexandria, were founded by Alexander himself, and claim in various dialects to perpetuate his name. The inhabitants were partly Macedonian and partly Greek,—veterans, discontented troops, camp followers,—with natives swept in from the neighbouring villages or transported from remote and unmanageable lands. Some of these cities were intended to be outposts or garrison towns, others were placed as convenient marts upon the great trade routes; but all were invested with the privileges of partial autonomy. In military affairs the Macedonian element predominated, whilst the Greeks were put in charge of the local administration, and made themselves felt supremely in matters of thought and culture. A similar policy was followed by Alexander's successors, with the difference that the distinction between Macedonian and Greek gradually disappeared. One result was that Greek became the language of politics, trade, and intellectual intercourse from Macedonia to Persia and from Bactria to Egypt. Before his birth Greece had supplied Macedonia herself with the standard of excellence in taste and civilization; and at his death the joint Græco-Macedonian influence was the rising factor in the whole evolution of private life, and strengthened the bond of union supplied in the Eastern world by a common language.

4. The philosophical schools, and their relative influence. — Amongst the changes of position in philosophic thought and its estimation during this period, two are of special importance in the history of the process of Hellenization. (*a*) On the one hand, the philosopher, though neither ceasing to indulge in abstract speculation, nor allowing himself to be drawn into the thick of political strife, becomes the adviser of all parties, and the person to whom appeal is addressed in emergency. Aristotle was one of the teachers of Alexander, but does not appear to have been consulted by the king in any difficulty; and the *Politics*, with its catalogue of one hundred and fifty political constitutions, was conceivably an object of amusement to the practical man. Yet two philosophers were selected to rouse the king out of the gloom and remorse into which he was plunged by the murder of Clitus. Xenocrates took no active part in the faction strife of Athens; yet the Athenians more than once chose him as their emissary to Philip, just as afterwards they used him in a similar capacity during the Lamian war. In later times the practice continued. The leading philosophers thus became a class or group of men outside the political arena and above it; they were consulted in practical emergency as well as in speculative perplexity, and their influence in spreading the culture they represented was both detached from dangerous entanglements and quickened by association with general human interests. (*b*) The period of Alexander witnessed a considerable change in the relative amount of attention given to the principal philosophic groups. Metaphysic for a time yielded the ground to ethic. Plato and Aristotle proved less attractive than men who were inferior to both in range and keenness of intellect, but who touched actual life at more points that the ordinary busy man could appreciate. The retirement of the princely thinkers was but temporary, and before many centuries passed they re-emerged in new guises or relationships, of which the number is not yet exhausted. They were both theorists and transcendentalists; and what the Greek world wanted at a time when it was busily engaged in spreading and rooting itself everywhere was not so much speculation as experience, a law of duty rather than a guide to exact thought. As soon as the conditions of life became favourable, for Plato and for Aristotle alike a splendid revival was fated; but the philosophy of Hellenism in its first progress eastwards, as in its later subjugation of Rome and Italy, was of another type.

5. Pyrrhonism, Stoicism, Epicureanism.—Pyrrho is said to have taken part in Alexander's expedition to India (Diog. Laert. ix. 63), but it is not until afterwards that traces of his teaching can be found to any extent in Greek thought. The rise of the New Academy, with its blending of the two schools of Plato and Pyrrho, is in reality the date when the Greek mind began to take refuge in conclusions that were other than positive; for the appeal of scepticism is of necessity met in a practical age with a tardy response, and the discomfort caused

by the disturbance of earlier beliefs is an unwelcome diversion when the mind is bent on activities. Pyrrho's importance in this period is twofold. He scattered seed, of which the fruit was late in appearing; but, when it did appear, the crop was plentiful; and the sceptical or captious inquirer, interested in every form of thought but captivated by none, became a not infrequent product of the Hellenistic genius. And he illustrates the reflex influence upon Greek culture of the beliefs of some of the districts which Alexander traversed or visited. That Pyrrho learnt his theories in Persia or India rests upon the statement of an early writer, whose name alone is known, and is probably incorrect (Diog. Laert. ix. 61). With more confidence it may be asserted that his natural equanimity was raised by his Eastern experiences into the worship of imperturbability. The Greek joyousness was transformed into a careless immobility, upon which in part may well be based alike the fatalism of various later creeds and the independence of external circumstance which the Stoic coveted and the Cynic mingled with bitterness.

During Alexander's reign the only schools of philosophy that could be regarded as of appreciable present value were the Stoic and the Epicurean, of which the former, especially, gradually became identified with the extension of Greek culture. Epicurus was a dozen years younger than Alexander, but, according to his own account, he entered seriously upon his philosophical studies at the age of fourteen. He claimed to be independent of his predecessors, but was certainly influenced by the teaching of Democritus, and he articulated in a system conceptions and tendencies that were floating in the air and creating the intellectual climate of the Greek world in Alexander's days. Zeno, too, was probably a little younger than the great king; but his teaching also links itself on to that of Socrates and the Cynics, and, as developed by his immediate successors, it soon became the standard of Greek ethical thought in its spread among the nations. Both schools indulged but little in abstract speculation, but endeavoured to teach men how to secure the happiness which was, in their view, a better and more natural end than knowledge. Epicureanism denied the existence of anything like Providence, declined to anticipate a judicial readjustment of experiences after death, and bade the sage carefully balance all possible present pleasures, and choose the path of prudence. Stoicism, on the other hand, had an elementary theology as well as an ethic. Other knowledge was held to be attainable than that given by the senses. The so-called gods were manifestations of a Supreme God, who ruled over human lives and ordained for each man the part he should play in the world. Happiness was to be reached indirectly by the discharge of duty, without much consideration of conditions or consequences. Wisdom and peace lay in keeping touch with the Divine ruler and plan of life; in which case a man became, whatever his outward circumstance, royal and free. Such a philosophy, unlike the Epicurean, involved the fusion of all distinctions of creed or race or custom, and was exactly appropriate to a period when civilizations also were fusing, and a rule of life was in request that could survive national decay and still serve for guidance in any change of fortune. Stoicism may be regarded as the leading philosophy in the Greek culture that became cosmopolitan. It succeeded in establishing itself at length on the banks of the Tiber, and penetrated even through the thick shell of Hebraism, affecting the thought and the phrases of St. Paul himself.

6. Alexander and the Jews.—Though Alexander possibly visited Jerusalem, according to the tradition preserved in the Talmud as well as by Josephus (*Ant.* IX. viii. 3–6), and though he enrolled Jews in his armies, granted them special privileges, used them as an intelligence department, and settled many favourably in his new towns and colonies, there are no indications of any direct or immediate influence upon their creed or practice. Indirectly, he opened or reopened the channels of communication by which the East and the West were brought into contact both with one another and with Egypt and Cœle-Syria. Along those roads, in subsequent ages, came teachers from India and Persia as well as from Greece; but the Hebrew did not readily assimilate any foreign belief or custom. The cause is to be found in the strictness of his monotheism as well as in the exceptional solidarity of the race. The Greek language was tolerated and even adopted in the course of time, but Greek culture was regarded with abhorrence in the inner circles where Jewish traditions were most sacredly preserved; and the complete coalescence of Hellenism with Hebraism proper has not yet taken place.

LITERATURE.—Freeman, *Hist. Essays*, 2nd ser. (4th ed. 1892). Essay 5 discusses the sources of Alexander's history. For the Rabbinical traditions see Derenbourg, *Hist. de la Pal.* (1867) i. 41 ff.; Hamburger, *RE* ii. (1883) 44 ff.; and *JE* i. 341–343. For relations with India see *JRAS* (1903) 685 ff. and (1894) 677 ff. Droysen, *Gesch. Alex. des Grossen* (1837) and *Gesch. des Hellenismus* (1877) are of special value. Wilamowitz, *Antigonus von Karystos* (1894), is brilliant for some of the philosophical tendencies. Add Mahaffy, *Gr. Life and Thought* (1896), *Progress of Hellenism in Alexander's Empire* (1905), and *Story of Alexander's Empire* (1900) (elementary, but well supplied with maps); Bevan, *Jerus. under High Priests* (1904); and Susemihl, *Lit. der Alexandrinerzeit* (1892). ALEXANDRIAN THEOLOGY.

[W. R. INGE].

Scope of the Article.—Some of the best-known histories of 'Alexandrianism,' or 'the School of Alexandria,' have been really histories of Neo-Platonism. This is a mistake. Neo-Platonism, which will be dealt with in this Encyclopædia under its own name, is the latest stage in the development of Greek thought. Its connexion with Alexandria is less than is commonly supposed. In this article the local limit will be observed.

Secondly, this article will deal with theology, not with philosophy. Although Neo-Platonism was essentially a religious philosophy, and Alexandrian theology a philosophical religion, it is possible to maintain the distinction. And we may speak of an Alexandrian theology, though not of an Alexandrian philosophy.

Thirdly, the Hellenic schools of religious thought which flourished at Alexandria are omitted, as belonging rather to the precursors of Neo-Platonism than to our present subject. The justification for omitting them lies in their subordination of positive religion to philosophy, which was almost an axiom among the Pagans; *e.g.* Galen expresses surprise that some Christians, who cannot follow philosophical arguments, 'have progressed as far in self-control and the ardent pursuit of virtue as genuine philosophers.' Moreover, in spite of the resemblance in metaphysical and especially in ethical principles between these Hellenic schools and the Judæo-Christian Alexandrians, their attitude towards Greek tradition and culture is decisive. There is a great cleavage in this respect even between Clement and Plotinus. In reformed Pagan circles it seems to have been a matter of good taste not to mention Christianity, and Judaism was regarded with equal contempt. It is very doubtful whether the Jewish-Alexandrian theology had any direct influence upon Neo-Platonism. In fact, national and, still more, religious prejudices counteracted the cosmopolitan tendency of thought which began under the successors of Alexander. In spite of the common parentage of many ideas, and the parallelism of development under similar conditions, the separa-

tion is sharp between the three forms which religious philosophy assumed in the 2nd and 3rd centuries: (1) Jewish and Christian Platonism, both of which stand on the basis of Jewish monotheism; (2) the Hellenic religious philosophy, of which the best representative is Plotinus; (3) the barbaric Platonism of the Gnostics. In all these systems or schools there appear the following characteristics, though often qualified by other tendencies: (*a*) an abstract notion of God as the transcendent, absolute Unity, (*b*) a tendency to call in intermediary powers (the Logos, spirits, etc.) to bridge over the chasm between God and the world, (*c*) a tendency to connect matter with the evil principle, (*d*) self-discipline as a means to clearer vision of Divine truths. But the emphasis which was laid on these several doctrines differed widely in the three classes above named.

This article deals only with the first—Jewish and Christian Platonism, as developed at Alexandria. And the three representative names, round which our discussion must range, are Philo, Clement, and Origen.

1. **Precursors of Philo.**—It was inevitable that the Judaism of the Diaspora should diverge further and further from the Palestinian tradition. In Egypt especially, where the Jews comprised nearly half the population of the capital, and were numerous throughout the country, a vigorous independent life was sure to appear in all departments of mental activity. The Egyptian Jews could not maintain an attitude of aloofness from the secular culture of the world around them. To say that they were Hellenized is only to say that they were not self-excluded from the civilization of the period, for Hellenism was a factor in all the religion, philosophy, and ethics of the lands where Greek culture penetrated. But when we speak of the Hellenizing of Judaism, we mean more than the pervasive influence of the secular civilization. There was a definite attempt made by the Jews to interpret their own religion in a form acceptable to the Greeks, from which cannot be separated an attempt to interpret Hellenism to themselves by stretching it upon a framework of Jewish orthodoxy. This latter design was rendered necessary by the rapid decay of faith in the statutory Judaism among the educated, a decay which was exhibited both by the increasing inwardness and spirituality of the really religious, and by the increasing externality and hypocrisy of the cult among the official class. In the Diaspora, a liberal Judaism sprang up which was merely a cultured Unitarianism with strong ethical convictions. The old dream of a theocracy was forgotten, and Messianism aroused no interest. The Greek doctrine of immortality was given a moral turn by conceiving of the future life as primarily the scene of rewards and punishments; and the national hatred of Rome (after the Roman conquest of the East) was gratified by the belief in a day of universal destruction, ushering in the great assize. The statutory basis of this religion was furnished by the Old Testament, which was asserted to contain the sum total of all Divine and human wisdom. The 'books of Moses,' in particular, were treated with unlimited reverence.

The *Septuagint* is perhaps our earliest specimen of Jewish-Alexandrian literature, for the traces of Greek influence in Sirach are very disputable. Dähne has shown that the translators frequently modify the naïve anthropomorphism of the Old Testament, substituting, *e.g.*, the 'power' for the 'hand' of God, and His 'glory' for His 'robe' in Is 6^1. In Gn 1^2 they seize the opportunity to introduce the Platonic distinction of matter and form, and in Ps 51^{12} the Stoical *ἡγεμονικόν* intrudes itself. The third book of the so-called *Sibylline Oracles*, which probably dates from the middle of the 2nd cent. B.C., is a remarkable proof of growing respect for Greek thought and religion, since the main object of the composition is to support Jewish monotheism and Jewish national hopes, under the form of heathen prophecy. But the characteristic features of Alexandrianism, enumerated above, are not prominent in the *Sibylline Oracles*. Neither allegorism, nor ecstasy, nor asceticism, can be found in them. In the so-called *Wisdom of Solomon*, though the form is that of Hebrew poetry, the matter is far more Hellenic. The half-personified 'Wisdom' is almost identical with Philo's Logos, and the 'Spirit' is also half-personified, being, indeed, only 'Wisdom' itself under a slightly different aspect. The 'Word,' on the other hand, is used, as in the Old Testament books, for the expression of the will of God; there is no approximation to the Philonic use of 'Logos,' even in 18^{14-16}, where there is a poetical personification. On Messianic hopes the author is silent, like the other Wisdom-writers; the book was not written for Palestinian Jews, and was not accepted by them as Scripture. The influence of Greek (Platonic and Stoic) philosophy appears chiefly in the conception of a harmonious and beautifully ordered world directed by an immanent principle (Wisdom). The most striking deviation from orthodoxy is to be found in the doctrine of pre-existence, which is clearly stated in $8^{19.\ 20}$ 'I was a child of comely parts, and had obtained a good soul; or rather, being good, I entered into an undefiled body.' This can only mean that the soul has displayed goodness in a previous state of existence. The body is thus no essential part of the personality, a view which leads easily to the notion that it is, if not the source of moral evil, yet the 'muddy vesture of decay' which presses down the soul. The eschatology is vague. There will be no bodily resurrection; but the souls of the righteous will be rewarded, at the 'inspection,' with everlasting felicity, while those of the wicked will be excluded from their true life, and cast into eternal darkness.

2. **Philo.**—Passing by the Letter of the pseudo-Aristeas, a manifest forgery, and the fragments of Aristobulus (a Jewish Peripatetic who lived in the middle of the 2nd cent. B.C.), which have also been suspected, we come to Philo. Philo (born about 20 B.C.) was a member of a well-known Alexandrian family, being brother of Alexander the Alabarch, the head of the Jewish community in the Egyptian capital. Philo himself lived a life of retirement and contemplation, until an outbreak of anti-Jewish fanaticism, fomented by the Roman governor Flaccus, led to his being sent to Rome with a deputation from the Jewish community (A.D. 39–40). He was then elderly, and had already written most of his books.

Philo believed himself to be, and was accepted by his contemporaries as being, an orthodox Jew. He is an apologist, who wishes to defend Judaism against atheism, polytheism, and scepticism. More particularly, since Judaism for the Alexandrian Jew was a book-religion, he was concerned to prove that the highest forms of revelation and of human wisdom were contained within the compass of the Old Testament. Disrespect to the sacred text is in his opinion a crime of the deepest dye: he knows of an impious man who, after laughing at some story in Genesis, soon after hanged himself for no particular reason—a manifest judgment (*de Mut. Nom.* 8). His theory of inspiration is that God speaks through the prophet, who is merely a passive instrument. This inspiration takes place when the instrument is in a kind of trance, such as Philo himself has experienced. His mind suddenly becomes full of images, and ideas pour forth from it, while he is insensible to all externals (*de Migrat.*

Abrah. 7). The description resembles Böhme's account of his manner of writing. At the head of all the prophets is Moses, who alone had seen God face to face. In his writings the sum of human wisdom is contained.

This conception of revelation, as given once for all in its entirety, led Philo into great difficulties. If he had been content to argue that the more spiritual faith of his day was contained implicitly, in germ, in the Pentateuch, he might have made out a good case. But the doctrine of development, even in the limited application afterwards made by St. Paul, was unknown to him. He can admit no inferiority in Genesis as compared with Isaiah. And since the OT, understood in its natural sense, contained many things which could not but shock the conscience as well as the intelligence of a cultivated Alexandrian acquainted with Greek philosophy, the expedient of *allegorism* was necessary (see ALLEGORY). This method was no invention of Philo, or of his contemporaries. Greek moralists had long treated Homer in this way, quoting lines from him as we quote verses from the Bible, to enforce moral truths. The system was elaborated by the Sophists, and still more by the school of Anaxagoras; but it is rejected by Plato, who will not admit unedifying myths into his State, 'either with or without allegories.' It may be said that to a certain extent this kind of exposition is justified. In the higher kinds of literature, the perception of some sort of allegory or double meaning is almost necessary. The mere literal or grammatical sense cannot satisfy the student of any poetry or imaginative prose. But when Homer is made by the Stoic to prove such philosophic theses as that virtue can be taught, or that the sage is 'apathetic'; by the Pythagorean to teach that silence is golden, and by the Epicurean that pleasure is the guide of life; and when Moses is made by Philo to indicate the eternal motion of the heavens under the figure of the cherubim's flaming sword, we have a right to protest. So arbitrary and unscientific an exegesis is a fatal obstacle to understanding the religious books of mankind—a task in which we cannot succeed unless we realize that the thoughts of the past are relative to the past, and must be interpreted by it. Philo himself calls it the method of the Greek mysteries. In these rites everything was represented as being at once a thing and the covering of a thing, an outward sign and an inward truth.

Allegorism, then, is simply the sacramental method applied to history and literature. It was becoming the common property of all the higher religions, and was the easiest refuge for educated men who wished to belong to an established religious body, without forcing themselves to accept immoral or absurd beliefs. The general view was that all revelation is a Divine cryptogram, which serves the double purpose of concealing the truth from those who are unworthy to receive it, and of magnifying it, for the choicer spirits, by an indirect and mysterious mode of presentation (ἡ κρύψις ἡ μυστικὴ σεμνοποιεῖ τὸ θεῖον).

The following summary of Philo's principles of exegesis may give some idea of the method in practice. (1) When nouns are repeated, a hidden meaning is indicated. In Lv 18[6] 'man,' 'man,' shows 'that what is meant is not the man possessed of body and soul, but he only who is possessed of virtue.' Similarly, pleonasms are significant. In Gn 15[5] ἐξήγαγεν ἔξω means that Abraham was delivered from the trammels of the flesh. There can be no tautology in Scripture, and no change of a word without meaning. If Moses says 'shepherd' in one place, and 'keeper of sheep' in another, he means to distinguish between a good and a bad kind. (2) Plays on words are frequent, *e.g.* ὄνος is meant to indicate πόνος, and πρόβατον to indicate προβαίνειν. (3) Double meanings of words often give the clue to the higher meaning, *e.g.* since 'rib' is sometimes used for 'strength,' the words about Adam's rib mean that the αἰσθητικὴ δύναμις comes forth out of the νοῦς. (4) Numbers are always important: *one* is the number of God, *two* of the creature, *three* of the body, *four* of potential completeness, *five* of the sensuous life, and so on. (5) Animals are symbolic: the camel of memory, the ass of the irrational nature, the snake of lust. Inanimate objects are treated in the same way. (6) The proper names in the Pentateuch are allegorized according to their fancied etymological affinities. Philo speaks of allegorism as the 'moral,' as opposed to the 'natural' interpretation.

It is plain that the principle of allegorism offered great temptations to evading the letter of the Mosaic law. This misuse of the method is condemned by Philo, who protests against those who thus 'spiritualized' the ceremonies enjoined in the Pentateuch (*de Migrat. Abrah.* 16). He also distrusts the symbolic study of nature, as raising more problems than it solves. We shall learn more by studying our own minds, and the sacred literature.

In considering Philo's theology, we must expect to find the Greek and Hebrew elements imperfectly fused. It would surpass the genius of any man to harmonize the logical, analytic thought of the Greek with the vague, indefinite intuitions of Hebrew prophecy. But the way had been prepared for him by approximations from both sides. The Jews of Alexandria had universalized Jahweh till He had lost the characteristics of the tribal God of the Hebrews; and, on the other hand, Greek thought was now more favourably disposed to the transcendence of God than when Stoicism reigned supreme. Philo has no difficulty in explaining the anthropomorphisms of the Pentateuch as mere accommodations. God is, in truth, not a Being who can feel anger, jealousy, or repentance. He is without body, invisible, the most universal of beings, above goodness, above knowledge, above even the absolute Good and Beautiful. We apprehend His existence partly by analogy: as we have an invisible mind, which is sovereign over the body, so must the Universe be guided by an invisible mind, which is God (*de Mundi Opif.* 23). Also, the world shows traces of design; but the principle of causality cannot reside in matter, which has nothing noble in itself, but only the potentiality of becoming all things (*de Mundi Opif.* 5).

A higher mode of apprehending God is by spiritual intuition, which under certain conditions culminates in knowledge of Him. But, since like only can know like, we are precluded by the limitations of our finitude from forming an adequate conception of the mind of the Universe. We cannot get out of ourselves, and underived existence is incomprehensible to us. 'We must first become God, which is impossible, in order to be able to comprehend God' (*Fragm.* ii. 654). We approach most nearly to the truth when we strip off from our idea of God all that is characteristic of finite existence. This process still leaves Him with the attributes of goodness, freedom, and activity. Creative activity (τὸ ποιεῖν) is as characteristic of God as receptivity (τὸ πάσχειν) is of the creature, and God 'never ceases working.' The *via negativa* logically leads to a God who is without qualities (ἄποιος *); but Philo here takes refuge in agnosticism. 'God has revealed his nature to none, and we cannot say that the First Cause is material or immaterial, with or without qualities' (*Leg. All.* iii. 73). The bare fact of His existence (ψιλὴν ἄνευ χαρακτῆρος ὕπαρξιν, *Quod Deus immut.* 11) the mind can apprehend, but no more. He was revealed to Moses as the Nameless Existing. Nevertheless, we can without contradiction ascribe to God the attributes of omnipotence, omniscience, and the like, which can be applied only to the Supreme Being; and such attributes as goodness, which in their full meaning can be applied only to Him. 'Those things which among men are called truth and justice, are symbols only; but those which are

* But properly ἄποιος means not 'having no attributes,' but 'incapable of being classified': God does not belong to any class or order of being, but is above all classification, being unique.

so with God are prototypes or ideas.' God is 'the most generic' as excluding nothing; but He transcends even the highest genus, τὸ λογικόν. He is 'older than the monad'; by which Philo means that the unity of God is not merely the negation of plurality, but that His nature is the archetype of the mathematician's unity.

One of the most difficult parts of Philo's system is the doctrine of the Divine 'Powers.' These Powers could be fully apprehended only by pure Intelligence; to us they are revealed in their action. They are not, however, exhausted in the created world, for they are infinite, like God Himself. Their function is to give to matter those forms in virtue of which we are able to say that things exist. In themselves, the Powers are the eternal forms of God's thought; their activity is stamped on the whole order of nature, which in the regularity of its changes reflects the persistence of the creative ideas. These Powers, or ideas, are not of equal rank. The highest of them is the Logos, which stands nearest to the Godhead, even as the reasonable soul of man is that part of him which reaches most nearly to the Divine.

It has been usual with critics of Philo to condemn with great severity this conception of 'Powers.' It is said that he uses them as an expedient to mediate between two irreconcilables, God and the world, and that the contradiction reappears, in no way softened, in the qualities assigned to the mediating agencies. The Powers are sometimes identified with God, and sometimes separated from Him. They are (it is said) a transparent device to bring God again into contact with the finite, from which He has been jealously excluded by another line of argument. It is perhaps worth considering whether any theistic system which regards God as something more than a finite spirit among other spirits, has succeeded in explaining how an almighty, omnipresent, and eternal Being can really act in space and time. Philo is possibly not more successful than others who have attempted to do so; but a fair estimate of his teaching will acquit him of the puerile expedient of creating substitutes to act in God's place. 'God, being outside creation, has none the less filled the universe with *Himself*,' he says in one place (*de Post. Cain.* 5); and this is not an isolated acknowledgment of the Divine immanence in the world. He 'extends' His Powers over creation just as man is said to 'extend' the energies of his soul to God. It is true that we read that 'the Blessed One must not come into contact with indeterminate matter; and this is why He used the immaterial Powers, whose real name is ideas, that every genus might be taken possession of by its proper form.' But surely this is merely to assert the transcendence of God, without denying His immanence. The notion of the Powers as subordinate *persons* is quite foreign to Philo's mind, and cannot even be discussed without wandering far from his standpoint. Drummond quotes a very apposite parallel from Athanasius: 'The Logos is, as it were, *in* all creation, outside of the whole in his essence, but in all things by his powers . . . containing the whole of things and not contained, being wholly and in all respects *within* his own Father, and him only.' Both in Philo and Athanasius the phrases denoting spatial externality and its opposite are well understood to be metaphors. In the same way, when the Powers are symbolized as the agents and ministers of God, the poetical form ought not to have been misunderstood as a literal statement of fact. Philo is extremely fond of personification: *e.g.* for him 'all the virtues are virgins,' just as, *par revanche*, the wives of the patriarchs are 'not women but virtues.' Nothing can prove more strongly that Philo did not ascribe personality to the Powers, than the fact that he everywhere distinguishes them from the angels (in spite of Zeller and others). The angels are incorporeal souls, created, finite, and localized: they are 'powers,' no doubt, doing God's will, but they are entirely different from 'the Powers' or Divine Ideas. These latter are the active manifestations of the energy of God, which give to creation all the reality, as well as all the order and beauty, which it possesses.

In the hierarchy of Powers, the Logos of God is, as already remarked, second to God Himself (*Leg. Alleg.* ii. 21). The name Logos comes from Stoicism, but for the content of the word Philo is more indebted to Plato. The Stoical notion of Logos as active and quickening force is less prominent than the Platonic expressions 'idea of ideas' and 'archetypal idea.' The Logos of Philo, in fact, coincides with the Platonic Νοῦς, and the intelligible world is the mode which he assumes in creating: 'in the Logos are inscribed and engraved the constitutions of all other things.' As the principle of orderly differentiation in the natural world, he is called the 'Cutter' (τομεύς). The inferior ideas, gathered up in the Logos, constitute the multiplicity in unity of God's creation. A difficult question is raised by the distinction between the inward (ἐνδιάθετος) and the uttered (προφορικός) Logos in man, which corresponds to a distinction in the universal Logos. 'The Logos is double both in the universe and in the nature of man' (*Vit. Mos.* iii. 13). The 'seal' of the Logos upon matter—the expressed thought of God—is not called the 'uttered Word'; but the distinction in the universal Logos seems to be between the thought of God in itself and the same thought made objective.

Another problem is the relation of the Logos to the half-personified 'Wisdom' of the early Jewish-Alexandrian literature. Philo disliked the gender of 'Wisdom'; and though he explains that 'its nature is masculine, not feminine,' he found the word less dignified as well as less plastic than Logos. 'Wisdom' is chiefly used by Philo of the Logos as informing the human soul, hardly ever of God's creative power. The word 'Spirit' is sparingly used of the Logos or Wisdom inhabiting the soul of man. The question as to the personality of the Logos is better undiscussed. Neither Philo nor any Greek cared to define personality, a concept which has no name in the Greek language. He sometimes speaks of 'Logoi' in the plural, with no more hesitation than when we speak indifferently of 'the law' or 'the laws' of nature. For this very reason he employs poetical or mythical personification quite freely. The Logos is the constitutive principle of human individuality; he is not himself an individual. The Logos-doctrine of Philo is therefore nearer to what, in Christianity, became Monarchianism than to the Arianism with which it has been compared, or to Athanasian orthodoxy. See, further, the article LOGOS.

As the Logos of God is the archetype of human reason, the mind of man is nearer to God than any other created thing. The human soul is the only worthy temple of God; those in whom God dwells may justly be called His sons. Knowledge of God, gained by imitation of Him and likeness to Him, is the highest good for man. Evil consists in separation from God, and ignorance of Him; the cause or fountainhead of moral evil is selfishness (φιλαυτία), especially when combined with arrogance and conceit (μεγαλαυχία). 'To speak, like Esau, of "*my* birthright" and "*my* blessing," is proof of boundless ignorance, and of a mean, servile disposition; for it belongs to God alone to say "Mine"' (*Leg. Alleg.* iii. 70). Philo does not identify evil with ignorance; for he clearly teaches that sins committed in ignorance are pardonable; but he is careful to distinguish between the ignorance which we cannot help and that which is due to pride or selfishness. The corruptible body always tends to press down the soul; not that it is evil in itself, for matter has no moral significance, good or bad, apart from our use of it; but, as a matter of experience, the bodily needs and appetites are a clog upon spirituality. The 'powers' of sense, though Divine gifts, are irrational, urging us to their own gratification without thought of consequences; but to make this gratification our object is wrong and ruinous. The passions (πάθη) for the most part operate in opposition to reason, and are therefore bad; but the good man is not destitute of such μισοπόνηρα πάθη as pity and love.

The great helper of mankind in the ascent to God is the Logos; and here Philo tries to unite his Jewish reverence for the written 'Word' of God with his Platonic idealism. His description of the virtuous life is on the whole very modern in sentiment. Self-discipline is not an end in itself. Such exercises as fasting, abstinence from the bath, and sleeping on the ground are useless and unprofitable labours, which injure the soul as well

as the body (*Quod. det. pot.* 7). It is true that we have a war to wage, 'the most difficult and troublesome of all wars,' against our bodily appetites, and that in practice we must often regard our bodies as by nature evil; but Philo advises neither ascetical austerities nor withdrawal from the world. 'The serpent, pleasure, bites us in the wilderness'; it is safer to live in the world, to accept responsibilities and dignities, and show how such a career can be followed without contamination and to the good of others. 'Those who assume a squalid and melancholy appearance, and say that they despise glory and pleasure, are hypocrites.' Unworldliness is to be gained only by knowledge of the world. At the same time, such luxury as was prevalent among the wealthier classes in Egypt is wrong. The good things of the world should be used sparingly, that the soul may not be entangled in the corruptible elements. Truthfulness in speech is strongly insisted on, and taking oaths is deprecated as needless for an honourable man, whose word ought to be sufficient. The only acceptable worship is that of the soul, and truth the only sacrifice (*Quod. det. pot.* 7); ceremonial observances and rich offerings do not make a man pious. Piety and justice seem to share the throne as the chief of the virtues. The soul is in its essence immortal, and will be rewarded or punished in a future state for its life here; but Philo discourages this line of thought; virtue and vice are their own reward and punishment; heaven and hell are within us. To enjoy an innocent and quiet mind, free from unruly passions; to feel the presence of the Holy Spirit of Wisdom within us; to share at last in the peace which passes all understanding, and to see God as He is—this is the goal which Philo sets before himself and his readers. 'The climax of blessedness is to stand steadfastly and steadily in God alone.' A resurrection of the body has no place whatever in his creed.

Philo has been very variously estimated as a thinker. Dähne treats him with contempt; Zeller thinks that his whole system is vitiated by a fundamental contradiction—the attempt to achieve union with a Being whose very notion makes such union impossible. Such a scheme, he suggests, could be the creation only of a consciousness at discord with itself and the world. Vacherot emphasizes the inconsistency of borrowing now from Plato and now from the Stoics, the result being an 'incoherent syncretism' dragged into the service of Judaism. Siegfried is impressed by his complete abandonment of the old Jewish religion, which nevertheless he affects to defend in words. 'No Jewish writer contributed so much to the dissolution of Judaism. The history of his people becomes in his hands mainly a didactic symbolic poem, by which he inculcates the doctrine that man attains to the vision of God by mortifying the flesh. The God of Philo was an imaginary Being, who, in order to gain power over the world, had need of a Logos, to whom the palladium of Israel, the unity of God, was sacrificed.' E. Caird, criticizing Philo's whole system from the Hegelian standpoint, shows that he had no conception of a historical process of evolution, and objects that his world is regarded as related to God, but not God to the world. (For a consideration of this criticism, which affects Plotinus more than Philo, see the article on NEO-PLATONISM). A more favourable estimate than any of these is given by Drummond, whose exhaustive treatise takes rank, with Siegfried's book, as the most valuable exposition of Philo's theology. No sane critic could place Philo in the same rank as a great original thinker like Plotinus; but the unfavourable estimates of him have proceeded mostly from critics who extend their condemnation to the school of Plato generally, in the interests of some rival system. The 'inconsistencies' which have been so freely attributed to Philo are mainly the difficulties which all who believe in a God at once transcendent and immanent must be prepared to face, though some of them are mere misunderstandings due to an unsympathetic and sometimes superficial study of his writings. His belief in the possibility of immediate communion with 'the first God' in visions is the result of personal experience. He describes, modestly and clearly, 'what has happened to himself a thousand times' (*de Migrat. Abrah.* 7). In the face of this passage it is difficult to maintain that in Philo God 'is not related to the world,' or, with Dähne, that he 'robs the human race of their God.'

The extent of the influence exercised by Philo's writings in the first century, and early part of the second, is very difficult to determine. As regards pagan philosophy, he remained both then and afterwards outside the pale. Neo-Platonism, so far as we can judge, is not directly indebted to him. The question whether St. Paul and the author of the Fourth Gospel had read Philo has not been decided. As regards the latter, a strong case may be made out on either side. That the author of the Gospel was steeped in the philosophy of the Jewish Alexandrian school is certain; but his standpoint differs from that of Philo in several particulars, and many of the most characteristic Philonic words are absent from the Gospel, so that direct dependence cannot be proved. The same may be said of the Epistle to the Hebrews. The Epistle of Barnabas, as Siegfried shows, follows the Philonic rules for allegorical interpretation. Justin Martyr's Logos-doctrine is nearer to Philo's than that of the Fourth Gospel; and there are parallels which suggest a direct knowledge of Philo's writings. It is probable also that he was read by some of the Gnostics of the 2nd century. Clement was well acquainted with Philo, and seems to borrow from him not only many fanciful applications of the allegorical method, but several characteristic theological and philosophical terms; though these latter may be part of the common stock of ideas at Alexandria. The same may be said of Origen, between whom and Philo many correspondences are discovered by Siegfried. Eusebius frequently quotes Philo; and, to come to the Latin Fathers, Ambrose conveys whole sentences from him into his writings, so that a Jewish commentator has (much too strongly) called Ambrose 'Philo Christianus.' Jerome is also much influenced by Philo's interpretations of the Old Testament.

LITERATURE.—Text of Philo: Richter (1851–53). The best critical expositions of his system are in Dähne, *Geschichtl. Darstellung der Jüdisch-alexandrinischen Religionsphilosophie* (1834); Zeller, *Die Philosophie der Griechen*, iii. 2 (1881); Siegfried, *Philo von Alexandria* (1875); J. Drummond, *Philo Judæus*, 2 vols. (1888). Of these the most trustworthy are Siegfried and Drummond. Dähne's book is marred not only by want of sympathy with his subject, but by some strange errors, *e.g.* that Philo anticipated the Johannine identification of the Logos with the Messiah. There is an excellent article on Philo in the *Jewish Encyclopedia* (x. 6–18).

3. Alexandrian Christianity.—Until the age of Clement, the Christian Church at Alexandria lay in obscurity. Our information is so scanty that we cannot even say whether the ideas of Philo and his school were a factor in Alexandrian Christianity during the greater part of the 2nd century. The Church in the Egyptian capital retained a democratic constitution until Clement's lifetime, perhaps even consecrating its patriarchs by the hands of its college of presbyters. It had at this period no fixed liturgy, and no definite distinction between the Eucharist and the Agape. In contrast with this primitive organization, there grew into importance,

in the later half of the century, the remarkable Catechetical School, the earliest διδασκαλεῖον in close relation to the Church. (The schools of the Apologists — Justin, Tatian, etc. — were private ventures). The oldest Gnostic schools for the study of religious philosophy were in Egypt, and the Christian Catechetical School may have been modelled partly upon these and partly upon the Jewish high schools (cf. Euseb. *HE* v. 10, ἐξ ἀρχαίου ἔθους διδασκαλείου τῶν ἱερῶν λόγων παρ' αὐτοῖς συνεστῶτος). The school emerges from darkness under Pantænus; but we know very little about its management either under him or under Clement. There were no class-rooms or collegiate buildings. The head of the school gave informal instruction in his own house, sometimes by lectures, sometimes by conversation classes (Orig. *c. Cels.* vi. 10). The usual course was three years (*Const. Ecc. Egyp.* iii. 42). No fees were charged. The lecturer was supported by free gifts from rich students. The education was on much the same lines as that advocated by Philo. The aim was the acquisition of γνῶσις—the higher theology and religion. The preparation consisted partly of moral discipline and partly of the study of philosophy, to which must be added the art of expounding, in accordance with the principles of allegorism, the books which contain the special revelation. The Christian teachers placed Greek philosophy and the Old Testament Scriptures side by side as propædeutic to the higher knowledge; and among philosophers, though the Platonists and Stoics were most studied, none were excluded except the 'godless Epicureans.' The commentaries of Origen show that Biblical study held a very important place in the course. The list of Heads of the School is given as follows:— Pantænus, Clement, Origen, Heraclas, Dionysius, Pierius, Theognostus, Serapion, Petrus, Macarius(?), . . . Didymus, Rhodon. (Arius, according to Theodoret [*HE* i. 1], was catechist; but it is very unlikely that he was ever Head of the School). The Catechetical School lost its importance during the Arian controversy, and was further weakened by the attacks upon Origen's orthodoxy. It was destroyed in the unhappy struggle between Theophilus of Alexandria and the barbarous orthodoxy of the Egyptian monks.

(*a*) **Pantænus**, the first Head of the School, is said by Eusebius to have been a Stoic, by Philip of Side to have been 'an Athenian, a Peripatetic.' In any case, he was learned in Greek philosophy, and, according to a doubtful tradition, visited India as a missionary before his appointment at Alexandria. The notices of his teaching indicate that he led the way in the allegorical interpretation of Scripture. His work seems to have been more catechetical than literary, and the most interesting fragment of his teaching has been preserved in the form of question and answer. 'Pantænus, being asked in what manner Christians suppose God to know reality, replied, He neither knows sensible things by sense, nor intelligible things by intellect. For it is not possible that He who is above the things that are should apprehend the things that are according to the things that are. We say that He knows things that are as acts of His own will' (ὡς ἴδια θελήματα, Maximus Conf., *Schol. in Greg. Naz.*). Clement was almost certainly a hearer of Pantænus (not *vice versa*, as Philip of Side says); and it is highly probable that Pantænus is the 'Sicilian bee' whom Clement discovered 'hiding himself' in Egypt, and in whom he 'found rest.'

(*b*) **Clement of Alexandria.** — Titus Flavius Clemens was born about A.D. 150, not at Alexandria; perhaps at Athens (Epiphanius). After many years of leisurely travelling in Italy, Greece, and the East, he came to Alexandria, where, about 200, he succeeded Pantænus as Head of the Catechetical School. In 202 or 203 he was compelled by the persecution under Severus to quit Alexandria, probably for Palestine and Syria. He was still living in 211, but dead in 216. We do not know at what period of his life he embraced Christianity, or what were the stages of his conversion.

The works of Clement are—

(1) The Λόγος Προτρεπτικὸς πρὸς Ἕλληνας, an exhortation to the Greeks (not 'Gentiles,' as Jerome mistranslates it) to abandon paganism. This treatise was probably written about 190. (2) The Παιδαγωγός, written after the last-named, a practical instruction dealing chiefly with the conduct of social and personal life. The 'Tutor' is Christ Himself, the great Instructor of all mankind. (3) The Στρωματεῖς (title in full κατὰ τὴν ἀληθῆ φιλοσοφίαν γνωστικῶν ὑπομνημάτων στρωματεῖς, *Strom.* i. 29), *Miscellanies*, a much longer treatise, in seven, or eight (Photius, Jerome) books. (The fragment of a logical treatise called Book viii. does not seem to belong to the Στρωματεῖς,* and the end of Book vii. promises another treatise rather than another Book: ἀπ' ἄλλης ἀρχῆς ποιησόμεθα τὸν λόγον). The *Miscellanies*, which are issued 'in studied disorder,' that the mysteries of knowledge may not be made too plain to readers who are unfit for them, expound the principles of a reasonable and philosophic faith. The treatise was probably designed to lead up to another, which Clement intended to be called Διδάσκαλος. (This intention is implied in *Pæd.* ii. 76, iii. 97, and other places). This would have completed the series begun in the Προτρεπτικός and continued in the Παιδαγωγός, initiating the reader into the higher γνῶσις. But Clement probably found that he could not publish such a work without violating his principle of reserve in communicatiog religious truths. Some have identified the Στρωματεῖς with the promised Διδάσκαλος; but de Faye and Mayor have shown that several promises are unfulfilled in the Στρωματεῖς, and that the work has no appearance of finality. It was probably a sort of *hors d'œuvre*, forming no part of the original scheme. (4) Ὑποτυπώσεις or *Outlines*, in eight books. These were notes and comments on the Old and New Testaments, including, says Eusebius, contested books such as Jude, Barnabas, Apocalypse of Peter, but not the whole of the Old Testament. Photius passes some severe strictures on this work, in which Clement, he says, teaches that 'matter is timeless,' that the Son is a creature, that there were many worlds before Adam, that there are two Λόγοι, of whom only the lower, a Power or Effluence of the Divine, was incarnate; together with metempsychosis and docetism. (5) Τίς ὁ σωζόμενος πλούσιος, still extant; an interesting sermon, ending with the well-known story of St. John and the robber. (6) Several other treatises are mentioned by Eusebius and Jerome, and (as subjects on which he intended to write) by Clement himself.

The view adopted above as to the character of the *Miscellanies* and the non-fulfilment of the design for a *Didascalus* is of great importance for the understanding of Clement's theology. In *Strom.* iv. 1 he announces his intention, after dealing with other subjects, of introducing his readers to the 'true gnostic science of nature,' initiating them first into the lesser and then into the greater mysteries. But from such initiation he carefully refrains in the *Miscellanies*, for, as he says, 'to put everything into a book is as bad as to put a sword into a child's hand.' We have, then, to conclude that Clement has suppressed what he considered the highest part of his teaching. It is safest, he says, to learn and teach such things orally. What was this esoteric teaching? It is safe to guess that it was mainly connected with Biblical exegesis. Clement believed in an authoritative tradition of interpretation, handed down from Christ Himself through Peter, and James, and John, and Paul. It probably allegorized narratives which the *simpliciores* treasured as bare facts. Besides this, the 'Gnostic' doubtless allowed himself to develop a mystical philosophy of religion, which could not be fully imparted or even made intelligible to the public.

The conception of the earthly life of Christ as a grand symbolic drama or Divine mystery-play for the enlightenment of humanity, was quite in accordance with Alexandrian philosophy. And though no objection was taken to the supernatural element, as such, in either the OT or the NT, the esoteric teaching undoubtedly was that certain details in the former which were morally objectionable had only a symbolical truth. With regard to the philosophy of religion in its wider aspects,

* The critical problems raised by this fragment, the *Eclogæ*, and the *Excerpta ex Theodoto*, have been discussed with different results by Zahn, Ruben, von Arnim, and de Faye.

it is seldom necessary to read between the lines in Clement. He was not a profound thinker, but a well-read and able man, who accepted in an intelligent manner the syncretistic philosophy popular in learned circles at Alexandria. He has been called cloudy and rhetorical, and has been accused of taking his quotations from anthologies of elegant extracts. But the obscurity is rather of arrangement than of thought, and the rhetoric is not often obtrusive. In Clement an ardent and impetuous imagination is joined to a serene soul and a clear intelligence. In fact it is worth observing, in view of the often repeated statement that rhetoric, 'the evil genius of Greece,' infected Greek Christianity, that Minucius and Tertullian are much more 'rhetorical' than Justin or Clement.

Clement, as a Christian philosopher, is aware that he has to encounter prejudice and mistrust. Gnosticism, at this time, was much more dreaded in the Church than fifty years earlier, when it was really a formidable intellectual force. At the end of the 2nd cent. the Christians were better educated, and the growth of rationalism and speculation in the Church alarmed many. Tertullian argues that, since 'hæreses a philosophia subornantur' (*de Præscript.* 7), philosophy should be banished from the Church; and Clement is well aware that the majority agree with him. 'Philosophy,' he protests, 'is not a goblin who wants to run away with us, as the vulgar think' (*Strom.* vi. 10). It is not the privilege of the few; 'with us, philosophers are those who love Wisdom, the Author and Teacher of all things' (*Strom.* vi. 7). But he feels that the obscurantists, with their cry of *μόνη καὶ ψιλὴ πίστις* (*Strom.* i. 43), are formidable: he must even vindicate his right to publish a book at all! Must literature be left only to pagans and atheists?, he asks. Must teaching be only by word of mouth? His doctrine is not his own, but handed down from the Apostles; and, lastly, people are not obliged to read him. Such a defence throws much light on the Christian distrust of culture even at Alexandria.

To turn to Clement's theology. God is a Being (*οὐσία*), but above space and time, 'beyond even the One and the Monad,' and strictly nameless, though we are obliged to give Him names. In a doubtful fragment (on which see Bigg, *Bampton Lectures* [1886], p. 64) he has been thought to deny to God consciousness of the external world; but probably Clement only means that God knows reality *not* as external to Himself. He certainly does not teach that the Father has no consciousness except through the Son. God takes pleasure in our salvation, and in that only (*Strom.* vii. 3; *Protrept.* 94, 95, 116): His nature is profoundly *moral*: He is good because He *wills* to do good, not like fire, which radiates heat automatically (*Strom.* vii. 42, and esp. *Strom.* vi. 104, *ἐπεὶ καὶ ὁ θεὸς οὐχ ᾗ φύσει ἀγαθός ἐστι, ταύτῃ μένει μακάριος καὶ ἄφθαρτος . . . ποιῶν δὲ ἰδίως ἀγαθά, θεὸς ὄντως καὶ πατὴρ ἀγαθὸς ὤν.*). Such passages must be considered as well as those in which he tries to outdo Plato in emphasizing the transcendence of God.

Nevertheless he insists that no man cometh to the Father except through Christ, the Logos. He rejects the Stoic pretension to 'resemble God' (cf. however, *Strom.* vi. 113, quoted below), and quotes very pertinently the words of Christ Himself, 'It is enough for the disciple to be as his master.' His Logos-doctrine, which is the basis of his Christology, is less metaphysical and more religious than that of Philo. Although the direct dependence of Clement on Philo, as regards his conception of the Logos no less than in his principles of allegorism, has been conclusively established by Siegfried, it is plain that, while Philo is mainly preoccupied with the desire to explain the formation and government of the universe, Clement is much more interested in religious psychology. In the 150 years which elapsed between the two writers, the centre of gravity in 'philosophy' had changed from metaphysics and cosmology to religion and ethics (*ὅσα εἴρηται . . . δικαιοσύνην μετὰ εὐσεβοῦς ἐπιστήμης ἐκδιδάσκοντα, τοῦτο . . . φιλοσοφίαν λέγω*, he says). The immanent Logos of the Stoics was now more thought of than the Platonic 'Idea of Ideas.' Clement's attempt to combine the two conceptions may be the excuse for Photius' charge that he taught 'two Logoi.' Or perhaps Clement was perplexed by problems about the Father's consciousness while the Son was incarnate. But the 'two Logoi' do not appear in his extant treatises. The Logos in Clement is the instrument in creation (He is often called 'creator'); He introduces harmony into the universe, of which He is the 'pilot.' He created man in His own image. He is spoken of as 'the Will of God,' 'a power, or energy, of God,' and in particular as 'Saviour,' a term to which, we think, there is no parallel in Philo. He was a 'lover of mankind' from the beginning (*Protr.* 6); it was He who revealed Himself in the OT theophanies. Since the Incarnation, He has been the 'Saviour,' 'Tutor,' and 'Teacher' of Christians, of those, that is, who have been 'initiated' by the laver of illumination (*Pæd.* i. 26) into the true mysteries. In his soteriology, baptism is decidedly more prominent than redemption by the blood of Christ. Very characteristic is the presentment of salvation as an *educational* process, by the side of the other conception—equally characteristic of the period—of salvation as the acquisition of immortality.

Of the Third Person of the Trinity, Clement says but little. The Alexandrians, in point of fact, hardly needed a Third Person; for the functions of the World-Soul, the Third Person of the Platonic Trinity and the God of the Stoics, were discharged by the Logos in addition to those of the Platonic *Νοῦς*; and, were it not so, there was no close resemblance between the Holy Ghost of Christianity and the Neo-Platonic Psyche. Clement makes the orthodox statements about the Person of the Holy Ghost, and, for the rest, puts the subject aside as a *θαῦμα μυστικόν*.

Clement's psychology is Platonic. There are three parts of the soul—the irrational soul, the rational soul, and the *σπέρμα πνευματικόν*. The third is evidently identical with the *κέντρον ψυχῆς* of Plotinus, and the *synteresis* of mediæval mysticism. But Clement ascribes so much Divine inspiration to the rational soul that the tripartite classification seems hardly necessary. Origen discards it. Clement guards himself against the common tendency to associate evil with matter. The body is not naturally evil, he says, nor is the soul naturally good. Rather the soul is that which wills, the body that which acts. On preexistence there is no definite statement. It was regarded as an open question in the Church, and probably Clement, like Origen, was inclined to believe it, though without accepting the Platonic doctrine of metempsychosis. He admits no hereditary guilt. God punishes only voluntary sins; the sins forgiven in Baptism are actual transgressions; infant Baptism is not mentioned (Bigg, p. 81).

The most distinctive feature of Clement's ethics is his doctrine of the Two Lives. This classification was common to most of the religious and philosophical teaching of the time, and was exaggerated into an absolute difference by the Gnostics. Clement is as much opposed to Gnosticism as he is anxious to utilize and harmonize Platonic and Stoic doctrine. Faith and knowledge, the principles of the lower and higher life respectively,

are necessary to each other, and closely related. Faith is defined as 'a voluntary anticipation (*πρόληψις*) of things unseen,' 'an uniting assent to an unseen object,' 'the foundation of rational choice.' 'Voluntarily to follow what is useful is the first condition of understanding it.' Unless knowledge is based on faith, it remains merely intellectual assent, and is neither stable nor effective. The motive powers of faith are hope and filial awe. 'God is just, because He is merciful.' Faith, however, must go hand in hand with inquiry (*ζήτησις*): it is the nature of living faith to develop into knowledge (*γνῶσις*). The perfect Christian, therefore, is the 'Gnostic,' a word which Clement will not abandon to the sectarians who at last monopolized it. The portrait of the Gnostic is given in *Strom.* vii. It is of supreme importance for the understanding of Clement as a teacher, because it anticipates the final part of his scheme, which was never executed. He does not expound his Gnosticism, but he does show us its fruits. The Gnostic is the man whose character has been formed by the complete religious philosophy for which the earlier books of the *Stromateis* are a preparation only.

The aim of the Gnostic is to 'become like to God.' Clement is not afraid, speaking as a Greek, to say that he *μελετᾷ εἶναι θεός* (*Strom.* vi. 113). The Divine attribute of which he is thinking in such expressions is the higher knowledge, that which has for its object the 'intelligible world.' In one place (*Strom.* ii. 47) he says in more Christian language that the highest contemplation is knowledge of God, which is inseparable from likeness to Him. In Stoical form he says (*Strom.* iv. 39) that Gnosis is the purification of the ruling faculty of the soul; and everywhere the necessity of moral even more than intellectual training is insisted on. In the seventh book the 'canons' of the Gnostic character are said to be 'gentleness, kindness, and noble devoutness,' and the 'achievements of the Gnostic faculty' are 'to know what is right, to do what is right, and to help others to do it.' 'He is the true athlete, who in the great stadium, this beautiful world, is crowned for the great victory over all his passions.' 'He is persuaded that for souls that have chosen virtue, progress is always towards something better, till they are brought to the Great High Priest, in the vestibule of the Father.' Especial prominence is given to the two words *ἀπάθεια* and *ἀγάπη*, the former of which is the perfected work of temperance, when the passions are no longer even felt: *οὕτως ζῆσαι ὡς ἄσαρκος* (*Strom.* vii. 79; and still stronger *Strom.* vi. 75): and the latter is the climax of the whole Christian life, the end which, like the beginning, faith, is not matter of teaching (*τὰ ἄκρα οὐ διδάσκεται*). The statement that Clement exalts the intellect above the affections is untrue. The words *κυριωτάτη πάσης ἐπιστήμης ἀγάπη* (*Strom.* vii. 68) are typical. The 'intellectual love of God' affords perfect satisfaction to all our faculties, and unifies the entire personality. 'Conduct follows knowledge as surely as the shadow the body.' The will is not neglected. Faith in the first instance is an affair of the will, and is the necessary foundation of knowledge, the superstructure (*Strom.* ii. 11, v. 2, vii. 55): 'but both are Christ, the foundation and the superstructure too.' Faith exists in a higher and a lower form—*πίστις ἐπιστημονική* and *π. δοξαστική* (*Strom.* ii. 48).

As a thinker, Clement is most important as the author of a syncretistic philosophy of religion, fusing Platonism and Stoicism in a Christian mould. In Stoicism he found a natural religion, rationalism, moralism, and a predominant interest in psychology and apologetics, in Platonism a cosmology, doctrines of revelation, redemption and salvation, and contemplation as the highest state. 'In Clement,' says Hort, 'Christian theology in some important respects reaches its highest point. . . . There was no one whose vision of what the faith of Jesus Christ was intended to do for mankind was so full or so true' (*Ante-Nicene Fathers*, p. 93).

LITERATURE.—The best edition of the text of Clement is in Stählin, *Gr. christl. Schriftsteller der drei ersten Jahrhunderte* (1905). Important for the study of Clement are Zahn, *Forschungen zur Geschichte des Neutestamentlichen Kanons*, etc., vol. iii. (1884); Bigg, *Christian Platonists of Alexandria* (1886); P. M. Barnard, *Quis Dives Salvetur* (1897); de Faye, *Clément d'Alexandrie* (1898); Capitaine, *Die Moral des Clemens von Alexandria* (1903); Hort and J. B. Mayor, *Clem. of Alex. Miscellanies*, Book vii. Cf. also an article by the present writer in *Church Quarterly Rev.* for July 1904.

(*c*) Origen (Origenes Adamantius—the latter a real name) is said by Epiphanius to have been 'an Egyptian by race,' which probably does not mean a Copt. Porphyry calls him 'a Greek,' and his father, the martyr Leonides, has a Greek name. He was born about 185, was carefully brought up as a Christian, became a pupil of Pantænus and Clement, and already in his 18th year occupied informally the position of Head of the Catechetical School, the older teachers having been scattered by the persecution under Severus. For many years he was occupied in laborious study and teaching, mainly on the Bible; but he attended the lectures of Ammonius Saccas, and was himself consulted by many non-Christians. In 215 he was driven from Egypt by mob-violence, and taught for some time at Cæsarea, even preaching in the churches, though still a layman, till Demetrius recalled him to Alexandria. On his return he devoted himself mainly to writing Biblical commentaries, leaving to his coadjutor Heraclas most of the catechetical teaching. Meanwhile his relations with Demetrius became strained, and he availed himself of invitations to visit Palestine, Greece, and Asia Minor (about 227). In Palestine he received orders from the bishops there, without the consent of Demetrius. That prelate resented his action as contumacious, and Origen left Alexandria for the last time in 231. The Egyptian Synod condemned him, and even declared his priesthood invalid; but the sentence was disregarded in Palestine, where Origen laboured (at Cæsarea) for the last twenty years of his life. He was tortured and imprisoned in the Decian persecution (250), and, broken in health, died at Tyre in 253.

A complete list of Origen's works would occupy too much space here. The following are the probable dates of the most important treatises:

220–228. Commencement of *Hexapla*. Com. on Canticles.
228–231. Commentaries on St. John, Genesis, etc.; *Miscellanies; de Principiis.*
232–238. Commentaries continued; *Exhortation to Martyrdom.*
238–240. Commentaries on Ezekiel.
240. *Letter to Julius Africanus*; Commentaries on Canticles (10 books).
241–248. Homilies on OT; New Testament Commentaries; *Hexapla* finished.
249. The eight books *contra Celsum.*

Of these the most valuable for an understanding of Origen's theology and philosophy are the *de Principiis*, the *Commentary on St. John*, and the *contra Celsum*; to which may be added the beautiful treatise *On Prayer* (date uncertain; before 231), and the collection of extracts from his writings called *Philocalia*, made by Gregory of Nazianzus and Basil.

Principles of exegesis.—Allegorism in Origen is an instrument of apologetics, and at the same time a device to gain freedom of thought. He insists that no word or letter of Scripture can lack a profound meaning, and that every historical text has a body, soul, and spirit, *i.e.* a literal, moral, and spiritual sense. History is compared to a ladder, of which the literal facts are the lowest rungs (*in Ioh.* i. 20).

This metaphor would bind us to do justice to the literal meaning first. But Origen, like Philo, at times expresses almost contempt for the literal narrative. 'What man of sense,' he asks, 'will suppose that the first and second and third day, and the evening and morning, existed without a sun and moon and stars? Or that God walked in a garden in the evening, and that Adam hid himself under a tree? Or that the devil took Jesus into a high mountain, whence He could see the kingdoms of the Persians and Scythians and Indians?' (*de Princ.* i. 16). All such passages are valuable only for their higher meanings. 'There are some passages,' he says, 'which are not literally true, but absurd and impossible' (*de Princ.* iv. 18). So 'some of the laws of Moses are absurd and others impossible.' Moses orders the sacrifice of an animal (the τραγέλαφος) which does not exist in nature. 'I should blush to admit that God has given such commands, which are inferior to many human enactments.' 'Scripture contains an unhistorical element, inwoven with the history,' in order that the worthlessness of the latter may drive us to seek the spiritual meaning.

We may wonder that Origen did not make more use of the theory of a progressive and gradual revelation, which he asserts in several places. But his main object was to save the OT (which was attacked and ridiculed by the Gnostics) for the Church, while at the same time repudiating the obligation to obey the Law, which was still pressed on the Christians by the Jews. The allegoric method served both ends. It must also be remembered that the 'homily,' as established by custom at Alexandria, necessitated a very plastic treatment of the text. The preacher or lecturer was expected to go straight through some book of the OT, extracting something edifying from each chapter. What could he say about Joshua but that the Canaanite kings were 'non tam reges quam vitiorum nomina'? The tone of these interpretations is often half-ironical, though the moral lesson is pressed home with all seriousness. His treatment of NT difficulties shows even greater boldness, and is quite startling. The discrepancies between the four Evangelists are, he thinks, fatal to their credit unless we look for their truth in the 'spiritual sense.' There is (so Jerome makes him say) an Eternal Gospel, of which the actual Gospel is only the shadow. We must separate the αἰσθητὸν εὐαγγέλιον from the νοητὸν καὶ πνευματικόν. Thus he interprets the Fourth Gospel as a symbolic treatise, much as Loisy and others do now. But in his eyes all this exegesis was not the work of human ingenuity, but the gift of the Holy Spirit. Much of it was traditional: Clement seems always to copy, not to invent, his allegorisms. Origen, without making any boastful claim, believes himself to be illuminated.

Doctrine of God.—As 'Spirit' and 'Light,' 'God is a simple intellectual nature, in whom is no greater nor less, higher nor lower, the Monad, Unit, Mind, and Fountain of all Mind' (*de Princ.* 1). As against the Christian Stoics, he asserts that God is incorporeal, and he is more careful than Clement to avoid Stoical phrases savouring of materialistic pantheism. God is spaceless and timeless, 'everywhere and nowhere,' 'natura simplex et tota mens.' Being unchangeable, He cannot feel anger, hatred, or repentance. Punishment is not His work, but the necessary consequence of sin. And yet He is long-suffering, merciful, and pitiful: He has 'the passion of love' (*in Ezech. Hom.* vi. 6, Bigg, p. 158). God is not infinite, but self-limiting (*in Matt.* xiii. 569): His almightiness is limited by His goodness and wisdom (*c. Cels.* iii. 493). Origen has not solved the problem of reconciling these moral attributes with the Platonic transcendence; for a fine but vague passage on the subject see *in Num. Hom.* xxiii. 2. He has less confidence than Clement in the *via negativa* as a path to reality; the most intimate knowledge of God is gained not by abstraction, but by direct revelation; grace is implanted in the soul μετά τινος ἐνθουσιασμοῦ. On this side he is more of a mystic than Clement. Moreover, by emphasizing the attribute of Goodness (ἀγαθότης) rather than that of self-existent Being, he gives the idea of God a richer and more ethical content.

But the doctrine of God in Origen involves at every point the problem of the Trinity. The Son or Logos is the centre of his theology. He is co-eternal and co-equal with the Father. 'There never can have been a time when He was not. For when was the Divine Light destitute of its effulgence? . . . Let him who dares to say there was a time when the Son was not, consider that this is the same as to say there was a time when Wisdom, the Word, and life were not' (*de Princ.* iv. 28). But we must distinguish between those attributes (ἐπίνοιαι) which belong to the Son essentially, and those which are assumed for the purpose of redemption. To the former class belong Wisdom, Word, Life, Truth; to the latter, Firstborn from the dead, Propitiation, Light, Shepherd. The former class are νοητά, the latter αἰσθητά. 'Happy are they who need the Son of God no longer as Physician, Shepherd, Redemption, but as Wisdom, Word, Justice, and the other perfect attributes' (*in Joh.* i. 22). He is willing to identify the Logos with the Platonic κόσμος νοητός (*in Joh.* xix. 5; *c. Cels.* vi. 63), only protesting against subjective idealism (*de Princ.* ii. 3, *mundum in sola phantasia et cogitationum lubrico consistentem*). The Son is therefore essentially eternal and unchanging, not merely the λόγος προφορικός of God; He '*was* (not 'became') with God,' as St. John says. He is absolute Truth, Righteousness, and Wisdom; but the text, 'none is good save one, that is God,' forbids us to call Him the absolute Good, though 'in regard to us He is the absolute Good.' Prayer may be addressed to the Son or to the Spirit, but the highest prayer is that which is addressed to the Father in Christ's name.

The charge of subordinationism in Origen's Christology cannot be maintained. It is unlikely that he used the word ὁμοούσιος, in the Nicene sense, of the Son, because for a Platonist it is hardly correct to speak of the οὐσία of God, who is ὑπερούσιος; but words like οὐ κατὰ μετουσίαν ἀλλὰ κατ' οὐσίαν ἐστὶ θεός (*Sel. in Psalm.* 135) should have been enough to establish his orthodoxy on this side. The doctrine of ἐπίνοιαι (see above), varying with the grade of spirituality attained by the believer, explains some apparent inconsistencies of expression, and his reverence for Scripture (*e.g.* 'My Father is greater than I') explains others. The subordination which he teaches is one of person and office, not of essence. 'The Son is less than the Father, as reaching only to rational beings; while the Father, holding all things together, reaches to everything. The Holy Spirit is less [than the Son], as extending to the saints only' (*de Princ.* i. 3). In the Incarnation the Son united Himself with a soul which had remained absolutely pure in its pre-existent state (*de Princ.* ii. 6). Like other souls, it was eternally united to the Word. It was free, like other souls, but so perfectly and inseparably did it cleave to the Word from the beginning, that the union of the two is like a molten mass of metal always radiating a white heat. By this union it was saved from all possibility of sin. His body was also pure and perfect. It was real flesh and blood, but of transparent beauty to those whose spiritual sight was purged. He rose from the dead, not in this flesh, but with that 'spiritual body' of which St. Paul speaks. 'Origen's view of the God-Man—a term which he first employed—differs from the ordinary view, generally speaking, only in so far as it is conditioned by his opinions of the pre-existence of the Soul and of the nature of the resurrection body' (Bigg, p. 189).

Origen speaks with much hesitation about the nature and office of the Holy Spirit. As a Person of the Trinity, He is co-eternal and co-equal with the Father and Son. 'The Spirit of the Father and

the Spirit of the Son is one and the same' (*in Rom.* vi. 13). He understood St. Paul well enough to observe that no distinction is made by him between the action of the Spirit and of the Son (*de Princ.* i. 3). But in one remarkable passage (*in Joh.* ii. 6) he raises the question whether the Spirit came into being through the Word (διὰ τοῦ λόγου ἐγένετο), or whether He has no separate essence (ἑτέραν οὐσίαν) from the Father and the Son. These speculations are so inconsistent with the strong Trinitarian doctrine elsewhere maintained, that they cause surprise. They show how fluid dogma still was when Origen wrote. But the influence of his teaching (in spite of the charges brought against him) certainly operated *against* subordinationism. With some hesitation he pointed to the true view that the sources of Essence, of Revelation, and of Inspiration must be completely equal—must be God in the same degree. The opposite view removes the supreme God from life and experience, and makes Him finally unknowable. Other significant *dicta* about the Trinity are that 'the Father begets, the Son comprehends, the Holy Ghost penetrates all'; and that 'things derive their essence from the Father, reason from the Son, and holiness from the Holy Ghost' (*in Rom.* vii. 13; *de Princ.* i. 3).

Cosmology and Psychology.—The world began in unity, and will end in unity. In this sense the end will be 'like the beginning,' but not identical with it, inasmuch as the beginning is the desire for a perfection which is only implicitly contained in the scheme, as designed by perfect Wisdom. God created the world 'out of nothing': matter, the lowest of the creatures, was created by Him immediately after the 'fall of the souls,' to prevent the world from being dissolved' (*de Princ.* ii. 1). God is neither the whole nor a part of the whole: the former conception contradicts His simplicity, the latter His sovereignty. His Spirit is no all-pervading subtle element, like the Stoic πνεῦμα. The world is distinct from God; it is His creation. It is eternal in the sense that it had no beginning in time; the entire scheme that we know is only a brief phase in an innumerable series of worlds. The original creation, Origen teaches, was of innocent spirits, who shared 'accidentally' or precariously the perfection which God possesses 'essentially.' Their fall from perfection was voluntary. Some (the angels and the stars, to which Origen attributes souls) remained in their first estate; others (sinful men and evil spirits) fell in various degrees, and can be restored only through the discipline of suffering. This world is constructed as the appropriate scene of their training, affording scope for the treatment proper to every degree of guilt. The fall of the souls was thus antenatal, but Origen teaches no metempsychosis. The story of the Fall in Genesis he is disposed to treat as mere allegory (*c. Cels.* iv. 40). The most succinct statement of his doctrine is in *de Princ.* ii. 8, ending νοῦς πως οὖν γέγονε ψυχή, καὶ ψυχὴ κατορθωθεῖσα γίνεται νοῦς, words which throw light on his psychology. 'Soul' is 'mind' in a fallen state; it is an adventitious principle, intermediate between 'flesh' and 'mind' or 'spirit.' In reality his psychology is dichotomic, though out of respect to St. Paul he preserves in words the distinction between 'soul' and 'spirit' (see esp. *in Joh.* xxxii. 2; *in Levit. Hom.* ii. 2).

The discussion as to whether Origen teaches the immateriality of the soul has been conducted on wrong lines. The soul for Origen is certainly immaterial, but it implies a body. 'The spirit,' he says, 'is with the soul as a master and director, associated with it to remind it of the good, and to accuse and punish it for its faults. If the soul is disobedient and obstinate in revolt, it will be divided from the spirit after it leaves the body' (*in Rom.* ii. 9). The soul which is exalted by following the spirit, and not only following but being transformed into spirit, must put off its nature as soul, and become spiritual (*de Orat.* 10). Here the 'spirit' resembles the impersonal νοῦς of Neo-Platonism; but the question whether it belongs or does not belong to our *ego* can be answered neither for Origen nor for any other mystical thinker. It is an essential part of his teaching that the existence of God and other fundamental truths of religion are 'sown in the soul' as matters of immediate apprehension (αἰσθησις). 'So long as we keep them, the Logos never leaves us' (*in Joh.* xix. 3). This θεία αἰσθησις is made to cover such sensuous experiences (of sight, hearing, smell) as the later Catholicism accepts under the name of mystical phenomena (*c. Cels.* i. 48); but such communications, though from a Divine source, are only externalized by our minds; 'God never speaks to us from outside' (*in Psalm.* xxvii. 1). From these 'seeds' spring the flowers and fruits of Divine knowledge, Christ revealing Himself under various aspects as the soul is able to receive Him. Corresponding to this psychological dispensation is the historical economy which, after the partial theophanies of OT, culminated in the Incarnation. The two are parallel aspects of the same Divine plan; it is meaningless to ask whether the historical Incarnation is the 'cause' of the soul's restoration. At the same time it must be admitted that Origen has a less firm grasp of the ideas of progress and development than Clement. He gives too much importance to the 'fall of Adam,' and in consequence his philosophy of history is both gloomier and less scientific than Clement's. His view of secular culture is also much less sympathetic.

Eschatology.—Clement had represented men in the future life as placed in different grades according to their moral deserts. The wicked will be subjected to disciplinary punishments till they are forced to own their guilt. Origen developed further the notion that all punishment must be disciplinary, since 'God can hate nothing,' and it is no part of His nature to render evil for evil. Moreover, immortal spirits (νοεραὶ φύσεις) cannot be consigned to perdition.

Here it is plain that Origen encountered great difficulties in reconciling his philosophy with the traditional Church teaching on the resurrection, last judgment, heaven, and hell. It is clear, he says, that the Gospels must not be understood literally. 'The stars' could not 'fall from heaven' upon the earth, for they are much larger than the earth. Our material bodies, which are dispersed among other organisms, cannot be reconstituted in the resurrection. Can we suppose that the damned will literally 'gnash their teeth'? No, he says; it is the 'spark,' or vital principle, which survives, and will make a new abode for itself, the resurrection body. Even when the soul becomes pure spirit, it will need a kind of body, for God alone is incorporeal spirit. Purgation must continue after death; 'even Paul or Peter must come into that fire.' But will any remain in torment for ever? Origen hopes and thinks not, but will not dogmatize; he remembers the guest who was cast into outer darkness, with no promise of pardon. There are passages in Origen which imply at least a *pœna damni* never to be made good; but he would himself have disclaimed any certitude on the subject. Only he insists that promises like 'love never faileth,' 'God shall be all in all,' must somehow be fulfilled. Even the devil *might* find salvation, as a spirit made in the image of God, though, as devil, he would be destroyed (*in Rom.* v. 3). The final consummation is complete likeness to God: 'God shall be all in all'; *i.e.* He will be all in each individual (*de Princ.* v. 6). Then there will be no more diversity, when all shall have reached the highest degree of perfection.

Esoteric Christianity.—Origen believes that the Logos enlightens all men according to their capacities. Current Christianity is the best that the average man can assimilate. It includes mythical stories, which exist both in OT and NT; it offers rewards and punishments as inducements to virtue, and communicates truths in veiled forms and images. But it is not a matter of indifference what symbols are presented to the 'common man'; it is the religion of Christ alone which must be accepted by

all, though under different aspects. The Gnostic learns that the objects of religious knowledge have only a supramundane history: the 'eternal' or 'spiritual' Gospel 'places clearly before men's minds all things concerning the Son of God, both the mysteries shown by His words, and the things of which His acts were the riddles' (*in Joh.* i. 9).

Such passages have been harshly interpreted as implying that the Gnostic has no further need of the historic Christ; but this is true only in the same sense in which it might be said of St. Paul—in other words, the statement is quite misleading. The innate knowledge of God, which he asserts, is the work of the Logos-Christ, who first fully disclosed Himself in the historic Incarnation. On the actual effect of the death of Christ, as a transaction, Origen suggests various views, already current, in a tentative manner: among others, the idea of a ransom paid to the devil, which was popular at this time. He certainly did not regard the historic work of Christ as a mere appearance or exhibition, though, for the Gnostic, Christ *in* us is far more important than Christ *for* us.

Influence of Origen.—The double achievement of Origen (carrying on what Clement began) was to destroy Gnosticism, and to give philosophy a recognized place in the creeds of the Church. The second was the price which the conservatives had to pay for the first. Henceforth the Church possessed a theology and a philosophy of religion which were far more attractive to the educated mind than the barbaric Platonism of the Gnostics. It was, of course, neither possible nor desirable to teach the philosophy to the masses, for whose benefit the Catholic system, with its apparatus of cultus, miracle, and sensuous symbolism, was developed side by side with the progress of scientific theology. In their relation to tradition, the Alexandrians mark a stage in a conflict which ended in a compromise. The great Gnostics of the 2nd cent. had been unable to maintain their footing in the Church. Clement succeeded in doing so, though not without suspicion; Origen, after much hesitation, was condemned. The Cappadocians endeavoured to reconcile faith and knowledge by mutual concessions, a process which was completed, after a fashion, by Cyril of Alexandria and by the theologians of the 6th century (Harnack, *Hist. of Dogma*, iii. 5).

The first conflict in which Origen's theology was deeply involved was against Sabellianism. Dionysius, bishop of Alexandria, in attacking the Monarchians fell under the charge of Tritheism, the Roman see pronouncing against him, and laying down a *via media* between the Alexandrian and the Sabellian doctrines. This condemnation had no effect at Alexandria, where the school of Origen flourished almost unchallenged till the end of the 3rd century. Modifications, however, were introduced, involving a doctrine of subordination in the Trinity of the Neo-Platonic type, and upholding continence (ἐγκράτεια) as the great original contribution of Christianity to ethics. Gregory Thaumaturgus (who is said to have called the Son a κτίσμα) taught the Trinitarian doctrine of Origen in a form nearer to Monarchianism than to Tritheism.

The first serious attack on Origen was that of Methodius, who, however, in spite of his bitterness, seems only to advocate a compromise between his teaching and the rule of faith. In the controversies that followed in the 4th cent., which need not be described in detail, we mark a gradual hardening and crystallizing of theological thought under the chilling breath of authority. Origen's teaching was disintegrated, selections being made from it without regard to consistency, and he himself was at last condemned as a heretic. After Athanasius the Logos-doctrine began to decay in importance, as the notion of an economic and relative Trinity gave place to that of an absolute Trinity. The identification of the Logos-Christ with the spirit of the cosmic process fell more and more out of sight. This change may also be described as part of a transition from Platonism to Aristotelianism in the Church. The school of Antioch led a revolt against the Alexandrian exegesis of Holy Scripture, and founded a more critical method, in which the literal sense was always at least considered, and the Messianic allusions in OT very much curtailed. Origen's idea of pre-existence had still many supporters in the 4th cent., but was more and more discredited, till it was finally condemned at Constantinople in 533. The rival theories—that the soul is begotten with the body, and that God creates souls and plants them in the embryos—were left to contend with each other. The doctrine of the Fall of Man, based on Genesis, resumed its importance when the theory of an extramundane Fall was excluded. The question whether Christ would have become incarnate if Adam had not sinned is never, we think, discussed at length except by those who answer it in the negative; but the idea of an Incarnation as an essential part of the Divine plan is certainly in accordance with Alexandrianism, and has been revived by modern thinkers (*e.g.* Westcott), who are in general sympathy with Clement and Origen. It was part of the teaching of Pelagius, and may have been discredited on that account.

One of the most important of Origen's contributions to theology was his teaching on the death of Christ, which combined rather than reconciled the notions of expiatory sacrifice—of a propitiatory death of God vanquishing the death decreed by Him—and of the revelation of a redemption really effected in the eternal world. Both ideas were familiar to the Greek mysteries. The idea of *substitution* could not be emphasized by an Alexandrian; the Logos-doctrine makes it meaningless, but after Cyril it became prominent.

In the long Arian controversy the name of Origen played a curious part. The Adoptianist theory of a Jesus who gradually becomes God was totally at variance with Origen's doctrine; but Arius found in the Neo-Platonic cosmology a support for his theory of a *mediating* Logos, between the inaccessible Father and the world. But in denying to the Logos any *essential* unity with the Father he abandoned decisively the Alexandrian Christology. 'With Arius, Christ belongs in every sense to the world of created things' (Harnack); with Athanasius He belongs in every sense to God, the cosmical aspect being virtually shelved. Athanasius was not a scientific theologian, and the restatement of Alexandrian theology, necessitated by his labours, fell to the Cappadocians, of whom Gregory of Nyssa is most in sympathy with Origen. This writer avoids some of the most obnoxious speculations of his master, but on the whole reproduces his teaching, which in this way has found and maintained a footing in the Catholic Church, for Gregory of Nyssa has never been condemned.

But the growing power of 'tradition' had already begun to kill religious philosophy; and the progressive degradation of Christianity into a religion of cultus affected Christian Platonism in precisely the same way in which Neo-Platonism suffered between Plotinus and Jamblichus. Dionysius the Areopagite is the representative of this application of Alexandrian allegorism to ritual and dogma. The first vogue of this extraordinary writer coincided with a reaction in favour of Origen. Among later developments of Christian Platonism, which owed some of their inspiration to the Alexandrian theology, it is necessary to mention only the philosophical mysticism of Eckhart and his successors, the 'Cambridge Platonism' of the 17th cent., and in our own day the theology of F. D. Maurice, Westcott, etc. Among philosophers, Leibniz has many points of resemblance to Origen.

LITERATURE.—Redepenning, *Origenes* (1841–1846); Denis, *De la Philosophie d'Origène* (1884); Westcott, art. 'Origenes' in *Dict. Christ. Biogr.*; Harnack, *Dogmengeschichte*; Bigg, *Christian Platonists of Alexandria* (1886); text: Lnmmatzsch (1831–1847).

Permanent value of the Alexandrian Theology.—Was the attempt of the Alexandrians to Christianize the current philosophy of their age legitimate? The question has been very diversely answered. Writers like Deissmann, Wernle, and Hatch, and the Ritschlian school generally, regard the 'Hellenizing' of Christian doctrine as an alien graft upon the enthusiastic revivalism of primitive Christianity, and deplore, with Harnack, the 'secularizing' and 'depotentiation' of the religion which they ascribe to the influence of Alexandria. On the other side, it has been pointed out that, unless we ignore St. Paul's Epistles, the Epistle to the Hebrews, and the Fourth Gospel, there is much of 'Hellenism' in the NT; and also that philosophy in the first two centuries had ceased to be 'secular' and had become religious. The later Stoics and Platonists were 'not far from the kingdom of God,' and were by no means inclined to undervalue strictness of conduct. Moreover, the fusion of Greek and Jewish thought was so inevitable that to deplore it is to take a pessimistic view of human development. Finally, revivalism is in its nature a brief phase; an intellectual system must follow it, or the whole effects of the movement must disappear. The Alexandrians satisfied the legitimate need of their age by providing 'a scientific doctrine of religion which, while not contradicting the faith, does not merely support or explain it in a few places, but raises it to another and higher intellectual sphere, namely, out of the province of authority and obedience into that of clear knowledge and inward intellectual assent emanating from love to God' (Harnack, *History of Dogma*, Eng. trans., vol. ii., pp. 324 f.). This recognition, from a writer whose view of religion is strongly anti-intellectualist, is remarkable, and it does no more than justice to the great constructive effort of Clement and Origen, by which the best of Platonism and Stoicism was incorporated in Christianity. The permanent value of their syncretistic schemes will always be differently judged while men continue to be 'born either Platonists or Aristotelians'; those who would oust metaphysics from theology can have but scanty sympathy with the Alexandrians. But if speculation on Divine truths is permissible or even necessary, no Christian theologians deserve a higher place than Clement and Origen, who made a serious and not unsuccessful attempt to combine in their creed the immanence and transcendence of God, universal law and human freedom, the universal and the particular in revelation, a lofty standard of practical ethics and world-forgetting contemplation. Hort's opinion of Clement's contribution to Christian theology has been quoted. Westcott says of Origen, 'We have not yet made good the positions which he marked out as belonging to the domain of Christian philosophy' (*Rel. Thought in the West*, 252). W. R. INGE.

ALGONQUINS.

ALGONQUINS (Eastern).—1. Divisions.—The existing representatives of the Algonquin or Algic race may be separated linguistically into three divisions: the Blackfeet of the extreme western part of North America, whose idiom differs most from that of all the other Algonquin tribes; the Cree-Ojibwas of the middle west, whose language embraces a number of closely allied linguistic variations; and the so-called *Wabanaki* races of the north-eastern American coast, with whom the present article is especially concerned.

The term *Wabanaki* or *Oñbanaki* means both 'land of the dawn *or* east' and 'man *or* person from the east.' The name is at present applied to five distinct clans; viz., the Passamaquoddies, Penobscots, Canadian Abenakis or St. Francis Indians, Micmacs, and Delawares, all of whom are plainly descended from one common family which probably first established organized tribal relations along the Canadian and New England north-eastern coast. There is no reason to consider that the term 'Easterners = *Wabanakis*' has any meaning going farther back than this into the origin of these peoples, who, in all probability, came eastward at a comparatively early date from some unknown western *habitat*. Unless modern Americanists are to be driven to accept the impracticable theory that the eastern tribes crossed from Europe by way of some long since vanished land-bridge, the theory of a western origin for all the Indian coast-races is literally forced upon us. It will be seen, therefore, that the name '*Wabanakis* = Easterner' must have for us a geographical rather than a racial-historical signification.

(1) The Passamaquoddy Indians of Pleasant Point, Maine, now numbering about 500 in all, are identical with the Milicetes or Etchemins of New Brunswick and Nova Scotia, Canada. The name *Passamaquoddy* is a purely local term, meaning 'spearers of pollock-fish' (*peskátum*). The correct form is *Pestumokádyik*, which has been corrupted by the whites into *Passamaquoddy*. These Indians are by far the most interesting remnant of the Wabanakis, as they still retain an unusually extensive oral literature, including love poems, legends, and historical tales of considerable value. It should be stated that the nucleus of the material relating to the primitive religious conceptions of the *Wabanakis* has been collected by the present writer from the Passamaquoddies primarily, and secondarily from the Micmacs.

(2) The Penobscot Indians of Maine now number not more than 350, most of whom live at the Indian village of Oldtown on Penobscot River near Bangor, Maine. These people still speak a characteristic Algonquin language, which is more closely allied to the idiom of the Abenakis of St. Francis, near Pierreville, Quebec, Canada, than it is to that of the geographically nearer neighbours of the Penobscots, the Passamaquoddies. In short, there can be no doubt that both the Penobscot and the Abenaki dialects are sister idioms which have sprung from a common original at a very recent date (cf. the present writer in *Kulóskap the Master*, p. 30).

(3) It is well known that the Abenakis of Canada are the direct descendants, of course with some admixture of French and other blood, of the majority of the savages who escaped from the great battle of the Kennebec in Maine, when the English commander Bradford overthrew their tribe on 3rd December, 1679. Many of the survivors at once fled to French Canada, where they established their *habitat* at their present village of St. Francis, near Pierreville, Quebec. Others again may have wandered into Canada at a slightly later date. There can be no doubt that the Indians now called Penobscots, from their residence near the river of that name, are the descendants of those of the early Abenakis who eventually submitted themselves to their English conquerors. The Canadian Abenaki is the only one of the Wabanaki clans which calls itself generically by the comprehensive name *Wabanaki* (*Kulóskap*, p. 31).

(4) The Micmacs are the easternmost and by far the most numerous to-day of the Wabanaki remnants. They are to be found in various places in the Canadian provinces of Quebec, New Brunswick, Nova Scotia, Prince Edward's Island, and Newfoundland. Their grade of intelligence is much lower than that of the other members of the same family, but they still possess a vast store of folk-lore, legends, and poems, which is perishing for want of interested collectors. Their language differs so greatly from the dialects of the Passamaquoddies, Penobscots, and Abenakis, that the members of these clans always use French or English when communicating with their Micmac neighbours, while an intelligent Passamaquoddy can without difficulty be understood by a Penobscot or Abenaki, if the dialect is pronounced slowly.

(5) The story of the enforced westward wanderings of the ill-fated Delawares or *Lenâpe* has been told in detail by a distinguished authority, the late Dr. D. G. Brinton, in his comprehensive work, *The Lenâpe and their Legends*, pp. 122–126. At the present day, this famous tribe, around which a certain glamour of romance has been cast by the well known American author, Fenimore Cooper, in his *Leatherstocking Tales*, is scattered literally to the four winds of heaven. The three Delaware clans, the *Minsi*, the *Unami* and the *Unalachtigo*, who were once the dominant native race in Delaware, Pennsylvania, New Jersey, and parts of New York State, are now represented by a few bands living in Indian Territory, in Western Canada, and in Ontario, Canada. The Delawares of Indian Territory, numbering about 500 persons, have quite lost their tribal identity, as they have been incorporated by the Cherokee nation, by whose chief and council they are governed. In Ontario there are only about 300 in all: 100 situated at Hagersville on the Reserve of the Six Nations (Iroquois), 100 at Munceytown, and the same number at Moraviantown, which is the seat of a Moravian mission.

2. **Religious conceptions.** — All the Wabanaki clans at present existing, save only the Delawares, are, with very few individual exceptions, of the Roman Catholic faith, a fact which is most fortunate for students of comparative religion, as the Catholic priests have made little if any effort to stifle the ancient ideas regarding witchcraft and spirits, which formed the chief elements of the earlier shamanistic faith. For this reason, nearly all our material, upon which this and other studies of Algonquin religious ideas are based, comes from the Catholic tribes, and not from the Delawares, who are all Protestants, belonging for the most part to the Church of England or to the Moravians.

The religious system of the primitive eastern Algonquins was, as already indicated, purely shamanistic, viz. a faith which, although admitting in a vague way the existence of a Supreme Being, laid its chief stress on the government of the world by an indefinite number of secondary spirits or deities, both benevolent and malevolent towards man. These beings, in whose hands lay the real power, had therefore to be propitiated by all sorts of magic rites and spells, which gave rise to a caste of conjurors and wizards, who were themselves endowed with preternatural powers. In the lore of the Wabanakis, the general principle of good may be said to be represented by the rather clown-like being known to the Passamaquoddies as *Kulóskap* and to the Penobscots as *Klûskûbe*, who, as Mr. Leland has aptly put it, personifies the principle of good nature rather than of goodness. *Kulóskap's* twin brother, *Malsum* the wolf, was the evil genius of the Indians, and may perhaps be called the *Ahriman* of the Wahanakis, although this is almost too dignified a term. It is highly interesting to notice that these twins were born from an unknown divine mother, the good *Kulóskap* in the natural manner, and the evil wolf through the woman's side, a method which he maliciously chose in order to kill his mother. In spite of his name, which means 'the liar,' the tendency of *Kulóskap* was essentially benevolent (*op. cit.* p. 34). He was called 'the deceiver,' not because he deceived or injured man, but because he was clever enough to lead his enemies astray—the highest possible virtue to the early American mind.

Kulóskap was at once the creator and the friend of man, and, strangely enough, he made the Indian (or man—the terms are synonymous) out of the ash tree. The present writer, in collaboration with the late Charles Godfrey Leland, has published a work entitled *Kulóskap the Master* (New York, 1902), which gives in translation a number of songs and narrative poems relating to this being's career and exploits. In this collection, which gives the history of *Kulóskap* almost in epic form, it will be noticed that the hero or demi-god is born from a divine mother, and that he is the creator of man and all the animals, a special poem being devoted to the origin of the rattlesnakes, who were primitively bad Indians. *Kulóskap* then named the animals, and discovered that man was the lord of them all. Traces of Christian influence are so evident even in the titles of these poems as to need little elaboration. It will be noticed, however, that although the general outline has undoubtedly been affected by the teachings of the missionaries, the details remain distinctly native. *Kulóskap* then became the kindly teacher of man, who came into the world an absolutely ignorant being. When man was first created, there was no light at all, and the god's first act was to bring about the 'daybreak and the dawn.' Here again we see Biblical influence. *Kulóskap* at once proceeded to instruct man in hunting, fishing, and trapping, and in the arts of building huts and canoes. He showed man the hidden virtues of 'plants, roots, and blossoms.' He taught him the use of weapons, and even the names of the stars, and the origin of the planets. He recounted to his apt pupils 'all the wonderful stories and the very old traditions,' thus becoming the Indian father of history. He was prodigal in magic gifts to his special favourites, and became, in short, a veritable demiurge, whose special care was the welfare of mankind.

The epic, if so loosely connected a series may be so called, concludes with a number of tales relating to the magic power of the god, who, although almost omnipotent, was on one occasion conquered by an unusual enemy—the baby! When the god was boasting of his powers to a certain woman, she replied: 'One there still remains whom no man has ever yet overcome in any strife,' indicating her baby who sat 'upon the floor in baby peace profound, sucking a piece of maple sugar sweet; greatly content and troubling nobody.' The Master then proceeded to attempt to cajole the baby to come to him, using at first all his blandishments. When these failed, for the baby remained immovable, he had recourse to sorcery, 'and used the awful spells and sang the songs which raise the dead, and fright the devils wild, and send the witches howling to their graves.' But the baby 'peacefully as ever kept his place' (*op. cit.* p. 107). This story, which seems to be a genuine native production, is a good illustration of the Indian sense of humour, which, contrary to accepted opinion, is very highly developed.

In the end, owing to the evil ways of man, *Kulóskap* 'sailed away over the water, the shining waves of Minas; and they looked in silence at him, until they could see him no more. Yet when they had

ceased to behold him they still heard his voice in song, the wonderful voice of the Master! But the sounds grew fainter and fainter and softer in the distance, till at last they died away. Then over them all was silence, till a wonder came to pass: for all the beasts, which before had used but one common language, now talked in different tongues!' Here again we seem to have a perverted echo from the missionaries. After *Kulóskap* had left the land, the bird which had loved him most, the Great Snowy Owl, 'went far into the North, into the deep dark forest, where to this day his children sing to the night "Kûkûskûûs," which meaneth in our language "sorrow, sorrow, sorrow." And the loons who had been his huntsmen go back and forth o'er the waters, seeking in vain for their master, the lord whom they cannot meet; ever wailing, wailing sadly, because they find him not' (*op. cit.* p. 216). Micmac tradition in various forms still associates Kulóskap (or Glooscap, as he is there called) with Cape Blomidon, a bold headland projecting into the Bay of Minas, Nova Scotia.

It will be evident even from the above very brief sketch, that *Kulóskap*, as he at present exists in the memories of his former children, is a mixture of traditions. The element of the Christian God has entered very markedly into this lore, curiously compounded with what are undoubtedly native elements. For example, it is quite clear that all the stories of the exploits of the demi-god are based on the conception that he was a supernatural Indian and the father of all the conjurors, a class which still exists among the Catholic Wabanakis. This same culture-hero appears in the legends of the entire Algonquin family, although often under another name. It is highly probable, therefore, that the idea of a great Divine man was brought by these eastern Indians from their primitive western home.

The Wabanakis saw a spirit in every tree and waterfall, and a malignant or benevolent influence in many animals; and, in order to propitiate these beings, the class of sorcerers became, of course, a positive necessity. These people, who are called by the Passamaquoddies *m'deolinwuk*, 'drum-beaters,' from their methods of exorcism, had very peculiar powers. We see from the tales that the conjuror could transform himself into an animal at will; that he could cast a spell on an enemy, even though the latter might also be a *m'deolin*; that he could violate the laws of nature so far as to walk in hard ground, sinking up to the ankles or knees at every step; and, finally, that the wizards could communicate with each other telepathically. One need hardly comment on the first two or the fourth of these wonders, as they are common among all shamanistic conjurors; but the third phenomenon, the power to sink into hard ground while walking, seems to be characteristically American. Rink states that this is not an unusual feat among the conjurors of the Greenland Eskimos, who frequently sink into rocky or frozen ground 'as if in snow.' The trick is probably done by some peculiar method of stooping, or else is merely suggested by means of hypnotic influence. Leland compares here, however, the Old Norse statements regarding their wizards, who occasionally sank into the ground, and who had power to pass through earth with the same ease as through air and water (*Algonquin Legends*, p. 342). It seems hardly permissible to draw a parallel between the ancient Norsemen and the northern Indians on this account, as the case Leland cites is that of a conjuror who disappeared into the ground head downwards when stabbed at by a foe. The present writer has been told by old Passamaquoddies that they had personally seen conjurors 'soften the ground' without any apparent means of performing the wonder. On this account, the theory of suggestive hypnosis seems the most acceptable one.

Religious cannibalism appears also to have existed among the Wabanakis. In one tale, the wizards eat their murdered comrade, evidently with the idea of absorbing into themselves some or all of his power. As is well known, the Fijis and the New Zealand Maoris often ate their enemies with the same object in view; viz., to become as brave as the fallen foe had been. All authorities tend to show, however, that cannibalism was extremely rare among the American races, and was resorted to only in isolated cases such as the one here noted. In one Delaware tale, the wizard, who is also an evil spirit, desires to devour a very old worn-out man. This seems to be a relic from primitive times, when it was probably not unusual to devour the aged, perhaps for a double purpose: both to get rid of them, as was the case until recently among the islanders of Tierra del Fuego, and also possibly to absorb sacramentally into the living members of the family the essence of the dead parent, whose soul is thus prevented from becoming entirely extinct.

Especial attention should be called at this point to the remarkable ideas prevalent among the Wabanakis regarding the cohabitation of women with serpents (*Kulóskap*, p. 225). Such a conception may seem strange, coming as it does from a land where there are no ophidians large enough to warrant such a superstition. Although running the risk of seeming fanciful, the present writer deems it not impossible that we have in these hideous tales some relic of far distant pre-historic days when huge serpents were not unknown. It should be added, moreover, that in every case of such sexual relations between serpents and human beings among the Wabanakis, the serpent was always a wizard in disguise,—a fact which shows that, in the later superstition at least, the unusual character of such monstrous serpents was fully appreciated.*

It will appear evident from this sketch of the religious ideas of the Eastern Algonquins, that the legends of these people are well worthy of preservation, from the point of view both of primitive poetry and of science. Mr. Leland, in his preface to *Kulóskap the Master* (p. 14), remarks on the very common reproach of Europeans, that Americans have a land without ancient legends or song. He adds: 'We bewailed our wretched poverty when we had in our lap a casket full of treasure which we would not take the pains to open.' The fact is that almost every hill and dale of New England has or had its romantic native legend, its often beautiful poem or curious myth. Many of these fancies have disappeared for ever through the deliberate ignorance of the average white settler, who even to-day, when the Indian has almost vanished from the land, is inclined to preserve the old feeling that 'the only good Indian is a dead Indian.' Rand's *Legends of the Micmacs* (New York, 1894), Leland's *Algonquin Legends of New England* (Boston, 1885), *Kulóskap the Master*, and the present article must perhaps suffice, then, to present to the English-speaking public a few interesting and characteristic specimens of the religious traditions of the rapidly disappearing race of the Wabanakis,—a race which, fifty years hence, will, in all probability, have hardly a single living representative who shall know its language or lore.

J. DYNELEY PRINCE.

*It may be noted that similar marital relations between serpents and mankind, though generally with a different *motif*, are found not only among other stocks of North and South America, but also in Europe, Asia, Africa, and Polynesia (cf. MacCulloch, *The Childhood of Fiction*, London, 1905, pp. 253–259, 264–267).

ALGONQUINS (Prairie Tribes, viz. the Kickapoos, Pottawatomies, Sacs, and Foxes).—These tribes, together with their Algonquin allies, the Chippewas, and their Siouan friends, the Osages and Iowas, have their strongest bond of union in their return, between the years 1880 and 1884, to their ancient beliefs. Many of them had been, in name at least, Roman Catholics, a few were Presbyterians and Methodists, though all, except the Pottawatomies, revered the clan totems as saints, and all continued to wear their medicine-bags, and to guide their actions by their dreams. Those who remained heathen in name as well as in practice had seemed to have forgotten the old gods, and merely showed a superstitious faith in the power of their 'medicine,' as their fetishes were called, the incantations of their *shamans* or wizards, the 'warnings' of their dreams, and a vague impression that somewhere, above the firmament or in the bowels of the earth, dwelt a company of immortal, gigantic animals—the totems, or ancestors—from whom the various clans of the tribes were descended.

As early as the middle of the 17th cent., the Jesuits endured every sort of hardship and danger to convert these peoples, who, at that time, were living at the head of the Green Bay of Lake Michigan (Parkman, *La Salle and the Discovery of the Great West*, p. 34), and they had some reason to believe that they had succeeded. In 1673, Father Marquette wrote that, when he and M. Joliet went among the tribes of the Green Bay Indians, he was rejoiced to find in one of their villages a great cross set up, adorned with white skins, red girdles, and bows and arrows, as votive offerings (Marquette, *A Discovery of some New Countries and Nations in the Northern America*, printed as an appendix to Hennepin's *America*, p. 323)—a proof to him of the success of the mission of Allouez and Dablon, established in 1669–70. Hennepin, the Franciscan friar, had, however, not much confidence in these conversions. He avers that these 'salvages' would 'suffer themselves baptized six times a Day for a Glass of *Aqua Vitæ* or a Pipe of Tobacco' (*America*, pt. ii. p. 56), and adds this statement as to what they really did believe: 'Some of 'em acknowledge the Sun for their God. . . . Others will have a Spirit that commands, say they, in the Air. Some among 'em look upon the Skie as a kind of Divinity, others as an Otkon or Manitou, either good or evil. . . . Dreams with them supply all other defects, and serve instead of Prophecy, Inspiration, Laws, Commands, and Rules, either for undertakings in War, Peace, Trade, or Hunting. Nay, they are a kind of Oracles in their Eyes. You would say, to see 'em at their Devotion, that they were of the Sect of the Pretended Inspir'd. The Belief they have in their Dreams imposes upon them a kind of Necessity of believing likewise, that they are forewarned by an Universal Mind of what they ought to do or avoid. Nay, this Infatuation prevails upon 'em so far that if they were persuaded in their Dreams to kill a Man, or commit any other Enormous Crime, they would immediately do it with the greatest alacrity, and make Atonement for it by the means which we shall hereafter relate. Parents' Dreams generally serve for the Observation of their Children, and Captains' for those of their Villages. There are some among 'em as pretend to interpret Dreams. . . . When they meet with any great Fall of Water, which is either difficult to pass or dangerous to avoid, they throw into it a Bever's skin, Tobacco, Porcelane, or the like, by way of Sacrifice, to appease and engage the Deity that there presides. . . . There is no nation among 'em which has not a sort of Juglers or Conjurers, which some look upon to be wizards. . . . They are, in a Word, extremely bewitch'd of these Juglers, though they so plainly and frequently appear to deceive 'em. These Impostors cause themselves to be reverenced as Prophets which fore-tell futurity. They will needs be looked upon to have an unlimited Power. They boast of being able to make it Wet or Dry; to cause a Calm or a Storm; to render Land Fruitful or Barren; and, in a Word, to make Hunters Fortunate or Unfortunate. They also pretend to Physic and to apply Medicines, but which are such that they have little or no Virtue at all in 'em. . . . It is impossible to imagine the horrible Howlings and strange Contortions that these Juglers make of their Bodies, when they are disposing themselves to Conjure, or raise their Enchantments. . . . They will do nothing without either Presents or Hire. But however 'tis certain that if these Impostors have not skill enough to procure themselves Credit, or to find something to say in case of a Failure in their Art by their Patients' Death, 'tis ten to one but that they are killed on the spot without any further formality.

'These poor blind Wretches are, moreover, engaged in several other Superstitions, which the Devil makes use of to Ensnare 'em. They believe there are many living Creatures which have Rational Souls. They have a very unaccountable veneration for certain Bones of Elks, Bevers, and other Beasts, and therefor never give them to their dogs, but lay 'em up in Repositories with a great deal of Care: These they never throw into Rivers but with great Reluctancy. They say that the Souls of these Animals observe how they deal by their Bodies, and consequently advertise both the Living and the Dead of that kind thereof, so that if they treat 'em ill, they must not expect that those sorts of Beasts will ever suffer themselves to be taken by them either in this or the other world' (*America*, pt. ii. pp. 56–60). In addition, there are scattered through the two parts of the book descriptions of the various feasts and dances for the living and the dead, which might have been written to-day, so little change has time wrought, and on p. 112 the author says of the 'medicine' or fetish: 'These people admit of some Sort of Genius in all things: they all believe there is a Master of Life, as they call him, but hereof they make various Applications: some of them have a lean Raven, which they carry along with them, and which they say is the Master of their Life; others have a Bone or Sea-Shell, or some such thing.' He also details at some length the story of the woman who fell down from Heaven and bore two sons, one of whom, after a time, retired to Heaven. This, of course, is a fragment of the legend of Hiawatha, Manibosho, or Nanabush (all names of the same supernatural personage).

The revival of the old religion, either modified by contact with Christianity or else having always had observances which had escaped the notice of the missionaries, was brought about by the Chippewas. According to their story, a band of their people was surprised by the Sioux and exterminated. From the setting of the sun till its rising all lay dead, but when its beams fell on the Woman —her name is too sacred to be spoken—she revived, and heard a voice saying to her, 'Get up and take the drum.' When this command had been four times repeated, she rose up and found a drum and twelve drumsticks beside her. She took a stick and began to beat on the drum, and immediately the other sticks began to beat as if hands held them. At once her strength was restored, and her scalp-lock, which had been torn away, was renewed, —a most important miracle, as the soul is supposed to be in the small bulb which lies at the roots of the scalp-lock, and one is a slave in the spirit land to the holder of the scalp. Then the voice

spoke again, 'Go to the other band of the Chippewas and to all who will be my friends'; so she set out, travelling night and day, feeling no need of food or rest, and listening to the instructions of the Voice. Thus she travelled for eighty days, at the end of which time she reached her people, called them together by the roll of her drum, and told them that Geechee Manitou wished them to take leave of the gods of the white people, politely, and turn again to him. He desired a dance house built for him, and a dance, to be called the Remembrance or Religion dance (*Ow-wah-see-chee*), to be performed in it by strong young men, without physical blemish, who had practised, prayed, and denied themselves all pleasures for eighty days. This dance was to continue four, seven, or twenty-one days, to the accompaniment of the drum and songs of praise to the manitou (pronounced 'manito-ah' by the Indians), while all the people feasted and made offerings of the smoke of tobacco and the steam of cooked food, beginning with the offering of a white dog. In addition, all the old customs were to be revived, and an effort was to be made to induce all other Indians to conform to them again. When the people had purified themselves by fasting and by being sweated in the sweat-lodge (a small close hut having a great stone in it which is heated and then drenched with cold water to produce a vapour in which the devotee stands naked to have the devils that produce disease or wickedness sweated out of him while he recites his prayers); and after they had built a dance house, and had honoured Geechee Manitou by prayers and praises, she taught them the Religion dance, put them in mind of some forgotten beliefs, and then disappeared, no one knew whither; nor did she ever return. At once the Chippewas had a great revival of old practices, to which they invited their relatives the Pottawatomies, who in turn proselytized the Kickapoos and their friends and neighbours, the Osages, Sacs, and Foxes. A little later the Sacs won over the Iowas and Otoes, but in spite of strenuous efforts they have never been able to add any other Siouan tribes to this coalition.

Besides Geechee Manitou, these tribes believe in three great gods. He is the first, the creator, and he lives in a golden boat, which we call the sun. Meechee Manitou is the god who lives in the cold, wet, slippery cavern in which the souls of the wicked wander and shiver for ever. He is not now very active in mischief, but he is the father of an innumerable number of devils that produce war, pestilence, famine, aches, pains, quarrels, and all other ills of body and soul. Some of these are the offspring of witches with whom he has consorted; others sprang from his breath, his sweat, his saliva, even his words and the scent of his footsteps. The Brothers, 'twin sons of the woman who fell down from heaven,' spend their time, one in ruling over the happy hunting-ground, or place of the happy dead; the other in sitting in the road the ghosts go over, at the point where it divides, his business being to show the good their way to the happy hunting-ground, and the bad their way to the cavern of Meechee Manitou. These Brothers lived a long time on earth, destroyed many devils and wizards (some tribes were in the world before these two gods, and had become very wicked), received additional physical and spiritual power from the totems, founded the Fox tribe, and then took their way—one to the spirit land, the other to the road that leads to it. The occasion of their leaving the world was this: on account of the good works of the Brothers, the devils and wizards endeavoured to destroy them, and succeeded in killing the younger, Cold Hand; but when the elder, Hot Hand, mourned so terribly as to flood the earth with his tears, and draw it, which had hitherto been flat, into hills and valleys by his sobs, the devils and wizards, terrified by the commotion, worked four days and nights with their enchantments to 'make the dead alive.' When he was made alive, he went to his brother, but Hot Hand was not pleased. He said he was ashamed, because he had been heard to mourn so terribly, and he went into his wigwam and shut Cold Hand out. Presently he thrust forth a kettle, fire-sticks, tobacco, and a whistle to call ghosts. Cold Hand took these things and went away. He sat down on the edge of the world to dream. When he came out of his dream, he 'made a place for good souls. Before that they had no place; they blew about in the wind. Since that time, death has been better than life' (M. A. Owen, *Folk-Lore of the Musquakie Indians*, p. 15).

The totems are patron saints. Each clan or subdivision of the tribe is named from the giant animal from which it is supposed to be descended. Judging from the old legends told by tribe historians, all the tribes at one time had many clans, each with its clan Secret Society which did homage to its totem, as its *shaman* or medicine-man directed; but so many clans were exterminated by their wars with white and red men that in some tribes the totemic system is only a memory, and in others there are many more sticks to the sacred drum than there are drummers to hold them—each clan having but one drummer playing at a time.

The hereditary chief is the high priest of the faith, nominally, but he does nothing without first consulting the *shamans*, who are presidents of the totem societies, prophets, physicians, and exorcists all in one, besides filling some other offices (referred to by Hennepin). When it is understood that the earth and air are supposed to be peopled with an infinite number of malignant devils and sprites, as well as vampire ghosts, which are always on the alert to do mischief except when rendered torpid by extreme cold, and as only the *shamans* know the secret of casting them out or spell-binding them, it will be readily comprehended that, so long as the ancient beliefs prevail, the *shamans* will be the real autocrats of the tribes. Generally a son succeeds his father, as in the case of the chieftainship, but sometimes the son is not clever enough to be a *shaman*; in that case, any boy in the clan may be selected to be trained, thus keeping the succession in the family, as everyone in the clan is related. Sometimes, when an especially clever boy is found in another clan, the *shaman* takes possession of him, and, in rare cases, a boy has been brought from another tribe. In the latter case he is adopted by a member of the *shaman's* tribe who has lately lost a son of about the same age.

The white witches of the tribe are the 'women-with-spots-on-their-faces.' These spots are round daubs of vermilion, and each one stands for a Religion dance given for the woman-with-spots-on-her-face, at puberty, by her father. These dances and the severe usage to which she is subjected from a very early age, make her a healer and a bringer of good fortune. She insures safe delivery to women in childbirth, not by being present, but by chanting and praying at a distance and refusing to hear all entreaties to be present; she names the newborn infants after something that belongs to the father's clan (this is the real name, not much used, not the nickname given from some exploit or peculiarity); she heals the sick, and interprets the confused dreams of the women; any one with whom she is friendly is lucky, any one with whom she is unfriendly may look for misfortunes.

The ceremonials of the faith may almost be described by a word—'dancing.' There are fasts,

prayers, and hymns before dancing, and feasts, prayers, and hymns during dancing; these are parts of the same thing. There are dances for planting and dances for harvest, dances to bring rain and to cause it to cease, for peace, for war, for puberty, to restore health, and to honour the dead, totem dances, and dances for every great event in the life of the tribe and individual except birth, marriage, and the too frequent divorces.

Kickapoos.—The Kickapoos consider themselves foreigners. 'This is the only tribe among all our Indians who claim for themselves a foreign origin,' says Thomas L. M'Kenney, formerly of the Indian Department, Washington, U.S.A., speaking of the Shawnee tribe, of which the Kickapoo is a division. 'Most of the aborigines of the continent believe their forefathers ascended from holes in the earth; and many of them assign a local habitation to these traditionary places of the nativity of their race; resembling, in this respect, some of the traditions of antiquity, and derived, perhaps, from that remote period when barbarous tribes were troglodytes, subsisting upon the spontaneous productions of the earth. The Shawanese believe their ancestors inhabited a foreign land, which, for some unknown cause, they determined to abandon. They collected their people together, and marched to the seashore. Here various persons were selected to lead them, but they declined the duty, until it was undertaken by one of the Turtle tribe. He placed himself at the head of the procession, and walked into the sea. The waters immediately divided, and they passed along the bottom of the ocean until they reached this "*island*" (M'Kenney, *North American Indians*, vol. ii. pp. 263-264). This writer goes on to state, what the traditions of the Kickapoos confirm, that the Shawnees were, in their days of power, divided into twelve tribes, and these again into 'families,' such as the Eagle, the Turtle, etc., each named from its totem or ancestral animal; but two of the tribes were annihilated, six were merged, and four kept their names and tribal government. These four were the Kickapoos, Pickaways, Chilicothes, and Makostrakes.

It is not known exactly when these people were driven, by the Iroquois, southward to the Savannah river, nor is it known when they left that region and separated the tribes. In 1673, Father Marquette found the Kickapoos on a river which flowed into the Bay of Puans (the Green Bay of Lake Michigan, or, as it was then called, the Lake of the Illinois), and he refers to Father Allouez as having a mission among them. He adds that, in comparison with their neighbours, the Miamis, they are boors (Marquette, *A Discovery of some New Countries and Nations in the Northern America*, in Hennepin's *America*, pt. ii. p. 323). On Hennepin's map, published in 1698, they are north of Lake Winnebago, but, in his account of the retreat of Tonti when he was endeavouring to lead his little company back to M. La Salle after the destruction of Fort Crèvecœur (A.D. 1680), he speaks of their home as being on the west side of the Bay of Puans (*America*, pt. i. ch. 75, headed 'The Savages Kikapoux murther Father Gabriel de la Ribourde, a Recollect Missionary'), though bands of their young men were wandering in the south-east in the hope of surprising small companies of their enemies, the Iroquois. Hermann Moll's map, published before 1716, shows them on the west side of the bay. In 1763, when they were engaged in the conspiracy of Pontiac to form a federation of all the Indian tribes with the intention of preventing the encroachments of the whites or destroying them, they were living on the Miami and Scioto rivers (Parkman, *Conspiracy of Pontiac*, vol. ii. p. 198 and map). Colonel Bouquet reported, when he had forced the Indians to sue for peace (1764), that the 'Kickapoux' had three hundred warriors and a total population of fifteen hundred. He placed them on the 'Ouabache' (Wabash) river (*19th Annual Report of the Bureau of American Ethnology*, p. 1108). On May 22, 1804, Captain William Clark, of the Lewis and Clark Expedition, wrote as follows: 'This tribe resides on the heads of the Kaskaskia and Illinois rivers, on the other (east) side of the Mississippi, but occasionally hunt in Missouri' (Elliott Coues, *The History of the Lewis and Clark Expedition*, vol. i. p. 7); but this could have been but one band of them, for, in 1808, the Pottawatomies and Kickapoos gave to Tecumseh and his brother, the Prophet, a tract of land in Indiana, lying along the Tippecanoe river. These two most distinguished Kickapoos, Tecumseh, or Flying Panther, and the Prophet Tens-kwau-taw-waw, endeavoured to form a confederacy like the one Pontiac projected, and, in 1811, became engaged in a war with the whites, which terminated disastrously for the Indians at the battle of Tippecanoe, much to the surprise of the red men, who had believed that the incantations of the Prophet had rendered them bullet-proof. In the war of 1812, Tecumseh and his people joined forces with the British (Eggleston and Seelye, *Tecumseh*, chs. xxii.–xxxiii.). Catlin visited the Prophet and his people in Illinois in 1831, but his map, printed in 1840, shows them on the west side of the Missouri river. During the Civil War, one band, with a band of Pottawatomies, went to Mexico, but have since returned. *Smithsonian Report*, pt. ii. p. 185, states: 'Kickapoos at Pottawatomie and Great Nemaha Reservation, in Brown County, Kansas, August 20, 1885, 235. Kickapoo, Mexican (mixed band with Pottawatomie), Indian Territory, 346.' The numbers are at this time much smaller, so that the report of the Commissioner for Indian Affairs for 1901 gives the number of Kickapoos in Kansas as 199, and of Mexican Kickapoos in Indian Territory as 221. It is a dying people.

The Kickapoos are sickly, melancholy, and severely religious. In addition to a dance house, they have a 'house of silence'—a wooden structure which was built, as a chief was commanded in a dream, in silence and fasting. It is used for prayer and praise, but not for dances. Another revelation of late years causes them to flog their children for misdemeanours—something unknown in other tribes, where children are whipped only at puberty as a trial of endurance. A flogger is chosen once a year by lot, and his duty is to make the rounds of the wigwams every Saturday with a mask over his face. In consequence, no one is at home on Saturday but the culprits; the rest of the family sit among the bushes on the river bank and weep. The culprits do not weep during this (supposedly) religious exercise. These people have but one council-fire and three totems. This refers to the Brown County Kickapoos, not to the Mexican, who prefer to be considered Pottawatomies. They pay more reverence to the Rain Serpent than other Indians, and this may partly account for their sickliness, as their reservation is so infested with venomous reptiles as to render cattle-raising almost an impossibility, in consequence of which their staple flesh diet is pork. (It is well known that the bite of a serpent has no effect on a hog). As an antidote for themselves and their ponies, they make use of a tea and wash of infused leaves, roots, and blossoms of the arrow-leaved violet (*Viola sagittata*). Violet was once a maid, sister to Rattlesnake, and as good as he was wicked; whomsoever he poisoned, she healed. In rage at this he killed her. Geechee Manitou, compassionating her and those she could befriend, changed her into this healing plant. It grows wild

in great abundance all over the reservation. Another cause of their inferior physique may be their marrying in the clan—something contrary to the religious scruples of most other Indians. Their tribal name means 'smooth,' and undoubtedly refers to some stream by which they have lived, and not to their tempers.

Pottawatomies.—These people have no legend of ever having lived anywhere but in the North-West. The French missionaries and fur traders found them, during their first explorations, in what is now the State of Michigan. 'Early in 1600 the Pottawatomies were occupying the lower peninsula of Michigan, in scattered bands, whence they were driven westward by the Iroquois, and settled about Green Bay. The French acquired much influence over them, whom they joined in their wars with the Iroquois' (*Smithsonian Report, 1885*, p. 135). The *Jesuit Relation*, 1658, refers to them as being the nearest tribe to the settlement of St. Michael, near the head of Green Bay. A band of them accompanied Marquette when, in 1674, he set out to found a new mission, the Immaculate Conception, at the principal town of the Illinois; and it was the Ottawas, the elder branch of this family of Indians, that, in 1676, carried the bones of Marquette to St. Ignace in a grand procession of thirty canoes, and took part in the funeral services (Parkman, *La Salle and the Discovery of the Great West*, pp. 68–71). It is evident, therefore, that they were considered Christians; but when they joined in Pontiac's conspiracy, nearly a hundred years later, reliable witnesses declared that they ate the bodies of their most valiant enemies. Again, in the war of 1812, they were guilty of the same practices. One of the best attested instances is that of Captain Wells, who was killed after the capture of Chicago in 1812. 'This man, who had been a long time among the Indians, having been taken prisoner by them at the age of thirteen, had acquired a great reputation for courage, and his name is still mentioned as that of the bravest white man with whom they ever met. He had almost become one of their number. . . . At the commencement of hostilities . . . he sided with his own countrymen . . . Wells was killed. . . . His body was divided, and his heart was shared as being the most certain spell for courage, and part of it was sent to the various tribes in alliance with the Pottawatomies, while they themselves feasted upon the rest. . . . Mr. Barron has seen the Pottawatomies with the hands and limbs of both white men and Cherokees, which they were about to devour. . . . Among some tribes cannibalism is universal, but it appears that among the Pottawatomies it is generally restricted to a society or fraternity, whose privilege and duty it is, on all occasions, to eat of the enemies' flesh; at least one individual must be eaten. The flesh is sometimes dried and taken to the village. Not only are the members of this fraternity endued with great virtues, but it is said they can impart them, by means of spells, to any individual they wish to favour' (W. H. Keating, *Keating's Narrative*, compiled from the notes of Major Long and Messrs. Say, Keating, and Calhoun, vol. i. pp. 102, 103).

Since Keating's narrative was written (1825), missionaries have again laboured among these people, and with considerable success. Among those who still cling to tribal life there are Methodists, Presbyterians, and Roman Catholics, as well as worshippers of the Manitous; but it is impossible to tell what proportion of the tribe has responded to the efforts of Christian teachers, as some appear to participate in the exercises of both religions. Another reason for the apparent predominance of the heathen element is that the Christian contingent leaves the tribe and is lost among the whites. This is the reason, also, why the tribe appears so small, —never numbering quite fifteen hundred,—although the Pottawatomies are large, handsome, healthy, prolific people, and not in any sense victims of encroaching civilization. One band is at the Sac and Fox Agency, Indian Territory; and another at the Pottawatomie and Great Nemaha Reservation, Kansas; while possibly three hundred are in Michigan, Wisconsin, and Iowa. When the tribe disappears, it will be from disintegration, owing to the fact that these extraordinarily keen traders do not care to hold their goods in common. Their boast is that they have followed and bartered with the whites from the time they met the first French fur-traders, and always to their own advantage, except when they sold the site of the city of Chicago. Briefly put, trading brings segregation, segregation civilization, civilization Christianity, an unusual conversion, but one likely to be permanent. The name *Potta-wat-um-ees* signifies 'those-who-make-or-keep-a-fire,' and refers to their having started a council-fire for themselves when they and the Ojibwas, or Chippewas, separated from the Ottawas. They seem to have no totems, though the old people recite folk-tales which indicate that there was a time when they possessed them, and a few have claimed that they are descended from a dog. This is not to be taken seriously, as they partake of the dog feast, and no Indian eats the animal named from his totem.

Sacs and Foxes.—These people are classed as one tribe in Government reports, very much to their dissatisfaction. They have never been under the same chieftainship, but have kept up their separate council-fires, and have a different number of totems (the Sacs have one that the Foxes consider unworthy of any descendants but women, the Tree or Dryad totem). Their traditions of migration from the Atlantic seaboard to the region of the Great Lakes are about the same, and so are their accounts of reverses at the bands of the Iroquois on the east and the Sioux on the west; but the Foxes have a legend of a mysterious white buffalo leading them to join forces with the Sacs, which the latter ridicule. The Jesuits found them living as distinct tribes in the neighbourhood of Lake Michigan. Both tribes fought the Hurons and Illinois. In 1712 the Foxes, or, as they were generally called, the Outagamies or Musquakies, with their allies, attacked the French at Detroit, but were defeated with great slaughter, by the aid of the Sacs, Hurons, Ottawas, Mascoutins, Illinois, and other tribes (Parkman, *A Half-Century of Conflict*, pp. 279–286). In 1732 another determined effort was made by the French and their Indian allies to destroy these terrible fighters; and it was so nearly successful that, about 1736, eighty warriors and their families joined themselves to the Sacs, these being all that were left of this 'scourge of the West,' as they had long been called. Jonathan Carver, in 1766, found the two tribes in neighbouring villages on the 'Ouisconsin' (Wisconsin) river. He describes the Saukie town as the best Indian town he ever saw, having ninety houses, each large enough for several families, well built of hewn plank, and having sheds before the doors. The streets were wide, he adds, and the land round about so well cultivated that traders made this an outfitting station. The principal business of the warriors was to engage in forays among the Illinois and Pawnees for the purpose of procuring slaves. This appeared to him to be the reason the tribe did not increase in numbers more rapidly, for their adversaries quickly retaliated. The Outagamie or Fox town was almost deserted (Carver, *Travels*, pp. 46–49). Both tribes were too busy fighting the Sioux and Chip-

pewas to take part in the war of the Revolution, but the Foxes and part of the Sacs were on the side of the British in the war of 1812. The same division took place in the Black Hawk War (1831–32), when the band of Sacs under Keokuk refused to fight the U.S. There are at the present time between four and five hundred Sacs in Indian Territory, whose last recognized chief Ke-wah-ko-uk (Keokuk) died in Aug. 1903, and about two hundred on the Pottawatomie and Great Nemaha Reservation, in Kansas, under Margrave, a Pennsylvania German, to whom they gave the place of the hereditary chief, deposed for drunkenness. The Foxes are at Tama, Iowa: a small, rich tribe, numbering scarcely more than three hundred, if we exclude visiting Pottawatomies. As to this division, the agent wrote, August 1885: 'Our Indians, the Sac and Fox of the Mississippi, disclaim any connexion whatever with the Sac tribe, and claim most earnestly that they are Foxes only.' Later, the Sacs expelled the few Foxes in their midst. The Sacs are more agreeable than pious, the Foxes more pious than agreeable. The Sacs are great lovers of fun, the Foxes great sticklers for dignity. The Sacs are stalwart, and with a leaning towards civilization; the Foxes sickly, and with a profound regard for the wisdom of their ancestors. The Sacs have eight totems from which they are descended; the Foxes have seven totems from which they are not descended, since they trace their lineage to a boy and girl, one of whom came from the shoulder of one of the Brothers, the other from the side of his twin. *Saukie* is said to mean 'yellow clay,' while *o-saukie* means 'mouth of the river,' and *Outagamie* connotes 'red clay.' *Musquakie*, the name by which the Foxes call themselves, means 'fox.'

MARY A. OWEN.

ALLĀH is the proper name of God among Muslims, corresponding in usage to Jehovah (Jahweh) among the Hebrews. Thus it is not to be regarded as a common noun meaning 'God' (or 'god'), and the Muslim must use another word or form if he wishes to indicate any other than his own peculiar deity. Similarly, no plural can be formed from it, and though the liberal Muslim may admit that Christians or Jews call upon Allāh, he could never speak of the Allāh of the Christians or the Allāh of the Jews. Among Christians, too, a similar usage holds. In the current Arabic Bible versions, 'God' (אלהים) is uniformly rendered *Allāh*, but when 'the Lord God' (יהוה אלהים) occurs, it is rendered *ar-rabbu-l-ilāhu*, 'the Lord, the *Ilāh*,' where 'the *Ilāh*' is an uncontracted form, retaining its force of a common noun with the article, from which *Allāh* has been shortened through usage. The Muslim, too, who usually derives and explains *Ilāh* as meaning 'worshipped,' uses it and its plural *Āliha* in the broadest way, of any god, explaining that such is possible because worshippers believe that their god has a claim to worship, and 'names follow beliefs, not what the thing is in itself' (*Lisān*, xvii. 358). But more ordinarily, in referring to the gods of the heathen, a Muslim speaks simply of their images or idols, *aṣnām*, *authān*.

The origin of this goes back to pre-Muslim times, as Prof. Nöldeke has shown below (art. ARABS [RELIGION OF THE ANCIENT]). Muhammad found the Meccans believing in a supreme God whom they called Allāh, thus already contracted. With Allāh, however, they associated other minor deities, some evidently tribal, others called daughters of Allāh. Muhammad's reform was to assert the solitary existence of Allāh. The first article of the Muslim creed, therefore,—*Lā ilāha illā-llāhu*,—means only, as addressed by him to the Meccans, 'There exists no God except the one whom you already call Allāh.'

Naturally, this precise historical origin is not clear to the Muslim exegetes and theologians. But that Allāh is a proper name, applicable only to their peculiar God, they are certain, and they mostly recognize that its force as a proper name has arisen through contraction in form and limitation in usage.

Aṭ-Ṭabarī (d. A.H. 310=A.D. 923), the greatest commentator on the Qur'ān of the old traditional school, seems to have very little on the word. He gives only one derivation, namely, that it means 'the worshipped, the served,' and contents himself with proving the existence of such a root in Arabic and the possibility of the contraction of *al-ilāh* to *Allāh* (*Tafsīr*, i. 40). Apparently neither the etymological nor the metaphysical question had become important for his time. It is very different in the next greatest Qur'ān commentary which we have, that by ar-Rāzī, the great systematic theologian, who died in A.H. 608 (= A.D. 1209). He deals with it twice, in one passage considering whether God can have a known proper name (*Mafātiḥ al-ghaib*, i. 61), and in another, the meaning, derivation, etc., of Allāh (i. 83 ff.). The first position, he says, the earlier philosophers denied. The object of a name was to distinguish the thing named from other things; but if the thing named could not be known, as in the case of the peculiar essence of God, there was no use for the name. Certainly, if God gave knowledge of Himself to some particularly chosen beings, He might have a name for them. As this name, then, would be the greatest of all names, he who knew it could control all things and beings, material and spiritual. It would be, in fact, the Most Great Name of God, the ineffable name of the Jews, by which miracles could be wrought, and of which Muhammad had evidently heard. That such a name exists ar-Rāzī believes; traditions from Muhammad assert its existence among the names given in the Qur'ān, but are vague and contradictory as to which it is; and as it cannot be a name involving a quality, but must be the name of God's essence, it can be nothing else than Allāh, God's proper name. His consideration, then, of Allāh he divides into five sections (i. 83 ff.). 1. The preferable view is that Allāh is a proper name of God, and has no derivation; this he defends with arguments based on the undoubted usage of the Qur'ān and the impossibility of making a common noun apply to an individual only. 2. The various derivations alleged by those who hold that it comes from a common noun. Eight of these are given, with theological and metaphysical refutations of an *a priori* kind; the facts of the language have little consideration. 3. The linguistic possibility of derivation. Some held that it was from Hebrew or Syriac; but it was known by the Arabs in the time of Muhammad as a plain Arabic word, and as such must accept it. Of the others, those who say it is a name need no derivation, and those who derive it are of two schools, on which a reference to Lane, *Lexicon*, pp. 82*b* ff., will suffice. 4. Broadly, Allāh is used of the true God only, as also, in the first instance, *al-ilāh*; but the latter can by extension be applied to any god, as Allāh Himself applies it in the Qur'ān. [This, of course, is a complete reversal of the historical fact.] 5. Certain peculiarities of this Divine Name which distinguish it from all other names of God; *e.g.* as letter by letter is cut from it, the remainder continues significant for God, and the formal confession of the Muslim faith can take place only through this name, and not through any of the descriptive epithets, such as 'the Merciful One,' 'the Holy One,' etc.

With the Qur'ān commentary of Baiḍāwī (d. A.H. 685 = A.D. 1286) we reach, again, saner air. Modelled on that of az-Zamakhsharī (d. A.H. 538 = A.D. 1143)—a combination of rationalism and precise grammatical and lexicographical interpretation—it has no room for *a priori* theories or dreams of a wonder-working Name. Allāh is a contraction of *al-ilāh*, and has come to be used as a proper name, though a common noun in origin. A number of possible derivations are given with examples of such transformation. It is shown that God's essence in itself, taken without reference to some other thing, real or imagined, is unintelligible to mankind, and so cannot be indicated by a separate word, even though especially revealed to His saints, as ar-Rāzī suggests; nor does derivation from a root involve *shirk* in the theological sense, one thing having part in another; it means only that the two expressions have part in a common idea and formation. The Syriac derivation is mentioned without criticism.

Other commentaries give modifications only of the two atti-

tudes of ar-Rāzī and al-Baiḍāwī. Thus Abū-s-Su'ūd (d. A.H. 982 = A.D. 1574) paraphrases and elucidates al-Baiḍāwī. The following statement from him (margin of *Mafātiḥ al-ghaib*, i. 19) shows how far this interpretation could attain: 'Know that what is meant by the negation in the first article of the creed, *Lā ilāha illā-llāhu*, is that He is the rightfully worshipped One, and the sense of that article of the creed is, "No rightfully worshipped individual exists except that rightfully worshipped One."' Similarly, Niẓām ad-Dīn al-Naisabūrī (d. *circ.* A.H. 710 = A.D. 1310) abbreviates from ar-Rāzī, but is disposed to regard the difference as verbal (*lafẓī*) only, a hard saying (margin of aṭ-Ṭabarī's *Tafsīr*, i. 53 ff. and 63 ff.). All these are generally accepted and respected commentaries. See art. GOD (Muslim).

LITERATURE.—There is little in Western languages on this subject. Cf. Fleischer, *Kleinere Schriften*, i. 154, 170; Sprenger, *Leben und Lehre des Mohammad*, i. 286 ff., ii. 33; Palmer's *Qur'ān*, i., xli. ff., lxvi.; Hughes, *Dictionary of Islām*, *s.vv.* 'God,' 'Da'wah'; Grimme, *Mohammed*, ii. 36.

D. B. MACDONALD.

ALLĀHĀBĀD.—An important Indian city, capital of the United Provinces of Agra and Oudh. The original Hindu name of the place is Prayāga, '*the* place of sacrifice,' a name which is applied to three other sacred bathing-places on the Alaknandā (wh. see), one of the upper waters of the Ganges. Allāhābād is specially holy, as it is supposed to be the triple junction (*triveṇī*) of three sacred rivers—Ganges (Gangā), Jumnā (Yamunā), and Saraswatī, the last being supposed to have an underground connexion with the others. The name *Allāhābād*, 'abode of Allāh,' was conferred upon the place by the Emperor Akbar, who in A.D. 1572 built his fort commanding the junction of the two rivers, and named it *Illāhābās*, which was changed to Allāhābād by his grandson Shāhjahān. But the place had been regarded as sacred from the very earliest times. It first appears in history as the site where Aśoka erected one of his edict-pillars about B.C. 240. Fa Hsien, the Buddhist pilgrim, about A.D. 414 found it included in the kingdom of Kośala; and the name Prayāga appears in the *Travels* of his successor, Hiuen-Tsiang in the 7th century. He found Buddhism prevailing here side by side with Brāhmanism, and he notes that in the midst of the city was a famous temple of the latter faith, in front of which was a large tree with wide-spreading branches, which was said to be the dwelling of an anthropophagous demon. This tree was surrounded with human bones, the remains of pilgrims who, according to immemorial custom, were in the habit of sacrificing their lives by jumping from its boughs into the holy stream. This tree is now almost certainly represented by one of its successors—the Akshaya Vaṭa, or 'undying Banyan-tree,' which is still one of the chief objects of Hindu worship. It stands in an underground temple, probably part of the edifice described by Hiuen-Tsiang, or built on the same site. This building is now within the Fort, and owing to the accumulation of rubbish the whole of the lower part has disappeared underground. Early in the 14th cent. the historian Rashīd-ud-dīn mentions the sacred tree 'of Prāg' at the confluence of the Ganges and Jumnā. About the time of Akbar, 'Abd al-Qādir speaks of 'the tree from which people cast themselves into the river.' From these accounts it is clear that in the interval between the time of Hiuen-Tsiang and Akbar the rivers had cut away the land near their junction so that the sacred tree, once in the centre of the city, had been brought close to the water. This accounts for the fact that, except the famous Pillar of Aśoka, no relics of the Buddhist and Brahmanical monuments described by the traveller of the 7th cent. now survive.

The chief bathing fair at Allāhābād is what is called the *Māgh Melā*, Māgh (Jan.-Feb.) being the month in which it is held. The chief bathing day is that of the new moon (*amāvasyā*), and the fair is held in the sandy bed at the river junction, which is left dry at the close of each rainy season. Every twelfth year here and at Hardwār, when the sun is in the sign of Kumbha or Aquarius, bathing is specially efficacious, and enormous crowds of pilgrims assemble from all parts of India. To these are added large numbers of ascetics, and beggars who display their infirmities to the charitable parties of bathers. Specially remarkable are fanatics like the *ūrdhvabāhu*, who extend one arm or both arms above the head until the muscles become withered through disuse, and the *ākāśamukhin*, who keep their necks bent back looking at the sky. To these are added numbers of traders and sellers of all kinds of goods who supply the wants of the pilgrims. The maintenance of sanitation and the prevention of outbreaks of epidemic disease are in the hands of a special European staff. This is the chief danger resulting from gatherings of this kind, the attendance at which has greatly increased since the railways offered facilities to the pilgrims. The people are so orderly and law-abiding that little work falls upon the police force. The bathing at these fairs is controlled by a body of local Brāhmans, who take their name, *prayāgwāl*, from the place, and have a bad reputation for insolence, rapacity, and licentiousness.

LITERATURE.—Cunningham, *Archæological Reports*, i. 296 ff., abstracted and supplemented by Führer, *Monumental Antiquities and Inscriptions of the North-western Provinces and Oudh*, 127 ff.; *Imperial Gazetteer of India*, *s.v.*

W. CROOKE.

ALLEGORY, ALLEGORICAL INTERPRETATION.—The word 'allegory' is derived from the terminology of Greek rhetoric, and means primarily a series of metaphors ('Iam cum fluxerunt continuæ plures tralationes, alia plane fit oratio. Itaque genus hoc Græci appellant ἀλληγορίαν': Cicero, *Orator*, xxvii. 94; cf. *de Oratore*, iii. 166). Seeing that the later classical poets studied in the schools of rhetoric, it is not surprising that Horace, in the ode in which he compares the State to a ship (*Od.* i. 14), had an allegory in view, as is recognized by the rhetorician Quintilian (viii. 6, 44). Thus we see that the conception of allegory as formulated in rhetoric, and, owing to the close connexion between ancient rhetoric and hermeneutics, as used also in explaining a work of literature, has a rather narrow range. The term is by no means applied in that wide sense which it has to-day when we speak, for instance, of allegorical figures in art. On the contrary, we must keep in view that allegory is a form of representation which a reader believes himself to find in a piece of writing which is more or less in need of interpretation. As such an interpretation, however, is in reality justified only where the author of the writing, as, for instance, Horace, or Goethe in the second part of *Faust*, had a secret meaning in mind, the rule comes to be that in allegorical interpretation an entirely foreign subjective meaning is read into the passage which has to be explained. In this way allegory is almost always a relative, not an absolute, conception, which has nothing to do with the actual truth of the matter, and for the most part springs from the natural desire to conserve some idea which, owing to its age, has come to be regarded as sacred.

These remarks are necessary for the proper understanding of allegory among the nations of antiquity. It is a misuse of the word to find in Homer and the poets of the subsequent period unconscious allegorical ideas, as is done, *e.g.*, by Decharme (*La critique des traditions religieuses chez les Grecs des origines au temps de Plutarque*, p. 279 ff.). The use in Homer (*Il.* ii. 426), in Archilochus (*Fragm.* 12), or in Sophocles (*Antig.* 1007) of Ἥφαιστος for fire is neither allegory nor a conscious substitution of the gift of the god for his name (Plutarch,

Quom. adol. poet. aud. deb. p. 23*ab*), but a direct identification of the god with his earliest form of earthly manifestation. Hephæstus is here, to adopt Usener's terminology, the 'divinity of the moment' (*Götternamen*, p. 279 ff.). A similar explanation must be given of the Cyclops—Brontes, Steropes, Arges (Hesiod, *Theog.* 140), and of Scamander, which in Homer is both god and stream, as well as of Uranos, Gaia, Demeter, Chaos, etc. There are figures, which in the later evolution unite themselves to the elementary divinities, whose names and natures are identical, *e.g.*, Eris (*Il.* iv. 440, v. 518, 740, xi. 3 f., xviii. 535, xx. 48; Hesiod, *Op.* 16, 24, 28, 804, *Theog.* 225, etc.), Phobos, Deimos, Kydoimos (*Il.* iv. 440, xiii. 299, xv. 119, v. 593, xviii. 535), Zelos, Nike (Hesiod, *Theog.* 384), and others. Only the most superficial consideration, however, can call such a usage allegorical. It is simply owing to the difficulty we have in analyzing such a pantheon of abstract conceptions and such a theology, and for want of a better term, that we call them personifications. It is quite impossible in such cases to speak of an allegory, seeing that in Homer and Hesiod we are dealing with a world of ideas still comparatively naïve. Allegory is much more the child of a reflective epoch.

The assertion that piety is the mother of allegorical explanation is entirely correct (cf., *e.g.*, Gomperz, *Griechische Denker*, i. 305). The 6th cent. before Christ rejected the gods of Homer and Hesiod. Xenophanes (*Fragm.* 11, 12, Diels), Pythagoras (Diog. Laert. viii. 19, 21), and Heraclitus (*Fragm.* 42 D) attack with all their energy the religious views of their predecessors and contemporaries. But the piety of the faithful was not brought by means of these attacks to give up its ideals then any more than it is to-day; it had recourse to the method, so often practised since, of reading a new meaning into the sacred tradition, and thus protecting it from the satire of its critics. Quite a number of men meet us in this connexion, who sought, often by very childlike or indeed childish means, to succour the ancient tradition, but who themselves regarded their undertaking with religious earnestness. The oldest of these was Theagenes of Rhegium, who flourished at the time of Cambyses (Tatian, *adv. Græcos*, 31). He wrote an 'Apology' for the Homeric poetry (Schol. Hom. *Il.* xx. 67), and probably (cf. Schrader, *Porphyrii quæstionum Homericarum ad Iliadem pertinentium reliquiæ*, Leipzig, 1880, p. 384) sought to save the battle of the gods in the twentieth book of the Iliad by a physical and ethical interpretation. Others are said to have made similar attempts. The philosopher Anaxagoras interpreted Homer's poetry in a purely ethical way (Favorinus in Diog. Laert. ii. 3. 11), and his pupil Metrodorus of Lampsacus followed a similar method in his physical explanation of the Homeric figures. For him Demeter was the liver, Dionysus the spleen, Apollo the gall; Hector signified the moon, Achilles the sun, Agamemnon the earth, Helena the air (cf. the passages in Diels, *Die Fragmente der Vorsokratiker*, p. 339). Diogenes of Apollonia went on similar lines (Philodem. *de Piet. c.* 6*b*) when he found in Homer not myths but truth, and identified Zeus with the air. Democritus of Abdera too, an enthusiastic admirer of Homer (*Fragm.* 18, 21, Diels), inclined to an allegorical interpretation of the gods (*Fragm.* 30 D). When we consider, further, how much interest religious questions excited in Athens in the middle of the 5th cent., how, for instance, Aristophanes ridiculed the new doctrines of philosophy (*Nub.* 828, 380 ff.), and when we remember that the rationalistic historians from Hecatæus and Herodotus onwards had stripped the old miraculous legends as far as possible of their supernatural character, it is easy to understand that a related, if not an entirely identical, movement had to make itself felt in poetry as well. Euripides, the pupil of Anaxagoras (cf. *Fragm.* 487, 839, 877, Nauck), is by no means an allegorist, although he, too, resolves Zeus into ether (*Troades*, 884; *Fragm.* 941). The true allegorist, as we have seen, has a fixed system. The poet Euripides, moved as he is by doubts, appears now as a believer, and again as a sceptic. In his later years he wrote the *Bacchæ*, in which he gives a purely rationalistic explanation of the birth of Dionysus (vv. 286 ff.). This is also a way of saving the old tradition, but it is not, properly speaking, allegorical. In the place of a silly fable we find a new and no less silly myth. Such a proceeding, however, is not allegorizing (cf. also Decharme, *l.c.* 295).

Up to this point we have constantly spoken of 'allegory,' as if this expression were found in the philosophers themselves. This is, however, by no means the case. We find a number of writers giving allegorical interpretations, who never use the word itself. The older expression, which was used till 'allegory' occurs in the 1st cent. B.C. (cf. Cicero, *Orator*, 94; Plutarch, *Quom. adol. poet. aud. deb.* p. 19 f.), was *ὑπόνοια*. Thus Xenophon uses the word in the well-known passage of his *Symposium* (iii. 6), where he adduces Stesimbrotus of Thasos and Anaximander (cf. also Plato, *Ion*, 530 D, who mentions Glaucon by the side of Metrodorus and Stesimbrotus) as teachers of Antisthenes in this method of explaining Homer. As a matter of fact, the Cynical school had with conscious purpose reduced the allegorical interpretation of Homer to a system. The writings of Antisthenes were largely occupied with the poetry of Homer and the figures it contained (Diog. Laert. vi. 1, 17 f.); and we learn from the fifty-third oration of Dio Chrysostom (p. 276 R), that he distinguished in Homer between *δόξα* and *ἀλήθεια*, and that he allegorized the poet (cf. Schrader, *l.c.* 387 f.; Dio Chrysost. viii. 283 R; Xenoph. *Memor.* i. 3. 7; Dümmler, *Antisthenica*, 22 ff.) In spite of their utter denial of the existence of a plurality of gods, and their emphatic rejection of the figures of mythology, the Cynics were quite unable to free themselves from the spell of the Homeric poetry. Plato is the opponent of Homer and Antisthenes; he often treats with playful sarcasm the attempts of the 'great Homer experts' to interpret the names and actions of the gods allegorically (*Cratyl.* p. 407 A; *Phædr.* 229 C; *Repub.* 378 D, where again the word *ὑπόνοια* appears).

Thus the beginning of a system of allegorizing had been made. The Stoics undertook its completion, and their views passed on later to the Jews and the Christians, and thence more or less directly to our own time. The passage from Dio referred to above mentions the Stoic Zeno as the follower of Antisthenes in his method of explaining Homer, and the fragments we possess from the hand of the founder of the Stoical school bear witness to his allegorical point of view (Arnim, *Stoicorum veterum fragmenta*, i. pp. 43, 167 ff.). Chrysippus, the head of the Stoical school, has, of course, taken great delight in working out the method.

Zeus is for him the Logos, who orders all things; he derives his name from his life-giving activity (*ζῆν*). Male and female divinities do not exist: Ares is war, Hephæstus fire, Kronos the stream, Rhea the earth, Zeus ether, Hermes reason. Almost all the names of the gods suggest such an interpretation, as Rhea comes from *ῥεῖν*, Themis from *θέσις*, Kronos from *χρόνος* or *κρᾶν* (*κιρνᾶν*), Apollo from the circumstance that he was *οὐχὶ τῶν πολλῶν καὶ φαύλων οὐσιῶν τοῦ πυρός* (cf. Arnim, *l.c.* ii.; *Fragm.* 1076, 1079, 1084, 1087, 1090, 1095).

It serves no purpose to refer to the many (often self-contradictory) interpretations of the Stoics (cf. Chrysippus), but we may mention in passing that in the person of Crates of Mallus this method of

interpretation extended itself to the exposition of Homer as a whole (Wachsmuth, *de Cratete Mallota*, p. 62). Two unsatisfactory though not uninteresting writings which are still extant, the *Allegoriæ Homericæ* of Heraclitus and the *Theologiæ Græcæ compendium* of Cornutus, prove to us the wide diffusion of these views, and show of what excesses the allegorical method of interpretation is capable. Of the two, Heraclitus is the less annoying; he at least has some feeling; he hates Plato and Epicurus (cap. 4), in fact all those who are not enthusiastic admirers of his beloved Homer. Accordingly, he endeavours to meet the old objections raised against the weakness and sins of the Homeric gods.

Thus the chaining of Hera (*Il.* iii. 277) is explained as the union of the elements (23); the hurling of Hephæstus through the air (i. 592) signifies the earthly fire, which is weaker than the heavenly flame (thus Hephæstus is χωλός) (26); the wounding of Aphrodite and of Ares (v. 336 ff., 858 ff.) is to be understood as the defeat of the barbarian army (ἀφροσύνη='Αφροδίτη), which sends forth unearthly noises (30, 31); the union of Aphrodite and Ares (*Od.* viii. 266 ff.) is the combination of love and strife in harmony. These interpretations are so general that even Apollodorus, the great Athenian student of Greek religion, grants them his recognition (Cornutus, p. 49, 4; Münzel, *Quæstiones mythographæ*, p. 17). Other testimonies to the allegorical usage are given, for instance, by Strabo (p. 18), and by the author of the pseudo-Plutarchic writing, *de Vita et poesi Homeri*; but it would serve no purpose to follow this out in detail.

In spite, however, of the strength of this movement, it had by this time reached a very definite limit. Plato, as we saw above, derided the attempts of Antisthenes to defend Homer allegorically. His followers, the members of the so-called Middle Academy, along with the Epicureans, made use of sceptical arguments, and renewed the conflict against the Stoics, the successors of the Cynical school. The chief representative of this line of thought is Carneades, who practically advocated the views of his teacher, Arcesilaus; his attack is contained in the third book of Cicero's *de Natura Deorum*, and in Sextus Empiricus, *adv. Mathem.* ix. He regarded the interpretation of the myths as entirely meaningless, and reproached the Stoics for regarding as wise the inventors of such disreputable stories (Cicero, *l.c.* iii. 24, 62). The Epicureans expressed themselves to the same effect; they found all those allegorical gods of the Stoa nothing but absurdities, and they applied the term 'godless' to the mode of procedure of the sect, for the effect of these very interpretations was to make the gods appear as perishable (Philodem. *de Piet.* cap. 18). These opinions were then, to a large extent, taken over by the Christians, although they, in like manner, early fell under the spell of allegory.

The attack was keenly maintained, but a great movement has never yet been checked by harsh contradiction. The 1st cent. before and after Christ is the great era of the Stoa, which at a later date even occupied the Imperial throne in the person of Marcus Aurelius. But, what is more important, these views made their way into Judaism. The Wisdom of Solomon is under the influence of the Stoa, and the allegorical interpretation of the Jewish law is found in the letter of Aristeas (§ 143 ff.), just as symbolical explanations occur among the Essenes (Philo, *Qu. omn. prob. lib.* ii. p. 458, Mangey). Philo, however, is the chief representative of this direction of thought. Attempts have been made to trace back his allegorical exposition of the Scriptures to the Haggada. And this much, at any rate, is certain, that there were interpreters before Philo who made use of the same method of explanation, for he frequently refers to such expositions of the Old Testament.

Those 'Physicists' had explained Abraham as the νοῦς, and Sarah as virtue (Philo, *de Abrah.* ii. 15, Mangey); again, the king of Egypt was the νοῦς as ruler of the body (*de Jos.* ii. p. 63, Mangey); they interpreted the rite of the Passover as referring either to the purification of soul or to the creation of the world (*de Septen.* ii. 291); and in this way a number of Scripture passages obtained a moral interpretation (*e.g.* Gn 21^{23}, Dt 25^{11}; cf. *de Plant. Noë*, i. 337; *de Spec. Leg.* ii. 329); there were even definite rules for this exegesis (*de Somn.* i. 631, 611, 660).

But Philo not merely followed in the footsteps of his predecessors; his aim rather was to reduce the allegorical explanation to a kind of system. There is no writer who shows more clearly than he the origin of the allegorical method. Philo tells us often of the different attacks which the opponents of the Scriptures, *i.e.* the Greeks, made on the Biblical narratives. He reprimands the detestable people who express amazement at God's changing His opinion, and writes against them the pamphlet, *Quod Deus sit immutabilis*; he is well aware that the same persons mock at the tower of Babel (*de Conf. Ling.* i. 405), smile at the serpent in Paradise (*de Mund. Op.* i. 38), explain the swearing or wrathful God of Israel as a monster (*Leg. all.* i. 128; *Quod Deus s. imm.* i. 282), and make merry over Joseph's dreams (*de Jos.* ii. 59). This Greek criticism, which lasted from the days of Philo till the fall of paganism, compelled the Jews, and after them the Christians, to give an allegorical meaning, a ὑπόνοια, to the sacred Scriptures, just as, at an earlier date, it had compelled the faithful among the pagans. But, besides that, by Philo the Scriptures are best regarded as an allegory (*de Jos.* ii. 46; here, again, the term ὑπόνοια is used); the allegorical exposition is the soul of the sacred text, the literal meaning only its body (*de Migr. Abr.* i. 450), a comparison which Origen later adopts (see below). The literal meaning of a passage would, according to Philo, lead to absurdity and impiety,—here, too, Origen is his pupil,—and literal obedience to the precepts of the Law would be preposterous (*e.g. Leg. all.* i. 44; *de Conf. Ling.* i. 425; *de Somn.* 634; *de Spec. Leg.* ii. 329; *de Agric.* i. 324, etc.). We cannot here go on to speak of the reasons which, according to Philo, caused the Deity to give such incomplete representations of Himself, nor is it possible to introduce a large number of individual allegories. The history of allegorical exegesis is tedious enough owing to the want of diversity in the method. Accordingly it may suffice to give a few instances, which any one can easily amplify for himself, from Siegfried's book, *Philo von Alexandria als Ausleger des AT.* pp. 160–272.

Philo recognizes in Paradise the ἡγεμονικόν of the soul, in the tree of life the fear of God, in the tree of knowledge the φρόνησις (*de Mund. Op.* i. 37; *Leg. all.* i. 56); the four rivers of Paradise are the four cardinal virtues (*de Post. Caini*, i. 250; *Leg. all.* i. 56); Abel is pure piety without intellectual culture, Cain the egoist, Seth the virtue which is imbued with wisdom (*Qu. det. pot. ins.* i. 197; *de Sacrif. Ab.* i. 163; *de Post. Caini*, i. 249), Enoch hope (*Qu. det. pot. ins.* i. 217; *de Præm. et Pœn.* ii. 410), etc.; Hagar signifies the ἐγκύκλιος παιδεία, Sarah virtue and wisdom (*de Cherub.* i. 139 f.); Joseph is the type of the statesman (*de Jos.* ii. 41); his coat of many colours indicates that his political policy is intricate and difficult to unravel (*Qu. det. pot. ins.* i. 192); in the Law (Dt $21^{15\text{-}17}$) the one beloved wife is pleasure, the other who is hated is virtue (*de Sacrif. Ab. et Caini*, i. 167); and so on.

Seeing that the allegories crowd in on Philo in such a way, it is natural for him to interpret the same passage in different allegorical ways (*de Prof.* i. 572); moreover, the same facile hand occasionally changes the text, just when it suits his allegory to do so (*Qu. det. pot. ins.* i. 200).

The Jewish method of interpretation was carried over into *Christian* exegesis, although the influence of Philo did not make itself particularly felt till the 2nd and 3rd centuries. Thus St. Paul, as well as the writer of the Epistle to the Hebrews, makes ready use of allegorical exegesis (cf. Gal 4^{24} 3^{16}, 1 Co 9^{8}); and the Epistle of Barnabas, with its search for a spiritual meaning behind the letter, is a product of the Jewish tradition. This need of allegorizing is seen still more plainly in the Apologists.

This is particularly true of Justin Martyr, who interprets a number of Old Testament prophecies in a most daring fashion: thus Gn 49[11], 'he hath washed his garments in wine, and his vesture in the blood of grapes,' means that he will purify the faithful in whom the Logos dwells, with his blood, which, like the juice of the grape, comes from God (*Apol.* i. 32); when it is said, 'the government shall be upon his shoulder' (Is 9[6]), the meaning is that Christ would be hung on the cross. The Gnostics go still further. They allegorize in their Oriental manner not only the Old Testament, but also the New, discovering in the simplest words and incidents ever anew their 'Demiurge,' their 'Bythos,' their 'Achamoth,' and their 'eternal Wisdom' (Irenæus, i. 1. 17, 15; Hatch, *Influence of Gr. Ideas and Usages upon the Christian Church*, p. 75).

The enormous syncretism of the 2nd cent. drew allegory into its circle. When we see Greeks and Christians contending with one another, we become quite bewildered with the confusion of terms. The Apologists unite with the Sceptics in their opposition to allegory (Aristides, xiii. 7, Seeberg; Tatian, *adv. Græc.* 21; pseudo-Clem. Rom. *Hom.* vi. 17, etc.); but they themselves calmly use allegorical interpretation. Celsus is perfectly justified in his attack on this method, which he designates as a retreat of shame at the immoral stories of the Bible (Origen, *c. Cels.* i. 17, iv. 48 ff.). But, again, Celsus is an allegorist himself (*l.c.* vi. 42), and so both parties, Greeks as well as Christians, tread the same erroneous path.

Allegory had, in fact, become to the men of this time a religious requirement. Although Irenæus and Tertullian scornfully reject the Gnostic interpretations, yet the method took firmer hold, and, along Philo's lines, developed just as luxuriantly as in the Græco-Judæan empire. The language of Clement of Alexandria, revelling as it does in symbolic pictures, at once betrays the allegorist; but it is not worth our while to go into his individual allegorical interpretations here (*Strom.* i. 3. 23, vi. 11. 94; *Pæd.* ii. 8. 62), as they do not essentially differ from those of other Theosophists. Then, Hippolytus is an allegorist, in the full sense of the term, in his commentary on Daniel (cf. i. ch. 13 ff.), and especially in the Canticles, where the interpretation follows that of the Jewish Rabbi Akiba. Origen gave the allegorical method a kind of scientific basis. He also commented on the Canticles, and here we see the influence of Philo more definitely than in his predecessors (cf. p. 8). For it is with the influence of Philo that we have here to deal, not that of Cornutus, as Porphyry, the opponent of Origen, asserts (Eusebius, *HE* vi. 19. 8). According to Origen, then, as to the Hellenistic Jews, there is a threefold conception of Scripture, —the simple man is edified by means of the 'flesh' of the Bible, the advanced by means of its 'soul,' the perfected by the pneumatic *νόμος*, which has a shadow of good things to come (*de Princ.* iv. 11). Thus the understanding of Scripture stands in the most intimate relationship to human nature. There are, however, in Scripture all kinds of *σκάνδαλα*, *προσκόμματα*, and historical impossibilities. Origen, well instructed in the heathen polemics, agrees that there could have been no days before the creation of the stars, and that God could not, like a gardener, plant trees or take walks. It was also impossible to talk of God's face, from which Cain hid himself. Then the Gospels, as well as the OT law, contain precepts which are not to be literally followed (*e.g.* Lk 10[4], Mt 5[39. 29]; cf. 1 Co 7[18]). And there is no lack of stories which are absurd when taken literally, as, *e.g.*, that Satan brought Jesus to the top of a high mountain (Mt 4[8ff.]). Now it would be quite false to reject the whole on account of such peculiarities; on the contrary, where the literal meaning is unworthy of the wisdom of revelation, it is the proper thing to look for the *ὑπόνοια*. The *πνευματικόν*, but not the *σωματικόν*, goes through the whole of the Scriptures; in some passages the latter is impossible. Thus the allegorical wisdom received its academical consecration, and it made little difference that Porphyry, the passionate opponent of Christianity, declared himself against the method (Eusebius, *HE* vi. 19. 4), seeing he himself, as is well known, did no better (cf. the case of Celsus, above). A more threatening opposition arose from another quarter, from the camp of the Christians themselves. We know quite a succession of ecclesiastical writers who declared themselves against Origen's allegorical system. These are the representatives of the school of Antioch (Julius Africanus): Lucian, Eustathius of Antioch (*de Engastrimytho*, ed. Jahn, *Texte und Untersuchungen*, ii. 4; cf. especially ch. xxi. f.), Diodorus of Tarsus (*τίς διαφορὰ θεωρίας καὶ ἀλληγορίας*), Isidorus of Pelusium, and, above all, Theodore of Mopsuestia, who wrote, among other works, five whole volumes against the allegorists (cf. for him, Kihn, *Theodor von Mopsuhestia und Junilius Africanus als Exegeten*). These men, of course, did not think of bluntly rejecting the pneumatical exegesis as unjustified; they only sought, by calling in question the sole supremacy of the allegorical interpretation, to restore the historical basis which had been destroyed by the allegorists. This they did by attempting to disclose the *typical* meaning after having ascertained the verbal signification. But they could not in this way really reach consistency. The allegorical method was, after all, more logical than the exegesis of the school of Antioch, which, in recognizing typology and in distinguishing a double meaning in Scripture, again came nearer to the allegorical interpretation, and, particularly by accepting Messianic passages in the OT, made its own position untenable. Theodore himself is the best example of this. It is quite refreshing to learn his opinions regarding the Book of Job and the Canticles (Migne, *Patrologia Græca*, lxvi. 697 ff.): the former resembles a Greek drama, the latter a love poem, in which Solomon celebrates his marriage with an Egyptian woman. The Psalms, too, were explained historically by Theodore. But then, again, comes the reaction. Although Theodore does not deny that, *e.g.*, Zec 9[8-10] refers to Zerubbabel, and although he expresses himself strongly against those who interpret one part of the prophet's words as applying to him, and another part as referring to Christ, still he finds a kind of mediation in the thought that a considerable part of the prophetic message is to be understood 'hyperbolically,' *i.e.* its full truth was first found in Jesus Christ (cf. *Comment. in Zach.* ix. p. 554 f. 11). Similarly, too, he interprets Ps 54 as referring to Onias, but, at the same time, as being a *σκιαγραφία* (cf. above, Origen, and Theodore himself [p. 555]) of the sufferings of our Lord. Another excellent example (Jl 2[28-32]) is given more fully by Kihn, *loc. cit.* 137. Theodore's exegesis continued to flourish in the school of Nisibis, and obtained, by means of Julius Africanus, an entrance into the West (Kihn, *loc. cit.* p. 215 ff.).

The allegorical method was not emphatically enough combated by this new method, which in the place of the one *ὑπόνοια* only set another, notwithstanding the vigour with which the champions of the doctrine of Antioch in thoroughly Greek style carried on the conflict. It was now no longer possible to overthrow the system; it had already become far too necessary an element in Greek thought. Gregory of Nyssa seems to have quite made up his mind not to reduce the Scriptures to an allegory (*Hexæmeron*, i. p. 6. 42, 43); but then, again, he takes a delight in all allegorical representations, and gives some himself, particularly in his explanation of the Canticles. Gregory of Nazianzus, who, like all the Apologists, opposes the heathen allegories, wishes to adopt in the interpretation of Scripture a *via media* between

the παχύτεροι τὴν διάνοιαν and the allegorists (*Orat.* xlv. 12), but he also declares: ἔνδυμα τῆς ἀσεβείας ἐστὶν ἡ φιλία τοῦ γράμματος (*Orat.* xxxi. 3).

Allegorical interpretation flourished also in the West. Its rules had been taught at an early date in the rhetorical schools (Jerome, *Com.* on *Ep. ad Gal.* ii. 4. 24). Alongside of Hilary and Ambrose, the great name to be mentioned here is that of Jerome, who lays down the maxim (*Comment. in Mal* $1^{10ff.}$, vi. 952, Migne): 'Regula scripturarum est: ubi manifestissima prophetia de futuris texitur, per incerta allegoriæ non extenuare quæ scripta sunt,' but who at the same time explains Leah as Judaism, Rachel as Christianity (*Ep.* cxxiii. 13, i. p. 910, Migne), and declares (*ad Am.* lib. i. 2. 1 ff., vi. 238, Migne): 'Qui legit introiisse Judam ad Thamar meretricem et ex ea duos filios procreasse, si *turpitudinem* sequatur *litteræ* et non ascendet ad decorem *intellegentiæ spiritalis*, comburat ossa regis Idumææ.' Augustine here, as in all other departments, occupies a prominent place. He follows in his writing, *de Doctrina Christiana*, the seven hermeneutic rules of the Donatist Tychonius (iii. 30), and gives a lively and delightful representation of the duties of the expositor. In spite, however, of the breadth of his view, he too appeals to the old text, 2 Co 3^6, that the letter killeth (iii. 5); and thus we kill our souls when, in following the letter, we subject our *intellegentia* to the flesh (cf. Origen, above). But Augustine in many Biblical passages recognizes not so much an allegorical meaning as *figurata locutio* (xi. 15): 'Servabitur ergo in locutionibus figuratis regula huiusmodi, ut tamdiu versetur diligenti consideratione quod legitur, donec ad regnum caritatis interpretatio perducatur.' It requires, however, no more than these seven rules of Tychonius to show us that Biblical exegesis was threatened with a schematism which, in a short time, prevailed. Cassiodorus, who in like manner makes use of Tychonius, postulates in his book *Institutiones divinarum et sæcularium literarum* six *modi intellegentiæ*; and Eucherius proceeds according to the same example in his *Formulæ spiritalis intellegentiæ*, which now furnish us with a copious table of individual allegories. Thus a special meaning is afforded when Scripture speaks of the features of God—the eyes of God are His insight, His mouth is His speech, and so on.

But, in addition to that, every individual thing has its definite meaning: the ice is = *durities peccatorum*; the winds = *animæ sanctorum*; the shadow = *protectio divina*; the stones = either Christ or *sancti*; roses are = *martyres a rubore sanguinis*; the fishes = *sancti*; the raven = *nigredo peccatoris vel dæmonis*; the lion = *dominus*; the bear = *diabolus aut duces sævi*, but the wolf and the wild boar are also representations of the devil; the tiger is = *feminea interdum interrogantia*; the camel = *divites rebus sæculi onusti vel moribus distorti.*

After winning these triumphs, the Middle Ages fell asleep, and it is impossible for us here to trace the vagaries of allegorical interpretation further. The interpretation, which finds expression in the following well-known couplet, becomes quite a fixed rule:—

'Littera gesta docet, quid credas *allegoria*,
Moralis quid agas, quo tendas analogia.'

Bernard of Clairvaux is an enthusiastic allegorist of the Canticles. Thomas Aquinas (*Summa Theol.* i. art. 10) distinguishes the *sensus historicus vel litteralis* from the *sensus spiritualis, qui super litteralem fundatur et eum supponit*, and this distinction prevailed for centuries. It was not till the Reformation that this way of interpreting was called in question. Luther, who confesses that as monk he had allegorized everything, seeks, along with the other Reformers, only for the *sensus litteralis* (Heinrici, in Hauck, *PRE*^{3}, vii. art. 'Hermeneutik'). Of course he still interprets Canticles allegorically, but does not express himself so enthusiastically regarding it as either the theologians of the Middle Ages or many later exegetes. The Canticles, in fact, have been to a large extent the test for the later Biblical interpretation. Generally speaking, the allegorical method has in modern times fallen into disuse. Men like Cocceius belong to the exceptions, and Biblical criticism on a historical and grammatical basis has, particularly since the end of the 18th cent., almost annihilated allegorical exegesis. Still the interpretation of the Canticles, which held its place in the Canon, has again and again raised up friends of the old method. Although H. Grotius, as early as the 17th cent., treated the poem to a large extent historically and grammatically, and Herder, at the end of the 18th cent., offered a purely historical and literary explanation, still there have been even in our times men like O. von Gerlach and Hengstenberg, who have more or less preferred the old interpretation of the Canticles as referring to Christ and the Church. This is the exegesis which still prevails in the Roman Catholic Church.

A few words remain yet to be said with regard to the Jewish allegorists. The 2nd cent. of our era produced quite a succession of these exegetes. We have already noted above (p. 330[a]) that the allegorical interpretation of the Canticles is due originally to R. Akiba. Among the Jews, no less than among the Christians, keen controversies have raged, and the 13th cent. in particular is remarkable for the passions which this dispute called forth. Among the Jewish interpreters of the Bible at the present day the allegorical method is the method of interpretation which finds most general favour.

JOH. GEFFCKEN.

ALL FOOLS' DAY.—This has been authoritatively defined as a humorous name for the First of April, the day which has been popularly appropriated to the custom of playing the fool by means of practical jokes at the expense of a person's credulity. The term is of comparatively modern use; the practice is wide-spread, but of obscure origin.

The phrase is used by Swift in 1712: 'A due donation for All Fools' Day' (Hone's *Every Day Book*, i. 205). It occurs in 1760 in *Poor Robin's Almanack*: 'The First of April some do say is set apart for All Fools' Day' (Brand, *Pop. Antt.*). Charles Lamb uses the expression: 'All Fools' Day. The compliments of the season to my worthy masters.'

The custom is wide-spread. Hearne, in his diary, under April 2, 1712, writes: 'Yesterday being the first of April (a day remarkable in England for making of April Fools),' etc. (Hearne's *Collection*, vol. iii. Oxf. Hist. Soc. 1888). Congreve in 1687 refers to the fools'-errands practised on the First of April: 'That's one of Love's April-fools, is always upon some errand that's to no purpose.' There is also in the *Oxf. Eng. Dictionary* a reference as early as 1609, from Dekker's *Gull's Hornebook* (ed. Grosart, ii. 209): 'To the intent I may aptly furnish this feast of Fooles.' There is no distinct reference to the practice in Shakespeare, unless, in the light of the Congreve quotation above, the following from *As You Like It* may be taken as an allusion to it:

'*Ros.* Now tell me how long you would have her after you have possessed her.
Orl. For ever and a day.
Ros. Say "a day" without the "ever." No, no, Orlando; men are April when they woo, December when they wed.'—IV. i. 143.

Brockhaus (*Konv. Lexikon*) says that the practice is unknown to German antiquity, and appears to have been introduced from France.

The origin of the practice is obscure. It is clear from Dekker that it was widely prevalent at the close of the 16th century. It seems difficult,

therefore, to accept the theory that it was due to the transference of New Year's Day from the First of April to the First of January. In France this is said to have been due to an order of Charles IX. in 1564, and it is suggested that for the *étrennes*, or New Year's gifts which were transferred to the First of January—

'on ne fit plus que des félicitations de plaisanterie aux personnes qui s'accommodaient avec regret au nouveau régime. On fit mieux encore; on s'amuse à les mystifier par des cadeaux simulés ou par des faux messages, et finalement, comme au mois d'avril le soleil quitte le signe zodiacal des Poissons, nos aïeux donnèrent à ces simulacres le nom de poissons d'avril' (*Nouv. Dict. Larousse Illust.*).

But is not this itself a *plaisanterie*? New Year's gifts were, at least in England, given at the beginning of January before 1564. It is on record that they were presented to Henry VI. between Christmas Day and 4th Feb. 1428 (Rymer's *Fœdera*, x. 387). And 'Sol in piscibus' stood of old in the calendars much as the phrase 'Sun enters the sign Pisces' stands in the calendar for 1907 against 19th Feb. The *poissons d'avril* were caught under the Ram. They cannot even come under the category of the Irish Bull.

Other suggestions have been made as to the origin of this practice of making an April-fool, or 'hunting the gowk,' as it is termed in Scotland. Some have seen in it a parody of the changeableness of April weather. Others regard it as a reminiscence of the solemn fooling in the Miracle Plays. Another sees in it a relic of the Roman *Cerealia*, held at the beginning of April.

'The tale is that Proserpine was sporting in the Elysian meadows, and had just filled her lap with daffodils, when Pluto carried her off to the lower world. Her mother Ceres heard the echo of her screams, and went in search of the voice; but her search was a fool's errand,—it was hunting the gowk or looking for the echo of a scream' (Brewer, *Dict. of Phrase and Fable*).

May not this be numbered among the fables, the *Cerealia* being kept from April 12 to 19?

Fooling similar to that which characterizes the First of April takes place at the Holī Festival in India; and Maurice (*Ind. Ant.* vi. 71) says:

'The First of April in England and the Holī Festival in India had their origin in the ancient practice of celebrating the Vernal Equinox.'

The similarity of the fooling in India and the Celtic lands of Western Europe, taken together with affinities in religion and folklore, illustrated by the cross-legged figure of the Celtic deity Cernunnos in the Bordeaux Museum, points to a common origin in very early times, and supports Maurice's conclusion. The same conclusion is expressed in other words in Brockhaus' *Konvers. Lex.*:

'dass er der Rest eines alten heidnischen vielleicht altkeltischen Festes ist, welches mit dem Beginn des Frühlinges im Zusammenhange stand.'

In whose honour this old Celtic Festival was held, and what religious mystery or rite underlay the fooling, has yet to be traced. It is only possible to suggest the lines along which the solution may be found.

Two points have to be noted. The rite—if such fooling may be dignified by the name of rite—must be performed at the passing of March, *i.e.* on the First of April. It must also be finished before noon. These points are confirmed by two rhymes. In North Staffordshire, if the joke is played in the afternoon, those who are trying to practise the joke are met with the retort:

'March le gone, and April come;
You're a fool, and I'm none.'

In South Staffordshire the rhyme runs:

'April-fool's dead and gone,
You're ten fools to make me one.'

These rhymes, preserved in a district still strongly versed in old Celtic folklore, point not only to the antiquity of the custom, but to its being associated with some ancient pagan rite, celebrated between the evening of the last day of March and the morning of the First of April.

Is there any means of tracing the origin and affinity of the rite? The First of April was kept in ancient Rome as the Feast of Venus and Fortuna Virilis. Ovid says that Fortuna Virilis was worshipped by women that she might preserve their charms, and thus enable them to please their husbands (*Fasti*, iv. 145–149). How the men occupied themselves during the time the women were worshipping at the shrine of Fortuna Virilis, or whether they suspected they were being fooled by the women, cannot be known. As Fortuna Virilis was also the goddess of boys and youths, it is not impossible that the old game of 'blind-man's buff,' or 'hoodman-blind,' as it is in Shakespeare, may be a relic of the rite practised by the men on the occasion of this Festival. Or the fooling may be specially associated with this Spring Festival of Venus. It is on record that Q. Fabius Gurges, the Consul, at the close of the Samnite War, founded the worship of Venus Obsequens and Postvorta (Smith, *Class. Dict.* art. 'Venus'). Fuller details may be found in Livy (*Hist.* xi.).

It is to some Celtic form of this worship of Venus on the First of April that the origin of All Fools' Day must be traced. Rhys in his Hibbert Lectures shows an affinity between Venus and the maiden-mother Arianrhod, the daughter of Don.

'These remarks on the parallelism between the Celtic Sun-god and Balder would be incomplete without a word respecting the latter's mother, Frigg. She is proved, by the Anglo-Saxon word Frigedæg, now Friday, and by the old Norse habit of calling the planet Venus Frigg's Star, to have been treated to a certain extent as a counterpart of the Latin Venus. Her dwelling in a mansion called Fensal, the Hall of the Fen or Swamp, recalls Lleu's mother, Arianrhod, and her sea-girt castle' (Rhys, *Hibb. Lect.* p. 543).

And perhaps it is not merely accident that some of the most exquisite fooling in the *Mabinogion* is in 'Math, the son of Mathonwy.' Arianrhod was the mistress of the Culture Hero, Gwydion, son of Don. By her he had two sons, Llew or Lleu, the Sun-hero of Celtic mythology, and Dylan. The boy Llew was reared at Dinas Dinlle, on the Carnarvon coast near the southern end of the Menai Straits. A little distance to the south-west is a sunken reef known as Caer Arionrhod, the sea-girt Castle of Arianrhod in the *Mabinogion*. This was the scene of the magic fooling by which Gwydion won a name for his son Llew, and forced Arianrhod to invest him in the armour in which he was to shine. Llew's twin-brother was christened by order of Math, and immediately made for the sea. 'He swam as well as the best fish in its waters, and for this reason was called Dylan, the son of the wave' (Guest's *Mabinogion*, ed. Nutt, pp. 66–71). His name is commemorated in the headland Maenddulan on the same coast.

Llew and Dylan are held by Rhys to represent the principles of light and darkness, and it would be natural that any rite connected with the victory of the Sun-god Llew over Arianrhod and his twin-brother Dylan should be associated with the First of April. This suggestion also affords an explanation of the French phrase. Those who were fooled on the First of April, and suffered the discomfiture of Dylan, would suitably be named after his fish-like propensities, 'poissons d'avril.'

All Fools' Day may therefore be the relic of a Spring Festival of Llew. In the shining armour of the Sun, which he had won by his magic from Arianrhod, he triumphed at this season of the year over the cold gloom of the winter sunlight personified in his brother Dylan. These early myths took shape in religious rites, and were preserved in folklore and in popular rhymes and customs. Rhys, writing of the feast held on the First of August in honour of Lug, another name of the Sun-hero Llew, says:

'Look at the position of these places [Lyons, Laon, Leyden, all variants of the older Lugdunum] on the map, and take into

account those of Dinlleu in Arvon and Dinlle in the Wrekin district of Shropshire, also the places where the Lugnassad were celebrated in Ireland, and you will readily admit that the name Lugue, Lug, or Lleu was that of a divinity whose cult was practised by all probably of the Celts both on the Continent and in these islands' (*Hib. Lect.* p. 420).

Such a cult would almost of necessity involve a Spring Festival in which Llew would be associated with Arianrhod and his brother Dylan. And it may be noted that it is within sight of the Wrekin that the North Staffordshire rhyme runs:

'March is gone, and April come;
You're a fool, and I'm none.'

The lines point to the triumph of Llew and the discomfiture or fooling of Dylan.

IN the most general sense of the term, an altar may be defined as a surface, usually elevated, but occasionally level with the ground, or even depressed beneath it, prepared or adapted to receive a sacrifice. It is thus, by implication, intimately connected with sacrifice (*q.v.*), and has seemingly been developed as a ritual adjunct to the oblation. Sacrifices are, however, not uncommonly made to natural objects by casting the offering into them. Thus, amongst the Nicaraguans, the human sacrifices to the volcano Masaya or Popogatepec were cast into the crater of the mountain, and amongst the Hurons tobacco was thrust into the crevice of a rock in which a spirit was believed to dwell (Tylor, *Pr. Cult.*[3] ii. 207–208); while, in similar fashion, pins and other trifles are dropped into holy wells in Cornwall and Armenia; and in Swabia, the Tyrol, and the Upper Palatinate, meal is flung into the face of the gale to placate the storm-demon (*ib.* pp. 214, 269; cf. also pp. 210–211; and Abeghian, *Armen. Volksglaube*, Leipzig, 1899, p. 58). The common Greek practice of making offerings to water deities, even to Poseidon himself, by permitting the blood of the sacrifice to flow immediately from the victim into the water, is too well known to require more than an allusion, and it is again exemplified both in Guinea and North America; while, in like manner, offerings are made to the earth by burying the sacrifice, as amongst the Khonds of Orissa (a mode of sacrifice which also occurs elsewhere in offerings to the dead), and to the fire by casting the offering into it, as amongst the Yakuts and the Carinthians (Tylor, *op. cit.* ii. 377–378, 407–408). Sacrifice to the dead may be made simply by casting the offering away at random, as in Melanesia (Codrington, *Melanesians*, Oxford, 1891, p. 128).

Sacrifices may also be offered either by placing the offering simply on the ground, as amongst the Indians of Brazil and the African negroes (cf. Jevons, *Introd. to Hist. of Rel.*, London, 1896, pp. 134–135); or by hanging the oblation on trees or poles, as amongst the ancient Swedes and the modern Semites, Armenians, Hindus, and some of the African tribes (cf. Tylor, *op. cit.* ii. 228; Curtiss, *Prim. Semit. Rel. To-day*, New York, 1902, pp. 91–92; Abeghian, *op. cit.* p. 59; Crooke, *Pop. Rel. and Folklore of N. India*, London, 1896, ii. 99–100, 102; Ellis, *Ewe-Speaking Peoples*, London, 1890, p. 42).

In considering the primitive purpose of the altar, it may not be amiss to discuss the etymology of the words denoting it in Semitic and Indo-Germanic. In the former group of languages 'altar' is represented by the Hebrew *mizbēaḥ* (Arab. *madhbaḥ*), a derivative of זבח (Assyr. *zibû*, Arab. *dhabaḥa*, etc.), 'to slaughter,' thus clearly indicating that the Semitic altar was for the slaughtered victim or its blood, not for the burnt-offering (the burnt-offering being of later development amongst the Semites; cf. W. R. Smith, pp. 350 ff.); and this is curiously confirmed by the fact that amongst the modern Semites there are no burnt-offerings, but only the slaughter of victims without burning (Curtiss, *op. cit.* p. 229).

But if we turn to the Indo-Germanic words for 'altar,' a striking diversity of terms awaits us. First and foremost is the Latin *altāre*, borrowed in many languages (*e.g.* Old High German *altāri*, Old Pruss. *altars*, Old Church Slav. *olŭtarĭ*, Lith. *altõrius*, Russ. *altarĭ*), and defined by Festus as follows: 'altaria sunt in quibus igne adoletur.' The word is commonly derived from *altus*, 'high'; but this must be rejected, since not only is the meaning unsatisfactory, but linguistic evidence is against it, *-āris* (*-ālis*) being used in Latin only to form an adjectival or nominal derivative from a noun (cf. *limināris* for an inferred *liminālis*, 'relating to the threshold,' from *limen*). It should plainly be connected with *ad-oleo*, 'to burn a sacrifice,' unaccented Lat. *a* in post-tonic syllables (the primitive form of *adoleo* being *ádaleo*) becoming *o* before *l* and labials, and probably stands, by dissimilation, for an inferred *altālis*, 'fiery' (cf. for this etymology and other Indo-Germanic cognates, Walde, *Lat. etymol. Wörterbuch*, Heidelberg, 1906, p. 9; the *t*, however, makes the derivation of *altāre* from the root *alē* very difficult, unless one may assume in it the presence of a 'root-determinative' *t* [cf. Persson, *Wurzelerweiterung und Wurzelvariation*, Upsala, 1891, pp. 28–35], though this method of etymologizing is rejected by many scholars). The second Lat. term for 'altar' is *ara*, Oscan *aasa*, Umbrian *asa*, which is most probably connected with *areo*, 'burn' (Walde, *op. cit.* p. 40).

The Greek terms for 'altar' are *βωμός*, *θυμέλη*, and *θυσιαστήριον*. The first of these, which stands in *Ablaut*-relation with Doric *βâμα* (Attic *βῆμα*), 'step,' itself occasionally means 'step' (*e.g. Odyss.* vii. 100); while the last two are both connected with *θύω*, 'to sacrifice,' especially by burning (cf. Latin *suf-fio*, 'fumigate,' etc.). Finally, in Germanic we have the Icelandic *stalli*, Anglo-

Saxon *weofod* or *wihbed*, and Gothic *hunslastaþs*, the first being etymologically akin to the Eng. *stall*, 'place,' the second denoting 'idol-table,' and the third 'place of sacrifice, housel-stead.' Finally, it may be noted that a modern Russian term for 'altar,' *žertveniikŭ*, also means 'place of sacrifice,' being a derivative of *žertva*, 'sacrifice'; but it must be borne in mind that this root is ultimately connected with Skr. *gar*, 'to praise,' so that the Slav. group, including Old Church Slav. *žrěti*, 'to sacrifice,' *žrŭtva*, 'sacrifice,' and *žiričŭ*, 'priest,' seems to have regarded the sacrifice primarily as praise (cf. Miklosich, *Etymol. Wörterbuch der slav. Sprachen*, Vienna, 1886, p. 410)—a concept which is, perhaps, borrowed from Christianity.

It is thus evident that amongst the Semites the altar was primarily the place where the victim was slaughtered, and amongst the Indo-Germanic peoples the place where it was burnt.

It is clear from what has already been said that the altar, essentially an adjunct of the sacrifice, has been evolved later than the oblation, for many peoples have sacrificed, or made their offerings, and still do so, without altars; and there are considerable areas, particularly in Africa and South America, where the altar is entirely unknown, while the late development of the altar amongst the Indo-Germanic peoples is a commonplace (cf. Schrader, *RE der indogerm. Altertumskunde*, Strassburg, 1901, pp. 855, 861), and receives a striking exemplification in the relatively late evolution of the Indian *vedi* (see ALTAR [Hindu]). The latter represents, indeed, a curious type of altar, in that it is primarily a fire altar in a trench strewn with grass, evolving later into the common form of a raised altar for burnt-offerings. Its development thus shows all three forms of the altar — depressed below the ground, practically level with the ground, and elevated above the ground (cf. Ludwig, *Der Rigveda*, iii., Prague, 1878, p. 364 f.; Hillebrandt, *Ritual-Litteratur*, Strassburg, 1897, p. 14).

Allusion has already been made to the widespread custom of hanging offerings on sacred trees, and oblations are likewise placed on sacred stones. The best example of the latter phenomenon is perhaps found in the case of the Heb. *maṣṣēbāh*, 'upright stone, pillar' (from נצב, 'to take one's stand'; cf. Arab. *naṣaba*, 'to set up,' *nuṣb*, 'object set up, idol': for other cognates and for literature, cf. *Oxf. Heb. Lex.* pp. 662–663), which was regarded as a Divine abode and anointed with oil (*e.g.* Gn 28[18]). In like manner the Arab. *anṣāb* (plural of *nuṣb*, 'idol,' which is derived from *naṣaba* = נצב, and is thus linguistically connected with *maṣṣēbāh*) were anointed with blood (W. R. Smith, pp. 184, 321).

It is held by many that the sacred stone or tree and the altar 'originally were identical in use and purpose' (cf. Jevons, *op. cit.* pp. 134–135); but this view seems at least open to question, despite the support given to it by the history of the Semitic altar. Though the distinction may be deemed academic and subtle, the present writer feels that, while the deity is believed to be in the sacred stone or the sacred tree, he is never held to dwell in the altar. The altar is, in other words, from its very inception, the table on which the offering to the god is slaughtered, burnt, or deposited. The oil and blood on the sacred stone please and feed the deity, the rags on the sacred tree adorn him; but the offerings on the altar are taken by him, not placed upon him. In no sense, then, can the sacred tree or stone be considered identical with the altar, unless one is ready to regard the Ægæan Sea as an altar because offerings were cast into it in honour of Poseidon, or the crater of Mauna Loa as an altar since human sacrifices to Pele were hurled into its depths; for there seems to be no differentiation of kind between the besmearing of the sacred stone and the casting of an oblation into the ocean or into a crater.

The evolution of the altar will be considered more fully in the following sections devoted to it amongst individual peoples, but a brief allusion may be made to two forms of altar not always recognized as such. In the opening sentence it has been stated that the altar may sometimes be 'level with the ground, or even depressed beneath it.' In the former case we have a very primitive type indeed—but a step removed from the mere placing of offerings on the ground by interposing a layer of sand which serves as an altar. The typical example of this form is the Hopi altar, which is discussed in ALTAR (American), though an analogue may be traced in the Semitic use of the threshold as an altar (see Trumbull, *The Threshold Covenant*, London, 1896, *passim*), or in the mat-altars of the ancient Egyptians; as well as in the herbs on which the flesh of slaughtered victims was laid by the Persians (Herodotus, i. 132; Strabo, p. 732 f.).

The altar depressed below the ground is more than the mere trench which often surrounds the altar to receive the blood which flows from the sacrifice slaughtered upon it (cf. 1 K 18[32]; Wellhausen, *Reste des arab. Heidentums*[2], Berlin, 1897, p. 105), even as the altar itself frequently has hollows artificially made or modified in its upper surface to receive or carry off the blood (cf. Curtiss, *op. cit.* pp. 235–236). This form of depressed altar was particularly appropriate in sacrificing to the *manes*, and is admirably exemplified in the sacrifice made by Odysseus in order to enter Hades (*Odyss.* xi. 24–47; cf. Lucian, *Charon*, 22; Pausanias, x. 4–10); or again in the ancient Persian form of sacrifice to water (Strabo, *loc. cit.*), where, as in the Indian *vedi* (see above), we find the trench combined with the *quasi*-mat (for further instances of the Indo-Germanic trench-altar see art. ARYAN RELIGION). With all this may be compared the distinction in Chinese ritual between the victims sacrificed to earth and those offered to Heaven, the former being buried and the latter burnt.

The trench-altar is interestingly combined with the more usual form in the round altar with a hollow centre, through which the blood might flow immediately into the earth, found at Mycenæ, and corresponding with the hollow, round ἐσχάρα, 'hearth,' level with the ground, ἐφ' ἧς τοῖς ἥρωσιν ἀποθύομεν (Pollux, *Onomasticon*, i. 8; see Schuchhardt, *Schliemann's Excavations*, tr. Sellers, London, 1891, pp. 156–157); while the connecting bond between the two forms seems to be given by an altar discovered by Schliemann at Tiryns, consisting of a quadrangular block of masonry laid on the ground, with a round hole in the centre, lined with masonry to a depth of three feet, beneath being a rough earthen pit (Schuchhardt, *op. cit.* p. 107).

The probable general development of the altar may, in the light of what has been said, be sketched briefly as follows. Offerings were originally set upon the ground before the divinity, or placed upon the object in which he was believed to dwell, but as yet there was no altar. With the further evolution of the concept of sacrifice as a meal, either exclusively for the divinity or to be shared by him with his worshippers (for full details see art. SACRIFICE), and with the development of the idol-concept (see art. IMAGES AND IDOLS), natural objects, chiefly poles and stones, of appropriate shape were placed before the idol in which the deity was held to reside, and there received the offerings; or a thin substance was placed upon the ground to remove the offering from direct contact with the ground—thus giving the most primitive forms of the altar, which

might also be made of a pile of stones, or even of earth. As the shrine or temple (*q.v.*) was evolved, the altar was placed at first outside it, because of the small dimensions of the primitive shrine; but later it resumed its original place in front of the object in which the divinity was believed to dwell, or which symbolized the deity to whom sacrifice was made. With the development of art, the altar, which had long ceased to be left in its natural shape, despite the conservative character of religious ritual (cf. Ex 20^{25}), became varied in form, and was ornamented in accord with the best abilities of those who constructed it. The theory of the altar, however, is unchanged, whether victims be slaughtered on it, or whether it be used for burnt-offerings, or to receive and bear animal, vegetable, or other oblations (as in the Roman *lectisternium*, the Jewish table of shewbread, or many Polynesian altars), these distinctions belonging properly to the subject of sacrifice (*q.v.*). The human body has been used in at least two cults as an altar. In the Aztec Ochpaniztli, or broom feast, the woman who was to be sacrificed by decapitation was held by a priest on his back, he thus constituting an altar (*Bulletin 28 BE*, p. 174); while in Satanism (*q.v.*) the body of a nude woman forms the altar on which the Mass is parodied.

LITERATURE.—Jevons, *Introd. to Hist. of Rel.* (London, 1896) pp. 130–143; and see at end of following articles.

LOUIS H. GRAY.

ALTAR (African).—Nowhere, except in South America, is there so general a lack of the altar as in Africa—a phenomenon which closely corresponds to, and is in part indicative of, the primitive religious conditions of that continent, and also finds a partial explanation in the simplicity characterizing fetishism (*q.v.*), the prevailing type of religion there; though temples, or 'fetish huts,' are by no means unknown, even amongst tribes which have no altars, such as the Bantu Basogas (cf. Waitz, *Anthropol. der Naturvölker*, ii., Leipzig, 1860, pp. 184–185; Johnston, *Uganda Protectorate*, London, 1902, pp. 717–718). Thus, amongst the Hottentots, and even the Hovas of Madagascar, we find no traces of the altar (Waitz, *op. cit.* pp. 342, 440); while amongst the tribes of the West Coast, whose religion has been perhaps the most carefully studied, this feature of the cult plays relatively a very minor rôle. Attention should here be directed, however, to the sacrifices which are made by the Ewe-speaking peoples to Legba, the phallic deity, to whom 'on extraordinary occasions a human sacrifice is offered, the victim is disembowelled, the entrails placed in a dish or calabash before the image, and the body suspended on a tree or post in front of the shrine, where it is suffered to remain till it rots and falls to pieces' (Ellis, *Ewe-Speaking Peoples*, London, 1890, p. 42). Here both the dish and the tree (or post) represent a primitive form of altar, and in like manner we may regard the post on which a girl was impaled at Lagos to secure fertility for the ensuing year (Waitz, *op. cit.* p. 197) as a crude altar.

On the other hand, in the 'customs' of Dahomey (cf. Ellis, *op. cit.* pp. 120–138), the sacrificial victims were merely slaughtered on the ground; nor can the usage of burying living human beings when houses or villages were set up in Grand Bassam, Yarriba, and Dahomey (cf. the same custom in Polynesia), or the practice of staking out a victim in the path of a threatened invasion, where he was left to starve to death to deter the foe, be cited as referring in any way to the altar. Nevertheless, in Dahomey a rude form of altar is found in the small piles of earth placed at the foot of trees, the turning of roads, the entrance to houses or villages, and in open spaces, on which are set manioc, maize, palm-oil, and the like, as offerings to the spirits (Schneider, *Rel. der afrikan. Naturvölker*, Münster, 1891, p. 115).

Amongst the Tshi-speaking peoples of the Guinea Coast the country stool (*egwah*) of the god, 'which is the local symbol of authority,' is washed with the blood of human victims sacrificed in honour of the deity, whose own image receives a similar ablution, this being expressly recorded of the divinities Bobowissi, Ihtúri, Bons'ahnu, Behnya, and Prah (Ellis, *Tshi-Speaking Peoples*, London, 1887, pp. 23, 51–53, 65). But neither the stool nor the image can properly be termed an altar, any more than the elevations on which the idols are set in Dahomey temples, where 'the images of the gods are placed inside, usually on a raised rectangular platform of clay; and before them are the earthen pots and vessels, smeared with the blood, eggs, and palm-oil of countless offerings' (Ellis, *Ewe-Speaking Peoples*, p. 81).

Against this rather negative material may be set at least one African altar of a degree of development approximating to that found, for instance, in Polynesia. This is the one in the 'ju-ju house' at Bonny, thus described by de Cardi (in Mary Kingsley's *West African Studies*, London, 1899, p. 515):

'The altar looked very much like an ordinary kitchen plate rack with the edges of the plate shelves picked out with goat skulls. There were three rows of these, and on the three plate shelves a row of grinning human skulls; under the bottom shelf, and between it and the top of what would be in a kitchen the dresser, were eight uprights garnished with rows of goats' skulls, the two middle uprights being supplied with a double row; below the top of the dresser, which was garnished with a board painted blue and white, was arranged a kind of drapery of filaments of palm fronds, drawn asunder from the centre, exposing a round hole with a raised rim of clay surrounding it, ostensibly to receive the blood of the victims and libations of palm wine. To one side, and near the altar, was a kind of roughly made table fixed on four straight legs; upon this was displayed a number of human bones and several skulls; leaning against this table was a frame looking very like a chicken walk on to the table; this also was garnished with horizontal rows of human skulls—here and there were to be seen human skulls lying about; outside the ju-ju house, upon a kind of trellis work, were a number of shrivelled portions of human flesh.'

LOUIS H. GRAY.

ALTAR (American).—1. Among *the Indians of N. America* the altar played an important part, although, curiously enough, the Jesuit missionaries in New France make no mention of this adjunct of religious cult. This silence may be explained, at least in part, not only by the fact that these heroic and devoted souls were not trained observers, but also by the circumstance that the Algonquian and Iroquoian stocks among whom they laboured were essentially nomadic, and thus had neither temples nor altars sufficiently striking to attract the missionaries' attention. We know, however, that the Indians of Virginia had 'altars, which they call Pawcorances, placed in their fields, where they sacrifice blood and fat of savage beasts, and offer tobacco when they return from war or the chase' (de Laet, *L'Hist. du Nouveau Monde*, Leyden, 1640, iii. ch. 18). The Natchez, moreover, had a large temple, in the centre of which was an altar with a perpetual fire; while the Cadoan Assinai temples contained a wooden altar, on which stood leathern coffers, filled with leather dishes and musical instruments (Waitz, *Anthropol. der Naturvölker*, iii. 204, 220–221). The perpetual fire, it may be noted, was also maintained in Louisiana and amongst the Muskhogees (*ib.* pp. 203, 208).

Altar-mounds, found in connexion with many of the structures of the 'mound-builders,' contain altars of clay or, more rarely, of stone. They vary greatly in size and shape, but are seldom over twenty inches high, and are near the ground in the centre of the mound; while in their top is

a basin-shaped hollow, usually filled with ashes (Bancroft, *Nat. Races of the Pacif. States*, iv. 774; cf. Thomas, *RBEW* v. pp. 57–58 [West Virginia]; Holmes, *ib.* xx. pp. 36–37). Here, again, numerous variations from the general type are known. Thus, on the top of a mound near Sterling, Ill., was found 'an oval altar 6 ft. long and 4½ wide. It was composed of flat pieces of limestone which had been burned red, some portions having been almost converted into lime. On and about this altar I found abundance of charcoal. At the sides of the altar were fragments of human bones, some of which had been charred' (Holbrooke, quoted by Yarrow, *Introd. to Study of Mortuary Customs among the N. Amer. Indians*, Washington, 1880, p. 23).

In his *Mœurs des sauvages amériquains* (Paris, 1724, ii. 327) the Jesuit Lafitau advances the theory that the calumet, or 'pipe of peace,' was an altar. This statement, perhaps surprising at first, is not so absurd as it may appear, for the calumet certainly contains, in some instances, a burnt-offering in honour of a deity. Among the Southern Talapouches and Alabamons the head priest went forward each morning before sunrise with the calumet, and blew the first puff of smoke towards the east. The Natchez custom was very similar, except that the head priest thrice prostrated himself to the east, and honoured not only that quarter, but also the three others with whiffs of smoke. Like customs are found amongst many N. American Indian tribes, such as the Kisteneaux, Sioux, Shoshones, Omahas, Poncas, Blackfeet, Pottawatomies, and Hopis (M'Guire, 'American Aboriginal Pipes and Smoking Customs' in *Report of the United States National Museum*, 1897, pp. 351–646, especially pp. 563–571).

By far the most elaborate modern N. American Indian altars, however, are those of the Hopis and kindred Pueblo tribes, whose snake, antelope, and flute altars have been carefully described by Fewkes (*RBEW* xv. p. 270; *ib.* xvi. pp. 278–279, 287–288, 290–292; xix. pp. 966–969, 980–983, 989–996, 1001–1002). These altars are of special interest in that, unlike any others known, they embody primarily the principle of sympathetic magic, especially as 'at present the ritual is performed for the purpose of bringing abundant rain and successful crops' (Fewkes, *ib.* xix. p. 963, cf. pp. 1009–1111). The Hopi altar, which, of course, presents unessential variations in different places and ceremonies, is composed of sand, the square interior white, with bordering strips of yellow, green, red, and white, symbolizing the four cardinal points. At the top of the central square are four symbolic figures of each of the four rain-clouds, from which depend four serpents, typifying lightning, while on the top outer white sand border are lines of black sand, representing rain. At the bottom of the altar are four water-gourds (the number again typifying the four quarters of the sky), separated by ears of maize, and at the top is a vase with maize-stalks. Rattles and bull-roarers, symbolizing thunder, are scattered around the edges of the altar, and a pouch of tobacco (the smoke typifying the rain-cloud), a water-gourd, and a 'medicine-bowl,' into which an aspergill is dipped to symbolize the falling rain, are also prominent features. The lines of meal drawn across the sand seem to represent the fertilization proceeding from the rain-clouds to the external world; while *tipones*, or totemistic emblems of the clans celebrating the ritual, form the most sacred objects of the altar. Figures of aquatic animals are also found frequently, together with other objects whose precise significance is not yet fully known.

Many of these Hopi-Zuñi altars, it should be noted, have a more or less elaborate reredos, that of the Cakwaleñya ('Blue Flute' society) at the Tusayan pueblo of Mishongnovi, for example, being described by Fewkes (*RBEW* xix. pp. 991–992) as consisting 'of uprights and transverse slats of wood, the former decorated with ten rain-cloud pictures, five on each side, one above the other. These symbols had square outlines, each angle decorated with a figure of a feather, and depending from each rain-cloud figure, parallel lines, representing falling rain, were painted. The transverse slat bore a row of nine rain-cloud figures of semicircular form. Four zigzag sticks, representing lightning, hung from the transverse slat between the vertical or lateral slats of the reredos. Two supplementary uprights were fastened to the main reredos, one on either side. These were decorated at their bases with symbolic pictures representing maize, surmounted by rain-cloud figures. The ridge of sand between the uprights of the altar supported many smaller rods and slats, the one in the middle being decorated with a picture of an ear of corn.' Despite the elaborate character of these reredoses, however, they are obviously subordinate to the sand-altars placed before them, and of which they are palpable imitations; even though, as in some of the Zuñi altars described by Mrs. Stevenson, the reredos is *quasi*-permanent, while the sand-altar must be remade for each ceremony.

Amongst the Zuñi, as already intimated, we likewise find elaborate altars showing the same general type as their Hopi congeners. In all of them the principle of sympathetic magic seems to be present, as is clear from Mrs. Stevenson's detailed description of them (*RBEW* xxiii. pp. 245–246, 428, 432–434, 454, 491, 529, 543, 550, 551).

2. Turn to *Mexico* and *Central America*. The altar in the great temple at the City of Mexico in honour of Huitzilopochtli, the god of war and the chief Aztec deity, was a green block, probably of jasper, 5 ft. long by 3 broad and high, curved convexly on the top, so that the human sacrifice slaughtered upon it might be in the best position for the excision of the heart (Bancroft, *Nat. Races of the Pacif. States*, ii. 582–583). The Aztec altar, moreover, had an adjunct, not found elsewhere, in the sacrificial yoke, a heavy stone of green jasper, curved in a ⋂-shape, and placed over the neck of the human sacrifice at the time of his immolation, to assist the priests who held his arms and legs, to keep him in a proper position for the chief celebrant.

Our general knowledge of the details of the Aztec altar must, however, be drawn from the sacrificial stones of neighbouring peoples, which may be inferred to have been analogous. The Maya altars, as found in the ruins of Copan, Honduras, and of Quirigua, Guatemala, are 6 or 7 ft. square and about 4 ft. high, taking a variety of forms and being covered with sculpture somewhat less elaborate than the statues of the divinities themselves (Bancroft, *op. cit.* ii. 689, iv. 94). As in many Semitic altars, their tops were intersected with grooves to receive the blood of the sacrifices offered upon them (*ib.* iv. 94–99, 111–114, 541). Besides formal altars, the ancient Mexicans, Mayas, and Guatemalans also had braziers and small altars in which copal, which here corresponded to the Oriental incense, was burnt in honour of the gods, one of these smaller structures, found at Palenque in the Mexican State of Chiapas, being 16 in. high and 4 ft. in circumference (*ib.* i. 697, ii. 584, 690, iii. 336, iv. 345–346). Like the 'mound-builders' of N. America, the Mayas erected altars on the graves of the dead (*ib.* ii. 799), and in Nicaragua flat stones have been discovered which apparently served as altars (*ib.* iv. 32, 61–62).

Both in Mexico and in Central America generally, the altar, like the temple itself, was placed on the summit of the *teocalli*, or 'god-house,' a pyramid of considerable elevation; so that it has been not inaptly said that 'a Mexican temple was essentially a gigantic altar, of pyramidal form, built in several stages, contracting as they approached the summit' (Réville, *Native Religions of Mexico and Peru*, London, 1884, pp. 47–48). In places, however, as at Quemada, in the Mexican State of Zacatecas, a small structure, 5 ft. high and with a base 7 ft. square, was set in front of a pyramid, apparently as an altar (Bancroft, *op. cit.* iv. 587–588).

3. In *South America* the altar seems to be unknown, thus giving yet another proof of the cultic inferiority of the South American Indians to those of North and Central America. Even the archæological remains of Peru present no example of the

altar, so seeming to confirm the words of Garcilasso de la Vega (*Royal Commentaries of the Yncas*, iii. 20, tr. Markham, London, 1869, i. 271) that 'these Indians did not know anything of building an altar.' Nevertheless, there are not infrequent allusions to sacrifice, in the works of the early Spanish *conquistadores*, both of fruits and animals, so that it would seem, in view of the high civilization of the empire of the Incas, as though the Peruvians may very probably have known of the altar, despite the lack of archæological evidence.

LOUIS H. GRAY.

ALTAR (Celtic). — The data concerning the Celtic altar are extremely scanty, since all native records of the pre-Christian period are lacking, while the altars still preserved date from the Roman period, and are modelled upon Roman originals. The chief sources, then, for a knowledge of the altar, as of other portions of Celtic cult, are a few early classical authors. Cæsar, in his brief account of Druidism (*de Bello Gallico*, vi. 13–18), makes no mention of any altar, and is followed in this silence, which may not be without significance, by Strabo (iv. 4. 4–5). On the other hand, Tacitus (*Annales*, xiv. 30) distinctly states that the Druids of Mona 'held it right to besmear the altars with captive blood'; and this practice is extended to the whole of Gaul by Pomponius Mela (iii. 18). By far the most famous passage, however, in this connexion, is found in Lucan's *Pharsalia* (i. 443–445):

> 'Et quibus immitis placatur sanguine diro
> Teutates, horrensque feris altaribus Hesus,
> Et Taranis Scythicæ non mitior ara Dianæ.'

(On the identification of these divinities, see Rhys, *Lectures on the Origin and Growth of Religion as illustrated by Celtic Heathendom*, pp. 44–47, 61–73). The same poem contains a brief description of a Druid temple (iii. 399–452) at Marseilles, which was destroyed by Cæsar. It seems to have consisted simply of a gloomy wood, the oak being mentioned as one of the trees, which contained 'altars built with offerings to the dead' (*structæ sacris feralibus aræ*) and rude, artless images of the gods, roughly hewn from logs. Although Cæsar expressly states that the Gauls differed widely from the Germans in cult (*de Bello Gallico*, vi. 21), Lucan's description of the temple of Marseilles recalls involuntarily the statement of Tacitus (*Germania*, 9), that the ancient Teutons made neither images nor temples for the gods, but worshipped them in groves.

A large number of Celtic altars of the Roman period have been preserved, but are practically valueless, as being modelled entirely on classical prototypes. It was supposed by older archæologists that the dolmens or cromlechs, formed by laying a flat stone across two or three others which had been placed erect, were Druidical altars, a hypothesis now abandoned, since these structures are rather sepulchral chambers which were frequently covered to a greater or less extent with earth. It is probable, moreover, that the dolmens date from the neolithic period, and it is impossible, therefore, to state that they are specifically Celtic. The only conclusion which can be reached, in the light of the data now available, concerning Celtic altars is that the Druids probably had simple structures placed in their sacred groves and used for sacrifice, though the altar was not indispensable, since the wooden and osier cages filled with men and other victims and burned as a holocaust (Cæsar, *de Bello Gallico*, vi. 16; Strabo, iv. 4. 5) could scarcely have been offered on any but a special structure or on the ground.

(London, 1873); Dottin, *Manuel pour servir à l'étude de l'antiquité celtique* (Paris, 1906).

LOUIS H. GRAY.

ALTAR (Chinese).—The Chinese sacred books inform us that burnt-offerings were made to Shang-ti, the Supreme Ruler, upon mountain-tops from time immemorial; and the fact that, even to the present day, the worship of Heaven or Shang-ti is conducted upon a circular mound would seem to be a reminiscence of this ancient practice. As early as the days of the Emperor Shun (B.C. 2300), a distinction appears to have been made between the 'round' altar upon which the sacrifices—arranged in a circle, and hence called the '*round sacrifice*'—were offered to God, *i.e.* Shang-ti, and the '*spread-out sacrifice*,' and others, which were associated with the worship of subordinate deities or spirits, and which, as the names imply, were arranged in other ways. The distinction between the shape of the altar of heaven and that of earth is observable even now in China, and may serve to illustrate the early methods as represented in the classical books.

The celebrated 'Altar of Heaven,' in the Chinese quarter of Peking, stands in a beautiful park some 3 miles in circuit, and is a magnificent structure of white marble, 27 feet high, composed of 3 circular terraces, the lowest of which is 210 feet in diameter, the middle 150, and the upper 90 feet.* It is approached by 4 flights of steps, corresponding to the 4 points of the compass. Each terrace is protected by a marble balustrade. The top is paved with marble slabs arranged in concentric circles, the innermost slab being round in shape,—corresponding to the shape of Heaven,—around which is arranged a circle of slabs, 9 in number, and, outside of this, other circles in multiples of 9 until the square of 9 is reached in the outermost ring. Five marble stands support the altar furniture, consisting of censers, candlesticks, and vases. Close to the altar there is a furnace of green tiles, 9 feet high by 7 feet wide, approached by steps on three sides, intended for the reception of the sacrificial offerings which are here burned on the great occasions when the Emperor represents the whole nation in his high-priestly capacity. In the chapels adjoining, where the tablets of Shang-ti and the Imperial ancestors are preserved, this circular arrangement is also maintained.

The 'Altar of Earth,' as described in the *Law of Sacrifices*, was a square mound in which the victims were buried, while those offered to Heaven were burnt. The passage reads as follows: 'With a blazing pile of wood on the grand altar they sacrificed to Heaven; by burying in the grand mound they sacrificed to the Earth.' The Great 'Altar of Earth,' in the Chinese quarter of the city of Peking, consists of 2 terraces of marble, each 6 feet high. The lower terrace is 100 feet square, and the upper one 60 feet. The altar is situated in a park on the north side of that which contains the 'Altar of Heaven' above described. The coping of the wall which encloses the park is of yellow tiling, corresponding to the colour of earth.

The 'Altar of Prayer for Grain,' popularly known as the 'Temple of Heaven,' is separated by a low wall from the 'Altar of Heaven.' It also is circular in shape, but is protected by a triple roof of blue tiling, 100 feet in height.

The local altars on which sacrifices to Earth are periodically offered consist of low mounds of earth, about 5 feet square, and perhaps a foot high. They

* An engraving of the altar, from a photograph, is given in *Bible in the World*, March 1907, p. 79.

are not ornamented or distinguished in any way, except at the time of sacrifice, when they are specially prepared for the occasion.

In Chinese temples, whether Confucian or Buddhist, the altar usually consists of a stone table, rectangular in shape, the proportions varying with the size of the building. The altar furniture includes a censer, two candlesticks, and sometimes a pair of vases of bronze, porcelain, or stone. When Ancestor Worship is conducted in private houses, the offerings are laid out upon ordinary dining tables placed close together.

Permanent altars are erected in front of tombs for the half-yearly sacrifice to the spirits of the dead. They consist of a single stone slab supported by two others, thus forming a table. A smaller altar of similar construction is found at grave sides, intended for the sacrifices to the local spirits or demons.

In the majority of Chinese dwellings there are to be seen miniature altars, where incense is burned, and small offerings of food presented, either to the spirits of deceased relatives, or such popular divinities as the 'God of Wealth.'

W. GILBERT WALSHE.

ALTAR (Christian). — 1. **Nomenclature.** — (*a*) *GREEK.*—St. Paul, in a passage dealing with the Eucharist, uses the phrase *τράπεζα Κυρίου* (1 Co 10^{21})—a term frequently employed by the Greek Fathers after the 3rd cent., and constantly by Eastern liturgical documents, as a designation of the Christian altar. The word *θυσιαστήριον*—the ordinary equivalent of LXX for מִזְבֵּחַ—occurs in his writings (1 Co 9^{13} 10^{18}), but only with reference to the altar of the old dispensation. The writer, however, of the Epistle to the Hebrews may refer to the Eucharist when he says, 'We have an altar (*θυσιαστήριον*), whereof they have no right to eat which serve the tabernacle' (He 13^{10}); but most commentators explain this passage otherwise (cf. Rev 8^{3-5}). There is no other reference to the Christian altar in the NT.

[See Probst, *Liturgie der drei ersten christlichen Jahrhunderte*, pp. 20, 21, 37, 38; F. E. Warren, *Liturgy and Ritual of the Ante-Nicene Church*, pp. 78–82; Westcott, *Heb.* 455–463].

In the sub-Apostolic age it is difficult to find any direct reference to the altar. The *Didache* is silent on the point, but in the letters of Ignatius the word *θυσιαστήριον* occurs in passages dealing with the Eucharist; and this writer in at least one passage (*ad Philad.* 4) appears definitely to apply this word to the Eucharistic altar.

[See *ad Philad.* 4, *ad Magnes.* 7; cf. also *ad Ephes.* 5, *ad Trall.* 7 (in these latter passages *θυσιαστήριον* is applied figuratively to the Christian community; see Lightfoot, *Philippians*, p. 263)].

Later in the same century, Irenæus (*c. Hær.* iv. 18. 6) writes that the sacrifice of bread and wine should be frequently offered on the altar. Eusebius designates the altar of the basilica at Tyre, dedicated in the year A.D. 314, as *ἁγίων ἅγιον θυσιαστήριον* (*HE* x. 444), and speaks in the same place of the altars (*θυσιαστήρια*) erected throughout the world after the Peace of the Church. The word *τράπεζα* also is defined by pseudo-Athanasius as *θυσιαστήριον* (*Disput. cont. Arian.* xvii.).

τράπεζα, not *θυσιαστήριον*, is the term usually employed in the liturgies; it is also common in many of the Greek Fathers. Sometimes the word stands alone—*ἡ τράπεζα*, 'the table' *par excellence* (*e.g.* Chrys. *Hom. iii. in Epist. ad Ephes.*). Sometimes, as in 1 Co 10^{21}, it is *τράπεζα Κυρίου* (*e.g.* Orig. *c. Cels.* viii. 24). But very often adjectives are added, such as *ἱερά*, *ἁγία*, *μυστική*, and the like.

βωμός, as contrasted with *θυσιαστήριον*, is used in the OT for heathen altars: *e.g.* 1 Mac 1^{59} *ἐπὶ τὸν βωμὸν ὃς ἦν ἐπὶ τοῦ θυσιαστηρίου* (note the use of the word in Ac 17^{23}—the only place in which it occurs in the NT). This usage is generally followed by Christian writers. Exceptions, however, are met with, *e.g.*, in Synesius (*Katastasis*, 19 [Migne, *PG* lxvi. coll. 1572, 1573]), who speaks of *βωμὸς ὁ ἀναίμακτος*. Clement of Alexandria and Origen also use the word *βωμός*, but in a figurative sense, when they say that the soul of the faithful is the true Christian altar.

[Clem. Alex. *Strom.* vii. 31–32; Orig. *c. Cels.* viii. 17; for *τράπεζα* ses Dionys. Alex. *Ep.*, *ap.* Eusebius, *HE* vii. 9].

In the passage just quoted from Origen he expressly admits the charge of Celsus that Christians had no material altars. This admission, coupled with the fact that so few references to the altar are to be found in early Christian literature, might suggest that the altar was not in early times an adjunct of Christian worship. Nor is Origen alone in his admission; other writers say practically the same thing. But the prevalence of the *Disciplina Arcani* during this period sufficiently accounts for the reticence of ecclesiastical writers on this as on all other subjects connected with Christian worship and the administration of the sacraments. Further, it must be remembered that the same writers, who appear to deny the existence of altars, deny also the existence of temples, stating that God can be worshipped in any place, and that His best temple is in the heart of man. It would appear, then, that the same arguments could be used to disprove the existence of churches in the period now under discussion, and we have positive evidence in disproof of any such statement (see Duchesne, *Christian Worship* [Eng. tr.], ch. xii.). The object of these writers, no doubt, was to differentiate between the pagan sacrifices and the 'unbloody sacrifice' of the Church. In the pagan sense, it is true, Christians had neither temples nor altars.

With the passage cited from Orig. may be compared Minucius Felix, *Octavius*, c. x.; Arnobius, *adv. Gent.* vii. 3).

The word *madhbʿha* is employed by the Syrians, both Jacobites and Nestorians, *manershōoushi* by the Copts, and *khoran* by the Armenians, to designate the altar (see Brightman, *Lit.* i. 569).

(*b*) *LATIN.*—The term usually employed by the Latin Fathers and Western liturgical documents to designate the altar is *altare*. This word is used already by Tertullian, who describes the Lord's Table as *altare* (*de Exhort. Castit.* ch. 10). Cyprian also frequently uses this term, and applies to it an exclusively Christian significance, contrasting '*aras* Diaboli' with '*altare* Dei' (*Ep.* 64 [65]); nevertheless, in one passage of his writings we find the phrase 'Diaboli altaria' (*Ep.* 59 [65]). *Altare* is also commonly used by Ambrose (e.g. *de Virgin.* ch. 18) and Augustine (e.g. *Sermo* 159, par. 1). The appellation *Mensa Domini* or *Mensa Dominica* is also employed by Augustine (*e.g. Sermo* 90, par. 5) and other Latin Fathers.

Ara, the Vulg. rendering of *βωμός*, is not applied to the Christian altar by any early ecclesiastical writer except Tertullian, who uses the phrase 'ara Dei' (*de Orat.* 14 [19]). The word *ara* is, however, used occasionally in inscriptions: *e.g.* in one generally supposed to be of Christian origin and of early date—ARAM DEO SANCTO ÆTERNO (*CIL*, vol. viii. n. 9704). Minucius Felix, in a well-known passage, writes: 'Delubra et aras non habemus' (*Oct.* ch. 32). Prudentius uses *ara* as the designation of the base of the altar: 'Altaris aram funditus pessumdare' (*περὶ Στεφάνων*, x. 49); and in

this usage he is followed by other writers. The plural *altaria* is sometimes used with the significance of a singular. The singular *altarium* is used sometimes by late writers for *altare*. *Altarium* is also used as a designation of the free space around the altar.

The word *mensa* came to be applied to the slab itself on which the Elements were placed.

Altaria occurs, *e.g.*, in Cæsarius of Arles, *Hom.* vii.: the elements to be consecrated '*sacris altaribus imponuntur*.' Possibly the plural is used in this way by Ambrose [*Ep.* 20, *ad Marcellinam*] in a passage which has been quoted to prove that his church contained more than one altar (see below, § 4). For *altarium*, cf. Council of Auxerre (A.D. 578), *can.* 10: Mass is not to be said more than once a day, '*super uno altario*.' For the use of *altarium* to designate the space around the altar, cf. Greg. Tur. (*Hist.* ii. 14), who speaks of a church having *fenestras in altario triginta duas*; cf. also Mone, *Messen*, p. 6.

2. Material and form of the altar.—Altars were constructed of wood, stone, or metal.

(1) *Altars of wood.*—It is generally agreed that the earliest altars were made of wood. This would appear from the following considerations. The earliest churches were, no doubt, ordinary dwelling-houses adapted to the special requirements of Christian worship (see Duchesne, *op. cit.* ch. xii. p. 399 ff.), and it would seem probable that in the beginning the Eucharist was celebrated at the tables usually to be found in such houses. It is also known that at the beginning of this era such tables were usually made of wood, either square or round in shape. This view is supported by certain very early frescoes which have survived, and which have for their subject the consecration of the Eucharist. One of these, known as the *Fractio Panis*, is attributed to the first half of the 2nd cent.; and another, discovered in the cemetery of Calixtus, belongs to the latter half of the same century.

[Reproductions of both these frescoes will be found in vol. i. of *DACL*. The *Fractio Panis* is reproduced as Fig. 172, the fresco from the cemetery of Calixtus as Fig. 1123].

From both these frescoes it would appear that in very early times the Eucharist was consecrated at a small three-legged table, similar in form to those in use at the period for purposes of repast. No doubt, at a comparatively early date, special tables were reserved for the Eucharist, and their form was differentiated from that of those ordinarily in use; but for this period of transition we have no definite evidence. That these tables were made of wood is further attested by certain relics preserved at Rome in the churches of St. John Lateran and St. Pudenziana. These are alleged to be the table used at the Last Supper, and altars used by St. Peter. For our purpose the only point which deserves attention is that these relics are of wood, thus evidencing the traditional belief that the earliest altars were of that material. A number of passages of an incidental character in the writings of both Greek and Latin Fathers give the ultimate confirmation of this view. Optatus, Augustine, and Athanasius all mention altars of wood.

[See Optat. *de Schism. Donatist.* vi. 1, where he says that the Donatists used the altars of the Catholics as firewood; also Aug. *Ep.* 185, par. 27, who states that the orthodox bishop Maximianus was beaten with the wood of the altar. Athanasius, *ad Monach.*, expressly states of the altar destroyed at Alexandria by the Count Heraclius, that it was of wood (ξυλίνη γὰρ ἦν); these words, however, may imply that he was familiar with altars made of other materials].

It will, then, seem fair to conclude that in the earliest period altars were of wood, round or square in shape, and resembling the ordinary tables used for domestic purposes, from which they were gradually differentiated.

It was not till after a considerable period that wooden altars were altogether superseded by those of stone or metal. Although condemned by the local Council of Epaona (A.D. 517), they continued in some places to be used for several centuries later. In England it is related that the ancient wooden altars were demolished by the order of St. Wulstan, bishop of Worcester (A.D. 1062–1095), and there is evidence of their occasional retention in France and Spain at a later period.

In the East the material of the altar does not seem to have been regarded as of great importance; it is, however, stated that the use of altars of wood was forbidden by the Nestorian Patriarch, John bar-Algari, at the end of the 9th century.

[See Council of Epaona, *can.* 26—the earliest decree on the subject; also Capitulary of Charlemagne (A.D. 769), c. 14 (Migne, *PL* xcvii. 124). For England, William of Malmesbury, *de Gestis Pontif. Angl.*, who relates the demolition by St. Wulstan of '*altaria lignea jam inde a priscis diebus in Anglia*.' For France, see the anonymous author of the *Miracula S. Dionysii* quoted below, p. 341b, and the case of the altar of the monastery of St. Cornelius quoted by Dom Martène, *de Antiquis Ecclesiæ Ritibus*, i. p. 111. For Spain, Hardouin, *Concilia*, vi.a col. 1026. For the East, Assemani, *Biblioth. Orient.* iii. p. 238].

(2) *Altars of stone.*—It is certain that from a very early date stone altars were in use, and it is scarcely to be doubted that there is a very close connexion between them and the tombs of martyrs. It would seem that probably, during the same period at which the Eucharist was celebrated at the wooden tables described above, in the houses which served in early times for the purposes of Christian worship, it was also celebrated on the stone slabs (*mensæ*) which covered the relics of martyrs and formed part of their tombs (*arcosolia*). That the celebration of the Eucharist in cemeteries was a custom of great antiquity is indisputable; it is expressly ordered in the *Apostolic Constitutions*, where (iv. 17) the faithful are commanded to assemble in the cemeteries for the reading of Scripture and recitation of Psalms (*i.e.* for the observance of the nocturnal vigil) for the martyrs, saints, and all the faithful departed, and also to offer the Eucharistic sacrifice in churches and cemeteries. It is possible that the same custom is referred to as early as A.D. 155 in the *Letter of the Smyrneans* relating the martyrdom of St. Polycarp. After mentioning that they have placed the relics of the martyr in a suitable place, they pray that they may be permitted to gather themselves together in that place, and to celebrate the anniversary of his martyrdom (*Martyr. Polycarp.* c. 18). In the *Liber Pontificalis* it is stated of Pope Felix I. (A.D. 269–275): 'Hic constituit supra memorias (*al.* sepulcra) martyrum missas celebrari.' It seems, however, probable that this means only that he regulated an already existing practice. (See *Lib. Pontif.*, ed. Duchesne, i. p. 156). The cemeteries themselves afford abundant evidence of the existence of altars, but it is impossible here to enter into any discussion of the many disputed points arising from the investigation of these monuments. It is certain that not all the tombs (*arcosolia*) now existing were used for the celebration of the Eucharist, but it is agreed on all hands that many were used for this purpose; and instances occur of the slab covering the tomb being provided with rings, which would enable it to be drawn out for the purpose of the Eucharist. The intimate connexion between altars and the relics of martyrs is evidenced by such passages as the words of the author of the treatise *de Aleatoribus*, who writes: 'Martyribus præsentibus supra mensam Dominicam' (*CIL* i. pt. 3, p. 103); or of Augustine, who thus writes of the altar erected on the site of the martyrdom of Cyprian: 'Mensa Deo constructa est: et tamen mensa dicitur Cypriani . . . quia ipsa immolatione sua paravit hanc mensam, non in qua pascat sive pascatur, sed in qua sacrificium Deo, cui et ipse oblatus est, offeratur' (Aug. *Sermo* cccx. p. 2, in *Nat. Cyp.* 2). In this connexion may also be quoted the famous lines of Prudentius on the altar and tomb of the martyr Hippolytus:

'Talibus Hippolyti corpus mandatur opertis,
Propter ubi adposita est ara dicata Deo.

Illa sacramenti donatrix mensa eademque
Custos fida sui martyris adposita
Servat ad æterni spem iudicis ossa sepulcro,
Pascit item sanctis Tibricolas dapibus.'
(Prudent. περὶ Στεφάνων, xi. 169–174).

During the era of persecution, while the churches were for the most part in private houses, it was necessary for the faithful to betake themselves to the cemeteries and catacombs for the purpose of celebrating the Eucharist at the time of interment, or on the anniversaries of the martyrdoms. But after the Peace of the Church the custom arose of building churches immediately over the sites of the martyrdom of famous saints, or of translating their relics to churches prepared for their reception; as also, at a somewhat later period, of burying ecclesiastical personages beneath or in proximity to the altar in already existing churches. It was not considered necessary to possess the entire body of a saint or martyr; fragments of it would suffice, or even a piece of linen soaked in his blood. These relics were placed within the altar, so that its tomb-like character was for the most part preserved. In later times it was considered unlawful to consecrate an altar without relics; and if these could not be obtained, a leaf of the Gospels, or even a consecrated Host, was placed within it. (See Duchesne, *op. cit.* p. 403, and *canon* 2 of Council of Celichyth [Chelsea] quoted there).

Two forms of stone altar appear to have existed in early times—the one square, resembling a table; the other oblong, and resembling a tomb. It appears, however, that from the 4th cent. onwards many forms were in use. We meet with several instances of the table form supported by one or more columns, and sometimes with a combination of tomb and table form. An instance of this latter is the altar of St. Alexander, consisting of a table-like structure, the *mensa* of porphyry supported on columns of marble, having a substructure, in the form of a tomb, containing the relics of the saint. Generally speaking, however, the altar was probably of the form of a cube, and in the East it has retained this form. The present oblong form, common in the West, dates from the period when it was customary to place relics of saints in a sarcophagus situated at right angles to the altar and immediately behind it, having its end looking westward and supported by the altar itself. (See § 3, and Ed. Bishop, *On the History of the Christian Altar*, p. 14 ff.).

[A very full description of large numbers of these altars will be found in the *DACL*. Much information will be found in the art. 'Autel,' but more detailed accounts are given under the names of the localities where the particular altars are preserved. See, *e.g.*, 'Auriol (Autel d'),' i. col. 3151 ff., with its representation of the famous one-legged stone altar preserved there. See also the bibliography at the end of the present article].

(3) *Altars of metal.*—The earliest notice of an altar of metal is probably to be found in Sozomen (*HE* ix. 1), who mentions the altar of gold presented to the Church of St. Sophia at Constantinople, by Pulcheria, daughter of Arcadius, in the early part of the 5th century. In the next century we have a very full account of the magnificent altar presented by Justinian to the new basilica of St. Sophia, constructed by him between the years 532 and 563. We are indebted for this description to Paul the Silentiary, who tells us that the Holy Table was of gold, adorned with precious stones, resting upon pillars of gold, and that it was surmounted by a dome or *ciborium*, supported by pillars of silver gilt, and terminating in a great cross of gold (Paul Silent., *Descript. St. Sophiæ*, ed. Bona, vv. 682 ff.). In the West also, at about the same date, we have mention of altars of precious metal; but it is not clear whether they were constructed of metal or of wood which was covered with metal. These notices occur in the *Liber Pontificalis*, and date probably from the latter half of the 5th century. Especially worthy of mention in this connexion is the altar of St. Ambrose at Milan, probably erected before the year A.D. 835. It is 7 ft. 3 in. in length, 4 ft. 1 in. in height, and the *mensa* is 4 ft. 4 in. wide. The front is of gold, the back and sides of silver, and it is decorated with panels containing subjects in relief and with enamel work. It is probably the most elaborate specimen of its kind which has survived.

[For a reproduction see *DACL*, fig. 1130; and for the extensive literature connected with this altar see the same work, vol. i. col. 3171, n. 8].

3. Site and accessories of the altar.—The earliest Christian churches were of the form of a basilica, and the altar was usually placed on the chord of the apse. Around the apse were arranged the seats for the clergy, the bishop's throne being placed in the centre, behind the altar. Sometimes, however, it was placed more forward, nearer the centre of the church; but this was not common. Usually it was raised on steps, and separated from the body of the church by a low screen or railing, not of sufficient height to hide it from the view of the congregation. In later times, beneath the steps of the altar, was constructed a small vault (*confessio*) to contain the relics of a saint. It became customary from an early date for the altar to be covered by a canopy, usually dome-shaped and supported on pillars, called the *ciborium* (κιβώριον). The *ciborium* was made of metal or stone, and richly ornamented. It served a double purpose. Firstly, being provided with curtains hung between the pillars, it served to veil the altar at certain points in the service. Secondly, it did honour to the altar, providing it with a canopy or *umbraculum*, as in that period was customary with the seats of great personages. The date of the introduction of the *ciborium* is uncertain; it must, however, have been considerably earlier than the 6th century. A distinction must be made between the custom of the East and the West. In the West it had been, and for the most part is, customary to allow the altar to stand well in view of the people. In the East, at least from the 4th cent. onwards, the reverse has been the case. The *ciborium* with its veils is found in the West probably from about the 6th cent. onwards, and possibly owing to Byzantine influence. Among other reasons which tended to cause its disuse was the change in the shape of the altar, and the custom of placing a shrine containing relics upon it. The *ciborium* was well suited to the original cube-like altars, which, as we have seen, were in use in early times, but quite unsuited to the oblong altars evolved in the Middle Ages in the West. The *ikonostasis*, or heavy screen, hiding the *bema* from the rest of the church, and in general use in the East at the present day, represents to some extent the veil of the *ciborium*.

In early times nothing was placed upon the altar except the cloths and sacred vessels necessary for the Eucharist, and the book of the Gospels. Not even relics or the reserved Sacrament might be placed upon it. This custom appears to have prevailed in the West for some centuries, but in the 9th cent. a homily or pastoral charge, attributed to Leo IV. (A.D. 855), permits a shrine containing relics, the book of the Gospels, and a pyx or tabernacle containing the Lord's body, for purposes of the viaticum. From this period onwards, in the West, the ornaments which had formerly decorated the *ciborium* were transferred to the altar. At first these appear to have been placed on the altar only during the celebration of the liturgy, but gradually it became customary to place them there permanently. Thus the cross,

which had surmounted the dome of the *ciborium* and had depended from it, was placed on the altar itself. In the same way with lights, first a single candlestick was placed on one side of the altar opposite to the cross, later two candlesticks are found, one on either side of it. All this had been accomplished by the 13th century. Meantime, the *ciborium* having practically disappeared in the West, and the altar becoming more and more loaded with tabernacle reliquaries, candles, etc., and having generally been placed as far back as possible against the east wall, the reredos begins to make its appearance,—as also the small canopy now generally in use,—which may be regarded as directly descended from the *ciborium* and all that we now have to represent it.

[The earliest description of the interior of a Christian church is a passage in the *Didascalia Apostolorum*, incorporated in the *Apostolic Constitutions*, bk. ii. c. 57. For the ancient custom with regard to relics, cf. St. Ambrose (*Ep.* xxii. 13): 'Ille [Christus] super altare . . . isti [martyres] sub altari.' The homily attributed to Leo IV. is probably a document of Gallic origin, and is the ground-work of the address of the presiding bishop in the *Ordo ad Synodum* of the present Roman pontifical. It will be found in Migne, *PL* cxv. 677. For this section see especially Edmund Bishop, *On the History of the Christian Altar*].

4. Number of altars.—The primitive custom appears to have been that each church should have only one altar. This custom has prevailed in the East to the present day, although altars are found in *παρεκκλησίαι*, or side-chapels—these being regarded as separate buildings. In the West the multiplication of altars has been common from a comparatively early date.

[Cf. Ignat. *ad Philad.* 4, cited above: *σπουδάσατε οὖν μιᾷ εὐχαριστίᾳ . . . ἓν θυσιαστήριον ὡς εἷς ἐπίσκοπος . . .* Eusebius mentions only one altar in his description of the great basilica at Tyre (*HE* x. 4). The passage from Augustine, sometimes quoted in this connexion, proves nothing. He speaks of the existence of two churches in one town (*civitas*) as a visible sign of the Donatist schism (*in Epist. Joh. ad Parthos*, Tract. iii. 5), but his words obviously refer to schismatic worship in general. Contrast St. Basil (*Hom.* xix.), who speaks of more than one altar in a single town. For Eastern custom, cf. Renaudot, *Lit. Orient. Collect.* i. pp. 164, 311, 477, 499; also G. M. Neale, *Introd. to the Hist. of the Holy Eastern Church*, p. 183].

It has been suggested that the multiplication of altars in a single church originated in the cemetery chapels, in some of which several *arcosolia*, or altar tombs, are to be found. But it is dangerous to draw any inference from this fact, because it is generally agreed that many of these *arcosolia* were never used for the purpose of celebrating the Eucharist. More probably the reason is to be sought, on the one hand, in the growth of the Christian population subsequent to the Peace of the Church, and an attempt to meet their increasing needs; and, on the other hand, in the increasing desire of the clergy to celebrate, rather than only to communicate, as often as possible. It is, however, difficult to find passages which imply the existence of more than one altar in a single church earlier than the 6th century. It is not till the time of St. Gregory the Great that we have definite evidence; but it is clear that by that time the custom was well established, because at the request of a correspondent, Palladius, bishop of Saintonge, the pope sent relics for the consecration of four of the thirteen altars which Palladius had set up in his church (Greg. Magn. *Epist.* vi. 49). From this time onward the evidence for the multiplication of altars in a single church is abundant.

[The passage from St. Ambrose, cited above, p. 339a, is inconclusive: 'militis irruentis in altaria, osculis significare pacis insigne' (*Ep.* 20); cf. also St. Paulinus of Nola, *Ep.* xxxi. par. 6. For later evidence see Greg. Tur. *de Gloria Martyrum*, i. 33; Bede (*HE* v. 20), who states that Acca, bishop of Hexham (deposed A.D. 732), having collected a number of relics of apostles and martyrs, exposed them for veneration, 'altaria, distinctis porticibus in hoc ipsum intra muros ejusdem ecclesiæ.' In the 9th cent. the plan of the church of St. Gall, in Switzerland, provided for the erection of seventeen altars. See also Council of Auxerre, *can.* 10, quoted above; Walafrid Strabo, *de Reb. Eccl.* c. xxi.; *Capitularia Regum Francorum*, ed. Baluze, i. 422].

5. Portable altars and 'antimensium.'—The oldest example of a portable altar which has survived is that which was found with the bones of St. Cuthbert, and is now preserved in the Cathedral Library at Durham. It measures 6 in. × 5¾ in., and is made of wood covered with very thin silver. On the wood are found two crosses and part of an inscription, IN HONOR . . . S . . . PETRV. The earliest writer who certainly refers to portable altars is Bede, who relates (*HE* iii. 10) that, in the year 692, two English missionaries to the Saxons on the Continent carried with them an altar stone ('tabulam altaris vice dedicatam'). The following description is given of the portable altar of St. Willebrord: 'Hoc altare Willebrordus in honore Domini Salvatoris consecravit, supra quod in itinere Missarum oblationes Deo offerre consuevit, in quo et continetur de ligno crucis Christi, et de sudore capitis ejus' (Brower, *Annal. Treviren.*, an. 718, p. 364). From this and other passages it would appear that portable altars contained also relics. Portable altars are designated *altaria portabilia*, *gestatoria*, *viatica*. Sometimes *ara* is used for a portable altar.

[It has been suggested that portable altars were in use in the time of St. Cyprian, but the passage quoted from his writings (*Ep.* iv. 2), in which he makes provision for celebration in the prison, is inconclusive. A portable altar is preserved at Rome in the church of St. Maria, in Campitelli, said to have belonged to St. Gregory of Nazianzus; but it is not regarded as authentic. We also find other portable altars mentioned at a fairly early date, as that of St. Wulfran (*circ.* 740), the apostle of Frisia (Surius, *Vitæ Sanctorum*, ii. 294) and of St. Boniface. Mention is also made of a wooden board, covered with a linen cloth, used by the monks of St. Denys, who accompanied Charlemagne in his campaign against the Saxons (*Mirac. St. Dionys.* i. 20; *Acta SS. OSB.*, ed. Paris, 1672, vol. iv. p. 350)].

In the East, in place of a portable altar, the *antimensium* (Gr. *ἀντιμήνσιον*, a word of somewhat doubtful origin) is used. It consists of a piece of cloth consecrated, with various ceremonies, at the time of the consecration of a church. It is to be used apparently in oratories which do not possess a properly consecrated altar, and in other places where it is doubtful if the altar has received consecration.

[See Bona, *de Reb. Lit.* i. xx. 2 (end); Neale, *op. cit.* p. 186 f.; Goar, *Euchologia*, p. 648. See also Suicer, *Thesaurus*, *s.v.*, and the authorities there cited; also Renaudot, *op. cit.* i. 182].

6. Consecration of altars.—It would appear that prior to the 6th cent. the dedication of a church was accomplished simply by the solemn celebration of the Eucharist in it. No special form of consecration existed. But in the case of churches destined to contain relics,—and in the latter part of this period nearly all churches possessed them,—these had to be solemnly enclosed in the altar before the celebration of the first mass in the church. Indeed it is possible that the later forms of dedication originated to a great extent in the ceremonial accompanying this *depositio* of the relics (*pignora*) of saints, and, as these rites illustrate the history of the altar, they may be briefly mentioned here. A study of the earliest liturgical documents, dealing with the consecration of churches with their altars, reveals the fact that in the West two types of service existed side by side—the Roman and the Gallican; the latter, as might be expected, closely resembling the Byzantine formulæ of dedication. Briefly it may be said, with regard to the ceremonies of the consecration of the altar, that the Roman rite is of a funerary character, while the Gallican and Eastern rites resemble the ceremonies of Christian initiation. In the latter the altar is first consecrated by lustration with holy water and anointing with chrism, these corresponding to the rites of baptism and confirmation. These cere-

monies having been performed by the bishop in the presence of the people, he leaves the church and proceeds to the spot where the relics are awaiting him. Having brought them to the church, he takes them to the altar. But before the *depositio* a veil is let down, so that the concluding ceremony of enclosing the relics within the altar is not witnessed by the people—who meanwhile chant the Psalm, *Cantate Domino canticum novum* with the Antiphon *Exultabunt Sancti in gloria*. In the Roman rite, which is of a funerary character, the bishop first enters the church and washes the altar once with water, then, returning to the door of the church, receives the *pignora*, and, accompanied by the people, proceeds to the altar, where he performs the ceremonies of the *depositio* in a far more elaborate fashion, these constituting the main feature of the consecration.

[See Duchesne, *op. cit.* p. 899ff. (cf. the letter from Pope Vigilius to Profuturus of Braga cited on p. 97). The earliest *Ordines* of consecration are: (1) that published by F. Bianchini, *Anastas. Bibliothec.* iii. p. xlviii; and (2) the *Ordo of S. Amand*, published by Duchesne, *op. cit.* p. 478; cf. also the Gelasian *Sacramenta Muratori*, i. p. 635; see also *Monumenta Liturg.* Ambr. vol. i.; and for the Eastern rites, Goar, *Euchолog.* p. 832].

H. LEONARD PASS.

ALTAR (Egyptian). — According to the sculptures, offerings were laid on mats or stands. A common form of the latter was a pillar-shaped upright of wood or stone, on which a bowl, censer, or tray could rest, and sometimes the bowl or tray was made in one piece with the upright. In tombs and temples the typical scene of offering shows a tray-stand  covered with sliced loaves of bread , or with meat, vegetables, and other food, placed before the deceased man or the god; such stands are often accompanied by a variety of food on mats. At el-Amarna the stands of provisions to which the sun-god Aton stretches his radiating hands are often surmounted by flaming bowls, perhaps censers, perhaps lamps. The food, drink, incense, and water were provided for the god or the deceased, as they would have been for the banquets of a living man; most flesh and vegetables seem to have been eaten raw, but in the standard lists of offerings roast meat was included. Amongst the varieties of the symbol *khêwi*, 'altar,' in the New Kingdom, is , the picture of a stand with a flaming vessel upon it; and in the scenes of that age the offerer sometimes presents such a stand in his hand, with a plucked goose in the midst of the flames. Possibly this represents a kind of burnt sacrifice rather than a summary kind of cooking. The root of the name *khêwi* is spelt by the figure of a bivalve shell , which suggests that a shell may sometimes have replaced the bowl as the receptacle for the offering. Another kind of stand for offerings—a wooden frame to hold jars of liquid —was named *uthu*, this name being equally applied to those used at banquets.

In early tombs a flat slab for offerings, commonly called a 'table of offerings,' was placed before the niche containing a statue of the deceased, or in some other place corresponding. The table was oblong, with a projection like a spout in front. It was generally sculptured with , a loaf upon a mat, and often with a number of offerings in detail. The special name for this type was probably *hotep*. Such tables are also found in the ruins of temples, where they may have been placed for the service of the dedicator's statue rather than for that of the god. The type persisted down to the Roman period; it is rare during the New Kingdom, but was revived after its fall.

Temple altars on a large scale are very rare in Egypt. Down to the present time only four examples have been discovered, and none have survived in the Ptolemaic temples. The earliest is of the Fifth Dynasty, in the temple of the Sun at Abusir (Borchardt, *Das Re-Heiligthum des Königs Ne-Woser-Re*, i. pp. 14, 43). It is formed of five great blocks of alabaster; in the middle is a slightly raised circular slab, with four around it, oriented precisely to the cardinal points. Its extreme measures are some 15 ft. each way. Most of the surroundings are now destroyed to the level of the ground. The altar stood in a court before the great obelisk-shaped monument, and was raised only a few inches above the level of the floor; beside it was an area specially prepared for the slaughter and cutting up of victims. At Karnak, in an upper chamber close to the Festal Hall of Tethmosis III., is a great oblong rectangular altar or altar-base of white felspar, bearing the name of Rameses III. (Dyn. xx.), having each side shaped as a *hotep*. Tethmosis himself is recorded to have dedicated a similar one.

A different type of temple altar is a raised rectangular platform, reached by a flight of steps. There is a well-preserved example in the temple of Hatshepsut at Deir el-Bahari (Naville, *Deir el-Bahari*, i. Pl. 8; see also plan of temple in *Archæological Report*, 1894–95, or in Baedeker's *Egypt*). It measures about 16 by 13 ft., and stands in the centre of a small court about 5 ft. above the floor. The usual Egyptian cavetto cornice runs round it, and the top is flat except for some slight coping or cresting near the edge. Built of white limestone, it is dedicated to the sun-god, and is called a *khêwi* in the inscription, like the stands of offering. Another raised altar is at Karnak, dedicated by Tethmosis III.; and a third is stated to be in the largest temple of Gebel Barkal, dating from the early Ethiopian Kingdom in the 8th or 7th cent. B.C. (Borchardt, *l.c.*). These are all that are known to exist. The sculptures in the tombs of el-Amarna show the chief altars of Aton to have been of this form (Lepsius, *Denkmäler* iii. 96, 102; Davies, *El Amarna*, i. Pl. 12, 25, 27–28, ii. Pl. 18, iii. Pl. 8, 10). It seems as if the sun-gods in particular (Re, Aton, Amen-Re) were honoured by great altars.

F. LL. GRIFFITH.

ALTAR (Greek).—The altar, in Greek religion, is a raised place, usually an artificial structure, which is used for the purpose of making offerings to a god or gods. It is thus to be distinguished, on the one hand, from a sacrificial *trench* or *pit*, such as was often used for offerings to the dead, to heroes, or to the infernal deities; and, on the other, from a *table* for offerings such as was often placed in a temple or before a god at a ceremonial banquet.

But there is no very strict line of demarcation in either case. The distinction sometimes made between βωμός as an altar for the Olympian gods and ἐσχάρα for offerings to heroes, though laid down by Pollux (i. 8) and others, is not strictly observed by classical authors. And, on the other hand, a portable altar, such as was often used for incense or minor offerings, is not easy to distinguish from a sacred table.

A more essential distinction, at first sight, might seem to depend on the *nature of the offerings* for which an altar was used,—whether, for example, it was only for bloodless libations, for incense, and for gifts of fruit and flowers, or for the slaughter of victims, of which portions were burnt upon it. The ritual and offerings admissible in each case were prescribed by the nature of the deity worshipped and by the sacred regulations of the local cult, and the shape and construction of the altar must have depended upon these. But, apart from purely practical considerations, there does not seem to be any essential distinction observed in the form of the altar according to the various purposes for which it was intended.

Some confusion of thought is found in the case of sacred stones or other objects that were anointed with offerings of blood, oil, or other liquids, bound with sacred woollen fillets, and otherwise treated in much the same way as altars. This fact has led some writers to assert that an altar was sometimes regarded not merely as the symbol of the god, but as having him immanent in it. These sacred stones, which are a survival from primitive religious beliefs, are not, however, properly to be regarded as altars, though they may have been sometimes so thought of when religious thought had advanced to less crude conceptions of the deities.

Apart from these, an altar seems to derive its sanctity merely from its association with a god, or its dedication to him. There was nothing in Greek religion to prevent a sacrifice being made to a god on any occasion or in any place; and, in such cases, the convenience of the sacrifice would suggest the use of any outstanding rock or natural mound, or, in the absence of such help, the piling together of stones or sods to make an improvised altar (αὐτοσχεδία ἐσχάρα, Paus. v. 13. 5); and a similar primitive form, often heaped together out of the ashes of victims, was retained by many of the most famous altars, such as those of Zeus at Olympia and of Hera at Samos. This, however, implies the repetition of sacrifices at the same place; the selection of such places was due to various causes. These may best be classified, according to Hermann's well-known division, as natural, social, and historical; but before we examine instances of these three classes, it is necessary to consider the relation of the altar to other objects connected with worship, especially the precinct, the image, and the temple.

The normal equipment of a sacred place in Greece consisted of a *temple*, an *altar*, and a *precinct*. In later times the temple was the most conspicuous and the most important, and usually contained the image of the god; but even then the altar was the essential thing for ritual purposes. If possible, it was placed in front of the temple, and in its main axis; but so that the person sacrificing faced east, with his back to the temple. Examples of this are numerous; *e.g.* the altars in front of the temples of Aphæa at Ægina, of Apollo at Delphi, and of Aphrodite at Naucratis. Often, however, it was difficult or inconvenient to place the altar in this position, and it was placed elsewhere in the neighbourhood, as in the case of the altar of Zeus at Olympia, and of Athene on the Acropolis at Athens. In addition to the main altar, there might be others in the precinct, whether dedicated to the same god as the main altar or to other deities. An extreme case is offered by Olympia, where as many as 69 other altars are recorded as existing in the sacred *Altis* of Zeus. There was usually, in all probability, a small altar for incense and small offerings within the temple; traces of such altars have rarely been found (an example is in the temple of Sarapis on Delos [*BCH* vi. 299]); but they may often have been small portable ones.

It must always be borne in mind in this connexion that a temple in Greece was not usually intended for the performance of services or ritual acts, much less for congregational use; it served chiefly to house the image of the god and his most precious offerings. Assemblies and services, including sacrifices of all kinds, took place for the most part outside, around the altar which was their real centre; provision was sometimes made close to the altar for the accommodation of worshippers or spectators. Thus at Oropus there are curved steps above the altar in the Amphiaræum, and at Olympia there was accommodation for spectators near the great altar of Zeus. Round the altar of Artemis Orthia at Sparta, where the ceremonial flogging of the Spartan youths took place, a regular amphitheatre was erected in Roman times. An earlier and more important example of the association of an altar with the provision of accommodation for spectators is the θυμέλη placed in the orchestra of the theatre. Here the altar was the original centre round which were placed first provisional seats, and afterwards the great buildings which we find as theatres on numerous Greek sites. At Priene, where alone the *thymele* is still extant, it is placed on the side of the orchestra farthest from the stage.

Altars were, however, not always associated with temples. An altar might be set up on any sacred spot, with or without a precinct of some sort around it; and altars were also connected with the life of men, especially in domestic and civil surroundings. It was usual to have an altar of Zeus Ἑρκεῖος, the protector of the enclosure, in the courtyard of every house; traces of such an altar are found even in the palace at Tiryns. Here it was usual for the head of the house to offer sacrifice, especially on festival days. In addition to this there was the *hestia* or hearth, usually circular, and sacred to the goddess of the same name. Such a hearth is usually found in the hall of palaces of the Mycenæan age: its position in the house of historical times is doubtful. We should expect to find it in the *pastas* or open recess opposite the entrance, according to Galen's description of the primitive house; but some suppose it to have been placed in the ἀνδρών or dining-room. The hearth was the centre of domestic life, and it was accordingly sought by a suppliant who claimed the right of hospitality; at a wedding, fire from it was carried to the *hestia* in the new home by the bride's mother, thus ensuring the continuity of the domestic worship. The hearth of the royal palace was the centre of the worship and hospitality of the State in monarchical times. It was natural that, with the growth of democratic feeling, this should be transferred to the hearth of the State as the focus of civic life; such a hearth, itself usually circular, was often enclosed in a circular building called a *tholos*; and the Prytaneum, where public hospitality was dispensed, was associated with it. The original character of the public hearth as an altar of Hestia was not, however, lost sight of; the Prytanes at Athens regularly offered sacrifice there. On the sacred hearth in the Prytaneum at Olympia the fire was always kept burning day and night. It was also customary to set up altars in a market-place (*agora*), a gateway, or other places of concourse; and the sacrifices which preceded any assembly for political or other purposes implied the provision of an altar for offering them. Such altars frequently stood by themselves, without being attached to any particular temple or precinct.

This summary of the relation of altars to other appliances or conditions of religious or social life suffices, to a great extent, as a comment on the classification of the reasons that led to the choice of various places for altars. We may assign to natural causes the erection of altars on mountain-tops or in groves, beneath sacred trees, in caves, beside springs, or in other situations distinguished

by their natural surroundings; to the same category may be assigned altars dedicated to Zeus Καταιβάτης where lightning had struck, and others in commemoration of extraordinary phenomena; *e.g.* the altar to Phosphorus—perhaps an epithet of Artemis—dedicated by Thrasybulus in honour of the miraculous light that led his adventurous band from Phyle to Munychia. Examples of altars which owe their origin to social causes have already been given, especially those of the house and of the agora. In addition to the usual gods of the market-place (ἀγοραῖοι θεοί) we sometimes find altars of more abstract ethical significance, such as the altars of Ἔλεος (pity) and of αἰδώς (sense of honour) at Athens. Many of the altars attached to temples or in precincts would belong to this class. Altars that owe their origin to historical causes are not so common; a good example is the altar dedicated by the Greeks to Zeus Eleutherius at Platæa after their victory over the Persians. This class might be indefinitely enlarged if we include in it all altars that were set up for a special sacrifice and left as a memorial of it. Such were especially common in later times; a familiar example is offered by the 'taurobolic' altars of Roman date.

The *form* and *size* of altars vary very greatly, from a small portable block or table to a structure a stadium in length, and from a mere mound of earth to an elaborate combination of architecture and sculpture like the great altar at Pergamus. The form of a round or oval mound, with the addition probably, in larger examples, of a retaining wall of some sort to hold it together, was to be found in many of the oldest and most sacred altars. That of Zeus at Olympia, which was constructed of the ashes of victims, including those brought from the sacrifices on the sacred hearth at the Prytaneum, had a circumference, on its lower platform, of 125 ft., and of 32 on its upper portion, and a total height of 22 feet. The altar of Apollo at Delos, which was counted one of the seven wonders of the world, was said to be constructed of the horns of victims (κεράτινος βωμός). The other form of altar which may be regarded as primitive is an upstanding mass of rock, either in its rough state or cut to a rectangular form. The great altar of Athene on the Acropolis at Athens was a tract of natural rock, quite uneven on the top, but cut to a more or less square shape at the sides; it was about 80 or 90 feet square. Another rock-cut altar, of a more regular shape, with a platform and steps, is that in the middle of the Pnyx from which the orators addressed the people. Altars were, however, more frequently made of stone or marble, cut from a single block if they were small, or built up like any other structure if they were large. Small altars might be either round or rectangular; there does not seem to be any ritual distinction between the two, except that the hearth (ἑστία) was usually circular; and so, perhaps, were the low altars suitable to heroes, and called by later authorities ἐσχάραι; but rectangular altars to heroes were not unusual, *e.g.* that in the Heroum at Olympia.

When the altar was of any size and importance, the rectangular form prevailed; and the altar was usually mounted on a basis which projected on one side, and so provided a platform (πρόθυσις) on which the sacrificer stood. This was usually so placed that he faced towards the east; thus, in the normal positions of altar and temple, he would turn his back on the image of the deity in the temple,—a fact which alone would suffice to prove that the altar was the most primitive and most essential object in religious rites. This platform was of considerable extent in great altars, and was the place where the victims were slaughtered, the portions that were selected to be burnt being consumed on the altar itself. Altars intended for the sacrifice of many victims at once, or for hecatombs, were necessarily of very large size. The dimensions of the great altar built by Hieron II. of Syracuse (which is about 215 yards in length and about 25 yards in width), of the altars of Zeus at Olympia and of Athene at Athens, have already been mentioned; another example, of medium size, is an altar near the theatre at Megalopolis, which measures about 36 ft. by 6 ft. 6 inches.

Where stone was not readily available, an altar might be constructed of other materials; thus at Naucratis the altar, with its steps and *prothysis*, in the precinct of Aphrodite, is built, like the temple, of unbaked brick and faced with stucco. Altars of any considerable size usually consisted of a mere outer shell of masonry, the inside being filled with rubble or with the ashes from sacrifice; they thus offered a convenient surface on which to kindle the sacrificial fire. In the case of small stone altars which were used for burnt-offerings, some special arrangement was necessary to place on the top. As a rule, extant small altars are flat on the top. Sometimes they are hollowed into basins, as if to hold libations or drink-offerings; occasionally we find a drain to let the liquid run away, as in the altar found at Paphos (*JHS* ix. 239). Sometimes an altar had the form of a table supported upon stone legs. A good early example of this type was found in the early Dionysion west of the Acropolis at Athens. The Bœotians used to build an altar of wood on the summit of Mount Cithæron, and to let it be consumed together with the sacrifice.

It was usual to give some architectural form to an altar, if only in the step or steps on which it was raised and the moulding that ornamented it at top and bottom. Where something more elaborate was attempted, it often took the form of Ionic volutes at each end of the top moulding; these were often joined at the sides by rolls such as we see on the capitals of Ionic columns. Large built altars are sometimes ornamented by a Doric frieze of triglyphs and metopes, occupying the whole height of the structure; an example of this occurs in the large altar already mentioned at Megalopolis. Often in later times the decoration of an altar, in architecture and sculpture, became more elaborate. The altar of Athene at Priene was decorated with an attached Ionic colonnade, and with figures in relief between the columns. The altar of Artemis of Ephesus is said to have been full of the work of Praxiteles. The great altar of Asklepios at Cos was an elaborate structure; but the chief example of this kind was the great altar of Zeus at Pergamus. This consisted of a great basis, about 100 ft. square, ornamented with the well-known frieze of the gigantomachy. A broad flight of steps on the west side led up to the top of this basis, which was surrounded by a colonnade; in this space was the altar proper, consisting of heaped up ashes. An even larger altar than this is said to have existed at Parium on the Propontis. A remarkable architectural development of the circular altar is to be seen in the *Tholos* or *Thymele* (its official name) at Epidaurus; it has the form of a circular temple, with colonnades inside and outside.

Inscriptions are not usually found on altars in Greece. An early example is the altar with ἡρῶος or ἡρώων painted on its stucco face in the Heroum at Olympia. The chief altar attached to a temple or precinct would not require any such means of identification, though, where it was a special dedication, this might be recorded, *e.g.* the great altar of Apollo at Delphi states that it was dedicated by the Chians, and a smaller inscription on its corner adds that the Chians received the privilege

of *προμαντεῖα* for their gift. In the case of altars to other gods than the one to whom the precinct belonged, inscriptions would be useful, but were by no means universal. They would be required also on altars in public places; *e.g.* the inscribed altar in the Dipylon gateway at Athens, dedicated to Zeus Herkeios, Hermes, and Acamas. Where the object of an altar was commemorative rather than for practical use, the inscription would of course be essential. But ritual ordinances as to sacrifices were usually inscribed, not on the altar itself, but on a stela or slab set up beside it, or on some other convenient place in its immediate vicinity.

For the ritual of sacrifice, and the manner in which altars were used in connexion with it, see SACRIFICE. But it should be added here that an altar was usually dedicated to the service of a particular god, and was not used for offerings to any other. A good example of this is seen in the sixty-nine altars of Olympia, each of which had its proper destination, and was visited in its proper turn in the monthly order of sacrifices. This rule did not, however, preclude a common dedication to several gods of one altar (*σύμβωμοι, ὁμοβώμιοι θεοί*). There existed altars of all the gods, or of the twelve gods; an interesting example, probably to ensure the worship of some powers that might otherwise be overlooked, is offered by the altar of 'the unknown gods' at Olympia. The example of this title quoted by St. Paul at Athens (Ac 17[23]) was, however, in the singular. Frequently two gods were worshipped at the same altar; a classical instance is provided by the six twin altars mentioned by Pindar in *Ol.* v. 12 (see Schol. *ad loc.*). In Athens, Poseidon and Erechtheus shared a common altar in the Erechtheum, and in the Amphiaræum at Oropus the altar has been enlarged so as to accommodate several deities (*Πρακτικὰ Ἀρχ. Ἑτ.* 1804, p. 91).

In addition to their use for the ritual of sacrifice, altars were also sought by *suppliants*, who often sat upon the steps, and especially by *those seeking sanctuary*. The altar in a house, whether the *hestia* or that of Zeus Herkeios, often served this purpose; and in a temple a suppliant would naturally place himself under the protection of the god either by clasping his image or by seating himself on the altar or beside it. It does not, however, appear that in Greek religion there was any peculiar power in this connexion that belonged to the altar more than to any other part of a temple or precinct. The right of sanctuary usually had clearly defined limits within which it was inviolable. It is worthy of note that when Cylon's followers had to go outside these limits, it was to the early image, not to the altar, that they attached the rope to which they trusted for protection.

LITERATURE.—See end of art. ALTAR (Roman).

ERNEST A. GARDNER.

ALTAR (Hindu).—Altars, or raised platforms, play an important part in the Hindu ceremonial. The Sanskrit for a Hindu altar is *vedi*, which is defined as 'an altar or raised place made of Kuśa grass, or strewed with it, and prepared for an oblation, for placing the vessels used at a sacrifice, a place or ground prepared for sacrifice' (Monier Williams, *s.v.*). The original *vedi* was a trench of varied shape, in which the sacrificial fires were kept, dug in the sacrificial ground. In early times in India, when the gods were worshipped by each man at his own fireplace, it was a duty incumbent on every householder to keep the sacred fire in the altar, from the very day on which the ceremony of the Agnyādhāna, or the setting up of sacrificial fires, had been performed. On that important occasion the sacrificer chose his four priests, and erected sheds or fire-houses for the Gārhapatya and the Āhavanīya fires respectively. A circle was marked for the Gārhapatya fire, and a square for the Āhavanīya fire; a semicircular area for the Dakṣiṇāgni or southern fire, if that also was required. The *adhvaryu* or officiating priest then procured a temporary fire, either producing it by friction, or obtaining it from the village, and, after the usual fivefold lustration of the Gārhapatya fireplace, he laid down the fire thereon, and in the evening handed two pieces of wood, called *araṇi*, to the sacrificer and his wife, for the purpose of producing by attrition the Āhavanīya fire the next morning.

There were different *vedis* for different kinds of offering, as, *e.g.*, the large Soma altar (*mahāvedi*) and the *pāśukī vedi*, used for animal sacrifice, which resembled the *uttarā vedi*, or 'northern altar'; the latter was an altar raised with earth excavated in forming what is called a *chātvāla*, or hole. The Śatapatha Brāhmaṇa compares the shape of an altar to that of a woman: 'The altar should be broad on the western side, contracted in the middle, and broad again on the eastern side; for thus shaped they praise a woman.' The shape of sacrificial altars was considered a matter of so much importance that there were special manuals in Sanskrit, called Śulbasūtras, which form part of the ancient Śrautasūtras, and give the measurements necessary for the construction of the altars. The different shapes in which brick altars might be constructed are mentioned as early as in the Taittirīya Saṁhitā. Thus there is a falcon-shaped altar built of square bricks, or an altar of the shape of a falcon with curved wings and outspread tail; a heron-shaped altar with two feet; one of the shape of the forepart of the poles of a chariot, an equilateral triangle; another of the form of two such triangles joined at their bases; several wheel-shaped or circular altars, tortoise-shaped, etc. The area of the earliest species of altars was to be 7½ square *puruṣas*, the term *puruṣa* denoting the height of a man with uplifted arms. The area remained the same when a different shape of altar was required. This and other changes could not be effected without a considerable knowledge of geometry. As stated by Thibaut, 'squares had to be found which would be equal to two or more given squares, or equal to the difference of two given squares; oblongs had to be turned into squares and squares into oblongs . . .; the last task, and not the least, was that of finding a circle the area of which might equal as closely as possible that of a given square.' The result of these operations was the compilation of a series of geometrical rules which are contained in the above-mentioned Śulbasūtras.

A lively controversy has been going on as to whether these geometrical rules are of Indian growth, or due to Greek influence, the numerous coincidences between the Sanskrit texts and the writings of Heron favouring the latter view, whereas the apparent antiquity of the Śulbasūtras, and their close connexion with the ancient sacrificial rites of the Brāhmans, would seem to render their native origin the more probable alternative.

Though offerings in the ancient Vedic fashion have become very rare in India, various kinds of altars continue in common use for religious purposes. Thus the present writer saw a square *vedi* made of earth or clay, on which an open fire for oblations of butter had been kindled, at the consecration of a public tank near Calcutta. Hindu altars are also erected at some of the Saṁskāras or family celebrations of the Brāhmans. Thus among the Deshasth Brāhmans in Dharwar, it is customary, a few days before the ceremony of thread-girding, to raise a porch in front of the house, on the western side of which an altar is set up facing east. On the day of the ceremony the boy is bathed and is seated on a low wooden

stool which is placed upon the altar, and his father and mother sit on either side. The chief priest kindles on the altar a sacred fire, into which he throws offerings. On the occasion of a marriage in the same caste, an altar about six feet square and one foot high is raised. The bride and bridegroom are led to the marriage altar, and two men hold a cloth between them. At the lucky moment the cloth is drawn aside, and each for the first time time sees the other's face. Afterwards the priest kindles a sacred fire on the altar, and clarified butter and parched grain are thrown in. The married couple walk thrice round the fire. Seven heaps of rice are made on the altar, and a betel-nut is placed on each of the heaps. The bridegroom lifting the bride's right foot places it on each of the seven heaps successively. Among the Deshasth Brāhmans of Bijāpur, boys on their initiation are led to an altar called *bahule*, where the priest girds them with the sacred thread, to which a small piece of deerskin is tied.

J. JOLLY.

ALTAR (Japanese).—In Japan little distinction is made between the table and the altar. No special sanctity attaches to the latter. In Buddhist temples there is a stand on which incense is burnt, called *kōdan* or *kōdzukuye* ('incense-table'). Shinto offerings are placed on small tables of unpainted wood. The old ritual prescribed that in the case of Greater Shrines the offerings should be placed on tables (or altars); in the case of Lesser Shrines, on mats spread on the earth.

Each house may have its Buddhist domestic altar, or rather shrine (*butsudan*)—a miniature cupboard or shelf where an image of a Buddha is deposited, or a Shinto altar (*kamidana*) where Shinto tokens, pictures, or other objects of devotion are kept.

W. G. ASTON.

ALTAR (Persian). —**1.** In none of the ancient Persian records, whether literary or inscriptional, do we find a generic term for 'altar.'* Nevertheless, to infer from the absence of such a term in the extant records that no kind of altar was employed in the Zoroastrian ritual during the period represented by the Inscriptions and the Avesta, would be to press the argument from negative evidence too far. Moreover, if the limited vocabulary of the Inscriptions contains no *word* for 'altar,' yet the royal sculptor has left an unequivocal witness of the existence of altars in the Mazdaism of the early Achæmenians, in the representation of the altar itself in bas-relief over the entrance of the tomb of Darius Hystaspis on the rocks at Naksh i Rustam.†

The statements of Greek and Roman authors as to the absence of altars, and of temples and images, in early Persian worship, would seem, on the first view, more difficult of a satisfactory explanation.‡ Herodotus, claiming to speak from personal observation and research, states (i. 131 ff.) that the Persians 'think it unlawful to build temples or altars, imputing folly to those who do so.' Therefore, 'when about to sacrifice, they neither erect altars nor kindle fire.' Strabo (born *c.* 60 B.C.), writing some four hundred and fifty years later, reiterates (xv. iii. 13) the testimony of Herodotus, though, in regard to the phenomena of his own time, he afterwards modifies its application (see *loc. cit.* §§ 14–15).

It is generally agreed, however, by this time, that the kind of altar with which Herodotus, as a Greek, was familiar—a raised platform in masonry, with steps to ascend, erected in front of the temple and under the shadow of the sculptured statue of the deity to whom the temple was dedicated, and upon which animal sacrifices were immolated—was quite unknown amongst the Persians for a long period after Herodotus wrote his *History*. This is not intended to imply that animal sacrifices as well were foreign to the Persian worship of the 5th cent. B.C. For, in the same passage, Herodotus describes the customs observed in such sacrifices: 'If any intends to sacrifice to a god, he leads the animal to a consecrated place.' 'Then dividing the victim into parts, he boils the flesh, and lays it upon the most tender herbs, especially trefoil.' The herbs must certainly be regarded as serving the purpose of an altar, upon which the flesh is presented for the acceptance of the deity; for while it lies there, the *Magus*, we are told, performs the religious service (cf., in some respects, the use of the altar of peace-offering amongst the Hebrews).

The same custom was observed in the cult of certain Persian divinities even in Strabo's time. 'They sacrifice to water by going to a lake, river, or fountain; having dug a trench, they slaughter the victim over it . . .; then they lay the flesh in order upon myrtle or laurel branches' (*loc. cit.* § 14). Here we meet with an Iranian substitute for the Greek *βωμός*, or raised altar for immolating the victim, namely, the *trench*, which, indeed, is highly suggestive of the antiquity of the method of sacrificing to some of these natural divinities. We have before us what is, probably, a relic of an ancient method of sacrificing which goes back to the Indo-Iranian period, the trench being the Zoroastrian counterpart of the *vedi* of the Vedic ritual.*

There is another fact in connexion with ancient Persian substitutes for altars mentioned by Herodotus, which is interesting, and not, it would appear, without its significance. 'The consecrated places' in the open air whither the victims for some of their sacrifices were led for slaughter, were on the tops of the highest mountains.† Remembering this and the fact that the chief god of the Persians was a sky-god, do we not here perceive their true reason, or, at least, an additional reason on their part for reproaching with folly, as they did, those who erected artificial platforms for sacrificing? In these mountains the pious Zoroastrians saw the altars which their God had provided, which dwarfed and rendered superfluous all other altars, and upon which He seemed ever to dwell as they gazed upon them from their distant homes.

On the other hand, the bas-relief sculpture over the royal tomb at Naksh i Rustam does not represent a sacrificial altar, or indicate any substitute whatsover for the Greek *βωμός*, such as the trench was. Its purpose and significance are entirely different. If we wish to find amongst another people anything like a parallel to it, we must turn, not to the Greeks, but to the ancient Hebrews. Like the Ark of the Covenant amongst the Israelites, it was not an instrument for presenting anything to the deity, but the resting-place of the most perfect

* The *dāitya gātu* of the Avesta (*Vendīdād*, viii. 81, 85; xiii. 17) forms no real exception; for, etymologically, it means no more than 'legal or consecrated place,' and is synonymous rather with *temple* than with *altar*. See, however, Jackson, *Grundr. iran. Phil.*, ii. 701; *Persia, Past and Present*, p. 303, by the same author.

† See Dieulafoy, *L'Acropole de Suse*, p. 392.

‡ See art. TEMPLES.

* See 'Das Āpastamba-Śulba-Sūtra: Übersetzung von Bürk; Die altindischen Altäre und das geometrische Wissen welches ihre Konstruktion voraussetzt,' *ZDMG*, vol. lv. p. 543 ff., vol. lvi. p. 327 ff.

† Compare the use of 'high places' (*bāmōth*) amongst the Hebrews (1 K 3^{2}, 2 K 17^{11}. See also Gn 22^{14}).

symbol and truest visible manifestation of the presence of that divinity, namely, the sacred fire. The figure on the rock is, therefore, a Fire-altar, attesting the use of such altars amongst the Persians long before the death of Darius.

Of the fact that the Persian reverence for fire goes back to a very early period, there can be no doubt.* The prominence of the *Agni*-cult amongst the Indians as well as the Iranians shows conclusively that it was part of that common heritage which the Indo-Iranian period bequeathed to them. And the reform of Zoroaster had, no doubt, as one of its results, the intensification and extension of the reverence for that element.†

When we remember that the divine flame had to be preserved with the most scrupulous care from all possibility of contamination,‡ as well as maintained ever unextinguished, it is natural to conclude not only that from early times there must have been a protection from climatic and atmospheric dangers, in the form of roofed and walled edifices (see TEMPLES), but that it would be equally necessary to circumscribe it in some vessel, and raise it sufficiently high from the floor, so as to guard it from being polluted by dust or insects. And in the representation on the rock these conditions are fulfilled.

In formation, judging from the bas-relief altar,§ the Achæmenian Fire-altar seems to have consisted of (*a*) a massive plinth or pedestal, with (*b*) what appears like a stone slab, of some inches in depth, resting upon it, and which may very naturally be regarded as the prototype of what is now so well known as the *Ādōsht*;‖ (*c*) crowning all, the sacred urn, now called the *Ātash-dān*, the 'fire-container,' wherein the divine and eternal fire burned.

Even in those early days, probably, just as in the time of Strabo ¶ and Pausanias ** (*c.* 180 A.D.), and in modern Fire-temples, this sacred vessel was full to its utmost capacity with the ashes of preceding days, and upon these the sacred flame was kept burning day and night with incense and sandal-wood.

Moreover, from the days of Cyrus onwards the divine fire burned, not only in the sacred vase concealed in the seclusion of the *Ātash-gāh*, but it, or at least an inferior form of it,†† invariably formed part of the religious processions and royal progresses of the Persian kings. Xenophon, in describing these processions (*Cyrop.* VIII. iii. 11–13), tells us that 'after the third chariot men followed carrying fire on a large altar' (ἐπ' ἐσχάρας μεγάλης).

In what respect, if at all, the ἐσχάρα differed in form from the altar of the *Ātash-gāh*, we are unable to say. The word ἐσχάρα, which Xenophon employs, is variously translated in passages where it occurs as 'hearth,' 'unraised altar,' 'brasier.' One would scarcely think that this portable altar would include the massive support which seems to have characterized the temple altar * (but see on Sasanian altars, below, § 2).

Sebēos (wrote *c.* 650–675 A.D.) states that the portable altar was less elaborate than that in use in the *Ātash-gāh*.* Quintus Curtius (*c.* 64 A.D.), however, asserts that these royal altars were made of silver.† The latter statement may refer only to the *Ātash-dān*. Tabarī, the Arabic historian (*b.* 839 A.D.), relates how Yazdijird III., the last of the Sasanian kings, carefully deported with him the sacred fire, in its fit receptacle, from place to place in his hurried flight before the conquering Arabs.

From the representations on the coins of the period,‡ we learn that the sacred fire was not extinguished upon the altar during the Parthian domination (B.C. 250–A.D. 226). Unfortunately, these coins do not assist us very materially in ascertaining the conformation of the altar at this time. Although the Fire-altar is a common type on the reverse of the pieces of the period, they contain only the *Ātash-dān*, having as support the lower part of the Fire-temple or *Ātash-gāh*; that is, it is only a convention. Still they serve sufficiently to show that in its main element, the *Ātash-dān*, the Fire-altar of the Achæmenians had persisted and survived the shock given to Zoroastrian ritual by the conquest of Alexander and the rule of the Arsacids.

It is possible, though this is by no means certain, that it was during this period§ that the sacred places on the high mountains, under the influence of foreign cults, gave room to temples, in the classical sense (ἱερόν), and consequently there arose the accompanying altar (βωμός) for animal sacrifices (cf. Strabo, *loc. cit.* § 15, also XI. viii. 4; Pausanias, *loc. cit.*).

Other high authorities‖ are strongly inclined to assign what are, admittedly, the extant remains of one of these temples, the famous temple at Kangavar, to the time of Artaxerxes II. (Mnemon) (404–358 B.C.), when, as we learn from several sources, there was a serious decadence from orthodox Zoroastrianism, and a recrudescence of ancient cults (cf. J. H. Moulton, *Thinker*, 1892, vol. ii. pp. 498–499). The last word on this matter is yet to be written.

On any theory, we are certain that in the first century before our era two classes of altars, at least, were used in Zoroastrian ritual, namely, the Fire-altar of the *Ātash-gāh*, and the sacrificial altar attached to the temples erected to specific Persian divinities.

Was there not yet another altar in use at this period? Certain statements in the terse account which Strabo gives (*loc. cit.*) of the religious practices of the Persians would seem to justify the inference.

We know that the temples of those Persian

‖ See Jackson, *Persia, Past and Present*, pp. 236–242.

divinities were separate and distinct from the Fire-temples or *Ātash-gāhs* (Strabo, *loc. cit.* § 15). But Strabo adds that to whatever divinity the Persians sacrificed, they first addressed a prayer to fire, all their devotions then, as now, being performed in the presence of the sacred element. Further, in describing the sacrifice to water as mentioned above, he adds that they took great care lest any of the blood should spurt into the fire. The fire, in this case, cannot have been that of the *Ātash-gāh*, but a fire on some kind of altar or brasier present at the place of sacrifice (§ 14). This fire would naturally be of an inferior grade to that used in the *Ātash-gāh*, and consequently it is quite conceivable that it may have served both for boiling the flesh * and for representing the fire of the *Ātash-gāh* as the symbol of the nature and presence of the deity. (See below, § 3).

If the inference is correct, we have here the parent, so to speak, of the Fire-altar employed at the present day in the *Izashnah-Gāh*, or place where the religious rites are performed.

2. On Sasanian coins of all periods, the Fire-altar is a constant type, modified, as it is, from time to time. On some of the earlier pieces we observe that there are, attached to the sides of the altar, metal feet † in the form of lions' paws, which seem to rest upon what were probably intended for handles wherewith to carry the altar. It is, however, conceivable that these were a feature of only the movable altar already described, but were not characteristic of the altar of the *Ātash-gāh*. However, in the later coins of the period this feature disappears, and we have merely the central support in the form of a short column with a base, and crowned, as in the older coins, by the *Ādōsht*, which, in turn, supports the *Ātash-dān*.‡

Whether it was the great reform of Zoroastrianism inaugurated and developed by the Sasanian kings that abolished the practice of animal sacrifice, or whether it had fallen into disuse before the rise of that dynasty (cf. Dieulafoy, *L'Acropole de Suse*, p. 402, Note 2), there can be no doubt that from Sasanian times onwards no places for real sacrifices are to be counted among Zoroastrian altars.

The *dāitya-gātu* was no doubt more extensive than a mere shrine for the *Ātash-dān* of the Bahram Fire, but its remaining part was the shelter of another, only inferior, Fire-altar, already conjectured to exist in earlier times, namely, the small Fire-altar of the *Izashnah-Gāh* (as witness of this, see the elaborate ritual of Avesta, *Vend.* v. 39, etc.). These are the two classes of altars in use among the Zoroastrians of Persia and the Parsīs of India at the present day.

3. Modern Fire-altars, while always retaining the two most essential out of the three parts of which Sasanian and, probably, as we have seen, earlier altars consisted, namely, the *Ādōsht* and the *Ātash-dān*, vary somewhat in the form of the latter from those found on the coins and sculptures.

The *Ātash-dāns* seen by Anquetil du Perron at Surat (see *Zend Avesta*, ii. pl. x.; Darmesteter, *Le Zend Avesta*, i. pl. iii.), consisted of large round vases of metal, much like our garden flower-vases, with a foot like a goblet and widening upwards, the larger one measuring three and a half feet in height, and three in diameter at the brim. Each stood upon its *Ādōsht*, about six inches in height. The size and degree of elaboration which characterize the *Ātash-dān* depend in the first place upon the wealth of the community worshipping at its shrine, and especially upon the quality of the fire it contains: whether it is the Bahram Fire, the purest and most sacred of all earthly fires, or the *Ātash i Ādarān*, the fire of the second grade, or only that used in the *Izashnah-khānah*.

The larger of the two fire-altars which Anquetil saw was that of an *Ātash i Ādarān*, placed, of course, in the *Ātash-gāh*; the smaller one was that in use in the *Izashnah-Gāh*. The latter contains the lowest grade of the hierarchy of sacred fires; it is the representative, though not the equal, of the fires of the *Ātash-gāh* (Darmesteter, *Le Zend Avesta*, i. p. lxiii). In front of this altar the priestly rites and religious ceremonies are performed (see SACRIFICE and OFFERINGS). In large temples, such as that at Kolaba, described by Darmesteter (*op. cit.*), there are as many as six of these small altars, where as many pairs of priests are able, simultaneously, to perform their ministrations. This is the class of altar found in the numerous *dādgāhs*, or small chapels, which have no *Ātash-gāh* attached.

Unlike the sacred fire on the altars of the *Ātash-gāhs*, the fire of these altars may be allowed to go out, and be kindled again whenever the faithful Zoroastrians assemble to perform their devotions and ceremonies. A small altar of this class is found also in all pious and orthodox Zoroastrian homes (see Dieulafoy, *L'Acropole de Suse*, Pl. xvi.).

LITERATURE.—The principal works have already been referred to in the body of the article. Dieulafoy's *L'Acropole de Suse*, p. 350 ff. (Paris, 1890–92), is the only work which treats, with anything like fulness, of *ancient* as well as *modern altars*. Scattered references in Greek and Roman authors have been collected and translated by (1) Wilson, *Parsi Religion*, p. 182 ff., Bombay, 1843; (2) Haug, *Essays on the Sacred Language . . . and Religion of the Parsis*, p. 7 ff., London, 1884. These two works contain other relevant matter. On *modern altars*, see Anquetil du Perron, *Zend Avesta, Ouvrage de Zoroastre*, vol. ii. pp. 531, 568–71, Pl. x., Paris, 1771; C. de Harlez, *Avesta, Livre Sacré des Sectateurs de Zoroastre*, vol. ii. p. 10 ff.; Darmesteter, *Le Zend Avesta*, vol. i. p. lix–lxiii, Pl. ii.–iv., vi., Paris, 1892. E. EDWARDS.

ALTAR (Polynesian).—The Polynesian altar, or *fata*, was essentially a table for the gods, and was constructed of wood, thus forming a striking contrast to the stone altars found in practically all other parts of the world. In Tahiti, the altar was situated either before or in the *marœ*, or temple (Moerenhout, *Voyages aux îles du Grand Océan*, Paris, 1837, i. 470–471); while in Hawaii, where the pyramidal *marœ* was replaced by the *heiau*, the figure of the god was put in the inner apartment to the left of the door, with the altar immediately in front of it (Ellis, *Polynesian Researches*, 2nd ed. London, 1832–1836, iv. 89). The usual type of the Polynesian altar is admirably described by the missionary William Ellis, as follows (i. 344–345; cf. Cook, *Troisième Voyage*, Paris, 1785, ii. 152–153, 350, iii. 388): 'Domestic altars, or those erected near the corpse of a departed friend, were small wicker structures; those in the public temples were large, and usually eight or ten feet high. The surface of the altar was supported by a number of wooden posts or pillars, often curiously carved and polished. The altars were covered with sacred boughs, and ornamented with a border or fringe of rich yellow plantain leaves. Beside these, there were smaller altars connected with the temples; some resembling a small round table, supported by a single post fixed in the ground. Occasionally, the carcase of the hog presented in sacrifice was placed on the large altar, while the heart and some other internal parts were laid on this smaller altar, which was called a *fata aiai*. Offerings and sacrifices of every kind, whether dressed or not, were placed upon the altar, and remained there till decomposed.' A Tahitian altar is described and pictured by Wilson (*Missionary Voyage to the Southern*

* See Rawlinson, *Five Great Monarchies of the Ancient Eastern World*, vol. iii. p. 359, London, 1871.

‡ See *Num. Chron.* vol. xii. pl. ii.–v, and, in general, Dorn, *op. cit.*

Pacific Ocean, London, 1799, p. 211) as being forty feet long and seven wide, and resting on sixteen wooden pillars eight feet in height. It was covered with thick matting which hung down the side in fringes, and on it was a rotting pile of hogs, turtles, fish, plantains, coconuts, and other offerings. Since the Polynesians had no burnt-offerings, and since the sacrifices to the gods were, of course, *tabu*, this unsavoury procedure was unavoidable. In Tahiti, the victim was usually dead when placed on the *fata*, and there were also stone altars on which the heads of human victims were placed. The type of altars here described did not differ materially from the class represented by the Hawaiian *rere*, on which human victims were laid face downward, covered with sacrifices of sacred pig, and left to decay (Ellis, iv. 162).

The same distinction which prevails among the Melanesians (wh. see), is found in the Polynesian altars, which include not only the *fata* here described, but also the *fata tupapau*, or altar for the dead, which was six or seven feet in height, and received a corpse immediately after death. This *fata tupapau* was covered by a cloth which protected the dead body from the elements (Moerenhout, i. 470–471, 547); to the corpse food was offered daily for six weeks or two months. This covering is also extended in the Marquesas, where altars to the *tikis* and spirits of the dead are frequent along the roads and by the houses (Waitz-Gerland, *Anthropologie der Naturvölker*, vi. 387, Leipzig, 1872; cf. Cook, ii. 301), to the small *marœ* (Seraut in *L'Anthropologie*, xvi. 475–484). At the *maui fata*, or altar raising, the altar was decorated with mero branches and coconut leaves, while the offerings were pigs, plantains, and the like, but not human sacrifices (Ellis, i. 349).

LOUIS H. GRAY.

ALTAR (Roman).—Much of what has been said about altars in Greek religion applies to Roman religion also, especially in the case of customs or rituals borrowed from Greece. Indeed, most treatises or articles do not make any distinction between the two. Here only those cases will be mentioned as to which we have independent evidence for Roman practice, or in which Roman practice differed from Greek.

1. As to *names*, Varro (as quoted by Servius, *Æn.* ii. 535) asserts: 'Diis superis altaria, terrestribus aras, inferis foeos dicari.' But this distinction, like that between *βωμός* and *ἐσχάρα* in Greek, is by no means universally observed by Latin writers, though there seems to be a general impression, in accordance with the etymology, that *altaria* are usually higher structures than *aræ*. Lofty altars were thought suitable to Jupiter and the gods of heaven, low ones to Vesta and Earth. Natural or improvised altars, especially those built of turf, are familiar in Latin literature (*e.g.* Horace, *Od.* III. viii. 3–4: 'Positusque carbo in cæspite vivo'). Such altars were set up all over the country, especially in connexion with sacred groves or trees; but they tended, as Greek influence spread, to be superseded by altars of stone or marble. Some of the earliest and most sacred altars in Rome seem not to have been attached to any particular temple; among these were the *ara maxima*, sacred to Hercules, and the mysterious subterranean altar of Consus, which was uncovered only once or twice in the year during festivals.

2. When altars are associated with temples, their *position* varies. Vitruvius (IV. viii.) states that altars ought to face east, and should be placed on a lower level than the images of the gods in the temple, in order that the worshippers may look up to them. The orientation of temples being much more varied in Italy than in Greece, that of the altar varies also. Roman temples are usually raised upon a high substructure approached by steps; and the altars at Pompeii are usually placed either in the open area in front of the steps or on a platform part of the way up. The sacrificer appears, from the position of the altars, to have stood, in some cases, with his side to the temple, in some cases with his back to it. Here, as in Greece, the usage seems to show that sacrifices offered to a god on his altar were not directly offered to the image which symbolized his presence,—that, in short, we have not cases of genuine 'idolatry.' But, in the scenes of sacrifice frequently represented on Roman reliefs, it is common for either a recognizable temple or a small statue of a god to be indicated behind the altar, probably as an artistic device to show to whom the sacrifice is offered.

3. There were also altars in Roman *houses*. It appears that, in primitive houses in Italy, the hearth served both for sacrifices to the domestic gods and for cooking purposes; this must have been in the atrium or central living-room. In farmhouses, where the kitchen with its hearth was still the principal room, we find a survival of this arrangement in the shrine for the household gods affixed to the wall close by the hearth; an example occurs in the villa at Bosco Reale. In Pompeiian houses the hearth has been transferred, for practical purposes, from the atrium to the kitchen; and that its religious functions accompanied it is shown by the fact that here also a shrine or painted figures of the domestic gods are often found in the kitchen near the hearth. More frequently, however, the household worship was more conveniently carried on at a small shrine provided for the purpose, either in a special room or in various positions in the atrium, peristyle, or garden. Such shrines usually consisted of a niche, with either statuettes or painted images of the domestic gods, the *lares* and *penates*, the genius of the house, and serpents; and in front was placed a small altar of a usual type. In one case a small fixed altar was found in a dining-room; probably portable altars were generally employed for the offerings which usually accompanied all meals, when they were no longer held in the common living-room or kitchen.

4. Of the *common hearth of a city* we have the most familiar example in that of Vesta at Rome, where the undying fire was tended by the Vestal Virgins. This was, doubtless, circular, as was the temple that contained it. Small altars were commonly placed in the streets, usually with a niche, or at least a painting on the wall behind, to indicate the gods to whom the altar was dedicated—sometimes the *lares compitales* or street gods, sometimes other deities.

5. As regards the *form* of altars in early Italian religion, we have not much information. The Ara Volcani, discovered in the recent excavations of the Forum, was an oblong mass of natural rock, with its sides scarped away; it was restored with stone and covered with stucco after some damage in quite early times, possibly at the Gallic invasion. Among the primitive objects of cult found underneath the famous black stone was a rectangular block, which was probably an altar. Roman altars were probably influenced in form considerably by Etruscan custom, which seems, from vase paintings and other evidence, to have favoured some curious and fantastic shapes. But we have little evidence of this in Roman monuments. From Imperial times the evidence is abundant; the forms are in their origin dependent upon those of Greece, though they soon enter on an independent development of their own. The magnificent architectural structures of Hellenistic times found a counterpart in the Ara Pacis Augustæ, which was surrounded by

reliefs with allegorized and ceremonial scenes, and is perhaps the most characteristic example of the sculpture of the Augustan age. Smaller altars, both round and square, are provided with artistic decoration in the naturalistic garlands carved in the marble, where the Greeks would have hung real ones, and in the reliefs, frequently representing sacrifices, but including many other appropriate subjects. In these it is possible to trace a development which, however, concerns the history of sculpture rather than that of religion. Simpler architectural decorations follow the Greek models; raised rolls at each end, faced by Ionic volutes, and bands of triglyph ornamentation, are very common. We also find sometimes on reliefs an ornamental canopy built on the top of an altar. In Roman custom, altars were far more frequently than in Greece erected merely in commemoration of a sacrifice, whether actually made upon them or not; in such cases the inscription was the essential thing, the altar form being little more than a convention. On the other hand, altars for actual use were frequently supplied with arrangements convenient in practice, such as basins to receive libations, and ducts to carry away the liquids.

6. Smaller *portable* altars, either for incense or for minor offerings, were frequently used; some have been found at Pompeii and elsewhere, but they are not easy to distinguish from tripods or other tables. It is doubtful whether the *gartibulum* or marble table, frequently found behind the impluvium in the atrium of Pompeiian houses, should be considered as an altar in origin. If, as has been suggested, it originally stood beside the hearth, it may have served this purpose, though it may have been merely a dresser. A peculiar interest attaches to this table in the matter of religious evolution, if we accept its sacred significance; for it plays an important part in the theory of the development of the plan of the primitive Christian church from the atrium of the dwelling-house.

'Between the tablinum and the open part of the atrium stood an ornamental stone table, the only reminder of the sacred hearth. It is a very striking fact that this is precisely the position of the holy table in the basilica; when we take into account the similarity of many of these tables with the most ancient [Christian] altars, we can hardly fail to admit a close relation between them' (Lowry, *Christian Art and Archæology*, London, 1901, p. 100).

7. The association of altars with *tombs* in Roman custom is somewhat confusing. Tombs frequently take a form resembling an altar (*cippus*); and it is natural to associate this with offerings to the dead, even if the altars be merely commemorative and not intended for actual use; the word *ara* is even applied to tombstones in inscriptions. On the other hand, Vergil describes a funeral pyre as 'ara sepulcri' (*Æn.* vi. 177). This altar, on which offerings to the dead were consumed together with his body, may be symbolically represented by the altar-tomb.

LITERATURE.—The fullest and most recent account of altars, Greek and Roman, is that by Reisch in Pauly-Wissowa, *s.v.* 'Altar,' where references to earlier authorities are given. An article with illustration is in Daremberg-Saglio, *Dict. des Antiquités*, *s.v.* 'Ara.' For Pompeiian altars see Mau, *Pompeii*, 1899; for the decoration of Roman altars, Mrs. Strong, *Roman Sculpture*, 1907. See also the Handbooks of Antiquities, such as Hermann, *Lehrbuch*, ii. 'Gottesdienstliche Alterthümer'; Iwan Müller, *Handb. der klass. Altertumswissenschaft*, v. 3 'Griech. Sakralaltertümer' (Stengel, pp. 10–15), v. 4 'Religion und Cultus der Römer (Wissowa), and Indexes of these works. See also A. de Molin, *De Ara apud Græcos* (Berlin, 1884).

E. A. GARDNER.

ALTAR (Semitic).—**1. Primitive conditions.**—The primitive Semites regarded trees, crags or rocks, and springs as deities, and in the earliest times brought their gifts into direct contact with the god by hanging them on the tree, rubbing them on the rock, or throwing them into the spring or well. Evidences of the survival of these customs in Arabia, the primitive Semitic home, are known, and some of them survive even beyond its borders. Both in Arabia and in Palestine trees are found hung with the relics of such offerings.* Gifts were thrown into the Zemzem at Mecca,† and into other springs.‡ That they were also brought into contact with rocks, appears from the ritual of the *maṣṣēbāh* described below. The simplest altar was a natural rock, the top of which contained a channel by which the blood was conveyed to a sacred cave below, as was the case with the sacred rock in the Mosque of Omar at Jerusalem. Such rocks are still used by the Arabs as places of sacrifice (see Curtiss, *Bibl. World*, xxi. 255, 256). Sometimes the blood was conveyed by a rivulet to a sacred well. Such a rivulet was the *Ghabghab* at Mecca, which flowed into the Zemzem.§ No doubt in the earliest times the deity was supposed to dwell in or be identical with a crag, one part of which was taken as an altar because of its natural formation. Out of these primitive conditions there were two lines of development, one of which produced the altars of later times, and the other the *maṣṣēbāh*.

2. Stone altars.—The earliest altar of artificial construction was apparently a rough heap of stones, which represented a mountain-top or a crag in which the god had been thought to dwell. Such altars were made of unhewn stones, and were sometimes surrounded by artificial trenches (1 K 18^{32}). Traces of such altars are found among the Israelites and the Aramæans (cf. 2 K $16^{10ff.}$, Ezk 43^{13}, and 1 Mac $4^{45ff.}$). They were probably at first rude cairns, which suggested a mountain peak. The remains of such cairns may still be seen at Suf and on Mount Nebo, as well as in many other parts of the East (see Conder, *Heth and Moab*, 181 ff.; and Barton, *A Year's Wandering*, 143).

3. Altars of earth.—In lieu of such an altar as this, it was possible in early times to make an altar of earth. Such an altar is permitted in the 'Book of the Covenant,' Ex $20^{24\text{-}26}$ (E), though we have no description of one in the OT. Possibly Macalister is right in thinking that he discovered an altar of this type at Gezer, for in connexion with the high place there he found a bank of earth about 11 ft. in length, which was baked so hard that it was exceedingly difficult for the workmen to cut through it.‖ Underneath this bank were a number of human skulls. As human sacrifice formed a part of early Semitic worship, it is possible that this bank once served as such an altar. Though by no means certain, this is a suggestive possibility. Light on the altar of earth may possibly be obtained from the Samaritans. The writer in 1903 saw their preparations on Mt. Gerizim for the Passover, and when he asked if they had an altar, they said 'yes,' and showed him a hole dug in the ground—perhaps 18 in. in diameter and 10 in. deep. From this a conduit of oblong shape led off. Over the hole the sheep were killed, and the blood flowed into the conduit to be soaked up by the earth. Analogy with the rock-cut altar at Petra described below shows, however, that this is not a complete altar, but only the slaughter-place. The complete earthen altar was a mound of earth, plus one of these earthen slaughter-places.

4. Maṣṣēbāhs.—Another development from the primitive crag was the Arabic *nuṣb* or Hebrew *maṣṣēbāh*. This was a stone pillar of conical shape, frequently resembling in a rough way a phallus, in which the god was supposed to dwell. The fat and oil of sacrifices were smeared on this

* See Doughty, *Arabia Deserta*, i. 449 ff.; and Barton, *A Year's Wandering in Bible Lands*, 162.

‖ *Bible Side-Lights from the Mound of Gezer*, 56.

stone, so that it served at once as an emblem of deity and as an altar. It was a *bethel* (Gn $28^{17ff.}$). Sometimes such a pillar stood alone, sometimes one or two honorific stones were placed by it,* sometimes the number of stones was made seven,† and at Gezer the whole number of these standing pillars was ten.‡ High places adorned with such stones have in recent years been discovered at Tell es-Safi,* at Petra,§ at Megiddo,§ and at Gezer.‖ When the number of stones is more than one, it is usually easy to identify the *bethel*, as it is worn smooth from the contact of offerings. These pillars were common to both the Hamitic and the Semitic world,¶ and developed in course of time into the Egyptian obelisk.

5. **Meat cooked in a pot hung on three sticks.**—At this early time probably the larger part of each sacrifice was cooked and eaten by the worshipper, as in 1 S $1^{4.\ 5ff.}$ 2^{13-16}. Probably in the earliest period the flesh was boiled in a pot, as described in Samuel, and as represented on some early Bab. seals and in an early hieroglyphic Bab. inscription.** The Bab. pictures represent the pot as resting in the crotch of crossed sticks, as in course of time the fashion of roasting the meat instead of boiling it came in. The transition in Israel is noted in 1 S 2^{14-16}. It is quite probable that this transition marked a stage of culture which was attained at different periods in different parts of the Semitic world, and that one of its consequences was the institution of burnt-offerings—or offerings consumed by fire, of which the deity was supposed to inhale the smoke. This transition led to the creation of fire-altars. These were ultimately of several kinds, and the evolution of them proceeded along two lines.

6. **Ariels.**—One way of making a fire-altar was to add a fire-hearth to a *maṣṣēbāh*. This was actually done at Aksum in Abyssinia, where such structures have been found.†† Perhaps the 'ariels' of Moab, mentioned in 2 S 23^{20} and on the Moabite Stone (lines 12 and 17), were structures of this nature. They were structures which could be dragged away, and were connected with the shrines of Jahweh, as well as with those of other deities. This is evident from line 17 of the Moabite Stone, and from Is $29^{1.\ 2.\ 7}$, where the name is figuratively applied to Jerusalem.

W. R. Smith supposed that the pillars of Jachin and Boaz, which stood before the temple of Solomon at Jerusalem, were used as fire-altars also.‡‡ Herodotus (ii. 44) tells us of two similar pillars at Tyre, one of emerald and the other of gold, which shone brightly at night. This latter fact was possibly due to some sort of fire, fed either by burning fat or some similar substance, connected with them. Possibly all these pillars were developed, like the altar-*maṣṣēbāhs* of Aksum, out of the primitive pillar.

7. **Rock-cut altars.**—Another development from the primitive mountain crag was the rock-cut altar. This represents a later stage of culture than the altar of unhewn stones. That was an artificial imitation of a mountain crag, but it was built of stones on which man had lifted up no tool. Human labour had placed the stones one upon another, but was confined to that alone. Rock-cut altars, on the other hand, are projections of native rock which human hands have fashioned into a form better suited to the purposes of sacrifice. One such was unearthed by Sellin at Taanach.* This consists of a stone about half the height of a man, roughly rounded at the top, but square at the base. At the corners rude steps have been cut in the stone, and the top is slightly hollow. It appears to have been used for libations only, and never for fire offerings.

Another example of a rock-cut altar is found in the rock-cut high-place which was discovered at Petra in the year 1900.† This altar is 9 ft. 1 in. long, 6 ft. 2 in. wide, and 3 ft. high. It is approached on the east side by a flight of steps, on the top of which the officiating priest could stand. On the top of the altar is a depression 3 ft. 8 in. long, 1 ft. 2 in. wide, and 3½ in. deep. This was apparently the fire-pan of the altar. On three corners of this altar there are depressions cut, which have suggested to some the possibility that, when complete, it was adorned at the corners with horns of bronze. This is, of course, only conjectural.

Just to the south of this altar, and separated from it only by a passage-way, is a platform which seems to have been used for the preparation of sacrifices. It is 11 ft. 9 in. long from north to south, 16 ft. 6 in. wide, and 2 ft. 9 in. high. It is ascended by four steps at the north-east corner. In the top of this platform there are cut two concentric circular pans, the larger of which is 3 ft. 8 in. in diameter and 3 in. deep, and the smaller 1 ft. 5 in. in diameter and 2 in. deep. From the lower pan a rock-cut conduit, 3 ft. 2 in. long, 2 in. wide, and 3 in. deep, leads away. This platform was, no doubt, used for the slaughter of the victims, and these basins were designed to catch the blood, and the conduit to conduct it away.‡

When we remember the importance attached to the blood by the early Semites, and their feeling that it should be offered to the deity (cf. 1 S $14^{33.\ 34}$ and Dt $12^{16.\ 23-25.\ 27}$), it becomes clear that this platform was as important a part of the altar as the other. Some scholars have called it, because of the circular basins cut in it, the 'round altar.'§ Analogy makes it clear that the trench of the Samaritans, referred to above, is in reality a part of an altar. Probably every altar of earth in ancient times was accompanied by a slaughtering-place similar to the one seen on Mount Gerizim.

8. **Altars of incense.**—A still later form of the altar—later from the standpoint of cultural development—was a small portable altar carved out of a stone. Such altars were developed in many parts of the Semitic world, and are described more fully below in connexion with the altars of the different nations. They were used for the burning of fat or of sweet-smelling incense, and probably came into use at a time when, in ordinary sacrifices, such parts of the offering only were given directly to the deity, the other and more edible parts becoming the property of the priests.

9. **Bronze altars.**—At the farthest remove culturally from the primitive Semitic altar stands the bronze altar. Not made of an unmanufactured product like stone, it is an altar of a civilized, and not of a primitive, people. Such altars are found among the Babylonians, Assyrians, Phœnicians, and Hebrews. Our knowledge of their forms is set forth below in describing the altars of these nations.

10. **Arabian altars.**—The only large altar that can in any sense be called Arabian which has, so far as the writer knows, been studied by Europeans,

is the great altar at Petra, described above (§ 7). That rock-cut altar may, however, be an Edomite or Nabatæan work, and indicative of their civilizations rather than of the civilization of the Arabs. Indeed, the use of tools upon it makes it probable that it was constructed by people who had lost the primitive simplicity and poverty of thought which attached to all things Arabian in early times.

The purely Arabian altars were, as they still are, spurs of natural crags, or stones containing hollows to receive the blood (see Curtiss, *Bibl. World*, xxi. 255, 256).

From South Arabia a very interesting altar of incense has come, which is now in the Berlin Museum.* It is a little over 2 ft. high. It tapers slightly as it rises, until within about 7½ in. from the top. At this point a slight shoulder projects, above which the stone broadens again. On one side, in an ornamental framework carved in stone, rises a pyramid, the blunt apex of which is surmounted by the thin crescent of the moon. The horns of the crescent are turned upward, and a star or representation of the sun-disc occupies its centre.

Petrie discovered three such altars of incense in the temple at Serabit el-Khadem in Sinai.† It is true that this was ostensibly an Egyptian temple, but there can be little doubt that Semitic customs and practices found their way into it. Of the altars found here, the highest was 22 inches. It had on the top a cup hollow, 3½ in. wide and 1 in. deep. One of these altars presented on the top a burnt surface, about ¼ in. deep, and its sides were blackened. All of them were cut so as roughly to resemble an hour-glass in shape, though one of them continued to taper well up to the top.

11. Aramæan altars.—In 2 K $16^{10ff.}$ we are told of an altar in Damascus which the Judæan king Ahaz saw, and which so pleased him that he had one made like it and placed in the Temple at Jerusalem. Probably the altar described by Ezekiel (43^{13-17}) is a description of it. If so, it was built of stones, and consisted ‡ of a base 27 ft. square and 18 in. high, along the top of which ran a moulding 9 in. wide. On this arose a square of 24 ft., which was 3 ft. high; on this a square of 21 ft., which was 6 ft. in height; and above this arose the hearth of the altar, 16 ft. square and 6 ft. high. It was approached by steps on the east side. The whole structure was about 17 ft. high, and at its corners were projections of some kind called 'horns.' It is only by inference that we carry these dimensions back to the altar at Damascus. Of course, between Ahaz and Ezekiel there may have been modifications, but when the influence of religious conservatism is taken into account, our inference seems to be justified.

As noted above (§ 10), the altar at Petra was perhaps a Nabatæan structure. If so, it should be counted an Aramæan altar.

A few smaller Nabatæan altars, of the kind called altars of incense above, have been discovered. One such was found at Kanatha, and bears a Nabatæan inscription. On one side of it a bullock is carved in a rather primitive type of art.§ Another Nabatæan altar of similar type from Palmyra has two hands carved on its side below an inscription.‖ A fragment of a basaltic altar found at Kanatha, carved with the head of a bullock,* betrays such excellent artistic workmanship that it can hardly be Nabatæan, but is probably Greek. Another Nabatæan altar, found by the Princeton expedition, is pictured by Littmann.† It consists of a straight stone, the shoulders of which are rounded as the top is approached. This is set in a larger base. The upper edge of the base is carved into a moulding. Another Palmyrene altar‡ has straight sides, and at its top an ornamental moulding projects, making the top larger than the body of the altar. Altars of similar structure, probably of Nabatæan workmanship, may now be seen in Muhammadan cemeteries at Palmyra.§ All these Nabatæan incense-altars known to the present writer have a perpendicular pillar-like form. None of them is shaped like an hour-glass, as are the Arabian altars. Sometimes the base is larger than the stem of the altar, and sometimes a moulding makes the top larger, but the lines of the intervening part are perpendicular.

12. Babylonian altars.—Our knowledge of early Bab. altars comes in part from the pictures on old Bab. seals. These altars may not be purely Semitic, as the Semites there were mixed with the Sumerians,‖ but the Semites were in the country before the dawn of history and early mingled with the Sumerians, so that it is often difficult to disentangle the strands of their civilization.¶ The earliest altars pictured may be Sumerian in origin, but they were employed by Semites at so early a time that we shall treat them as Semitic.**

At the very dawn of Babylonian history the only altars pictured belong to the class called above 'altars of incense.' They are of two forms, each of which appears on seals as archaic as those picturing the other. One of these was apparently a block of stone, shaped thus . The seals which portray it represent the notch as a kind of hearth in which the fire was built. Probably the high portion was hollowed out. One seal represents this style of altar as constructed of large bricks.††

Equally ancient, so far as appears, was the altar of the hour-glass shape.‡‡ These were not all exactly alike. Sometimes the middle of an altar was small, sometimes it was large; sometimes the top was larger than the bottom, and sometimes the reverse was the case; sometimes the narrowest portion was almost at the top, sometimes it was nearer the bottom; but the hour-glass form describes them all.

A third altar, figured on a seal of the de Clercq collection,§§ is perhaps older than either. It consists of flat stones, or possibly large flat bricks, placed above one another in a simple pile.

Still other forms appear on later seals. One such altar ‖‖ is of stone, and is triangular in form, broad at the base, sloping toward the top, and surmounted by a fire-pan. Just below the fire-pan runs an ornamental ledge. That the Babylonians had bronze altars is made probable by another seal, showing a low structure supported by three legs, on which a sacrificial fire burns.¶¶

That the Babylonians had larger altars corresponding in function to the rock-cut altar at Petra is not only probable *a priori*, but is confirmed by the explorations of Dr. Haynes at Nippur. This

excavator found a structure built of sun-dried bricks, 13 ft. long and 8 ft. wide. A ridge of bitumen 7 in. high ran around the top. The structure was covered with a layer of white ashes several inches deep, and was separated from the surrounding space by a low wall or curb. Near it was a bin containing several bushels of ashes. Dr. Haynes rightly regarded this as an altar. He found it 3 ft. below the pavement of Naram-Sin, so that it belongs to the pre-Sargonic period.*

Herodotus (i. 183) bears witness to the fact that two kinds of altars stood in the temple at Babylon. He says the smaller altar was of gold, but is silent as to the material of which the larger altar was constructed. These correspond to the 'altar of burnt-offering' and the 'altar of incense.'

13. Assyrian altars.—The altars of the Assyrians consisted, no doubt, of the two varieties employed by the Babylonians. Those which explorations have brought to light belong to the smaller type, or the class of 'altars of incense.' These are sometimes of stone and sometimes of bronze.

The stone altars are of three forms. The oldest is from the time of Adad-nirari III. (B.C. 812–783), and is in the British Museum. It consists of an oblong stone 55 cm. long and of the same height, so carved that the top presents the appearance of a sofa without a back. The lower part is ornamented by a few horizontal symmetrical lines.† The second type is made of a block of stone so carved that its base is triangular, and is ornamented by two horizontal ledges. At the corners between these ledges a lion's foot is carved. This base is surmounted by a circular top.‡ The third altar is shaped much like the Nabatæan altars, but with a castellated top.‡ Both these last are from the palace of Sargon (B.C. 722–705), and are in the Louvre.

The Assyrian bronze altar is pictured for us on the bronze gates of Balawat,§ on a sculpture of Ashurbanipal,‖ and on other sculptures.¶ These altars, in spite of variations in detail, were built on the same pattern. Each was a table-like structure, sometimes half the height of a man, sometimes a little higher. The legs at each corner were moulded, somewhat like the legs of a modern piano. The legs were joined to one another by horizontal bars. Sometimes there was one, sometimes two, and sometimes three of these, and their distance from the ground was determined by the fancy of the maker. From the middle of the side of the altar (or from the centre of it, the perspective is so imperfect that it might be either) a leg descended to the lowest of these cross-bars. The top of the table was slightly hollow and formed the fire-pan. One of the representations shows the sacrifice burning on it. Such an altar could be taken with the army on a campaign, as is shown by the bronze gates of Balawat.

14. Canaanite altars.—In ancient Canaan the altars of burnt-offering were sometimes of native rock, as at Taanach (see § 7), sometimes structures of unhewn stone (§ 2), and sometimes heaps of earth (§ 3). These have already been sufficiently described (§§ 2, 3, 7). A Canaanite altar of incense was, however, found at Taanach, which is unique. It was made of earth moulded into a rounded trunk, broad at the base and tapering considerably toward the top. It was ornamented by many heads—both human and animal—in relief.**

¶ *e.g.* cf. Layard, *Nineveh and its Remains*, ii. 354.
** See Sellin, *Tell Ta'anek*, 76.

15. Phœnician altars.—The Phœnician altars which have survived are all 'altars of incense.' They present a variety of forms. Sometimes they are square with a large base and top, the central portion, though smaller, being of the same size all the way up.* Sometimes they are of the same general shape except that they are round, and the base and top join the central portion in an abrupt shoulder instead of being tapered down to it. Such is an altar found at Malta.† Another altar found at the same place has its central portion carved into panelled faces in which a vine is cut for ornamentation.‡ Still others are variations of the hour-glass form.§

Bronze altars are mentioned in Phœnician inscriptions as having been erected at Gebal, Kition, Larnax Lapethos, at the Piræus, and in Sardinia,‖ but we have no knowledge of their form. Perhaps they were made on the pattern of Assyrian bronze altars. We know that in many ways the Phœnicians copied Assyrian art.

16. Hebrew altars.—According to Ex 20^{24-26}, early Israelitish altars were constructed either of earth or stone. These have been described in §§ 2, 3. Solomon, when he erected his temple, introduced a brazen altar after Phœnician fashion. The description of this has been omitted by redactors from 1 K 6, because it was not made of orthodox material (so Wellhausen and Stade). Its presence is vouched for by the story of 2 K $16^{11ff.}$ and by the late and confused insertion (so Kittel), 1 K 8^{64}. The Chronicler (2 Ch 4^{1}) makes it a gigantic structure 30 ft. square and 15 ft. high, and modern scholars have often followed his statements.¶ As the altar had perished long before the Chronicler's time, and as it was smaller than the large stone altar which Ahaz built near it (2 K $16^{14.\ 15}$), and which was but 27 ft. square at the base, we may conclude that the Chronicler's measurements are unhistorical. It is much more likely that Solomon's brazen altar was of the Assyrian pattern. If it was, we can better understand why king Ahaz was so eager to supplant it with a stone altar which would be better adapted to the offering of large sacrifices. This bronze altar had disappeared by the time of the Exile. The stone altar of Ahaz is described above (§ 11). Such an altar, built of unhewn stones, continued to exist down to the destruction of the Temple by Titus (cf. 1 Mac 4^{45-47} and Jos. *BJ* v. v. 6).

According to 1 K 6^{22} 7^{48}, a golden altar, apparently of incense, stood before the Holy of Holies in Solomon's temple, but we have no description of its form.

The altars described in the Priestly document as made for the Tabernacle were the altar of burnt-offerings (Ex 27), made of acacia wood and overlaid with bronze, and the altar of incense (Ex 30) made of acacia wood and overlaid with gold. Modern scholars regard both of these as fancies of priestly writers, as it is clear that neither of them would stand a sacrificial fire. The altar of incense of this passage was possibly patterned on that of the Temple. If so, it gives us its dimensions. It was 18 in. square and 3 ft. high.

17. Horns of the altar.—Various explanations have been offered for the 'horns of the altar.' Stade** suggested that they arose in an attempt to carve the altar into the form of an ox, while W. R. Smith†† believed that they were substituted for the horns of real victims, which at an earlier time had been hung upon the altar. Josephus (*BJ* v. v. 6) says of the altar of Herod's temple that 'it

* See Renan, *Mission de Phénicie*, 163.

** *Gesch.* i. 465. †† *Rel of Sem.*² 436.

had corners like horns,'* suggesting that the term was figuratively applied to some ornamentation which surmounted the corners. As no horns appear upon any Semitic altar yet discovered, but the altar frequently appears surmounted with ornaments, it is probable that, as in Jer 17[1], the word 'horns' is figurative.

The Hebrew 'table of shewbread,' a counterpart to which is figured in Assyrian reliefs, might in one sense be called an altar, but, strictly speaking, it is an altar only in a secondary sense.

LITERATURE.—Nearly all the literature has been mentioned above. In addition, mention may be made of art. 'Altar' by Addis in *EBi*, that by Kennedy in Hastings' *DB*, and that by Barton in the *JE*; also Nowack, *Heb. Arch.* (1894) ii. 17 ff.; Benzinger, *Heb. Arch.* (1894) 378 ff.; Curtiss, 'Places of Sacrifice among the Primitive Semites' in *Biblical World*, vol. xxi. 248 ff.; Greene, 'Hebrew Rock Altars,' *ib.* vol. ix. 329 ff.; and W. H. Ward, 'Altars and Sacrifices in the Primitive Art of Babylonia' in Curtiss' *Primitive Semitic Religion To-day* (1902), Appendix G. GEORGE A. BARTON.

ALTAR (Slavonic). — There is a considerable number of texts relating to the temples of the Baltic Slavs, but they do not furnish any details about altars. The words denoting 'altar' among the Slavonic nations are borrowed, through the Old High German *altāri*, from the Latin *altare*. The Old Church Slavic *žrŭtva*, 'sacrifice' (cf. *žrĭcĭ*, 'sacrificer, priest'), compared with its Russian derivative *žertveniikŭ*, which is employed in the sense of 'altar' in the Biblical texts, seems to indicate that the altar was the place in the temple where the victims were sacrificed. Perhaps it is simply the translation of the Greek *θυσιαστήριον*. The entire group of words associated with *žrŭtva* primarily means only 'praise' (Vondrák, *Altkirchenslavische Grammatik*, Berlin, 1900, p. 129). Mention may likewise be made of Old Church Slavic *trĕbiste* (connected with *trĕba*, 'negotium'), 'altar, *θυσιαστήριον*, *σέβασμα*'; and *krada*, 'rogus, fornax.'

LITERATURE.—Miklosich, *DWAW* xxiv. 18.

L. LEGER.

ALTAR (Teutonic). — There seems to be no doubt that in heathen times the Teutonic peoples made use of altars; but our information with regard to these is very meagre, since the majority of the references give no details.

The bulk of the evidence is obtained from the Icelandic sagas. In these *stalli* appears to be the regular term for an altar within a temple: we are told that the *stalli* was set up in the centre of the sanctuary [the *afhús*—see TEMPLES (Teutonic)]; and it is described by the Christian writer of the Eyrbyggia Saga as 'like unto an altar.' The materials of its construction are nowhere stated, and there is practically no indication as to whether it was built of earth, stone, or wood. There are references in the sagas to a custom among the Icelandic settlers of carrying with them from Norway 'the earth under the altar'; and in the Kialnesinga Saga the *stalli* is described as made with much skill, and covered above with iron. If the material was wood, the iron would be necessary, since the writer goes on to say that upon the *stalli* burnt the sacred fire that was never allowed to go out. There is some evidence that the figures of the gods stood upon the *stalli*; it is certain that it carried the oath-ring and the great copper bowl (the *hlaut-bolli*) into which was collected all the blood of the victims slain at the sacrifice. Within the bowl were the *hlaut* twigs, by means of which the walls of the temple, within and without, were sprinkled with the blood, and the altar reddened all over.

We hear further of altars within sanctuaries in England and elsewhere: in Anglo-Saxon the regular Christian term for 'altar' was *wīhbed* (earlier form, *weofod*), which had probably come down from heathen times. In Gothic the word for 'altar' is *hunslastaþs*, lit. 'place of sacrifice.'

There is mention also in the sagas of a sacrificial stone, called Thor's stone, which stood in the midst of the place of assembly, and on which the men who were sacrificed to Thor had their backs broken. With this we may compare the altars mentioned by Tacitus (*Ann.* i. 61) in the forest of Teutoburgium, where the officers of the army of Varus were sacrificed by the Cherusci in A.D. 9. We hear elsewhere of sacred stones, especially in the Dane Law in England.

Many writers have supposed that the *hörg* of the sagas was some kind of stone altar, mainly on the strength of the passage in Hyndluliódh, where Ottar is said to have built for Frey a *hörg* of stone, which he made glassy with the blood of cattle. But other passages clearly indicate that the *hörg* was of the nature of a room; while the Old German glosses give the corresponding form *haruc* as a translation of *lucus* and *nemus* as well as of *ara*. It is perhaps safer, therefore, to regard the *hörg* simply as a sanctuary. It was apparently often in the charge of women, and seems to have been used especially in connexion with the cult of the dead, while the sacrifices at it took place, sometimes at least, by night.

C. J. GASKELL.

ALTER.—The social 'other,' fellow, or *socius* of the personal 'ego.' In current social Psychology and Ethics the 'alter' is the fellow of the social environment or situation in which the personal self finds itself. It is a contrast-meaning with 'ego.' The term 'altruism' shows historically an earlier use of the same word, meaning conduct or disposition favouring or advancing the interests of another rather than those considered advantageous for oneself. The development of less individualistic views in Sociology, Psychology, and Ethics has rendered important, indeed indispensable, the notion of personality as in some sense more comprehensive than individualism was able to allow. Various views of collectivism, social solidarity, general will and self, rest upon a concept of the 'ego' which essentially involves and identifies itself with its social fellow. The present writer has developed (reference below) such a view in detail, using the term 'socius' for the bipolar self which comprehends both 'ego' and 'alter.' On such a view, the 'ego' as a conscious content is identical in its matter—and also, in consequence, in its attitudes, sympathetic, emotional, ethical, etc.—with the 'alter.' The self-thought is one, a normal growth in the interplay of the influences of the social *milieu*; and the individual is not a social 'unit,' to be brought into social relationships, but an 'outcome' of the social forces working to differentiate and organize common self-material. The altruistic or 'other-seeking' impulses are on this view normal and natural, because in fact identical with the 'ego-seeking'; both are differentiations of the common group of less specialized movements in the process that constitutes personal consciousness in general. Recent work in Social Psychology has shown the place of imitative and other processes whereby the 'ego-alter' or 'socius' meaning is developed.

LITERATURE.—Rousseau, *Contrat social*; Bosanquet, *Philosophical Theory of the State* (1899); Baldwin, *Social and Ethical Interpretations* (1897), and *Dictionary of Philosophy and Psychology, in locis.* J. MARK BALDWIN.

ALTRUISM.—The use of the term 'Altruism' is due to Comte, who adopted it to describe those dispositions, tendencies, and actions which have the good of others as their object. He contrasted it with 'Egoism' (wh. see), which has self-interest

* κερατοειδεῖς προανέχων γωνίας.

as its direct object. Comte maintained that 'the chief problem of our existence is to subordinate as far as possible egoism to altruism.' Herbert Spencer adopted the term, and gives considerable space in his *Data of Ethics* to the discussion of the contrasted elements of Egoism and Altruism, and to their reconciliation. Briefly, the contrast set forth in the terms 'Egoism' and 'Altruism' was indicated by former writers on Psychology and Ethics by the distinction between self-regarding and other-regarding, that is, benevolent or disinterested tendencies.

The two terms have been widely used by more recent writers. We may distinguish between the use of the terms in Psychology and in Ethics. In Psychology 'Altruism' means the disposition which has as its object the good of another. Some are disposed to limit the meaning of the word to those dispositions which are consciously directed towards an object, and to deny the application of the term to mere spontaneous and unreflective action. In other words, they limit Altruism to conscious beings, and to them when they have attained to powers of reflexion, and have learned to constitute objects for themselves. They exclude from the sphere of Altruism also the gregarious and instinctive grouping together of animals for attack and defence. In Ethics, 'Altruism' is used to denote those dispositions and actions which have the welfare of others or another for their motive and object. It lays stress here, of course, on the ethical aspect of the disposition.

While many would limit the use of the terms 'Egoism' and 'Altruism' to dispositions and actions which arise only within a self-conscious being, and arise as the outcome of a process of reflexion, there are others who strive to trace the origin of egoistic and altruistic tendencies backwards to those instincts of love and hunger, the rudiments of which seem to be present in all forms of life. The conception of Evolution and the acceptance of it as a working hypothesis, at least, by all manner of workers, tend to lay great stress on this line of investigation. Evolutionists tend to regard the behaviour of each species of animals as illustrative of an ethical code relative to that species; and some of them, like Professors Geddes and Thomson, look on the processes of life as a 'materialized ethical process.' Professor Henry Drummond laid stress on the two great struggles; namely, the struggle for the life of self, and the struggle for the life of others.

Writers on this topic from the point of view of Evolution may be divided into two classes. There are those who, with Professor Huxley, describe the process of Evolution as a gladiatorial show, and nature as 'red in tooth and claw with ravin.' They affirm that the very existence of ethical life depends on the possibility of man's ability to combat the cosmic process. In popular literature, in scientific articles, in learned treatises, it has been affirmed that the animal world consists of a struggle between half-starved animals striving for food. 'Woe to the vanquished!' was put forward as the universal cry. Competition was described as strongest between animals of the same kind, and it was through this competition and the premium set on success that species was supposed to advance. On the other hand, there were those who questioned the reality of the struggle, and who questioned whether the struggle for existence is the only law of life and the only rule of progress. While the followers of Darwin laid stress on the struggle for existence, developed it, and painted it in ever darker colours, they apparently forgot that he had written in other terms in the *Descent of Man*. In this work he had set the problem before him of tracing the evolution of man from simpler forms of life, and an evolution of all the features of human life, physical, psychological, ethical. Thus he was led to lay stress on the social character of many animals, on their co-operation, on the evolution of sympathy and mutual helpfulness, until in certain parts that kind of struggle which was prominent in the *Origin of Species* tended almost to disappear. The unit in the struggle changes before our eyes; it is no longer the individual who struggles, gains an advantage, it is 'those communities which included the greatest number of the most sympathetic members that would flourish best, and rear the greatest number of offspring' (*Descent of Man*[2], 163). Even from Darwin's point of view here is a new factor introduced into the struggle for existence. Sympathy, mutual help, or union between members of the same species for attack or defence, has been recognized as a decisive factor in the evolution of life. The community has taken the place of the individual, and mutual help is as much a fact of life as mutual competition.

While many evolutionists had apparently forgotten that Darwin had set forth the great influence of the social factor in the evolution of higher forms of life, others took up the hint, and traced the various forms and kinds of social mutual helpfulness in the lower forms of life, and their influence on the development of altruistic affections. Nature did not appear to them to be a mere gladiatorial show; it was a sphere of co-operation, in which each was for all, and all for each. They delighted to trace co-operation throughout the sphere of life, they pointed out to men such forms of co-operation as *symbiosis*, as the co-operation of bacteria with wheat, with various forms of trees, alliances between trees and insects, and generally they were able to show that, competition notwithstanding, the world was a system that worked together. Then they pointed to the evolution of socialistic tendencies in gregarious animals. They showed us a herd of cattle banded together for defence, with the cows and calves in the centre, and the bulls to the front. They showed us a pack of dogs under the rule of a leader, organized for hunting, with the social order dominating the individual, and obeyed by the individual, with sanctions for obedience and penalties for disobedience. Then they traced for us the evolution of those psychological qualities the ethical character of which we distinctly recognize when they appear in self-conscious beings. Trust, obedience, recognition of the order of the pack, or of the herd, consciousness of fault and expulsion from the herd if the order is disregarded, are all depicted by those who trace for us the social evolution of life.

Stress has been laid by some on the relation of parents and children, on the care for offspring as the source of social affection; and attention has been called to the fact that a prolonged infancy calls forth a great development of parental care. As individuation increases, fertility lessens, and with the increase of individuation there goes the increase of the period of helplessness in infancy; and thus they are able to indicate an increase of social affection. Still this source of Altruism does not carry us very far, for the relation of parent and offspring is only temporary, and does not form the basis of a lasting relationship.

It is in the aggregation of animals together for mutual benefit that most evolutionists look for the source of Altruism. It is not possible to enter here into the controversy between those who hold that acquired qualities can be transmitted through heredity, and those who maintain that such transmission has never been proved. It is an important question in itself and in its consequences. But

for our purpose it is not needful to take a side on the question. For the present purpose, the denial of the possibility of a transmission of acquired qualities has directed attention to, and stimulated inquiry into, the possibility of social transmission of acquired attainments from generation to generation. Is there a tradition among animals? Is there social transmission of the mental and intellectual gains of a species? Or is the only way of transmission that of organic change inherited from parents by their offspring? We quote the following from Professor J. Mark Baldwin:

'Wallace and Hudson have pointed out the wide operation of imitation in carrying on the habits of certain species; Weismann shows the importance of tradition as against Spencer's claim that mental gains are inherited; Lloyd Morgan has observed in great detail the action of social transmission in actually keeping young fowls alive and so allowing the perpetuation of the species; and Wesley Mills has shown the imperfection of instinct in many cases, with the accompanying dependence of the creatures upon social, imitative, and intelligent action.' He adds: 'It gives a transition from animal to human organization, and from biological to social evolution, which does not involve a break in the chain of influences already present in all the evolution of life' (*Development and Evolution*, 1902, p. 148).

Nurture, imitation, social transmission seem to count for something in the evolution of life, and specially of social life among animals. While it is true that a chicken almost before it has shaken itself free from the shell will peck at a fly and catch it, yet there is evidence to show that in other forms of life the young have to learn from parental example; and it even appears that direct instruction of a kind is given. There is sufficient evidence, at all events, to affirm that the higher animals, whose young need parental care for some time ere they can provide for themselves, have to learn how to make their living. Parent birds teach their young to fly, and teach them to recognize the approach of danger. On this there is no need to dwell, save to remark that in such races of life, where parents and offspring are for a time associated, where parents care for offspring and offspring depend on parents, there is room and there is need for the exercise of what may be called social affections. Nor need we object to the fact that we find in lower forms of life the germ and the promise of what comes to flower and fruit in self-conscious beings. We have learnt that life is one, and that the laws of life are similar in all the ranges of life. It seems to proceed on one plan, and we need not be surprised that rudimentary forms of the higher may be found in the lower layers of life. But the full meaning of the social relations between living beings does not appear till we come to self-conscious beings who can look before and after, and reflect on their own experience.

While, therefore, we receive with gratitude the testimony of the students of life to the existence of the germs of social life in the lower spheres of living beings, it must be insisted on here that the advent of self-conscious beings into the world has made a great difference. The advent of rationality has given a new meaning to all the phenomena of life as these are manifested in beings lower than man. Appetites, passions, desires, affections are no longer what they were in lower forms of life. Appetite is a different thing in an animal which eats only for the sake of hunger, and drinks only to assuage thirst, from what it is in civilized man, who brings the wealth of his artistic nature and the powers of his memory and imagination to enhance the beauty of his festival. Even into appetite the wealth of his whole nature may enter. If this is the case with appetite, it is still more true of the emotions, such as fear, desire, and so on. Take *surprise*, and we find that while we call by the same name the similar phenomena of an animal and a man, yet surprise is relative to the experience of the individual. We are not surprised at railways, telegraphs, telephones, motor cars; these have become the commonplaces of civilization. Thus Comparative Psychology has in all its comparisons to remember what a difference self-consciousness has made in the character of the feelings, and to make allowance accordingly.

Thus in the discussion of Egoism and Altruism, while help of a kind can be obtained from a study of the lower life, that help does not carry us very far. In the lower forms of life the individual is sacrificed to the species: in a beehive the hive seems to be all-in-all, and the individual bees, whatever their function is, are steadily sacrificed to the good of the whole. Numerous other illustrations are at hand. But in a human society such a solution must be found that neither shall the individual be sacrificed to the whole nor the whole to the individual. The individual has a claim on the whole for the opportunity of living a full, rich, and gracious life; and society has a claim on the individual for devoted and whole-hearted service.

Looking at the history of our subject, and at the actual history of man, we find many curious things. Early societies steadily sacrificed the individual to the tribe, and the individual scarcely seemed to have any but a tribal consciousness. The discovery of the individual seems to be a late discovery. The individual must not in any way depart from the custom of the tribe; he must believe their beliefs, follow their customs, wear their totem, and in no way think or act spontaneously. Individual worth and freedom were neither recognized as desirable, nor tolerated, because inimical to the welfare of the tribe. Late in history, and mainly through religious influences, the worth and value of the individual won recognition, human life was recognized as sacred, and freedom found a place amid human worths and interests. In truth, we find in history the pendulum swinging from one extreme to another; now the individual is in bondage to society, and then the individual tends to make society impossible. Here there are long stretches of history where the authority of society dominates the individual, and then a reaction, when men regard the individual as the sole reality and society as a tyranny and trouble. If any one casts his eye back to the beginning of modern philosophy and reads Hobbes and Descartes, and follows out the principle of individualism to the French Revolution, its culminating period in modern history, he will find that the individual in all his naked simplicity, in all the grandeur of his so-called rights, is the object of all study, the beginning of all speculative thought. He is real, his rights are his own, and he is prepared to defend them against all comers. He is in a state of war, he is a free and independent creature, and if he is to live in society he will do so only when he has made terms with his neighbour. So he makes a social contract, he surrenders so much, and he obtains a guarantee for the others. He is supposed to be naturally selfish, egoistic, and to regard others only as instruments for his own good.

Looking at man from this point of view, those who hold it are laid under the heavy burden of attempting to derive Altruism from Egoism, and it need hardly be said that they have failed in the task. Altruism can no more be derived from Egoism than Egoism can be derived from Altruism. The truth seems to be that each of them goes down to the very foundations of life, and life can scarcely be conceived in the absence of either. If it be true that life comes only from life, then life must be sacrificed in order to produce fresh life. That is Altruism, whether it is conscious Altruism or not. It is vain to ask for the genesis of Altruism, it is as deep as life; it is vain to ask for the beginning of Egoism, for it is

proverbial that self-preservation is the first law of life. In fact we are here, as we are so often, the victims of our own abstractions. We cannot really separate the individual from society, or society from the individual.

It may be well, at this stage, to point out that what we may distinctively call the Ego feelings have also a social reference. In one sense all feelings which refer to the interests of the individual are Ego feelings. Personal pains and pleasures, desires and aversions, exist only for him who feels them. It would on the whole be an improvement in our use of words if we limited the title 'Ego feelings' to those feelings which belong to a self-conscious subject, and which depend not upon consciousness, but on self-consciousness. 'Ego feelings' thus would mean, not passive pain or pleasure, but feelings actively related to our self-esteem, to our self-assertion, or to any manifestation of the activity of the self by which the impression of its own worth is enhanced. In these feelings the Ego is at once the subject which feels them and the object of which they are qualities.

Limiting Ego feelings to those which thus refer to the self, we observe that it is precisely this reference to self that determines the value of an experience in our mental life. Pleasures and pains depend largely on being connected with self as their subject. Any worthy achievement, any feat performed, is estimated not by the passive sensations accompanying it, or by the physical endurance, but by the exaltation of self-feeling which is aroused. The man who does a daring deed, or performs a notable task, has a sense of power and efficiency, and delights in the deed as his own. Men delight in deeds and rejoice in things accomplished, not so much for their inherent worth, as for the fact that the deeds are their own. Our experiences are of value, and we account them of abiding worth, not because they gratify our sensibility, but because we have put so much of ourselves, of our personality, into them. Thus we can never form pleasures into a sum and measure their value quantitatively as Hedonism tries to do. All values in experience are constituted by their reference to self in self-consciousness.

Self-knowledge, self-reverence, self-control, the activity of self in constituting its objects, are thus determining elements in pleasure and pain. The passive pleasures are almost without value; one chooses the nobler part, though the choice may bring pain with it. A slave may have little of the anxiety, the care, the hardship of the free man, but then a slave can never have the exaltation of self-feeling and self-respect which comes from knowledge and freedom and manhood. It is, then, the reference to self that gives to rational pleasure its distinctive note. But it is next to be observed that even the reference to self has its social aspect. It always refers, even in its most egoistic mood, to a social standard. In fact, the social reference enhances the significance of pain and pleasure in an immeasurable degree. Man sees himself as with the eyes of others. 'As Nature teaches the spectators to assume the circumstances of the person principally concerned, so she teaches this last in some measure to assume those of spectators' (Adam Smith, *Moral Sentiments*, p. 29). The self looks at itself from a spectator's point of view, and estimates itself accordingly. Thus it may have an added misery: social slights, feeling of poverty, looked at from a spectator's point of view and reflected by the self on itself, enhance the feeling of misery till it may become unbearable. On the other hand, a sense of social appreciation, a looking at one's self through the eyes of others, may enhance pleasure till it becomes ecstasy. Pride, vanity, ambition, and other Ego feelings of the same kind need the reference to self for their justification, and yet without the social reference the reference to self would lose its value.

Without the reference to self, values would cease to have a meaning, and pleasure would be merely of the passive sort. As, however, pleasure and pain, the meaning of life and the worth of life, can exist for each person only in his own consciousness, and without the conscious possession of these in his own life a man can never enter into sympathy with others, so a full, broad, intense Ego life is the condition of a full, deep, and wide social life. The chief problem of our life is thus not, as Comte said, 'to subordinate egoism to altruism,' but to develop Egoism to its proper proportions, in the belief that the higher and fuller a personality is, the more he has to contribute to the happiness of mankind. Selfishness does not consist in a man valuing himself according to his intrinsic and social worth, but in ignoring or denying the rights, claims, and worth of others: 'Thou shalt love thy neighbour as thyself.'

Egoistic feelings would lose their value without the social reference. So also the social feelings would lose their value were there not the reference to the self to give them value. There is no necessity for any lengthened reference to the abstract man who has figured so picturesquely in philosophical treatises from Hobbes downwards. Nor is he quite dead yet. This abstract man is a being endowed only with egoistic impulses. Self-preservation is for him the only law of life: his natural life is a state of war. How is such a being to be constrained to live in society? He may be made social in various ways: by a force from above or from without urging him, by means he does not know, to become social even when his reason compels him to think that selfishness is his highest interest. But usually the way to make a selfish being social is to endow him with a desire for approbation, to make him seek society to win approval, or to make him see that others are needful to him if he is to carry out his purposes; and a wise selfishness takes the form of benevolence. The attempt is very subtle and very penetrating, but it is a failure. Men never became social in that way. They are social from the beginning. All that can be said is that man is naturally selfish and naturally social, and the field for the exercise of the Ego feelings and of the social feelings is to be found in society alone.

Look at the individual from any point of view we please, everywhere we meet the social reference. Begotten by social union, born within society, he grows up within society, and is equipped by society for the battle of life. The achievements of society form his inheritance. Social customs are learned by him before he is aware of the process; social beliefs become his beliefs, thought becomes possible because it is embodied in the action, in the language, in the converse of the people with whom the individual lives. In this social sphere the individual lives, here he learns, makes himself heir to the treasures of learning, science, and knowledge, without which individual life would be only rudimentary. A human being in isolation would not be a human being at all.

Jeremy Bentham in the beginning of his *Principles of Morals and Legislation* says, 'A community is a fictitious body, composed of individual persons who are considered as constituting, as it were, its members.' It is a characteristic definition. Nor does that phase of thought appear in Jeremy Bentham alone. It is characteristic of the century in which it appeared. No body of any kind is constituted by the members alone. Any unity

has to be looked at from two points of view, and is never the sum of its parts. Regard must be had to the wholeness of the whole as well as to the parts. But society or a people is not a fictitious body, of which individuals are the fictitious parts or members; a people is a unity, an organic whole, and the individuals are so in relation to the whole.

'Just as the organs are produced by the whole and exist in it alone, so the individuals are produced by the people, and live and move in it alone; they function as its organs, they speak its language, they think its thoughts, they are interested in its welfare, they desire its life; they propagate and rear offspring and so perpetuate the race. And this objective relation of the individual to the whole manifests itself subjectively in his volitional and emotional life. Everywhere the circles of the ego and the non-ego intersect. The fact is universally accepted; only in moral philosophy we still find persons who do not see it, but insist on regarding the antithesis between altruism and egoism as an absolute one. I should like to show how little the facts agree with this view; in our actual life and practice there is no such isolation of individuals; the motives and effects of action are constantly intersecting the boundaries of egoism and altruism' (Paulsen, *A System of Ethics* [Eng. tr.], pp. 381–3.

Professor Paulsen proceeds to show that every duty towards individual life can be construed as a duty towards others as well. Care of one's own health might appear to be purely selfish, yet on reflexion it appears that the possession of good health may add to the happiness of a community.

'The ill-humour which results from an improper mode of life, or a neglect of self, is not confined to the guilty person; he is cross and irritable, and his moodiness and moroseness are a source of annoyance to the whole household. In case of serious illness the family becomes uneasy and anxious, and perhaps suffers materially from a diminished income and an increase of expenditure. When the patient is an official, his colleagues are made to suffer; they have to do his work; if he has absolutely ruined his health, he becomes a pensioner, and so increases the public burdens' (*ib.* pp. 383–4).

It is not possible really to separate self-interest from the interest of society. The worths, values, and interests of the individual are inseparably bound up with those of society. It is society that gives life, warmth, and colour to the Ego feelings, and the life, warmth, and colour of the Ego feelings, their intensity and their sweetness, are needed for the vitalization of society. The analogy of the organism holds good with regard to the social organism. But the idea of a social organism as a systematic whole, indeed the idea of a world as a systematic whole, can exist only for a being who is conscious of the unity of his individual life as connected with an organism which is a unity. But to pursue this further would open up issues wider than fall to be discussed here. The observation has been made to show that from the metaphysical point of view, as well as from the psychological and the ethical, the individual cannot be severed from the whole, and that the antithesis between Egoism and Altruism is both misleading and ultimately unthinkable.

It is not our purpose to name, far less to discuss, the various forms of Hedonism. It may be observed, however, that from Butler's time an enlightened self-regard is recognized to be a legitimate form of moral sentiment; while a regard for the welfare of others enters also into all forms of virtue. A rational regard for the welfare of others expresses itself in every one of what by way of eminence are called the cardinal virtues;—in courage, temperance, and constancy; in wisdom, justice, and truth; in kindness and benevolence. But, again, these virtues are concrete facts which have their being in some individual person. They are not something in the air, or something that has merely an abstract existence. And then, just as they belong to some individual, so they flourish only as he finds himself rooted in society. The higher features of human character, which make these virtues possible in the individual, have emerged in human history through the social effort of man. The higher faculties of man, and the virtues evolved with them and through them, grew in him as a social being,—a being who must live with his kind, who works with his mates, who can come to himself and to his fruition only in fellowship with his fellow-men.

The antithesis may be put, finally, in another way. The individual seeks his own good, his own happiness, his own satisfaction. But what does he mean by these terms? A desire for good is not a desire for mere pleasant feeling. It is a desire for self-satisfaction, for a better, truer, more real self; for a self which shall approach nearer to that ideal of a self which has dawned upon his intelligence. A wider thought and a truer thought, a deeper and a purer feeling; a power of activity which shall bring his ideal to reality—these express some aspect of the good a man desires. But it is only through the social bond and by means of social effort that the making of such a self is possible. It is not too much to say that it is only through social effort and through social life that man becomes a living soul.

It is in virtue of the social solidarity of mankind that the individual man enters into the inheritance of all the past. It is through this social bond and effort that he has subdued the earth and made it his servant. It is in his social life that man has come to the conclusion that he is the crown and sum of things, that the cosmos has toiled and worked upwards towards him, and in him has become conscious of itself and its meaning. In association man feels that he can make physical powers fetch and carry for him, make the winds his messengers, and harness the lightning to his carriage. It is not necessary to enumerate the social achievements of man. But there is not one of them which has not originated in the thought of a solitary mind, and then become the common possession of many minds. Yet the thought would never have come to the solitary thinker unless he had previously been prepared to think through his social environment, and by the great tradition of the ages. It is on this fact that we lay stress as the reconciliation of Egoism and Altruism, for it is the refutation of the idea which persists in so many quarters that man is inherently selfish, and has regard only to his self-interest, that he is naturally egoistic, and altruistic only in a secondary and fictitious fashion. Even Reason has been so spoken of, and the Synthetic Reason has been described as a selfish, analytic, destructive faculty, a weapon cunningly devised to enable its possessor to survive in the struggle for existence.

JAMES IVERACH.

AMANA SOCIETY.—The Amana Society, or Community of True Inspiration, is an organized community of about 1800 German people who live in seven villages on the banks of the Iowa River in Iowa County, Iowa. This unique society owns 26,000 acres of land, which, together with personal property, is held in common. Indeed, the Amana Society is thoroughly communistic both in spirit and in organization. And yet it is in no sense a product of communistic philosophy. Primarily and fundamentally the Community of True Inspiration is a Church, organized for religious purposes, to work out the salvation of souls through the love of God (Constitution of the Society, Art. I.). The communism of Amana, therefore, is neither a political tenet, nor an economic theory, nor yet a social panacea, but simply a means of

serving God 'in the inward and outward bond of union according to His laws and His requirements' (*ib.* Art. I.).

1. History.—As a Church, or distinct religious sect, the Community of True Inspiration traces its origin back to the year 1714 and to the writings of Eberhard Ludwig Gruber and Johann Friedrich Rock, who are regarded as the founders or 'Fathers' of the 'New Spiritual Economy' of True Inspiration. Both Gruber and Rock were members of the Lutheran Church who had become interested in the teachings of the early Mystics and Pietists. Having studied the philosophy of Spener, they endeavoured to improve upon and formulate especially the doctrines of that little band of Pietists whose followers during the last quarter of the 17th cent. were called 'Inspirationists,' and who are said to have 'prophesied like the prophets of old' (cf. Perkins and Wick, *Hist. of the Amana Soc.*).

The unique fundamental doctrine of the founders of the 'New Spiritual Economy' was *present-day inspiration*. To be sure, Gruber and Rock believed profoundly in the inspiration of the Bible; but they argued:

'Does not the same God live to-day? And is it not reasonable to believe that He will inspire His followers now as then? There is no reason to believe that God has in any way changed His methods of communication; and as He revealed hidden things through visions, dreams, and by revelations in olden times, He will lead His people to-day by the words of His Inspiration if they but listen to His voice' (Gruber, *Characteristics of the Divine Origin of True Inspiration*).

Divine inspiration did not come, however, to all members of the Community, but only through those who were especially endowed by the Lord with the 'miraculous gift of inspiration.' These especially endowed individuals, called *Werkzeuge* ('Instruments'), were simply passive agencies through whom the Lord testified and spoke to His children (Gruber, *Divine Nature of Inspiration*).

The nature of the 'new word and testimony,' as revealed through the *Werkzeuge*, and its relation to the earlier revelations of the Heb. prophets are clearly set forth by Gruber in these words: 'Its truths are in common with the written word of the prophets and the apostles. . . . It aspires for no preference; on the contrary, it gives the preference to the word of the witnesses first chosen [prophets and apostles] just after the likeness of two sons or brothers, in which case the oldest son as the first-born has the preference before the younger son who was born after him, though they are both equal and children begotten of one and the same father.' Again he says: 'Both the old and the new revelation, of which we here speak, are of divine origin and the testimonies of one and the same Spirit of God and of Jesus Christ, just as the sons mentioned above are equally children of one and the same father though there exists through the natural birth a slight difference between them' (Gruber, *Characteristics of the Divine Origin of True Inspiration*).

Not all, however, who aspired to prophecy and felt called upon to testify were to be accorded the privilege. For there were false as well as true spirits. Gruber, who wrote much concerning true and false inspiration, records in his *Autobiography* his own sensations in detecting the presence of a false spirit:

'This strange thing happened. If perchance a false spirit was among them [the congregation] and wished to assail me in disguise, or if an insincere member wished to distinguish himself at our meeting in prayer or in some other manner, then I was befallen by an extraordinary shaking of the head and shivering of the mouth; and it has been proven a hundred times that such was not without significance, but indeed a true warning, whatever he who is unskilled and inexperienced in these matters may deem of it according to his academic precepts and literal conclusions of reasons' ('Articles and Narrations of the Work of the Lord' given in *Inspirations-Historie*, vol. ii. p. 33).

That the appearance of false spirits was not uncommon is evidenced by the many instances, given in the *Year Books*, or *Testimonies of the Spirit of the Lord*, where aspiring *Werkzeuge* are condemned, and by the fact that Gruber's son was 'especially employed [by the Lord] to detect false spirits wherever they made themselves conspicuous, and to admonish them with earnestness to true repentance and change of heart' (*IH* * ii. 41).

* *IH* will be used in this art. for *Inspirations-Historie*.

Gruber and Rock, who had 'the spirit and gift of revelation and inspiration . . . went about preaching and testifying as they were directed by the Lord.' They travelled extensively through Germany, Switzerland, Holland, and other European countries, establishing small congregations of followers. Those desiring to share in the 'New Spiritual Economy' and enjoy the blessings of 'True Inspiration' were asked such questions as—

(1) 'Whether he (or she) intends to behave as a true member of the Community of Jesus Christ towards the members, and also in respect to the public Prayer Meetings and the arrangement of the same? (2) Whether he (or she) be ready to suffer all inward and external pain, and to risk cheerfully through the mercy of God everything, even body and soul? (3) Whether he (or she) had obtained Divine conviction with regard to the work and word of inspiration, and whether he for his purification and sanctification would submit to the same? (4) Whether he (or she) was in a state of reconciliation, or in some disagreement with some brother or sister; also if he had anything to say against any one, or if any one had anything to say against him' (*IH* i. 50).

Although the number of congregations established during the time of Rock and Gruber was not large, considerable religious fervour was aroused by their teachings. Moreover, their attacks upon 'the utter hollowness and formality' of the established Church, and their bold denunciation of the 'godless and immoral lives' of many of the clergy of that day, aroused the authorities of the orthodox Church to active opposition. They also encountered the opposition of the political authorities, because they refused to perform military service or to take the required oath of allegiance. They refused to 'serve the State as soldiers, because a Christian cannot murder his enemy, much less his friend.' On the other hand, they refused to take the legal oath as a result of their literal adherence to the commands given in Mt $5^{34.\ 37}$: 'But I say unto you, Swear not at all'; and 'Let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil.'

Concerning the arrest of himself and his companions, because they would not upon one occasion take the prescribed oath, the younger Gruber, writing in 1717, says: 'Before the city gate the executioner untied us in the presence of the sheriff. The latter held in his hand a parchment with the oath written upon it and bade us to raise three fingers and to repeat it. We replied that we should not swear. He urged us forcibly with many threats. The brother (H. S. Gleim) repeated again that we should not swear; we should give a promise with hand-shake and our word should be as good as an oath, yet he would leave to me the freedom to do as I pleased. I affirmed then likewise I should not swear, since our Saviour had forbidden it' (*IH* ii. 124).

Furthermore, both the Church and the Government were irritated by the refusal of the Inspirationists to send their children to the schools which were conducted by the Lutheran clergy. Opposition soon grew into persecution and prosecution. And so the believers in 'True Inspiration' were fined, pilloried, flogged, imprisoned, and stripped of their possessions. In Zürich, Switzerland, 'their literature was by order of the city council burned in public by the executioner' (*IH* i. 65). Naturally, as their persecution became more severe, the congregations of Inspirationists sought refuge in Hesse—one of the most liberal and tolerant of the German states of the 18th century.

The *Tagebuch* for the year 1728 records that on Dec. 11, 'after a blessed period of two times seven years spent in the service of this Brotherhood and Community into which the Lord through His holy Inspiration had led him, the time came to pass when it pleased the Lord to recall His faithful worker and servant E. L. Gruber from this life and to transplant him into a blissful eternity.' Twenty-one years later, on March 2, occurred the death of J. F. Rock, which is recorded in this characteristic fashion: 'The time of his pilgrimage on earth was 10 times 7, or 70 years, 3 months and 3 days. In the year 1707, when he was 4 times 7 years old, he emigrated with Brother E. L. Gruber from

his native country. In the year 1714, when he counted 5 times 7 years, there came to him the gift of the Spirit and of Prophecy, and he made until 1742, in 4 times 7 years, over 100 lesser and great journeys in this service. In the year 1728, when he was 7 times 7 years old, he lost his faithful brother, E. L. Gruber. And in 1742, when he counted 9 times 7, or 63 years, he ceased to travel into distant countries and spent the remaining 7 years (of his life) largely at home' (*Testimonies of the Spirit of the Lord*, 1749).

With the death of Rock in 1749 the congregations of the 'New Spiritual Economy' began to decline. Left without a *Werkzeug*, the members relied chiefly upon the writings and testimonies of Rock and Gruber for guidance and spiritual consolation.

'At the beginning of the 19th cent. but few of the once large congregations remained; even these few had fallen back into the ways of the common world, more or less, preferring the easy-going way to the trials and tribulations suffered by their fathers' (Noe, *Brief Hist. of the Amana Soc. or Community of True Inspiration*, Amana, Iowa, 1900, p. 6).

The decline continued until 1817, when it is recorded that 'a new and greater period dawned for the Community' (*IH* i. 429), and that 'Michael Kraussert was the first *Werkzeug* which the Lord employed for the now commencing revival.'

The 'Revival,' 'Awakening,' or 'Reawakening' of 1817 began with the testimonies of Kraussert, whose first inspired utterance was given to the congregation at Ronneburg on September 11, 1817, as a summons in these words: 'Oh Ronneburg, Ronneburg, where are thy former champions, the old defenders of faith? They no longer are at this present day, and effeminates dwell in the citadel. Well, then! Do ye not desire to become strong? The eternal power is offered to you' (*Testimonies of the Spirit of the Lord*, 1817).

Michael Kraussert was a journeyman tailor of Strassburg, who had been converted to the faith of the Inspirationists through the writings and testimonies of Rock. With great zeal and much religious fervour he seems to have played an important part in the 'Reawakening.' And yet it is recorded that he lacked courage in the face of persecution; that 'at the arrest and subsequent examination at Bergzabern he showed fear of men and resulting weakness'; that in the presence of hostile elders he 'became timid and undecided, and ran, so to speak, before he was chased'; and that 'through such fear of men and reluctance for suffering he lost his inner firmness in the mercy of the Lord, went gradually astray from the Divine guidance, and soon fell back into the world' (*IH* iii. 34, 429).

After the 'fall' of Kraussert (whose connexion with the Inspirationists was therewith severed), the spiritual affairs of the Community were directed by the *Werkzeuge* Christian Metz and Barbara Heinemann, who came to be regarded as the founders and leaders of what is sometimes called in the records the 'New Community.'

When Michael Kraussert, Christian Metz, and Barbara Heinemann appeared as *Werkzeuge* at the time of the 'Reawakening,' a century had elapsed since Gruber and Rock preached the doctrines of the 'New Spiritual Economy.' But the persecution of independents in religious thought had not ceased; and so these new prophets were repeatedly arrested, and their followers 'were attacked and insulted on the streets and elsewhere' (*IH* iii. 70).

As a century before, so now the growing congregations of Inspirationists sought refuge in Hesse, where on October 31, 1831, it is recorded, 'the Lord sent a message to the Grand Duke of Hesse-Darmstadt as a promise of grace and blessing because he had given protection to the Community in his country' (*IH* iii. 96). It was at this time that the far-sighted Christian Metz conceived the idea of leasing some large estate in common which should serve as a refuge for the faithful, where each could be given 'an opportunity to earn his living according to his calling or inclination.'

And so, in the year 1826, 'it came about through the mediation of the Landrath of Büdingen that a part of the castle at Marienborn was given in rent by the noble family of Meerholz, which was very convenient for the Community, since it lay near Ronneburg,' the home of the principal elders (*IH* iii. 68).

In all, four estates were rented, and to the administration of these four estates, located within a radius of a few miles and placed under one common management, are traced the beginnings of the communistic life of the Inspirationists. Communism, however, formed no part of their religious doctrines. It was simply a natural development out of the conditions under which they were forced to live in their efforts to maintain the integrity of their religion. Under a common roof they hoped to live simply and peacefully the true Christian life. And so rich and poor, educated and uneducated, professional man, merchant, manufacturer, artizan, farmer, and labourer met together as a religious brotherhood to worship and plan the labours of the day.

But independence and prosperity were not yet fully won. The day of complete religious and economic freedom for which they hoped had not come. Cherished liberties relative to military service, legal oaths, and separate schools were still denied. Rents became exorbitant, while excessive heat and drought destroyed the harvests.

It was in the midst of their depression that 'the Lord revealed through His instrument, Christian Metz, that He would lead them out of this land of adversity to one where they and their children could live in peace and liberty' (Noe, *Brief History*, p. 15). Indeed, this 'hidden prophecy,' uttered by Christian Metz on May 20, 1826, was now recalled: 'I proceed in mysterious ways, saith thy God, and my foot is seldom seen openly. I found my dwelling in the depths, and my path leadeth through great waters. I prepare for me a place in the wilderness, and establish for me a dwelling where there was none' (*Testimonies of the Spirit of the Lord*, 1826).* This was interpreted as pointing the way to America. And so there was much discussion concerning emigration to the wildernesses of the New World. Finally, there came through the *Werkzeug*, Christian Metz, these words from the Lord: 'Your goal and your way shall lead towards the west, to the land which still is open to you and your faith. I am with you, and shall lead you over the sea. Hold Me and call upon Me through your prayers when storms or temptations arise. . . . Four may then prepare themselves' (*TSL*, July 26, 1842). Thereupon Christian Metz and three others were named through inspiration to visit America; and they were given 'full power to act for all the members, and to purchase land where they deemed best' (Noe, *Brief History*, p. 15).

After a voyage of many hardships and privations, the committee of Inspirationists reached New York City on October 26, 1842. After three months of careful deliberation they purchased a tract of five thousand acres of the Seneca Indian Reservation lands in Erie County, New York. Within four months of the purchase the first village of the Community was laid out and peopled. They called it Ebenezer.

Other villages were soon founded, and under the name of 'Ebenezer Society' the Community was

* Hereafter referred to as *TSL*.

formally organized with a written constitution. It is recorded that during 'the planting and building of the new home' the Lord 'gave precepts, directions, and explanations concerning the external and internal affairs of that time' through His 'holy word and testimony' (*IH* iii. 329).

With the transplanting of the Community of True Inspiration to America there came a serious consideration of communism as a plan for organizing and conducting the economic life of the Society. To live simply as a Christian congregation, or church, was, of course, the fundamental aim of the Community. But they had found the practice of communism conducive to that end. Besides, 'the Lord had gradually announced more and more clearly that it was His intention and pleasure, nay His most holy will, that everything should be and remain in common' (*IH* iii. 367).

It was in the midst of the discussion over communism that 'a very important revelation occurred again at Mittel Ebenezer on October 23, 1850, in which the Lord expressed His grief and displeasure over the discontent of many members with regard to common possession' (*TSL*, 1850). And on March 19, 1852, the 'Lord testified most emphatically and earnestly to put to shame those who would not believe and trust in the Lord and the Brethren. He announced that it was not His holy will, and never should be, that communism should be abolished; and He pronounced His curse upon all those who would attempt it, but gave a most gracious promise to those who would faithfully preserve it.' This testimony, which was given through Christian Metz, reads in part as follows: 'As truly as I live, saith the Lord, it is at no time my will to dissolve the ties of the Community in such manner, or to suffer its dissolution, neither through artful devices or skill and diplomacy, nor cunning or power of men. Nay, the faith which hath love and the bond of peace for its essence and foundation shall continue to exist. And there shall come eternal disgrace, shame, and disfavour upon those who cause it; their children shall suffer want and be without blessing in time and eternity. Their material possessions shall melt away, and the divine treasure they have disavowed; therefore the Lord is against them' (*TSL*, 1852, No. 12). And thereupon the erring Brethren 'did repent concerning it,' and signed the amendment to the Constitution providing for the adoption of absolute communism. This amendment, moreover, was incorporated in the new constitution adopted in the State of Iowa, and communism has ever since been one of the fundamental principles of the Community.

Thus it is evident that the object of the Community of True Inspiration is the worship of God in freedom according to their peculiar faith. Communism was adopted as one of the means to that end, but not in accordance with any understanding on the part of the Inspirationists of the social theories of Jesus. It has solved the problem of furnishing remunerative labour to the members, and has given them leisure 'to think upon the things that are of the Lord.'

Although more than eight hundred members had come from Germany to Ebenezer, many had remained in the old home. Those who came were largely of the peasant class. But they were men and women of character who were possessed of the enthusiasm born of moral earnestness. In their new home they enjoyed spiritual freedom, and were rewarded with a large measure of material prosperity.

As time went on, however, certain undesirable features of the location of their villages became more and more evident. In the first place, they suffered no little molestation from the Seneca Indians, who were tardy in leaving the Reservation. Then the rapid growth of the city of Buffalo (only five miles distant) caused such an advance in the price of real estate that the purchase of additional land to accommodate the growing Community was out of the question. And, finally, it became evident that the young people of the Community were too near the worldly influence of Buffalo to persevere in the injunction of Gruber, who said: 'Have no intercourse with worldly minded men, that ye be not tempted and be led astray.'

And so a committee was directed to go to the new State of Iowa, and there inspect the Government lands which were for sale. Out of one of the garden spots of Iowa they selected and purchased eighteen thousand acres of contiguous land.

A better selection for the new home could scarcely have been made. Through it meandered the beautiful Iowa River, bordered with the black soil of its fertile valley. On one side of the river the bluffs and uplands were covered with timber for fuel and building. Quarries there were of sandstone and limestone, while the clay of the hills was unexcelled for the making of brick. On the other side of the river stretched the rolling prairie land. To this splendid new domain, all ready for the plough and axe, the Inspirationists brought enthusiasm, industry, moral earnestness, and religious zeal.

The first village on the Iowa purchase was laid out during the summer of 1855. 'The time had now come,' writes Gottlieb Scheuner in his *IH*, 'that the new settlement in Iowa was to receive a name.' When the Community emigrated from Germany and settled near Buffalo in the State of New York, the Lord called that place Ebenezer, that is, 'Hitherto hath the Lord helped us.' Now He again led them out from there to a new place, which, as the work proceeded, was to be called 'Bleibtreu.' This had been laid into the heart of the *Werkzeug*, Christian Metz, who later poured it forth in a song beginning thus:

'*Bleibtreu soll der Name sein*
Dort in Iowa der Gemein.'

Since, however, it was difficult to express this word or name in English, it was proposed instead to use the Biblical name 'Amana,' which signifies *glaub' treu* ('believe faithfully') (cf. Song of Sol. 4^8). To this, it is recorded, the Lord gave His approval in a song on September 23, 1855. Henceforth the new home of the Community was known as Amana (*TSL*, 1855).

The removal from the old home to the new, from Ebenezer to Amana, covered a period of ten years. In addition to the first village, which had been given the name Amana, five additional villages were laid out by the year 1862—West Amana, South Amana, High Amana, East Amana, and Middle Amana. It was at this time that the Society, in order to secure railroad facilities, purchased the small village of Homestead. Twelve hundred members had come from Ebenezer; and by the time the sale of the Ebenezer lands had been completed, the Society's territory in Iowa consisted of twenty-six thousand acres.

In the year 1859 the Community was incorporated in accordance with the Laws of the State of Iowa under the name of 'The Amana Society.' The Constitution, which was also revised, came into force on the first day of January, 1860. This instrument is not a 'Declaration of Mental Independence,' nor a scheme for a 'One World-wide Socialistic Fraternal Brotherhood,' but a very simple, business-like document of ten articles.

On July 27, 1867, six years after the establishment of the last of the seven Iowa villages, and two years after the completion of the Ebenezer sale and the removal of the last detail of the Community to the new home in the West, Christian Metz, the *so hoch begabte und begnadigte* brother, 'through whom the weightiest and greatest things were wrought and accomplished,' was, after 'fifty years of effort and labour, recalled from the field of his endeavour' at the age of 72 years, 6 months, and 24 days (*IH* iii. 878).

Half a century—the most eventful years of the Community's inspiring history—bridges the interval between the 'bestowal of God's mercy' on Michael Kraussert at the time of the 'Reawakening' and the 'blessed departure and release' of Christian Metz in 1867. During that period the Community was never without a *Werkzeug*. 'Great undertakings and changes occurred,' and material progress unparalleled in communistic history was theirs.

After the death of Christian Metz 'the work of grace' was carried on by Barbara Heinemann, now Landmann (who lost her gift at the time of her marriage in 1823, but regained it in 1849 and retained it to the time of her death in 1883 at the age of ninety), and by the elders in whom the 'Lord manifested Himself so strongly and powerfully during the last illness of Brother Christian Metz.' Since the death of Barbara Landmann no *Werkzeug* has been called in the Community; but, as in the

period following the death of Rock, 'well founded Brethren endowed with divine mercy, who are still living witnesses of the great blessing of Inspiration, carry on the work of the Lord in the Community.' How long the coming generations will 'fill the widening gap' with no *Werkzeug* for their spiritual guidance, and with the breaking of the link in the 'passing into eternity of these faithful witnesses and Elders,' which binds them to the past with its inspiring history, 'is ordained only in the hidden counsel of God.'

2. Religion.—Although communism may appear to the casual observer to be the most characteristic feature of the Amana Society, a careful study of the history and spirit of the Inspirationists reveals the fact that the real Amana is Amana the Church — Amana the Community of True Inspiration. Religion has always been the dominating factor in the life of the Community.

The basal doctrine of the Amana Church is *present-day inspiration and revelation.* That is, to use the words of the *Werkzeug* Eberhard Ludwig Gruber, 'God is ever present in the world, and He will lead His people to-day as in olden times by the words of His Inspiration if they but listen to His voice.' Indeed, it is the belief of these people that, ever since the beginning of the 'New Spiritual Economy,' the spiritual and temporal affairs of the Community have been immediately under Divine direction according to the 'decisive word of the Lord' as revealed through His specially endowed instruments the *Werkzeuge.* And so it appears throughout their history that in all 'important undertakings and changes, nay in the whole external and internal leadership of the Community, the *Werkzeug* had to bear the bulk of the burden and care, since the Lord ordained and directed everything through him directly.' Thus Divine inspiration and revelation came through the *Werkzeuge* (*IH* iii. 878).

Perhaps the best exposition of the nature of Inspiration, as understood by the Inspirationists, is found in Eberhard Ludwig Gruber's *Divine Nature of Inspiration*, where, in reply to the charge that he was an 'instrument of the Devil,' he sets forth his own 'convictions' as follows:

'Because I have not light-headedly and without test and experience come to the approval of these things.

'Because the testimonies of the inspired persons, although being at first adverse to me, have not in the least troubled me, nor aroused and stirred my emotions, as certainly would have happened to some extent if they had originated from a wicked and dark spirit.

'Because I have not been hindered thereby in the usual quiet retrospective prayer granted to me by the mercy of God.

'Because during such a deep and earnest self-examination all scruples and objections to this matter were, without effort on my part, so completely removed and dispersed that not one remained which irritated me or which I could not comprehend.

'Because such prayer, which was absolutely without prejudice in the matter, has again won for me the precious gift of tears, which had become almost unknown to me.

'Because the Spirit of Inspiration penetrated into and laid bare those things which occurred in the most hidden corners of my heart, so that no creature could know them, and because it (the Spirit of Inspiration) also approved and commended those ways of mercy and sanctification in which the Lord had hitherto led me in affairs external and internal.

'Because the promises pronounced in regard to myself have not dazzled me or made me vain.

'Because at the same time the extinguished love was again renewed in the hearts of many.

'Because the assemblies of prayer recommended by the Spirit, and up to that time vainly striven for, were at once established to our joy and bliss, and without opposition of the then well-disposed individuals.

'Because I was led into the severest struggle for purification, instead of expecting at once the fulfilment of the great promises given me.

'Because this struggle searched my innermost self and has deeply impressed upon me the most vivid lessons of complete denial and negation of myself.

'Because in this matter also all external hindrances were removed, and I indeed was made willing and confident to throw them behind me, and to take upon me all the disgrace and suffering of this service, often confirming my faith under tests and with proofs not mentioned here, but known to God and also to others.

'Because the inner word was laid open and led forth from the depths of my heart, whither no divine creature, much less a satanic spirit, could reach, deeper and more abundantly than I ever possessed it before.

'Because those inner emotions known to me from my youth, but now become stronger and more numerous, have ever either held me back from some evil deed, or encouraged and urged me to some good act.

'Because they (inner emotions) often must with certainty reveal to me the presence of hidden false spirits rising against me or others.

'Because in all this I do not found my conclusions on the inspiration alone, as may be the case with others, but upon the undeniable work of God in my soul, which has gone on there for long years out of sheer mercy, and which under this new economy and revival is becoming ever more powerful.

'Because my son, together with many others, has been brought into a state of deepest repentance and wholesome anxiety of mind through the powerful Testimony of the Spirit in the inspired persons.

'Because the Word of the Lord was unsealed to him (the son) by the very first emotions (of the inspired one).

'Because the Spirit of Inspiration promptly appeared, as when it had been foretold that a certain married woman (*die Melchiorin*) would testify on the day mentioned in Bergheim.

'Because my son came to testify (make utterance) with great fear and trembling, nay even through the severest struggle, and surely not through his wish and vain desire.

'Because he was enabled and compelled in his first testimony, as a foreshadowing of the future, to denounce with great certainty an impure spirit, to the sincere humiliation of the latter.

'Because he (the son) was led in these ways of Inspiration, contrary to inclination and habit of his youth, to deep introspection and seclusion, and was also endowed with many extraordinary gifts of mercy.

'Because he made, far beyond his natural abilities, such pure, clear, and penetrating statements (utterances) that many well learned in divine and natural things were led to wonder.'

According to the belief of the Community of True Inspiration, the word and will of the Lord are communicated to the faithful through the specially endowed *Werkzeuge*, whose inspired utterances are in fact the *Bezeugungen*, that is, the Testimonies of the Lord. These are either written or oral. The gift of oral prophecy or testimony (*Aussprache*), being regarded as the highest form of inspiration, was not enjoyed by all the *Werkzeuge.* Indeed, the 'miraculous gift of *Aussprache*' was sometimes preceded by the humbler gift of *Einsprache*, when the *Werkzeug*, unable to give voice to his inspiration, committed his testimonies to writing. Thus the 'specially endowed' *Werkzeug*, Christian Metz, seems to have entered upon the 'service of the Lord' with simply the gift of *Einsprache*, which was later followed by the gift of *Aussprache*, and still later by the combined gifts of *Einsprache* and *Aussprache.* Sometimes the *Werkzeuge* were deprived of the gracious gifts of *Einsprache* and *Aussprache*, which were restored only after a period of deepest humility.

The inspired testimonies of the *Werkzeuge*, as recorded in the *Year Books*, or *Testimonies of the Spirit of the Lord*, vary in length from a few sentences to many pages. Some were uttered in rhyme; and there are instances where a testimony is given through two *Werkzeuge* speaking alternately. Under the date of Jan. 12, 1819, such a testimony was given by Michael Krauss ert and Barbara Heinemann (*TSL*, 1819). From the records it appears that testimonies were addressed sometimes to the whole congregation of the Community, and sometimes to individual members.

As to content, the Testimonies touch a great variety of subjects, from the routine affairs of daily existence to impassioned admonitions to live the holy life. Many contain promises of the love and mercy of the Lord. Others take the form of appeals of the 'God of Salvation' for more spiritual life. Some are warnings against *Lichtsinn*, pride, self-righteousness, and self-will; and especially are the *selbstständig* and *eigenmächtig* warned against the wrath of God. There are vigorous denunciations of the wicked, and there are threats of 'the hellish torture' and the 'gloomy abyss' for those who do not repent. But many more there are that teach and preach humility, obedience to the will of the Lord, self-negation, and repentance. Throughout, the testimonies suggest a wide familiarity with the language of the Bible, especially of the Old Testament.

The testimony of Christian Metz, given as a warning and admonition to Krauss ert, is typical of the utterances of the *Werkzeuge.* It runs thus:

'Thus speaketh the eternal God: I will give a word of testimony to my servant Krauss ert, who knoweth not now how to

begin, so bewildered he is. But listen, then. What hath prompted thee to act and deal thus according to thine own inclinations? Thou hast run before thou wast sent away, saith the almighty God of Love. Alas, how troubled is my spirit, that thou hast failed thus, and dost not want to be found again! Oh come back again and resign thyself in and to the faithful tie of brotherhood which I have established, and which I have again strengthened through thee. Thou runnest about thus, and art like a hireling who hath seen the wolf and hath abandoned to him his flock and deserted. Is this the true faithfulness of the shepherd? Do faithful servants act thus, when the wolf cometh that they run away and step not into the gap to ward off harm? . . . Canst thou, then, say that I have deserted thee a single time, when thou wast persecuted for holy causes alone? Have I not ever helped thee again and satisfied thee? . . . Hear, then, what the God of Eternal Love furthermore testifieth in regard to thee: Thou art, then, not as faithful in thine office and service as thou wast, and thou dost not sufficiently submit thyself in and to my will; thou hast become too self-willed, and thou dost not want to heed the others, whom, too, I have summoned, and through whom I instruct thee. Alas, I do not wish to make known and have recorded all that I have to record against thee, saith the mighty God. But, nevertheless, thou shalt never succeed in this manner if thou returnest not soon and quickly again in and to the training of my love, and dost not more carefully tend my flock than at present. Oh, I still love thee and see thee in thine erring state; return, then, and care more diligently for the souls whom I have called.

'Indeed I shall help and always have helped thee! Why, then, dost thou lose courage now and desert ere thou wast sent away? Hath it ever been heard of, that my witnesses whom I have called from time to time have not also thus believed that they knew no fear? And though the whole world should rise and appear in the field against them, and they themselves should be so weak that they could hardly stand on their feet, I will still be their God and their mighty protector, if they trust me in all things. Thus thou mayest see that I take no pleasure at all in thy present course of action.

'Alas, my soul is troubled that the wild beasts have broken in in such number. Wilt thou then, too, turn a hireling and scatter the sheep which I so miraculously have led together? saith the mighty God. Alas, return then again and lead them on as a faithful servant and shepherd; with the staff of the true love of the shepherd seize firmly upon faith; then I will assist thee again and give back the inward peace, love, and simplicity. Submit cheerfully to this punishment, for it is my will that it may become known thus that no mortal may boast of his importance' (*TSL*, 1819).

The giving or uttering of oral testimonies by the *Werkzeug* seems to have been accompanied by a more or less violent shaking of the body (*Bewegung*), which is described by one of the scribes in these words:

'With regard to the *Bewegungen*, the *Werkzeuge* were not alike; although they were all moved by one Spirit, there was considerable difference in regard to their gifts and commotions or convulsions. When they had to announce punishments and judgments of God, they all did it with great force, majestic gestures, strong motions, and with a true voice of thunder, especially if this occurred on the public streets or in churches. But when they had to speak of the love of God and the glory of the children of God, then their motions were gentle and the gestures pleasing; but all, and in all attitudes assumed by them, spoke with closed eyes. Often they had, some time previous to the *Bewegung*, a feeling of its approach. Again they were seized suddenly, often at their meals, by day and by night. At times they were aroused from their slumber, and had to testify frequently on the public highways, in fields and forests. In short, they were instruments in the hands of the Lord, and had no control over themselves.

'Violent as the commotions of the body often were, still they did no harm to the body; on the contrary, they served often as remedies if the *Werkzeuge* were ill, as on the occasion of the *Werkzeug* who on a journey lay seriously ill at Halle, Saxony, and was very weak in body, when he suddenly, to the terror of those present, was seized with violent convulsions and had to testify. In the utterance he received orders to start on the journey, at which all were surprised. After the testimony the *Werkzeug* arose and was well at the very moment, and on the following day they departed' (*IH*, ii. 295).

The belief in the genuineness and Divine nature of the *Bewegungen* is set forth in an account of an interesting interview which took place between the younger Gruber and his *Schreiber* and two Jewish Rabbis in a synagogue at Prague. The account, which is recorded under the date of Jan. 30, 1716, is a comparison of the manner of prophesying by the *Werkzeuge* of the Inspirationists and the old Hebrew prophets. It reads in part:

'Hereupon came two old grey-headed Rabbis and questioned us. This is the reason why I have recorded the happenings. They asked, in the first place, where we had our home. Answer: Near Frankfort. Question: Of what religion? Answer: We call ourselves Christians. They said they believed that, and that they knew full well that not all are Christians who call themselves Christians, just as, among themselves, not all were Jews who called themselves Jews; and that they asked only for the sake of the outer distinction. Thereupon I replied that one of us had been reared in the Reformed Church, the other among the Lutherans. They asked: Which of you is, then, the Prophet of the Lord? I pointed to Gruber. Now they questioned further: How does the word of the Lord come to this Prophet? Does it come through an external voice into the ears, or from within? Reply: Not from without, but from within, and, to be explicit, in the following manner: The *Werkzeug*, or the Prophet, feels at first in his innermost being a gentle and pleasant glow, which gradually becomes more intense and also fills the external body; thereupon results an inflation of the nose and a trembling of the whole body; at last, violent motions of the whole body, often attended by kicking with hands and feet and shaking of the head; and in the centre of this internal fire the word of the Lord is born; and the Prophet is enabled, through the *Bewegungen*, to pronounce the word of the Lord without fear or awe, such as it was born in him, at times syllable by syllable, at times word by word, now slowly, now rapidly, so that the *Werkzeug* has no choice of his own, but is used solely as a passive instrument in the hand of the Lord.

'Now you will be able to inform us,—we said to them—since you are better acquainted with the Hebrew language than we, whether the old Prophets among the people of Israel also announced the word of the Lord through such strange gestures of the body and through *Bewegungen*? They replied, in kindness and humility: The word of the Lord had not been made known to them otherwise than from within; and if you should have said that the word of the Lord came to the Prophets of the present day from without, we should have rejected it. Nor do the commotions of the body surprise us at all, since this has been a positive characteristic of the old Prophets; for he who spoke without these commotions of the body was not considered a true Prophet; wherefore we, in imitation of the Prophets of old, unceasingly move when we sing our psalms' (*IH*, ii.).

Ever since the time of the founders (Rock and Gruber) of the 'New Spiritual Economy' the testimonies of the *Werkzeuge* have been 'correctly written down from day to day and in weal or woe' by specially appointed scribes. Indeed, the *Werkzeug* was usually accompanied by a scribe, whose duty it was faithfully to record all inspired utterances. Moreover, the testimonies of the *Werkzeuge* have been printed by the Community in yearly volumes, entitled: 'Year Book of the Community of True Inspiration, or Testimonies of the Spirit of the Lord wherewith the Lord has Blessed and Endowed His Community Anew, Revealed and Uttered through,' etc., with the name of the *Werkzeug*, the year, and the number of the collection (*Sammlung*). In these volumes, which have been distributed only among the members of the Community, each testimony is numbered and briefly introduced as:

'No. 54 (20th Collection).—*Nieder Ebenezer*, October 12, 1845. Sunday afternoon, in the meeting of the Sisters, Brother Christian Metz fell into inspiration while an old testimony was being read, and he had to utter the following testimony from the Lord to the members of this meeting.' Or—

'No. 39 (53rd Collection).—*Heimstätte*, February 27, 1878. When on the afternoon of this day all the elders from the other settlements had met with the elders of this place and Sister Barbara Landmann, in order to begin the examination (*Unterredung*) still to be held in this Community, Sister Barbara Landmann fell at the very start into inspiration, and there occurred a decision through the word concerning Brother —— because of his attachment to the teachings of Swedenborg. Then followed an admonition to the other elders to work in harmony, and to promote the work of the Lord in the same spiritual love of souls.'

The Community of True Inspiration is without a creed, but professes the 'literal word of God' as found in the Bible and in the Testimonies of the *Werkzeuge*. As to its ethical and religious standards of conduct, these are, perhaps, best set forth in the 'One and Twenty Rules for the Examination of our Daily Lives,' by Eberhard Ludwig Gruber, published in 1715, and in the 'Twenty-four Rules for True Godliness,' revealed through Johann Adam Gruber in 1716, 'according to which the new communities were established and received into the gracious covenant of the Lord.' The 'Rules for the Examination of our Daily Lives' are as follows:

'I. To obey God without reasoning, and, through God, our superiors.

'II. To study quiet, or serenity, within and without.

'III. Within, to rule and master your thoughts.

'IV. Without, to avoid all unnecessary words, and still to study silence and quiet.

'V. To abandon self, with all its desires, knowledge, and power.

'VI. Do not criticize others, either for good or evil, either to judge or to imitate them; therefore contain yourself, remain at home, in the house and in your heart.

'VII. Do not disturb your serenity or peace of mind—hence neither desire nor grieve.

'VIII. Live in love and pity toward your neighbour, and indulge neither anger nor impatience in your spirit.

'IX. Be honest and sincere, and avoid all deceit and even secretiveness.

'X. Count every word, thought, and deed as done in the immediate presence of God, in sleeping or waking, eating, drinking, etc., and give Him at once an account of it, to see if all is done in His fear and love.

'XI. Be in all things sober, without levity or laughter, and without vain and idle words, deeds, or thoughts, much less heedless or idle.

'XII. Never think or speak of God without the deepest reverence, fear, and love, and therefore deal reverently with all spiritual things.

'XIII. Bear all inward and outward sufferings in silence, complaining only to God; and accept all from Him in deepest reverence and obedience.

'XIV. Notice carefully all that God permits to happen to you in your inward and outward life, in order that you may not fail to comprehend His will and to be led by it.

'XV. Have nothing to do with unholy, and particularly with needless, business affairs.

'XVI. Have no intercourse with worldly-minded men; never seek their society; speak little with them, and never without need; and then not without fear and trembling.

'XVII. Therefore, what you have to do with such men, do in haste; do not waste time in public places and worldly society, lest you be tempted and led away.

'XVIII. Fly from the society of women-kind as much as possible, as a very highly dangerous magnet and magical fire.

'XIX. Avoid obeisance and the fear of men; these are dangerous ways.

'XX. Dinners, weddings, feasts, avoid entirely; at the best there is sin.

'XXI. Constantly practise abstinence and temperance, so that you may be as wakeful after eating as before.'

The 'Twenty-four Rules for True Godliness' appear as a part of a lengthy testimony in which the Lord commands a renewal of the Covenant 'before my holy face and in the presence of my holy angels and of the members of your community,' which ceremony is still observed in the community by shaking hands with the presiding elder in open meeting. The concluding paragraph of the admonitory introduction and the 'Twenty-four Rules for True Godliness' are as follows:—

'Hear then what I say unto you. I, the Lord your God, am holy! and therefore ye, too, shall be and become a holy community, if I am to abide in your midst as ye desire. And therefore you shall henceforth resolve:

'I. To tear all crude and all subtle idols out of your hearts, that they may no longer befool you and mislead further to idolatry against your God, so that His name be not defamed and He go not suddenly forth, and avenge and save the glory of His name.

'II. I desire that ye shall have nought in common with the fruitless works of darkness; neither with the grave sins, and sinners, nor with the subtle within and without you. For what relationship and likeness hath My holy temple with the temples of pride, unchastity, ambition, and seeking for power, and of the useless, superfluous, condemning prattling, which stealeth time away from me? How could the light unite with the darkness? How can ye as children of the light unite with the ungodly, the liars and their works, the scoffers and blasphemers, who are nothing but darkness?

'III. Ye shall henceforth in your external life conduct yourselves so that those standing without find no longer cause for ill reports and for defaming My name. Rather suffer wrong if ye are abused. But above all flee from associations which hinder you from growing in godliness. All mockers and scoffers, and those who recommend you unto vanity, ye shall shun, and have no dealings with them.

'IV. Ye shall also perform your earthly task the longer and more according to the dictates of your conscience, and gladly desist from that which My Spirit showeth you to be sinful—not heeding your own loss, for I am the Lord, Who can and will care and provide for the needs of your body—that through this ye may not give cause for censure to the scoffer. The time which I still grant you here is very short; therefore, see to it well that My hand may bring forth and create a real harvest within you.

'V. Let, I warn you, be far from you all falseness, lying, and hypocrisy. For I say unto you that I will give the spirit of discernment and shall lay open such vices unto you through Him and the Spirit of Prophecy. For to what end shall clay and metal be together? Would it not make for me a useless vessel, which I could not use and should have to cast away with the refuse? Behold, my children, I have chosen you before many, many, many, and have promised to be unto you a fiery entrenchment against the defiance of your inner and outer enemies. Verily! Verily! I shall keep My promises, if ye only endeavour to fulfil what ye have promised and are promising.

'VI. Ye shall, therefore, none of you, strive for particular gifts, and envy the one or the other to whom I give, perchance, the gift of prayer or maybe of wisdom. For such the enemy of My glory seeketh ever to instil into you, especially into the passionate and fickle souls, to impart to you thereby a poison destructive to the soul. Ye shall, all, all, all of you be filled with My pure and holy Spirit when the time shall come to pass, if ye shall let yourselves be prepared in humility and patience according to my will. Then ye, too, shall speak with tongues different from the tongues ye now speak with. Then I shall be able to communicate with you most intimately.

'VII. Put aside henceforth all backbiting, and all malice of the heart toward each other, which ye have harboured hitherto! None of you are free from it. Behold I shall command the Spirit of My love, that He, as often as ye assemble for prayer in true simplicity of heart and in humility, be in your very midst with His influence and may flow through the channels of His love into the hearts he findeth empty.

'VIII. Ye must make yourselves willing for all outer and inner suffering. For Satan will not cease to show unto you his rancour through his servants and through his invisible power. It is also pleasing to Me and absolutely necessary for you that ye be tried through continuous sorrow, suffering, and the cross, and be made firm and precious in My crucible. And he who doth not dare—but none must he indolent himself in this—to exert all his physical and spiritual powers through My strength, let him depart, that he may not be later a blemishing spot upon My glory.

'IX. Do not in future lend your ears to suspicion and prejudice and, because of your lack of self-knowledge, find offence in each other, where there is none. But each one among you shall become a mirror for the other. Ye shall, moreover, also endeavour to stand every day and hour before the Lord as a unity, as a city or a light on a high mountain, which near and far shineth bright and pure.

'X. At the same time practise more and more outer and inner quiet. Seek ever, though it will be for the natural man which is inexperienced in this a hard death, to hide yourselves in humility in the inner and undermost chamber of your nothingness, that in this soil I may bring to a befitting growth My seed, which I have concealed therein.

'XI. Behold, My people! I make with you this day a covenant which I bid you to keep faithfully and sacredly. I will daily wander amongst you and visit your place of rest, that I may see how ye are disposed toward Me.

'XII. Guard yourselves! I, the Lord, warn you against indifference towards this covenant of grace and against negligence, indolence, and laziness, which thus far have been for the most part your rulers and have controlled your heart. I shall not depart from your side nor from your midst, but shall Myself, on the contrary, reveal Myself ever more powerful, holier, and more glorious through the light of My face in and among you, as long as ye will bring forth to meet Me the honest and sincere powers of your will. This shall be the tie with which ye can bind and hold Me. Behold I accept you this day as slaves of My will, as free-born of My kingdom, as possessors of My heart. Therefore let yourselves gladly and willingly be bound with the ties of My love, and the power of love shall never be wanting unto you.

'XIII. And ye who are the heads and fathers of households, hear what I say unto you: The Lord hath now chosen you as members of His community, with whom He desireth to associate and dwell day by day. See therefore to this, that ye prove truly heads and lights of your households, which, however, always stand under their faithful Head, your King. See that ye may bring your help-mates to true conduct and fear of God through your own way of living, which ye shall strive to make ever more faultless, more earnest, and manly.

'XIV. Your children, ye who have any, ye shall endeavour with all your power to sacrifice to Me and lead to Me. I shall give you in abundance, if ye only keep close to Me inwardly, wisdom, courage, understanding, bravery, and earnestness mingled with love, that ye yourselves may be able to live before them in the fear of God, and that your training may be blessed, that is, in those who wish to submit to My hand in and through Me. But those who scorn you and do not heed My voice, in and through you and otherwise, shall have their blood come upon their own heads. But ye shall never abandon hope, but wrestle for them with earnest prayer, struggle, and toil, which are the pangs of spiritual birth. But if ye neglect them through indifference, negligence, half-heartedness, and laziness, then every such soul shall verily be demanded of such a father.

'XV. Do now your part as I command you from without and frequently inwardly through My Spirit; do not desist, just as I never cease to work on you, My disobedient children; then ye shall abide in My grace and save your souls. And such women and children shall bear the fruits of their sins as do not wish to bow themselves under you and Me. I will henceforth no longer tolerate those grave offences among you and in your houses about which the world and the children of wrath and disbelief have so much to say; but I have commanded the Spirit of My living breath that He pass through all your houses and breathe upon every soul which doth not wantonly close itself to Him. The dew of blessing shall flow from the blessed head of your High Priest and Prince of Peace upon every male or head among you, and through them it shall flow upon and into your help-mates, and through both man and wife into the offspring and children, so that all your

seed shall be acceptable, pure, and holy before the Lord, since He Himself hath nourished and will nourish the same among you.

'XVI. And none of your grown-up children shall be permitted to attend your meetings who have not previously received from their parents a good testimony according to the truth, not appearance, and without self-deception, as also from the elders and leaders, especially from the one who with his fellow-workers hath to watch over the training of the children, which is to be carried on with earnestness and love, but without severity and harshness. This training is to be watched over with all earnestness, and should the parents be negligent and the case require it, then shall the latter be temporarily excluded [from the prayer meetings] for their humiliation.

'XVII. Prove yourselves as the people whom I have established for an eternal monument to Me, and whom I shall impress upon My heart as an eternal seal, so that the Spirit of My Love may dwell upon you and within you, and work according to His desire.

'XVIII. And this is the word which the Lord speaketh of these strangers who so often visit you and cause so much disturbance. None whom ye find to be a scoffer, hypocrite, mocker, sinner, derider, and unrepenting sinner, shall ye admit to your community and prayer meetings. Once for all they are to be excluded, that My refreshing dew and the shadow of My love be never prevented from manifesting themselves among you. But if some should come to you with honest intentions, who are not knowingly scoffers, hypocrites, and deriders, though it be one of those whom ye call of the world, if he to your knowledge doth not come with deceitful intentions, then ye may well admit him. I shall give you, My faithful servants and witnesses, especially the spirit of discrimination, and give you an exact feeling whether they are sincere and come with honest intentions or otherwise.

'XIX. If they then desire to visit you more frequently, ye shall first acquaint them with your rules, and ask them whether they will submit to these rules and to the test of the elders. And then ye shall read to them My laws and commands, which I give unto you; and if ye see that they are earnestly concerned about their souls, then ye shall gladly receive the weak, and become weak with them for a while, that is, ye shall, with them and for them, repent and make their repentance your own. But if a scoffer or mocker declare that he repenteth, him ye should admit only after considerable time and close scrutiny and examination of his conduct, if ye find the latter to be righteous. For Satan will not cease to try to launch at you his fatal arrows through such people. Be therefore on your guard, and watch lest the wolf come among you and scatter, or even devour, the sheep.

'XX. And those who pledge themselves with hand and mouth after the aforesaid manner to you shall make public profession before the community, and also make an open confession of their resolve, and I shall indeed show you if this latter cometh from their hearts; the conduct of those ye shall watch closely, whether they live according to their profession and promise or not, lest the dragon defile your garments.

'XXI. (To the elders.) Thus my elder and his fellow-workers shall frequently visit the members of the community and see how things are in their homes and how it standeth concerning their hearts. I shall give to you My servant (the *Werkzeug*) and to your brothers keen eyes, if ye only pray for it. And if ye find that one is in uncalled sadness, or liveth in negligence, impudence, licentiousness, or the like, then ye shall admonish him in love. If he repent, ye shall rejoice. But if after repeated admonition he doth not mend his ways, then ye shall put him to shame openly before the community; and if even this doth not help, then ye shall exclude him for a while. Yet I shall ever seek My sheep, those who are already excluded and those who in future, because of their own guilt, must be excluded, and I shall ever try to lead them in their nothingness into My pastura.

'XXII. And to all of you I still give this warning: let none of you reject brotherly admonition and punishment, lest secret pride grow like a poisonous thorn in such a member and torment and poison his whole heart.

'XXIII. Ye shall not form a habit of anything of the external exercises (forms of worship) and the duties commended to you; or I shall be compelled to forbid them again. On the contrary, your meetings shall make you ever more fervent, more earnest, more zealous, in the true simple love towards each other, fervent and united in Me, the true Prince of Peace.

'XXIV. This the members and brethren of the community shall sincerely and honestly pledge with hand and mouth to My elders, openly in the assembly, after they have carefully considered it, and it shall be kept sacred ever after' (*TSL*, 1819–1823).

From the records it appears that the members of the Community of True Inspiration are graded spiritually into three orders (*Abtheilungen*) according to the degree of their piety. Ordinarily, the spiritual rank of the individual is determined by age, since piety increases with years of 'sincere repentance and striving for salvation and deep humility of spirit.' Nevertheless, it remains for the Great Council of the Brethren at the yearly spiritual examination to judge of the spiritual condition of the members irrespective of age, and to 'take out of the middle order, here and there, some into the first, and out of the third into the second, not according to favour and prejudice, but according to their grace and conduct' (*The Supper of Love and Remembrance of the Suffering and Death of our Lord and Saviour Jesus Christ for 1855*). Moreover, reduction in spiritual rank follows the loss of piety, or as a punishment for evil doing. During the days of the *Werkzeuge* this spiritual classification of the members into *Abtheilungen* was made with 'great accuracy' through Inspiration.

There are three important religious ceremonies which are observed by the Community of True Inspiration with great solemnity. These are the renewing of the covenant (*Bundesschliessung*), the spiritual examination (*Untersuchung* or *Unterredung*), and the Lord's Supper or Love-feast (*Liebesmahl*).

Formerly the ceremony of renewing the covenant (*Bundesschliessung*) was appointed and arranged by the *Werkzeuge*; but it is recorded in *IH* iii. 872 that in 1863, 'when the annual common Thanksgiving Day [ordinarily the last Thursday of November] of the land came round, the Lord gave direction through His word that henceforth this day should annually be observed solemnly in the Communities as a day of Covenant, which has been and is still observed.' Every member of the Community, and every boy and girl fifteen years of age or more, take part in this ceremony. Following the usual religious exercises of hymn, silent prayer, reading from the Bible, and an exhortation by the head elder, the elders pass in turn to the head elder, who gives them a solemn shake of the hand, signifying a renewed allegiance to the faith and a pledge to 'cleave unto the ways of the Lord, that they may dwell in the land which the Lord sware unto their fathers.' Then the brethren one by one and according to age and spiritual rank, come forward and similarly pledge themselves by shaking the hand of the head elder and his associates. Finally, the sisters come forward, and in the same manner renew their allegiance to the work of the Lord.

The spiritual examination (*Untersuchung*), which is held annually, seems to be based upon the words of the Bible (Ja 5^{16}), which read: 'Confess your faults one to another, and pray one for another, that ye may be healed.' It serves as a preparation for the Love-feast (*Liebesmahl*) which follows. This ceremony of confession, with its sanctification and purification, seems to be participated in by every man, woman, and child in the Community. It is now conducted by the first brethren, although formerly it was the office of the *Werkzeuge* to ask the appropriate questions and to judge of the spiritual condition of each individual. Nor did the *Werkzeuge* hesitate to condemn the shortcomings of the members as revealed in this examination. And frequent were the exhortations to holier living, such as: 'Oh that ye were not given to the external, and that your eyes were directed inward! Pray the Lord, the God of your salvation, and live more sincerely for the true spirit of humility' (*TSL*, 1845).

Through the *Untersuchung* the people of the Community were prepared for the most elaborate and solemn of all the ceremonies of the Inspirationists, namely, the Lord's Supper or Love-Feast (*Liebesmahl*), which is now celebrated but once in two years. A special feature of the Love-feast as carried out by the Community of True Inspiration is the ceremony of foot-washing, which is observed at this time by the higher spiritual orders. Gottlieb Scheuner, the scribe, records, in reference to a particular Love-feast, the following:—

'The entire membership, excluding the young people under 15, was divided into three classes according to the conviction

and insight of the brethren and the *Werkzeug* (Barbara Landmann) concerning the spiritual state of the respective people. Likewise the servants for the foot-washing, for the breaking of the bread, and for the distribution of bread and wine, also those who were to wait at the supper, as well as the singers and scribes, had to be chosen and arranged. . . . The number of those who were to serve had to be determined in proportion to the great membership. Thus there were appointed for the foot-washing at the first Love-feast 13 brothers and 12 sisters. . . . For the second Love-feast likewise 13 brothers and 14 sisters from the first class. . . . For the breaking of the bread and the passing of the wine two times 12 brethren were selected. . . . For the leading and the support of the singing 8 brethren and 4 sisters were chosen. Besides those, many of the best singers among the brethren and sisters of their respective class were selected and joined to the leaders, so that the whole choir consisted of 20, sometimes 22, persons, who in the afternoon during the meal had their place at a separate table in the middle of the hall. To write down the testimonies of the Lord, those then being teachers at the different communities were appointed' (*IH* iv. 57).

The regular or ordinary religious exercises of the Community of True Inspiration are extremely simple, for the Inspirationists believe that 'forms and ceremonies are of no value, and will never take a man to heaven.' In the several villages prayer meetings are held every evening in rooms set aside for the purpose. On Wednesday, Saturday, and Sunday mornings the people meet by orders (*Abtheilungen*), while on Sunday afternoon there is held from time to time a general meeting. Thus, exclusive of special exercises, there are eleven religious services held each week in the Community.

With the exception of the prayer-meetings, all the religious gatherings are held in the churches, of which there is one in each village. The church is very much like the ordinary dwelling-house, except that it is longer. The interior is severely plain. White-washed walls, bare floors, and unpainted benches bespeak the simple unpretentious faith of the Community. In the general meetings the elders sit in front facing the congregation, which is divided—the men on one side and the women on the other.

The services are all solemn, dignified, and impressive, and never accompanied by excitement. There is no regular pastor or priest. In the exercises, which are conducted by the elders, there is really nothing peculiar. The silent prayer is followed by a hymn sung by the congregation. Then the presiding elder reads from the Bible or from the testimonies. Again there is prayer, which is sometimes given extemporaneously and sometimes read, or else is given in the form of supplicatory verses by the members of the congregation. The presiding elder announces a chapter in the Bible, which is read verse by verse by the members of the congregation. There is, of course, no sermon—simply a brief address of exhortation from an elder. After the singing of a hymn and the pronouncing of a benediction by the presiding elder, the people leave the church, the women going first and the men following. Nothing could be more earnest, more devout, more reverent, more sincerely genuine than the church services of the Community of True Inspiration.

As texts for religious instruction, the Community has published two Catechisms, one for the instruction of the youth, the other for the use of the members of the Community. The former was re-edited in the year 1872, and the latter in 1871. The title-pages are almost identical, and read: 'Catechetical Instruction of the Teachings of Salvation presented according to the Statements of the Holy Scriptures, and founded upon the Evangelic-Apostolic Interpretation of the Spirit of God for the Blessed Use of the Youth (or Members) of the Communities of True Inspiration.'

The one supreme object of 'the pilgrimage on earth' in the Inspirationist's system of theology is the salvation of the soul. The Community is but a school of preparation for the next world. The awful fate, after death, of the soul that has not been thoroughly purified and sanctified during its earthly sojourn is perhaps best described in an old *Bezeugung*, which reads: 'Such souls will wander in pathless desolation; they will seek and not find; they will have to endure much torment and grief, and be wretchedly plagued, tortured, and tormented by misleading stars' (*TSL*, 9th Collection, 2nd ed. p. 104).

'Behold how good and how pleasant it is for brethren to dwell together in unity,' said Gruber to his congregation of followers two centuries ago. And nowhere, perhaps, is this simple Amana doctrine of 'brothers all as God's children' more impressively expressed than in the Amana cemetery, where there are no family lots or monuments, but where the departed members of the Community are buried side by side in the order of their death, regardless of natural ties. Each grave is marked by a low stone or a white painted head-board, with only the name and date of death on the side facing the grave. There lies the great-hearted Christian Metz by the side of the humblest brother.

3. **Religious and moral instruction.**—The stability of the Community of True Inspiration and the perpetuity of the faith of the 'New Spiritual Economy' for nearly two centuries are due in a measure to the instruction and training of the youth; for the Inspirationists have always insisted on training their children in their own way according to the faith of the fathers (*Urgrosseltern*).

To-day there is in each village of the Community a school organized under the laws of the State and sharing in the public school fund. But since the whole of Amana Township is owned by the Society, the Society levies its own school tax, builds its own school houses, chooses its own school directors, and employs its own teachers. Thus the education of the youth of Amana is under the immediate guidance and direction of the Community.

To preserve the earnestness and religious zeal of the fathers (*Urgrosseltern*) is the real mission of the Community school. Here learning is of less account than piety. 'What our youth need more than text-book knowledge,' says the *Kinderlehrer*, 'is to learn to live holy lives, to learn God's commandments out of the Bible, to learn submission to His will, and to love Him.' Indeed, 'to love the ways of humility and simplicity,' and never to reject or despise the good and sincere admonitions of the brethren, constitute the foundation of the ethical and religious training of the Amana child, who, between the ages of five and fourteen, is compelled to attend school six days in the week and fifty-two weeks in the year. In addition to the branches that are usually taught in grammar schools outside of the Community, there is daily instruction at the Amana schools in the Bible and the catechism. Nor is this religious instruction slighted or performed in a perfunctory manner. Said one of the Community schoolmasters: 'It is my profound belief that no other children on the whole earth are more richly instructed in religion than ours.'

The spirit as well as the scope and character of the instruction and training of the youth of Amana is beautifully expressed in the 'Sixty-six Rules for the Conduct of Children' which are given in the catechism. To live up to these rules is indeed the first step towards salvation.

In order to ascertain and promote the spiritual condition of the youth in the schools, there are held each year two 'solemn religious meetings,' which are conducted by the first brethren. One of these meetings, the *Kinderlehre*, consists of a thorough review of the principles and doctrines of the Com-

munity and of the supreme importance of keeping the faith. The other, called the *Kinder Unterredung*, is indeed the children's part of the yearly spiritual examination (*Untersuchung*).

Graduation from the schools of the Community, which may take place either in the autumn or in the spring, is attended with solemn religious exercises. The children who are about to leave the schools are carefully examined as to their knowledge of both spiritual and temporal things. It is at this meeting that each child reads his 'graduation essay,' which is a simple child-like review of his school life, of his faults, of his aspirations, and of his intentions as a member of the Community.

Graduation from the schools is, in a sense, a preparation for the *Bundesschliessung* which follows, and in which the children are first permitted to take part at the age of fifteen. It is not, however, until the boys and girls come to the legal age of twenty-one and eighteen respectively that they are admitted as full members of the Society.

4. Membership.—Besides those born in the Community, who become members by signing the Constitution when they have arrived at the legal age, any outsider may join after a probation of two years, during which he agrees to labour faithfully, abide by the regulations of the Community, and demand no wages. If, at the close of this period, the candidate gives 'proof of being fully in accord with the religious doctrines of the Society,' he is admitted to full membership, after conveying to the Society all his property, taking part in the *Bundesschliessung*, and signing the Constitution. Members who 'may recede from the Society either by their own choice or by expulsion, shall be entitled to receive back the moneys paid into the common fund and to interest thereon at a rate not exceeding 5 per cent. per annum from the time of the adjustment of their accounts until the repayment of their credits' (Constitution, Art. VIII.). Few, however, withdraw from the Society; and most of those who do leave return in the course of time. The records show that formerly many outsiders (from Germany) were admitted; but in recent years the increase is almost wholly from within.

'Every member of the Society is,' according to Art. VI. of the Constitution, 'besides the free board, dwelling, support, and care secured to him in his old age, sickness and infirmity, further entitled out of the common fund to an annual sum of maintenance for him or herself, children, and relatives in the Society; and these annual allowances shall be fixed by the Trustees for each member single or in families according to justice and equity, and shall be from time to time revised and fixed anew.'

5. Government. — The entire conduct of the affairs of the Amana Society rests with a board of trustees consisting of thirteen members, who are elected annually by popular vote out of the whole number of elders in the Community. The members of the board of trustees are the spiritual as well as the temporal leaders of the Community of True Inspiration, and as such are called 'The Great Council of the Brethren.' Out of their own number the trustees elect annually a president, a vice-president, and a secretary.

With a view to keeping the members informed concerning the business affairs of the Society, the board of trustees exhibits annually in the month of June to the voting members of the Community a full statement of 'the personal and real estate of the Society.' The board itself meets on the first Tuesday of each month. Besides its general supervision of the affairs of the Community, the board of trustees acts as a sort of court of appeal to which complaints and disagreements are referred. With their decision the case is finally and emphatically closed.

Each village is governed by a group of from seven to nineteen elders, who were formerly appointed by Inspiration, but who are now (there being no *Werkzeug*) appointed by the board of trustees. Each village has at least one resident trustee, who recommends to the Great Council, of which he is a member, a list of elders from the most spiritual of the members of his village. From these lists the Great Council appoints the elders for each village according to spiritual rank. The governing board of each village is known as the 'Little Council,' and is composed of the resident trustee and a number of the leading elders, who call into conference the foremen of the different branches of industry and such other members of the Community as may, on occasion, be of assistance in arranging the village work.

It is this Little Council of the village that appoints the foremen for the different industries and departments of labour, and assigns to any individual his apportioned task. To them each person desiring more money, more house room, an extra holiday, or lighter work, must appeal; for these allotments are, as occasion requires, 'revised and fixed anew.'

The highest authority in matters spiritual in the village is the head elder; in matters temporal, the resident trustee. And although the trustee is a member of the Great Council itself, which is the spiritual head of the Community, in the village church the head elder ranks above the trustee.

Each village keeps its own books and manages its own affairs; but all accounts are finally sent to the headquarters at Amana, where they are inspected, and the balance of profit or loss discovered. The system of government is thus a sort of federation, wherein each village maintains its local independence, but is under the general supervision of a central governing authority, the board of trustees.

6. The Amana Villages.—The seven villages of the Community of True Inspiration lie from a mile and a half to four miles apart; but all are within a radius of six miles from 'Old Amana.' They are connected with one another, as well as with most of the important towns and cities of the State, by telephone. Each village is a cluster of from forty to one hundred houses arranged in the manner of the German *Dorf*, with one long straggling street and several irregular off-shoots. At one end are the village barns and sheds, at the other the factories and workshops; and on either side lie the orchards, the vineyards, and the gardens.

Each village has its own church and school, its bakery, its dairy, and its general store, as well as its own sawmill for the working up of hard wood. The lumber used is obtained largely from the Society's timber land. At the railway stations there are grain houses and lumber yards. The station agents at the several Amana railway stations and the four postmasters are all members of the Society. The establishment of hotels, in no way a part of the original village plan, has been made necessary by the hundreds of strangers who visit the villages every year.

7. The Amana Homes.—The homes of the Amana people are in two-story houses built of wood, brick, or a peculiar brown sandstone which is found in the vicinity. The houses are all quite unpretentious; and it has been the aim of the Society to construct them as nearly alike as possible, each one being as desirable as the other. The frame-houses are never painted, since it is believed to be more economical to rebuild than to preserve with paint. Then, too, painted houses are a trifle worldly in appearance. The style of architecture is the same throughout the entire Community—plain, square (or rectangular) structures with gable roofs. There are no porches, verandas,

or bay windows; but everywhere the houses are (in the summer time) half hidden with grape vines and native ivy. The uniformity is so marked that it is only with the aid of an inconspicuous weather-beaten sign that the stranger is able to distinguish the 'hotel' or 'store' from the school, church, or private dwelling. Grass lawns are not maintained about the buildings, but in season they are surrounded with a riotous profusion of flower beds.

In the private dwelling-house there is no kitchen, no dining room, no parlour—just a series of 'sitting rooms' and bed rooms, which are furnished by the Society in the plainest and simplest manner. Each house is occupied by one, two, or sometimes three families. But each family is assigned certain rooms which constitute the family home; and in this home each member has his or her own room or rooms. There is no crowding in the Amanas; for the same spirit which led the Society to adopt the village system has led it to provide plenty of house room for its members.

8. Domestic Life.—At the time of its inception the 'New Spiritual Economy' does not seem to have had rigid precepts relative to marriage. But with increasing religious fervour among the Inspirationists celibacy came to be regarded with much favour; while marriages were in certain special cases prevented by the *Werkzeuge*. It does not appear, however, that marriage (although discouraged) was ever absolutely prohibited. To-day there seems to be no opposition; and the young people marry freely, notwithstanding the admonition that 'a single life is ever a pleasure to the Lord, and that He has bestowed upon it a special promise and great mercy' (*TSL*, 1850, No. 74). The newly married pair are, indeed, still reduced to the lowest spiritual order. A young man does not marry until he has reached the age of twenty-four years, and then only after permission has been given by the Great Council of the brethren one year in advance. Marriage in the Community of True Inspiration is a religious ceremony which is performed in the church by the presiding elder.

Divorce is not recognized in the Community of True Inspiration. The married couple are expected to abide by the step they have taken throughout life. But if, for good and sufficient reason, such a life union is impossible, 'then one of them, mostly the man, is told to separate himself from the Community and go into the world.' Second marriage is not regarded with favour.

The number of children in the Amana family is never large—ranging usually from one to four. Indeed, with the birth of each child the parents suffer a reduction in spiritual rank. There are, however, very few childless families in the Community.

The newly married couple begin their home life in rooms which are provided and furnished by the Society. Housekeeping with them, however, is a very simple matter, since there are neither meals nor cooking in the home. At more or less regular intervals in each village there is a 'kitchen house,' at which the meals for the families in the immediate neighbourhood are prepared and served. At each of these common eating places provision is made for from sixteen to forty persons. The preparation of the food and the serving of the meals are done by the women.

In their dress the members of the Society are and always have been very 'plain.' There is nothing distinctive about the clothes of the men. Their 'best clothes' are made by the Community tailor, but ordinarily they wear ready-made garments—except a few of the elder brethren, who still wear trousers with the old-fashioned broad fall front, and a coat without lapels. With the women utility and comfort (instead of adornment) are chiefly regarded. Plain calicoes of gray or blue or brown are worn for the most part. The bodice is short and very plain; while the skirt is long and full. An apron of moderate length, a shoulder-shawl, and a small black cap complete the summer costume. The only headdress is a sun-bonnet with a long cape. The winter dress differs from this only in being made of flannel; while a hood takes the place of the sun-bonnet. Every woman makes her own clothes; and every mother makes the clothing for her children.

9. Industrial Life.—Agriculture, which is one of the chief industries of the Community, is carried on, with the German proneness for system, according to the most modern and scientific methods. The general plan of the field work is determined by the board of trustees; but a field 'boss' or superintendent is responsible to the Society for the proper execution of their orders. He sees that the farm machinery is kept in good condition, he appeals to the elders for more men to work in the fields when necessary, and he obtains from the 'boss' of the barns and stables the horses that are needed. From fifteen to eighteen ox teams are still used for the heavy hauling.

The Amana Society is perhaps best known in the business world through its woollen mills, which have been in active operation for forty-two years. Over half a million pounds of raw wool are consumed in these mills annually. It has always been the aim of the Society to manufacture 'honest goods,' and they have found a ready market from the Atlantic to the Pacific coast. The hours of labour in the woollen mills during the greater part of the year are the usual Amana hours of 7 to 11 in the morning and 12.30 to 6 in the afternoon. But during the summer months, when the orders for the fall trade are being executed, the mills run from half-past four in the morning to eleven at night (the factories being lighted throughout by electricity).

In spite of the long hours and the busy machinery, there is a very unusual factory air about the Amana mills. The rooms are light and airy. There is a cushioned chair or stool for every worker 'between times.' An occasional spray of blossoms on a loom frame reflects the spirit of the workers. Here and there in different parts of the factory are well-equipped cupboards and lunch tables, where the different groups of workers eat their luncheon in the middle of each half-day. In the villages where the factories are located the boys of thirteen or fourteen years of age who are about to leave school are employed in the mills for a few hours each afternoon 'to learn.' If the work is congenial, they are carefully trained and are given every opportunity to 'work up'; but if this employment is not agreeable, they are at liberty to choose some other line of work.

In Old Amana there is a calico printing establishment, where four thousand five hundred yards of calico are dyed and printed daily. The patterns for the calico are designed and made by a member of the Society. This 'colony calico,' as it is called, is sold throughout the United States and Canada, and is quite as favourably known as the woollen goods.

The industrial efficiency of the operative in the Amana mills and factories is noticeably great even to the casual observer. Each worker labours with the air of a man in physical comfort and peace of mind, and with the energy of a man who is working for himself and expects to enjoy all the fruits of his labour.

Besides these mills and factories, the Society owns and operates seven saw mills, two machine shops, one soap factory, and one printing office

and bookbindery. The job work for the stores and mills, the text books used in the schools, the hymn books used in the churches, and other religious books commonly read in the community, are all printed at the Amana printing office. The Society publishes no newspaper or magazine, official or otherwise, although it subscribes for several trade journals.

In three of the villages there are licensed pharmacies. The quantity of drugs prepared for the outside market is not large, as no effort has ever been made to build up a drug trade. As a rule, only special orders are executed. Some physicians of the State prefer to get their supplies here rather than to send farther east for them. The Society were the first people west of Chicago to manufacture pepsin, and their manufacture is still considered one of the best in the market.

In addition to the aforenamed industries, each village has its shoemaker, tailor, harness-maker, carpenter, blacksmith, tool-smith, waggon-maker, etc. These tradesmen, as a rule, do not devote their entire time to their occupations, but only make and repair what is needed in their line by the people of the village. During the busy season they stand ready to be called to the factory or the field as circumstances demand. The physicians, pharmacists, and mechanics are trained at the expense of the Society.

LITERATURE.—*Constitution and Bye-Laws of the Community of True Inspiration; Life and Essays* of Eberhard Ludwig Gruber; *Autobiography* of Johann Friedrich Rock; *Year Books* of the Community of True Inspiration [published by the Society each year during the lifetime of the *Werkzeuge* and containing the *Bezeugungen* in the order of their utterance, with brief introductions relating the circumstances under which the *Bezeugungen* were given]; *Brief Relation of the Circumstances of the Awaking and the first Divine guidance of Barbara Heinemann; Historical Description of the Community of True Inspiration* . . . recorded by Brother Christian Metz. *Extracts from the Day Book* of Brother Christian Metz; *Inspirations-Historie*—compiled from various accounts, some of them printed, some written by Gottlieb Scheuner, 4 parts or vols.:—[Vol. i.] Historical account of the founding of the Prayer-Meetings and Communities; [vol. ii.] Various articles and narrations of the work of the Lord in His ways of Inspiration; [vol. iii.] Historical Account of the New Revival, Gathering, and Founding of the Community of True Inspiration; [vol. iv.] Description of the works of the mercy of the Lord in the Communities of True Inspiration; *Catechetical Instruction of the Teachings of Salvation*, part i. for the youth of the Community, part ii. for the members; *Psalms after the manner of David for the Children of Zion: . . . particularly for the Congregation of the Lord; The Supper of Love and Remembrance of the Suffering and Death of our Lord and Saviour Jesus Christ* [published during the lifetime of the *Werkzeuge* after each Love-Feast, and containing a full account of the meetings and the *Bezeugungen* uttered during the solemn ceremonies]; numerous pamphlets and essays found only in the records and libraries of the Society. These works are all in German, and printed chiefly at Ebenezer, N.Y., and Amana, Iowa. Reference may also be made to Nordhoff, *Communistic Societies of the United States*, pp. 26–59 (New York, 1875); Hinds, *American Communities*, pp. 263–286 (Chicago, 1902); Knortz, *Die wahre Inspirationsgemeinde in Iowa* (Leipzig, 1896); and Perkins and Wick, *History of the Amana Society* (Iowa City, Ia., 1891).

BERTHA M. H. SHAMBAUGH.

AMARĀVATI.—A small town (lat. 16° 34′ 45″ N., long. 80° 24′ 21″ E.) on the south bank of the Kistna (Krishnā) River in the Kistna District, Madras Presidency, the ancient Dharaṇikoṭa, or Dhānyakaṭaka. It is famous as the site which has supplied a multitude of fine sculptures, chiefly bas-reliefs, of the highest importance for the history of both Indian art and Buddhist iconography. The sculptures, executed almost without exception in white marble, formed the decorations of a *stūpa*, which was totally destroyed at the end of the 18th and the beginning of the 19th cents. by a local landholder, who used the materials for building purposes. The surviving slabs are only a small fraction of the works which were in existence about a century ago. Most of the specimens rescued from the lime-kiln are in either the British Museum or the Madras Museum. The body of the *stūpa* was cased with marble slabs and surrounded by two railings or screens, of which the outer and earlier stood 13 or 14 feet in height above the pavement, the inner and later one being only six feet high. The casing slabs, and every stone of both railings, including the plinth and coping, were covered with finely executed bas-reliefs. The basal diameter of the *stūpa* was 138 feet, the circumference of the inner rail was 521 feet, and that of the outer rail 803 feet. It is estimated that the separate figures on the outer rail must have numbered 12,000 or 14,000. The multitude of figures on the inner rail, carved on a minute scale suggesting ivory work, was still greater. The outer rail was constructed of upright slabs connected by three cross-bars between each pair of uprights, which stood on a plinth and supported a coping about two feet nine inches in height. On the outer face each upright was adorned with a full disc in the centre and a half-disc at top and bottom, with minor sculptures filling the interspaces. Similar but ever-varying discs decorated the cross-bars, and the coping was ornamented with a long wavy flower-roll carried by men, numerous figures being inserted in the open spaces. The plinth exhibited a frieze of animals and boys, generally in comic or ludicrous attitudes. The decorations on the inner side were even more elaborate, the coping presenting a continued series of bas-reliefs, and the central discs of both bars and pillars being filled with beautiful sculptures, treating every topic of Buddhist legend. The Amarāvatī railings are by far the most splendid examples of their class, and the sculptures, even in their present fragmentary state, are invaluable as documents in the history of both art and religion. Fortunately, their date can be determined with a near approach to precision. Dedicatory inscriptions recorded during the reigns of the Āndhra kings Pulumāyi (A.D. 138–170) and Yajña Śrī (A.D. 184–213) fix the time of the erection of the outer rail as the middle or latter part of the 2nd cent. A.D. This inference agrees well with the statement of Tāranāth, the Tibetan historian of Buddhism (Schiefner, *Tāranāthas Gesch. d. Buddhismus in Ind., St. Petersburg*, 1869, pp. 71, 142), that the Buddhist patriarch Nāgārjuna surrounded the great *chaitya* of Dhanaśrīdvīpa or Srī Dhānyakaṭaka with a wall or screen (*Mauer*). The ecclesiastical rule of this patriarch, who is said to have been contemporary with Kanishka, is placed by Dr. Eitel between A.D. 137 and 194; and the most probable scheme of Indian chronology assigns Kanishka to the period A.D. 120–150. We may therefore assume with confidence that the great outer rail was erected and decorated between the years A.D. 140 and 200. Of course, the work must have occupied many years. The inner rail is somewhat later in date, and may not have been finished before A.D. 300. A few fragments of ancient sculpture prove that the *stūpa* in its original form dated from very early times, about B.C. 200.

The Indian art of relief sculpture drew its inspiration from two sources, Alexandria and Asia Minor. The ancient school (B.C. 250–A.D. 50), of which the Bharhut (*q.v.*), Sānchi, and Bodh Gayā works are the leading examples, evolved a thoroughly Indianized adaptation of Alexandrian *motifs*, so completely disguised in Indian trappings that the foreign origin of the art has not been generally recognized. The composition is characterized by excessive crowding and compression, and the execution by extreme naïveté and realism, the purpose of the sculpture being directed to edification rather than to making an æsthetic impression. The works of this school were produced from the time of Aśoka (B.C. 250) down to about the Christian era, or a little later. The so-called Græco-Buddhist art of Gandhāra, or the Peshāwar region, on the contrary, was influenced,

not directly by Alexandria, but chiefly by the schools of Pergamum and other cities of Asia Minor, which practised a cosmopolitan style of art, sometimes designated as Græco-Roman. The balanced composition of the Gandhāra reliefs closely resembles that of many Roman works, Pagan or Christian, and is as much superior to that of the ancient Indian school as is the execution of individual figures. The Gandhāra draperies follow classical models, and are often treated with much skill. The special value of the Amarāvatī sculptures to the historian of art is that they form a connecting link between the two schools above named. Their basis is the old Indian art of Alexandrian origin, but that is freely modified in respect of the composition, execution, and drapery by the influence of the contemporary Gandhāra school, the best work of which may be assigned to the period A.D. 100–300. From the religious, as from the artistic, point of view the sculptures of Amarāvatī occupy a position intermediate between those of Sānchi and Gandhāra. The artists of the ancient school never attempted to delineate the figure of the Buddha, and were content to indicate his felt but unseen presence by the empty chair, the print of his footsteps, or other significant symbols. Gandhāra art, on the other hand, is characterized by inordinate repetition of the image of the Master, sitting, standing, or engaged in various incidents as related in the books of legends. The Amarāvatī sculptures frequently made use of the symbolical notation of their predecessors at Sānchi and Bharhut, but also freely adopted the foreign innovation, and often introduced isolated images of the Buddha, either standing or sitting, clad in Greek drapery. Such images seem to be more common on the later inner rail than on the earlier outer one. Scenes representing the Buddha in action are rare at Amarāvatī.

LITERATURE.—The sculptures are fully illustrated and described by Fergusson, *Tree and Serpent Worship*[2] (1873), and Burgess, *The Buddhist Stūpas of Amarāvatī and Jaggayyapeta* (being vol. vi. of the New Imp. Ser. of Archæol. Rep., London, 1887). Full references to special reports are given by Sewell, *Lists of the Antiquarian Remains in the Presidency of Madras* (1882), i. 63. See also Fergusson, *History of Indian and Eastern Architecture* (1899); Grünwedel, *Buddhist Art*, tr. Burgess and Gibson (1899); and Foucher, *L'Art Bouddhique du Gandhāra*, i. (1905). The evidence proving the Alexandrian origin of the ancient Indian art has not yet been fully published.

VINCENT A. SMITH.

AMARKAṆṬAK (Skr. *amara-kaṇṭaka*, 'peak of the immortals').—A hill in the Bilāspur district of the Central Provinces, India, lat. 22° 40′ 15″ N., long. 81° 48′ 15″ E. It is on the watershed of Central India, three great rivers having their sources from it,—the Narbada, flowing westward to the Indian Ocean; the Johilla, shortly joining the Son, one of the tributaries of the Ganges; while the Arpa mingles with the Mahānadi, which drains the plain of Chhattīsgaṛh, and, like the Ganges, flows eastward into the Bay of Bengal. As the source of the Narbada, which local legend declares will by and by surpass the sanctity of the Ganges, Amarkantak is an important place of pilgrimage.

'If the peninsula,' writes Sir R. Temple, 'may be imagined as a shield, and if any spot be the boss of such a shield, then Amarkaṇṭak is that spot. South of the Himālayas there is no place of equal celebrity so isolated on every side from habitation and civilization. To the east and to the north, hundreds of miles of sparsely populated hills and forests intervene between it and the Gangetic countries. On the west there extend hilly, roadless uplands of what are now called the Sātpura regions. To the south, indeed, there is the partly cultivated plateau of Chhattīsgaṛh, but that, after all, is only an oasis in the midst of the great wilderness. It is among these mighty solitudes that the Narbada first sees the light' (*Cent. Prov. Gaz.* 346 *f.*).

Formerly difficult of access, it has now been rendered approachable by the railway between the Bilāspur and Katni Junctions, and cultivation has rapidly advanced in Chhattīsgaṛh. The place where the Narbada rises is enclosed by a wall of masonry, and, as the name of the site implies, it is surrounded by temples dedicated to the cult of Śiva.

LITERATURE.—Forsyth, *Highlands of Central India*[2] (1889), 403; *Central Provinces Gazetteer* (1870), 347.

W. CROOKE.

AMARNĀTH or AMBARNĀTH (Skr. *amaranātha*, 'the immortal Lord,' a title of Śiva).—A place situated in the Thāna district of the Bombay Presidency, famous as the site of an ancient Hindu temple. The temple is without history, written or traditional. An inscription translated by Bhau Daji (*JRASBo* ix. 220) gives its date as A.D. 860; but it seems probable that the existing building is a restoration, or has been rebuilt from the materials of that erected in A.D. 860. It faces west, with doors to north and south in a hall in front of the shrine (*maṇḍap*, *antarāla*), supported by four pillars, elegant in conception and general beauty of details. At the west entrance is a defaced bull (*nandi*), showing that the shrine was dedicated to Śiva. The roof of the hall is supported by columns, of which the sculpture is so rich and varied that no description can give a correct idea of its beauty. The temple is remarkable for a three-headed figure, known as a *trimūrti*, of a male with a female on his knee, probably representing Śiva and his spouse Pārvatī. The sculpture, as a whole, shows a degree of skill that is not surpassed by any temple in the Bombay Presidency. It has been fully described, with a series of plates, by J. Burgess (*IA* iii. 316 ff.).

W. CROOKE.

AMAZONS.—1. The Amazons were a mythical race of women, dwelling in the northern part of Asia Minor, or still farther north, who had proved their prowess in conflict with the greater heroes of Greece. Something about the conception of feminine warriors made it very attractive to the Greek story-teller. Women who had asserted their independence of conventional bonds, and who kept their power by maiming or blinding their male children; women who wore a man's short *chitōn*, and who had cut away the right breast that they might the more freely handle arms; withal beautiful women to inspire with love those Greek heroes who fought against them—such were the Amazons. According to Pherekydes (*frag.* 25), their nature was explained by the fact that they were descended from Ares and the naiad nymph Harmonia; Hellanikos (*frag.* 146) makes them a race of women living apart from men and perpetuating their kind by visits to neighbouring people. Thus they were both 'man-haters' (Æsch. *Prom.* 724) and 'man-like' (Hom. *Il.* iii. 189).

In the epics they use the same arms as do other warriors. Pindar (*Ol.* xiii. 125) and Æschylus (*Suppl.* 288) speak of them as skilled with the bow, and in art they ordinarily wear a quiver. Their proper weapon in later myth was the axe—either the axe with blade and point, such as Xenophon found in use in the mountains of Armenia (*Anab.* iv. 4. 16), or the double-headed axe, *πέλεκυς* (Plut. *Quæst. Græc.* 45, 301 F.). The Latin poets (*e.g.* Virg. *Æn.* xi. 611) refer to them as fighting from war-chariots, but Greek poetry and art represent them as going into battle on horseback (Eur. *Hipp.* 307, 582, etc.).

The story of their mutilated breasts is probably due to a false etymology (*a-* privative and *μαζός* 'breast'). What the name did originally mean is not quite clear; with some probability Göttling (*Comment. de Amaz.* 1848) has suggested that it referred to their unfeminine character in that they have nothing to do with men (*a-* and *μάσσειν*). The names of individual Amazons are in the main genuine Greek names, added as the myth found favour among the Greeks.

2. The *Iliad* mentions two wars in which the Amazons were involved—a war with the Lycians,

which led the king of the Lycians, Isobates, to send Bellerophon against them (vi. 186), and a war with the Phrygians, in which Priam fought on the side of the Phrygians (iii. 189). Strabo (xii. 552) notes the inconsistency of this story with the account of Penthesileia and her companions. According to the later epic, the *Aithiopis* of Arktinos, she came to Troy after the death of Hector to aid the forces of Priam. Achilles inflicted a mortal wound on Penthesileia, only to be touched with love at her beauty as she lay dying in his arms.

The story of Herakles and Hippolyte is a later myth about an earlier generation. It was one of the twelve labours of Herakles to fetch the girdle of Hippolyte, queen of the Amazons, for Admete, Eurystheus' daughter. According to Apollodorus (*Bibl.* ii. 5. 9. 7), the queen fell in love with Herakles, and gave him the girdle; but as he went to board his ship the other Amazons, invited by Hera, attacked him. Suspecting treachery on the part of Hippolyte, Herakles shot her with an arrow and sailed away. In the more common form of the story, sometimes connected with the Argonautic expedition, Herakles made war on the Amazons, overcame them in battle, and triumphantly carried off the girdle (Diod. Sic. iv. 16; Apoll. Rhod. ii. 967).

A somewhat similar story is told of Theseus and Antiope, namely, that Theseus made an expedition against the Amazons, and either by love or by force won Antiope to be his bride. The importance of this expedition was that it furnished the occasion for the expedition of the Amazons against Athens. As the story is told by Plutarch (*Thes.* 27), its form is determined by several Amazon shrines at Athens, by the position of the Areopagus in front of the Acropolis, and by a place called *Horkomosion*, where a treaty of peace was made. In this war Antiope met her death, and was buried by the Itonian gate of Athens. The story was significant in that it furnished Attic orators and artists with another instance of the superiority of civilization to barbarism, as in the battle of gods and giants and in the war between Athens and Persia.

3. *Locality.*—On the north coast of Asia Minor and well towards the east, the town of Themiskyra by the river Thermodon was the generally accepted seat of the Amazons. Rarely were they located farther to the north or north-east. It should be noted, further, that either one Amazon or a band of Amazons finds a place in the local legends of very many cities on the north coast and the west coast of Asia Minor. 'Herakles turned over to the Amazons the region between Pitane and Mykale' (Herakleid. Pont. *frag.* 34); and such cities as Smyrna and Ephesus are most important local centres of Amazon legend. In Greece proper, on the other hand, there are graves of Amazons and places which they visited, but they are present only as visitors from outside.

4. *Explanation.*—Any effort to understand the Amazons must start from three facts. (1) The Amazons were warriors, armed with weapons such as the Greeks associated with eastern Asia Minor and regions still farther to the east and north. They were closely associated with the 'Thracian' god Ares; he was their reputed father, they sacrificed horses to him, and their camp at Athens was on the hill of Ares. (2) They were also connected with Artemis, especially the Ephesian Artemis. It is said that this cult was established by the Amazons, and that here they performed war dances and choral dances in honour of the goddess (Paus. vii. 2. 7; Kallim. *Hymn to Artemis*, 237 f.; cf. *Il.* ii. 814). (3) The legends of the Amazons are in the main connected with the coast towns on the north and west of Asia Minor.

K. O. Müller suggested (*Dorier*, i. 390 f.) that the conception arose from the large number of *hierodoulοi* connected with the worship of Artemis at Ephesus and elsewhere in Asia Minor. It is more probable that the presence of women with these peculiar weapons in the armies of northern and eastern races started the legends, that incursions of these races into Asia Minor determined the locality with which they were associated, and that war dances performed by women in the worship of Ares, Artemis, etc., aided the growth of the legends. To bring the Amazons into conflict with Bellerophon, Achilles, Herakles, and Theseus was the natural means of emphasizing the prowess of feminine warriors.

ARTHUR FAIRBANKS.

AMBĒR.—An ancient, now ruinous, city in the native State of Jaipur in Rājputāna. Formerly it was held by the non-Aryan Mīnās, from whom the Kachhwāhā sept of Rājputs conquered it in 1037 A.D. It then became their capital, and so continued to be until 1728, when Jai Singh II. founded the present city of Jaipur, and Ambēr became deserted. It was in olden days much frequented by pilgrims from all parts of India, but its glory has departed. At a temple of Kālī within the ruined city a goat is daily sacrificed, a substitute, as is believed, for the human victim offered in former times to the goddess.

LITERATURE.—For the history: Tod, *Annals of Rajasthan*, Calcutta reprint, 1884, ii. 381 ff. For a description of the remains: Major Baylay, in *Rājputāna Gazetteer*, ii. 154 f.; Rousselet, *India and its Native Princes*, 1890, ch. xx.; Fergusson, *Hist. of Indian and Eastern Architecture*, 1899, p. 480.

W. CROOKE.

AMBITION.—'Ambition,' derived from Lat. *ambitio*, the 'going round' of a candidate for office canvassing for votes, signifies primarily a desire for a position of power or dignity; thence a desire for eminence of any kind, and so, by an easy but well-defined and recognized extension (in the absence of any other word to cover the idea), the will to attain, obtain, or perform anything regarded by the user of the word as high or difficult. The same term thus becomes applicable to Jaques' 'ambition for a motley coat,' and the desire of Milton to write something which the aftertimes would not willingly let die. It is obvious that almost any desire may in certain circumstances become our 'ambition' in this third sense, which may, therefore, be dismissed at once—especially as in default of a qualifying term one of the first two is always intended. The present article will accordingly be confined to these. The motive in question holds a unique position for two reasons: its moral position is more uncertain in general estimation than that of any other, and it is reported by tradition to have been the first sin. These points will be taken in order.

1. Bacon, in his essay, 'Of Ambition,' says of it that it 'is like choler, which is an humour that maketh men active, earnest, full of alacritie, and stirring, if it be not stopped; but if it be stopped and cannot have his way, it becommeth adust, and thereby maligne and venomous.' Spinoza (who defines it, however, as 'an excessive love of glory') says: 'Ambition is a Desire by which all the Affections are nourished and strengthened; and on that account this particular Affection can hardly be overcome. For so long as a man is influenced by any Desire at all, he is inevitably influenced by this' (*Ethics*, pt. iii. Appendix). The opinions of these high authorities imply no particular censure. A reference to any Dictionary of Quotations, however, will reveal it indeed as

'divine' and 'accursed,' 'blind' and 'eagle-eyed,' 'base' and 'sublime'; but for one epithet of honour ten will be found of blame. At the same time, this proportion does not appear accurately to represent the average man's feeling towards it, which may be described as two parts of fear and distrust to one of secret admiration. Now, amid this clash of opinion, it is clear that ambition is in itself non-moral; for power is never, in the last analysis, desired for itself, but always from an ulterior motive, namely, for the *opportunities* it affords, whether for enhanced activity, for the exercise of peculiar faculties possessed, for the furtherance of a desired end, or the gratification of vanity. Logically, therefore, it should be judged by the motive behind; and, in fact, the soundest defence of it may be based upon this consideration. But such a plea avails little against the prosecutor, whose main, if often unrealized, ground of attack (apart from religion) rests upon the means by which the ambitious are tempted to gain their ends.

The reasons for the conflicting views entertained on the subject may be summed up thus, the attitude of religion being reserved for separate treatment. From the point of view of society, it is natural and right that public opinion should be directed to check rather than to encourage ambition, as the danger of an excess of it is greater than that of a deficient supply. Morally, such a desire can in no case be generally considered virtuous, in view of the obvious personal advantages which power, from whatever motive sought, confers upon the possessor. To many philosophers, again, it is especially anathema as a chief enemy of that peace of mind and independence of externals which is the Nirvāṇa of their creed. These reasons apply to the desire for power in any degree of development; but what is after all perhaps the chief cause of the invidious sense attaching to the word 'ambition' lies in a subtle implication which modifies the meaning, without equally restricting the use, of the term itself. In the words of Aristotle (*Ethics*, ii. 7), 'There is such a thing as a due and proper desire for distinction; the desire may also be excessive or defective: the man who is excessive in this desire is called "ambitious," the man who is deficient, "unambitious"; *for the middle state there is no name.*' This desire is, in fact, present in some degree in almost all members of the white races, and hence the definite term 'ambitious' is applied only to those in whom it is prominent, and therefore over-developed. It stands, in short, self-condemned as excessive, in which condition it is pregnant with danger alike to the State, the neighbour, and the morality of its subject, and lies justly under the censure of political, ethical, and philosophic thought. At the same time it is viewed by many, even when in excess, with a certain reluctant admiration as the infirmity of a *noble* mind. For, whatever its own demerits, it is generally found in company with the qualities most admired in Western civilization — ability and energy. It implies also a certain length and largeness of view, in themselves admirable, and in many cases can only with difficulty be distinguished from its twin-virtue — aspiration. Finally, it is a motive with which, though perhaps faulty, the world, in the present condition of religion and morals, could ill afford to dispense; for positions of power are after all generally given to those who not only desire, but also in some degree at least deserve them, and the noble actions, prompted either wholly or in part by ambition, fill not a few of the most distinguished pages in history. 'Licet ipsa vitium sit, tamen frequenter causa virtutum est' (Quintilian).

The verdict of religion upon worldly self-aggrandizement could hardly be doubtful, and in all countries it is unanimous in condemnation. For Greek religious thought it was the direct forerunner of *ὕβρις*, which is visited upon the children to the third and fourth generation; in Buddhism it is a wile of *māya*, entangling the soul in the world of becoming and desire; for Confucius it is an enemy of peace; to the Muhammadan it is a choosing of this present life and its braveries, for which there is nothing in the next world but the fire.

In the Bible the word itself does not occur, and in the OT hardly even the idea. The Jewish historians confined themselves practically to the acts of kings, lesser men being introduced only when they came into contact or conflict with the king. But a violent change in the kingship of a people essentially and always theocratic, in the view of the writers, was ascribed as a rule to the direct intervention of God using a man as His instrument; and any private motives of such an instrument were disregarded. Thus it is not unlikely that such men as Jeroboam or Jehu were ambitious, but they are set in action by the word of a prophet. The Prophets again scourge the sins of the people, of which ambition was not one. The absence of any reference to it in the 'Wisdom-literature' of the nation (Proverbs, etc.) is more remarkable. Even Ecclesiastes, in considering the vanity of human wishes, travels round the idea rather than refers to it directly, in a way which suggests that power as a direct object of desire was unfamiliar to the author. The view of the NT, so far as expressed, is uncompromising. In the Christian community there is no room for ambition. The 'Kingdom of Heaven,' or Church of Christ, is for the poor in spirit (Mt 5^3); 'Whosoever would become great among you shall be your minister' (20^{26}); 'Set not your mind on high things, but condescend to things that are lowly' (Ro 12^{16}). Quotations need not be multiplied: the humility and renunciation of the things of the flesh, which are the badge of the followers of Christ, leave little room for the self-assertion inseparable from ambition. What (if any) modifications of this rigorous doctrine may be involved in or justified by the transition of Christ's Church from a limited and purely religious community to the creed of nations, it is not within the province of this article to discuss.

2. It is a current belief that ambition was the first sin which disturbed the harmony of heaven. 'Cromwell, I charge thee, fling away ambition: by that sin fell the angels' (*Henry VIII.* III. ii. 440). The origin of this tradition, which has no authority in the Bible, is obscure; but it may perhaps be traced to the old identification of the 'king of Tyre' in Ezk 28 with Satan. ('Thine heart is lifted up, and thou hast said, I am a god, I sit in the seat of God' [v.^{2}]. 'Therefore . . . strangers . . . shall bring thee down to the pit' [vv.$^{7, 8}$]. 'Thou hast been in Eden, the garden of God . . . thou wast the anointed cherub that covereth' [vv.$^{13, 14}$], etc.). According to the more elaborate version of Milton, however (*Paradise Lost*, v. 660 ff.), pride claims precedence. For it was jealousy of Christ, whose begetting threatened the archangel's pre-eminence in heaven, that stirred Satan's ambitious aim against the throne and monarchy of God. Dante appears to adopt the same tradition ('di cui è la invidia tanto pianta,' *Par.* ix. 129; 'principio del cader fu il maladetto superbir di colui,' etc., *ib.* xxix. 55). (For an elaborate discussion of the point see the *Dict. Encyclopéd. de la Théol. Cathol.*, *s.v.* 'Diable'). It is worth noting in this connexion that the first step in the process of declension of Plato's ideal State is marked by the appearance of

a ruffling and ambitious spirit (*φιλονεικίαι καὶ φιλοτιμίαι, Repub.* viii. 4).

LITERATURE.—Besides the works mentioned, reference may be made to Fowler and Wilson, *Principles of Morals* (1894), 43ff., 169; A. H. Strong, *Christ in Creation and Ethical Monism* (1899), 480; Dobschütz, *Chr. Life in the Prim. Church* (Eng. tr. 1904), 215, 221; J. B. Lightfoot, *Camb. Sermons* (1890), 317; A. L. Moore, *From Advent to Advent* (1892), 239; J. T. Jacob, *Christ the Indweller* (1902), 135.

C. D. ROBERTSON.

AMBROSE OF MILAN.—1. Life.—Ambrose was born, probably, at Trèves, the seat of government of his father, the Prætorian prefect of the Gauls. The family was noble; his father was one of the four highest officers in the empire; his elder brother Satyrus became the governor of a province, name unknown (*de excessu Satyri*, i. 49, 58). The family was also Christian in sympathy; Ambrose's great-aunt Sotheris had suffered as a martyr in the persecution of Diocletian (*de Virgin.* iii. 7; *Exhort. Virg.* xii. 82). The year of Ambrose's birth is a little uncertain. Either 333 or 340 A.D. will suit the data given in his letters (*Ep.* lix. 3, 4; see *PL* xiv. 68, for a full discussion). But probably 340 best meets all the circumstances. On the death of his father, his mother removed with her family to Rome (352), and there Ambrose received the usual liberal education. Of Latin authors Vergil was his favourite; he was also well read in Greek literature. In the doctrines of Christianity he was instructed by Simplicianus, whom he loved as a father (*Ep.* xxxvii.; not to be confused with the Simplicianus who succeeded him). Adopting the law as a profession, he rose very rapidly. When he was but little over 30 (372), Valentinian I., on the advice of the Christian Probus, the prefect of Italy, appointed him 'consular' of Liguria and Æmilia, an office which he discharged with great ability and integrity. In 374 both Dionysius the Catholic and Auxentius the Arian bishop *de facto* died. Both parties strove hard to secure the election of the successor, for at that time Milan was perhaps the first city in Europe in population and importance. Ambrose, in whose province it lay, went to preside at the election, and to suppress the customary tumults. But while the consular was addressing the people in the church on the duty of maintaining order, a voice was heard proclaiming, 'Ambrose is bishop.' The cry, according to Paulinus, first started by a child, was taken up by Arians and Catholics. In spite of the protests of Ambrose—on which Paulinus enlarges *con amore*, with disregard both to truth and to the good name of his hero, judged, that is, by modern ideas—the sanction of Valentinian was given to this irregular election, which won the approval also of the bishops of East and West (Basil, *Ep.* lv.; for Ambrose's statements about the election see *de Offic.* i. 1, 4, *Ep.* lxiii. 65, *de Pœnit.* ii. 8, 72. Ambrose says that Valentinian promised him 'quietem futuram,' *Ep.* xxi. 7). Ambrose was as yet only a catechumen; he had shrunk from baptism under the common feeling of the day which led so many to postpone the same until near death—the dread lest he should lose the baptismal grace. Within eight days of his baptism he was consecrated bishop (Dec. 7, 374, Migne, xiv. 71). His first step was to give his property to the poor and the Church. The administration of his household was handed over to Satyrus († 379), who left his province that he might serve his younger brother (*de excessu Satyri*, i. 20 f.)

Ambrose's life as a bishop was one of incessant work. His moments of leisure were filled with self-culture in theology, which, however, for the most part he learned by teaching (*de Offic.* i. 1, 4). Throughout his diocese Arianism almost ceased to exist, largely through his constant preaching and the care he bestowed on the preparation of catechumens. The Arians, thus bitterly disappointed in the bishop they had elected, found an opportunity for attacking him in his sale of Church plate to provide funds for the release of Roman prisoners captured in Illyricum and Thrace by the Goths, after their great victory at Adrianople (Aug. 9, 378). Ambrose's reply was characteristic: Which did they consider to be the more valuable, church plate or living souls? (*de Offic.* ii. c. 28).

Of his life at this time Augustine has given us a delightful picture (*Conf.* vi. 3, *Ep.* xlvii. 1):

> 'He was surrounded by an army of needy persons who kept me from him. He was the servant of their infirmities, and, when they spared him a few minutes for himself, he gave his body the food necessary, and nourished his soul with reading. . . . Often when I entered his retreat I found him reading softly to himself. I would sit down, and, after waiting and watching him for a long time in silence (for who would have dared to disturb attention so profound?), I would withdraw, fearing to importune him if I troubled him in the short time he rescued to himself out of the tumult of his multifarious business.'

In his opposition to the Arians, Ambrose did not limit his efforts to his own diocese. At Sirmium in 380, in spite of the threats of Aviana Justina, the Arian widow of Valentinian I. († Nov. 17, 375), Ambrose succeeded in carrying the election of the Catholic Anemius to the see. In 381 the young emperor Gratian—who from 378–381 lived chiefly at Milan, and followed in most things the advice of Ambrose, whom he called his *parens*, and who composed for his instruction (see *de Fide*, i. prol. iii. 1) his treatise against Arianism, entitled *de Fide* (378)—summoned a Western council, which met in September at Aquileia. Through the influence of Ambrose, who presided, the council deposed two more Arian bishops, Palladius and Secundinus [see the *Gesta Conc. Aq.* inserted in Ambrose, *Op.* after *Ep.* viii. (Migne, xvi. 916), or, more fully, Mansi, iii. 599 ff., and cf. *Epp.* i. ix.–xii.]. If in the following year he attended the abortive council at Rome, he seems to have taken no part in its deliberations. (For this somewhat uncertain council, see Mansi, iii. *s.v.*).

The murder of Gratian, who had estranged the soldiers by foolish and unpatriotic conduct, at Lyons (Aug. 25, 383) by the agents of the British usurper Maximus, led Justina, acting for her young son Valentinian II., to persuade Ambrose to journey to Trèves as her ambassador (*de Obitu Valent.* 28). As the result of his visit (winter, 383), or rather of the delays caused thereby, and the knowledge that behind Ambrose would be, if necessary, the forces of Theodosius, Italy seems to have been secured for Valentinian II., Spain, however, falling to the usurper (*Ep.* xxiv. 6, 7).

On his return to Milan, Ambrose came into collision with Q. Aurelius Symmachus, the prefect of Rome, Pontifex Maximus, Princeps Senatus, the leader in the Senate of the conservative and pagan majority (on this question of the majority, Ambrose, *Ep.* xvii. 10, 11, is untrustworthy). In 384, Symmachus had sought from Valentinian II. the restoration to the Senate of the ancient golden statue and altar of Victory, whose removal had been ordered by Gratian (382). This *Relatio Symmachi* (*Op. Sym.*, ed. Seeck, x. 3, in M.G.H.; see also Migne, *PL* xvi. 966), or defence of paganism, followed the usual line of argument of the times. Symmachus traced the greatness of Rome to the help of the gods; her decline and recent disasters, including a famine in the previous year, to the new creeds. He eloquently appealed to the charm of old traditions and customs. Ambrose's answer (*Ep.* xvii. a hasty appeal to Valentinian; *Ep.* xviii. more matured; cf. *Ep.* lvii. 2, 3) is not altogether happy in its claim that Rome owed her greatness not to her religion, but to her own intrinsic energy—a weak concession to secularism. For

the rest, he dwells on paganism as the world's childhood, Christianity as the evolutionary and progressive factor and result. The request of Symmachus was refused, as also were three other similar requests [382 to Gratian, 388 or 391 to Theodosius, 392 to Valentinian II. (Amb. *Ep.* lvii. 5)], chiefly through the zeal of Ambrose and the zealous orthodoxy of Theodosius. To Theodosius we owe the final triumph of Christianity by the series of his edicts which prohibited pagan rites, culminating, so far as sacrifices were concerned, in the deadly *nullus omnino* of Nov. 8, 392 (*Cod. Theod.* xvi. t. x. §§ 12, 13). The difficulties which the usurpation of Eugenius (see *infra*) threw in the way of the carrying out of this edict in the West explain Ambrose's antagonism to this shadow of an emperor.

But the great conflict of Ambrose was with the Arian court. Under the influence of a Scythian Arian, Mercurinus, better known by his name of Auxentius, adopted from the Arian bishop whom Ambrose had succeeded, the empress Justina demanded from Ambrose (Easter, 385) the surrender, first of the Portian basilica, now the Church of St. Victor, then of the new basilica (see *infra*), for the use of the Arians. Ambrose refused this, as well as all later requests (*Epp.* xx. xxi.). On Jan. 23, 386, Justina retorted by a decree drawn up by Auxentius, giving the Arians full freedom to hold religious assemblies in all churches. The edict was a failure. So Justina sent orders that Ambrose should either allow the dispute between Auxentius and himself to be settled by (secular) arbiters, or should leave Milan. Ambrose declined to do either. To employ the people who guarded the Portian basilica, in which he was in a way imprisoned, Ambrose introduced among them at this time the Eastern custom of antiphonal song [*Sermo de basilicis tradendis* (Migne, xvi. 1007), esp. c. 34; August. *Conf.* ix. 7].

Ambrose's victory over Justina was completed by the miracles (especially the alleged healing of a blind butcher named Severus) attending his discovery of some gigantic bones, which he believed to be those of two brother martyrs, Protasius and Gervasius, and of whose location he had a 'presage' or vision. The discovery of these relics was welcomed with enthusiasm by a church somewhat barren of local martyrs. In spite of Arian sneers, they were solemnly deposited under the altar of the new basilica then awaiting dedication, which Justina had claimed, and which Ambrose now called by their name [*Ep.* xxii.; August. *Civ. Dei*, xxii. 8, *Conf.* ix. 7; Paulin. *Vita*, cc. 14, 15; for Ambrose's view of the miracles, *Ep.* xxii. 17-20].

Realizing its hopelessness, Justina abandoned the struggle, the more readily that she needed the bishop's help. In 387 she requested Ambrose again to act as her ambassador with Maximus (*de Obitu Valent.* 28). It was probably on this second visit to Trèves that Ambrose refused to communicate with the followers of the Spanish bishops Ithacius and Idatius, because they had persuaded Maximus to sentence and torture to death Priscillian and certain of his followers as heretics (see PRISCILLIANISM), and also because they held communion with Maximus, the slayer of Gratian. We see the same resoluteness in his refusal to give Maximus at the first interview the customary kiss of peace, and in his demand for the body of Gratian. We need not wonder that his embassy was unsuccessful, and that Ambrose was 'himself thrust out' of Trèves (*Ep.* xxiv.; and for Ithacius, etc., cf. *Ep.* xxvi. 3).

Maximus crossed the Alps (Aug. 387), and for a short time occupied Milan itself. During this usurpation Ambrose withdrew from the city, while the death at that time (Bury's *Gibbon*, iii. 177 n.) of the exiled Justina rid the bishop of all further trouble from the Arians. As regards Ithacius, it may be added that Ambrose presided in the spring of 390 over a council of bishops from Gaul and Northern Italy at Milan which approved of his excommunication.

After the defeat and execution of Maximus at Aquileia (Aug. 27, 388), the great Catholic emperor Theodosius took up his abode at Milan. Emperor and bishop were soon in conflict. The first struggle is of some moment in the history of the growth of intolerance. The Christians of Callinicum in Mesopotamia had burnt down a conventicle of the Valentinians and a Jewish synagogue. Theodosius ordered the bishop of Callinicum to rebuild the same at his own expense. Ambrose protested in a long letter written at Aquileia (*Ep.* xl.); he seemed to glory in the act; for the Church to rebuild the synagogue would be a triumph for the enemies of Christ. On his appealing to Theodosius in a verbose and rambling sermon at Milan (in *Ep.* xli.), the emperor yielded. 'Had he not done so,' Ambrose wrote to his sister, 'I would not have consecrated the elements' (*Ep.* xli. 28). In such incidents as these we see the beginnings of the claims which culminated in Hildebrand and Innocent III. Of almost equal importance is it to notice the intolerance which treats the Valentinian village chapel as if it were no better than a heathen temple (*Ep.* xl. 16), and considers the death of Maximus to be the Divine retribution for his ordering in 387 the rebuilding of a synagogue in Rome (*Ep.* xl. 23).

Whatever may be thought of his arrogance and intolerance in this matter of Callinicum, in his next conflict with Theodosius Ambrose was grandly in the right. The story is too familiar to need much detail. Angered by the murder of Botherich, the barbarian governor of Illyria, by the people of Thessalonica, Theodosius gave orders, retracted all too late, that the whole populace should be put to death. The gates of the circus were closed; for three hours the massacre went on of those within (April 30, 390). According to Theodoret, 7000 perished. On learning the news, Ambrose wrote to Theodosius a noble and tender letter exhorting him to repentance (*Ep.* li.). What answer Theodosius returned we know not; but on his presenting himself at Milan at the door of the church (*S. Ambrogio*), Ambrose met him in the porch, rebuked him for his sin, and bade him depart until he had given proofs of his penitence. For eight months, if we may trust Theodoret, Theodosius absented himself from all worship (Theodoret, v. 18). He felt his exclusion bitterly. 'The Church of God,' he said to Rufinus his minister, 'is open to slaves and beggars. To me it is closed, and with it the gates of heaven.' The intercession of Rufinus was in vain; so Theodosius laid aside his pride, and, prostrate on the floor of the church, confessed his sin, a forerunner in a worthier struggle of Henry IV. at Canossa and Henry II. at Canterbury. On receiving absolution, Theodosius mounted the chancel steps to present his offering. Ambrose refused to allow him to remain. 'The purple,' he said, 'makes emperors, not priests.' Ambrose claimed the chancel for the clergy alone. In all this we see not merely the final triumph of the Christian religion over the Empire, but the beginnings of the subjection of the laity to the priesthood. [On this Thessalonican matter and Ambrose's action, see Ambrose, *Ep.* li.; Theodoret, v. 17, 18 (needs care); Sozomen, vii. 25; Rufin. ii. 18; August. *Civ. Dei*, v. 26; Paulin. *Vit. Amb.* 24; and for the penance of Theodosius, Amb. *de obitu Theodos.* 34].

The relations of Theodosius and Ambrose were

henceforth undisturbed. During the usurpation of Eugenius (392–394), whom Arbogast the Frank, after strangling Valentinian II. at Vienna (May 15, 392), had elevated from the professor's chair to the purple, Ambrose retired to Bologna and Florence and stood loyally by Theodosius, in spite of all the friendly overtures of Eugenius. In Eugenius he rightly detected the danger of the recrudescence of paganism, as part of his political programme (*Ep.* lvii.; Paulin. *Vita*, 26, 31). No one, therefore, rejoiced more than Ambrose in Theodosius' victory over the puppet emperor at Heidenschafft (or Wipbach ?), Sept. 6, 394 (*Epp.* lxi. and lvii.; *Enarr. in* Psalm xxxvi. 22; Paulin. *Vita*, 26–34; August. *Civ. Dei*, v. 26), though he was careful to intercede with Theodosius not to punish the people in general. A few months later Theodosius died at Milan (Jan. 17, 395), in his last hours sending for Ambrose and commending his sons Arcadius and Honorius to his care (Amb. *de Obitu Theod.* 35). It was Ambrose also who in the presence of Honorius pronounced over the dead Theodosius the funeral oration. The death of Ambrose two years later (Good Friday, April 4, 397) was more than the passing of a great bishop: 'It is a death-blow for Italy,' exclaimed the valiant but ill-fated Stilicho (Paulin. *Vita*, 45). Ambrose was buried under the altar of the great church which he had built and consecrated to Protasius and Gervasius (see *supra*), but which now bears his own name (S. Ambrogio).

2. Influence.—The reputation of Ambrose must always rest upon his courage and skill as a practical administrator of the Church in most troublous times. In spite of sacerdotal claims which later were to bear much fruit, few would grudge him the tribute of their admiration. He combined the loftiest qualities of the Roman senator with the goodness and self-denial of the true Christian. Though his methods may not always commend themselves to our modern notions, in his results Ambrose was usually in the right. He saved Italy from Arianism, and restored her to the faith. Even the growth of sacerdotal claims was not without its services. In the approaching barbarian deluge it was no small gain to civilization that there was a power before which tyranny should quail. This is one side of his famous saying at the Council of Aquileia, 'Sacerdotes de laicis judicare debent, non laici de sacerdotibus' (*Gesta Conc. Aquil.* 51; see *supra*, p. 373[b]). The other side is its development into the deeds and theories of Hildebrand.

By his introduction of antiphonal singing (on the details of which see Groves' *Dict. Music*, new ed. *s.v.* 'Antiphony, Ambrosian, Gregorian'), Ambrose enriched the Western Church for ever. His own hymns, though repeatedly imitated in later days (see the full list of hymns falsely attributed to Ambrose, Migne, *PL* xvii. 1171–1222), are few in number, according to the Benedictine editors not more than twelve in all (printed in Migne, xvi. 1410), but of great interest and value. Their construction is uniform: 8 strophes in Iambic acatalectic dimeter (∪ — ∪ — ∪ — ∪ —). The ascription to him of the *Te Deum* as composed at the baptism of St. Augustine is a legend of late growth. His morning hymns, *Æterne rerum conditor*, *Splendor paternæ gloriæ* ('O Jesu, Lord of heavenly grace'), his evening hymn, *Deus creator omnium*, his Christmas hymn, *Veni redemptor gentium*, and his hymn, *O lux beata Trinitas*, are permanent possessions of the Church universal (Trench, *Sacred Lat. Poetry*, 80–86; Julian, *Dict. Hymn.* 56 and *s.v.*).

The reputation of Ambrose as a writer and thinker must not be rated high, in spite of his being regarded as one of the four Latin Fathers of the Church. Gibbon is correct: 'Ambrose could act better than he could write. His compositions are . . . without the spirit of Tertullian, the copious elegance of Lactantius, the lively wit of Jerome, or the grave energy of Augustine' (iii. 175 n.). As a thinker he is completely overshadowed by his great convert St. Augustine, whose baptism in S. Ambrogio, at his hands, is one of the great spiritual events of the world (April 25, 387). But his influence was strongly exerted in certain directions, some of which we may deplore, all of which had later developments. His extravagant regard for relics (Gervasius, *supra*), and his enthusiasm for virginity (see especially the three books *de Virginibus* addressed to his sister Marcellina) and asceticism were signs of the times and indications of the future. His theory of the Sacraments (*de Sacramentis libri sex*) tended to the emphasis of materialistic conceptions; for instance, he praises his brother Satyrus for tying a portion of the Eucharist round his neck when shipwrecked (*de excessu Satyri*, i. 43, 46). He deduces the necessity of daily communion from the clause of the Lord's Prayer (ἐπιούσιος; *supersubstantialis*, Vulg. *quotidianus* [*de Sacr.* vi. 21], a view much developed in mediæval theology; cf. ABELARD, *supra*, p. 16[b]). His sermons are remarkable for their manliness and sober practicalness, enforced at times by felicitous eloquence. His letters are more valuable as materials for the historian than because of any charm or personal revelation. His exegetic writings, as we might expect from his lack of special study, contain little that is original, and are excessively allegorical after the fashion introduced by Origen (cf. August. *Conf.* vi. 4). But his knowledge of Greek enabled Ambrose to enrich Latin theology with many quotations from the Eastern Fathers, *e.g.* Basil and Gregory of Nyssa. Jerome, in fact, by reason of his dependence on these sources, especially Basil, compares him to a crow decked out in alien feathers (Rufinus, *Invect.* ii.). We see this dependence in his *de Bono Mortis* (the Blessing of Death), written about 387, in which his exceedingly mild view of the future punishment of the wicked is plainly indebted to *Fourth Esdras*. 'It is more serious,' he writes, 'to live in sin than to die in sin' (*op. cit.* 28). Nevertheless he 'does not deny that there are punishments after death' (*ib.* 33).

As a moral teacher Ambrose is seen at his best. His *de Officiis Ministrorum*, founded on the *de Officiis* of Cicero, is an attempt to establish a Christian ethic on the basis of the old philosophic classification of four cardinal virtues (*virtutes principales*)—*prudentia* or *sapientia*, *justitia*, *fortitudo*, and *temperantia* (*l.c.* i. 24). Of these he identifies *prudentia* with a man's relation to God ('pietas in Deum'; *de Offic.* i. 27). The classification is essentially faulty, as it leaves no place for humility, a grace unrecognized by pagan writers, and which Ambrose has difficulty in bringing in (*de Offic.* ii. 27). Virtue, he claims, is not the *summum bonum* of the Stoics, but rather the means to it. Ambrose further follows the Stoics in distinguishing between perfect and imperfect duties ['officium medium aut perfectum'; *consilia evangelica* and *præcepta* (*de Offic.* i. 11, 36 ff.; iii. 2)], a doctrine later developed into the mediæval 'works of supererogation.' His exegesis of the Sermon on the Mount is literal. The taking of interest is unconditionally rejected; the Christian should not even defend himself against robbers (*l.c.* iii. 4), though, remembering his Old Testament, he does not go so far as absolutely to condemn the soldier (*l.c.* i. 40). As was usual in the early Church, he disapproves of capital punishment, though he shows that he was somewhat embarrassed by the position

in the matter of Christian judges (*Ep.* xxv.). We see his leanings to monasticism in his declaration that private property is *usurpatio* (*de Offic.* i. c. 28); charity is thus the partial adjustment of a wrong, and, as such, able to cancel sin (*de Elia et jejunio*, c. 20, from Tobit 12[9]; *Sermo de eleemosynis*, 30, 31). We see the new note of humanity in his declaration that strangers must not be expelled from a city in time of famine (*de Offic.* iii. 7).

LITERATURE.—*A.* For the life of Ambrose we are dependent on the materiale to be found in his own works (first arranged by Baronius) and on the *Vita* of Paulinus, his secretary. This work, dedicated to Augustine, is most unsatisfactory, and full of the absurdest prodigies [with which cf. the contemporary Sulpic. Severus, *Vita Martini* (ed. Halm, *CSEL*), cc. 1, § 9; 7, 8, 16; *Dial.* i. 24, 25, ii. 4, iii. 5, § 5]. It will be found in Migne, *PL* xiv. 27–46, or ed. Bened. App. An anonymous life in Greek (Migne, *PL* xiv. 46–66) is valueless. Other sources of knowledge from Augustine, etc., are indicated in the text.

B. The chief editions of the works of Ambrose, including a great many that are spurious, are (1) the editions of Erasmus, esp. the Basel ed. of Froben in 1527; (2) the Roman ed. in 6 vols. 1580–1587; (3) the Benedictine ed. of du Frische and le Nourry, Paris, 1686–1690; (4) Migne, *PL* xiv.–xvii. [the last vol. mostly spurious; Migne has excellent notes]; (5) the new ed. in progress (text only) in the Vienna *CSEL* (the Epp. unfortunately as yet [1907] not printed); (6) the ed. of Ballerini (Milan, 1875).

C. Of modern works, mention may be made of Th. Förster, *Amb. B. v. Mailand* (1884); Ihm, *Studia Ambrosiana* (1889); Pruner, *Die Theol. d. Amb.* (1862); Deutsch, *Des Amb. Lehre von d. Sünde und Sündentilgung* (1867); P. Ewald, *Der Einfluss der stoisch-ciceron. Moral auf die Ethik bei Amb.* (1881). For the historic setting, Gibbon, ed. Bury; and Hodgkin, *Italy and her Invaders* (1880, vol. i.), are indispensable.

H. B. WORKMAN.

AMERICA (Ethnology, Religion, and Ethics*). —Although many of the ethnical questions presented by the *Amerinds* or *Amerindians*, as some now propose to call the American aborigines, wrongly named 'Indians' by the Spanish discoverers, still await solution, the more fundamental problems affecting their origin and cultural development may be regarded as finally settled. Little is now heard of the 'Asiatic school,' which derived the Amerinds and all their works from the Eastern Hemisphere in comparatively recent times, that is, when the inhabitants of the Old World—Egyptians, Babylonians, Malays, Hindus, Chinese, Japanese—were already highly specialized. Such an assumption necessarily gave way when a more critical study of the American physical and mental characters, religious and social systems, failed to discover any close contact with those of the Old World, but pointed rather to independent local growths, owing nothing to foreign influences except the common germs of all human activities. Direct contact or importation might, for instance, be shown by the survival of some language clearly traceable to an Eastern source; or some old buildings obviously constructed on Egyptian, Chinese, or other foreign models; or any inscriptions on such buildings as might be interpreted by the aid of some Asiatic or European script; or some sailing craft like the Greek trireme, the Chinese junk, or Malay prau, or even the Polynesian outrigger; or some such economic plants and products as wheat, barley, rice, silk, iron; or domestic animals such as the ox, goat, sheep, pig; or poultry; things which, not being indigenous, might supply an argument at least for later intercourse. But nothing of all this has ever been found; and the list might be prolonged indefinitely without discovering any cultural links between the two hemispheres beyond such as may be traced to the Stone Ages, or to the common psychic unity of mankind. Mention is made of the oil-lamp, which, however, is confined to the Eskimo fringe, and was no doubt borrowed from the early Norse settlers in Greenland. There are also the Mexican pyramids, which have been likened to those of Memphis by archæologists who overlook the fundamentally different details, and forget that the Egyptians had ceased to build pyramids some 3000 years before the Mexican teocalli were raised by the Toltecs. Lastly, recourse is had to the Aztec and Maya calendric systems, although they prove, not Oriental borrowings, as Humboldt wrongly thought, but normal local developments on lines totally different from those of the Eastern astronomers.

Mainly on these grounds, the late J. W. Powell finally rejected the Asiatic theory, holding that there is no evidence that any of the native arts were introduced from the East; that stone implements are found in the Pleistocene deposits everywhere throughout America; that the industrial arts of America were born in America; that the forms of government, languages, mythological and religious notions were not derived from the Old, but developed in the New World (*Forum*, Feb. 1898). Mr. F. S. Dellenbaugh goes even further. He sets back the peopling of the continent to the Pre-Glacial epoch, while the climate was mild; and concludes that the Amerind race was 'early cut off on this hemisphere from intercourse with the remainder of the world, and held in isolation by a change in land distribution and by the continued glaciation of the northern portion of the continent'; and thus 'welded into an ethnic unity, which was unimpressed by outside influences till modern times' (*The North Americans of Yesterday*, 1901, p. 458). Hence the general homogeneity of type, customs, social and religious institutions, 'which separates the Amerindian races from the rest of the world, and argues an immense period of isolation from all other peoples' (*ib.* p. 358).

Recent exploration, especially in South America, supports the view that this 'general homogeneity' is not primordial, but the result of a somewhat imperfect fusion of two original elements—long-headed Europeans and round-headed Asiatics—which reached the New World in pre- and interglacial times by now vanished or broken land connexions. The Europeans, who most probably came first by the Faroe-Iceland-Greenland route available in the Pleistocene (Quaternary) Age, occupied the eastern side of the continent, and ranged in remote times from the Eskimo domain to the extreme south, where they are still represented by the Botocudos, Fuegians, and some other long-headed isolated groups. Thus the veteran palæo-ethnologist, G. de Mortillet, suggests that the Palæolithic men, moving with the reindeer from Gaul northwards, passed by the then existing land bridge into America, where they became the ancestors of the Eskimos. This view is anticipated by Topinard on anatomical grounds, and now confirmed for South America by A. Nehring and F. P. Outes. Nehring produces a long-headed skull from a Brazilian shell-mound at Santos, which presents characters like those both of the European Neanderthal and of the still older Javanese *Pithecanthropus erectus* (*Verhandl. Berlin. Anthrop. Ges.* 1896, p. 710). And in Patagonia, Outes describes eight undoubted Palæolithic stations and two Pleistocene types,—a long-headed arriving from the North-east and a short-headed from the North-west (*La Edad de la Piedra en Patagonia*, Buenos Ayres, 1905, section ii.).

The two streams of migration—Asiatic short-heads (North-west) and European long-heads (North east)—are thus seen to commingle in the extreme south as early as the Old Stone Age; that is, prior to any marked somatic and cultural specializations

* This art. is offered as a general introduction to the Religion and Ethics of the American tribes. The tribes of North America will be grouped under the titles NORTH PACIFIC COAST; CALIFORNIA; MIDDLE AND SOUTHERN PLAINS; PUEBLOS; ALGONQUINS; DENES; ATLANTIC SEACOAST; ESKIMOS AND THE N.W. COAST; and some important tribes will be more fully described under their own names. An art. on the Mexican tribes will be found under MEXICO. The present art. is followed by a separate sketch of the religion of the South American tribes; on which see, further, ANDEANS, etc.

in the Eastern Hemisphere. The Asiatics, following the still bridged Bering route, appear to have arrived a little later, but in larger bodies, which explains the predominance of round heads along the Pacific seaboard from Alaska to Chili. But interminglings were inevitable, and the result is that the Amerinds as a whole are a composite race, in which the Mongolic (Asiatic) characters are perhaps more marked than the Caucasic (European). Thus the complexion is reddish-brown, coppery, olive or yellowish, never white; while the hair is uniformly black, lank, often very long and round in section, like that of all Mongols. The high cheek-bones, too, point to Mongol descent, as does also the low stature—5 feet and under to 5 feet 6 inches—in the west (Thlinkets, Eskimos, Haidas, Pueblos, Aztecs, Peruvians, Aymaras, Araucanians). On the other hand, the large convex or aquiline nose; the straight though rather small eyes, never oblique; the tall stature (5 feet 8 inches to 6 feet and upwards), especially of the Prairie Redskins, the Brazilian Bororos, and the Patagonians, as well as a curious Caucasic expression often noticed even amongst the Amazonian aborigines, bespeak a European origin, more particularly for the eastern and central groups. The constituent elements of the Amerinds would therefore appear to be proto-Europeans of the Old Stone Age—that is, a somewhat generalized primitive Caucasic type—and proto-Asiatics of the early New Stone Age,—that is, a somewhat generalized primitive Mongolic type,—both elements still preserving many features of the common Pleistocene precursors (see art. ETHNOLOGY, § 4).

Coming now to the *mental qualities*, as illustrated by language, the industrial arts, social and religious institutions, and ethical standards, we shall find that in all these respects the Amerinds show far greater divergences from their Eurasian progenitors than is the case with their somatic characters. The reason is obvious. The physical traits brought with them from the East are, so to say, indelible and, apart from slight modifications due to miscegenation, climate, and heredity, necessarily persist as witnesses to their ethnical origins. But the mental phenomena and cultural processes were all in a rudimentary state when the Amerinds were cut off from the Eurasians in the Ice Age, and since then the very rudiments have almost been obliterated during their normal evolution in the New World. Dellenbaugh deals fully with such industries as basketry, pottery, carving, weaving, and, without any reference to Eastern prototypes, is able to follow their regular development in America from the rudest beginnings to the finished Pueblo and Californian waterproof wickerwork, and the highly artistic earthenware and basalt carvings of the Chiriqui district, near Panama. And that these are all purely local products, uninspired by any extraneous influences, is evident from the fact that, as we shall see, they are exclusively 'dominated by the customs and religious ideas of the Amerind race, which were practically the same everywhere in different stages of development. As in picture-writing we trace the growth of letters, so by the aid of Amerind sculpture and carving we have a line of art progress from infancy to the present time' (*op. cit.* p. 192 f.).

Perhaps even a stronger proof of independent growth in a long-secluded region is presented by the Amerind languages, not one of which has yet been traced to a foreign source. From all other forms of speech they differ not merely in their general phonetic, lexical, and structural features: they differ in their very morphology, which is neither agglutinating, inflecting, nor isolating, like those of the Old World, but holophrastic or polysynthetic, with a tendency to fuse all the elements of the sentence in a single word, often of prodigious length. Here culture makes no difference, and the same holophrastic character is everywhere presented by the rudest as well as by the most highly cultivated tongues current between Alaska and Fuegia, by Aztec, Mayan, and Quichuan (Peruvian) no less than by Eskimo, Algonquin, Cherokee, Amazonian, Ipurina, and Tehuelche of Patagonia. Yet of this remarkable linguistic phenomenon not a single instance is to be found anywhere in the Eastern Hemisphere. There is incorporation with the verb, as in Basque and the Mongolo-Turkic family, always limited, however, to pronominal and purely formative elements. But in Amerind speech there is no such limitation; and not merely the pronouns, which are restricted in number, but the nouns, with their attributes, which are practically numberless, all enter necessarily into the verbal paradigm. Thus the Tarascan of Mexico cannot say *hoponi*, 'to wash,' but only *hopocuni*, 'to wash the hands,' *hopodini*, 'to wash the ears,' and so on, always in one synthetic form, which is conjugated throughout, so that the conjugation of a Dakotan, Cree, Aztec, or any other Amerind verb is endless. Specimens only can be given, and they fill many pages of the native grammars without even approximately exhausting a theme for which six or eight pages suffice, for instance, in English or Danish. The process also involves much clipping and phonetic change, as in the colloquial English *hap'oth* = 'halfpenny worth,' *I'd* = 'I would,' etc., forms which give just a faint idea of the Amerind permutations.

It is obvious that such a linguistic evolution from a common rudimentary condition of speech, as in the Pleistocene Age, implies complete isolation from foreign contacts, by which the cumbrous process would have been disturbed and broken up, and also a very long period of time, to expand and consolidate the system throughout Amerindia. But time is perhaps still more imperiously demanded by the vast number of stock languages which form another remarkable feature of the American linguistic field. Some are known to have died out since the Discovery; but many others, variously estimated at from one to two hundred, or perhaps more than are found in the whole of the Eastern Hemisphere, are still current, all differing radically in their phonology, vocabulary, and general structure—in fact, having little in common beyond the extraordinary holophrastic mould in which they are cast. But even this statement conveys a far from adequate idea of the astonishing diversity of speech prevailing in this truly linguistic Babel. Powell, who has determined nearly sixty stocks for North America alone, shows that the practically distinct idioms are far more numerous than might be inferred even from such a large number of mother-tongues. Thus in the Algonquian family there are quite forty members differing one from the other as much as, and sometimes even more than, for instance, English from German: in Siouan, over twenty; in Athapascan, from thirty to forty; and in Shoshonean, a still greater number (*op. cit.* and *Indian Linguistic Families of America North of Mexico*, Washington, 1891). For the stocks Powell adopts the convenient ending *-an* attached to a typical or leading member, such as *Algonquin*, which for the whole group becomes *Algonquian*; and the principle has been extended by Dr. N. León to the Mexican and Central American families, and by A. H. Keane to those of South America. León's list, based on the latest information, comprises seventeen stocks, including the great and widespread Nahuatlan (Aztecan) and Maya-Quichéan families, and ranging from Lower California and the Rio Grande del Norte southwards

to Panama (*Familias Linguisticas de Mexico*, etc., Museo Nacional, 1902). The imperfectly explored South American section has already yielded over fifty stocks, of which the more important are the Quichua-Aymaran, the Tupi-Guaranian, the Carihan, Arawakan, Gesan, and Araucan. But some of these are lumped together in large groups, such as the Ticunan, Moxosan, and Purusan, each of which will, on more careful analysis, probably be found to comprise several stocks (Keane, *Central and South America*, 1901, vol. i. ch. ii.).

So uniform are the physical characters, that systematists have failed to establish an intelligible classification of the Amerind races on strictly anthropological data. Hence all current classifications are mainly linguistic, and make no claim to scientific accuracy. Thus Sir E. im Thurn declares that for Guiana, where 'it is not very easy to describe the distinguishing physical characters,' and where 'there are no very great differences other than those of language,' this factor 'must be adopted as the base of classification' (*Among the Indians of Guiana*, 1883, p. 161). At the same time, the linguistic grouping is convenient, and often even informing, as we see in the northern fringe, where, owing to the astonishing tenacity with which the Eskimos cling to their highly polysynthetic language, their pre-historic migrations may still be easily followed from Greenland and Labrador round the shores of the frozen ocean to Alaska, and even across the Bering waters to the opposite Asiatic mainland. So with the Algonquians, whose cradle is shown to lie about the Hudson Bay lands, where Cree, the most archaic of all Algonquian tongues, still survives.

Perhaps even more striking is the case of the Siouans (Dakotans), hitherto supposed to have been originally located in the prairie region west of the Mississippi, but now proved to have migrated thither from the Atlantic slope of the Alleghany uplands, where the Catawbas, Tutelos, Woccons, and other Virginian tribes still spoke highly archaic forms of Siouan speech within the memory of man. So also the Niquirans, Pipils, and others of Guatemala and Nicaragua, who are known to be of Nahuatlan stock, not from their somatic characteristics, but solely from the corrupt Aztec language which they have always spoken.

As the tribe is thus identified only or mainly by its speech, it becomes important to determine the distribution of the Amerind tongues in their several areas. It is noteworthy that the great majority of Powell's families, about forty altogether, are crowded in great confusion along the narrow strip of seaboard between the coast ranges and the Pacific from Alaska to California: ten are dotted round the Gulf of Mexico from Florida to the Rio Grande, and two disposed round the Gulf of California, while nearly all the rest of the land—some six million square miles—is held by the six widely-diffused Eskimoan, Athapascan, Algonquian, Iroquoian, Siouan, and Shoshonean families. Similarly in Mexico, Central and South America, about a dozen stocks—Opata-Piman, Nahuatlan, Maya-Quichéan, Chorotegan in the north; Cariban, Arawakan, Tupi-Guaranian, Tapuyan (Gesan), Tacanan, Aymara-Quichuan, Araucan in the south—are spread over many millions of square miles, while scores of others are restricted to extremely narrow areas. Various theories have been advanced to explain this strangely irregular distribution, and, at least in the North American prairie lands, the Venezuelan savannahs, and the Argentine pampas, a potent determining cause must have been the scouring action of fierce, predatory steppe nomads, so that here, as in Central Asia, most of the heterogeneous groups huddled together in contracted areas may perhaps be regarded as 'the sweepings of the plains.' The chief stocks, with their more important sub-groups, will be found in art. ETHNOLOGY, *Conspectus*.

None of the Amerind languages has ever been reduced to written form except by the missionaries, and in one instance by a Cherokee native (Sequoyah or George Guest), working under European influences and on Old-World prototypes. Even the cultured Peruvians had nothing but the *quipo*, knotted strings of varying thickness, colour, and length, used for recording dates, statistics, and events. The more artistic, but less serviceable, Algonquian *wampum* sometimes answered the same purpose, as in the historical treaty between Penn and the Delaware Indians. But various rude pictographic systems, inscribed or painted on rocks, skins, earthenware, or calabashes, were almost universal, ranging from the extreme north (Eskimos) to Argentina and Central Brazil. The Matto Grosso aborigines, recently visited by the Bohemian explorer, V. Fric, have developed quite an ingenious method of 'taking notes,' using dried calabashes for the purpose. Everybody goes about with one of these, which may be called his diary, all important incidents being inscribed on it pictorially. The art is perhaps the most perfect of the kind anywhere devised, since the scratchings are quite legible, and handed round to be read as we might hand round printed or written matter. True perspective and proportion are observed, as by the Bushmen in their cave paintings; and the evil spirits which swarm everywhere are also thwarted by being sketched in fanciful forms on the calabashes (*Science*, July 1906).

Far more advanced than any of these primitive methods are the Aztec, the Zapotec, and especially the Maya pictorial codices, painted in diverse colours on real native (maguey) paper, and mainly of a calendric or astrological character. Several have been reproduced in facsimile with long commentaries by Förstemann and Seler, but still remain undeciphered, although they express numerals quite clearly. They had also reached the *rebus* state, but apparently fell short of a true phonetic system, despite the claim of Bishop Landa's 'alphabet' to be regarded as such. There are also long mural inscriptions on many of the temples and other structures at Palenque, Uxmal, Chichen-Itza, and elsewhere in Chiapas, Yucatan, and Honduras. But these also have so far baffled the attempts of Mr. Cyrus Thomas and others to interpret them, although the calculiform ('pebble-like') characters present the appearance of a real script. It is admitted that many have phonetic value, but only as rebuses, and the transition from the rebus to true syllabic and alphabetic systems had apparently not been made by any of the Amerinds. But even so, these codices and wall writings, believed to embody calendric systems on a level with the reformed Julian, represent their highest intellectual achievements, while the palaces and temples in the abovementioned districts rank as their greatest architectural triumphs, rivalled only by those of the Chimus, Quichuas, and Aymaras in Peru and on the shores of Lake Titicaca.

Elsewhere there is nothing comparable to these monumental remains of Central and South America, and the less cultured Amerinds of North America have little to show of æsthetic interest beyond their beautiful ceramic and wickerwork products, the earth-mounds thickly strewn over the Ohio valley and some other parts of the Mississippi basin, and the *casas grandes* of the Pueblo Indians in New Mexico and Arizona. On the origin of the *casas grandes*—huge stone structures large enough to accommodate the whole community—no question arises. They are undoubtedly the work of their present occupants, the Hopi (Moki), Tañoan,

Keresan, and Zuñian tribes, driven to the southern uplands by the Apaches, Navahos, and other predatory nomads of the plains. Their communal houses or strongholds grew out of the local conditions, and the complete adaptation of Pueblo architecture to the physical environment is quite obvious. The circular chambers called *estufas* or *kivas* occurring in some districts are still the council houses and temples, the 'medicine lodges,' in which the religious and social affairs of the community are transacted, and their very form recalls the time when the tribe dwelt in round huts or tents on the plains. Some are very old, some quite recent; yet the structures do not differ from one another, and in all cases 'the result is so rude that no sound inference of sequence can be drawn from the study of individual examples; but in the study of large aggregations of rooms we find some clues. The unit of Pueblo construction is the single room, even in the large many-storied villages. This unit is quite as rude in modern as in ancient work, and both are very close to the result which would be produced by any Indian tribes who came into the country and were left free to work out their own ideas. Starting with this unit, the whole system of Pueblo architecture is a natural product of the country and of the conditions of life known to have affected the people by whom it was practised' (Cosmos Mindeleff in Sixteenth An. Report of *BE*, Washington, 1897, p. 192).

This applies with equal force to the *cliff-dwellings* of the neighbouring Colorado cañons, in which the same peaceful Pueblo peoples have taken refuge against the same marauding Prairie Indians. 'Along the cliff lines slabs of rock suitable for building abound; and the primitive ancients, dependent as they were on environment, naturally produced the cliff-dwellings. The tendency towards this type was strengthened by inter-tribal relations; the cliff-dwellers were probably descended from agricultural or semi-agricultural villagers who sought protection against enemies, and the control of land and water through aggregation in communities' (*ib.* p. 94).

In the same way many of the Ohio mounds, which often present the aspect of fortresses, may have been raised by the more settled Cherokee (Iroquoian) tribes as earthworks against the lawless nomads of the surrounding plains. In any case the long controversy regarding their origin may now be taken as closed, and the view that they were constructed, not by any unknown pre-historic race, but by the present Amerinds, is generally accepted as beyond reasonable doubt. Mr. W. K. Moorehead, one of the best observers, recognizes two distinct mound-building races, the earlier long-heads of the Muskingum valley, and the later round-heads whose chief centre lay about the sources of the Ohio river. From the sepulchral and other mounds of the long-heads have been recovered pottery, slate and hematite objects, copper bracelets and other ornaments, all generally inferior to those of the round-heads. Fort Ancient, the largest of the earthworks in Ohio, is nearly a mile long with over 10 miles of artificial knolls, and Chillicothe on the Scioto river is the centre of several extensive groups, such as the Hopewell and Hopeton works, and the Mound City, that have yielded potteries of artistic design, finely wrought flints, and some copper, but no bronze or iron implements—another proof that nearly the whole of America was still in the Stone Age at the time of the Discovery. Moorehead concludes that none of the mound-builders attained more than a high state of savagery; that they were skilled in several arts, but excelled in none; that they were not even semi-civilized, much less possessed of the 'lost civilization with which they have been credited' (*Primitive Man in Ohio*, 1892, *passim*). Hence the general inference of Cyrus Thomas that there is nothing in the mounds that the Amerinds could not have done, that many have been erected or continued in post-Columbian times, consequently by the present aborigines, and that there is therefore no reason for ascribing them to any other race of which we have no knowledge (Twelfth An. Report of *BE*, Washington, 1894). Taking a broader view of the whole horizon, Dr. Hamy ventures to suggest that the mound-builders, the Pueblo Indians, and the cliff-dwellers 'all belong to one and the same race,' whose prototype may be a fossil Californian skull from the Calaveras auriferous gravels assumed to be of Pleistocene age (*L'Anthropologie*, 1896, p. 140).

For most of these Northern Amerinds a higher moral standard may perhaps be claimed than for the more civilized Central and South American peoples. Our general impression of the native American, writes Mr. Dellenbaugh, who knows them well, is that he is a kind of human demon or wild animal, never to be trusted, unable to keep a compact, and always thirsting for blood. But it is not so. If treated fairly he may nearly always be trusted. The Iroquois League maintained the 'covenant chain' with the British unbroken for over a century; the Delawares never broke faith with Penn; and for two hundred years the Hudson Bay Company have traded all over the northern part of the continent, without a serious rupture with any of the Chipewyan, Cree, and other rude Athapascan and Algonquian tribes.

'We are blind to our own shortcomings, and exaggerate those of the Amerind. In estimating their traits we do not regard them enough from their own standpoint, and without so regarding them we cannot understand them. His daily life in the earlier days was by no means bloodthirsty, and the scalping-knife was no more the emblem of pre-Columbian society than the bayonet is of ours. In most localities he achieved for all, what all are with us still dreaming to obtain—"liberty and a living," and his methods of government possessed admirable qualities' (*op. cit.* p. 353 f.).

The aborigines, however, were not free from the taint of cannibalism, which, if it assumed a somewhat ceremonious aspect in the north, was widely practised by many of the Brazilian, Andean, Colombian, and Amazonian tribes in the south, without any such religious motive. Thus the nearly extinct Catios, between the Atrato and Cauca rivers, were reported, like the Congo negroes, to 'fatten their captives for the table.' Their Darien neighbours stole the women of hostile tribes, cohabited with them, and brought up the children till their fourteenth year, when they were eaten with much rejoicing, the mothers ultimately sharing the same fate (Cieza de León). The Cocomas along the Rio Marañon ate their own dead, grinding the bones to drink in their fermented liquor, and explaining that 'it was better to be inside a friend than to be swallowed up by the cold earth' (Markham, *JAI*, 1895, 235 f.). The very word *cannibal* is a variant of *caribal*, derived from the man-eating Caribs; and so universal was the custom in New Granada, that 'the living were the grave of the dead; for the husband has been seen to eat his wife, the brother his brother or sister, the son his father; captives also are eaten roasted' (Steinmetz, *Endokannibalismus*, p. 19). But the lowest depths of the horrible in this respect were touched by what J. Nieuwehof relates of the wide-spread East Brazilian Tapuya savages, although something nearly as bad is told by Dobrizhoffer of some of the primitive Guarani tribes in Paraguay (*ib.* pp. 17–18). The Seri people of Sonora, most debased of all the Northern Amerinds, are certainly cannibals (McGee). But elsewhere in the north, anthropophagy has either long since died out, or else survives here and there apparently only as a ceremonial rite. 'Cannibalism of this

kind prevailed in many tribes; *always, ostensibly,* a religious ceremony, not a means of satisfying hunger. The victims were often richly feasted and generously treated for some time before being executed' (Dellenbaugh, p. 368). Yet Payne declares that the Aztec custom of consuming captives at religious feasts was in reality a means of procuring animal food resulting from the limited meat supply, and that perpetual war was waged mainly to obtain prisoners for this purpose (*History of the New World*, etc., ii. pp. 495, 499, 501).

The more favourable picture presented by the northern aborigines is specially applicable to the Iroquois, in many respects the finest of all the Amerinds, — unsurpassed, says Brinton, by any other on the continent, 'and I may even say by any other people in the world. In legislation, in eloquence, in fortitude, and in military sagacity they had no equals. They represented the highest development the Indian ever reached in the hunter state. Crimes and offences were so infrequent under their social system that the Iroquois can scarcely be said to have a criminal code. Theft was barely known, and on all occasions, and at whatever price, the Iroquois spoke the truth without fear and without hesitation' (*The American Race*, p. 82). Even in the literary sphere they rank high, as attested by Sequoyah's most ingenious syllabic script (see above), and by the stirring poetic effusions of Miss Pauline Johnson (Tekahionwake), who can thus sing of the departed Amerind's 'Happy Hunting Grounds':

'Into the rose-gold westland its yellow prairies roll,
World of the bison's freedom, home of the Indian's soul.
Roll out, O seas, in sunlight bathed,
Your plains wind-tossed, and grass-enswathed. . . .
Who would his lovely faith condole?
Who envies not the Red-skin's soul
Sailing into the cloudland, sailing into the sun,
Into the crimson portals ajar when life is done.'
(*The White Wampum*, 1906).

This vision of a cloudland, the glorified abode of departed souls, is a purely anthropomorphic notion common to all the primitive Amerind peoples. It has nothing to do with the supernatural, or with rewards and penalties after death, or even with the immortality of the higher creeds, but is to be conceived as a purely natural continuation of the present life, freed from its cares and troubles. Skyland is only a distant part of this world, which is better than the tribal territory, and in which the departed continue to live in a state of absolutely material comfort and happiness, exempt from all present anxieties, and, so to say, without a thought for the morrow.

'The key to the whole matter may be provided by remembering that these [Guiana] Indians look on the spirit-world as exactly parallel to, or more properly as a part of, the material world known to them. Spirits, like material beings, differ from each other only, if the phrase be allowed, in their varying degrees of brute force and brute cunning, and none are distinguished by the possession of anything like divine attributes. Indians therefore regard disembodied spirits not otherwise than the beings still in the body whom they see around them' (Sir E. im Thurn, *Among the Indians of Guiana*, 1883, p. 358).

Such is the first stage of the purely animistic religions common to the more primitive Amerind peoples in North and South America. The essential point is that men remain men in the after world, where they continue to follow their ordinary pursuits under more pleasant conditions. Thus the Eskimo has his kayak, his harpoons, and great schools of cetaceans; the prairie redskin his tomahawk, his bow and arrows, and countless herds of bisons, and so on. Thus is explained the secondary part played by ancestor-worship, and also the great variety of burial rites amongst the Amerinds. If a man remains a man, he cannot be deified or worshipped; and if he is still interested in human pursuits, he needs attendance and attendants. The Guiana native is buried in his house, which is then deserted, so that he may visit his former dwelling without interference from his survivors. He will also need his hammock and other necessaries, which are accordingly buried with him. In the north-west he was accompanied by a slave, who, if not dead in three days, was strangled by another slave. In Mexico, the custom of burying live slaves with the dead was general. Elsewhere they were wrapped in fine furs, or in less costly grasses and matting, to keep them warm. Then there were burials in pits, mounds, cists, caves; also cremation, embalming, and sepulture in trees or on scaffolds, or in the water, or in canoes that were then turned adrift. In Tennessee, old graves are found which were made by lining a rectangular space with slabs of stone, exactly as during the reindeer period in France. And in Ancon, on the coast of Peru, whole families were mummified, clothed in their ordinary garb, and then put together in a common tightly corded pack with suitable outward adornments, and all kinds of domestic objects inside (Reiss and Strübel, *The Necropolis of Ancon in Peru*, A. H. Keane's Eng. ed. 3 vols., 1880–1887).

In the evolution of the Amerind Hades, the next step is the recognition of two separate departments, —one for the good, usually left in cloudland; the other for the wicked, more often consigned to the nether world, but both at times relegated to the same shadowy region of difficult access beyond the grave. Thus the Saponi (eastern Siouans) hold that after death both good and bad people are conducted by a strong guard into a great road, along which they journey together for some time, till the road forks into two paths — one extremely level, the other stony and mountainous. Here they are parted by a flash of lightning, the good taking to the right, while the bad are hurried away to the left. The right-hand road leads to a delightful warm land of perennial spring, where the people are bright as stars and the women never scold. Here are deer, turkeys, elks, and bisons innumerable, always fat and gentle, while the trees yield delicious fruits all the year round. The rugged left-hand path leads to a dark and wintry land covered with perpetual snow, where the trees yield nothing but icicles. Here the wicked are tormented a certain number of years, according to their several degrees of guilt, and then sent back to the world to give them a chance of meriting a place next time in the region of bliss (J. Mooney, *The Siouan Tribes*, etc. p. 48).

This discrimination between the two abodes thus obviously coincides with the growth of a higher ethical standard, such as is seen even amongst the pitiless Aztecs with their frightful religious orgies. If the Spanish historian, Sahagun, can be trusted, their moral sense was sufficiently awakened to distinguish between sin and crime, and they even recognized a kind of original sin, which was washed away by cleansing waters. Xochiquetzal, the 'Mexican Eve,' the 'first sinner,' was depicted weeping for her lost happiness, when driven from Paradise for plucking a flower; and the Earth-goddess Tlaçolteotl was represented as an embodiment of sin, which was 'from the beginning of time.' Hence the newborn babe is subjected to a ceremonial washing, with the words, 'My son, come unto thy mother, the Goddess of Water, Chalchiuhtlicue, thy father, the Lord Chalchiuhtlatonac; enter the water, the blue, the yellow; may it cleanse thee from the evil which thou hast from the beginning of the world' (E. Seler, *Aubin Tonalamatl*, A. H. Keane's Eng. ed., 1901).

A further development of the after-life, still in association with a corresponding growth of the moral sense, is seen in the beautiful vision of the Araucanian people, who consign the departed spirits, not to an invisible heaven or hell, but to the visible

constellations of the starry firmament. Their forefathers are the bright orbs which move along the Milky Way, and from these ethereal heights are still able to look down and keep watch over their earthly children. Under their ever vigilant gaze, these Southern Amerinds had a far higher motive than the hope of reward or the fear of punishment, to avoid wrong-doing and to practise all the virtues, that is, all the tribal usages sanctioned by tradition. Thus, without any legal codes, pains, or penalties, the social interests were safeguarded, while even personal conduct was controlled; for who would dare to wrong his neighbour beneath the glittering eyes of his ancestors? Scarcely any more complete fusion of the ethical and religious systems has elsewhere been realized (*RAnth*, 1884).

It will be seen at once that these Araucanian ancestors, though wafted aloft, still remained human, with human cares and interests, and hence could not be worshipped as gods. The Delawares also would say to a dying man, to comfort him, 'You are about to visit your ancestors,' or, as we might say, to join the majority, without attaching any sense of an apotheosis to the expression. So it is nearly everywhere amongst the Amerinds, and Herbert Spencer's broad generalization that all religions have their origin in ancestor-worship ('ghost propitiation') does not apply at all to the New World. His further statement (*Eccles. Institutions*, p. 687), that 'nature-worship is but an aberrant form of ghost-worship,' has here to be reversed, since the prevailing Amerindian religions were various forms of what American writers designate as *zoötheism*, that is, the deification, not of men, but of animals. Dellenbaugh says emphatically: 'Savage races worship animal gods and natural objects personified as animals . . . as in the case of the thunder and lightning generally attributed by the Amerinds to the mysterious "thunder-bird"' (*op. cit.* p. 393). In their creation myths the aborigines themselves are sprung from animals: three, say the Mohegans, a bear, a deer, and a wolf; one, say the Delawares, the 'Great Hare,' called the 'Grandfather of the Indians.' Their personal and totemic gods were everywhere conceived to be in the form of animals, and to these various acts of homage were made, thus leading up to the universal zoötheism common to most Amerinds.

But there is no absolute uniformity, and amongst some of the more advanced nations there occur instances of what may be called hero-worship, resulting, as elsewhere, in some form of apotheosis or ancestor-worship. Thus the Aztecs have their *Quetzalcoatl*, answering to the Mayan *Kukulcan*, both meaning the 'bright-feathered snake,' and both appearing under two forms, as a deity and as an historical person. Hence they may very well have been real men who arose as teachers and civilizers amongst their people, and became deified as their good deeds became traditions and memories. To them corresponded the Quiché *Gukumatz* (same meaning), one of the four chief gods who created the world; *Votan*, the eponymous hero of the Tzendals; the Algonquian *Michabo*; the Iroquoian *Ioskeha*, and many others. But the Amerind pantheon was essentially limited. In the three extant Maya codices—the Dresden, Paris, and Madrid—Dr. P. Schellhas could find only 'about fifteen figures of gods in human form and about half as many in animal form,' and these figures 'embody the essential part of the religious conceptions of the Maya peoples in a tolerably complete form' (*Deities of the Maya Manuscripts*, 1905, p. 7). Most of the gods here figured—the Death-god, Itzamná (the Maya culture hero), the Moon-, Night-, Sun-, War-, Snake-, Water-, and Storm-gods—find their counterpart in the Aztec Olympus, which may have a few others of its own. But the more primitive Amerind religions cannot boast of more than five or six; and in 1616, before contact with Europeans, the chief of the Potomac Algonquians told Captain Argoll that they had only 'five gods in all; our chief god appears often unto us in the form of a mighty great hare [see above]; the other four have no visible shape, but are indeed the four winds, which keep the four corners of the earth' (W. Strachey, *Historie of Travaile into Virginia*, p. 98). Frequent mention occurs of these four deities of the Four Cardinal Points, or of the Four Winds, or of four invisible powers, bringers of rain and sunshine, rulers of the seasons and the weather, with a fifth represented as greater than all, 'who is above,' and is identified by Brinton with the god of Light, of whom 'both Sun and Fire were only material emblems' (*The Lenâpé and their Legends*, 1885, p. 65). This is the *Manitou* of the early writers, who is described by the missionaries as the Creator, the Supreme Being, the true God of the really monotheistic aborigines. But this Manitou with many variants is the Devil of the New Jersey natives (*Amer. Hist. Record*, i. 1872), and in the Delaware *Walam Olum*, edited by Brinton (Philadelphia, 1885), there are all kinds of Manitous—a Great Manitou who speaks 'a manitou to manitous,' who was 'a manitou to men and their grandfather,' and 'an evil Manitou,' who makes 'evil beings only, monsters, flies, gnats,' and so on. The claim of this Manitou, the 'grandfather' of the Delawares, to rank as the *Ens Supremum* must therefore be dismissed with the like claims of the Dakotan 'Wakanda' and other Amerindian candidates for the highest honours. On the general question of a Supreme Being it is pointed out by Gatschet that the deities of the early Algonquian natives are better known than the so-called 'gods' of most of the present North American aborigines. This is due to the observations made by Capt. John Smith, Strachey, Roger Williams, and a few other pioneers prior to Christian influences. The first preachers translated 'God' and 'Jahweh' by the Algonquian terms *manit*, *mundtu*, 'he is god'; also *manittw* (whence our *manitou*), which simply means 'ghost' or 'spirit,' so that the plural form *manittowok* served to express the *gods* of the Bible. Here *m* is an impersonal prefix which is dropped in polysynthetic composition (see p. 377[b]), leaving the root *anit*, *ant*, *and*, i.e. any spirit, not *the Spirit* in a pre-eminent sense. It was equally applicable to one and all of the *genii loci*, and to restrict it to *one* was reading into it a meaning puzzling to the natives, though required for the right understanding of the Christian and Biblical concepts. One of these genii was *Kaut-antow-wit*, the great south-west spirit, to whose blissful abode all departed souls migrated, and whence came their corn and beans. The same root appears in *Kehteanit*, the 'Great Spirit, which by the epithet *kehte* (='great') acquired sufficient pre-eminence to be used by the missionaries for 'God' and 'Jahweh.' But *great* is relative, not absolute, and does not necessarily involve the idea of an *Ens Supremum*. *Kehteanit* again is the *Kiehtan* of Eliot's Massachusetts Bible, and also the *Tantum* (contraction of *Keitanitom*, 'our great god') of the Penobscots, who associated him with *Hobbamoco*, the Evil One, thus suggesting the two principles of good and evil as more fully developed in the *Walam Olum*, and among the Araucanians and others. E. Winslow (*Good News from New Eng.*, 1624) thinks *Kiehtan* was the chief god of the Algonquins, maker of all the other gods, and himself made by none. But if there were other gods, by whomsoever made, then *Kiehtan* was merely the head of a pantheon, the Zeus or Diespiter of the New World. Hence he

naturally dwells above, in the heavens towards the setting sun, whither all go after death. But he had a rival, *Squantam*, 'whom they acknowledge,' says Josselyn, 'but worship him they do not.' In any case he was more to be feared than loved, for *squantam* comes from the verb *musquantam* (='he is wrathful'), which explains the Narraganset remark at any casual mishap, *musquantam mánit*, 'God was angry and did it' (*JAFL* vol. xii.).

Respecting the Dakotan *Wakanda*, also supposed to rank as the Supreme Being, W J McGee clearly shows that he is not a personality at all, much less a deity, but a vague entity, an essence, a virtue, a subtle force like the Polynesian *mana*, which inheres in certain objects and renders them efficacious for good or evil. 'Even a man, especially a shaman, may be wakanda. So, too, the fetishes, and the ceremonial objects and decorations, — various animals, the horse among the prairie tribes, many natural objects and places of striking character, — though it is easy to understand how the superficial inquirer, dominated by definite spiritual concepts, perhaps deceived by crafty native informants, came to adopt and perpetuate the erroneous interpretation' (Fifteenth An. Report of *BE*, Washington, 1897, p. 182).

Nobody pretends that the sublime notion of a Creator had been grasped by the Pueblos with their undisguised animal-cult, ceremonial snake dances, and gross symbolism; or by the Cheyennes, Poncas, and allied groups, whose elaborate animal and sun dances have been so fully described by G. A. Dorsey (*Field Columbian Museum Publications*, Chicago, 1905). Hence nothing more is heard of a Supreme Deity till we are confronted by the Mexican Tonacatecntli who was represented as the one true god of the Aztecs, the maker of the world, the supreme Lord, to whom no offerings were made because he needed none. But in so describing him it is suggested that the early interpreters were biassed by Biblical conceptions. A more plausible view, advanced by Seler, is that Tonacatecutli was a later invention of the Nahuan rationalists, 'the outcome of philosophic speculation, of the need of a principle of causality, such, for instance, as the God of our modern theosophistic systems' (Seler, *Aubin Tonalamatl*, 39). The Mayas also, however advanced in other respects, were but indifferent theologians with whom the local tutelary deities still survived under Christian names. Appeal is likewise made to the 'Feather-Snake' god of the Huaxtecs, creator of man, but also father of the Tlapallan people, and founder of the Tollan empire, whereby his universal godhead is destroyed (see art. TGLTECS); and to Piyexoo, chief deity of the Zapotecs, the Creator, the uncreated *Pitao-Cozaana*, who, however, was only the first amongst many patrons of all the virtues and of all the vices, to whom horrible sacrifices were made (de Nadaillac, *Prehistoric America*, p. 363). The *Bochica* of the Chibchas was almost certainly an eponymous hero (see art. CHIBCHAS), and this Colombian nation were really Sun-worshippers, like the neighbouring Qnichuas (Peruvians), amongst whom it would be idle to look for an *Ens Supremum*. We are indeed told that one of the Incas had his doubts about the divinity of the sun, while a mysterious being, a *Deus ignotus* or supreme god, is spoken of who was worshipped under the name of *Pachacamac* or *Viracocha*, the sun, moon, and stars being merely the symbols under which he revealed himself to his creatures. But for the mystification involved in this conception the reader must be referred to art. VIRACOCHA.

Thus a rapid survey of the whole field has failed to discover an *Ens Supremum* amongst the Amerinds, whose primitive beliefs were essentially animistic, the worship of animals greatly predominating over that of ancestral spirits, which plays a very subordinate part in the American systems. Conspicuous features are totemism and shamanism in the north, true polytheism in the higher religions of Mexico and Central America, solar worship in those of South America, and various forms of lycanthropy everywhere. These subjects have here been barely touched upon, as they will be found fully treated in special articles.

Ehrenreich, *Die Urbewohner Brasiliens*, 1897; K. von den Steinen, *Durch Central-Brasilien*, 1886; The Annual Reports of the Smithsonian Institution, Washington, and the Publications of the Peabody Museum, Cambridge, Massachusetts. A. H. KEANE.

AMERICA, SOUTH.—The religious ideas of the savage peoples of South America are, in comparison with those of the North Americans, strikingly undeveloped. They have not advanced beyond the crudest forms of belief in ghosts, such as are produced by the vague fear of the souls of the dead, or of the demons, which express themselves in certain natural occurrences. Their religious beliefs are thus not essentially superior to those of the Australians or the Papnans. The want of a belief in gods, in the proper sense of the term, speaks less for the low stage of religious culture than the almost total absence of forms of worship that are no more than mere magic practices, as, *e.g.*, prayers, sacrifices, idols, and sanctuaries. The few undoubted traces of a real cult belong to tribes in whose case we are inclined to suspect that influence has been brought to bear on them from the side of the civilized and half-civilized peoples of the region of the Andes and of Central America.

We find such traces among the Arhuacos (Köggaba) of Colombia, the Tainos of the Antilles, the Tacanas of Eastern Bolivia, the Araucans and several nations of the Chacos and the Pampas, which are in connexion with them, especially the Guaycuru group, who have also adopted numerous elements of Peruvian culture.

Of course the mythology of the South Americans can tell us of creators and world figures, but still these are without the character of gods. They are legendary figures without religious significance, without influence on man and his fate, and thus also devoid of religious worship or veneration. The Peruvian religion was the first to raise the heroes of the legends, so far as they were personifications of the sun or moon, to the position of divinities. Among the Chibchas of Colombia are to be found the first approaches to this.

The earliest reports regarding the religious ideas of the savage tribes of the time of the Conquest and the first missionaries are, in general, obscure and contradictory. While some deny all religious feeling to the Indians, others tell of reverence for God, or at least of devil-worship, and others again of the dualistic opposition of a good and an evil spirit.

On the other hand, reverence for one all-ruling highest being was expressly ascribed to many tribes.

In particular the following are named: Tupan among the eastern Tupis, Sume among the southern Tupis or the Guaranis, Pillan among the Araucans, Gualichu among the Puelches, Queevet among the Abipones, Soychu among the Patagonians, and others. As a matter of fact, we have in all these cases by no means to do with more elevated ideas of God. These beings are, on the contrary, mere natural demons or deified ancestors or heroes of the tribe.

Without doubt, the demonic figures which took part in the masked dances of the Indians have

often been regarded by the missionaries as gods or devils. The festive huts, the houses of the community or of the bachelors, in which the masks were preserved, were supposed to be 'temples.' And yet, all the contemporary observers even at that date emphasize the absence of specific actions of worship (prayer and sacrifice), except in the above-mentioned cases of probable foreign influence from regions of higher culture. Still, the masked dances might be regarded as the first traces of a primitive culture. As the analogies among other savage peoples teach us, the ceremonies are in the main directed towards exerting a magical influence on animals or animal spirits (in the sense of an allurement, defence, or multiplication), or towards driving out destructive demons that manifest themselves in natural phenomena.

Often too, of course, they are primitive dramatic representations of achievements of the tribe and of the legends of the heroes, as, *e.g.*, those connected with the Yurupari or Izi mysteries of the tribe of the Uaupés, and probably those of the Passê and Tikuna, and those of the Chiquitos of Bolivia, which were described at an early date. The sacred dances of the Tainos in Cuba and Hispaniola (Haiti), the so-called Areitos, were of this nature.

These masquerades seem to be especially important at the initiation ceremony of the young men, at funeral celebrations, and at the laying out of new settlements. The use of masks seems to have been confined to the basin of the Amazon. In Guiana and Venezuela, the Orinoco region, the east coast, and farther south than 15° south latitude their existence has not been proved.

We know more particularly only those of the Marañon (Tikuna), those of Uaupé and Yapura (Tariana and Betoya tribes), those of the upper Xingu (Bakairi, Mehinaku, Auetö, and Trumai) and of Araguay, those of the Karaya (which present a striking resemblance to the so-called dukduk masks of New Britain).

Idols of wood and stone belonging to a more ancient period are frequently mentioned in the Antilles, in Darien, Venezuela, and on the Amazon; still, we are ignorant of their appearance or signification. Only with regard to the Tainos do we know that they represented their ancestral gods (*Zemes*) in grotesque figures of wood and cotton, of which a few have been preserved. On the lower Amazon various peculiarly formed sculptures of men and animals have been found, whose style points to the Columbian sphere of culture (according to Barboza Rodriguez and R. Andree). The so-called idols of the Takanas of Eastern Bolivia have not yet been more closely investigated. The wooden 'Santos' of the Caduves (Guaycuru) are in all probability representations of ancestors, but perhaps influenced by Christianity.

In the older literature actual divinities of individual peoples are mentioned; in particular Tupan, the 'god of the eastern Tupi,' whose name was adopted in the popular language as the general designation of God, and, through the influence of religious instruction carried over to many tribes of the interior. Thus he frequently obtained the signification of 'the God of the white man.' In reality *Tupan* is simply 'the flash,' *i.e.* a thunder-demon of the Tupis, who, however, pay him all sorts of worship. In the magic rattle (*maraka*) his worshippers believed that they heard his voice, and so it came about that Hans Staden pronounces this rattle to be nothing else than the god of the tribe. In his nature he has absolutely nothing to do with the one God in the Christian sense of the term.

In other cases the supposed divine beings are of a purely mythical nature, the ancestors of the tribe, or culture-heroes, who are active as demiurges, like Tamoi or Sume of the Tupi-Guaranis, whom even the missionaries identified with St. Thomas, who in some mysterious fashion was reported to have been the first to bring religion and civilization to America.

Other similar figures are Quetzalcoatl and Kukulcan in Central America, Bochica in Colombia, and Viracocha in Peru. The same is also true of Aguarachi of the Abipones, the Rueevet or Huecubu of the Puelches and Araucans, and the fox-god of the Chiriguanos (according to Campana).

We can thus gather exceedingly little positive information from the older references. The more recent material for observation is also still scanty and incomplete. The following may be regarded as certain, so far as it goes. The belief in souls (animism) forms for these peoples the basis of all their supernatural ideas. The spirits of the dead are thought of as demons which are for the most part hostile, or at least terrifying—seldom indifferent,—or good spirits stand over against these evil demons.

Of such a nature are the Opoyen and Mapoyen of the Caribbean Islands, the Anhangas of the Tupis, the Kamyry of the Ipurinas. Only among the Tainos do we find a completely systematized spirit worship of the *Zemes*, which are represented by idols.

The belief in the incarnation of the souls of the dead in animals is widely diffused. Jaguars, snakes, and in particular birds like *araras*, hawks, eagles, are such soul-animals. Besides these there are everywhere spiritual beings of an indefinite nature; cobolds, which appear in animal or in grotesque human forms, but as a rule invisible to the eye, manifest themselves in certain natural sounds, such as in the echo, in the rustling of the wood, or in nightly sounds of an indefinite kind, or have their seat in remarkable rock formations. The best known are the forest demons of the Tupis —Kaapora, Kurupira, and Yurupari—which were adopted in the popular superstition of the colonists. Similar beings dwell in the water as gigantic snakes or crab-like monsters.

Where a special 'land of the fathers' in heaven, or more seldom in the lower world, is accepted, the souls of the dead return to it. Among the Chaco tribes the stars are the souls of warriors, which combat one another in the thunder-storm. As falling stars, they change their places. Certain constellations—in particular Orion, the Cross, Pleiades, the Milky Way—are regarded as representations of beings or objects of mythical significance belonging to the primeval time. They illustrate in this way incidents in the activity of the culture-heroes in the cosmogonical legend.

These peoples have not advanced to a deification of cosmic bodies and natural powers. Even the sun and the moon have remained, in spite of their personification in the myth, without significance for the religious ideas. Atmospheric phenomena, too, have been little observed, a fact which probably is connected with the great regularity of the rainfall and thunderstorms throughout the whole continent. In a few cases proof can be given that demons or spirits of nature were supposed to manifest themselves in these phenomena.

Among the eastern Tupis, Tupan reveals himself in the lightning flash; among the Machakalis, Akjanam shakes the rain out of his beard. The Caribbean islanders know demons who control the sea, the wind, and the rain. The rainbow, too, is widely regarded as an evil spirit that brings sickness (*yolok*, 'devil,' of the Caribbean peoples of Guiana). Among other peoples he is a mythical animal, snake (Ipurina) or electric eel (Karaya).

Tendencies towards the development of actual divinities and divine cults are to be found among the Tainos, who, besides the spirits of their ancestors, revered the sun and the moon; and probably also among the old tribes of Darien and of the north coast (according to Peter Martyr, Oviedo, Gomara, and others). In later times, among the Takanas of Eastern Bolivia, gods of water, of fire, of sicknesses, etc. are mentioned, and their images were worshipped in temples by means of sacrifices and dances (according to Col. Labre and P. Armentia). But these details have not yet obtained scientific confirmation. Again, with

regard to the sacrifice of horses which the Patagonians or tribes of the Pampas are said to offer, we have no exact information. In individual cases the mighty phenomena of volcanic action have led to divine worship of active volcanoes.

Thus the Jivaro of Ecuador are supposed to look upon the volcano Cayambé as the seat of a mighty spirit, to whom they offer prayer. Among the Araucans, Pillan is the god of thunder and of volcanoes. Subordinate to him are the Cherruves, the inciters of the summer lightning, who in like manner are thought of as dwelling in volcanoes.

The cause of this imperfect development of the belief in gods is probably to be sought in the entirely primitive condition of agriculture in the whole of South America, with the exception of the slopes of the Andes. Agricultural rites of a magical nature, from which, as a rule, divine cults are developed, do not easily arise among tribes who, though practising primitive agriculture, may yet be said to follow an almost purely hunting or fishing life, and owing to the perfectly regular change of kinds of weather and the certainty of copious showers, do not require heavenly helpers. Only under the more niggardly natural conditions of the high lands of the Andes in Peru and Bolivia did the farmer recognize his dependence on higher powers, at the head of which he placed the sun-, or light-god.

The *mythology* of the South Americans, now unfortunately only partially known to us, seems to have been more plentiful than might have been expected from their crude religious ideas. The most that we know comes from more recent times; still, even from the 16th cent. we possess a comparatively complete cosmogony and cycle of heroic legend of the eastern Tupis, related by Thevet, *Cosmographie*, Paris, 1574 (in extracts in Dénis' *Fête brésilienne*, Paris, 1851). Further, we have fragments of a creation-legend of the Tainos, according to Peter Martyr. The subsequent missionary period has supplied us only with scattered and unreliable material.

It was not till recent times that more valuable sources were again furnished by the investigations of travellers, such as D'Orbigny (for the Yurakaré of Bolivia), Brett and E. im Thurn (for the tribes of Guiana), Cardus (for the Guarayos of Bolivia), von den Steinen and Ehrenreich (for the Bakairis, Paressis, and Karayas of Central Brazil), Lenz (for the Araikans), Borba (for the Kaingang of the Ges linguistic stock of South Brazil), and others. Of great importance is the so-called Yurupari myth of the Uaupé tribe, communicated by Stradelli (*Bol. soc. geogr. Ital.*, Rome, 1890), the only complete legend handed down regarding the worship of a secret society. A critical collection of all the materials discovered up to the present time was given by Ehrenreich in his *Mythen und Legenden der südamer. Urvölker*, Berlin, 1905. The myths deal in the main with cosmogony, the work of creation of the culture hero or heroes, conceived of as brothers, who bring to mankind the useful plants, fire, and other possessions, and appoint the course of sun and moon. The sun or highest heavenly being, thought of as a magician, is placed at times, as the procreator of the heroes, at the beginning of the genealogy, *e.g.* Monan of the Tupis, Kamushini of the Bakairis. A destruction of the world by flood or by world-conflagration occurs more than once (see Andree, *Flutsagen*). The story of the birth of the hero brothers with the motive of the immaculate conception, the death of their mother, their combats with monsters and with one another, their ascension into heaven or descent into the lower world, offers many parallels with myths of the old world. Still, these can be explained from the similarity of the view of nature lying at the basis of all these myths, which is always connected with the sun and moon and their relation to each other. The heroes themselves are often immediately recognizable as personifications of these stars, as, *e.g.*, the pair of brothers Keri and Kame among the Bakairis.

On the other hand, there are undoubtedly many North American and even East Asiatic legendary elements which have wandered to South America, probably following the Pacific Coast. In like manner there are common elements in the stories of the heroes of Peru and Eastern Brazil which can be explained only by immediate influence of the one people on the other.

LITERATURE.—J. G. Müller, *Gesch. der amerikan. Urreligionen*, Basel, 1867; E. im Thurn, *Among the Indians of Guiana*, London, 1883; Barboza Rodriguez, *Paranduba amazonense*, Rio, 1890; K. von den Steinen, *Unter den Naturvölkern Zentralbrasiliens*, Berlin, 1893; P. Ehrenreich, *Mythen und Legenden der südamericanischen Urvölker*, Berlin, 1905. This work contains abundant bibliographical material. P. EHRENREICH.

AMESHA SPENTAS.—A designation for a specific class of beings in the Zoroastrian religion, corresponding to the idea of archangels in Judaism and Christianity. The name literally means 'Immortal Beneficent Ones,' from Av. *ameša* (read *amereta-*), 'undying' and *spenta*, 'bountiful, beneficent' (from root *su-*, 'to increase, benefit'), and the form appears in Pahlavi as *Amhraspand*, read in later Persian as *Amshaspand*. As a class-designation the title *Amesha Spenta* does not occur in the metrical Gāthās, although the Amesha Spentas themselves are constantly referred to singly, or in company, throughout these older hymns; but the actual title does occur in the prose Gāthā of the Yasna Haptanghāitī (*Yasna*, xxxix. 3; cf. xlii. 6), and is met with often in the Younger Avesta and in the subsequent Zoroastrian literature.

The Amesha Spentas are conceived of as attendant ministers waiting as servitors upon their supreme lord and sovereign, Ahura Mazda, or Ormazd (cf. Phl. *Yōsht-ī Fryānō*, ii. 55–59; *Bahman Yasht*, iii. 31), with whom they make up a sevenfold group, to which number the divine being Sraosha is also often added (cf. *Yasht*, ii. 1–3, xix. 16=xiii. 83, x. 139, iii. 1; *Yasna*, lvii. 12; *Bundahishn*, xxx. 29). In later usage the term *Amshaspand* is more loosely employed, and some of the angels are called by this designation. Besides Sraosha, who is admitted to the group, and who works in unison with them (*Bundahishn*, xxx. 29), Ātar, the Fire of Ahura Mazda, is spoken of as an Amshaspand (*Yasna*, i. 2). Gōšūrvan, the soul of the primeval ox, though usually spoken of as an angel, is called an Amshaspand in *Shāyast lā-Shāyast*, xxii. 14. A later 'Kusti' formula even speaks of *sī u se*, 'thirty-three,' Amshaspands. Their nature is that of virtues and abstract qualities personified, and their names are *Vohu Manah* 'Good Thought,' *Asha Vahishta* 'Perfect Righteousness,' *Khshathra Vairya* 'Wished-for Kingdom,' *Spenta Armaitī* 'Holy Harmony,' *Haurvatāt* and *Ameretāt* 'Saving Health and Immortality.' The Greek writer Plutarch, in the 1st cent. A.D., alluded to them as 'six gods' (ἐξ θεούς, *de Is. et Os.* 47), and rendered their names respectively as εὔνοια, ἀλήθεια, εὐνομία, σοφία, πλοῦτος, ὁ τῶν ἐπὶ τοῖς καλοῖς ἡδέων δημιουργος (see Tiele, 'Plutarchus over de Amšaspands,' in *Feestbundel Prof. Boot*, pp. 117–119, Leyden, 1901). He once mentions Ameretāt by name as Ἀμάρδατος (miswritten as Ἀνάδατος), and a century earlier Strabo (xi. 8. 4, xv. 3. 15) unquestionably refers to Vohu Manah under the name Ὠμανής (see Windischmann, 'Die persische Anahita, oder Anaïtis,' in *Abhandlungen d. bayr. Akad.*, phil.-philol. Classe, viii. part 1, p. 36, Munich, 1856), all which

goes to prove that the conception was well known at that period. This latter fact, among numerous others, is of weight in disproving the theory advanced by Darmesteter, that the conception of the Amesha Spentas in Zoroastrianism was late, and owed its origin to the influence of Philo Judæus.

The various attributes which the Zoroastrian scriptures apply to the Amesha Spentas are in harmony with the spiritual qualities represented by these allegorical personifications. This will be manifest at a glance, if reference be made to the Avesta (*e.g. Yasna*, xxxix. 3; *Visparad*, ix. 4, xi. 12; *Yasna*, iv. 4, xxiv. 9, lviii. 5; *Yasht*, xiii. 82–84). The Gāthic adjectives *vohu* 'good,' *vahišta* 'best,' *vairya* 'wished-for,' *spenta* 'holy,' which are the most common titles of the first four Amesha Spentas in the earlier period of the religion, become in later times standing epithets, practically indispensable to the qualities to which they are added by way of nearer definition. The last two personifications, Haurvatāt and Ameretāt, have no standing attributes, but are commonly mentioned together as a pair.

The Amesha Spentas were Ahura Mazda's own creation (*Yasht*, i. 25; *Dīnkarṭ*, tr. Sanjana, p. 103), and their function is to aid him in the guidance of the world (*Yasht*, xix. 16, i. 25, ii. 1–15; *Vendīdād*, xix. 9; *Bundahishn*, i. 23–28). They are invisible and immortal (*Dīnkarṭ*, tr. Sanjana, pp. 47–48), good rulers, givers of good, ever living and ever bestowing (*Yasna*, xxiv. 9). They have their Fravashis, which are invoked (*Yasht*, xiii. 82). They receive special worship in the ritual, and are said to descend to the oblations upon paths of light (*Yasht*, xiii. 84, xix. 17). They dwell in paradise, where at least one of them, Vohu Manah, sits on a throne of gold (*Vendīdād*, xix. 32); but they are not infinite and unproportioned like their Lord, Ormazd (*Dīnkarṭ*, tr. Sanjana, p. 114). They are spoken of as the givers and rulers, moulders and overseers, protectors and preservers of the creation of Ormazd (*Yasht*, xix. 18). For that reason the guardianship of some special element in the universe is assigned to each. To Vohu Manah is entrusted the care of useful animals; to Asha Vahishta, the fire; to Khshathra Vairya, the supervision of metals; to Spenta Armaitī, the guardianship of the earth, whose spirit she is; and to Haurvatāt and Ameretāt, the care of water and vegetation (*Shāyast lā-Shāyast*, xv. 5; *Great Bundahishn*, tr. Darmesteter, in *Le Zend-Avesta*, ii. 305–322). The precise nature of the relation, in each case, between tutelary genius and element, has been variously explained, according to the stress laid upon the physical or the spiritual side of the concept; but it is certain that the association and the double nature are old, because the twofold character may be seen foreshadowed in the Gāthās, and becomes pronounced, in the later texts especially, on its physical side. Each Amesha Spenta has a special month assigned to his honour (*Bundahishn*, xxv. 20). Each has a special day as holy day (*Sīrōzā*, i. 1–7). Each has a special flower, *e.g.*, white jasmine sacred to Vohu Manah, the 'basil-royal' to Khshathra Vairya, musk to Spenta Armaitī (*Bundahishn*, xxvii. 24). It is impossible here to enter into a detailed discussion of the functions of each of the Amesha Spentas, the first three of which celestial group are males (or rather, neuter according to the grammatical gender, not sex), and the last three females; but it is sufficient to indicate the fact that these exalted personifications play an important rôle as archangels throughout the entire history of the Zoroastrian religion, and are opposed (more particularly in the later development of the faith) by six antagonists, or corresponding archfiends, *Aka Manah*, *Indra*, *Sauru*, *Nāoṅhaithya*, *Tauru*, and *Zairi* (*Vendīdād*, x. 9–10, xix. 43; *Yasht*, xix. 96). The Amshaspands will, nevertheless, vanquish these opponents at the time of the resurrection (*Yasht*, xix. 96; *Bundahishn*, xxx. 29).

To draw parallels between the conception of the Amesha Spentas as a spiritual band higher than the angels (Av. *Yazatas*), yet lower than the Supreme Being, Ahura Mazda, and the Biblical doctrine of archangels, is natural and has been done by some scholars, while others have emphasized the likenesses to the idea of the Ādityas in ancient India. Opinions vary as to whether the resemblances are due to borrowing, or to some common source, or, again, to natural developments. It is premature, as yet, to attempt to give a decision on this question, which is but a part of the whole problem of the influence of Zoroastrianism on other religions or its kinship with them.

A. V. WILLIAMS JACKSON.

'AM HA-AREṢ (עַם הָאָרֶץ). — A term used in Rabbinic Hebrew to designate, either collectively or individually, those who were ignorant of the Law, and careless as to its observance. It is almost invariably a term of reproach. Its literal meaning, 'people of the land,' may suggest that its origin is similar to that of the words 'pagan' or 'heathen.' In the OT it occurs several times, but never with the significance which it afterwards acquired (cf. 2 K 24^{14}, Ezr 9^{1}, Neh 10^{31}).

Our chief authority for the use of the term is the Mishna, where it frequently occurs (see list of passages given below), and in these passages the *'Am ha-areṣ* is, as a rule, contrasted with the *Ḥābhêr* (companion) who had bound himself to a very strict observance of the Law. In all matters regarding questions of tithe or of 'clean and unclean' the *'Am ha-areṣ* is not to be trusted. Thus we find it stated in the Mishna: 'He who takes it upon himself to be a *Ḥābhêr* sells neither fresh nor dry fruits to the *'Am ha-areṣ*, buys from them no fresh, does not enter into their house as a guest, or receive them as guests within his walls' (*Demai*, ii. 3). The majority of the passages in the Mishna deal with similar topics in connexion with the *'Am ha-areṣ*, viz. the fact that he must not be trusted in matters concerning the agrarian laws and ritual purity. One passage, however, is a notable exception to this, and is of peculiar interest as showing the feelings of the earlier Rabbis on this point. It is the well-known saying of Hillel: 'No boor (בור) is a sin-fearer, nor is the *'Am ha-areṣ* pious' (*Aboth*, ii. 6). In order, however, to obtain a definition of the *'Am ha-areṣ*, we must turn to the Bab. Talmud, where the following passage occurs (*Berākhōth*, 47*b*):

'"Who is an *'Am ha-areṣ*? One that does not eat his ordinary food in a state of ritual purity." These are the words of R. Meir; but the Ḥakhāmîm say, "He that does not tithe his fruits properly." "Who is an *'Am ha-areṣ*? One that does not read the Shema' morning and evening." These are the words of R. Eliezer. R. Joshua says, "One that does not put on the phylacteries." Ben Azzai says, "One that has not the fringes on his garment." R. Nathan says, "One that has not a Mezuza on his door." R. Nathan ben Joseph says, "One that has children, and does not educate them in the study of the Law." Others say, "Even if he have read and learnt, yet if he have not associated with wise men he is an *'Am ha-areṣ*."' (Cf. also Bab. *Soṭa*, 23*b*, *Gittin*, 61*a*, where this passage occurs with some variations).

From this passage it would appear that the *'Am ha-areṣ* was regarded by the Rabbis as a person who was accustomed to neglect the various enactments of the Law, and the general attitude of the Pharisees towards him was one of contempt and hostility. As we have seen, the *Ḥābhêr* is warned against having intercourse with him, and it naturally followed that intermarriage between the two classes was regarded with the greatest disfavour. 'One that gives his daughter in marriage to an *'Am ha-areṣ*,' R. Meir used to say, 'is as if he had bound her and set her before a lion' (Bab. *Pesaḥ*, 49*b*). In another place it is stated that the *'Am ha-areṣ* is disqualified for acting in certain capacities, which are enumerated under six heads, viz. (1) he must not be appointed to receive evidence; (2) his own evidence is not to be accepted; (3) a secret must not be confided to him; (4) he must not be appointed as the guardian to orphans; (5) he must not be appointed as overseer of the charity box; (6) it is not right to accompany him on a journey (Bab. *Pesaḥ*, 49*b*, and Rashi's comment, *ad loc.*). The attitude of hostility was apparently mutual, as would appear, among other passages, from the saying of R. 'Aqiba which occurs just before the passage cited above. He is reported to have said, 'When I was an *'Am ha-areṣ* I used to say, "Would that I had a *talmîd ḥākhām* ('disciple of the wise,' 'scholar'), and I would bite him like an ass."' Or again, a little later, 'The hatred with which the *'Am ha-areṣ* hates the *talmîdê ḥ'khāmîm* is greater than the hatred with which the heathen hates Israel' (Bab. *loc. cit.*). These passages offer a sufficient explanation of the words in Jn 7[49] 'This people who knoweth not the law are accursed,' in which we may probably see a reference to the attitude of the Pharisees towards the *'Am ha-areṣ*. Some difference of opinion exists as to the identity of the *Ḥābhêr*, with whom the *'Am ha-areṣ* is so frequently contrasted in the Mishna. Schürer and others identify the *Ḥābhêr* with the Pharisees, making the two terms practically synonymous. Others are rather inclined to regard the *Ḥābhêr* as a member of some kind of religious guild bound to a strict observance of the Law. But one thing is perfectly clear, viz. that the *Ḥābhêr* was not necessarily himself a *talmîd ḥākhām*, though he might incidentally be one. This would appear from the following passage: 'He who would take upon himself the decrees of the association (*ḥabheruth*) must do so in the presence of three *ḥābhêrîm*; even if he is a *talmîd ḥākhām*, he must do it in the presence of three *ḥābhêrîm*' (Bab. *Bekhor.* 30*b*).

Two passages may be cited which appear to indicate a less hostile attitude towards the *'Am ha-areṣ*. The first one is from *Aboth de R. Nathan* (ed. Schechter, p. 64*b*), the other is from the Midrash *Shir ha-Shirim Rabba*. In the first of these we are told that it is not right for a man to say, 'Love the wise man, but hate the disciples, love the disciples, but hate the *'Am ha-areṣ*'; but love them all, and hate the heretics and apostates and informers.

An attempt has been made to mitigate the severity of the statements concerning the *'Am ha-areṣ* which have been quoted above, by suggesting that in reality they refer to informers and political enemies (see Montefiore [*Hibbert Lectures*] and Rosenthal, cited below), but sufficient evidence for this is not forthcoming; and the quotation given above from *Aboth de R. Nathan* seems to point in the contrary direction. This also appears to be the view of the writer in the *JE*, who states as his opinion that 'there can be no doubt it was this contemptuous and hostile attitude of the Pharisaic schools towards the masses that was the chief cause of the triumphant power of the Christian Church.' A new and independent investigation of many points connected with the *'Am ha-areṣ* is to be found in the recently published work of A. Büchler, cited below.

H. LEONARD PASS.

AMIABILITY.—The adjective 'amiable' is obviously the Lat. *amabilis* modified in transmission through the French. It is thus etymologically equivalent to *lovable*, denoting that which is adapted to excite the sentiment of love in any of its varied forms. It has therefore been occasionally applied even to things, as, *e.g.*, in Ps. 84[1], 'How amiable are thy tabernacles!' But now it is used almost exclusively to describe persons and personal characteristics. In this use it has fortunately never degenerated by application to characteristics that are loved by corrupt minds. Thus, in its psychological aspect, amiability comprehends both the natural dispositions and the acquired habits which, being themselves of the nature of love, are calculated to evoke the same sentiment in others. In ethical and religious value amiability may therefore claim the rank that is accorded to love; and the evolution of moral intelligence has always tended towards that ideal in which love is recognized as the supreme principle and inspiration of all morality.

J. CLARK MURRAY.

AMITĀYUS or APARIMITĀYUS (Tibetan *Tśe-dpag-med*), 'The Boundless or Everlasting Life,' is one of the mystical or superhuman Buddhas invented in the theistic development of Buddhism in India. His worship was wide-spread in India in the Middle Ages, although hitherto unnoticed, for the writer found his image frequent in the ruins of mediæval Buddhist temples in mid-India. In Tibet, where the cult of a class of divinities with similar attributes, namely, the Sages of Longevity, had long been prevalent, his worship has become very popular as a supposed means of prolonging the earthly life of votaries. His image is to be seen in nearly every temple in Tibet; it is also worn in amulets, and carved on rocks by the wayside. He is specifically invoked in the prayer-flags which flutter from every point of the compass, and he is specially worshipped in that sacramental rite, the so-called 'Eucharist of Lāmaism,' where consecrated bread is solemnly partaken of by the congregation.

He is considered to be an active reflex or emanation of the divinely meditative Buddha, Amitābha (see ADIBUDDHA), who sits impassively in the Western Paradise (*Sukhāvatī*).

He is represented in the same posture as his prototype Amitābha, not, however, as an ascetic Buddha, but crowned and adorned with thirteen ornaments, and holding in his hands the vase of life-giving ambrosia, which is one of the eight luck-compelling symbols (*mangala*) of ancient India, and the vessel for holy water on Tibetan altars.

L. A. WADDELL.

'AMM, 'AMMI.—The word *'amm* (עַם, עַמִּי, עַמְּךָ, etc.) is common to all the Semitic languages,

and must have been found in the original tongue from which they are sprung. A comparison of its meanings in the dialects, together with a study of the social organization and religious beliefs of the several races, leads to the conclusion that the word denoted originally a male relative in the preceding generation. The Semites passed once through a stage of fraternal polyandry, and in such a society the distinction between father and paternal uncle is impossible. The mother's polyandrous husband, who might be either father or uncle, was known by the child as *'amm*. Cf. Gn 19^{38} where *Ben-'ammi* is equivalent to 'son of my father,' and the phrase נאסף אל עמיו which alternates with נאסף אל אבתיו. The name 'uncle' was naturally applied to male deities, as 'father' was in later times. Long after polyandry had passed away *'amm* continued to be used as a title of deity; and as it lost its primitive associations, it tended more and more, like Baal, Adon, Melek, and other epithets, to become a proper name. The Ḳatabân people in South Arabia designate themselves in their inscriptions as 'Children of 'Amm' (ולד עם), just as their neighbours the Sabæans designate themselves as *Walad Ḥmaḳah*, showing that among them *'Amm* had become a Divine name (cf. Hommel, *ZDMG*, 1895, p. 525; Glaser, *Mitteilungen der vorderasiatischen Gesellschaft*, 1899, ii. p. 21). According to II. Rawl. 54, 65, V. 46, 11, Emu (=Nergal) was a god of the land of Suḥi on the west side of the Euphrates (cf. Sayce, *RP*, 2nd ser. iii. p. xi; *KAT*[2] 481). According to King (*Ḥammurabi*, iii. p. lxv), Ḥammu = 'Ammi is written with the determinative for 'god' in the name of the king Ḥammurabi. The proper name Dur-'Ammi, 'Fortress of 'Amm,' also indicates that 'Amm is regarded as a deity (*ib.* p. 252). A trace of this meaning also lingers in Heb. in the formula לחי עם, 'by the life of the Uncle,' which is parallel to לחי ראי and חי יהוה.

How far this process went can be determined only by a study of the proper names compounded with *'amm* in all the Semitic dialects. Here the problem is complicated by the fact that *'amm* has developed a number of secondary meanings, and so it is not easy to determine what is its significance in any given compound. When fraternal polyandry gave place to monogamy and polygamy, and the father became a recognizable relative, *abu*, which hitherto had meant 'husband' (cf. Jer 3^{4}, and old Bab. usage), came to mean 'father,' and *'amm* received the more specific meaning of 'paternal uncle.' This is a common meaning in Arab. (cf. *bint 'amm* for 'wife,' lit. daughter of 'paternal uncle'), also in Min. and Sabæan. From this *'amm* came to mean any relative in the ascending line on the father's side, just as 'father' was used to denote a remoter ancestor; then it was used for 'relative' in general. It is used in this sense in one of the Tell el-Amarna letters (Winckler, 45^{32}). Jensen also cites an instance in Babylonian (*LCBl*, 1902, col. 695 f.). In Gn 17^{14}, Lv $7^{20f.\ 25.\ 27}$ 23^{29}, Nu 9^{13} 15^{30}, Ex 31^{14}, Lv 19^{16} 21^{1-4} *'amm* cannot mean 'people,' but only 'kinsman.' *Lo-'ammi*, the name of Hosea's child, must mean primarily 'Not my kin,' inasmuch as it was given with reference to the mother's adultery. The Carthaginian proper name עמא (*CIS* 384) and Nabatæan עמי, Οὐμεῖα (Euting, *Sin. Inschr.* 90^{27} 358^{5} 355), may mean 'kinsman' or 'uncle,' but cannot mean 'people' (cf. Aram.-Talm. אבא as a personal name). The final stage in the development of meaning was reached when *'amm* came to denote 'race' or 'people'—a common usage both in Hebrew and Arabic.

The question now arises, Which of these meanings is found in the numerous proper names compounded with *'amm*? These names are widely scattered through the Semitic races, and must have been one of the earliest types of name formation; it is natural, therefore, to conjecture that in them *'amm* has its primitive meaning of 'father-uncle,' and is used in some cases at least as a title of the Deity. Whether this is the fact can be determined only by an inductive study of the names in question.

1. The first class of 'Ammi-names consists of those in which 'Ammi is *followed by a noun*, as in *'Ammi-hud*. In most of these the translation 'people' for 'Ammi gives a very unlikely name for an individual, *e.g.* *'Ammi-el*, 'people of God,' or 'people is God'; *'Amme-ba'ali*, 'people of Baal,' or 'people is Baal'; and so with the other names given below. It is generally admitted, accordingly, that in all names of this class *'Ammi* has the sense of 'kinsman' or 'uncle.' This view is confirmed by the fact that compounds with *Abi*, 'father,' and *Aḥi*, 'brother,' run parallel to names with *'Ammi*, *e.g.* *Abi-el*, *'Ammi-el*; *Abi-hud*, *Aḥi-hud*, *'Ammi-hud*. The next question is, whether the epithet 'uncle' or 'kinsman' is understood of a human being or of a divinity. The answer to this question depends upon the grammatical relation in which *'Ammi* stands to the following noun. There is high authority for the view that it is a construct with the old genitive ending which frequently survives in the construct state, *i.e.* *'Ammi-hud* means 'kinsman of glory,' which, like *Abi-hud*, 'father of glory,' means 'glorious one.' This theory is open to many serious objections: (1) This construction is a pure Arabism, and there is no evidence that it existed in the other dialects. (2) It is very unlikely that any man should have been named *Abi-El* in the sense of 'father of God,' *Abi-Yah* in the sense of 'father of Yah,' *Abi-Ba'al* in the sense of 'father of Baal,' or *Abi-Melek* in the sense of 'father of Melek'; and it is just as unlikely that *'Ammi-El*, *'Ammi-Ba'al*, *'Ammi-Sin*, *'Ammi-Shaddai* mean respectively 'uncle (older kinsman) of God, Baal, Sin, Shaddai.' (3) These names are paralleled by names in which the same elements occur in reverse order, *e.g.* *Eli-'am* (2 S 11^{3} = 1 Ch 3^{5} *'Ammiel*), *Ba'al-'am*, *Aa-'am* (*Yah-'am*?), *Nabu-imme*, *Shulmanu-imme*, *Shamash-imme*. There is no reason to suppose that *Eli-'am* differs in meaning from *'Ammi-El* or *Ba'al-'am* from *'Ammi-Ba'al*. If the elements in these names are regarded as standing in the construct relation, they will mean respectively 'God of uncle,' 'Lord of uncle.' These have no relation to their inverted counterparts, and are most unlikely personal names. If, on the other hand, the nouns are regarded as standing in the relation of subject and predicate, the compounds are synonymous whatever be the order of the elements: *'Ammi-El* means 'uncle is God,' and *Eli-'am* means 'God is uncle.' (4) Conclusive evidence that *'Ammi*, *Abi*, *Aḥi*, *Dod* ('uncle'), *Ḥal* ('maternal uncle'), *Ḥam* ('father-in-law') are not constructs before the following nouns, is found in the fact that they are used in forming the names of *women*. *Abi-gal*, *Abi-noam*, *Ḥamu-ṭal* cannot mean 'father of joy,' 'father of pleasantness,' 'father-in-law of dew,' but must mean 'father is joy,' 'father is pleasantness,' 'father-in-law is dew' (cf. *Abi-ṭal*).

If *'Ammi* is not in the construct before the following noun but is the subject of a sentence, a further problem arises as to the meaning of the vowel *i* which appears not only in Hebrew but also in Canaanite names in the Tell el-Amarna letters and in Babylonian. Many regard it as the suffix of the first pers.; but against this view are the facts that no other pronominal suffixes are used in forming proper names, that the analogy of other names leads us to expect a general affirmation in regard to the Deity rather than the expression of a per-

sonal relation to Him, and that the î is omitted in parallel forms, *e.g. Eli-'am* = *'Ammi-El*, *'Ammi-Ba'al* = *Ba'al-'am*, *Ab-shalom* = *Abi-shalom*, *Ab-ram* = *Abi-ram*. Probably, therefore, î should be regarded as a modification of the original û, the nom. ending. The ending û still appears in *Ammu-ladin*, *Ammu-nira*, *Ammu-rabi*, and other names in Bab. and Assyr. records (cf. Heb. *Ḥamûl-ṭal*). If this be so, *'Ammi-el* must be translated, not 'my uncle is God,' but 'uncle is God.'

From this conclusion it follows that *'Ammi* in all these names is not a designation of a human relative, but of the Deity. In such names as 'uncle is God,' 'uncle is glory,' 'uncle is Lord,' 'uncle' can only be a title of a divinity. This conclusion is confirmed by the facts that *Abi*, *Aḥi*, and other names of relationship, except *Ben* 'son' and *Bint*, *Bath* 'daughter,' invariably refer to a god; *'Amm* forms compounds also that are parallel to compounds with Yah, cf. *'Ammi-El* and *Jo-El*, *'Ammi-hud* and *Hud-Yah*. The substitution of *Eli-'am* in 2 S 11[3] for *'Ammi-El* of 1 Ch 3[5] also shows consciousness that 'Ammi at the beginning of a compound is a Divine name. The change is analogous to the various substitutions for Baal in the Book of Samuel. Cf. also *Abi-ḥail* in the Heb. text of Est 2[15] 9[29] instead of *'Ammi-nadab* of the Gr. text.

The following names belong to this class:—*'Ammi-El*, 'uncle is God' (Nu 13[12], 2 S 9[4.5] 17[27], 1 Ch 3[5] 26[5]) = *Imi-ilu* (Obelisk of Manishtusu, Scheil, *Textes Élam.-Sém.* p. 6 ff.); *Amme-Ba'ali*, 'uncle is Lord,' an Aramæan of the middle Euphrates region (Ashurnaṣirpal, ii. 12, 118 f.); *'Ammi-hud*, 'uncle is glory' (2 S 13[37] *Q'rê*, a king of Geshur, Nu 1[10] 2[18] 7[48. 53] 10[22] 34[20. 28], 1 Ch 9[4]); *'Ammi-ḥur*, 'uncle is white'? (2 S 13[37] *Kethîb*); *'Ammi-ia* (עמיה ?), the name of a land in the Tell el-Amarna letters (Winckler, 119[11] 120[15] etc., cf. *Abi-Yah* and *Aa-am*); *Ami-li'ti*, 'uncle is might' (Rm. 77, rev. 10; Harper, *Letters*, No. 414); *'Ammu-nira*, 'uncle is light,' king of Beirut in the Amarna letters (Winckler, 96[29] 128–130 = *Ḥamu-niri*, 71[15. 66. 69] 91[53. 133]); *'Am-'âd* (meaning?), a town of Asher (Jos 19[26]); *Ama-Sin*, 'uncle is Sin' (Ob. of Manishtusu, A, v. 3) = *Imi-Sin* (*ib.* Scheil, *Textes Élam.-Sém.* p. 6 ff.); *'Ammi-Shaddai*, 'uncle is Shaddai' (Nu 1[12] 2[25] 7[66. 71] 10[25]); *'Am-shai*, 'uncle is a gift' (1 Ch 6[10-20] 11[20]: read עמשי, cf. אמשי).

2. A second class of 'Ammi-compounds consists of names in which 'Ammi is *followed by a word that may be either a verb in the perf. 3 sing. or a verbal noun*, e.g. *'Ammi-nadab*. In names of this class, as of the preceding, *'Ammi* cannot be translated 'people.' Such combinations as 'people has bestowed,' or 'people of bestowing,' 'people is generous,' 'people is friendly,' have no sense as names of individuals. *'Ammi* must here be translated 'uncle,' or 'kinsman,' and is clearly a title of the Divinity that has given the child. Nearly all the names with *'Ammi* of this class are paralleled by compounds with *Abi* and *Aḥi*, where also the name of relationship is a title of the deity; cf. *'Ammi-nadab*, *Abi-nadab*, *Aḥi-nadab*; *'Am-ram*, *Abi-ram*, *Aḥi-ram*. The parallelism between *'Ammi-zabad* and *Jeho-zabad*; *'Am-ram* and *Jeho-ram*; *'Ammi-nadab*, *Jeho-nadab*, *Chemosh-nadab*; also shows that *'Ammi* is treated as a Divine name. Mention has already been made of the fact that *Ḥammu*, the Bab. equivalent of *'Ammi*, is written with the determinative of 'god' in the name Ḥammurabi.

Those who take *'Ammi* as a construct in the preceding class of names take it also as a construct in this class, and translate *'Ammi-nadab* as 'uncle of generosity'; but all the objections urged against this view in the last class hold good here. *Jeho-nadab*, *Chemosh-nadab*, *Jehoram* can only be translated 'Jahweh is generous,' 'Chemosh is generous,' 'Jahweh is high'; and on this analogy the only natural translations for *'Ammi-nadab* and *'Am-ram* are 'uncle is generous,' 'uncle is high.'

Names of this formation are as follows:—*'Ammi-amara*, a Sabæan (Hommel, *AHT* 84); *'Am-mue'-en-shi* (עמיאנש), sheikh of Upper Tenu in the Egyptian tale of Sinuhe (*c.* B.C. 1970), apparently the same as the Sabæan name *'Ammi-anisa* (*CIS* 13; Halévy, 166 [=156, 158], 176, 243) and *'Ammi-anas*, a god of the Khaulan (Wellhausen, *Reste*[2], 23); *'Ammi-ditana* (*satana*?), one of the kings of the I Dyn. of Babylon; *Ammi-zabad*, 'uncle has presented' (1 Ch 27[6]); *'Ammi-za'ḍa*, 'uncle has terrified'; *Ammi-ḍhara'a*, 'uncle has sown'; *'Ammi-yada'a*, 'uncle knows'; *'Ammi-yapiya*, 'uncle is perfect' (all S. Arab names, Hommel, *AHT* 84); *'Ammi-yathi'a*, 'uncle has helped,' a Sabæan (Hommel, *AHT* 84) = *Am-yate'u*, an Assyrian (*WAI* iii. 46, No. 6 = Johns, *Deeds*, No. 229, rev. 5) = *Amme-'ta'*, an Arab (*WAI* iv. 47, No. 1[15]; Delitzsch, *Paradies*, p. 303; cf. *Abi-yate'* in Ashurbanipal, *Rassam*, vii. 97); *'Ammi-kariba*, 'uncle has blessed,' a Sabæan (*CIS* iv. 73); *'Ammu-ladin*, 'uncle is near,' a king of Kedar (Ashurbanipal, *Rassam*, viii. 16); *Ammi-nadab*, 'uncle has been generous' (Ex 6[23], Nu 1[7] 2[3 7 12. 17] 10[14], Ru 4[19], 1 Ch 2[10] 6[22], Est 2[15] 9[29] [acc. to LXX]), also a king of Ammon mentioned by Ashurbanipal (*KB* ii. p. 240); *'Ammi-amuqa*, 'uncle is wise,' a Sabæan (cf. Heb. עמק); *'Ammi-ṣaduqa*, 'uncle is righteous,' a Sabæan (Hal. 535), = *'Ammi-saduga*, a king of the I Dyn. of Babylon; *'Ammu-rabi*, or *Ḥammu-rabi*, 'uncle is great,' a king of the I Dyn. of Babyloo; *'Am-ram*, 'uncle is high' (Nu 3[17-19] 26[59], Ex 16[18-20], 1 Ch 6[2. 3. 18], Ezr 10[34]), also an Assyrian (Johns, *Deeds*, 59, rev. 2); *'Ammi-sami'a*, 'uncle has heard,' a Sabæan (Hommel, *AHT* 84); *'Ammi-shapaka*, 'uncle has bestowed,' a Sabæan (*CIS* 37).

3. A third class of 'Ammi-formations contains names in which 'Ammi is *preceded by a noun*; e.g. *Eli-'am*. Here also the translation 'people' for *'Ammi* gives no good sense, and the noun which precedes is not construct, but absolute. *Eli-'am* does not mean 'God of the people,' nor 'God is a people,' both of which would be impossible names for an individual, but it means 'God is uncle.' Once more the parallelism between *Eli-'am* and *Eli-Yah*, *Baal-'am* and *Baal-Yah*, shows that *'am* is a Divine name.

The following names belong to this formation:—*Eli'am* (2 S 11[3] 23[34]), also in a Phœn. inscription (*CIS* 147), and in the Bab. name *Ilu-Imme* (Johns, *Deeds*, 102[5]); *Ani-'am* (1 Ch 7[19]; meaning?, perhaps = *Anu-'am*, 'Anu is uncle'); *Beli-am*, 'Beli is uncle' (Ob. of Manishtusu, C, xv. 3; Scheil, *Textes Élam.-Sém.*), = prob. בלעם, Balaam; *Ben-'ammi*, 'son of uncle,' the progenitor of the Ammonites (Gn 19[38]; cf. art. AMMONITES); *Bîr-amma*, 'Bir is uncle,' an Assyrian (Johns, *Deeds*, 476, rev. 6; 855, rev. 8); *Zimri-ḫammu*, 'mountain-sheep is uncle,' a totemic Assyr. name (*Cun. Texts Brit. Mus.* iv. 1*a*, line 8); *Aa-amme* (perhaps = *Yah-am*, 'Jahweh is uncle,' an Assyr. name (Johns, *Deeds*, 296[3]); *Yithre-'am*, 'abundance is uncle' (2 S 3[5], 1 Ch 3[3]) = *Atar-ḫamu*? (Johns, *Deeds*, 198, obv. 3; Bezold, *Catalogue*, v. 1982); *Nabu-ḫamme*, 'Nebo is uncle,' a Bab. name interchanging with *Nabu-amme* and *Nabu-imme* (Strassmaier, *Nabuchodonosor*, p. 18 f.); *Shulmanu-imme*, 'Shulman is uncle,' an Assyr. name (Johns, *Deeds*, 284[3]); *Shamash-imme*, 'Shamash is uncle' (Johns, *Deeds*, 248[1]); *Se-imme*, 'gift is uncle' (cf. עמשי), an Assyr. name (Johns, *Deeds*, Nos. 126, 282 f.).

4. A fourth formation, in which *a verb in the perf. 3 sing. precedes* 'Ammi, is represented, so far as the present writer knows, only by רחבעם, Rehoboam (1 K 11[43] etc.), and (= Φιλόπατρις) as a cognomen of the Nabatæan king Ḥâriṯat (Euting, *Nab. Inschr.* 25, etc.). This is perhaps a late formation, and in it *'am* may have the late sense of 'people'; but the meaning '(Divine) uncle' is also possible, and is favoured by the parallel Rehab-Yahu. The name will then mean 'uncle is large.'

5. A fifth formation is found when 'Ammi *is preceded by a verb in the imperf. 3 sing.* Here belong the Heb. personal names, יקמעם, ירבעם, ישבעם, and five town names. These are commonly believed to be a late formation peculiar to the Heb., and *'am* in them is supposed to mean 'people'; but *Yashdi-ḫammu*, ''Ammi is lofty,' occurs in an Assyr. text (*Cun. Texts Brit. Mus.* iv. 2, line 21); and יקמעם is parallel to יקמיה, and ישבעם to ישביה; so that, even in this class, the primitive meaning of 'uncle' may still survive.

From the foregoing investigation it appears that *'Amm* is one of the earliest and widest spread of the Semitic designations of deity. It appears in the Obelisk of Manishtusu, which Scheil dates B.C. 4500, and in the earliest period of all the other Semitic languages. It was originally a title like El, Baal, Adon, Melek, and most other Divine names; but in a number of places where its primitive meaning was forgotten it developed into a true personal name. Among the Hebrews it was treated, like Baal, Adon, and Melek, as a title of Jahweh. It is found most frequently in the early period, and

no new names of this sort were coined during the period covered by the OT. See AMMONITES.

LEWIS BAYLES PATON.

AMMONITES.—During the period covered by the Old Testament literature the Ammonites occupied the eastern portion of the region now known as the Belḳā. Dt 2³⁷ describes their territory as 'the whole side of the torrent of Jabbōq, and the cities of the hill-country,' *i.e.* the region about the upper course of the modern Wādy Zerḳā (cf. Dt 3¹⁶, Jos 12²). Jos 13²⁵ speaks of the towns of Ja'zēr and 'Ărō'ēr as marking the frontier between Ammon and Israel. Ja'zēr is also named in Nu 21²⁴ according to the Gr. text (BAFL). It is described by Eusebius and Jerome as lying 10 R.m. west of Philadelphia (Rabbah) and 15 R.m. from Heshbon. Its precise location and also that of 'Ărō'ēr have not yet been determined. The capital city of the country was Rabbāh, or Rabbath benê-'Ammôn, at the head-waters of the Jabbōq (cf. Dt 3¹¹, Jos 13²⁵, 2 S 11¹ 12²⁶⁻²⁹ 17²⁷, 1 Ch 20¹, Jer 49²ᶠ., Ezk 21²⁰⁽²⁰⁾ 25⁵, Am 1¹⁴). It was rebuilt by Ptolemy Philadelphus (B.C. 285–247), and received from him its Greek name of Philadelphia. Its modern Arabic name of 'Ammān is a survival of the ancient name of the land. The other towns Minnîth and Ābēl-cheramîm are mentioned in Jg 11³³.

In regard to this people there are no native sources of information. Even inscriptions are wholly lacking. Our knowledge of their religion, accordingly, must be derived from the scanty notices of the OT and from the allusions in certain Assyrian inscriptions.

According to Gn 19³³⁻³⁸, the ancestors of Moab and Ammon were sons of Lot by his two daughters. They were thus nearly related to Israel (cf. Dt 2⁹·¹⁹). In the case of the Moabites this opinion is sustained by proper names and by the Mesha Inscription, which is written in a dialect almost identical with Hebrew. In the case of the Ammonites it is sustained by the proper names Nāḥāsh (1 S 11¹), Ḥānûn (2 S 10¹), Shōbî (17²⁷), Zelek (23³⁷), Na'ămāh (1 K 14²¹), Ba'sa and Ruḥub (Shalmaneser, *Monolith*, ii. 95), Sanipu (Tiglath Pileser, *Clay Tablet Ins.*, rev. 10), Puduilu (Sennacherib, *Prism*, ii. 52; Esarhaddon, *Broken Prism*, v. 18), Amminadbi (Ashurbanipal, 'Fragment,' in *Keilinschrift. Bibl.* ii. p. 240), Ba'ālîs (Jer 40¹⁴), Tōbîāh (Neh 2¹⁹); also by the divine name Milcōm, and the city names Rabbāh, 'Ărō'ēr, Minnîth, Ābēl-cherāmîm, all of which are easily interpreted from the Hebrew.

The Ammonites were a part of the same wave of Semitic migration to which Israel belonged, and their settlement east of the Jordan did not long precede Israel's occupation of Canaan. According to Dt 2²⁰ᶠ., they dispossessed a people known as the Zamzummîm, a branch of the Rephaim, which it has been proposed to identify with the Zuzim in Ham of Gn 14⁵ (cf. Dt 3¹¹). According to Jg 11¹³⁻²², Jos 13²⁵, they occupied originally the whole of the region east of the Jordan, but were driven out of the western half of this by the Amorites (cf. Nu 21²⁵⁻³¹). The Amorite kingdom of Sihon the Israelites conquered, but the land of the Ammonites they did not disturb (Nu 21²⁴, Dt 2¹⁹· ³⁷ 3¹⁶, Jg 11¹⁵). Dt 23⁽³⁾ᶠ. represents the Ammonites as participating with the Moabites in hiring Balaam to curse Israel, and, according to Nu 22⁵, Balaam came from the land of the children of Ammon (read '*Ammôn* with Sam., Syr., Vulg., instead of '*ammô*, 'his people'). According to Jg 3¹³, the Ammonites assisted Eglon, king of Moab, in his conquest, and, according to 10⁷–11³³, they disputed the possession of Gilead with the Israelites. A similar attack upon Gilead by Nahash, king of Ammon, was warded off by Saul, and was the occasion of his elevation to the throne, according to the older source of the Book of Samuel (1 S 11¹·¹¹). Nahash 'showed kindness' unto David, *i.e.* kept peace with him and paid his tribute, but his son Hanun, trusting to the help of the Aramæans of the adjacent regions of Beth-Rehob, Zobah, and Maacah, revolted, and had to be conquered by David (2 S 10¹–11¹ 12²⁶⁻³¹, 1 Ch 19¹–20³). The spoil of this campaign David dedicated to Jahweh (2 S 8¹²= 1 Ch 18¹¹), and the Ammonites remained tributary during the rest of his reign and during the reign of his successor. Zelek the Ammonite appears in the list of David's bodyguard (2 S 23³⁷). Solomon cultivated friendly relations by marrying a wife from this nation (1 K 11¹), and this account is confirmed by the fact that the mother of Rehoboam was an Ammonitess (14²¹. ³¹). According to one recension of the LXX, she was the daughter of Hanun, son of Nahash. For her benefit the cult of Milcōm, the god of Ammon, was established on a hill near Jerusalem (1 K 11⁵. ⁷. ³³, 2 K 23¹³). After the death of Solomon, the Ammonites appear to have regained their independence, and to have remained free until they fell beneath the yoke of the Assyrians along with the other small nations of Western Asia. The victories of Jehoshaphat, Uzziah, and Jotham over them rest only upon the authority of the Chronicler (2 Ch 20. 26⁸ 27⁵). In B.C. 854, Ba'sa (Baasha), son of Ruḥub (Raḥōb), with 1000 men, came to the help of the king of Damascus against Shalmaneser II., along with Ahab of Israel and ten other kings of Syria (Shalmaneser, *Monolith*, ii. 95). In the reign of Jeroboam II. (*c.* 760 B.C.), Amos denounces the Ammonites because of the atrocities that they have committed in Gilead (Am 1¹³). In B.C. 734, Tiglath Pileser III. records that he received the tribute of Sanipu of Bit-'Ammān (Bēth-'Ammôn), along with that of Ahaz of Judah (*Clay Tablet Ins.*, rev. 10). From Zeph 2⁸ᶜ, Jer 9²⁵⁽²⁶⁾ 49¹·⁶, it appears that after the deportation of the Israelites east of the Jordan by Tiglath Pileser III. in 734 (2 K 15²⁹), the Ammonites moved in and occupied their land. Sennacherib (*Prism*, ii. 52) records that he received the tribute of Puduilu (Padahel) of Bit-'Ammān at the time of his invasion of Syria in 701. This same Puduilu is mentioned by Esarhaddon (*Broken Prism*, v. 18) as one of the twenty-two kings of the 'land of the Hittites' who furnished building materials for one of his palaces. In his place in a similar list of twenty-two kings Ashurbanipal names Amminadbi (Amminadab) (*Keilinschriftliche Bibliothek*, ii. p. 240, l. 11). At the time of Nebuchadrezzar's first invasion of Syria the Ammonites assisted him (2 K 24²). Subsequently they joined a league against him (Jer 27³, Ezk 21²⁰. ²⁸), but before they were attacked they managed to make peace, and participated in his assault upon Jerusalem (Ezk 25¹·⁷·¹⁰). In spite of this, many of the Jews took refuge among them at the time of the siege, and Ishmael was incited by Baalis, king of Ammon, to murder Gedaliah, the governor whom Nebuchadrezzar had appointed at the time of the fall of the city (Jer 40¹¹· ¹⁴ 41¹⁰). The name Kephar hā-'Ammônai in Jos 18²⁴ (P), as one of the villages of Benjamin, suggests that during the Exile the Ammonites, like the Edomites, made settlements west of the Jordan. If so, this will explain the denunciation of the exilic prophecy, Is 11¹⁴. As early as the time of Ashurbanipal, two main divisions of the Arabians, Kedar and Nebaioth, were menacing the old lands of Edom, Moab, and Ammon, and were prevented from overrunning them only by the activity of the Assyrian monarch. Ezk 25 anticipates that these 'children of the East' will bring these three nations to an end (cf. Ob 17); and, as a matter of fact, after the Exile we find, instead of Moab and Edom, Geshem the Arabian as the chief enemy of the Jews (Neh 2¹⁹ 4⁷ 6¹·⁶). Ammonites are still mentioned, but they seem to lead no independent national existence. Tobiah, the Ammonite who opposed Nehemiah (2¹⁰. ¹⁹ 4³. ⁷ 6¹⁷ 13⁴), bore a name compounded with Jahweh, he and his son both had Jewish wives, he was connected by marriage with the high priest, and he appears regularly in company with Sanballat the Horonite and the Samaritans. Apparently he had nothing to do with the old land of Ammon, but was a resident of Kephar hā-'Ammônai (Jos 18²⁴). No king of Ammon is named after the Exile, and it seems probable that this people perished as a nation, along with Moab and Edom, at the time of the Nabatæan Arabian migration. Survivors of these nations found refuge in Judah, and gave rise to the problem of mixed marriages, which caused Nehemiah and Ezra so much trouble (Ezr 9¹, Neh 13¹· ²³). Where Ammonites are mentioned in the later history, we have merely an application of an old geographical term to a new race. The Ammonites under Timotheus (1 Mac 5⁶⁻⁸), and the Ammonites of Ps 83⁷ and Dn 11⁴¹, are Nabatæans or Greeks living in the old land of Ammon.

We must now endeavour to construct from these meagre sources a picture of the religion of the ancient Ammonites. From 1 K 11⁵. ³³, 2 K 23¹³, it appears that Milcōm was their chief national god, just as Chemosh was the god of Moab, Kozai of Edom, and Jahweh of Israel. In 2 S 12³⁰=1 Ch 20² the LXX reads *Milcōm* instead of *malcām*, 'their king.' This is the reading of the Talmud (*'Ābōdā zārā*, 44*a*), of the old Jewish commentators, and of most modern authorities. In that case the passage reads, 'And he took the crown of Milcōm from off his head, its weight was a talent of gold, and on it there was a precious stone. It David placed upon his own head.' From this it appears that Milcōm was represented by an idol of human size which was adorned with the insignia of royalty like other ancient images. In Jer 49¹· ³, LXX, Vulg., Syr. also read *Milcōm* instead of MT *malcām*, and this reading is undoubtedly correct, so that the passage should be translated, 'Hath

Israel no sons? hath he no heir? why then doth Milcōm inherit Gad, and his people dwell in the cities thereof? . . . Milcōm shall go into captivity, his priests and his princes together.' This shows that Milcōm bore a relation to Ammon similar to that which Jahweh bore to Israel, and that he had a priesthood that was the counterpart of the Jahweh priesthood. In 2 S 12^{31}, Am 1^{15} 5^{26}, Zeph 1^{5}, some of the versions and certain commentators also read *Milcōm* instead of *malcēn* and *malcām*, but these emendations are less probable. Apart from these passages in the OT no mention of Milcōm is known.

The name Milcōm is with Baudissin (*Jahve et Moloch*, 30) and Lagarde (*Übersicht über die . . . Bildung der Nomina*, p. 190) to be regarded as *milk* 'king' (Phœn. *milk*, Heb. *mélek*) with the old nominative ending and mimmation. It means, therefore, simply 'the king.' Others regard it as compounded of *mélek* and *'am*, and as meaning 'king of the people' (so Kuenen, *Theol. Tijdschrift*, ii. 1868, 555–598), or 'Am is king' (so Eerdmans, *Melekdienst*, 112); but these explanations are unsatisfactory, because they do not account for the disappearance of the *y*. In etymology and meaning accordingly, Milcōm is identical with Molech, the god worshipped by the Israelites, according to Lv 18^{21} 20^{2-5}, 2 K 23^{10}, Jer 32^{35}. The vowels of this word are generally believed to be those of *bōsheth* 'shame,' and to have been added by the Massoretes to express their abhorrence of the cult. The original pronunciation was Mélek. The name is always accompanied by the article (except in 1 K 11^{7}, where the text is corrupt), and means 'the king.' In Is 30^{33} 57^{9} it is probable that 'the king' refers to this god, and there are other passages in the OT where it is possible that the expression has the same meaning.

On the basis of the similarity of form and meaning of Milcōm and Molech it has been conjectured that the two gods are identical, and that Molech-worship was borrowed by Israel from the Ammonites. If so, we can learn something in regard to Milcōm from a study of Molech. In support of this theory it is claimed that the only passages in the OT which mention Molech-worship (2 K 23^{10}, Jer 32^{35}, Lv 18^{21} 20^{2-5}, Is 30^{33} 57^{9}) were written after the time of Manasseh, and have his abuses in mind. This seems to show that Molech-worship was an innovation introduced from Ammon. There are several difficulties in the way of this view. Even if we grant that Molech was a borrowed divinity, it is not clear why he should have been borrowed from the Ammonites. They had no such political importance in the time of Manasseh that their god should have been sought as a refuge against the Assyrians. If Molech was borrowed from them, why did he not retain his original name of Milcōm? Mélek as a divine name is found in all branches of the Semitic race. In Babylonia and Assyria it appears as Malik (Jastrow, *Rel. of Bab. and Assyr.* 176 f.); among the people of Sepharvaim as Adram-Mélek and Anam-Mélek (2 K 17^{31}); in Palmyra as Malak-Bel (Baudissin, *Studien*, ii. 193); in Phœnicia, as Melkart (=מלך־קרית); in Edom, in the proper name Malik-rammu (Sennacherib, *Prism*, ii. 54). If Molech-worship is really a borrowed cult in Israel, it may have been derived from any one of these sources quite as well as from the Ammonites.

It is not certain, however, that Molech-worship was an innovation introduced by Manasseh. Mélek is a title frequently applied to Jahweh Himself (*e.g.* Ps $5^{3(2)}$ 10^{16} $20^{10(3)}$ 24^{7} 29^{10} $44^{5(4)}$ $47^{3(2)}$ $48^{3(2)}$ $68^{25(24)}$ 74^{12} $84^{4(3)}$ 95^{3} 98^{6}, Is 6^{5} 33^{22}, Jer 8^{19} 10^{10} 46^{18}, Mic 4^{9}, Zeph 1^{5}, Zec 14^{17}, Mal 1^{14}, and proper names such as Malkishua, 1 S 14^{49}). A characteristic feature of the Mélek cult was child-sacrifice, and this is known to have been an element of the early Jahweh religion. The Book of the Covenant in Ex $22^{28(29)}$ enacts, 'The firstborn of thy sons shalt thou give unto me,' and contains no provision for redemption, such as we find in 13^{13} and 34^{20}. The story of Abraham's sacrifice of Isaac in Gn 22 (E) shows that child-sacrifice was practised in the early religion of Jahweh, but that the conviction was growing in prophetic circles that Jahweh did not demand these offerings. In spite of prophetic opposition, however, they continued to be brought (cf. 1 K 16^{34}, and Winckler, *Gesch. Isr.* i. 163, n. 3; 2 K 16^{3}, 2 Ch 28^{3}). Jeremiah repeatedly insists that Jahweh does not require these sacrifices (Jer 7^{31} 19^{5} 32^{35}), and this indicates that in the popular conception they were part of His requirements. The Holiness Code (Lv 18^{21}) also suggests that Molech sacrifices were popularly regarded as Jahweh sacrifices. Ezekiel goes so far as to quote the law of Ex 13^{12}, 'Thou shalt sacrifice unto Jahweh everything that openeth the womb,' and to say that Jahweh gave this commandment in wrath to destroy the nation because it would not keep the good statutes that he had previously given it (Ezk $20^{24-28.\ 31}$). These facts make it clear that Molech-worship was no new thing in Israel, and that by the nation in general it was regarded as one form of Jahweh-worship. The absence of early prophetic polemic against child-sacrifice is, accordingly, to be explained by the fact that the prophets included it in their repudiation of all sacrifice. Jeremiah and Ezekiel, who hold the Deuteronomic standpoint in regard to sacrifice, are obliged to specify that Jahweh does not require child-sacrifice, although He requires animal-sacrifice. If Molech-worship is ancient in Israel, then it cannot have been borrowed from the Ammonites in the time of Manasseh.

Another theory which identifies Milcōm with Molech supposes that this cult was introduced into Israel by Solomon. This opinion makes its appearance as early as the Gr. versions, and has been the source of much textual corruption. It seems to be supported by 1 K $11^{7.\ 33}$, which speaks of 'Milcōm, the abomination of the Ammonites,' as worshipped by Solomon after his marriage with an Ammonite wife (cf. 2 K 23^{13}, 1 K $14^{21.\ 31}$); and by 1 K 11^{7}, which calls this god Molech. Granting the historicity of Solomon's worship of Milcōm, which is disputed by a number of critics, it appears from 1 K 11^{7}, 2 K 23^{13}, that the high place of Milcōm was on the right hand of the Mount of Destruction east of Jerusalem, *i.e.* somewhere on the ridge of the Mount of Olives; but the high place of Molech, according to all the OT references, was in the Valley of Hinnom (cf. 2 K 23^{10}, Jer 2^{23} 7^{31} 19^{5} 32^{35}, 2 Ch 28^{3} 33^{6}). From this it is clear that Milcōm and Molech were not identified by the ancient Israelites (cf. Baethgen, *Beiträge*, 15). The substitution of Molech for Milcōm in 1 K 11^{7} is evidently a textual error; the MT points without the article, and Lucian's recension of the LXX reads Milcōm.

A third theory is that there was a primitive Semitic god, Mélek, of which Milcōm and Molech are local variants. Against this view is the fact that Milcōm and Molech are not personal names, but titles, like Baal, 'owner'; Adon, 'master'; Marna, 'our lord.' There was no primitive Semitic god Baal, whose cult came down in the various branches of the Semitic race, but there was a multitude of Baalim who presided over various holy places and who were distinguished from one another as the Baal of this place or the Baal of that place. These Baalim were different in functions and might have different personal names. In like manner there were as many Mᵉlākîm as there were nations, and there is no reason why the Mélek of Ammon, or the Mélek of Israel, or the Mélek of Tyre, or the Mélek of Palmyra should

be identified with one another, any more than why their human rulers should be identified because they all bore the name of 'king.'

Although there was no primitive god Mélek, it is probable, however, that all the various M^{e}lākîm of the Semitic races bore a family resemblance to one another, just as the Baalim bore a family resemblance, so that it is possible to draw inferences from the character of one Mélek to that of another. The Baalim were gods of nature. They manifested themselves in springs and streams and trees. They gave the fruits of the earth, and they were worshipped with offerings of firstfruits. The M^{e}lākîm, on the other hand, were tribal gods conceived after the analogy of human rulers. They gave the fruit of the womb; and, accordingly, they were worshipped with firstborn children and firstborn animals. Wherever we know anything of the cult of the M^{e}lākîm, child-sacrifice is its most conspicuous feature. When this rite was practised in Israel it was always in the name of the Mélek, even though this might be understood as a title of Jahweh. From Dt 12^{31} 18$^{9.10}$, Lv 18$^{21.24}$, Ezk 16^{20}, Ps 106^{38}, it appears that this sort of sacrifice was also offered by the Canaanites, and this testimony is confirmed by the excavations at Gezer, Megiddo, and Taanach, where the remains of sacrificed infants have been found in large numbers. Child-sacrifice was a conspicuous element in the cult of the Tyrian and Carthaginian Melḳart, and 2 K 17^{31} states that the people of Sepharvaim sacrificed their children to Adram-Mélek, and Anam-Mélek. These facts seem to show that sacrifice of infants was intimately connected with the conception of deity as Mélek, or ruler of the tribe; and we are probably warranted in thinking that wherever a god was called by this name this sort of sacrifice was celebrated in his honour. In the case of Milcōm, accordingly, infant-sacrifice is probable, although this is never mentioned in the OT; and this opinion is confirmed by the fact that the closely related Moabites sacrificed children in honour of their god Chemosh (2 K 3^{27}).

In regard to the manner in which children were sacrificed we have only the analogy of Molech-worship in Israel to guide us. The technical name for the rite was 'making over children to the King by fire' (Lv 18^{21} 20$^{2-4}$, Dt 18^{10}, 2 K 16^{3} 17^{17} 21^{6}, 2 Ch 33^{6}, Ezk 20^{31}). The same expression is used of 'making over' the firstborn to Jahweh in Ex 13^{12}. From Gn 22^{10}, Ezk 16^{20}, Is 57^{5}, *et al.*, it appears that children were slain like other sacrifices, and from Dt 12^{31} 18^{10}, 2 K 17^{31}, Jer 3^{24} 7^{31} 19$^{4-6}$ 32^{35}, that their bodies were afterwards burnt in a place known as *Tᵉphāth* (*Tōpheth*, with the vowels of *bōsheth*, 'shame'). Analogous rites are found among the Phœnicians and Carthaginians, and we may perhaps assume that they existed also among the Ammonites.

Besides Milcōm there is no clear evidence that the Ammonites worshipped any other god. Jg 10^{6} speaks of 'the gods of the children of Ammon,' but this is a late editorial passage. From Jg 11^{24} it has been inferred that Chemosh was a god of the Ammonites as well as of the Moabites, or else that Chemosh and Milcōm were identified; but it is now generally recognized that the section Jg 11$^{12-28}$ has nothing to do with Jephthah's dispute with the Ammonites. It is a fragment of a narrative of a dispute between Israel and the Moabites which has been combined with the Jephthah story by the compiler of the Book of Judges (cf. Moore, *Judges*, 283).

More can be said in favour of the view that the Ammonites worshipped a god called 'Am or 'Ammi. The name 'Ammôn (Assyr. Ammān) is apparently a diminutive or pet-name from 'Am, as Shimshôn (Samson) is from Shemesh. Ammon alone is never used as a tribal name, except in the late passages, Ps 83^{7} and 1 S 11^{11}, where the Gr. reads τοὺς υἱοὺς Ἀμμών. The regular expression is 'children of Ammon.' Even the ancestor of the race is not called Ammon, but Ben-'Ammî (Gn 19^{38}). 'Am means primarily 'father-uncle' in a polyandrous society, then 'paternal uncle,' then 'kinsman,' then 'people.' The narrator in Gn 19^{38} has chosen the meaning 'father-uncle,' and has derived from this the story of the incestuous origin of the Ammonites. Their ancestor, he thinks, was called Ben-'Ammî, 'son of my father-uncle,' because his father was also his mother's father. It is more likely, however, that 'Ammî was used here originally with reference to a god who was called the 'father-uncle,' or 'kinsman' of the tribe.

This use of 'Ammî as a divine name is wide-spread in the Semitic dialects. In Heb. we find it as the first element of the proper names 'Ammiel, 'Ammihud, 'Ammihur, 'Amminadab, 'Ammishadai, 'Ammizabad, 'Amnuiad; and as the final element in the names Ani'am, Eli'am, Ithre'am, Jashobe'am, Jekame'am, Jeroboam, Reboboam, Jible'am, Jokde'am, Jokme'am, Jokne'am, Jorke'am. In Babylonia it appears in names of kings of the first dynasty, 'Ammisatana, 'Ammisaduga, Ḥammurabi (or 'Ammurabi), and in South Arabia in 'Amḳarib and other proper names. One of the kings of Ammon mentioned by Ashurbanipal bore the name Amminadbi (Amminadab), 'my father-uncle is generous,' where 'Ammî is clearly the name of a deity. Bala'am is also a name compounded with 'Am, and one tradition in Nu 22^{5} (read '*Ammôn* instead of '*ammô*, 'his people'), makes Balaam come from the land of the children of Ammon (cf. Dt 23$^{4\,(3)}$f.. Rehoboam also bears a name compounded with 'Am, and he was the son of an Ammonite mother (1 K 14$^{21.31}$).

On the basis of some of these facts, Derenbourg, in *REJ* (1880) i. 123, proposed the theory that 'Am, or 'Ammi, was the name of the national god of the Ammonites. This theory is correct, if we regard 'Am as merely a title applied to Milcōm by the Ammonites, as it was applied to Jahweh by the Israelites; but it is not correct if we regard 'Am as a separate deity. There is no evidence that there was a primitive Semitic god 'Am, any more than that there was a primitive Semitic god Baal or Mélek. 'Paternal uncle' is a title like 'father,' 'brother,' 'king,' 'lord,' that might be applied to the most diverse gods (see 'AMM, 'AMMI).

The word Ilu, or El, which appears in the name of the Ammonite king Pudu-ilu (cf. Padah-El, 'God has redeemed,' Nu 34^{28}), is also generic, and may refer to Milcōm, as it does to Jahweh in the parallel Heb. form (cf. Pedaiah, 2 K 23^{36}). Baalis (בַּעְלִיס), the name borne by the king of Ammon at the time of the fall of Jerusalem, is of doubtful etymology. Grätz regards it as abbreviated out of Ben-'ālîṣ (בֶּן־עָלִיץ), 'son of exultation.' Baethgen (*Beiträge*, 16) regards it as equivalent to Baal-Isis, 'husband of Isis,' or 'Isis is Baal,' and compares Abd-is, 'servant of Isis' (*CIS* 308). Both interpretations are exceedingly doubtful, and all that can be gathered from this name is that Baal was in use as a generic name for deity among the Ammonites as among the other Semites. Tobiah the Ammonite and his son Jehohanan (Neh 2^{10} 6$^{17f.}$) have names compounded with Jahweh, and this has been made a basis for the conjecture that Jahweh was one of the gods of the Ammonites, as of the people of Hamath (cf. Joram, 2 S 8^{10}, and Yau-bi'di in the inscriptions of Sargon), and of the people of Ya'udi in Northern Syria (cf. Azri-yau in the inscriptions of Tiglath Pileser III.). The conclusion is, however, not valid, because, as previously pointed out, the Ammonites settled in the land of Israel during the Exile and adopted the cult of the god of the land. The other Ammonite names that have come down to us are not theophorous, and, therefore, yield no information in regard to the religion of this race. Stephen of Byzantium (cited by Baethgen, *Beiträge*, 16) states that the original name of the capital of Ammon was Ammana, then it was called Astarte, and finally Philadelphia. If this be true, it indicates the worship of the primi-

tive Semitic goddess Ashtart. From the mention of the gigantic sarcophagus of Og that was preserved at Rabbah (Dt 3^{11}), we may, perhaps, infer that ancestor-worship was practised among the Ammonites as among other branches of the Semitic race.

From the foregoing survey it appears that there is no convincing evidence of the worship of any other god than Milcōm among the Ammonites. It would be rash, however, to infer from this lack of evidence, which is due to the scantiness of our sources, that Milcōm occupied the same unique place in Ammon as Jahweh did in Israel; and to use this, as Renan did, as proof of a tendency to monotheism in that branch of the Semitic race to which Israel belonged. In all probability the Ammonites were polytheists, like their neighbours and near relatives the Moabites and Edomites, and it is merely an accident that we know the name of only the head god of their pantheon.

In regard to the rites of their religion we know practically nothing, except what we may infer from the analogy of the religions of kindred races. Jer 9^{26} shows that they practised the rite of circumcision, in common with the Egyptians, Israelites, Edomites, and Moabites. In other respects probably their customs did not differ widely from those of ancient Israel. From Gn $19^{36\text{-}38}$ Delitzsch (*Com. on Gen.*) infers that the Ammonites and Moabites were characterized by an extreme lewdness that aroused the moral repugnance of Israel; and he appeals to Nu 25 for proof of this in the case of the Moabites; but Gn $19^{36\text{-}38}$ is so evidently derived from a fanciful popular etymology of the names Moab and Ben-'Ammî that no historical conclusions can be based upon it.

LEWIS BAYLES PATON.

AMNESTY.—The word is used somewhat loosely by modern writers with reference to several episodes in Greek history. Strictly and properly, it is the word used by writers of the post-classical age to describe the resolution adopted by the Athenians after the expulsion of the so-called Thirty Tyrants, when, in the summer of B.C. 403, a reconciliation was effected, through the mediation of the Spartan king Pausanias, between the oligarchical party of the city and the democrats of the Piræus, upon the following basis:

'All persons who, having remained in the City during the oligarchical régime, were anxious to leave it, were to be free to settle at Eleusis, retaining their full civil rights, and possessing full and independent rights of self-government, with free enjoyment of their personal property. . . . There should be a universal amnesty concerning past events towards all persons (*τῶν δὲ παρεληλυθότων μηδενὶ πρὸς μηδένα μνησικακεῖν ἐξεῖναι*), except the Thirty, the Ten (who were their successors), the Eleven (who had carried out their decrees of execution), and the magistrates (ten in number) of the Piræus; and these should also be included if they should submit to give an account of their official acts (*ἐὰν διδῶσιν εὐθύνας*) in the usual way' (Arist. *Ath. Pol.* 39 [Kenyon's tr.]; cf. Xen. *Hell.* ii. 4. 38, and reference in Aristoph. *Plut.* 1146: *μὴ μνησικακήσῃς, εἰ σὺ Φυλὴν κατέλαβες. Ἀλλὰ ξύνοικον πρὸς θεῶν δέξασθέ με*).

That the children of the Thirty were included under the amnesty is testified by Demosthenes *Or.* xl. 32: *νυνὶ δ' ὑμεῖς μὲν οὕτως ἐστὲ καινοὶ καὶ φιλάνθρωποι, ὥστ' οὐδὲ τοὺς τῶν τριάκοντα υἱεῖς φυγαδεῦσαι ἐκ τῆς πόλεως ἠξιώσατε*—which was in striking contrast with the practice usual in Greek political strife.* This agreement of harmony was ratified by the oath of the whole people, and for some years at least it seems to have been incorporated with the oath of office taken by members of the Council and the Heliasts—the senators swearing not to admit any information (*ἔνδειξις*) or to allow any arrest (*ἀπαγωγή*) founded on any fact prior to the archonship of Eukleides, excepting only in the case of the persons expressly excluded from the amnesty (*πλὴν τῶν φυγόντων*); the dikasts swearing neither to remember past wrongs, nor to yield to any solicitation to do so, but to give their verdict in accordance with the revised code dating from the restoration of the democracy (Andoc. *de Myst.* 90: *οὐ μνησικακήσω, οὐδὲ ἄλλῳ πείσομαι, ψηφιοῦμαι δὲ κατὰ τοὺς κειμένους νόμους.* See Grote, *Hist. of Greece* [vol. xii. ed. 1884], viii. 100 n.).*

The amnesty, as above described, seems to have been renewed two years later with the secessionists at Eleusis (Arist. *l.c.*; Xen. *Hell.* ii. 4. 43: *καὶ ὁμόσαντες ὅρκους ἢ μὴν μὴ μνησικακήσειν ἔτι καὶ νῦν ὀμοῦ τε πολιτεύονται καὶ τοῖς ὅρκοις ἐμμένει ὁ δῆμος*). The energetic but high-handed action of Archinos was a powerful factor in maintaining the amnesty. When one of the returned exiles began to violate the agreement, Archinos haled him before the Council, and persuaded the Councillors to put the man to death without trial (Arist. *l.c.*: *ἄκριτον ἀποκτεῖναι*), telling them that they had now an opportunity of showing whether they wished to preserve the democracy and abide by their oath. Archinos also carried a measure giving every one accused in violation of the amnesty the right to raise a special plea in bar of action (*παραγραφή*. See Isocr. *Or.* xviii. 2: *ἄν τις δικάζηται παρὰ τοὺς ὅρκους, ἐξεῖναι τῷ φεύγοντι παραγράψασθαι . . . ἵν' οἱ τολμῶντες μνησικακεῖν μὴ μόνον ἐπιωρκοῦντες ἐξελέγχοιντο κ.τ.λ.*).†

It must be noticed that the terms used of the above events by the classical writers are *αἱ διαλύσεις* or *αἱ διαλλαγαί*, *αἱ διαθῆκαι*, *οἱ ὅρκοι*—the 'reconciliation,' the 'covenant,' the 'oath'; while for the specific content of the oath the phrase *μὴ μνησικακεῖν*, 'not to remember past wrongs,' is ordinarily used (corresponding to the phrase *τὰς περὶ τῶν προτέρων αἰτίας ἐξήλειψαν* used in Arist. *Ath. Pol.* xl. 3). Compare the account given by the Latin compilers, *e.g.* Corn. Nep. *Thras.* iii. 2: 'legem tulit, ne quis ante actarum rerum accusaretur neve multaretur, eamque illi oblivionis appellarunt'; Justin, v. 10. 10: 'atque ita per multa membra civitas dissipata in unum tandem corpus redigitur, et ne qua dissensio ex ante actis nasceratur, omnes iure iurando obstringuntur, discordiarum oblivionem fore.' The Greek word *ἀμνηστία*, translating the Latin *oblivio*, is first used in Val. Max. iv. 1. 4: 'hæc oblivio, quam Athenienses *ἀμνηστίαν* vocant'; and by Plutarch (*Cic.* 42): *Κικέρων . . . ἔπεισε τὴν σύγκλητον Ἀθηναίους μιμησαμένην ἀμνηστίαν τῶν ἐπὶ Καίσαρι ψηφίσασθαι* (cf. Plut. *Præc. Pol.* 17: *τὸ ψήφισμα τὸ τῆς ἀμνηστίας ἐπὶ τοῖς τριάκοντα*: and Hist. Aug. *Aurel.* 39: 'amnestia etiam sub eo dslictorum publicorum decreta est de exemplo Atheniansium'). It was probably the classical phrase *μὴ μνησικακεῖν* that was in Cicero's mind in the opening of his First Philippic (*Phil.* i. 1: 'in quo templo, quantum in me fuit, ieci fundamenta pacis, Atheniensiumque ranovavi vetus exemplum: græcum etiam verbum usurpavi, quo tum in sedandis discordiis usa erat civitas illa, atque omnem memoriam discordiarum oblivione sempiterna delendam censui'—where, however, the Berne MS reads 'amnestiam' before 'usurpavi').

A similar example of an Act of oblivion, though no details are known, is furnished by the restored democracy of Samos in B.C. 411 (Thuc. viii. 73: *καὶ τριάκοντα μέν τινας ἀπέκτειναν τῶν τριακοσίων, τρεῖς δὲ τοὺς αἰτιωτάτους φυγῇ ἐξημίωσαν· τοῖς δ' ἄλλοις οὐ μνησικακοῦντες δημοκρατούμενοι τὸ λοιπὸν ξυνεπολίτευον*). An abortive attempt to re-establish harmony on the basis of amnesty was made at Megara in B.C. 424 (Thuc. iv. 74).

It is clear that the above Acts of oblivion differ from those examples to which the word 'amnesty' is also applied by modern writers—that is to say, those resolutions, of which several instances are

* *e.g.* at Corcyra (Thuc. iii. 70 f.); at Argos (Grote, *Hist. of Greece*, ix. 418); see Thonissen, *Le droit pénal*, p. 153, and cf. Dio Cass. xliv. 26. 5.

* Cf. Dio Cass. xliv. 26. 2: *στασιάσαντές ποτε . . . καὶ τυραννηθέντες, οὐ πρότερον ἀπηλλάγησαν τῶν κακῶν πρὶν συνθέσθαι καὶ διομολογήσασθαι τῶν τε συμβεβηκότων σφίσι . . . ἐπιλήσεσθαι, καὶ μηδὲν τὸ παράπαν ὑπὲρ αὐτῶν μήτε ἐγκαλέσειν ποτὲ μήτε μνησικακήσειν τινί.*

† Whether this belongs to the year B.C. 403 or to B.C. 401 is doubtful—probably to the latter year; so the present writer would arrange the events, rejecting Breitenbach's attempt (ed. of Xen. *Hell.* ed. 2, note on *Hell.* ii. 4. 43) to prove that the oath as given by Andocides (above quoted) belongs to the second and final act of reconciliation, and that hence arises its difference from the oath as given by Xen. *Hell.* ii. 4. 38.

known from Greek history, taken in times of great danger, with the object of stilling disputes and uniting all forces in defence, by which political exiles were recalled and civic rights conferred upon those who had been partially or wholly disfranchised as a penal measure. The Athenians adopted this measure shortly before the battle of Salamis (Andoc. *de Myst.* 107: *ἔγνωσαν τούς τε φεύγοντας καταδέξασθαι καὶ τοὺς ἀτίμους ἐπιτίμους ποιῆσαι.* Cf. Arist. *Ath. Pol.* 22: *κατεδέξαντο πάντας τοὺς ὡστρακισμένους . . . διὰ τὴν Ξέρξου στρατείαν*). Again, a similar resolution was passed at the time of the siege of Athens by Lysander, on the motion of Patrokleides (Andoc. *op. cit.* 73: *ἐπεὶ γὰρ αἱ νῆες διεφθάρησαν καὶ ἡ πολιορκία ἐγένετο, ἐβουλεύσασθε περὶ ὁμονοίας, καὶ ἔδοξεν ὑμῖν τοὺς ἀτίμους ἐπιτίμους ποιῆσαι*: see § 77 for the full text of the decree). A third example is furnished by the proposal of Hypereides after the defeat at Chæroneia, that exiles should be recalled and public debtors and other *ἄτιμοι* be restored to their civic status on condition of military service (Lycurg. *Leocr.* 41; Hyper. *frg.* 29; Demos. *Or.* xxvi. 12: *ὅτε γὰρ Ὑπερείδης ἔγραψε, τῶν περὶ Χαιρώνειαν ἀτυχημάτων τοῖς Ἕλλησι γενομένων . . . εἶναι τοὺς ἀτίμους ἐπιτίμους, ἵν' ὁμονοοῦντες ἅπαντες ὑπὲρ τῆς ἐλευθερίας προθύμως ἀγωνίζωνται*). To these examples may be added the measure of Solon (Plut. *Sol.* 19), which restored civil rights to all who before his archonship (B.C. 594) had been visited with disfranchisement, with the exception of certain categories of persons which need not here be specified. Such acts of grace were known with reference to individuals, *e.g.*, the recall of Alcibiades (Xen. *Hell.* i. 4. 11, his return in B.C. 408; the vote of recall actually passed in B.C. 411, Thuc. viii. 97) and of Demosthenes in B.C. 323 (Plut. *Dem.* 27), as well as of the historian Thucydides—to take only conspicuous examples in Athenian history.

Such acts of grace or pardon on the part of the sovereign people in reference to individuals or comparatively small groups or classes are clearly different in their nature from Acts of oblivion, where, in Greek history at any rate, the sovereign body itself has been sundered in twain upon a conflict of principle concerning the forms of government. Both, again, are to be clearly distinguished (and the confusion is not uncommon in the books of reference) from what the Greeks called *ἄδεια*, which corresponds to our Bill of Indemnity. Such *ἄδεια* or guarantee against penal consequences was always necessary to enable anyone to exercise any privilege that did not properly belong to his status, *i.e.* to enable slaves, resident aliens or disfranchised citizens to perform those higher functions which were part and parcel of the notion of civic status. It was also necessary before a proposal for the State to forego any of its rights against individuals, as, for example, a proposal for the removal of *atimia* or disfranchisement (Dem. *Or.* xxiv. 47: *ἄλλος οὗτος νόμος, οὐκ ἐῶν περὶ τῶν ἀτίμων οὐδὲ τῶν ὀφειλόντων λέγειν οὐδὲ χρηματίζειν περὶ ἀφέσεως τῶν ὀφλημάτων οὐδὲ τάξεως, ἂν μὴ τῆς ἀδείας δοθείσης, καὶ ταύτης μὴ ἐλάττων ἢ ἑξακισχιλίων ψηφισαμένων*. Cf. *CIA* i. 180–183, and i. 32). A vote of *ἄδεια* also guaranteed informers against punishment for crimes in which they might have been participators; but their evidence must be truthful. In general, *ἄδεια* was a preliminary surrender of specific rights of the State in favour of an individual for a particular purpose (see Goldstaub, *De ἀδείας notione et usu in iure publico Attico*, Breslau, 1888).

We must distinguish, then, the following three categories: (1) *ἄδεια*, indemnity for acts which involve or may involve penal consequences; in general, prospective; only when retrospective does it coincide in practical effect with amnesty. (2) Pardon, in cases in which the penal consequences are already in operation. In this sense the word 'amnesty' is incorrectly used, as above explained. The Greeks apparently possessed no single term to cover this sense. (3) *μὴ μνησικακεῖν* (= Lat. *oblivio* and late Gr. *ἀμνηστία*; Eng. 'amnesty' in its correct use), an Act of oblivion, or refusal to make investigation of matters of fact with a view to punishment.

W. J. WOODHOUSE.

AMPHIARAUS. — A seer and, along with Adrastus, the chief hero of the legend of the Seven against Thebes. He had early become the subject of heroic legend, and his character was portrayed in legend in Argos as well as round about Thebes. These local legends had been, too, at an early date united to the Theban cycle of legends by the two Homeric epics, 'The expedition of Amphiaraus' and the 'Thebaid.' But his cult is older than the legend.

Amphiaraus was worshipped in the Peloponnesus (Sparta, Pausanias, iii. 12. 5; Argos, Pausan. ii. 23. 2; Phlius, Pausan. ii. 13. 7; and the colony of Byzantium, *FHG* iv. 149. 16), and especially in Oropus near Thebes, where his sanctuary has been excavated (Pauly-Wissowa, i. 1893 ff.). He was worshipped as a god of the lower world, often at his own grave, where he gave oracles. That is the original form of the belief regarding him. This is the reason, too, why he is a seer in the heroic legend, and why he does not die but descends alive into the depths of the earth.

As seer, Amphiaraus was genealogically connected with the famous seer Melampus (Homer, *Od.* xv. 225 ff.), and later with Apollo (Hygin. *Fab.* 70, 128). Argos was regarded as his home. An all but forgotten legend represents him as an Argive king and enemy of Adrastus, whose brother Pronax he kills. Adrastus flees to Sicyon to his grandfather Polybus, but returns victorious and makes peace with Amphiaraus. The latter marries Eriphyle, the sister of Adrastus; and both parties are bound to accept her decision. When Polynices was seeking allies for the war against Thebes, Adrastus his father-in-law bribed Eriphyle, who compelled Amphiaraus, against his will, to march with them (Pindar, *Nem.* ix. with Scholium 30 and 35; Herodotus, v. 67; Hygin. *Fab.* 73). A later version of the legend, which probably originated from the epic Thebaid, related that Amphiaraus concealed himself in his house in order not to be compelled to take the field against Thebes, where he knew he must die, but was betrayed by his wife Eriphyle, who had been bribed by Polynices with the necklace of Harmony. Thus did Eriphyle become guilty of the death of Amphiaraus, who at his departure instructed his youthful son Amphilochus to wreak vengeance on Eriphyle for his death (Homer, *Od.* xv. 243 ff. with Scholium 246; Sophocles, *Elec.* 836 with Scholium; Apollodorus, *Bibliotheca*, iii. § 60 ff.; Hygin. *Fab.* 73). This leave-taking was represented on the Cypselus chest in Olympia (Pausan. v. 17. 4), and the picture on the Corinthian bowl (*κρατήρ*) corresponds with it (*Monumenti d. Instituto*, x. 4. 5).

In Nemea also, which lies on the road between Argos and Thebes, there were legends of Amphiaraus, traces of which have been preserved in the legends of the founding of the Nemean Games, especially in the 3rd *Hypothesis* in Pindar's Nemean Odes; Aelian, *Var. Hist.* iv. 5; Pausanias, iii. 18. 12, ii. 15. 2; Apollodorus, *Bibliotheca*, iii. 6. 4.

In the war against Thebes, Amphiaraus slays the powerful Theban hero Melanippus (Herodotus, v. 67; Pausanias, ix. 18. 1). But he cannot with-

stand Periclymenus, and flees from him; however, as the latter is about to stab him in the back, Zeus divides the earth with a lightning flash, and sinks Amphiaraus with his chariot alive into the depths. This tradition is a unity, and thus probably derived from the epic Thebaid (Pindar, *Nem.* ix. 24; Euripides, *Supp.* 925; Apollodorus, *Bibliotheca*, iii. § 77).

There are mirrored in these legends struggles of the time of the settlement of the Greek peoples in Argos as well as round about Thebes. The people who worshipped Amphiaraus had brought his cult with them from Argos over Phlius and Nemea towards the north, where its last remnants were preserved between Attica and Bœotia. These historical recollections in connexion with the cult, which remained ever living, have provided the material of the legend and determined its character.

E. BETHE.

AMPHICTYONY.—An amphictyony was a union of different cities or peoples, centred in a temple for the common performance of certain religious duties. The name is derived from ἀμφικτίονες (with a variant form in later times, ἀμφικτύονες), which, with its equivalent περικτίονες, is used by early writers (Homeric Hymn, Pindar, Thucydides) in the sense of 'dwellers round.' The word ἀμφικτυονία is not expressly defined by any Greek writer; it is not frequent in the classical authors, although the substantive ἀμφικτύονες and the adjective ἀμφικτυονικός are often used. The ideas attached to these words were coloured by the history and constitution of the Delphian amphictyony, and we need not assume that all amphictyonic unions were similar in organization or function. Many local unions in early times which were formed on a religious basis, and would fall within the definition given above, are not expressly described as amphictyonies. This may be accidental, for some amphictyonic unions are mentioned only once in ancient literature, and there were primitive religious leagues, which did not survive in later times, that seem to have possessed the characteristics generally regarded as amphictyonic, and we know of no essential difference which should exclude them from the present survey.

The simplest form of union which can be traced in the earliest times is the union of people of kindred race within a continuous area round a common temple.

Such a federation is perhaps implied in the beginning of *Odyss.* iii., where the men of Pylos in their companies feast and offer sacrifice to Poseidon. So Strabo records (viii. 343) that the Tryphilians met at Samicum in the grove of the Samian Poseidon, had the sacred truce proclaimed, and united in sacrifice. So also the twelve Ionian cities of the Peloponnesus, before the Ionian migration, combined in a religious league centred in the temple of Poseidon at Helice (Strabo, viii. 384), and on this league was modelled the federation of the Ionian colonies in Asia. Strabo (ix. 412) refers to the 'amphictyonic' league of Onchestus, whose meeting-place was the grove of Poseidon in the territory of Haliartus, founded perhaps before the immigration of the Boeotians. The Boeotians, after their conquest, celebrated at the temple of Itonian Athene, in the plain of Coronea, the festival of the Pamboeotia (Strabo, ix. 411); and we may assume that their league had an amphictyonic character. It may have been the original basis of the political federation of later times.

Strabo (viii. 374) also records an 'amphictyony' of Calauria, an island off the coast of Troezen. This met, probably at a very early period, at the temple of Poseidon (which was always an asylum), and included the following cities: Hermione, Epidaurus, Aegina, Athens, Prasiae, Nauplia, and the Minyan Orchomenus. At a later time Argos and Sparta took the place of Nauplia and Prasiae. This league combined states which were not neighbours. Whether it had any objects other than religious we do not know; but it is possible, as is generally assumed, that it was a union of sea-states, designed to secure intercourse by sea.

The amphictyony of Pylae, which afterwards became so important from its connexion with Delphi, was originally a combination of different races (not cities), united in the worship of Demeter. Its history will be studied in detail below.

There are possible references to an amphictyony of Dorian states centred in Argos (Paus. iv. 5. 2; Plut. *Parall.* 3), presumably meeting at the temple of Apollo Pythaeus. The allusion in Pindar (*Nem.* vi. 44) to the festival of the 'amphictyons' in the grove of Poseidon is held by some to imply a Corinthian amphictyony, but the word may be used in a general sense. It has been suggested that we should assume a Euboean amphictyony meeting in the temple of Amarynthian Artemis, as there is evidence of the Euboean cities combining in a festival there (Strabo, x. 448; Livy, xxxv. 38).

Of these religious leagues centred on the mainland of Greece, those meeting at Samicum, Helice, Coronea, and Amarynthus are not expressly described as amphictyonies. Of the federations of the Greek colonies, in the Aegean or in Asia, we have warrant for calling only that of Delos an amphictyony. This league from a very early date united the Ionians of the islands in the worship of Apollo, and its history will be considered below. There are other leagues which have amphictyonic characteristics. The twelve Ionian colonies of Asia Minor (of which a list is given in Herod. i. 142) met at the Panionium, a precinct on the promontory of Mycale dedicated to the Heliconian Poseidon, and celebrated a festival called Panionia (Herod. i. 148; cf. Strabo, viii. 384; Diod. xv. 49). The league, which was probably founded on the model of the original league of the Ionian cities in the Peloponnesus, had also political objects, and the meetings at the Panionium were used for the discussion of questions of common policy and to promote joint action (Herod. i. 170, vi. 7). Ephesus was also a place of common festival for the Ionians (Thuc. iii. 104; cf. Dionys. Hal. iv. 25, who says the precinct of Artemis was the place of meeting, and Diod. xv. 49, who says the πανήγυρις was transferred from the Panionium to Ephesus). The grove of Poseidon at Tenos seems to have been the site of a πανήγυρις (Strabo, x. 487).

The three Dorian cities of Rhodes (Lindus, Ialysus, and Camirus), Cos, and Cnidus, with Halicarnassus (which was afterwards excluded from the union), celebrated a festival on the Triopian promontory at the temple of Apollo (Herod. i. 144). Dionysius (*l.c.*) says that these Dorians and the Ionians meeting at Ephesus took the great amphictyony as their model, and attributes to their leagues, besides religious functions, powers of jurisdiction and control of policy for which we have no evidence elsewhere.

The religious leagues in Greece and the colonies which come within the definition of an amphictyony, as given above, have been mentioned. It is possible that there were other similar federations in early times of which all trace is lost.

Before discussing the Delian and the Delphian amphictyonies, each of which had a special character, it will be best to consider the general functions of such religious leagues.

It is clear that the amphictyony was a primitive form of union, the origin of which in all probability preceded the coming of the Achaean invaders. The gods whose temples supplied the meeting-places are for the most part the gods of the earliest inhabitants. Poseidon appears at Samicum, Helice, Onchestus, Calauria, and the Isthmus (if we interpret Pindar's allusion as showing the existence of an amphictyony), and at Mycale and Tenos. At Pylae, Demeter was the presiding goddess. The primary purpose was the common worship, at set times, of the god; and the offering of a common sacrifice and the celebration of a common festival were essential elements. (Terms like τὰ Παμβοιώτια, τὰ Πανιώνια, τὰ Ἐφέσια, τὰ Δήλια might denote the festival generally, or the sacrifice; cf. Strabo, viii. 384, θύουσι ἐκεῖ τὰ Πανιώνια).

At the meeting (πανήγυρις) a sacred truce (ἐκεχειρία) was proclaimed. The cities or peoples participating sent sacred envoys (θεωροί, in some instances denoted by special titles, Πυθαϊσταί, Δηλιασταί), but many of the ordinary citizens flocked to the gatherings. Usually there were athletic and musical contests, and it is possible that the great games of Greece had their origin in amphictyonic meetings (see Gilbert, *Griech. Staatsaltertümer*, ii. p. 406).

The gathering often served other purposes: fairs were held, and some of them became important markets. Peaceful intercourse between the states was encouraged, and combination for political purposes was facilitated by these meetings, which were sometimes used for definite political ends. Thus the Ionians discussed their common interests, and resolved on united action at the Panionium; the Boeotian confederation may have been the outcome of the religious league at Coronea, and events caused the Delian and the Delphian amphictyonies to assume political importance. In spite, however, of the exaggerated statements of some ancient writers (Dionys. Hal. iv. 25), there is not sufficient evidence to justify us in assuming that the original purpose of the amphictyonic gatherings was other than religious. But the indirect results were of great moment both in religion and politics. The Greek tendency to disunion was in some measure corrected. Co-operation in the worship of a tribal god gave expression to the idea of kinship; intercourse at the sacrifices, festivals, and marts tended to break down the barriers between different states, and on occasion prepared the way for permanent peace and political union. The names Pamboeotia and Panionia, given to two of these gatherings, emphasize the idea of unity. When the amphictyony included cities which were not neighbours, or which did not recognize the bond of kinship, its function was even more important. The association of different peoples in the worship of a common god broke through the exclusiveness of local cults, and tended to found that religious unity which was regarded as one of the bases of Hellenic nationality (Herod. viii. 144). The Delphian amphictyony certainly contributed to the idea of Hellenism, and, in concert with the oracle, had great influence in establishing common religious observances among the Greeks. Its political importance was in some sense accidental; its religious functions it shared with the other amphictyonies, whose importance in the history of religion rests on their work in uniting different states in the common worship of the same gods.

The Delian amphictyony.—Delos, the sacred island, hallowed as the birthplace of Apollo, was from early times a religious centre for the Ionians of the Aegean. The legends spoke of a transfer of the island from Poseidon to Apollo (Strabo, viii. 373), and of Theseus instituting a festival (Paus. viii. 48. 3; cf. Plut. *Thes.* 21). It is thought that the connexion of Theseus with the festival was an invention in the time of the Athenian domination; but, at least from the time of Solon, Athens sent sacred envoys, Δηλιασταί, chosen from certain Eupatrid families (Athen. vi. 234). There is evidence for the existence of the πανήγυρις at a comparatively early date, in the Homeric Hymn to the Delian Apollo (i. 146–164; cf. Thuc. iii. 104, ἦν δέ ποτε καὶ τὸ πάλαι μεγάλη ξύνοδος ἐς τὴν Δῆλον τῶν Ἰώνων τε καὶ περικτιόνων νησιωτῶν, and Strabo, x. 485). To Delos came the 'Ionians in their trailing robes,' with their wives and their children. There they offered sacrifice, performed sacred dances and hymns, and engaged in contests. Doubtless a sacred truce was proclaimed, and a fair was held upon the seashore, where the visitors to the festival exchanged their goods. The union of the states celebrating the festival probably bore the name of an amphictyony. Although it is not expressly described as such, the existence in later times of officials called Ἀμφικτύονες is best explained on the theory that the title is a survival from earlier days (see below, and cf. Thuc. *l.c.* περικτίονες). As Mycale and Ephesus rose in importance as meeting-places for the Ionians of Asia Minor and of the islands near the coast, the festival at Delos waned. The islanders (presumably of the Cyclades) and the Athenians continued to send their bands of singers and their sacrifices, but in the troublous times of the 6th and 5th centuries the great festivals were abandoned (Thuc. *l.c.*).

Delos was too small in extent and population to possess any political strength. Hence it was liable to come under the patronage or the sway of dominant powers. Pisistratus had purified the island, and Polycrates had shown it favour (Thuc. *l.c.*). The Athenians, on the institution of their confederacy in 477, chose Delos as the meeting-place. Political reasons may have moved them, but it is probable that their choice was partly determined by the desire to represent their league as an amphictyony, centred in what had been a holy place of the Ionian race, of which Athens claimed to be the natural head. At Delos the meetings of the allies were held, and the federal funds were stored. With the growth of Athenian domination and the transfer of the treasury to Athens (in 454), Delos lost its importance in the confederacy, until, in 426–5, the Athenians purified the island, and established a great festival, to be held every four years. Whether the amphictyony had hitherto in form survived or not, we do not know, but the Athenians seem to have wished to represent it as still existing. Thus, although the temple and its funds were controlled by Athenian magistrates (the earliest direct evidence refers to the year 434–3, *CIA* i. 283), these bore the title Ἀμφικτύονες or Ἀμφικτύονες Ἀθηναίων (*BCH* viii. p. 283). The probable explanation of this name is that the title had at some time been borne by the representatives of other states, and that although (with one or two exceptions in the 4th cent.) only the Athenians appointed such magistrates, the fiction of amphictyonic government was kept up. (Our knowledge is based on inscriptions; the only allusion to such officials in literature is in Athenaeus, iv. 173, ὁ τῶν Ἀμφικτυόνων νόμος).

The amphictyony of Delos thus ceased to be a religious union of independent states, and became an instrument of Athenian supremacy, so that its history is bound up with the varying fortunes of Athens.

The festival (Δήλια) was celebrated in the spring of the third year of each Olympiad. (A lesser festival took place every year). It was regulated and presided over by the Athenians (Aristotle, *Ath. Pol.* 54. 7, refers to it as if it were an Athenian festival); the Athenians sent a θεωρία in the sacred ship, and at every celebration an offering

of a gold crown was made to Apollo (ἀριστεῖον τοῦ θεοῦ, *CIA* ii. 814); and from the number of crowns recorded in the inventories, the number of celebrations can be estimated. The festival was modelled on the great Pan-Hellenic festivals, and was doubtless open to all the states of the Aegean, possibly to all the Greeks. To the old athletic and musical contests the Athenians added horse races. (For the order of proceedings see Plut. *Nic.* 3). Banquets concluded the festival, at which the Delians served the tables, and hence bore the title of Ἐλεοδόται (Athen. iv. 173).

The first celebration was in 425, and was probably the occasion of the magnificent θεωρία of Nicias (Plut. *Nic.* 3; others attribute this to 417). The Delians seem to have resented the rule of the Athenians, and in 422 the Athenians expelled them from the island (Thuc. v. 1), intending, no doubt, to make it a mere appanage of Athens. But in 420, at the bidding of the Delphian oracle, they were restored.

The festival was celebrated every four years during the Peloponnesian war. An inscription of 410–409 (*BCH* viii. p. 283) shows Delian νεωκόροι sharing in the administration with the four Ἀθηναίων Ἀμφικτύονες (for whose title this is the earliest definite evidence). After the fall of Athens, Delos regained its independence (the fragment of an inscription, *IGA* 91, probably refers to this); the great πεντετηρίς was abandoned, but the annual festival was celebrated by the Delians, and to this the Athenians still sent their θεωρία (Xen. *Mem.* iv. 8. 2).

Soon after the battle of Cnidus, when the Athenians were striving to re-establish a federation of sea-states, they seem to have regained the control of the Delian temple (*CIA* iv. 2. 813*b*), and the festival was renewed probably in 388 (in the 4th cent. its date was changed to the second year of the Olympiad). The Athenian control was interrupted for a time (the banishment of Delians recorded in *CIA* ii. 814 may be connected with this epoch), and probably the festival was omitted in 380; but with the foundation of their second confederacy the Athenians were again masters of the Aegean. The inscription containing the accounts from 377 to 374 (known as the Sandwich marble, *CIA* ii. 814) throws much light on temple property and administration. From 377 to 375 the sacred property was administered by four Ἀμφικτύονες Ἀθηναίων: in 374 five Athenian commissioners were appointed and five Ἀνδρίων Ἀμφικτύονες. This recognition of the allies is consistent with the principles of the confederacy, but in only one other inscription do the Andrian commissioners appear (*BCH* viii. 367), and the Athenians, aided by Delian subordinate officials (Βουλὴ Δηλίων καὶ ἱεροποιοί mentioned in an inventory of 364–3, *BCH* x. 461), continued to administer the temple and the sacred property. The festival was regularly celebrated with the usual offering of a golden crown. The resentment of the Delians was manifested in the banishment (probably about 350) of an Athenian partisan (*CIA* ii. 115*b*); and, in 345–4 or 344–3, the Delians appealed to the arbitration of the Delphian amphictyony to regain control of the temple (see below, p. 398). The decision was favourable to the Athenians; even after the collapse of her power, Athens retained her control of Delos until at least 315. Before 308 Delos was independent, and the nominal amphictyony had come to an end. (For date, see von Schöffer in Pauly-Wissowa, iv. 2482).

The Delphian amphictyony.—The chief amphictyony is usually referred to by modern writers as 'the Delphian' or 'the Pythian,' because in historical times Delphi was its most important place of meeting. It met also at Anthela, near Thermopylae. The ancients regard it as *the* amphictyony; allusions to it are usually connected with the substantive Ἀμφικτύονες or the adjective Ἀμφικτυονικός (with σύνοδος, σύστημα, συνέδριον), and the collective substantive Ἀμφικτυονία is comparatively rare (Dem. vi. 19, xi. 4). The substantive Ἀμφικτύονες is used either of the amphictyonic peoples generally, or of their representatives at the amphictyonic meetings, or of the actual council of Hieromnemones.

Its early history is legendary (Strabo, ix. 420, τὰ πάλαι μὲν οὖν ἀγνοεῖται), and the legends are diversely interpreted. The foundation was ascribed to an eponymous hero, Amphictyon, usually described as the son of Deucalion and brother of Hellen (by Dionysius, iv. 25, as the son of Hellen), some 300 years before the Trojan war. He, being king at Thermopylae, united the neighbouring peoples in the festival of Pylaea. Other accounts explained the name Ἀμφικτύονες as meaning 'the neighbouring peoples,' and connected the institution with Delphi (for the authorities see Bürgel, *Die pyläisch-delphische Amphiktyonie*, p. 4 ff.). The rival claims of Thermopylae and Delphi, as the place of origin, were reconciled in the legend that Acrisius, summoned from Argos to help the Delphians, instituted a συνέδριον at Delphi on the model of that at Pylae, and organized the constitution of the amphictyony (Schol. to Eur. *Orest.* 1093; cf. Strabo, ix. 420). Little further is recorded until the first Sacred War (B.C. 595), when the amphictyonic peoples are said to have attacked Crisa for injury done to Delphi and transgression of the amphictyonic ordinances (Æschines, iii. 107–8; Strabo, ix. 419). After the destruction of Crisa, the Pythian games were instituted.

The truth underlying the legends may be somewhat as follows. At a remote period, probably before the great migrations within Greece, the peoples then settled near Thermopylae combined in the worship of Demeter, the festival possibly being connected with the harvest. That Pylae was the original meeting-place is probable on the following grounds. The cult of Demeter Amphictyonis was always maintained at Pylae; the meetings of the amphictyony, whether at Pylae or Delphi, bore the name Πυλαία, and Πυλαγόροι was the title of the official envoys; the peoples in after times belonging to the amphictyony were largely those grouped round Thermopylae. It is a matter of speculation which of these peoples originally belonged to the amphictyony. There were, no doubt, fresh accessions consequent on the migrations, and, by the end of the 7th cent., probably most of the peoples in eastern Greece between Thessaly and Laconia had been admitted. The Thessalians were presidents. At some period before the first Sacred War, Delphi had been taken under the protection of the amphictyony, and became a second place of meeting. (Legend placed this at a very early date, and the tradition of the Greeks undoubtedly set it before the Sacred War. Bürgel argues that the war was not conducted by the amphictyony, which, he thinks, was opened to new states after the war). The war with Crisa marks an epoch; henceforth the history of the league rests on surer information; it is more closely identified with Delphi, whose shrine and property came under the protection of the amphictyonic council, which also had the superintendence of the Pythian games.

(*a*) *Members.*—The amphictyony was a league of twelve peoples (ἔθνη, called γένη by Paus. x. 8. 2; Strabo, ix. 420, wrongly speaks of πόλεις). Whatever changes in the composition of the amphictyony took place, the number of the peoples was constant. The earliest list that has come down to

us is that of Aeschines (ii. 116), who professes to give twelve names, though only eleven appear in the text. These are the Thessalians, Boeotians, Dorians, Ionians, Perrhaebians, Magnetians, Locrians, Oetaeans, Phthians, Malians, and Phocians. It is generally believed that the Dolopes should be added to complete the list, and that Aeschines describes as Oetaeans the people who more usually appear as Aenianes (Herod. vii. 132, in a list of nine peoples who submitted to Xerxes, cites only amphictyonic peoples). From 346 to 345 the Macedonian king took the place of the Phocians, and the Delphians were admitted, room being made for them by uniting the Perrhaebians and the Dolopes as one people. (An inscription gives us a list of the peoples in 344–3. See E. Bourguet, *L'Administration financière du sanctuaire pythique au IV^e siècle avant Jésus-Christ*, p. 145 ff., and *BCH* xxi. p. 322). The subsequent changes after the Aetolians were admitted need not be followed here.

While there was at all periods a conservative adherence to the principle that races and not states should be members of the amphictyony, a measure ascribed to Acrisius, and certainly adopted at an early date, regulated the participation of separate states in the amphictyonic council. Each of the twelve peoples admitted to membership had two votes (Aesch. ii. 116), and in some cases these votes were divided between different branches of the same race (*e.g.* the Locrians and the Malians), or between states belonging to the same race; thus we find the Ionian votes shared by Athens and one of the Euboean states; the Dorian votes divided between the Dorians of the metropolis and the Dorians of the Peloponnesus, or at another time between the Lacedaemonians and some other state of the Peloponnesus (*BCH* xx. p. 197 ff.); and the Boeotian votes between the different cities of Boeotia (Thebes being usually represented). The exclusion of a particular state from the amphictyony might be effected without diminishing the representation of the race to which it belonged, as its vote could be transferred to another state. We have no information as to how the apportionment of votes to the individual states or sections of the people was effected. While the decision of amphictyonic business was thus entrusted to the representatives of the states qualified for the time to vote, other states not so represented, or even states which had no right to a vote, might take part in the amphictyonic meetings, and send sacred embassies.

(*b*) *Meetings and representatives.*—The meetings were held twice a year, in spring and autumn (πυλαία ἐαρινὴ καὶ μετοπωρινή, Strabo, ix. 420), and on each occasion at both Anthela and Delphi. Extraordinary meetings might be called (Aesch. iii. 124). Any members of the amphictyonic peoples might attend; sacred embassies (θεωρίαι) were probably sent by the amphictyonic peoples, and there were also Πυλαγόροι (in some writers Πυλαγόραι) and Ἱερομνήμονες, who represented the interests of the states or peoples qualified to vote. From the 3rd century Ἀγορατροί seem to have taken the place of the Πυλαγόροι.

There is some uncertainty as to the respective duties of the Πυλαγόροι and the Ἱερομνήμονες at different dates. In the early years of the 5th cent. the Πυλαγόροι are represented as the executive and deliberative power (Herod. vii. 213; Plut. *Them.* 20. Strabo ix. 420 does not mention any other officials). Towards the end of the century we can trace Ἱερομνήμονες (Aristoph. *Nub.* 623). Inscriptions and literary evidence (the account of the meeting of the amphictyony in Aeschines, iii. 115 ff., is our chief authority) show that in the 4th cent. the Hieromnemones (who were twenty-four in number, two for each amphictyonic people) formed the council of the amphictyony. Pylagori were still appointed, but had not voting power, and were perhaps not limited in number. Thus, Athens sent three to Delphi in 339. The method of appointing these officials may have been left to the discretion of the different states. At Athens we find the Hieromnemones appointed by lot (Aristophanes, *l.c.*) and the Pylagori elected. Prominent statesmen were sometimes appointed (*e.g.* Demosthenes and Aeschines), perhaps to watch over the political interests of their state at the amphictyony. From the narrative of the meeting in 339 (Aeschines, *l.c.*) it would appear that the Hieromnemones formed the council (συνέδριον) of the amphictyony, and that the individual Hieromnemon might seek advice and support from the Pylagori of his state. Thus Aeschines, who was one of the Athenian Pylagori, was admitted to the council of the Hieromnemones when the other Pylagori had withdrawn, and after defending the cause of Athens, retired before the vote took place. In the council of Hieromnemones, all power, deliberative, judicial, and executive, was vested, and it was apparently sometimes described as τὸ κοινὸν τῶν Ἀμφικτιόνων (*CIA* ii. 551, l. 41; cf. Aesch. ii. 139). The president is referred to as ὁ τὰς γνώμας ἐπιψηφίζων (Aesch. iii. 124). The decisions of the council were called δόγματα or τὰ δεδογμένα. It was open to the council to call an ἐκκλησία of all who were attending the meeting (οἱ συνθέοντες καὶ χρώμενοι τῷ θεῷ, Aesch. *l.c.*), presumably to announce the course of action proposed, or to ratify the decision of the council.

For the special boards of ναοποιοί and ταμίαι see below.

(*c*) *Competence of the amphictyony.* — It is difficult precisely to define the competence of the amphictyony. There is no general statement in ancient writers that can be relied upon (Dionys. Hal. iv. 25, vaguely exaggerates), and its powers, so far as they cannot be inferred from the original aims, must in the main be deduced from the historical instances of its activity. It should be noted that the influence and the importance of the amphictyony varied greatly at different periods. As most of its members were politically insignificant, states such as Athens and Sparta at the height of their power had little respect for its authority. On the other hand, when a strong state commanded a majority of votes and so became predominant in the council, it could use the amphictyony for its own ends, and find pretexts to justify an extension of amphictyonic action. It is possible here to give only broad results without detail.

We may assume that, probably from the first, the amphictyony had two main objects: the union of different peoples for common religious purposes, and the common observance of certain rules affecting the relations between those peoples. Two causes combined to increase the importance of these objects. As the amphictyony came to include representatives from most of the peoples of Greece, it tended to assume an Hellenic character, and when Delphi was taken under its protection and became its most important meeting-place, the universal recognition of the oracle and of the cult of Apollo increased the prestige and importance of the amphictyony. It is not always easy to distinguish the relative spheres of Delphi and of the amphictyony, but it must be remembered that the oracle, though under the protection of the amphictyony, was independent, and many institutions or observances which owed their origin to Delphi should not be credited to the amphictyony.

The members of the amphictyony united in common religious observances at both Anthela and Delphi. At Anthela they worshipped Demeter (with the title Ἀμφικτυονίς or Πυλαία) and the hero Amphictyon. We know that there were meetings in spring and autumn protected by the proclamation of a holy truce (ἐκεχειρία); sacrifice was offered, and probably a festival was celebrated with its usual accompaniment of contests and market. An important inscription (*CIA* ii. 545) gives us much information as to the relations of the amphictyony with Delphi. The inscription dates from B.C. 380, and the assertion of the amphictyonic rules and duties may mark a recent restoration of the power of the amphictyony, perhaps under the protection of Sparta, then at the height of her power (Bürgel, *op. cit.* p. 252; Bourguet, *op. cit.* pp. 158–9). At Delphi Leto, Artemis, and Athena Pronaia (or Pronoia) were associated with Apollo as Amphictyonic deities (Aesch. iii. 108, 111), to whom sacrifice was offered at the spring and autumn meetings.

In the procession preceding the sacrifice, among other beasts an ox of great price was led (this is the βοῦς τοῦ ἥρωος of *CIA* ii. 545, l. 32; cf. Xen. *Hell.* vi. 4. 29, βοῦς ἡγεμών. Some think this beast was a special offering at the great Pythia). The amphictyony superintended the meetings and festivals, including the great Pythia, which took place every four years, and the annual Pythia. To these festivals the amphictyonic states sent envoys (perhaps the πυθαΐσταί of Strabo, ix. 404; cf. *CIA* ii. 545. 45, where Böckh restored πυθαϊστάς). The amphictyony was responsible for the care of the sacred rites, of the property consecrated to the gods, the temples and other buildings, and the sacred land. In the inscription referred to provision is made for a circuit of the sacred land (πέροδος, cf. Dem. xviii. 150, περιελθεῖν), and penalties are imposed on any one taking it into cultivation (cf. Aesch. iii. 109, 119). The Hieromnemones are to keep the buildings at Delphi in repair. The roads and bridges (presumably on the routes leading to Delphi) are to be kept up by the amphictyons (usually interpreted as the different peoples belonging to the amphictyony).

More important duties fell to the amphictyony when the great temple had to be rebuilt. In the 6th cent., after it had been destroyed by fire, the rebuilding was entrusted to the Alcmaeonidae, as contractors (Herod. ii. 180, v. 62). In 373 the temple was again burnt down, and under the amphictyonic law of 380 the Hieromnemones undertook its reconstruction. We have much detailed information on the procedure from inscriptions recently found at Delphi. (The results are summarized in E. Bourguet, *L'Administration financière du sanctuaire pythique au IVe siècle avant Jésus-Christ*). The restoration of the temple undertaken in 369 was not completed for thirty years. The work was interrupted by the Sacred War, but the heavy fine imposed upon the Phocians supplied funds, which enabled the work to be carried through. In connexion with this work two new colleges of amphictyonic magistrates were instituted. From 369 we can trace the activity of the ναοποιοί. The members of the College belonged to amphictyonic peoples, but the total number, as well as the numbers from the different states, varied widely. Some of the states represented in the amphictyonic council appointed none, while Delphi had a ναοποιός before it secured a vote in the council. The ναοποιοί met twice a year at the ordinary meetings of the amphictyony; they collected funds for the expense of rebuilding, and made contracts in accordance with the specifications (συγγραφαί) drawn up for the different parts of the work. (For details of the contracts, methods of payment, etc., see Bourguet, *op. cit.* p. 95 ff.). After the completion of the temple, the ναοποιοί were charged with the maintenance of the fabric, and their activity can be traced for a century and a half.

In 339, at the autumn session, a college of twenty-four ταμίαι was instituted (see Bourguet, p. 110 ff.). It is thought that the institution may have been proposed in the interest of Philip, who was anxious to increase his influence in the amphictyony. The result was to make the work of the ναοποιοί subordinate, and to concentrate the control of expenditure in the hands of the new college. The composition of the college was identical with that of the council of the Hieromnemones; the same states were represented, and the lists of both were drawn up in the same order. The ταμίαι, from the sums assigned to them, met not only the expenses of rebuilding the temple (the money for which was paid over to the ναοποιοί), but the other expenses of the amphictyony, both at Delphi and Pylae (see Bourguet, p. 126 ff.). This board was, however, only a temporary institution, and when the last instalment of the Phocian fine had been paid and the temple at Delphi was finished, their work probably ceased. Before 310, and possibly as early as 326, they were no longer acting.

Inscriptions thus enable us to realize in detail the activity of the amphictyony in the case of the sacred property. The protection of the property of the god is one of the objects guaranteed by the amphictyonic oath recited by Aeschines (ii. 115). The other clauses of the oath remind us of another obligation of the amphictyony, the observance of certain common principles, the violation of which was a sin visited by amphictyonic vengeance. Aeschines mentions the oath not to raze any amphictyonic city to the ground, or to cut off running water in war or peace. The purpose of those prohibitions, which may go back to the origin of the amphictyony, is not to prevent war altogether, but to modify its harshness and to encourage peaceful intercourse. We do not know whether there were other general obligations of a similar character recognized by the amphictyony. Dionysius (iv. 25) refers to κοινοὶ νόμοι called amphictyonic, and other writers refer to the laws or deliberations of the amphictyony (Strabo, ix. 420; Schol. to Eur. *Orest.* 1093). If we could accept the vague statements of these late writers, we might assume a much wider competence of the amphictyony in regulating the relations of the Greek states to one another, and it is possible that there were κοινὰ νόμιμα or νόμοι τῶν Ἑλλήνων other than those mentioned by Aeschines, which were sanctioned by the amphictyony (see Bürgel, *op. cit.* p. 198, for certain regulations, possibly but not demonstrably amphictyonic). There are instances of charges being brought before the amphictyony which may have been based on the supposed violation of general rules, though we lack definite testimony. Among the historical incidents quoted in this connexion are the condemnation of the Dolopes of Scyros for piracy (Plut. *Cim.* 8); the price put upon the head of Ephialtes after the second Persian War (Herod. vii. 213); the condemnation of the Spartans, who were fined and excluded from the amphictyony for the seizure of the Cadmea (Diod. xvi. 23); and the charge threatened against Athens by the Amphissians in 339 (Aesch. iii. 116).

Charges brought before the amphictyony were tried by the council, which might fine the offenders or exclude them from the league, or in more serious cases proclaim a holy war against the offending state. As we do not know the scope of the amphictyonic laws, we cannot say whether the charges were always based on a supposed transgression of them. Probably some pretext was assumed to bring them within the jurisdiction, but the competence of the amphictyony might be extended by the admission of charges which did not properly come before its court. Thus an Athenian decree of 363 (*CIA* ii. 54) asserts that Astycrates has been condemned παρὰ τοὺς νόμους τῶν Ἀμφικτιόνων, and in 335 Alexander apparently demanded that the orators of Athens should be tried before the amphictyony (Dem. xviii. 322). Apart from this, disputes might be referred by consent to the arbitration of the amphictyony, and we probably have an instance of this in the submission by the Athenians and Delians of their controversy respecting the Delian temple in 345–4 or 344–3 (Dem. xviii. 134, xix. 65).

The amphictyony might pass votes referring to individuals, as in the honours accorded to the heroes of Thermopylae (Herod. vii. 228) and to Scyllias (Paus. x. 19. 1), and in the grants of ἀτέλεια and ἀσυλία to the guilds of Dionysiac artists (*CIA* ii. 551—at some date after 279).

We may conclude that the competence of the amphictyony was not rigidly restricted, at least in practice. It was open to a power possessing a dominant influence to extend its functions, and Alexander induced the council to confer upon him the command of the war against Persia (Diod. xvii. 4).

(*d*) *Importance of the amphictyony.* — The amphictyony in its constitution, its objects, and its possibilities involved important principles. It united many different peoples of Greece on the basis of a common Hellenism; and this union was realized by a system of representation by which equal votes were accorded to the several members. It fulfilled the purpose common to amphictyonies generally, of maintaining certain religious institutions and rites, while it enforced the recognition of rules regulating the relations of its members. In this respect it tended to establish in the Greek world a system of *quasi*-international law, with a court to enforce it, comparable in our own days to the purpose of the Concert of Europe. In its constitution it might seem to prepare the way for a federal system, if not for a Pan-Hellenic national union. This may explain why, on different occasions, the amphictyony might act as the representative of Greek feeling or policy, and why it was sometimes described as if it included the whole nation (cf. Soph. *Trach.* 638, Ἑλλάνων ἀγοραὶ Πυλάτιδες; Herod. vii. 214, οἱ τῶν Ἑλλήνων Πυλαγόροι; Aesch. iii. 161, 254, συνέδριον τῶν Ἑλλήνων).

But the disruptive forces which dominated the Greek political system counteracted these tendencies. The influence of the amphictyony (apart from the oracle) in the sphere of religion scarcely extended beyond its own meetings. The rules of humanity which it laid down were not enforced, and amphictyonic cities were razed to the ground without vengeance or protest. The amphictyony had little effect in correcting the separate autonomy of the great states. Composed as it was in great part of peoples of small political or military significance, it could not impose its will on powerful states, which overshadowed it or made it a mere instrument of policy. Thus in the greater part of the 5th cent., while Sparta and Athens divided the allegiance and controlled the fortunes of the other Greeks, the amphictyony receded into the background. In the 4th cent., from 380 at least, the amphictyony assumed a greater importance, mainly because it came under the influence and served the purposes of the most powerful states—at first Sparta, then Thebes, and later the Macedonian king. The amphictyony became the scene of intrigues, and the Sacred Wars, waged nominally in the cause of the amphictyony, were critical for Greek history. It is precisely at this period that Demosthenes describes the league as ἡ ἐν Δελφοῖς σκιά (v. 25). The subservience to the policy of the dominant state became still more marked when the Aetolians controlled the amphictyony.

LITERATURE. — For amphictyonies in general, the proper sections in G. Busolt, *Griech. Staalsaltertümer*[2] (1892); G. Gilbert, *Griech. Staatsaltertümer*, ii. (1885); G. F. Schömann, *Griech. Altertümer*, ii. (4th ed. by J. H. Lipsius, 1902), should be consulted. See also F. Cauer, 'Amphiktyonien' in Pauly-Wissowa, i. (1905 ff.). For the Delian amphictyony see von Schöffer in Pauly-Wissowa, iv. 2459 ff.; for the Delphian amphictyony, H. Bürgel, *Die pyläisch-delphische Amphiktyonie*, Munich, 1877. The French excavations at Delos and Delphi have brought many fresh inscriptions to light. These have been published in the successive volumes of the *BCH*. The financial history of the Delphian amphictyony is summarized in E. Bourguet, *L'Administration financière du sanctuaire pythique au IVe siècle avant Jésus-Christ* (Paris, 1905).

LEONARD WHIBLEY.

AMRITSAR.—Amritsar, in the Panjāb, is one of the religious centres of India and the chief city of the Sikhs. It lies in what is known as the Mānjha country, about 32 miles east of Lahore, and contained at the census of 1901 a population of 162,429, of whom 40 per cent. were Hindus, 48 per cent. Muhammadans, and 11 per cent. Sikhs. It is the chief commercial town of the Panjāb proper; but its commercial importance is based less on any advantages of position than on the fact that the city is built round the celebrated 'Tank of Nectar' or 'Tank of the Immortals,' *i.e.* the gods (Sanskrit, *Amṛtasaras*), in the centre of which is situated the Golden Temple, the central shrine of the Sikh religion. There are stories of the spot having been visited by the first Sikh Guru, Nānak (A.D. 1469–1538), and by the third Guru, Amardās (A.D. 1552–1574); but the actual purchase of the site and excavation of the tank are believed to have been undertaken by the fourth Guru, Rāmdās, in A.D. 1577, and the masonry work was begun by the fifth Guru, Arjan, in A.D. 1588. The remaining five Gurus seem to have paid little or no attention to the place, but after the death of the last Guru in A.D. 1708, and during the turbulent period which preceded the breaking up of the Mughal empire, the shrine began to obtain considerable popularity and to be recognized as the national centre of the Sikh confederacies. The Muhammadan Government took every precaution to prevent access to the shrine; but so great was the attachment of the Sikhs to it that the Sikh horsemen would frequently risk their lives by galloping through the Mughal lines for a sight of the sacred tank. In A.D. 1762, the Afghan leader, Ahmad Shāh, blew up the sacred shrine with gunpowder, and polluted the sanctuary with the blood of kine; but four years later, in A.D. 1766, the shrine was reconstructed on its present basis. The Sikh leaders then began to build round it a number of separate fortified quarters which formed the nucleus of the present city of Amritsar, and the city has since continued to flourish under Mahārājāh Ranjit Singh (A.D. 1801–1839) and the British Government (since 1849).

There are five sacred tanks in the city, but the most celebrated is the 'Tank of Amritsar' proper, in which the Golden Temple lies. The form of the tank is nearly square, the sides at the top being 510 feet in length, and it is fed by water from the Bārī Doāb Canal. The Temple occupies a small island in the centre of the tank, 65½ feet square, which is connected with the west side by a fine causeway 227 feet long and 18 feet broad. The central shrine is known as the *Har-mandar* or 'Temple of God,' and consists of a single room, covering a square of 40½ feet, with four doors, one opening to each side. The lower part of the outer walls is adorned with marble inlay, resembling that of the Tāj Mahal at Agra, and the upper walls and roof are covered with plates of copper heavily gilt, from which the place has obtained among Europeans the name of the 'Golden Temple.' Among the Sikhs themselves the shrine and its precincts are known as the *Darbār Sāhib* or 'Sacred Audience'; and this title owes its origin to the fact that the *Granth*, or Sacred Book, is looked upon as a living Person, who daily in this shrine receives his subjects in solemn audience. The book is brought every morning with considerable pomp from the *Akālbūnga* (see p. 400[a]) across the causeway to the shrine, and returns at night with similar ceremony. It is installed in the shrine below a canopy, and a *granthī* sits behind it all day waving a *chauri*, or yak's tail, over it, as a servant does over the head of an Indian Prince. On the south sit a selection from the *pūjārīs*, or hereditary incumbents of the Temple, and on the north sit the musicians (*rāgīs* and *rabābīs*—the latter, strange to say, being Muhammadans), who from time to time sing hymns from the Granth

to the accompaniment of divers native instruments. In front of the book is the cloth upon which the faithful deposit their offerings. Although the outer precincts have since 1898 been lit by electric light, the shrine itself is lit with clarified butter or candles only. The wearing of shoes within the precincts, and, of course, smoking of any kind, are strictly prohibited; and as the Granth is always installed upon the ground, it is considered irreverent for any one within the precincts to sit upon a chair or stool.

Round all four sides of the tank runs a paved walk 30 feet broad, known as the *Prakarama* (properly *Parikrama*), which is frequented by the worshippers who come to bathe, by pandits or ascetics of various kinds, and by vendors of religious and other trinkets. At the south-east corner of this walk, where the water issues from the tank, is the bathing-place assigned to the Mazhabis, or low-caste converts, whom the bulk of the Sikhs still decline to admit to their religion on equal terms. Round the outside of the walk rise a number of picturesque buildings, known as *būngas* or hospices, which were for the most part built by the Sikh chiefs in the latter part of the 18th cent. for the accommodation of themselves and their followers when visiting Amritsar; and among these the *būnga* of the Rāmgarhia Sirdārs is prominent by its two large towers, which dominate the city and neighbourhood of Amritsar.

Attached to the main shrine are three subsidiary institutions, which are of considerable importance in the eyes of the Sikhs. The first of these is the *Akālbūnga*, or 'Hospice of the Immortal,' which adjoins the shrine on the west side of the causeway, and is the traditional centre of the fanatical sect known as the Nihangs or Akālīs. The *Granth Sāhib* is kept here at night, and the building also contains a fine collection of the weapons of Guru Har Govind and other Sikh Gurus and chiefs. The courtyard in front of the *Akālbūnga* is a favourite place for the administration of the *pahal*, or religious baptism of the Sikh creed; the ceremony may, however, be performed anywhere in the presence of the Granth, and the number of persons baptized at the *Akālbūnga* does not exceed 1200 annually. The second of the well-known subsidiary institutions is the *Bābā Atal*, a shrine surmounted by a tower, which lies a few hundred yards to the south-east of the Har-mandar. This shrine was commenced in A.D. 1729 in memory of Bābā Atal, the young son of Guru Har Govind (A.D. 1606–1645), and is surrounded by the cenotaphs of many of the old Sikh nobility. The third institution subsidiary to the Golden Temple is the shrine of *Taran Tāran*, which lies 13 miles south of Amritsar, and which was founded by the fifth Guru, Arjan (A.D. 1581–1606). The Taran Tāran shrine, which also is built on an island in a large tank, is the scene of a considerable monthly fair, and the Amritsar temple, too, is the centre of two exceedingly large fairs, the Baisākhī and Diwālī, which are held in the spring and autumn respectively, and are attended by immense numbers of persons, both for religious and for commercial purposes, from the whole of northern India.

The actual building of the Golden Temple and its precincts is maintained from the proceeds of a *jāgir*, or assignment of land revenue from certain neighbouring villages. The *granthīs* who read the sacred volume are three in number, and are supported by offerings made directly to them by worshippers at the shrine. The *pūjārīs*, or incumbents, are a very large body of men to whom the general offerings at the shrine are distributed, after deducting a fixed sum for the temple establishment, — that is to say, the musicians, office-bearers, menials, and so forth. The whole institution and its subsidiaries are supervised by a manager, who is generally a Sikh gentleman of position appointed by the Government. The funds of the temple, as well as a certain number of precious ornaments, are kept in a somewhat primitive manner in a treasury over the main gate.

The whole importance of Amritsar from a religious point of view lies in the Golden Temple, and there is little of religious importance in the town outside the precincts of the *Darbār Sāhib*. Mention may, however, be made of two recent institutions, namely the Sāragarhī memorial and the Khālsa College. The former is a memorial in the form of a Sikh shrine, which was erected in A.D. 1902 in the centre of the city by the British Government in memory of the gallant manner in which a small body of the 36th Sikh Regiment held the fort of Sāragarhī on the North-West Frontier against an Afghan enemy in the Tīrāh campaign of 1897. The latter is a denominational college which was started some twelve years ago for the encouragement of learning among the Sikhs. It lies some two miles out of the city, and is largely supported by the Sikh States of the Panjāb as well as by private donors.

E. D. MACLAGAN.

AMULETS.—See CHARMS AND AMULETS.

AMUSEMENTS.—A. 1. In the category of 'amusements' it is usual to include all sorts of pleasant occupations, both mental and physical, by which the attention is disengaged from the serious pursuits of life. Strictly speaking, however, an amusement is a light form of enjoyment in which little exertion either of the body or of the mind is required. In this respect amusements differ from recreation, which is a word of a higher order, inasmuch as recreation implies some considerable expenditure of energy, either mental or physical or both, although in the nature of the case the exertion is agreeable and refreshing. Both amusement and recreation are designed to serve the same end, the recuperation of one's jaded mental and physical powers; but amusement secures that by turning the mind into channels where the time passes pleasantly without the need of special exertion, whereas recreation effects its purpose by an agreeable change of occupation, by calling into activity other faculties and muscles than those engaged in work. Amusement, in short, is a form of enjoyment in its nature akin to relaxation; recreation is pleasurable exercise in which the energies, set free from work, are allowed to play in other directions (see RECREATION).

2. The slight demands which amusements make on the mental and physical activities, and their character as a means of lightly beguiling the time and drawing off the attention from the more important concerns of life, no doubt explain why in a serious age the word was used in a depreciatory sense. At the close of the 17th cent. we find *amusement* defined as 'any idle employment to spin away time' (Phillips, quoted in *Oxf. Dict.*). It may readily be allowed that anything which has no further aim than to kill time and to render men oblivious of the higher ends of life deserves to be condemned; and the use of the word pastime as synonymous with amusement has been regarded as an unconscious and melancholy confession that amusements have no other object and serve no other end than to fill up the emptiness of a life which is devoid of nobler interests, and to make men forget themselves. This pessimistic view of

amusements finds unquestionably some justification in the actual state of things. It cannot be doubted that amusements are often greedily sought after by those who find in the true business of life, in noble aims and strivings, nothing to excite their interest and to afford them joy; and they are indulged in with the object of appeasing the natural craving for happiness which finds no satisfaction in higher pursuits. Where this is the case, the passion for amusement is a pathetic witness to the misery of a life which has missed its true joy. But when a depreciatory estimate of amusements is based on the view that life itself, in the duties and relationships to which men are called, is so rich in delights that any other form of enjoyment is unnecessary, the ground is less secure. It is a severe and exacting philosophy which affirms that, to all who are conscious of the satisfactions which attend the pursuit of high moral aims, life is an absorbing interest which takes the place of all amusements. 'Where men are rightly occupied, their amusement grows out of their work' (Ruskin, *Sesame and Lilies*, 100). This, it must be confessed, is somewhat too highly pitched for ordinary human nature. It is this view of amusements which has commonly been associated with Puritanism, not altogether with justice. To begin with, at least, it was no aversion to pleasant things, arising out of an austere philosophy of life, that called forth the Puritan protest against the amusements of the time. Amusements were condemned, not because they were considered too trifling for men who had the serious business of life on hand, but because they were either sinful in themselves or closely associated with sinful accessories. This was the case, for instance, in the matter of dramatic representations. 'In the days of Elizabeth, the Puritan Stubbes held that some plays were "very honest and commendable exercises," and "may be used in time and place convenient as conducible to example of life and reformation of manners"; but the gross corruption of the seventeenth century stage drove Prynne and the majority of the Puritan party to extremer views' (Traill, *Social England*, iv. 165). It was the unfortunate association of evil with so many forms of amusement that disposed the Puritans in their later days to look askance at mirth and enjoyments perfectly innocent; their abhorrence of tainted pleasures led them to regard with suspicion every form of gaiety in which 'the enjoying nature' of their neighbours found expression, and fostered the growth of an austere and sombre spirit, which regarded life as too serious a business to permit of indulgence in light and pleasant diversions.

3. The Puritanic 'gospel of earnestness' is too narrow and one-sided to do justice to human nature. Healthy-minded men refuse to be satisfied with any view of life which ignores the natural instinct for play, and regards participation in amusements as a weakness which will be outgrown when men have tasted the more solid joys which duty brings. It is, no doubt, true that, wherever duty engages the conscience for its faithful and honourable discharge, it becomes, if one cannot say the chief amusement, at least the chief interest in life. But that does not mean more than the recognition of the subsidiary place which amusements should occupy. It does not justify an ascetic attitude towards amusements. Human nature has an instinct for joys of a light and entertaining kind, and the proper method of dealing with that instinct is not disparagement and repression, but a wise control and a large-hearted recognition of the part its gratification may play in the culture of life. The Christian view of life has room for laughter and mirth, for pleasures which stand in no immediate relation to life's duties, but minister to our natural capacity for enjoyment. And the supreme justification of this generous attitude to amusements lies in this, that where they are wisely indulged in, they serve a high end, and cannot be banished without loss. They give a zest to life; they pleasantly engage the mind and give it relief from the strain of duty, and enable it to recover its elasticity and tone. However interesting work may be, however congenial the more serious pursuits in which men engage may prove, the necessity arises, if the freshness of interest is to be maintained, of laying the work aside and seeking other interests. Human nature requires something more than rest for its refreshment; it requires that we should seek diversion for the sheer joy of it—some diversion which shall pleasurably occupy the mind and relax the energies, and afford an opportunity for escaping from the deadening influences of routine. The appetite for enjoyment must be wisely gratified, if the vitality necessary for good work is not to be impaired. *Cito rumpes arcum si tensum habueris.*

4. The main ethical justification of amusements lies, accordingly, in their fitness to renew and refresh our powers for the duties of life. But they serve other ends which are ethically important. They have a *social* value—many of them at least. The fact that we are thrown into pleasant association with others constitutes one of the charms of amusement; and, apart from the refreshing influences of such intercourse, there is a further gain in the growth and consolidation of friendship, and in the forging of links which bind us more closely together. There may be indeed, and there are, experiences shared with others which have a far greater uniting power than fellowship in the social pleasures of life, but the latter has its honourable place, and the value of it is deserving of recognition. Moreover, amusements, like everything else which draws us into association with others, serve as an opportunity for the culture of social virtues—unselfishness, equanimity, courtesy, and the like; while, if we extend our definition of amusements to include the great national games, they afford a discipline for the growth of such qualities as patience, self-restraint, magnanimity, alertness, readiness to seize an opportunity. Then, further, the pursuit of amusements is a bulwark against the temptations of the leisure hour. Nothing exposes the heart to the inroads of evil like the want of some healthy interest; and an honest love of innocent pleasure, if it served no other end, would be valuable as a moral safeguard.

5. All this must be freely acknowledged. Amusements have an undeniable ethical worth when they are wisely engaged in. But they cease to be ethically valuable, and indulgence in them becomes a dissipation, when they are sought after without due regard to the serious interests of life. When they are allowed to engross the mind and to become the main business in which pleasure is found, when their pursuit prejudices the performance of duty and the cultivation of higher interests, when they encroach on time which should be devoted to more serious matters, or make one indisposed to engage in one's proper work, they become harmful and morally reprehensible. There is no amusement, however innocent in itself, that cannot be changed into a means of self-indulgence through the excessive or untimely pursuit of it. Its pursuit is untimely when there is work waiting to be done. The pleasures of amusement are stolen pleasures, if they are enjoyed at the cost of neglect of duty. 'Sport and merriment are at times allowable; but we must enjoy them, as we enjoy sleep and other kinds of repose, when we have performed our weighty and important affairs' (Cicero, *de Off.* i. 29, 103). But the abuse of amusements lies not

only in their untimeliness, but also in their excess. They are frequently allowed to bulk so largely in life that serious occupations become distasteful. If, after participation in amusements, we are unable to pass with ease to more important concerns, and, instead of feeling refreshed for duty, have an aversion to it, we may fairly conclude that we have transgressed the limits of legitimate enjoyment, and have fallen into self-indulgence. That these limits are frequently overpassed is not a matter for doubt. There is no question that at the present day the desire for amusement has in many instances become a passion which is seriously prejudicing the culture of the higher life. In the opinion of competent judges, there is a waning of intellectual interests, a decay of any genuine love for those pursuits which enlarge and enrich the mind, a growing unconcern for the graver matters of religion and social service, and in some degree at least this is to be attributed to the immoderate indulgence in lighter pleasures. The fault of our age is not in seeking amusement, but in not knowing where to draw the line. *Nec lusisse pudet, sed non incidere ludum* (Horace, *Epist.* I. xiv. 36).

6. The nemesis of excessive addiction to amusements is not only the destruction of the taste for serious pursuits, but the decay of any genuine pleasure in life. The rationale of amusements is their power to send us back to work re-vitalized and capable of finding joy in it. But when they usurp the throne of our desires, and so dominate our thoughts and interest that work is felt to be a wearisome and uninviting interlude, they kill joy in that region of life where joy is all-important, where alone joy can be solid and lasting. A predominant craving for amusement defeats its own end; it renders joyless the whole stretch of life which of necessity must be given to work, and it speedily exhausts the enjoyment that amusement itself can give. Excessive pleasure-seeking brings satiety. Amusements, when they become the chief object of pursuit, lose their power of amusing. There is a world of truth in the well-known saying, uttered in reference to the excitements of a London season: 'Life would be tolerably agreeable, if it were not for its amusements.' Excess of pleasure nauseates and takes the joy out of life.

7. In the choice of amusements, and in the determination of the extent of their indulgence, there are other than personal considerations to be taken into account. From the individual's point of view, it is important that he should learn to avoid every form of pleasure which is physically harmful or morally debasing, and to allow himself only that measure of enjoyment which is consistent with the proper discharge of his work, and with a due concern for higher personal interests, such as self-culture and religious worship. But the question of amusements must be considered also in the light of the obligations which we have towards others. To some extent, of course, a consideration of that kind is always involved. Our conduct is never, strictly speaking, merely self-regarding; faithfulness in work, for instance, with which our amusements should never be allowed to interfere, is not simply a personal matter—it affects all others whom our work is calculated to benefit. But as members of a family, or of a church, or of society in general, we have duties to others—duties of love, helpfulness, consideration, service; and these must be kept in mind in determining the extent and nature of our amusements. Indulgence in pleasures the most innocent is illegitimate when it leads to the neglect of our social obligations. A man has no right to seek amusement to the detriment of those offices of love and fellowship which he owes to those of his own family circle. Similarly, one may spend so much time or money on the gratification of one's desire for enjoyment as to render impossible the honourable discharge of one's duties to society. Those most closely identified with religious and philanthropic work are unanimous in the opinion that one of the chief difficulties in finding money for its adequate maintenance arises from the increasing expenditure on amusements. Further, there may be occasions when our obligations to others raise the question whether we should not deny ourselves the gratification of an amusement which to us is perfectly innocent, but which is a cause of offence to those with whom we are closely associated. The duty which we owe to 'weaker brethren' cannot be entirely ignored, although there must be limits set to it. One may feel constrained in certain circumstances to renounce a form of enjoyment which harms another or offends his conscience; bnt, in the interests of moral education, it should be recognized that one has also a duty of vindicating the freedom of conscience, and of showing that amusements which to some are obnoxious, and even injurious, may be indulged in with perfect loyalty to high ethical standards. But, in still another way, our obligations towards others are bound up with the question of amusements. In these days the provision of amusement is very largely in the hands of professional classes, and it has been maintained that the moral danger to which men and women belonging to these classes are exposed is so great, that the amusements provided by them should not be countenanced by those who have the welfare of their fellows at heart. This is perhaps the chief reason why many refuse to enter a theatre. It should be frankly acknowledged that if, as is frequently alleged, the theatrical career puts the souls of men and women in needless jeopardy, and exposes them to temptations such as no one should be called upon to face; if the conditions and atmosphere of an actor's calling are so lowering to the moral tone as to make a loose manner of life practically inevitable, the enjoyment furnished by dramatic representations is a form of amusement which a good man will refuse to countenance. Now, that there are moral risks of a peculiar kind attending the theatrical profession, it would be idle to deny; but the fact of risk does not necessarily condemn it, any more than the inevitable risks attending all kinds of worldly business condemn them. Nevertheless it is a consideration which cannot be left out of account in determining our attitude to the theatre; each individual is bound not only to think of the effects of a dramatic entertainment on himself, but also to consider, on the grounds of the fullest knowledge at his command, whether those who provide the entertainment are prejudicially affected in character.

8. In the last resort, the question of amusement is for each individual to decide. It is impossible to lay down hard-and-fast rules which will have universal validity. The science of ethics is one of the most individual of all the sciences. The determination of duty is a matter for the earnest and enlightened conscience of each person for himself. It is not to be denied that the method, which has been largely favoured in some quarters, of drawing up lists of allowable and proscribed amusements has a certain practical utility; the deliberate judgment of good men in reference to pleasures, whose worth for the ethical ends of life is a matter of debate, is not rashly to be set aside; nevertheless, in all such matters the individual conscience must be the final judge. The free life of the spirit must not be bound; only it should be remembered that, for a wise settlement of the question of amusements, the individual must have a clear apprehension of the moral obligations resting upon

him, and be guided by a spirit of devotion to a lofty ideal of life. 'He that is spiritual judgeth all things.' Let a man realize the true ethical ends of life, let him recognize that life is a gift to be honourably used for self-culture and service, and the question of amusements may be left to settle itself. He who walks according to 'the law of the spirit of life in Christ Jesus' will never find himself in serious difficulty. He will not ask himself in what amusements he may indulge, or to what extent he may indulge in them, without doing wrong; he will be so intent on seeking the true ends of life that only those amusements will be desired which are in harmony with these ends, and only that measure of indulgence will be allowed which helps towards their attainment. In the most natural way, amusements will take their fitting place as a means of refreshment. They will be the lighter breathings of an earnest spirit, which finds in them a new zest for duty and a preparation for more exacting pursuits. The ethical ideal which gives unity to life will govern them and lend them value; so that pleasures, which in those indifferent to high aims are simply the frivolous exercise of a low-toned spirit, are the sparkle on the surface of a deep and earnest nature, the instinctive playfulness of a heart that finds in relaxation a help for serious work.

B. 1. So far we have been concerned with the general principles which should control the choice and pursuit of amusements; we turn now to consider their character and place in our modern life. It was inevitable that the vast changes which have taken place in business and industrial life within the last two or three generations should affect in a large degree the habits of men in their hours of leisure. The decay of intellectual interests has been incidentally referred to as one of the regrettable results of the increasing desire for lighter forms of amusement, but it must be confessed that it is hard to see how that was altogether to be avoided. The growing strain which the conditions of modern life have imposed on those engaged in business, the exacting demands made on brain and physical endurance by the sharpness of competition as well as by the necessity for providing the comforts and æsthetic refinements of a higher standard of living, have made such inroads on the energies of men that their pleasures have inevitably taken the form of amusements which agreeably relax the tension of the mind. In former days, when the strain was less severe, it was possible in moments of leisure to devote oneself to interests which required some intellectual effort; but under the conditions of present-day life the tension in the case of very many is so great that, if the balance is to be redressed and the powers re-energized for the proper discharge of work, amusements must often be of a nature to quicken sensation and act as an agreeable opiate to serious thought. This may be regretted in the interests of wide and harmonious self-culture, but it is part of the price which must be paid for the overdriven activity of modern life. The same consideration is a fair answer to the criticism which decries the craving for spectacular amusement in the name of robuster methods of recreation. It is blindness to the facts of modern life that leads to the wholesale condemnation of pleasurable excitement which is not accompanied by the healthy glow of exercise. That some measure of recreation in its nobler sense is both desirable and necessary for health of body and mind may be freely allowed; but it cannot be questioned that for the vast proportion of the toilers in our cities what is needed is not so much a further expenditure of energy, as some form of diversion which will quicken the pulse of life by its appeal to the imagination through the senses; and the hard-driven poor ought to be able to secure this in ways that are free from moral danger. Nothing, indeed, is of greater importance for the true welfare of those who are exposed to the strain of city life than the establishment of centres where healthy amusement, freed from all contaminating associations, can be had at a small cost. The Churches are moving in this direction already, and the time should not be far distant when municipalities will realize that it is their highest interest to devote some attention to the amusements of the people.

2. It is not merely the strain which our modern civilization imposes that makes the question of amusements of such vital importance; it is much more the unnatural conditions which have been created by the highly specialized character of modern industry. For large sections of the population there is under present conditions nothing in the nature of their work itself to excite any deep and genuine interest. In earlier days, handicraftsmen found in the varied operations of their calling, and in the freedom in which their skill found scope, a zest which in our mechanical age is almost entirely lacking. It is by no means surprising that men have sought an escape from the colourless routine of uninspiring work along the path of least resistance, and have endeavoured to satisfy their craving for a wider and more joyous life by indulgence in vicious pleasures or in forms of excitement which sap instead of renewing the energies. In these circumstances the great problem is to make activity pleasurable again, to find some way by which interest may be re-awakened in the performance of work which in itself is largely devoid of interest. Unquestionably the noblest way of attaining this end is to endeavour to implant in men's minds a new sense of the deeper meanings of work, a feeling for its ethical significance to the individual himself, and for its significance as the contribution which he is able to make to society in return for the privileges which society confers upon him. But the same end may be served in another way. It has been remarked that 'the most powerful moralizing influences are not always those which are directly moral' (MacCunn, *Making of Character*, 58). Accordingly, interest in work, with the formation of good habits which that implies, may be secured by the provision of healthy amusement which will stir the imagination and satisfy the instinctive desire for a larger life. While the love of life is at present largely exploited by private individuals, with results that are frequently far from beneficial, the aim of the community ought to be to supply forms of entertainment which shall prove a stronger attraction than questionable and vicious pleasures, and shall so enlarge the horizon of men's better desires that they will feel a new inducement to enter into work with all the energies at their command. As an indirect means of attaining moral ends, amusements have a worth which is deserving of greater attention than they have received. Professor Patten (*The New Basis of Civilization*) closes a suggestive discussion of this question with these words: 'Amusement is stronger than vice, and can stifle the lust of it. It is a base of economic efficiency upon which depends the progress of multitudes. When men and women have withstood the allurements of vice and learned work habits, then the steps beyond are fairly well paved. The Church and home can moralize and induce character, the school can clarify purpose, and the settlement can socialize the material ready in the industrial world' (p. 143). See also GAMES.

A. F. FINDLAY.

AMYRALDISM was the name given, more generally, to the theology of Moyse Amyraut (Moses Amyraldus, the Amiro of Baillie's *Letters*), and, more particularly, to his way of defining the doctrine of Predestination. In the latter sense it was called, not quite appropriately, *Hypothetical Universalism*. It was one of three attempts (the others being Arminianism and the Covenant Theology) made during the 17th cent. to break through the iron ring of Predestination within which the Reformed Scholastic of that century had enclosed the theology of the Reformed Church. To understand the theory it is necessary to know something of the workings of that Scholastic, and something too of the life and aims of Amyraut.

The second leads naturally to the first. Moyse Amyraut was born at Bourgeil in Touraine in 1596. His family belonged to the Reformed religion. The boy was destined to a lawyer's career. He had begun his studies, and had attained to the grade of licentiate, when the reading of Calvin's *Institutio* turned all his thoughts to theology. He entered the Theological College of Saumur, where the teaching of the celebrated Scoto-French theologian, John Cameron, made a profound impression on him—second only to that already produced by the study of the *Institutio*. After a short ministry at Aignan, in Paris, he became minister at Saumur (1626). He had rapidly acquired a high position in the Reformed Church of France, and was deputed by the National Synod, which met at Charenton in 1631, to carry their respectful congratulations to King Louis XIII. At Court he attracted the attention of Cardinal Richelieu, and retained his friendship. In 1633 he was appointed Professor of Theology in Saumur, having as colleagues, appointed at the same time, Josué de la Place and Louis Cappel. All three had been students under Cameron, and all had a fervid admiration for the theology of Calvin as that was exhibited in the *Institutio*. All three believed that the so-called Calvinism of the day differed widely from the teaching of the master, and they were not slow to let this be known in their lectures. The College soon acquired a great reputation. Students came to it from the Reformed Churches beyond France, especially from Switzerland. Then doubts began to arise about the orthodoxy of its teaching, both in France and in Switzerland. The individual churches of the latter country began to withdraw their students, and that 'after-birth' of Reformed creed-making, the *Formula Consensus Helvetica*, was framed for the purpose of denouncing the doctrine of the three professors of Saumur.

The critics of Amyraut were right if orthodoxy was to be tested by the Reformed Scholastic of the day. It was his aim to bring back the Calvinism of the *Institutio*, which differed widely from the Scholastic, and in nothing more than in the doctrine of Predestination. With Calvin, predestination is not set forth at the beginning of his theological system; it is never used as the fundamental thought under which everything else is to be classed. It is simply an explanation of the sovereignty of grace, which overrides man's sin and man's weakness. Still, in spite of the smaller place and special position which the word and idea of predestination held in the *Institutio*, there was a master-thought running through Calvin's theological thinking which might easily be displaced by the conception of predestination. The devout imagination has never made grander or loftier flight than in the thought of the *purpose of God* moving slowly down the ages, making for redemption and the establishment of the Kingdom of God. This is the master-thought in the *Institutio*. It was full of life and movement, and had for issue a living thing, the Kingdom of God. If this conception of the Kingdom of God be kept in view, it is impossible to crystallize or stereotype the living thought of purpose. The Kingdom comes into being in such a variety of ways, none of them able to be expressed in exact definition. Its conception can never be summed up in a few dry propositions. It is something which from its very nature stretches forward to and melts in the infinite. But if a keen and narrow intellect, coming to Calvin's theology, fastens on its nerve thought of *purpose*, and manipulates it according to the presuppositions and formulæ of the second-rate metaphysics within which his mind works, it is possible to transform the thought of purpose into a theory of predestination which will master the whole system of theological thinking.

This is what the Reformed Scholastics of the 17th cent. did with the experimental theology of the 16th century. They made it a second-rate metaphysic dominated by what they called the Divine decree. Moreover, they effected the transformation in the very same way that the mediæval Schoolmen had treated the experimental theology of Augustine. They began with a definition of God borrowed from the Aristotelian philosophy, and put this abstraction in the place which ought to be occupied by the Father, who has revealed Himself in Jesus Christ. The *Principium Essendi* was their starting-point. The abstraction which did service for God in the Aristotelian philosophy needed another abstraction to bring it into relation to the universe of men and things. The Aristotelian thought which mediated between the principle of existence and the variety of life and motion in the universe was the category of Substance. Substance, the first and unique category, collected everything into a unity of being, and so brought the *All* into relation with the *One*. A second abstraction was also needed by the Reformed Scholastic. This was found in the Divine decree. It was the highest category, embracing all existence, including everything knowable, everything which proceeds from the One Principle of Being. The essential existence of God (Trinity) is alone outside this decree; everything else lives, moves, and has its being within the circle of the Divine decree. It is the channel through which God delivers Himself in action outside His essential nature. It includes, it *is*, all existence, still immanent within the Godhead. Within it are all things arranged in *eternal* providence, and all men, and the election of some and the reprobation of others. When existence emerges, it comes forth on the lines laid down within the Deity in the Divine decree, which includes all creation, all actual providence, all Divine work of redemption.

It was this Scholastic that Amyraut and his colleagues protested against—this enclosing everything thinkable within the ring-fence of a Divine decree, which was simply the Aristotelian category of Substance under another name. They wished to get back to the experimental theology of the Reformation age as that was exhibited in its greatest master. They felt that the first thing to be done was to break through this ring-fence, within which the metaphysic of the time made all theological thought move. The attempt made before them, which went by the name of Arminianism, did not appeal to them. It had nothing to do with the experimental theology of Calvin, and was simply the revolt of a shallower metaphysic against a deeper. They accepted the decisions of the Synod of Dordrecht. But they wished to bring theology back to life, to connect it with the needs of men and women.

The special doctrine of Amyraut is known as *Hypothetical Universalism*, or the *Double Reference Theory of the Atonement*. It was suggested by, if not based on, Cameron's doctrine of Conversion. That doctrine, as Amyraut understood it, was: Conversion may be described as a special case of the ordinary action of the intelligence on the will. According to the psychology of the day, it was held that the will acts only in so far as it is influenced by the intellect—action follows enlightenment, and that only. Conversion is a special case of this action of intellect upon will—special, because in this case the Holy Spirit enlightens the intellect, and the intellect, charged with this spiritual enlightenment, acts upon the will. Conversion is thus an instance of the ordinary action of the intelligence on the will, and yet is, at the same time, an altogether extraordinary work of supernatural grace. The grace of God, which is supernatural when it acts upon the will in conversion, follows the ordinary psychological laws. This relation between the intellect and the will in conversion suggested to Amyraut a similar parallel between Providence and Election, and between Creation and Redemption. Providence may be looked on as belonging to the course of nature; but Election is a special instance of Provi-

dence and at the same time the peculiar and gracious work of God. Creation belongs to the ordinary course of nature, and Redemption is a special instance of Creation, and is nevertheless a unique and gracious work of God. Just as the relation of the intellect to the will may be called the universal of conversion, so Election may be looked at as set in the environment of Providence, and Redemption in the environment of Creation.

Amyraut, whose devotion to Calvin was unbounded, insisted that these thoughts of his were the legitimate and historical development of ideas presented in the *Institutio*. He keeps to Calvin's great thought of the purpose of God unfolding itself down through the ages. This purpose of grace, when viewed out of all relation to time, is universally Creation, specially it is Redemption; viewed historically, it is Providence and Election; viewed individually, it is Intellect acting on Will and Conversion. He has thus three pairs of ideas —the one universal and natural, the other special and of grace; and that which is of grace is always set in the environment of the natural.

This mode of thought, however, embodied a practical ecclesiastical purpose. In those days Germany was being devastated by the Thirty Years' War—a struggle hideously prolonged, all men saw, in consequence of the mutual jealousies between Calvinists and Lutherans. Since the Synod of Dordrecht, the Lutherans had grown more embittered against the Calvinists. They believed that its doctrinal conclusions had been directed against them indirectly. Amyraut hoped to make it plain to the Lutherans that Calvinist theology could be stated in a form which might be more acceptable to them. He saw that the Lutherans took special objection to the Calvinist doctrine of a limited reference in the Atonement, and he hoped to overcome that difficulty.

Two modes of dealing with the Lutherans were possible to Reformed theologians. (1) They might have insisted that Lutheran theology was quite distinct from Arminianism, and that the condemnation of the Arminians at Dordrecht was not meant to, and did not, involve a condemnation of the Lutherans; that the particular point raised in the Arminian controversy had never been before the Lutheran Churches, and had never been settled by it; and that in any attempt to bring the Lutheran and the Reformed Churches closer to each other, this particular doctrine of a limited reference in the Atonement might be left an open question. This was the view of the great French Reformed theologians Claude and Jurieu. (2) They might, while adhering strictly to the Reformed doctrine as laid down at the Synod of Dordrecht, have endeavoured to shape that doctrine so as to make it approach the Lutheran type in statement at least. Amyraldus selected the latter method. He tried to show that there might be the general reference in the Atonement to all men, which the Lutherans insisted on retaining, while the Reformed thought of a limited reference was also correct. He worked out his scheme of conciliation by the use he made of the three pairs of ideas already mentioned. The purpose in Creation, he said, was Redemption; the purpose in Providence was Election; the purpose in the gift of intellectual endowment was Conversion. Applying this to the matter in hand, he declared that, if the whole design of God in Providence is to make all things work together for the good of them that are called, Providence itself is but a wider election—an election which may be described as universal.

His argument condensed was somewhat as follows: The essential nature of God is goodness; and by goodness Amyraut means love *plus* morality—love limited by the conditions which the universal moral law must impose upon it. This Divine goodness shines forth on man in Creation and in Providence, which is simply Creation become continuous. But sin has through man entered into creation, and has destroyed the true end and aim of man's life. In presence of sin God's goodness shines on, but it must, from its very nature as love *plus* morality, take a somewhat different form. It becomes righteousness, which is goodness in the presence of sin; and this righteousness demands the Atonement, Christ's work of satisfaction, through which men are saved from the consequences of their sin. The goodness of God remains unchanged; it is seen in the desire to *save*; but the presence of sin has made it appear under a special form. When this thought is applied to assert the theological ideas of the 17th cent. Calvinism, it is seen that the purpose of God in salvation is really *infra-lapsarian*, because it arises from goodness in the presence of sin, and therefore face to face with the thought of the Fall. But it may also be regarded as *supra-lapsarian*, because it is simply a continuation of the original goodness of God. In this purpose of God there is no theoretical limitation save what is implied in the means which the goodness of God in presence of sin is morally compelled to take, *i.e.* the work of Christ. The purpose of God to save is simply the carrying out of the original and universal goodness of God. The work of Redemption is thus the carrying out of the original work of creation. The purpose to redeem is set in the environment of the original purpose to create. When looked at from the point of view of Creation, the *supra-lapsarian*, there is a universal reference in the work of Christ. But when we look at this purpose of God in presence of sin, and when we know that some men do die impenitent and therefore are not saved—when we take the *infra-lapsarian* purpose to save—we see that the theoretically universal reference is limited practically by the fact that some are not saved. The universal reference is theoretical or *hypothetical*; the limited reference to the elect is practical and *real*. Christ's work has real reference only to the some who are saved. This placing a hypothetical universal reference round the limited reference in the work of Christ is *the* distinctive feature in the theology of Amyraldus.

Amyraut, however, applied this general thought in a threefold way:—(1) He broke through the strict idea of salvation limited to the elect—to whom all reference of the work of Christ was limited in 17th cent. Reformed theology—by making the goodness of God, which has regard to *all* men universally, still active in His righteousness (which is His goodness in the presence of sin). He declared that this thought lay implicitly in the well-known phrase of the divines at Dordrecht: '*Christum mortuum esse sufficienter pro omnibus, sed efficaciter pro electis*'; and to make plain what he believed to be its meaning, he changed it to: '*Christum mortuum esse sufficienter sed non actualiter pro omnibus.*' This gave him a hypothetical universalism and a real limitation to those actually saved. (2) He broke down the barrier which 17th cent. divines had reared against the possibility of the salvation of the heathen, by their statement that those to whom the external call is not addressed cannot be held to be recipients of the benefits of the saving work of Christ. He taught, following Zwingli, that God in providence did bestow upon pious heathen what in their case did amount to an external call. This gave a real and not a hypothetical, universal, external call, and with it the offer of salvation to those who had not heard the Gospel message. (3) He widened the precisely fixed sphere of conversion by insisting that every illumination of the intellect was an analogue and prophecy of the spiritual enlightenment which produces conversion.

But while all these three conceptions were discussed in his many treatises on Predestination, the controversy which followed the publication of his views was really confined to the first line of thought. The question was asked, What changes this hypothetical universal reference into a real particular reference? Is it the action of God or of man? If the change arises from man's power to resist what God has purposed to do for all, then Amyraut was an Arminian, as the Dutch and the Swiss theologians asserted. Did the mystery of the change lie hidden in God? Then his theology did not differ substantially from that of the divines of Dordrecht, save perhaps in sentiment. The latter was the view taken by the French Reformed Church. Amyraut was summoned before the

National Synod of 1637 along with his friend Paul Testard, pastor at Blois. The accused were energetically defended, and allowed full liberty to explain their position. They were acquitted of all heresy. The accusation was renewed at the National Synods of 1644 and 1645, with the same result. The Swiss theologians were not satisfied. Their *Formula Consensus Ecclesiarum Helveticarum Reformatarum* (1676) witnessed their protest.

The doctrine of Amyraut has maintained a firm hold on many evangelical Calvinists since his day. It was professed by Baxter, Vines, and Calamy in the days of the Westminster Assembly. It was not, as we can learn from the minutes, meant to be excluded by the definitions in the Westminster Confession. It was taught by Professors Balmer and Brown within the Secession Church in Scotland. It is part of much modern evangelical theology.

ANABAPTISM.—I. *HISTORY.*—The Anabaptists, or Katabaptists (*Wiedertäufer* or *Täufer*) rose in close connexion with the early Reformers at Zürich, Wittenberg, and possibly elsewhere. They spread swiftly over those parts of Europe affected by the Reformation, making a profound impression in the early years of that movement. All the leading Reformers (Luther, Zwingli, Bucer, Oecolampadius, Calvin, Knox, and many others) combated their views in one or more publications and disputations; their doctrines are condemned explicitly or by implication in all the leading creeds of the 16th and 17th cents. (Augsburg, Part I. Artt. ix. xvi.; Trent. Sess. v. 4, 'On Bapt.,' Can. xiii.; French, xxxv.; 2nd Helv. Conf., Artt. xx. xxx.; Belgic Conf., Art. xxxiv.; Scotch Conf., Art. xxiii.; Formula of Concord, Art. xii.; Thirty-nine Artt. xxvii. xxxvii. xxxix.; Westminster Conf. xxviii.); and Calvin's *Institutes* were originally written largely to prove to Francis I. that the Reformers were not all Anabaptists; they were put under the ban by the Diet of the Empire in 1529; and most other civil governments, including that of England, took action against them.

They were the radical party of the Reformation period, regarding Luther and Zwingli as half-reformers who had pulled down the old house without rebuilding in its place. Despairing of reforming the old Church, they sought to build anew on the foundation of Scripture literally interpreted, without the help of the State or any other existing institution; this religious ideal involved fundamental social and political changes (Beck, *Geschichtsbücher d. Wiedertäufer*, p. 12). They differed considerably among themselves in spirit, aim, and many more or less important points of doctrine, but strove together towards a great and far-reaching reform. They sought to reform the work of the Reformers.

The striking similarity between many of their doctrines and those of some earlier sects has led to an effort to show some historical connexion. Ritschl (*Gesch. d. Pietismus*) has sought to trace their doctrines to the spiritual Franciscans; Ludwig Keller and others have sought to show some connexion with the Waldenses, who a little earlier were widely scattered over central Europe. The similarity in doctrines, spirit, and organization is so marked as almost to compel belief in some sort of historical succession; and yet the effort to trace this connexion has not so far been successful. Moreover, several considerations militate against such a conclusion. (1) The Anabaptists themselves were not conscious of such connexion, regarding themselves as the spiritual children of a renewed study of the Bible. (2) All their leaders, so far as their lives are known, came out of the Catholic Church. (3) They had little or no communion with older sects after their rise. These considerations render it probable that they, like the sects of the Middle Ages, are the offspring of a renewed Bible study, and that the similarity is the result of independent Bible study under similar circumstances and controlling ideas.

The history of the party can perhaps be best followed by dividing them into German, Swiss-Moravian, and Dutch Anabaptists. These divisions overlap more or less, but they are largely distinct types.

1. The German Anabaptists.—It is commonly held that the German Anabaptists rose with Thomas Münzer and Nicholas Storch at Zwickau in eastern Saxony. Münzer, a well-educated man, deeply imbued with the mysticism of the later Middle Ages, a friend and follower of Luther, became pastor at Zwickau in 1520. Here he came under the influence of Nicholas Storch, a weaver, who had become deeply tinged with Bohemian views: chiliasm; the rejection of oaths, magistracy, warfare, and infant baptism; and the insistence on community of goods. Under this influence he at once began drastic reforms. With his approval Storch set up a new church on the Bohemian model, claiming new revelations and the special guidance of the Spirit. Their socialistic teachings and revolutionary proceedings soon forced them to leave. Storch, in company with a former Wittenberg student named Stübner, proceeded to Wittenberg in the hope of winning the support of the University for their views. Luther was then in hiding at the Wartburg; Carlstadt and Cellarius, two of the professors of the University, were speedily won over by the new prophets, and even Melanchthon was deeply moved. Various reforms were put into effect immediately. Luther, hearing of these radical proceedings, and believing they would bring the whole reform movement to ruin, hastened to Wittenberg in spite of the protest of his friends, and in eight powerful sermons succeeded in suppressing the movement at that place. Storch and eventually the two professors whom he had won to his views were driven away, Melanchthon was saved, and the radical reforms revoked. Henceforth Luther was one of the most powerful and uncompromising opponents of the Anabaptists. Storch now wandered from place to place, and finally disappeared about 1525.

In the meantime Münzer had visited Prague for several months, had then laboured as pastor and agitator at several places in Thuringia, and had made a visit to southern Germany and the border of Switzerland in the interest of his views. He was becoming more socialistic, more chiliastic, more bitter towards the ruling and upper classes. At last in 1525 the peasant uprising broke out. It had his enthusiastic support, and shortly after its overthrow at Frankenhausen he was arrested and executed. With this catastrophe the Anabaptist cause in Germany suffered a permanent defeat. Henceforth Anabaptism was associated in the minds of Germans with the wild socialism and chiliasm of Münzer and the horrors of the Peasant War. And yet neither Münzer nor Storch is known to have been re-baptized or to have practised believers' baptism. Both opposed infant baptism, but Münzer specially provides for it in a German service which he drew up for the church of Alstedt in 1523. It is impossible to determine the extent to which these men preached the necessity of believers' baptism, and thereby became the founders of the Anabaptism of Hesse and other regions of western Germany. They were chiefly interested

in socialistic-chiliastic ideas, and probably did not press the demand for re-baptism. If this be true, the Anabaptists of the Rhine region had another origin, to be traced later.

2. The Swiss-Moravian Anabaptists.—Bullinger says that the Swiss Anabaptists sucked their Anabaptism from Münzer (*Refor. Gesch.* i. p. 224 f.). But this is improbable. Münzer, as we have seen, did visit the border of Switzerland in 1524, and was in conference with some men who later adopted Anabaptism; but in a letter still preserved (Cornelius, *Gesch. d. Münst. Aufruhrs*, ii. Beil. 1), written September 5, 1524, they show marked independence, even chiding Münzer for some of his views. Moreover, the whole tone and spirit of the Swiss was different from that of Münzer. Chiliasm and violence had no place in their scheme, and socialistic tendencies were much less prominent. Besides, there was in southern Germany and Switzerland at this time wide-spread doubt of the Scripturalness of infant baptism, Bucer, Oecolampadius, and even Zwingli being in doubt ('Vom Tauf, vom Widertauf,' etc., *Opp.* ii. p. 245, *ib.* i. p. 239 f.; Egli, *Actensammlung*, 655, 692).

These Anabaptists rose from the circle of Zwingli's intimate friends and associates at Zürich. Zwingli had become pastor there on 1st Jan. 1519, and by his powerful evangelical preaching had by 1523 brought many of the population to a readiness to abolish Catholic worship and doctrines. But he was anxious to avoid division and strife, and delayed action, hoping to convince the whole mass of the people and then proceed to reform with the authority of the cantonal government. Under these circumstances there sprang up a radical party who favoured proceeding at once with reform 'without tarrying for any.' Moreover, their convictions on some points were in advance of Zwingli's. They urged him to remove or destroy the images, abolish the Mass, begin the celebration of the Supper in both kinds, and finally, to set up a church composed of saints (believers) only. His delay in adopting their earlier demands and his flat refusal to entertain the last led to a final break with the party in 1523 or 1524 (Bullinger, *Der Wiedertäufer Ursprung*, Bl. 9).

The more prominent members of the party at this time were Simon Stumpf pastor at Höngg, Froschauer the famous printer, Heine Aberli, Andreas Castelberg a cripple, Conrad Grebel a young man of aristocratic family, Felix Manz, Wilhelm Reublin pastor at Wytikon, Ludwig Hätzer an excellent Hebraist and later translator of the Prophets, and Georg Blaurock a converted monk who was the most powerful popular preacher among them. Grebel and Manz were the real leaders of the party at Zürich. Grebel was trained at Vienna and Paris, and possessed a fine Greek culture; Manz was an excellent Hebrew scholar, habitually using his Hebrew Bible in preaching. These men held private meetings for Bible study, and here their views were gradually developed and perfected (Egli, *op. cit.* No. 623). Early in 1524 they reached the conclusion that infant baptism was without warrant in Scripture, was an invention of the Pope, yea of Satan himself; it was therefore invalid, was no baptism, and hence the duty of beginning anew the baptism of believers was felt to rest upon them. This they proceeded to do in Dec. 1524 or Jan. 1525, when in a private house Grebel baptized Blaurock, who in turn took a dipper (*aimer*) and baptized several others in the name of the Trinity (Egli, 636, 646). This was followed by the celebration of the Supper in the same simple way.

The civil authorities now resorted to repressive measures. After a public disputation with the Anabaptists (17th Jan. 1525), it was decreed that all infants should be baptized within eight days, that all private religious meetings be abandoned, and that all foreign Anabaptists be banished. Soon afterwards several were arrested, warned, threatened, and released. Continuing their activity, they were again arrested, thrown into prison, and a second ineffective disputation was held on 20th March. On 5th April most of them escaped from prison, and leaving for a brief period the Canton of Zürich comparatively quiet, they spread their views far and wide in other cantons. Renewed activity in Zürich was met by increasing severity on the part of the authorities. In Jan. 1526 the fine to be imposed for re-baptizing was raised to five pounds, and in March eighteen persons were thrown into prison and ordered to be fed on bread and water till they 'die and rot.' Further, baptizing or aiding and abetting the same was to be punished by drowning. Soon afterwards the prisoners were released, on what terms is unknown. Manz and Blaurock were again arrested in the territory of Zürich early in 1527. Soon afterwards Manz was drowned, while Blaurock was beaten through the streets and sent into banishment with the death penalty hanging over him in case of return.

In August 1527, Zürich proposed the adoption of uniform measures for the suppression of the Anabaptists by the cantons affected, viz. Basel, Berne, Schaffhausen, Chur, Appenzell, and St. Gall. These cantons had probably all received these views from Zürich (but see Müller, *Gesch. d. Ber. Täufer*, p. 52 f.) in the early stages of the movement.

The Anabaptists appeared in Basel in the summer of 1525, and for nearly a year enjoyed comparative peace. In June 1526 they were banished five miles from the city, and a month later attendance on their secret meetings was forbidden. Notwithstanding fines, imprisonment, and public floggings, they multiplied rapidly in the country districts throughout the year 1527. They first appeared in the territory of Berne in 1525, but gave little trouble before 1527, when persecution in Basel and elsewhere drove them into this canton in great numbers. In St. Gall they are found early, and achieved a signal success. The founder and leader was Wolfgang Uolimann, who was converted and baptized (immersed naked) in the Rhine at Schaffhausen in Feb. 1525. Grebel himself preached in St. Gall for two weeks in March with great power and success. By Easter the Anabaptists numbered five hundred souls, and their influence was so great that the authorities felt compelled to deal gently with them. The foreign Anabaptists were banished, and the native ones were persuaded to cease baptizing until the matter could be decided by the Council. Zwingli was alarmed by the rapidity of their growth, and persuaded Vadian, who was the leading statesman of the canton and a brother-in-law of Grebel, to oppose them, dedicating his book *Vom Tauf*, etc., to Vadian at the end of May. Notwithstanding the earnest entreaties of Grebel (Cornelius, *Gesch. Münster. Aufruhrs*, ii. 250), Vadian turned against them. After a disputation early in June, the Council ordered the Anabaptists to cease baptizing altogether, and to cease teaching outside one of the churches which was opened to them. Severe measures were enforced against them, and by 1527 the strength of the movement was broken.

In similar ways Anabaptism had been planted in Chur, Appenzell, and Schaffhausen. In Schaffhausen it seemed for a time that Dr. Sebastian Hofmeister, the leading preacher of the canton, would be won for the Anabaptists (Egli, 674).

The efforts of Zürich to secure the adoption of uniform regulations against the Anabaptists in August 1527 were unsuccessful; but all the cantons agreed to proceed more strenuously towards their extermination. It now became very difficult for the leaders to find hiding-places in Switzerland, and the emigration to the Austrian lands and Moravia which had begun several months earlier was greatly accelerated. Still many lingered and worked in Switzerland, and still the measures for their suppression increased in severity. In the canton of Zürich six were executed between 1527 and 1532, and one in the Catholic canton of Zug (Nitsche, *Gesch. d. Wiedertaufer* (1885), p. 97). Twenty years later, Bullinger still complains bitterly of their great numbers, and the time of their complete disappearance from the canton is unknown.

After the Reformation was legally introduced into Basel in 1529, the government proceeded against the Anabaptists more vigorously. On 12th Jan. 1530, Hans Ludi was beheaded, and a year later two others were drowned (Burckhardt, p. 41). Others, both men and women, were exposed in the pillory, ducked, beaten, and banished, and it is probable that others were executed (Burckhardt, p. 43). This broke their power, but they lingered on amid perpetual persecution through the 16th and 17th centuries.

Berne proceeded against the Anabaptists more vigorously after 1527. In 1528, during the great disputation which led this canton to accept the Reformation, eight Anabaptists were arrested and thrown into prison. When Zwingli and others failed to convince them of their errors, they were banished under penalty of death if they returned. During the years 1528–1529 frequent cases were brought before the authorities;

disputations with Pfister Meyer in 1531 and at Zofingen in 1532 failed to retard their growth. Berne then proceeded to blood, and between the years 1528 and 1571 no fewer than forty were executed (Müller, p. 78 f.). But even this severity was not sufficient to root them out of this canton. During the succeeding centuries they were sent to the galleys, deported, banished, persecuted; but they have maintained their existence to the present time.

In St. Gall, persecution drove the Anabaptists, especially the women, to the most absurd and childish and even immoral practices (Kessler, *Sabbata*). One case in particular wrought disaster to the Anabaptist name and cause. On 7th Feb. 1526, a half-witted man named Schugger struck off his brother's head 'by the will of God.' Later Anabaptists denied all connexion with this incident, but they could not escape the consequences of the deed. Anabaptists lingered in this canton till the 17th century.

By 1532 all the leaders, such as Grebel, Manz, Blaurock, Denck, Hätzer, and Hübmaier, were dead, hundreds had been forced to recant, many had died in prison, and perhaps thousands had been driven from the country. The movement in Switzerland lay in ruins, destroyed by the civil power. The causes of this bitter persecution are not far to seek. The Anabaptists in this region, with few exceptions, were quiet, pious, law-abiding people, with some oddities due to their strictness (Kessler, *Sabbata*, i. 272). Even Bullinger admits that they had the appearance of unusual piety. But they made what seemed at that time impossible demands: a Church composed of believers only, rigid discipline for moral offences, complete freedom for the Church and the individual conscience. Failing to obtain their demands, they divided and weakened the Reformers, causing endless strife and difficulty. Their refusal to bear arms, to serve as civil officers or take the oath, made them dangerous to the State, while their attitude towards property, usury, and certain forms of taxes threatened the whole social order. Hence suppression and extermination were felt to be the only paths to safety.

The intimate relations of the south German cities with Switzerland made them peculiarly susceptible to all spiritual and religious movements in that country. Accordingly we find large Anabaptist circles in Strassburg, Worms, Nuremberg, and Augsburg quite early. In these circles such leaders as Ludwig Hätzer, Hans Denck, and Hans Hut were won for the Anabaptist cause. One of the most important conquests was in the small border town of Waldshut in Austrian territory. Here Dr. Balthasar Hübmaier, a gifted scholar and eloquent preacher, some time rector of the University of Ingolstadt and Cathedral preacher at Regensburg, was the leading pastor. He was early converted to Reformed views, and in 1524 succeeded in introducing them into the city. But he was unable to stop here. Gradually he found himself compelled to accept Anabaptist views; about Easter 1525 he and some sixty members of his church were re-baptized. This was followed soon afterwards by the baptism of several hundred others, and the Anabaptists seemed to be in a fair way to win the town. But for some months the Austrian authorities, who were strict Catholics, had been threatening to punish the town for its evangelical doings. Hitherto the support of Zürich had emboldened Waldshut to persevere. The Anabaptist defection caused the withdrawal of this support, and in December the storm broke over the devoted city. Hübmaier fled to Zürich, was arrested as an Anabaptist, imprisoned, and forced to recant as the price of liberty. Released on 11th April, 1526, he fled through Constance to Augsburg, and thence in June to Nikolsburg in Moravia, where his persecuted brethren were already gathering.

Driven from Switzerland, the Anabaptists fled eastward into the Austrian lands from 1526 onwards. Their doctrines found ready acceptance, and soon large bodies had been gathered at Rottenberg, Kitzbüchl, Brixen, Bozen, Linz, Steyer, and elsewhere. Here they came under Catholic governments which hunted them down, if possible, even more strenuously than the Swiss. King Ferdinand himself was very active in the work of extermination, and in a few years hundreds had suffered martyrdom. Protected by the character of the country and the sympathy of the common people, the Anabaptists continued to maintain an existence for more than a century, until the Catholic reaction swept all forms of evangelical life in these regions out of existence.

Persecution in the Austrian lands drove the Anabaptists onward into Moravia, Bohemia, and Poland. The religious history and the social and political condition of these lands made them an asylum for various sects, and here for a brief period the Anabaptists found rest and safety. At Nikolsburg, under the protection of the lords of Lichtenstein, they found 'a goodly land,' a new Jerusalem, from 1526 onwards. Thither they streamed in great numbers from Switzerland, the Austrian lands, Germany, and elsewhere; natives were converted to their views, and soon they numbered thousands. Among the first to arrive was Hübmaier. Learned, eloquent, free from fanaticism, without rancour in debate, a careful exegete, possessed of an excellent literary style, he was the chief ornament of the sect. Within little more than a year he published no fewer than fifteen tracts, in which he set forth with force and clearness the great principles that characterized his people. Had he lived, their history might have been different. But the Austrian authorities soon learned of the presence in their dominions of this fugitive from Waldshut, and demanded his apprehension as a traitor. After some delay, the lords of Lichtenstein delivered him up in July, 1527. He was imprisoned at Vienna, where he was burned at the stake on 10th March, 1528. Thus perished the most important of all the Anabaptist leaders.

The community in Nikolsburg could ill afford to lose a man of such wisdom and sanity. Already in 1526 Hans Hut, one of Münzer's followers who had escaped from Germany, appeared among the brethren as a powerful and impressive herald of Christ's speedy return, a determined opponent of magistracy and war. Others soon began to agitate in favour of community of goods. Hübmaier had opposed all these views, but Hut's enthusiasm had won many of the brethren before his expulsion by the Lichtensteins. They soon felt compelled to banish his followers, who were now perhaps a majority of the brethren. The moderates remained at Nikolsburg under the leadership of Spitalmaier as chief pastor, but they were never again the most influential party. The radicals settled at Austerlitz, and soon became a thriving community, with branches at Brünn and elsewhere. Chiefly through the missionary labours of Jacob Huter, a noble and zealous leader, their persecuted brethren in the Austrian lands were induced to immigrate in large numbers. They built great communal houses, became experts in agriculture and stock-raising, and in the manufacture of many important articles of commerce. Their value was recognized by their lords, who protected them as far as possible; but after the Münster horror in 1535 a terrible persecution broke over them. Their houses were broken up, and they were driven forth into other lands. As persecution subsided, they returned and took up their work again. After another period of persecution, which lasted with more or less severity from 1547 to 1554, they enjoyed great prosperity till 1592, when they probably numbered some 70,000 souls. They had suffered from frequent internal strifes, and were

now caught in the great Catholic reaction led by the Jesuits, and gradually declined. Greatly reduced by the Thirty Years' War, they were completely ruined by later invasions of Turks and others, as well as by persecution. Some of them fled to Hungary and Transylvania, where they disappear in the 18th century. Others fled to southern Russia, whence a remnant removed in 1874 to South Dakota, in the United States, where they still preserve their communal life.

The Anabaptists of two other regions, both with some relations to the Swiss-Moravian movement, must be mentioned in this connexion. About 1526, in connexion with the work of Schwenckfeldt, the Anabaptists appeared in Silesia. Soon they had flourishing congregations in several important cities, but persecution from 1528 onwards gradually exterminated them.

By the middle of the 16th cent. there was a strong Anabaptist body in N.E. Italy, chiefly anti-Trinitarian in Christology. The Inquisition then got on their track, and in a few years the movement was stifled. Many of them fled to Poland, where they built up a flourishing connexion. In 1605 they issued the Racovian Catechism, which provides for immersion as the mode of baptism. Though they were Socinians, they believed in the authority of Scripture and the lordship of Christ. They suffered the fortunes of the other evangelicals in this region during the Counter-Reformation.

3. The Anabaptists of the Rhine regions.—As far as their history can be traced, the Anabaptists of the lower Rhine-lands owe their origin and peculiarities chiefly to Melchior Hofmann. This wonderful man was born in Hall, Swabia, and was a furrier by trade. He early accepted Luther's views, and by 1523 was a zealous evangelical preacher in North Germany. He was without education, but early acquired a remarkable knowledge of the text of Scripture, along with an intense interest in the prophetic and apocalyptic portions. He developed a burning enthusiasm as well as a powerful eloquence in propagating the Lutheran views. His zeal and power usually aroused intense opposition, and frequently occasioned riot and sometimes bloodshed. He moved rapidly from place to place, and always made a profound impression. In 1523 he was in Wolmar, in Livonia; banished from there, in 1524 he was in Dorpat; in 1526 he was in Sweden, at Stockholm; in 1527, at Lübeck; then at Kiel, where he made a profound impression on King Frederick I. of Denmark. Banished from there, he entered East Friesland, with Carlstadt, where he threw himself into the controversy between the followers of Luther and Zwingli over the Supper, supporting the latter party, and by his power and eloquence carrying the day for his views. In June 1529 he reached Strassburg. By this time he had developed most of the peculiarities of his system, including the allegorical method of interpreting Scripture, a glowing chiliasm which fixed the beginning of the reign of Christ on earth in the year 1533, the assertion that the human nature of Christ was not derived from Mary, and, therefore, not ordinary flesh, a denial of the oath, etc. During this visit he is supposed to have come in contact with Anabaptists, who were then numerous in Strassburg, and to have been baptized into their fellowship. Returning to East Friesland in May, 1530, he began a truly wonderful Anabaptist propaganda, which extended, with brief interruptions, to 1533, and covered much of the Low Countries. Most of the Lutheran and Zwinglian work was swept away, and it is probable that the majority of Evangelicals in the Netherlands from 1533 to 1566 were of the Hofmannite type. In 1531 he suspended baptisms for two years, intimating that the Lord would then come to assume the reins of government at Strassburg, and bring the era of righteousness and peace for all the oppressed. The effect was magical, the religious and social excitement intense. In order to be present when the Lord came, he quietly returned to Strassburg early in 1533. He was soon apprehended and thrown into prison, where he died ten years later. But the seed which Münzer and others had sown was destined to bear some horrible fruit.

The episcopal city of Münster, in Westphalia, had been ruled by a succession of exceedingly dissolute and oppressive bishops, who, however, succeeded in holding reform at bay for several years. But in 1529 Bernard Rothmann, a gifted young preacher near Münster, began to preach evangelical doctrines. He was suspended, but returned to his work in 1531, and soon made an alliance with Knipperdollinck and the social democracy of the city. The bishop was driven away in 1532, and the next year reform was introduced. Persecuted Evangelicals from surrounding regions found their way into Münster, and there was great rejoicing and naturally great excitement over this new triumph of the truth. Heinrich Roll, a fugitive from Cleve, became an advocate of believers' baptism in 1532, and the next year Rothmann reached the same conclusion, and began a crusade against infant baptism. He was followed by a number of the leading men of the city. The City Council undertook to force the preachers to administer infant baptism, but popular sentiment was so strong as to prevent the execution of their will. This was the tense and excited condition of the city towards the end of 1533; Anabaptists, Lutherans, Catholics, and social democrats were all struggling for supremacy, when a horde of still more excited Anabaptists poured into the city from the Netherlands, believing it to be the hour for setting up Christ's kingdom at Münster as the New Jerusalem.

Jan Matthys, a baker of Haarlem, a disciple of Hofmann, inspired with a fanatical hatred of the upper classes, now proclaimed himself the promised prophet Enoch, and ordered the resumption of baptism as a final preparation for the coming King. In a short time thousands were baptized. In January 1534 two of his missionaries entered Münster, where they baptized Rothmann and other leaders, and announced the setting up of the earthly kingdom, in which there should be no magistracy, no law, no marriage, and no private property. Soon John of Leyden, a gifted young man of twenty-five years, appeared and took over the leadership of the new theocracy. Catholics and Lutherans fled, and the city fell completely into the hands of these fanatical Anabaptists. Matthys now declared Münster to be the New Jerusalem, and invited all the oppressed Anabaptists thither. Thousands of deluded and persecuted people sought to reach this place of safety and happiness, only to be destroyed on the way or ruined at last in the city. The city was soon besieged by the forces of the bishop, assisted by neighbouring princes, while within its walls murder, polygamy, and crime ran riot. After more than a year of ever increasing shame, the terrible orgy ended in massacre and cruel torture in 1535.

The effect of this Münster kingdom was most disastrous to the Anabaptists. Everywhere persecuting measures were sharpened, and the name became a byword and a hissing throughout Europe. This episode was regarded as the legitimate outcome of Anabaptist principles.

Menno Simons gathered up the fragments of

the quiet Anabaptists and re-organized them in 1536, at the same time disclaiming all connexion with the Münster fanatics. From him they have been called Mennonites (wh. see), and in Holland and America they still constitute a respectable folk.

Before and after the Münster episode some Anabaptists found their way to the eastern sections of England, where they were severely persecuted. It is possible, indeed probable, that there is some connexion between them and the Independents, English Baptists, and Quakers, all of whom show some of the peculiarities of the Anabaptists.

II. *System.* — Anabaptism affords a case of arrested development with scarcely a parallel in Christian history. Arising spontaneously at different points, the movement seized Central Europe with a powerful grip, and bade fair to divide the population with other forms of Protestantism. But the machinery of ecclesiastical and civil government was soon set in motion to suppress it, and in ten years there remained only a persecuted, fanatical remnant of the once powerful movement. Without any great leader to crystallize its doctrines, and suffering persecution from the beginning, the party never attained unity and harmony. It is, therefore, often necessary to set forth the prevailing tendency, and at the same time to point out important variations from the general trend.

The immediate, direct accountability of each individual soul to God in all religious things was the fundamental principle of the Anabaptists. No institution, sacred or secular, no ordinance, no parent or priest, could mediate between the soul and God. Communication between the two was open; they must approach each other through Jesus Christ. This principle determined the character of their religious views; and its corollary, the absolute brotherhood of believers, determined their conception of all human relations, their attitude towards society and the State. Both these principles they regarded as revealed and illuminated by the Scriptures, which, when properly interpreted, were authoritative for all the relations and duties of life. For their proper interpretation, only piety and spiritual enlightenment were necessary; learning might be useful or harmful, according to the spirit of the interpreter. In order to set forth their tenets in more detail, it is best to group them under the three heads of Religious, Political, and Social.

1. Religious views. — (1) In general, the Anabaptists accepted the common Catholic and Protestant doctrine of God as set forth in the Apostles' and the Nicene Creeds. A few, like Denck and Hätzer, doubted, or denied, the essential Deity of Christ; and, on the other hand, Melchior Hofmann and his followers denied the humanity of Christ, maintaining that His was a sort of heavenly flesh, descended through Mary, but without essential relations to humanity.

(2) They opposed the Augustinian theology of the Reformers, insisting vehemently on the freedom of the will and complete moral responsibility. The theology of Luther, Zwingli, and Calvin appeared to them to be contrary to the Scriptures, dishonouring to God, and dangerous to morality. In these views they anticipated Arminius by almost a century.

(3) The Anabaptists maintained the right of the individual to interpret Scripture for himself; and some of them, at least, asserted the superior authority and sanctity of the NT over the OT as the fuller, clearer revelation of God, thus approximating to the modern view of a progressive revelation. Pfister Meier says: 'I obey that in the Old Testament which I find confirmed in the New.' The chief qualification for correct interpretation of the Scripture was the illumination of the Holy Spirit—a doctrine which was strongly emphasized. It was charged that they claimed to have revelations and visions which they regarded as more important than Scripture; but this charge was probably an exaggeration of their real belief in the fact and importance of spiritual illumination.

(4) The true Church was composed of believers only—'saints.' Despairing of bringing the State Church to this standard, they proceeded to set up a new Church on this model, thereby introducing schism into the Protestant ranks. The purity of the Church was to be secured by the baptism of believers only, and preserved by the exercise of strict discipline. (*a*) Infant baptism was regarded as without warrant in Scripture, contrary to the principle of voluntary action in religion, an invention of the devil, and the chief source of the corruption in the Church and of its subjection to the State. In its stead they practised believers' baptism, administering the rite to those who had been baptized in infancy, thus winning the name 'Anabaptists' — re-baptizers — from their opponents; but the name and its implication they earnestly repudiated, declaring that so-called baptism in infancy was no baptism, and claiming for themselves the name of 'brethren' or 'disciples.' Infant baptism, the repudiation of which was the most obvious characteristic of the sect, became the chief battle-ground of the parties. The *mode* of baptism was never a matter of discussion. Most of them practised affusion, the form then prevalent on the Continent; but some of the Swiss and Polish Anabaptists insisted on immersion as the only admissible form, thus anticipating the modern Baptist position. (*b*) The means of preserving the Church pure was the constant application of rigid discipline for moral offences. Unconverted and immoral members were severed from the body relentlessly, the party doubtless going to extremes in this respect. Discipline was exercised by the democratic action of the congregation rather than by the officers of the Church or by the civil power. On all these points they came into sharp collision with the State Church. They strove to reproduce in themselves the life of Christ, and in their Church the life of primitive Christianity, laying great emphasis on the imitation of Christ. While admitting that they had the appearance of unusual purity of life, their opponents declared them to be hypocrites and guilty of grave moral lapses. A few cases, due to fanaticism, especially among the followers of John of Leyden and others of what may be termed the 'fanatical' Anabaptist school, seem to be proven; but, beyond dispute, they in general lived quiet and harmless lives, in striking contrast to the society about them.

(5) The ordinances of Baptism and the Lord's Supper had no sacramental significance. Baptism was rather a declaration of faith and forgiveness than a sacrament of cleansing or regeneration. They were charged with laying an over-emphasis on baptism; but, as a matter of fact, its place in their scheme was not so important as in that of Luther. They insisted on believers' baptism, because they regarded it as Scriptural and necessary to the purity of the Church; Luther insisted on infant baptism, because he regarded it as necessary to the regeneration of the individual. They believed that infants dying in infancy are saved without the necessity of baptism. They agreed with Zwingli in regarding the Supper as a memorial ordinance, rejecting Catholic, Lutheran, and Calvinistic views.

(6) Not much is known of the officers and organization of the Anabaptists. Ordination seems to have been in abeyance in the earlier stages of the

movement, which was a great outburst of missionary activity among laymen. When charged with preaching in improper places and without proper authority, they claimed the authority of a Divine call which needed no ecclesiastical ordination or State authorization. Later abuses in their own ranks forced them to adopt ordination. Preachers were chosen by lot and ordained by the congregation as a recognition of the Divine call, which they still regarded as the necessary part of their qualification for preaching. They rejected with decision the principle of State support in every form, and claimed that preachers ought to be supported by the free-will offerings of the congregation when located, and by Christian hospitality when travelling. They reproached the ministers of the State Church with inactivity and want of care for the people, among whom they should go as shepherds among the sheep.

(7) On eschatology there were great differences of opinion. The majority, perhaps, held sane and Biblical views; but expectation of the early return of Christ bred the wildest fanaticism in others. From the belief of Hofmann that Christ was soon to set up His Kingdom on earth and destroy the wicked, it was but a step to an effort to set up the Kingdom by destroying the wicked, and we have the 'fanatical' Anabaptists and John of Leyden's horrible 'kingdom' at Münster as the outcome. Thomas Münzer also had believed in the use of the sword, and his powerful personality had given the whole movement in Germany a fanatical and dangerous chiliastic bent, which brought ruin on his cause.

(8) Anabaptist worship was necessarily very simple. Persecution and the lack of church buildings made it necessary to worship in small companies, in such a fashion as to attract as little attention as possible. In the earlier years worship probably consisted almost wholly of prayer and instruction; later, singing occupied a large place. Their own compositions were set to popular music and sung far and wide. These songs, often written in prison, reveal profound religious feeling and unwavering faith and hope (cf. Wolkan, *Lieder der Wiedertäufer; Aus Bundt*).

2. Political views.—(1) The Anabaptists regarded the State as a necessary evil, ordained of God indeed, and therefore to be obeyed where its obligations were not in conflict with conscience. The charge that they were opposed to magistracy altogether is without foundation in fact. They denied the supremacy of the State in the realm of conscience, and resisted its assumption of authority here, even to death; as to other things they inculcated obedience. The conscience was absolutely free under God. The State had no religious duties; it was needed only to protect the good and punish the wicked. This doctrine involved complete disestablishment; universal toleration; freedom of worship, organization, and teaching. These views came to full, clear, and vigorous expression in Hübmaier especially. Repudiated and execrated then, this contention has been adopted in modern times with more or less completeness by all civilized lands.

(2) Many of the Anabaptists maintained that no Christian could hold civil office, because such elevation was in conflict with the principle of Christian brotherhood and equality; besides, it often required the infliction of capital punishment, and to kill was under no circumstances permissible to a Christian. This tenet, regarded by their opponents as destructive of all government, was not so understood by themselves. They did not believe capital punishment was necessary to the suppression of crime, nor did they regard all who bore the Christian name as Christians. Their opponents said: 'If no Christian can act as magistrate, we must go to the heathen or Turks for governors.' 'No,' replied the Anabaptists, 'there are but few Christians even in Christian lands, and hosts of men are left for rulers.' The different meanings attached by the two parties to the word 'Christian' were the source of the misunderstanding. Their anticipation of the modern movement for the abolition of capital punishment is noteworthy. Hübmaier and others, however, maintained the right of a Christian to hold civil office.

(3) They opposed the oath under any and all circumstances, on purely Biblical grounds (Mt 5^{34}). This, again, was regarded by Zwingli and others as destructive of civil government, which was thought to rest upon the inviolability of the oath. No such importance and sacredness were attached to it by the Anabaptists, who taught that one's assertion should be as sacredly kept as the oath. Under the threat of execution they sometimes took the oath; but it was not regarded as binding, because taken under duress.

(4) The Anabaptists were relentless opponents of war as the great destroyer of human life, which they held to be inviolable. Under pressure they paid war taxes, assisted in building fortifications, and rendered other services of this kind; but they suffered imprisonment and death rather than bear arms. The Münster kingdom was a hideous caricature of the whole movement, and cannot be cited in opposition to this statement. Indeed, the Anabaptists' insistence upon peace was the main cause of the constant war made upon them. The military basis of society in the 16th cent. made such advocates of peace appear exceedingly dangerous to national existence; but this cause of bitter denunciation and persecution may yet become their crown of glory as the world swings into the era of universal peace.

3. Social and economic views.—(1) In imitation of the primitive Christian Church, the Anabaptists were strongly inclined to a voluntary and benevolent communism in the acquisition and administration of property (Ac $2^{44ff.}$). This opinion, which appears in the earliest stages of the movement, was fully developed in Moravia, where many of them lived and worked in great communal settlements (Loserth, *Communismus*, etc.). Among the German and Dutch Anabaptists appeared a tendency towards enforced communism, as seen in Thomas Münzer and in the Münster kingdom. But a large part, perhaps a majority, of the Anabaptists, did not favour actual communism in any form; they strenuously maintained, however, that all property belonged primarily to the Lord, and must be freely used in ministering to the needy. They conceived themselves in the position of stewards, under solemn obligation to administer the Lord's money for the highest good of mankind.

(2) They opposed the lending of money at interest, refused to accept interest themselves, and paid it unwillingly to others. Money, they held, should be lent for the benefit of the borrower rather than the lender. Proper fraternal relations forbade the exploitation of the needs of a brother; besides, the practice was regarded as contrary to the explicit teaching of Scripture (Dt $23^{19f.}$, Ps 15^{5}).

(3) They refused to pay ecclesiastical taxes, believing that religion should be supported by the voluntary gifts of religious people.

Glancing backwards over their views, we see that the Anabaptists were several centuries in advance of their age. They were the modern men of their time. Some of their tenets, then universally anathematized and persecuted, have been adopted by all civilized lands, *e.g.* universal religious toleration; others have been widely incorporated in the newer lands (America and Australia),

and are making headway in the older societies, *e.g.* complete separation of Church and State; yet others are still objects of endeavour, only seen as far-off boons, as, for example, abolition of war; some, as communism, are not likely ever to be adopted widely. It is remarkable that these simple people should have drawn from a fresh study of the Bible so many great ideas that still float before the race as high and distant ideals.

LITERATURE.—Anabaptist writings and disputations, now very rare and widely scattered in the libraries of Europe, of which but few have been reprinted or translated; the pertinent writings of their opponents in 16th cent.; various court records, published and unpublished, and a few chronicles. The earlier writers on the Anabaptists, such as Fischer, Gast, Meschovius, Ottius, Sender, and others, are more or less partisan and unreliable. The large recent literature, of which only a few of the more important works can be mentioned, is more just. The first-hand treatments are in German for the most part, though there are several excellent works in English and a few in French.—H. Barge, *Andreas Bodenstein von Karlstadt*, Leipzig, 1905; J. von Beck, *Geschichtsbücher d. Wiedertäufer in Oesterreich-Ungarn von 1526 bis 1785*, Vienna, 1883; K. W. Bouterwek, *Zur Lit. u. Gesch. d. Wiedertäufer, besonders in den Rheinlanden*, Bonn, 1864; P. Burckhardt, *Die Basler Täufer*, Basel, 1898; H. S. Burrage, *Hist. of the Anabaptists in Switzerland*, Philadelphia, 1881; C. A. Cornelius, *Berichte d. Augenzeugen über das Münsterische Wiedertäuferreich*, 1858, *Gesch. d. Münsterischen Aufruhrs*, Leipzig, 1855; H. Detmer, *Bernhard Rothmann*, Münster, 1904; E. Egli, *Actensammlung z. Gesch. d. Züricher Reformation*, Zurich, 1879, also *Die St. Galler Täufer*, Zurich, 1887, and *Die Züricher Wiedertäufer zur Reformationszeit*, Zurich, 1878; M. Geisberg, *Die Münsterischen Wiedertäufer*, Strassburg, 1907; C. Gerbert, *Gesch. d. Strassburger Sectenbewegung z. Zeit d. Reformation, 1524–34*, Strassburg, 1889; K. Hase, *Das Reich d. Wiedertäufer*, Leipzig, 1860; R. Heath, *Anabaptism from its Rise at Zwickau to its Fall at Münster, 1521 to 1536*, London, 1895; L. Keller, *Ein Apostel d. Wiedertäufer* (Denck), Leipzig, 1882, and *Gesch. d. Wiedertäufer u. ihres Reichs zu Münster*, Münster, 1880; J. Loserth, *Der Anabaptismus in Tirol*, Vienna, 1892, also *Communismus d. Mährischen Wiedertäufer in 16 u. 17 Jahrhundert*, Vienna, 1894, *Die Stadt Waldshut u. d. vorderösterreichische Regierung in d. Jahren, 1523–6*, Vienna, 1891, *Doctor Balthasar Hübmaier u. d. Linz*, etc., Berlin, 1893; E. C. Pike, *The Story of the Anabaptists*, London; K. Rembert, *Die Wiedertäufer in Herzogthum Jülich*, Münster, 1893; T. W. Röhrich, *Zur Gesch. d. Strassburgischen Wiedertäufer in d. Jahren 1527–43*; J. K. Seidemann, *Thomas Münzer*, Dresden, 1842; Vedder, *Balthasar Hübmaier, the Leader of the Anabaptists*, New York, 1905; R. Wolkan, *Die Lieder d. Wiedertäufer*, Berlin, 1903; F. O. zur Linden, *Melchior Hofmann*, etc., Haarlem, 1885. Besides the above, many valuable articles will be found in Cyclopædias and Journals of History and Theology, as well as brief treatments in all the Church Histories (fullest in Lindsay, *History of the Reformation*, ii. [1907] 430–469).

W. J. M'GLOTHLIN.

ANÆSTHESIA.—Dioscorides in treating of mandragora gives a description of its virtues as an anæsthetic, and prescriptions for its use. Of one preparation he says that it is given to produce anæsthesia (*βούλονται ἀναισθησίαν ποιῆσαι*) in patients to be cut or cauterized; and of another, that the patient can be put to sleep for three or four hours so as to be cut or cauterized, feeling nothing (*αἰσθησόμενον οὐδένος*). Before his day and since, various drugs have been used to produce insensibility to suffering. The most efficacious of them, besides mandragora, were opium, Indian hemp, hemlock, henbane, belladona. They were usually given internally in the form of infusions, tinctures, and extracts. More rarely they were smoked when incandescent, or inhaled in the form of hot vapours. When chemistry took the place of alchemy and produced more definitely volatile substances, it was found that among them were some possessed of sedative properties; and in 1795, Dr. Pearson advocated the use of sulphuric ether to relieve the cough in cases of asthma. When the various gases came to be differentiated and their properties investigated, Sir Humphry Davy found that nitrous oxide—'laughing-gas,' as it was called—had the power of alleviating pain; and in 1800 he said, 'As nitrous oxide in its extensive operation appears capable of destroying physical pain, it may probably be used in surgical operations in which no great effusion of blood takes place.' His suggestion was not taken up. Laughing-gas continued, however, to be administered from time to time in chemical class-rooms and at public entertainments. In 1844, Dr. Horace Wells, a dentist in Hartford, Connecticut, observed that individuals might be injured when under the influence of the gas without being conscious of any pain. He conceived the idea of testing its effects during the extraction of teeth, and got his assistant, Dr. Rigg, to extract one of his own molars after he had produced insensibility in himself by the inhalation of nitrous oxide. After having proved its efficacy in a series of cases, he went to Boston to give a demonstration of its value in the Massachusetts General Hospital. In the test case, by some mischance, the anæsthesia produced was imperfect, and he was dismissed with something of contempt. His health broke down, and he went to Europe to recruit.

On 16th October 1846, Dr. William Thomas Green Morton, who had been assistant to Wells, put to sleep with sulphuric ether, in the same Boston Hospital, a patient on whom Professor J. C. Warren operated for removal of a small tumour in the neck, and on the day following he put to sleep another patient operated on painlessly by Dr. Hayward. Morton had consulted Wells, after his return to Hartford, as to the preparation of nitrous oxide, and had been advised to get from Professor Jackson, Professor of Chemistry in Harvard University, the necessary directions. Professor Jackson suggested that instead of nitrous oxide he should make trial of sulphuric ether, and Dr. Morton had experimented on himself and some of his dental patients before he offered to demonstrate its effects in the public theatre. He called his preparation *lethēon*, and took out a patent for its use. He associated Dr. Jackson with himself in obtaining the patent, and admitted that Dr. Smilie, who had previously anæsthetized a patient by causing inhalation of sulphuric ether with opium dissolved in it, might continue the use of his preparation without infringement of the patent. It was Morton's demonstration on the 16th of October 1846 that truly marked the beginning of the era of anæsthesia, and gave the impulse to its adoption in all branches of the profession throughout the world. But for a time there was unseemly strife as to priority of the discovery, Jackson and Wells both disputing the claim of Morton to be the discoverer of the new mode of producing insensibility to pain. So that, although a monument in honour of the great event was set up in Boston, years passed ere it was finally decided to inscribe on it the solitary name of Dr. Morton, and Wendell Holmes is credited with having made the suggestion that E(I)THER might do.

Meanwhile news had come to Europe of the great discovery that the inhalation of ether vapour could be employed with safety so as surely to control the pain of surgical operations, and surgeons in Great Britain and the Continent began to make trial of it in all directions. On the 17th of January 1847, James Young Simpson, Professor of Midwifery in the University of Edinburgh, etherized a woman in labour. The benefit of etherization in surgery was established. But would it be safe to apply it in midwifery cases? Would the pain of labour be removed without interference with the labour effects? Could the patient be kept for the necessary time under the influence of the narcotic? What might be the after effects? What of the child? The test case was one in which Simpson had predetermined, because of pelvic deformity,

to extract the child by turning, and the result showed that labour could go on in its course although the sensations of pain usually attendant on it were for the time being altogether abrogated. When the virtue of the anæsthetic had been proved in other cases of both natural and instrumental labour, he claimed for women the right to be relieved of this sorest of all human suffering—their labour-pains. There had been misgivings in some minds as to the propriety of the administration of ether to surgical patients, and when it was proposed further to abolish the pains of labour, there arose a perfect storm of opposition to the practice. Simpson had to bear the stress of it because of his application of it in midwifery, and because some months later, searching for a substance that might be free from some of the drawbacks of ether, he discovered, on the 4th of November 1847, the anæsthetic virtue of chloroform, and introduced it as a substitute for the earlier anæsthetic. Oliver Wendell Holmes had suggested that the term 'anæsthesia' should be applied to the process; but Simpson's papers, like those of most of the other writers up till the end of 1847, spoke of 'Etherization in Surgery,' 'The Inhalation of Sulphuric Ether in Midwifery,' and such-like. It was only after the new narcotic began to be used that it became necessary to fall back on the Greek expression which would be applicable to the effect of any agent; and when at a later period Simpson traced the history of narcosis and narcotics, and found Theocritus speaking of Antigone having a painless labour because Lucina poured *νοδυνία* over her, he regretted that he had not adopted the terms 'nodynia' and 'nodynic' rather than 'anæsthesia' and 'anæsthetic.'

The occasional deaths resulting from the use of both ether and chloroform led to fresh experiments with nitrous oxide, which has been found especially safe and satisfactory in operations of short duration, as in tooth-pulling, so that it is now the anæsthetic most frequently employed in dentistry. Other volatile liquids have also been found to be possessed of anæsthetic properties, such as amylene, ethidene, bichloride of mythylene, etc. But none of them is free from danger, and none of them is so serviceable as chloroform in the ease and rapidity with which patients can be anæsthetized with relatively small quantities of the drug, and in the comfort which attends the subsequent awakening. There is still much discussion as to the relative values of ether and chloroform. For, whilst the former requires special apparatus in its administration and is apt to have troublesome *sequelæ*, the proportion of fatal cases is distinctly less than is met with in the use of chloroform. So that members of the profession who specialize as anæsthetists prefer its use in hospital practice and for patients undergoing the major operations of surgery, whilst chloroform remains the favourite anæsthetic in hot climates, in the lying-in room, and in the hands of military surgeons and busy general practitioners in their ordinary round of daily work. The writer has in the course of more than half a century seen some thousands of patients under the influence of anæsthetics—commonly of chloroform, and he has not seen a fatal case; but he knows that any day the record may be closed.

Some have sought to avoid the danger associated with all means of producing general anæsthesia by the superinduction of local anæsthesia. The skin has been rendered insensible by applications of ice, of ether spray, as suggested by Sir Benjamin Ward Richardson, or of ethyl chloride so as to freeze the surface. Alone, or conjoined with freezing processes, electricity, cocaine, eucaine, and other analgesics have been applied to the surface or injected hypodermically so as to produce a more lasting degree of local anæsthesia. Ovariotomy has been performed on a patient who lay still and made no complaint of suffering during the operation, when the seat of incision in the abdominal wall had been rendered insensible by freezing with ethyl chloride and hypodermic injections of cocaine. Such measures are, as a rule, however, only applicable for minor operations. A wider and more lasting form of localized anæsthesia was introduced by Dr. Corning of New York, in 1885, who found that injections of cocaine into the arachnoid space in the lumbar region of the spinal chord produced anæsthesia in the lower half of the body, of sufficient intensity and duration to allow of the carrying out without pain of amputations of the lower limbs and other grave operations in the lower half of the abdomen. Cocaine and its derivates and also stovaine with adrenalin have been used in this way with results in midwifery and in various surgical procedures that give hope of a great future for this method of superinduction of localized anæsthesia.

It should be added that from time to time insensibility to pain has been produced by means that were not medicinal, but purely mental. In the 18th cent., Mesmer produced, by what he supposed was an animal magnetism, a series of phenomena which were more carefully investigated in the middle of last century by Mr. J. Braid. Under the designation 'hypnotism,' Braid described a state of the system into which individuals could be brought by having their attention fixed on a given object for a length of time until there ensued an exhaustion of some elements in the nervous system and the subject became amenable to the control of the operator. The person thus hypnotized can be made insensible to suffering at the suggestion of the hypnotizer. Dr. Esdaile and other surgeons in the Indian medical service reported a series of cases where operations, both major and minor, were performed on patients in a condition of unconsciousness thus produced. But hypnotism has been found applicable mainly to cases where there is disturbance in the nervous system; and its use for the relief of the pain of surgical operations is restricted by the circumstances (1) that not every patient can be hypnotized, and (2) that the patient may have to be experimented on repeatedly before the hypnotizer gains sufficient control to command the necessary degree of anæsthesia. The practice has not sufficiently commended itself to the medical profession, even so far as to encourage more than a few members of it to try for themselves whether they were capable of exercising a hypnotic influence.

A. R. SIMPSON.

ANĀGATA VAṀSA ('Record of the Future'). —A Pāli poem of 142 stanzas on the future Buddha, Metteyya. It is stated in the *Gandha Vaṁsa* (*JPTS*, 1886, p. 61) that it was written by Kassapa; and in the *Sāsana Vaṁsa Dīpa* (v.[1204]) we are told that he was a poet who lived in the Chola country. We may probably conclude that he did not reside at Kāñchipura, the Chola capital, as in that case the name Kāñchipura, which would have suited the metre equally well, would probably have been put in the place of Chola-raṭṭha. The further statement (*Gandha Vaṁsa, l.c.*), that he also wrote the *Buddha Vaṁsa*, seems to be a mistake. And we know nothing either of his date or of the other books attributed to him. The poem has been edited for the Pāli Text Society by the late Professor Minayeff (*JPTS*, 1886, pp. 33–53), with extracts from the commentary, which is by Upatissa (see *Gandha Vaṁsa*, p. 72). Of the latter writer also nothing is at present known, unless he be identical with the author of the *Mahā Bodhi Vaṁsa* who wrote in Ceylon about A.D. 970.*

Our ignorance about the date of the *Anāgata Vaṁsa* is regrettable, as the question of the origin and growth of the belief held by the later Buddhists in this future Buddha, Metteyya, is important. As is well known, there are statements in the *Nikāyas* (*e.g. Dīgha*, II. 83, 144, 255) that future Buddhas would arise, but, with one exception, neither the *Nikāyas* nor any book in the *Piṭakas* mention Metteyya. His name occurs, it is true, in the concluding stanza of the *Buddha Vaṁsa*, but this is an addition by a later hand, and does not belong to the work itself. Neither is Metteyya mentioned in the *Netti Pakaraṇa*. The exception referred to is a passage in the 26th Dialogue of the *Dīgha* which records a prophecy, put into the Buddha's mouth, that Metteyya would have thousands of followers where the Buddha himself had only hundreds. This passage is quoted in the *Milinda* (p. 159); but the *Milinda* does not refer anywhere else to Metteyya. In the *Mahāvastu* (one of the earliest extant works in Buddhist Sanskrit) the legend is in full vogue. Metteyya is mentioned eleven times, two or three of the passages giving details about him. One of these agrees with the *Anāgata Vaṁsa* in its statement of the size of his city, Ketumatī (*Mahāv.* iii. 240=*Anāg. Vaṁ.* 8); but discrepancies exist between the others (*Mahāv.* iii. 246 and iii. 330 differ from *Anāg. Vaṁ.* 78 and 107). It is in this poem that we find the fullest and most complete account of the tradition, which evidently varied in different times and places.

This is really conclusive as to the comparatively late date of the poem. In earlier times it was enough to say that future Buddhas would arise; then a few details, one after another, were invented about the immediately succeeding Buddha. When in the south of India the advancing wave of ritualism and mythology threatened to overwhelm the ancient simplicity of the faith, a despairing hope looked for the time of the next Buddha, and decked out his story with lavish completeness.

Three points of importance are quite clear from the statements in this work. (1) There is little or nothing original in the tradition of which it is the main evidence. It is simply built up in strict imitation of the early forms of the Buddha legend, only names and numbers differing. But it is the old form, both of legend and of doctrine.

(2) There is sufficient justification for the comparison between Metteyya and the Western idea of a Messiah. The ideas are, of course, not at all the same; but there are several points of analogy. The time of Metteyya is described as a Golden Age in which kings, ministers, and people will vie one with another in maintaining the reign of righteousness and the victory of the truth. It should be added, however, that the teachings of the future Buddha also, like that of every other Buddha, will suffer corruption, and pass away in time.

(3) We can remove a misconception as to the meaning of the name. *Metteyya Buddha* does not mean 'the Buddha of Love.' *Metteyya* is simply his *gotra* name, that is, the name of the *gens* to which his ancestors belonged—something like our family name. It is probably, like *Gotama*, a patronymic, and means 'descendant of Mettayu.' Another Metteyya, in the *Sutta Nipāta*, asks the Buddha questions, and is doubtless a historical person. We can admit only that whoever first used this as the family name of the future Buddha may very likely have associated, and probably did associate, it in his mind with the other word *mettā*, which means 'love.' It would only be one of those plays upon words which are so constantly met with in early Indian literature. The personal name of the future Buddha is given in the poem, and elsewhere also, as *Ajita*, 'unconquered.'

The poem in one MS has the fuller title *Anāgata-Buddhassa Vaṇṇanā*, 'Record of the future Buddha' (*JPTS*, 1886, p. 37). There is another work, quite different from the one here described, though the title is the same. It gives an account, apparently, in prose and verse, of ten future Buddhas, of whom Metteyya is one (*ib.* p. 39). This work is still unedited.

LITERATURE.—H. C. Warren, *Buddhism in Translations*, Cambridge, Mass., 1896, pp. 481–486, has translated a summary of one recension of this work.

T. W. RHYS DAVIDS.

ANĀHITA (Gr. Ἀναεῖτις).—Anāhita is one of the chief deities in Mazdaism, and we get fairly accurate information about her character from a complete *Yašt* (v) and numerous other passages in the Avesta. Ardvī Surā Anāhita, that is, undoubtedly, 'the high, powerful, immaculate one,' is a goddess of fertilizing waters, and more particularly of a supernatural spring, located in the region of the stars, from which all the rivers of the world flow (Darmesteter). The fertility which the divine water caused in the earth was extended to the animal kingdom, and, according to the Avesta, Anāhita 'purifies the seed of males and the womb and the milk of females' (*Vendīdād*, vii. 16; *Yašt*, v. 5), and is invoked by marriageable girls, and by women at the time of childbirth (*Yašt*, v.). At the same time she is thought of as a goddess of war, who rides in a chariot drawn by four white horses (*Yašt*, v. 11, 13), which are wind, rain, cloud, and hail (*Yašt*, v. 120), and she bestows victory on the combatants, and gives them sturdy teams and brave companions. The Avestan hymn, after enumerating all the heroes of the past who sacrificed to Anāhita, including Zoroaster, whom she instructed in her worship, concludes with a very exact description of her appearance and her dress (*Yašt*, v. 126 ff.). 'She is a beautiful maiden, powerful and tall, her girdle fastened high, wrapped in a gold-embroidered cloak, wearing earrings, a necklace, and a crown of gold, and adorned with thirty otter skins.' These minute details are undoubtedly inspired by a sculptural type, and this passage of the Avesta has rightly been connected with the famous text of Berossus (Clem. Alex. *Protrept.* 5), which says that Artaxerxes Mnemon (B.C. 404–361) was the first to teach the Persians to worship anthropomorphic statues in the temples of Babylon, Susa (cf. Pliny, *Hist. Nat.* vi. 27, 135), and Ecbatana (cf. Plutarch, *Vit. Artax.* 27; Polybius, x. 27. 12), in Persia, Bactriana, Damascus, and Sardis. These statues were probably reproductions of a Babylonian original, and perhaps, as has been suggested, Anāhita might even be identical with the Semitic goddess Anat. This would account for the passage in Herodotus (i. 131), according to which 'the Persians learned from the Assyrians to sacrifice to the "heavenly" Aphrodite, whom they

* Geiger, *Mahavaṁsa und Dipavaṁsa*, Leipzig, 1905, p. 88.

call Mithra.' The ancient historian had probably written 'Mithra' by mistake for 'Anâhita.' As a matter of fact, the two divinities are united, and form, so to speak, a pair in the cuneiform inscriptions of the Achæmenians, in which they figure precisely from the reign of Artaxerxes Mnemon (Weissbach-Bang, *Die altpersischen Keilinschriften*, 1893, 44, 46).

The information of Berossus on the diffusion of the Anâhita cult throughout the Persian empire is confirmed by a mass of evidence. Outside of Iran, the goddess is found in Armenia (Gelzer, *Sit. Gesellsch. Wiss. Leipzig*, 1896, 111 ff.; see also art. ARMENIA [Zoroastrian]). She had temples at Artaxata, at Yashtishat in Tauranitis, and especially at Erēz in Akilisene, the whole region of which was consecrated to her (*Anaetica regio*, Pliny, v. 83). The Erēz sanctuary, which contained a golden statue of Anâhita, was famous for its wealth, and the daughters of the noble families of Armenia used to go there and prostitute themselves to strangers before their marriage (Strabo, xi. 532 C). This sacred custom, which is probably of Semitic origin, seems to be a modification of the ancient exogamy (cf. Cumont, *Religions orientales*, Paris, 1907, 287). Old traditions continued to hold ground at Erēz under the Romans; the sacred buffaloes of Anâhita wandered at liberty in Akilisene, and the victims for sacrifice had to be captured by hunting (*RA*, 1905, i. 25 ff.).

The Persian goddess was worshipped also in Pontus and in Cappadocia (Strabo, xi. 512 C, xii. 559 C, xv. 733 C), perhaps also at Castabala in Cilicia (Strabo, xii. 537 C). In these districts she became identified with the great autochthonous divinity Mâ, and her temples were attended by a number of sacred slaves (*ἱερόδουλοι*) of both sexes. At Zela in Pontus, a festival, the Sacæa, which was probably of Babylonian origin, was held annually.

It is especially in Lydia that Anâhita has left numerous traces of her presence. She was probably, as Berossus states (cf. above), brought into Sardis by Artaxerxes II., and there became amalgamated with Kybebe (Cybele), the Great Mother honoured throughout the country. The well-known figures of a winged goddess holding a lion in either hand, to which the designation 'Persian Artemis' has been given, really represent this syncretic divinity worshipped as 'mistress of the beasts' (*πότνια θηρῶν*) (Radet, *CAIBL*, 1906, p. 285). Descriptions of her noisy rites exist as early as in the works of the tragic poet Diogenes of Athens (Nauck, *Trag. Græc. Fragm.* 776). Her principal temples were at Hierocæsarea (Paus. v. 27. 5, vii. 6. 6; Tac. *Ann.* iii. 62: 'delubrum rege Cyro dicatum'; cf. *Bull. Corr. hellén.* xi. 95), and at Hypæpa (Paus. *l.c.*; cf. *RA*, 1885, ii. 114; Dittenberger, *Orientis Græci Inscriptiones Selectæ*, 1903–05, 470); but her name also appears in a large number of inscriptions in this vicinity (Reinach, *Chroniques d'Orient*, 157 ff., 215 ff.; Buresch, *Aus Lydien*, 1898, 28, 66 ff., 128; Roscher, *Lexikon der Mythologie*, *s.v.* 'Persike'; Wright, *Harvard Studies*, 1895, vi. 55 ff.). The conception formed of the goddess and the ceremonies by means of which she was worshipped seem to have remained faithful to the ancient Iranian traditions; she was always regarded as the goddess of sacred waters (*Ἀναείτιν τὴν ἀπὸ τοῦ ἱεροῦ ὕδατος*, Buresch, *l.c.* p. 118), and her liturgy was repeated in a 'barbarian' language (Pausanias, v. 27. 5).

The Greeks identified Anâhita, on the one hand, on account of her warlike character, with Athene, and, on the other, as a goddess of fertility, with Aphrodite (Berossus, *l.c.*; Agathias, ii. 24; Photius, *Bibl.* 94). Already, in Iran, as noted above, under the influence of the Chaldæan star-worship, Anâhita had become the planet Venus. But the name usually applied to her in the West was 'Persian Artemis' or 'Persian Diana' (*Ἄρτεμις Περσική* or *Περσία*, 'Diana Persica') (Pausanias, vii. 6. 6; *Bull. Corr. hellén.* xi. 65; Diodorus, v. 77; Plutarch, *Lucull.* 24; Tacitus, *Ann.* iii. 62). As the bull was sacred to her, she was confounded especially with 'Artemis Tauropolos' in Lydia, as well as in Armenia and Cappadocia. It was probably from this composite cult of the Asiatic Tauropolos that the 'taurobolium' penetrated into the Roman world (Pauly-Wissowa, *s.v.* 'Anaïtis'; *RA*, 1905, i. 28 ff.). In the Latin countries, the Persian goddess, assimilated with the *Magna Mater* of Phrygia, certainly remained in close connexion with Mithra, whose mysteries spread to the West after the 1st cent. of our era (Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra*, i. 333 ff. and *passim*).

LITERATURE.—Windischmann, 'Die persische Anâhita,' *Sitzungsb. Akad. München*, 1856; Spiegel, *Eranische Altertumskunde*, 1873, ii. 54 ff.; Darmesteter, *Zend-Avesta*, 1893, ii. 363 and *passim*; Roscher, *Lexikon der Mythol. s.vv.* 'Anaïtis' (Ed. Meyer) and 'Persike' (Höfer). FR. CUMONT.

ANALOGY.—The determination of the limits within which validity belongs to the argument from analogy is a problem of long standing. Though the discussion of the question properly falls within the sphere of logic rather than of theology, yet the latter science is intimately concerned with its decision. So long as arguments from analogy occur with such frequency and have so important a part to play alike in the defence and in the exposition of revelation, the theologian will not be easy unless his confidence in this logical process be firmly established. Moreover, even the warmest advocate of the argument from analogy will admit that as an instrument of thought it is specially liable to abuse, and that its employment involves at least risks of error which require to be explicitly recognized in order to be avoided. In this article the subject of treatment will be the use of analogy in theology; but in the interest of clearness of statement it will be necessary to begin with some brief reference to general principles.

1. **Analogy: its definition in logic.**—At the outset we are confronted with a considerable lack of agreement among logicians as to the correct definition of analogy. Some authorities, content to fall in with popular usage, identify the argument from analogy with the argument from resemblances. Such, for example, is the position adopted by J. S. Mill, who explains it to be the inference that when one object resembles another in a certain number of known points it will probably resemble it in some further unknown points also. Such a logical procedure is akin to induction, but is distinguishable therefrom by the circumstance that no causal or necessary connexion has yet been established between the known points of resemblance and the further points whose resemblance is only inferred. The conclusion is, therefore, not demonstrable but probable, and the amount of probability will vary in accordance with the number and the importance of the resemblances which have been observed, and will be correspondingly diminished by any ascertained points of dissimilarity between the two objects. In estimating the extent of the probability, account must be taken of the proportion borne by the number of ascertained resemblances to the supposed number of unknown properties (cf. Mill, *System of Logic*, III. xx.).

This conception of analogy is, however, repudiated by other logicians as altogether too lax and unscientific. Influenced by the meaning of the word in the original Greek, and by its primary use as a term of mathematics, they insist that analogy is a

resemblance not between things, but only between relations.

'Two things,' writes Dr. Whately, 'may be connected together by analogy, though they have in themselves no resemblance; for analogy is the resemblance of ratios or relations; thus, as a sweet taste gratifies the palate, so does a sweet sound gratify the ear, hence the word sweet is applied to both, though no flavour can resemble a sound in itself' (*Elements of Logic*[2], p. 168).

The last words of the sentence are noteworthy. They indicate that upon this view of analogy no legitimate inference can be drawn from the nature of the one pair of related terms to the nature of the other pair. The relation between palate and taste may be strictly similar to the relation between ear and sound, but we cannot therefore draw inferences as to the nature of the one from what we know of the other. This is an important contention with far-reaching consequences, and its influence upon theological argument will appear presently.

This definition of analogy has the merit of scientific exactness, and of being in strict accordance with the type exhibited by mathematics, but it is at the same time open to serious criticism. The restrictions which it imposes upon the function of analogy are such as would almost entirely invalidate the use of the argument in practical life. Men in their daily concerns do not confine their analogical arguments to the consideration of mere relations, but freely draw inferences as to the nature of things. Although this is a merely practical objection, it is not without support in the theory of analogy. It has been pointed out that *some* identity of nature is always postulated in every analogy. In mathematical analogy, for example, it is at least necessary that both pairs of terms should be magnitudes. And, again, in the analogy between sound and taste, though in a sense there is no resemblance between them, yet they are both sensations. The heterogeneity is not absolute. Exception, therefore, may fairly be taken to the extreme statement of Whately, that no inference is permissible from the nature of the one to the nature of the other. And the theologian will press the point; for in his hands the argument from analogy is usually of the more flexible and practical form, which cannot be confined within the narrow limits set by the type of mathematical analogy. It is concerned with realities rather than with abstract relations.

2. **Analogy in religious vocabulary.**—The entire vocabulary of religion is based upon the perception of analogies between the material and the spiritual worlds. Words which now bear an immaterial and spiritual significance were originally used to denote visible and tangible objects. If in many languages the word for breath or wind has come to be used for the soul, it is because at an early stage of their development men became conscious of an analogy between the lightness and invisibility of air and the supposed properties of the human spirit. To a later and more critical age the analogy may appear thin and crude; but it must be remembered that the initiation of a religious vocabulary dates from the childhood of the race. In the gradual evolution of religion, crudities have been refined away, until the original meaning of many words now used exclusively with a spiritual significance has been forgotten. But throughout the whole course of the development the necessity for finding analogical words as a vehicle for the expression of spiritual truth has never been outgrown. The innermost secret of religion is still put into speech by means of the analogy of human fatherhood. Thus witness is borne in all ages to the instinctive readiness with which men assume a parallelism between the things which are seen and the things which are not seen. To what extent that parallelism really exists and how far it affords us grounds of inference to the real nature of the spiritual world, is the problem which every philosophy of religion sets out to solve.

3. **Analogy as a means to the knowledge of the spiritual world.**—Not only the vocabulary but the content of natural religion is derived from the source of analogical reasoning. For natural religion begins with the assumption of a resemblance between God and the world, sufficient to justify the inference that the wonder and majesty of Creation will in some sort reflect the wonder and majesty of the Creator (cf. Wis 13[5] 'For by the greatness and beauty of the creatures proportionably [ἀναλόγως] the maker of them is seen'). Though this is the only Biblical passage in which the word 'analogy' appears in this connexion, yet the thought of the world as the visible expression of the attributes of the invisible God is of constant recurrence in Scripture. It is familiar to the Psalmist (Ps 19). It is stated explicitly by St. Paul: 'For the invisible things of him from the creation of the world are clearly seen, being understood by the things that are made, even his eternal power and Godhead' (Ro 1[20]). This assumption of a significant analogy between God and the world is not argumentatively justified in the Bible. Like the other principles of natural religion, it is taken as accepted truth. And the belief culminates in the doctrine of man's creation in the image of God. It is impossible to overestimate the formative influence of this conception of human nature as the true analogue of the Divine. As it was one of the controlling factors in the development of Jewish religion, so has it exercised an even more dominant influence upon Christian thought, supplying, as it does, the philosophic basis for the doctrine of the Incarnation. Throughout the whole history of Christian doctrine the question of the reality of the likeness of man to God, *i.e.* of the truth of the analogy between Divine and human nature, has been one of the pivots of controversy. Men have arranged themselves in opposite camps according as they have been more or less ready to accept this belief.

4. **Analogy in Patristic writings.**—The great theologians of the early centuries, following the precedent of Scripture, made free use of analogy for the double purpose of defence and exposition. It was to them a convenient means of exposing the hollowness of many commonly urged objections, and a ready method of illustrating the difficulties of abstract theology by means of familiar and concrete examples. Illustrations of so frequent a practice are scarcely necessary. But perhaps a single example from East and West may not be out of place.

The following quotation from Gregory of Nyssa indicates how clearly he recognized the character of the logical process which he was employing: Ὥσπερ δὲ τὸν Λόγον ἐκ τῶν καθ' ἡμᾶς ἀναλογικῶς (*v.l.* ἀναγωκικῶς) ἐπὶ τῆς ὑπερκειμένης ἔγνωμεν φύσεως, κατὰ τὸν αὐτὸν τρόπον καὶ τῇ περὶ τοῦ πνεύματος ἐννοίᾳ προσαχθησόμεθα, σκιάς τινας καὶ μιμήματα τῆς ἀφράστου δυνάμεως ἐν τῇ καθ' ἡμᾶς θεωροῦντες φύσει (*Serm. Cat.* ii.). In the short treatise, *De fide rerum quæ non videntur*, ascribed to St. Augustine, the objection to the requirement of religious faith is met by insistence on the analogy of the actual necessity of faith in ordinary human intercourse. And in his work, *De Trinitate*, the mysteries of the Triune Being of God are repeatedly illustrated by the analogous mysteries of human psychology.

5. **Analogy in Scholastic theology.**—But however legitimately and successfully this method of argument was employed by the Fathers, it was not by them subjected to reflective criticism. A real advance was therefore made when the Schoolmen entered upon a rigorous examination of the limits of the analogical method with particular reference to its use in theology. Among the reasons which led them to undertake the task was their desire to find a philosophic justification for the anthropomorphic language of Scripture. Such language obviously could not be taken liter-

ally, nor yet be summarily dismissed as merely metaphorical, and therefore implying no real likeness between God and His creatures. The Schoolmen's answer to the problem is to be found in their theory of analogy, which concerns itself not only with the explanation of the analogical use of language, but also with the far deeper and more important question of the reality and the extent of the analogy between the finite and the infinite, and the legitimacy of inference from one to the other.

With regard to language, it was pointed out that a distinction must be made between the univocal, the equivocal, and the analogical use of words. A word is univocally employed when in two or more propositions it conveys precisely the same meaning; equivocally when used in two entirely different senses. But where two things are connected by some relation, the same word may be applied to them both in a related, though not precisely identical, sense. This last is the analogical use. Thus—the instance is as old as Aristotle—the word 'healthy' is analogically applied to the body which is sound, and to the food which is the cause of soundness. Similarly, the term 'being' is analogically applied to God who exists absolutely, and to man whose existence is contingent and dependent.

Upon the basis of this distinction was established the justification of the use of human terms about the Deity. When, for example, we speak of the wisdom of man and the wisdom of God, the word 'wisdom' is not used univocally. For if so, we should be denying any difference in kind between human and Divine wisdom, and our statement would be obviously opposed to the Christian teaching about God. Nor yet is the use of the word equivocal. For then we should be asserting the essential unlikeness of human and Divine wisdom, and it would be impossible to argue from the nature of the one to the nature of the other. Such a position would be untenable, because if a similar objection were supposed to hold good in all parallel cases, every inference from the creature to the Creator would be vitiated by the fallacy of equivocation. A way of escape from these opposite difficulties is provided by the recognition of the analogical use of the word. It is implied that there is a relation or proportion existing between the wisdom of man and the wisdom of God. What is partial and incomplete in man is perfect in God. (Cf. Thom. Aq., *Summa*, I. xiii. 6).

This distinction between the univocal and the analogical use of words was a sufficient reply to the reproach of anthropomorphism, but it left untouched the deeper question of the extent of the analogy or resemblance between God and His creatures. Accordingly, in the effort to reach greater clearness of thought with reference to this fundamental problem of religion, the Schoolmen proceeded to introduce further distinctions into their conception of analogy. These may be sufficiently illustrated from the scheme of Suarez (*Disput. Metaphys.* xxviii. sec. iii.). He distinguished two kinds of analogy, viz. that of proportion and that of attribution. To the former of these not much interest attaches. It amounts to little more than a mere resemblance, seized upon by the mind as justification for the use of a metaphor. Though such an analogy of proportion may appeal to the imagination, and therefore be of use in the way of illustration, it does not go far enough to warrant any inference in argument. The analogy of attribution, on the other hand, is established by the existence of a resemblance in the nature of things, and is valid for purposes of inference. When this resemblance consists in the possession by two subjects of the same quality in different degrees, the analogy is styled intrinsic. This is the highest grade of analogy, *analogia attributionis intrinseca*, and of this kind is the analogy between God and His creatures as regards, for example, the property of existence. Existence is predicated of Him and them. Their existence, however, is not of the same degree as His. Yet is it so far the same as to allow of some inferences being drawn, from what we know of finite existence, as to the nature of infinite existence. These distinctions may possibly appear needlessly subtle and technical, but the consideration of them will at least serve the purpose of calling the attention of the student to the possibility of some confusions of thought that have been actually responsible for the failure of much analogical argument.

6. Analogy in post-Reformation theology.—When the questions of theology ceased to be confined to the schools, and became the subject of popular debate, it was natural that the problem of analogy should be handled in accordance with the new methods, and in a manner intelligible to a larger public. A general advance in intellectual enlightenment brought the question once more to the front. At a time when man's knowledge of the world was being rapidly extended in many directions, he was inevitably brought once more face to face with the issue, whether Nature was in any true sense the analogue of God. Hence at the beginning of the 18th cent. we find that the theory of analogy was occupying the attention of some of the foremost theological writers.

Among the books on the subject which specially deserve mention may be noticed a *Discourse on Predestination*, by Dr. King, Archbishop of Dublin (1709). By this writer a somewhat extreme form of religious agnosticism was advocated. Desiring to allay the bitterness of theological controversy, he laid stress on the principle that all our notions about the Deity are inevitably limited by our human and finite capacity. 'If we know anything about Him at all, it must be by analogy and comparison, by resembling Him to something we do know and are acquainted with' (Whately's reprint of King in Appendix to Bampton Lectures, 3rd ed. p. 480). Our notions of God are really as far from the truth as a map is different from actual land and sea. A chart, while it provides instruction sufficient for the purpose of the traveller, does not actually resemble the country conventionally represented. Similarly, Scripture teaching about God may give us information about Him adequate for the purposes of this present life, without revealing Him to us as He is. This depreciation of man's capacity for acquiring a true knowledge of God was intended in the interest of theological peace. It became, however, the occasion of controversy. Bp. Browne, of Cork, contributed several books to the discussion of the question. In an early work he maintained that—

'Our ideas of God and divine things . . . are a sort of composition we make up from our ideas of worldly objects, which at the utmost amount to no more than a type or figure by which something in another world is signified, of which we have no more notion than a blind man hath of light' (quoted in Introduction to *Procedure*, etc.).

Adhering to these principles in his *Procedure, Extent, and Limits of the Human Understanding* (1728), he accepted without demur King's somewhat extreme conclusions:

'That we have no direct or proper notions or conceptions of God in His attributes, or of any other things of another world; that they are all described and spoken of in the language of revelation, by way of analogy and accommodation to our capacities; that we want faculties to discern them' (*op. cit.* p. II).

At the same time he criticized King for failing to distinguish between metaphor and analogy, and for thus suggesting the inference that our statements about God are merely metaphorical, and as

unreal as the ascription to Him of human passions or human limbs. To the exposition of this distinction he devotes a chapter (bk. i. ch. ix.), explaining that metaphor expresses only an imaginary resemblance or correspondence, whereas in analogy the correspondence or resemblance is real. The same theme is worked out at greater length in his later book, *Things Divine and Supernatural conceived by Analogy with Things Natural and Human* (1733). Our knowledge of the spiritual order is strictly relative to our capacities.

'God does not raise up our minds to any direct or immediate view of the things of another world, . . . but brings them down to the level of our understanding' (p. 32). 'What just and sufficient knowledge of God we have in this life is obtained by analogy or similitude with those perfections we find in ourselves' (p. 39).

The question naturally attracted the attention of Berkeley, who handled it with characteristic acuteness and precision in *Alciphron*, Dial. iv. ch. xxi. Familiar with the Scholastic definitions of analogy, he does not shrink from the conclusion that all our knowledge of God is strictly analogical. It is not, however, on that account to be reckoned as worthless. Human passions, indeed, are attributed to God by metaphorical analogy only, and involve no statement as to His nature. On the other hand,

'Knowledge, for example, in the proper formal meaning of the word, may be attributed to God proportionably, that is, preserving a proportion to the infinite nature of God. We may say, therefore, that as God is infinitely above man, so is the knowledge of God infinitely above the knowledge of man, and this is . . . *analogia proprie facta*. And after this same analogy we must understand all those attributes to belong to the Deity which in themselves simply and as such denote perfection' (ed. 1732, i. p. 257).

Berkeley, while recognizing the incompleteness of our spiritual knowledge, lays the emphasis on its trustworthiness rather than on its inadequacy.

'This doctrine of analogical perfection in God, or our knowing God by analogy, seems very much misunderstood and misapplied by those who would infer from thence that we cannot frame any direct or proper notion, though never so inadequate, of knowledge or wisdom as they are in the Deity, or understand any more of them than one born blind can of light or colour.'

Such was Berkeley's repudiation of the attempt to make religious truth unassailable by assuming it to be unintelligible.

It is remarkable that Butler, whose work is still the classical example of the application of the argument from analogy to theology, should have deliberately abstained from any prefatory justification or explanation of the theory of the instrument which he wielded with so much effect. Such, however, is the case. Declaring at the outset that he will not take it upon him to say how far the extent, compass, and force of analogical reasoning can be reduced to general heads and rules, he curtly brushes aside objections to this kind of argument with the remark that it is undeniably adopted by all in practical life. 'It is enough to the present purpose to observe that this kind of general way of arguing is evidently natural, just, and conclusive.' Others, as we have seen, were discussing these very points at the time when Butler was engaged in the composition of the *Analogy*. Perhaps he distrusted such speculations as essentially unpractical. Whatever the reason may have been, they are absent from his own work. He applies, he does not analyze, the argument from analogy. What gives his work its pre-eminent position in apologetic literature is not his selection of this particular kind of argument, but the steady patience, the scrupulous exactitude, and the transparent honesty with which he applied it to the controversies of his day. He offers a striking contrast alike to those writers who denounced analogical reasoning as worthless and those others who belauded it as the key to all difficulties. The claim that he makes on its behalf is modest in its scope. Positively it can never (so he tells us) afford more than a probable proof; negatively it can expose the latent insincerity of much unbelief, by showing that circumstances often considered to be conclusive objections to religion are strictly parallel with analogous circumstances in nature, the acknowledged handiwork of God. Analogy in Butler's hands provided no vindication of the character of God (*Works*, ed. W. E. Gladstone, i. 359), but it was fitted to open the eyes of men to their obligations, leaving them without intellectual excuse if they failed to consider with appropriate seriousness the arguments urged on behalf of religious belief.

The full effectiveness of Butler's argument will not be appreciated unless it be remembered that he says he is arguing upon the principles of others, not his own (*ib.* p. 367). Convinced that the proper proof of religion was to be found in the principles of liberty and general fitness, he nevertheless avoided reference to these principles, and limited himself to the consideration of religion as a matter of fact and practice. Upon this lower ground he met his adversaries, the Deist and the indifferentist. Against them he turned the weapon of analogy with complete logical success. Deistic objections against Christianity crumble away under his analysis. It is, of course, true that since his day the incidence of the critical attack upon religion has shifted its position. Hence many of his arguments need re-statement in accommodation to modern requirements. But, whatever alterations in detail may be thought necessary, time has not altered the general verdict in favour of the soundness and cogency of his argument.

7. Analogy since Kant.—Discussion of the nature and extent of man's analogical knowledge of God will always hold a principal place in apologetics, and for that reason will be sensitive to any change in the general philosophic attitude towards the ultimate questions of metaphysics. Hence it was that the whole statement and treatment of the problem were profoundly affected by the influence of the critical philosophy of Kant. That influence, however, was slow to exhibit itself in English theology, and until the 19th cent. was well advanced the discussion continued along the traditional lines. A controversy between Copleston and Grinfield in 1821 brought out once more the possibilities of disagreement over the place to be assigned to analogy. The two writers, representing respectively the lower and the higher estimate of the value of analogy, reproduce with curious exactness the points which had been made a century before by Archbp. King and Bp. Browne. Explicit acknowledgment was made of the debt due to these earlier writers; and Whately, Copleston's friend and disciple, reprinted with notes and high commendation King's famous *Discourse on Predestination*, in which the limitations of human reason had been so rigorously insisted upon. A different attitude towards the fundamental question at issue revealed itself in Mansel's Lectures on the *Limits of Religious Thought* (1858). The title of the book recalls that of Bp. Browne's *The Procedure, Extent, and Limits of the Human Understanding*. And the resemblance is more than superficial. In both writers there is the same tendency to dwell on the inadequacy of the human intelligence to probe the mysteries of the Divine Nature. But Mansel, under the influence of Kantian principles as to man's ignorance of things in themselves, attacks the problem from a different side, and goes far beyond the point reached by his predecessor. Whereas Bp. Browne had urged the relativity and consequent incompleteness of man's analogical knowledge of God, Mansel went so far as to say that, of God's real nature, we, under our finite conditions, are, and must remain, totally ignorant. It is an ignor-

ance so complete as to exclude the possibility of either affirmation or denial.

'We cannot say that our conception of the Divine Nature exactly resembles that Nature in its absolute existence; for we know not what that absolute existence is. But, for the same reason, we are equally unable to say that it does not resemble; for, if we know not the Absolute and Infinite at all, we cannot say how far it is or is not capable of likeness or unlikeness to the Relative and Finite' (3rd ed. p. 146).

This is not the place in which to take notice of those further considerations with regard to the distinction between regulative and speculative truth, by which Mansel sought to establish religious faith upon this basis of philosophic scepticism. It is enough to give attention to the line which he adopted with respect to analogy. Repudiating on metaphysical grounds the analogy between the Finite and the Infinite, and consequently rejecting the customary philosophic proofs of religion, he found a negative defence for belief in the analogous difficulties of religion and philosophy. In so doing he claimed to be following in the footsteps of Bp. Butler, and to be adding another chapter to his argument on the analogy between religion and the course of nature. His principle he declares to be, that there is no rational difficulty in Christian theology which has not its counterpart in philosophy; and, further, that the stumbling-blocks which the rationalist professes to find in the doctrines of revealed religion arise, not from defects peculiar to revelation, but from the laws and limits of human thought (*ib.* p. 170). His work certainly resembles that of Butler in being an eminent example of the way in which the argument from analogy can be used for defensive purposes. He showed conclusively enough that many of the objections urged against revelation are applicable with equal force against the commonly accepted principles of thought and action. If the creed of theism contains its antinomies, so also does the creed of philosophy. In both cases explanation is equally impossible.

But the emphasis which Mansel placed upon our ignorance of the Divine Nature as it is, and his insistence on the absence of any necessary analogy between the goodness of man and of God, were the occasion of vigorous protests at the time, and eventually proved partly responsible for results very different from those which he desired. The assertion of man's ignorance, made by him and by other religious thinkers in the interest of revelation, was one of the exciting causes of the agnosticism, explicitly opposed to religion, which gained currency in the latter half of the 19th century.

8. Renewed confidence in Analogy.—In recent years there has been a distinct revival of confidence in the reality and the significance of the analogy between the Creator and His creation, and in the possibility of passing from the knowledge of one to the knowledge of the other. Among the causes which have contributed to this result must be counted the advance of the idealistic philosophy, and the increased attention given to the study of human personality. Instead of attempting to evade the reproach of anthropomorphism by conceding to the agnostic the inscrutability of the Divine Nature, the modern apologist is not afraid to avow the anthropomorphic character of theology, while he insists that in this respect theology is in the same position as every other department of human thought. 'Personality is thus the gateway through which all knowledge must inevitably pass. . . . It follows that philosophy and science are, in the strict sense of the word, precisely as anthropomorphic as theology, since they are alike limited by the conditions of human personality, and controlled by the forms of thought which human personality provides' (Illingworth, *Personality Human and Divine*, p. 25). In the book from which these words are quoted, human personality is deliberately taken as the analogical symbol of the Divine Nature, on the ground that God possesses, in transcendent perfection, the attributes which are imperfectly possessed by man. Thus what might appear to be the damaging effect of the admission of an anthropomorphic element in theology is neutralized by the correspondent assertion of a theomorphic doctrine of human nature. The supposition of an absolute and insuperable heterogeneity between the Finite and the Infinite, which has always been the basis of philosophic scepticism, whether in alliance with or in opposition to orthodoxy, is denied. The reality and the inexhaustible significance of the analogy between God and man are explicitly re-asserted.

Illingworth, *Personality Human and Divine*, 1894; J. S. Mill, *Logic*, bk. iii. ch. xx., 1843, also *Hamilton's Philos. examined*, 1872, p. 111 ff.; Vacant, *Dict. de Théol. Cathol.*, art. 'Analogie,' 1900; Sigwart, *Logic* [Eng. tr.], 'Analogy' in Index.

G. C. JOYCE.

ĀNANDA.—One of the principal early disciples of the Buddha. He was the Buddha's first cousin, and is described as being devoted to him with especial fervour in a simple, childlike way, and serving as his personal attendant (*upaṭṭhāka*). A panegyric on him is put into the mouth of the Buddha just before his (the Buddha's) death (*Mahā Parinibbāna Suttanta*, in *Dīgha*, ii. 144–146). But it is for his popularity among the people and in the Order, and for his pleasant way of speaking on the religion, not for intellectual gifts or power of insight. So, in the same book (*l.c.* 157), the stanza put into Anuruddha's mouth at the death of the Buddha is thoughtful; while that put into Ānanda's mouth is a simple outcry of human sorrow. Though all the other disciples had attained to *arhat*-ship long before this, Ānanda remained still a 'learner' (*sekha*); and at the council said to have been held after the Buddha's death, Ānanda is described as the only one of the first hundred members selected to take part in it who was not an *arhat* (*Vinaya*, ii. 285). He became one before the council met (*ib.* 286), and took a prominent part in it; but that did not prevent the council from admonishing him for certain faults of inadvertence he had previously committed. Other passages of a similar tendency might be quoted (*e.g. Majjhima*, No. 32); but these are perhaps sufficient to show that the picture drawn of him is of a man lovable and earnest, but withal somewhat dense.

T. W. RHYS DAVIDS.

ANARCHY, ANARCHISM.—Anarchy means, as writers like Kropotkin understand it, the perfectly unfettered self-government of the individual, and, as a result, the absence of any kind of external rule. It is the widest possible application of the doctrine of *laissez faire*. Government, it declares, is something that human nature should not be asked to submit to. If men were but left to themselves, they would form themselves into co-operative producing groups, which would live in perfect harmony with one another. Each individuality would have unlimited powers of expansion, and the rigid moulds would vanish into which at present human nature is forced with infinite hurt to itself.

Anarchy as a theory must therefore be separated from Anarchism as a historical movement. The

popular idea of Anarchy is that it is concerned only with bomb-throwing and Terrorism. But Anarchy as a theory of existence has been proclaimed by some of the gentlest and most cultured spirits in Europe; and although, in the case of a writer such as Bakunin, the thinker and the active revolutionary are merged, it will be convenient to consider first the theory and then the history of the movement.

i. THEORY. — On its economic side Anarchy is a branch of Socialism or Collectivism. It regards the day of private ownership and of capitalism as drawing to a close. It believes that the wage *nexus* between employer and employee is evil, and must sooner or later cease. Its view of the remuneration of labour varies between payment by labour time and the taking by each of what he wants from the common stock of production. When the workers are living in free associations, each will see that his own interest is the interest of the association, and the present tragic struggle for the increased share will cease.

The political basis of Anarchy is, negatively, that the possession of mere electoral and voting power is quite illusory as a means of social redemption for the many. Liberalism has been a failure. Even universal suffrage could lead but to the deeper enslavement of the worker. Representative government has had its full trial, and has failed; its defects are inherent in itself, and never can be cured. It is impossible for a Parliament to attend to all the numberless affairs of the community. More and more Parliament shows this inability in the congestion of business, and in the increasing extent to which local affairs are delegated to local authorities. It is this process of decentralization that is so full of hope to the philosophic Anarchist. He takes it to foreshadow the day when every little group will settle its own affairs, when there will be no rulers and no subjects, when each individual will have free play within his group, and each group free play in its relation to all other groups.

Anarchy has been extremely anxious to place itself on a scientific basis. In its modern form it has claimed Herbert Spencer as intellectual sponsor. It declares itself to be acting along the lines of evolution in that it is conforming to those two great tendencies which Spencer discerns in present-day conditions—the tendency to integrate labour for the production of all wealth in common, so that no individual shall be able to say what portion of the total result is due to his toil; and the tendency towards the fullest freedom of the individual for the prosecution of all aims beneficial both for himself and for society at large. Throughout organic nature the capacities for life in common are growing in proportion as the integration of organisms into compound aggregates becomes more and more complete. The struggle for existence, Kropotkin asserts, is not merely the struggle for the existence of the individual, but also the progressive adaptation of all individuals of the species to the best conditions for the survival of the species. The conditions must, therefore, be modified, so that man will be able to live the normal free life, instead of being forced by positive law to hold a place in a system of things which gives him neither freedom nor opportunity.

ii. HISTORY. — The view that authority is in itself a thing undesirable, and that man reaches the full measure of his stature only when he is allowed to develop his individuality absolutely unchecked, is by no means new. It appeared in several of the Mystic and Anabaptist sects of the later Middle Ages and post-Reformation period. In the 13th cent. there was a sect of the Beghards, calling themselves Brethren and Sisters of the Free Spirit, who professed pantheistic views. It claimed the utmost liberty on the ground that, as God inhabited each, the will of each was the will of God. In their preaching the Brethren advocated community of goods and community of women; they insisted on a personal equality, and rejected all forms of authority. In the period immediately preceding the French Revolution the idea was widely spread that the normal condition of life was that represented by 'Paul and Virginia,' a condition under which men were self-sufficing and independent, owning no other authority than that of their own wills. In 1795, William Godwin wrote his *Inquiry concerning Political Justice*, advocating community of goods, the self-government of mankind according to the laws of justice, the abolition of all forms of government, and the abolition of marriage.

The real founder of Anarchy as a living modern movement was Pierre Joseph Proudhon, a Frenchman of humble parentage, born in 1809. The attention Proudhon attracted was due, not only to his great ability, but to the fact that he lived in the stormy middle years of the 19th cent., when all constituted forms of government were on their trial, and to his acceptance of the dominant Hegelianism as the vehicle of his thought. His first work, *What is Property?* was published in 1840, and the answer he gave to his own question was that property was theft. The conclusion reached had evidently much in common with Marx's view that capital was crystallized labour, wealth of which the workman had been defrauded in the process of production. Labour, Proudhon held, is the source of value, and the value of labour should be measured by its duration. So far he followed the ordinary Socialist views of his time. It was when he asked himself the question how the poor man was to be raised from his poverty that he diverged from many of his contemporaries, and began that rift in the Communistic ranks that now has become the gulf between the policies of State Socialism and Anarchy. Proudhon, with Marx and Louis Blanc, wished to secure for labour the whole product of labour. Blanc hoped to attain this end by organizing labour under the authority of the State; Proudhon thought that the same result could be reached by the free initiative of the people unassisted in any way by the State. Governments, he declared, were the scourge of God, introduced in order to keep the world in discipline and order. It was not their function to produce movements, but to keep them back. Progress would be made not by revolution, but by evolution. As the people became more enlightened, they would gradually learn to dispense with government. The constitution would have to be revised continuously and unceasingly; so gradually, by the formation of independent and interacting groups, Anarchy would be introduced.

It was in the ranks of the 'International Association of Working Men' that the conflict between State Socialism which wished to make government co-terminous with human activity, and Anarchy which wished to eliminate government altogether, came to be fought out. Before this struggle commenced, the 'International' had had a long and somewhat confused history. In 1836 a number of Germans, exiled in Paris, formed a communistic society which they called the League of the Just. Becoming involved in trouble with the French Government, they removed to London in 1839. Amid the mixture of races in London, the Society, as a matter of course, came to be of an international character. The influence of Marx began to tell upon it. It accepted his view that economic conditions determined the social structure, and that every vital change in society must be brought about

by a change not so much in political conditions as in economic. This change could be wrought only along the lines of social development. In 1847 the Society began to call itself the Communist League, its aim being 'the founding of a new society without classes and without private property.' The manifesto that the League put forth did not a little to give vigour to the various revolutionary movements of 1848; but, in the reaction following upon that time of enthusiasm, the League died. During the London International Exhibition of 1862 views were exchanged between French workmen visiting the Exhibition and their English fellows; popular sympathy with the Polish insurrection of 1863 helped the movement; and so, in 1864, the 'International Association of Working Men' was formed, with Karl Marx as its ruling spirit. His influence led the Association to the acceptance of State Socialism. State ownership of the land, as well as of the means of transport and communication, was early agreed upon as an object for which the Association should strive, although a proposal to abolish the right of inheritance did not find a majority.

But the disintegration of the International was at hand. In 1869, Bakunin and a number of the Russian Anarchists had joined it, and at once they began to attack the centralizing views of Marx. Then the Franco-German war broke out, and national feeling could not be eliminated even from an International Association. The Commune in Paris raised hopes that were almost immediately dashed in very dreadful fashion. In 1871 it became evident that there were two definitely marked groups in the Association, and the line of cleavage, as Kropotkin has pointed out, was not only an economic, but a racial one. The Germans, who now had received Parliamentary government, wished to work along electoral lines. 'The conquest of power within the existing status' became the watchword of the party which took the name of the 'Social Democrats.' The Latin and Slav elements in the Association gathered themselves together, under the leadership of Bakunin, in advocating the abolition of all paternal government, and the free action of the people through separate groups. In 1872 the Anarchists were expelled from the Association, and henceforth uttered their views through the 'Jura Federation.' This expulsion of the Anarchists was almost the last action of the International. It moved the seat of its General Council to New York, held one other Congress in Geneva in 1873, and then died. The Jura Federation and the Anarchists had a stormier history, owing to the influence of their leader.

Michael Bakunin (1814–1876) was an aristocrat and an officer. Horrified by the repressive duties he had to perform in Poland, he left the army and became a revolutionary. From 1849 to 1855 he was almost constantly in prison. In 1855 he was exiled to Siberia, but escaped in 1861 to America, and thence made his way to London. It was at this time that Russia seemed to be on the verge of a crucial constitutional change. The Czar in 1857 had promised the emancipation of the serfs, but after he had announced his intention the reactionary party induced him to impose upon the serfs an enormous redemption price for the land, and to postpone the emancipation till 1863. But in 1863 there broke out the insurrection in Poland. It was repressed with the utmost cruelty; tens of thousands of Poles were exiled to Siberia. Up to this time Russian social reformers had wrought mainly by going among the artizans and peasantry, indoctrinating them with their liberal and revolutionary views. This propaganda was now rendered almost impossible. After the attempt on the Czar's life by Karakozoff in 1866, the reformers had to hide their heads. Thousands fled the country, and settled in Switzerland and elsewhere.

It was among those exiles that Bakunin developed his Anarchist views. His object was the destruction of the existing order of things in faith, morals, economics, and politics. He refused to consider the question of reconstruction; 'all talk about the future is criminal, for it hinders pure destruction, and stems the course of revolution.'

The programme of the International Social Democratic Alliance which he founded gives the most succinct statement of his views. 'The Alliance professes atheism; it aims at the abolition of religious services, the replacement of belief by knowledge, and Divine by human justice; the abolition of marriage as a political, religious, judicial, and civic arrangement. Before all, it aims at the definite and complete abolition of all classes, and the political, economic, and social equality of the individual of either sex; and to attain this end it demands, before all, the abolition of inheritance, in order that, for the future, usufruct may depend on what each produces, so that . . . the land, the instruments of production, as well as all other capital, shall only be used by the workers, *i.e.* by the agricultural and industrial communities.' All children were from birth to be brought up on a uniform system, with the same means of instruction, so that there might disappear 'all those artificial inequalities which are the historic products of a social organization which is as false as it is unjust.' It rejected 'all political action which does not aim directly and immediately at the triumph of the cause of labour over capital.' It repudiated 'so-called patriotism and the rivalry of nations,' and desired the universal association of all local associations by means of freedom.

Bakunin's ideas were developed by his disciple **Netschajeff**, the son of a Court official in St. Petersburg, and born there in 1846. Netschajeff was much more a Terrorist than an Anarchist. Anarchy is, at all events, a reasoned system of things. It believes that life will be not only possible, but desirable, under the conditions it seeks to establish. But Netschajeff had regard purely to a destructive movement. His views were expounded in the Revolutionary Catechism, which was at first supposed to be the work of Bakunin, but is now, with more likelihood, held to have been by Netschajeff himself. According to this Catechism, the revolutionary must let nothing stand between him and the work of destruction. 'If he continues to live in this world, it is only in order to annihilate it all the more surely. A revolutionary despises everything doctrinaire, and renounces the science and knowledge of this world in order to leave it to future generations; he knows but one science—that of destruction. For that, and that only, he studies mechanics, physics, chemistry, and even medicine. . . . The object remains always the same—the greatest and most effective way possible of destroying the existing order.' The Catechism makes no ambiguity as to its methods. Differential treatment is to be meted out to the different classes of society; the rich are to be spared, but their wealth is to be used for the purposes of revolution; the former owners of wealth are to become the slaves of the proletariat. But rulers are not to be dealt with thus considerately. 'In the first place, we must put out of the world those who stand most in the way of the revolutionary organization and its work.' There is to be no attempt to set things right upon their present basis. Every effort is to be made 'to heighten and increase the evils and sorrows which will at length wear out the patience of the people, and encourage an insurrection *en masse*.' Active Terrorism is part of Netschajeff's programme. 'All is not action that is so called; for example, the modest and too cautious organization of secret societies, without external announcement to outsiders, is in our eyes merely ridiculous and intolerable child's play. By external announcements we mean a series of actions that positively destroy something—a person, a cause, a condition that hinders the emancipation of the people. Without sparing our lives, we must break into the life of the people with a series of rash, even senseless

actions, and inspire them with a belief in their powers, awake them, unite them, and lead them on to the triumph of their cause.' This is the attitude that the plain man understands by Anarchism. It is claimed, of course, by the Anarchist thinkers that to allow this extravagant utterance of the Revolutionary Catechism to stand as representative of the whole movement is to do it an injustice, and to confound extreme applications of a general principle with the principle itself. 'To confuse Nihilism with Terrorism is,' says Kropotkin, 'as wrong as to confuse a philosophical movement, like Stoicism or Positivism, with a political movement, such as, for example, Republicanism.' But, in answer, it may be said that all Anarchists are not thinkers, and it is teaching of the Bakunist character that has had, as it was intended to have, the most startling results. The assassination of Alexander II., of the Empress of Austria, of King Humbert, of President M'Kinley, the bomb outrages in Chicago in 1887, in the French Chamber of Deputies in 1893, in a theatre in Barcelona in 1894, the attack on King Edward VII. at Brussels in 1900, the attempt, on their wedding day, upon the young King and Queen of Spain, are the things which 'break into the life of the people with a series of rash, even senseless actions,' and make the whole movement hateful to those who feel that any organized form of society, however it may violate the rights of individuals, is preferable to a state of things in which the most irresponsible make the greatest noise and have the greatest power to do mischief. It must be allowed, too, that this irresponsible Terrorism is the dominant form of Anarchism at the present time. In 1882 the Anarchists, in conference at Geneva, cut themselves adrift from all political parties. They declared the enmity of the Anarchists to the law. 'We declare ourselves allies of every man, group, or society which denies the law by a revolutionary act. We reject all legal methods. We spurn the suffrage called universal. . . . Every social product is the result of collective work, to which all are equally entitled. We are, therefore, Communists; we recognize that without the destruction of family, communal, provincial, and national boundaries the work will always have to be done over again.'

It is, at first sight, not a little difficult to find any relation between this extravagant propaganda which has had such appalling results and Prince Kropotkin, the man of high birth, of splendid ability, of gentle and noble and self-sacrificing life. Kropotkin has told his own story in the *Memoirs of a Revolutionist*, and whoever would seek to understand Anarchism should read this book, along with the account of the trial of the Anarchists at Lyons in 1883 (*Le Procès des Anarchistes*). Such a reading will explain how it is that the more recent developments of Anarchism go so far beyond the conceptions of Proudhon. If Russians who have suffered, as Bakunin and Stepniak and Kropotkin and tens of thousands of others have done, can find no solution of the social situation other than the utter destruction, by any means, of the present condition of affairs in Russia, it is not to be wondered at. The Russian Anarchists imagine that they reach their conclusions as a necessary inference from certain scientific propositions. In reality it is the Russian bureaucracy that has conditioned their thinking. Kropotkin was born at Moscow in 1842, a member of one of the most ancient and distinguished families in the Empire. He was brought up as a page at Court; but already, on his father's estates and in his father's house, he had seen enough of the life of the serf to make him an ardent advocate of the liberal views that were in the air before the actual date of emancipation. Instead of following out the career that was open to him, as a courtier and an officer of the Household Brigade, he chose service in Siberia, and spent four years there, being occupied most of the time in geographical and geological work. In Siberia he recognized the absolute impossibility of doing anything really useful for the masses of the Russian people by means of the existing administrative machinery, and became convinced that the only future for mankind lay in an entirely free Communism. On returning to St. Petersburg, full of ardour for his country's freedom, he found that the liberal movement of the earlier years of Alexander II. had died. Turguenieff's 'Smoke' is its epitaph. Kropotkin accordingly set to work to renew the Anarchist zeal, and strove, through companions whose earnestness and utter disregard of self almost disarm criticism, to spread among the working classes of the capital revolutionary opinions. His activity was discovered. For three years he was imprisoned in the fortress of SS. Peter and Paul, but finally escaped. For the next few years he moved between Switzerland, France, and England, and, becoming involved in the Anarchist rising in Lyons in 1883, was sentenced to five years' penal servitude. Since his liberation at the end of three years he has lived mostly in England.

Kropotkin's main idea is that, as the present system of government and competition and private property cannot be mended without being ended, society must fly asunder into its primary elements and begin to re-aggregate itself. The right of private property he denies, on the ground that if we go back to the uncivilized condition of things we find no such right. Land has been made what it is by draining and cultivation in past generations. Production to-day is the result of innumerable inventions that have now become merged in the general producing machinery. We can produce now only as a consequence of what past generations have done. 'Who is, then, the individual who has the right to step forward and, laying his hands on the smallest part of this immense whole, to say, I have produced this; it belongs to me?' This argument, by which he thinks he has proved the illegitimacy of private property, occurs again and again in his writings. An ironmaster, he declares, deals with and uses the discoveries of those who have gone before, and the discoveries of to-day that he can buy up. 'British industry is the work of the British nation, —nay, of Europe and India taken together,—not of separate individuals.' But where government has once been destroyed and individuals have been left free to re-aggregate themselves, each man will take his place in the group he prefers; and those groups, retaining their own freedom, will at the same time act with mutual helpfulness and consideration, without any constraint from a government. The working agreements that have been arrived at by railways suggest themselves to him as the kind of thing that will be reached under Anarchism. The result is to be a great increase in production. At present 'the owners of capital are certainly endeavouring to limit the production in order to sell at higher prices.' Kropotkin seems to think that the economics of the diamond industry apply, in this regard, to agriculture and cotton-spinning, quite oblivious of the fact of the general economy of large production. If it be asked how labour is to be organized, or to be rewarded, Kropotkin is sufficiently vague. Under the system of free groups each man would naturally turn to the work he could do; but what assurance would there be that he would stand to any agreement he had made? The Anarchist answer is that there will be no necessity to hold him to

his agreement. As the agreement has been freely entered into, there will be no need of any authority to enforce it. The labourer will be remunerated by helping himself to that portion of the joint product which he requires. The problem of the idler is easily settled :—there are not likely to be idlers in such a society. Work is natural to man, and the feeling of brotherhood and mutual responsibility will result in greatly improved labour. 'We consider that an equitable organization of society can arise only when every wage system is abandoned and when everyone contributing for the common well-being, according to the full extent of his capacities, shall enjoy also from the common stock of society to the fullest possible extent of his needs.'

To the questions that present themselves to the objector, Kropotkin has the most indefinite of answers. It may be asked, for instance, how, under any such free associations, any large public works are to be undertaken. We have heard not infrequently of such undertakings resulting in losses to the contractor, and, finally, being carried through not by that mutual agreement which is apart from law, but by the insistence of the law that a contract entered into shall be fulfilled. When a group finds difficulty in building, let us say, another Forth Bridge, who is to insist that the work shall be finished so that gross waste shall not ensue? And will not that ideal unity between group and group be very soon broken when matters of this kind come to be discussed and settled?

Then, again, with regard to the remuneration of labour, it may be granted that the wages system is not an ideal method of assessing the value of each man's contribution. But what would be the result on production, distribution, and industrial peace when each man was taking from the general heap exactly what he wished? The alternative on the Anarchist view is that he should be paid according to the labour time spent on his work. But what would become of art, music, literature, under such a system? The labourer is not, as a rule, prepared to acknowledge that anything is work which is not manual work. Far from granting that the value of an hour's work of Lord Kelvin or Mr. Edison was the equal of his own, he would deny to it the very name of work. Under this system the family would disappear as a matter of course. The notion of a permanent alliance between man and woman, enforceable by law, would be impossible. The relationship between husband and wife would be absolutely free; and this, unless human nature were to be altogether changed, would mean that the woman was to be placed at the mercy of the man and have assurance neither of home nor of sustenance. Children would require to be in charge of the group, not of the parents, and equality would necessitate that they should all be brought up in common.

Kropotkin assures the critic that the dreaded evils are imaginary. The solidarity of the human race will prevent them. The condition of things that is to be established not by law but by the sheer dignity of man, after bloodshed and revolution have done their work, is the idyllic one of perfect peace, and the solidarity of the human race. The Romanoff and the serf will vie with each other in praying the other first to take his portion of the heap.

On its theoretical and economic side Anarchism is a dream. It postulates an unreal world in which all men will live at peace, and work without thought of self. Nor is there any ground for the hope that under a system where men would be working for their group and not for their own advantage, production would be increased. One method of apportionment of wages—payment according to labour time — might have some chance of success under State Socialism, but none under a system where each man was absolutely free. The loafer and the malingerer would have found their paradise. But, anxious as Kropotkin is to dispense with government, his own scheme would involve government with an iron hand. Paternal feeling, one of the primary instincts of mankind, would have to be dead if men did not try to do their best for their own children. The rights of parentage would not be surrendered by those who were most worthy of being parents unless under the strongest compulsion. Only the sensual and the reckless would be satisfied. The great postulate of the whole system is that national feeling shall become extinct. A society organized in productive and socialist groups would clearly be unable to defend itself against a foe armed and organized as the great powers of to-day are. It would be necessary, therefore, not only that the groups within any one race should live at unity among themselves, but that they should be devoid of jealousy for the groups in any other race.

The history of Anarchism as a movement is the history of innumerable 'associations' flying to pieces, of innumerable congresses effecting nothing. Among the Teutonic peoples the movement has made no headway, for order and system is the genius of these peoples. Among the Latin and Slav races it has had a hearing. That a Russian who has suffered under the bureaucracy should be an Anarchist is no surprise. He may naturally feel that the dissolution of society into its elements is the postulate of any reconstruction. But that Anarchism shall ever establish itself as an organization of society under which men and women shall be able to live is impossible. What is even remotely practical in it, the taking of the means of production out of private hands, has already been adopted as the fundamental element of their policy by the State Socialists. The broad difference between those two great branches of Communism is that, while in the one it is realized that government will require to have much more extensive functions than it has at present, so that it may regulate those relationships which now are settled by private contract, in the other it is expected that the solidarity of the human race will be such that the will of the individual shall become the will of the group apart from all interference by government. That the former view better fits the facts as we know them, hardly admits of dispute.

LITERATURE.—Proudhon, *Qu'est-ce que la Propriété?* (1840), *De la Justice dans le Révolution et dans l'Église* (1858); Bakunin, *La Revolution Sociale ou la Dictature Militaire* (1871), *God and the State* (1894); Kropotkin, *La Conquête du Pain* (1891), *Fields, Factories, and Workshops* (1904), 'Scientific Bases of Anarchy' in the *Nineteenth Cent.*, Feb. 1887, 'The Coming Anarchy,' *ib.* Aug. 1887, *Memoirs of a Revolutionist*[2] (1906); Stepniak, *Underground Russia* (1883), *Career of a Nihilist* (1889); Kennan, *Siberia* (1891); C. Zenker, *Anarchism* (1898); Kirkup, *History of Socialism*[2] (1907); G. Plechanoff, *Anarchism and Socialism* (1906); *Le Procès des Anarchistes* (1883); P. Latouche, *Anarchy! An Authentic Exposition of the Methods of Anarchists and the Aims of Anarchism*, London, 1908.

R. BRUCE TAYLOR.

ANAXAGORAS, son of Hegesibulus, was born about B.C. 500 at Clazomenæ on the southern shore of the Gulf of Smyrna. He brought philosophy and natural science from Ionia to Greece, and marks an era in the history of Greek thought, being the first known advocate of a distinct psychical principle, called the *Nous* (Mind). He taught also an original theory of the constitution of matter.

Anaxagoras belonged to a family of wealth and position, but neglected his inheritance to follow science. Tradition asserts that he was a pupil of Anaximenes. This is chronologically impossible,

as Anaximenes died before B.C. 520. He probably belonged to the school of Anaximenes, for scholarship in Ionia was not unorganized; the relation among groups of congenial thinkers foreshadowed the development in Greece of chartered schools of philosophy (θίασοι) (Diels, *Ueber die ältesten Philosophenschulen der Griechen*, Leipz. 1887; Wilamowitz-Möllendorf, *Antigonos von Karystos*, p. 263 ff.). Theophrastus states that Anaxagoras was 'an associate of the philosophy of Anaximenes' (Arist. *Phys. Op.* fr. 4; Diels, *Doxographi Græci*, p. 478). Anaxagoras migrated to Athens about B.C. 460, the first philosopher to take up his abode there. The intimate friend and teacher of Pericles (Plato, *Phædrus*, 270), he taught in Athens thirty years, numbering among his pupils Euripides, Thucydides, Archelaus, and Metrodorus of Lampsacus. His influence was far-reaching in introducing rationalism into Greece.

His chief work, entitled περὶ Φύσεως ('on Nature'), complete in several volumes, was published, probably in Athens, after B.C. 467, the year of the great fall of meteorites which he mentions. It was written in prose, and was the first Greek book, with the exception of geometrical writings, to be illustrated with diagrams. Considerable fragments survive, most of which are found in Simplicius' commentary on Aristotle's *Physics*.

At the beginning of the Peloponnesian war, when Pericles' popularity began to wane, Anaxagoras was arraigned for impiety, accused of denying the godhead of the sun and moon, and of saying that the sun was burning stone, and the moon earth (Plato, *Apol.* 26 D). Pericles saved him, but he was exiled to Lampsacus, on the southern shore of the Hellespont, about B.C. 430. There he had many disciples, and died in B.C. 428. A stone was erected to his memory bearing on one side the word Νοῦς and on the other Ἀλήθεια (Arist. *Rhet.* Bk. II. cap. 23).

That matter is neither generated nor destroyed had been the doctrine of the Ionian physicists for a full century. Heraclitus brought the idea of becoming into prominence, but Anaxagoras believed absolute change impossible. 'The Hellenes,' he said, 'are wrong in using the expressions "coming into being" and "perishing"; for nothing comes into being or perishes, but there is mixture and separation of things that are.' To Anaxagoras the eternity of matter involved the eternity of all its qualities, therefore the problem that confronted him was the origin of force. The three great systems of Empedocles, the Atomists, and Anaxagoras, all accepted the unchanging character of particles of matter and the separation of matter and force; Anaxagoras' book shows acquaintance with both of the other systems. Anaxagoras posited the *Nous* to satisfy his strongly developed sense of causation, to account for order in the universe, and to solve a definite mechanical problem.

In the beginning was chaos, which contained original particles of all existing objects, for 'How could hair come from not-hair, and flesh from not-flesh?' (Diels, cf. *Hermes*, xiii. 4). Anaxagoras calls the particles 'seeds' or 'things' (σπέρματα or χρήματα, Fr. 4 [Schorn]); but they were called *homœomeriæ* by a later half-Aristotelian phraseology. All things were together and occupied all space. There was no empty space. The action of the *Nous* upon some point of chaos produced rotation of inconceivable rapidity, which, ever widening in extent, caused the union of homogeneous particles. The impulse of the *Nous* was initial. Revolution followed and separation by force and speed, 'and speed makes force' (Fr. 11 [Schorn]). The earth was formed in the centre of this movement. The sun, moon, and stars were separated by the violence of the motion, and the celestial globe increased in circumference as ever-increasing masses of matter were included in the rotation. Homogeneous seeds combine to form objects as we know them, but there is never absolute freedom from disparate seeds. Objects become so by the kind of matter prevailing in them. Earth, water, air, and fire are complex substances containing particles belonging to all objects. The sun is a mass of ignited stone as large as, or larger than, the Peloponnesus. The earth is flat or a flat cylinder, resting on the air. Anaxagoras discovered with tolerable accuracy the cause of the phases of the moon and of eclipses, and he explained at length various meteorological and elemental phenomena. His observation in early manhood of a huge meteoric stone which fell at Ægospotami may have helped him to form his cosmological theories (Pliny, *HN* ii. 58; Diog. Laert. I. iii. 10).

Anaxagoras believed in the qualitative trustworthiness of sense-perception, but the senses, being weak, cannot discern the truth (Sext. Emp. *Math.* vii. 90). Sensation is produced by opposites, and is connected with pain (Theoph. *de Sens.* 27, 29; Diels, *Dox.* p. 507). That which is hot is also somewhat cold. Our senses show us the proportions that prevail. 'Snow must be dark, because the water from which it comes is dark' (Sext. Emp. *Hyp.* i. 33). The superiority of man lies in his possession of a hand. Death is a simple necessity of nature.

The *Nous* is the rarest and purest of all things, in its essence homogeneous, a kind of reasoning force, or thought-stuff. Personality is attributed to it in one fragment only, which speaks of its knowledge of the past, present, and things to come (Fr. 6 [Schorn]). The *Nous* was a possible first cause of motion from a dualistic standpoint, a *deus ex machina* according to Aristotle, and merited the disappointment which Plato in the *Phædo* attributes to Socrates regarding it. Yet it forms an important link in the shifting of interest from nature to man; and, although metaphysically an incomplete conception, the *Nous* of Anaxagoras was pronounced immaterial by Plato, Aristotle, and Theophrastus.

Anaxagoras' teaching regarding the laws of nature and unity in the cosmic process formed a marked contrast to the mythical ideas of his age. His great contribution to knowledge was in the scientific method employed and in referring order in the universe to a rational principle. Anaxagoras left no distinctly ethical or religious teachings. He considered contemplation of nature the highest task of man.

ANCESTOR-WORSHIP AND CULT OF THE DEAD.—The worship of the Manes, or ancestors, is, says Tylor (ii. 113), 'one of the great branches of the religion of mankind. Its principles are not difficult to understand, for they plainly keep up the social relations of the living world. The dead ancestor, now passed into a deity, simply goes on protecting his own family and receiving suit and service from them as of old; the dead chief still watches over his own tribe, still holds his authority by helping friends and harming enemies, still rewards the right and sharply punishes the wrong.' In this view of the case the departed ancestor is regarded as invariably kindly and well disposed towards his surviving relatives; and it may be said that this is the usual feeling of savage and barbaric man towards his kinsfolk who have passed into the other world. But there are, as will be seen, exceptions to this general rule; and the question of the attitude of the living towards the dead has formed the subject of controversy between two schools of anthropologists.

1. *The dead regarded as friendly.*—What may be called the totemistic school—that which regards totemism as the main source from which religion has been evolved—dwells specially upon the kindly relations between the deity and his worshippers. Thus, according to W. R. Smith (213–357), primitive sacrifice is an act of communion, the totem animal or beast sacred to the god being slain in order to renew or re-establish the bond of connexion between the clan and its supernatural ally. Hence he rejects the supposition that 'religion is born of fear.' 'However true,' he writes (p. 54), 'it is that savage man feels himself to be environed by innumerable dangers which he does not understand, and so personifies as invisible or mysterious enemies of more than human power, it is not true that the attempt to appease these powers is the foundation of religion. From the earliest times, religion, as distinct from magic or sorcery, addresses itself to kindred and friendly beings, who may indeed be angry with their people for a time, but are always placable except to the enemies of their worshippers or to renegade members of the community. It is not with a vague fear of unknown powers, but with a loving reverence for known gods who are knit to their worshippers by strong bonds of kinship, that religion in the only true sense of the word begins.'

This theory has been extended by Jevons (*Introd. Hist. Rel.* 54 ff.) to the cult of the dead. He contends that primitive man was 'ordinarily and naturally engaged in maintaining such [friendly] relations with the spirits of his deceased clansmen; that he was necessarily led to such relations by the operation of those natural affections which, owing to the prolonged, helpless infancy of the human being, were indispensable to the survival of the human race: and that the relations of the living clansman with the dead offered the type and pattern, in part, though only in part, of the relations to be established with other, more powerful, spirits.' In support of this position, he contends that the maintenance of the parental instincts and family affection was essential to the survival of primitive man in the struggle for existence; and he quotes instances of the grief felt by the survivors when a death occurs in the family; the provision of food and other necessaries for the use of the dead; the retention of the corpse in the dwelling-house for a considerable period after death, or its ultimate burial beside the hearth; the preservation of relics of the departed; the appeals of the mourners to the ghost, imploring it to return home; the adoption of cremation, which frees the soul from the body and thus enables it to revisit its friends; the custom of catching the departing soul; the periodical feasts which the dead are invited to attend; and so on (*op. cit.* 46 f.).

2. *The dead unfriendly to the living.*—On the other hand, the same writer (p. 53) admits that love was not 'the only feeling ever felt for the deceased. On the contrary, it is admitted that fear of the dead was and is equally wide-spread, and is equally "natural."' These two apparently opposite modes of thought in relation to the dead he explains by the supposition that primitive man draws a clear line of distinction between the ghost of the kinsman and that of the stranger; the one is kindly and protective, the other malignant, dangerous, and hence an object of fear. 'In fine, he remarks (*op. cit.* 54), 'as we might reasonably expect, the man who was loved during his lifetime did not immediately cease to be loved even by savages, when he died, nor was he who was feared in life less feared when dead.' The many instances of the savage cult of the dead, when it is prompted by fear, he regards as due to 'mal-observation of the facts of savage life.'

But these cases are so numerous that it is impossible to account for them in this way. Thus it is universally admitted that the spirits of strangers and enemies are inimical, and the same feeling is extended to those who have perished by an untimely death, or in some unusual or tragical way. On this principle Frazer (*GB*[2] i. 331) explains the inconvenient restrictions imposed on the victors in their hour of triumph after a successful battle, in obedience to which the warrior is isolated for a period from his family, confined to a special hut, and compelled to undergo bodily and spiritual purification. For the same reason, on the return of the successful head-hunter in Timor, sacrifices are offered to propitiate the soul of the victim whose head has been taken, and it is generally believed that some misfortune would overtake the victor were such offerings omitted. For the same reason, the same feeling is very generally extended to the

ghosts of kindred in the case of children, youths, or maidens snatched away in the prime of their strength and beauty. These are naturally supposed to cherish feelings of jealousy or hatred towards the survivors, who are in the enjoyment of blessings from which they are excluded. The same is the case with the ghosts of women dying in childbirth, who are almost universally regarded as specially dangerous. Equally malignant are the spirits of the murdered man, of one slain by a wild beast, or dying from snake-bite. This feeling is naturally extended to the ghosts of wizards or sorcerers, who were renowned during life on account of the mysterious powers which they were supposed to possess. Thus the Patagonians lived in terror of the souls of their sorcerers, who were believed to become evil demons after death; and the Turanian tribes of N. Asia dread their shamans even more when dead than when alive (Falkner, *Descript. of Patagonia*, 116; Castrén, *Finsk mytologi*, 124; Bastian, *Mensch in der Geschichte*, ii. 406; Karsten, *Origin of Worship*, 110).

Such cases may be easily explained; but the fear of the dead is not confined to spirits of the classes already enumerated. 'Death and life,' writes Tylor (ii. 25), 'dwell but ill together, and from savagery onward there is recorded many a device by which the survivors have sought to rid themselves of household ghosts.' He instances the habit of abandoning the dwelling-house to the ghost, which appears in some cases to be independent of horror, or of abnegation of all things belonging to the dead; and the removal of the corpse by a special door, so that it may not be able to find its way back. In some cases, again, the return of the ghost is barred by physical means. In parts of Russia and East Prussia, after the corpse is removed, an axe or a lock is laid on the threshold, or a knife is hung over the door; and in Germany all the doors and windows are shut, to prevent the return of the ghost. With the same object the Araucanians strew ashes behind the coffin as it is being borne to the grave, so that the ghost may miss the road; and Frazer suggests that the very general practice of closing the eyes of the dead was based upon the same principle, the corpse being blindfolded that it might not see the road by which it was borne to its last home (*JAI* xv. 68 ff.). In India the Aheriyas, after cremating the corpse, fling pebbles in the direction of the pyre to scare the ghost; and in the Himalayas one of the mourners, on returning from the funeral, places a thorny bush on the road wherever it is crossed by another path, and the nearest relative puts a stone on it, and, pressing it down with his feet, prays the spirit of the dead man not to trouble him (Crooke, *Pop. Religion*, ii. 57).

Appeals are often made to the spirit, imploring it not to return and vex its friends. Among the Limbus of Bengal, the officiant at the funeral delivers a brief address to the departed spirit on the general doom of mankind and the inevitable succession of life and death, concluding with an exhortation that he is to go where his fathers have already gone, and not come back to trouble the living in dreams (Risley, *Tribes and Castes of Bengal*, ii. 19). Similar appeals are made by the Chinese, Dakotas, and the Karieng (Frazer, *JAI* xv. 65). The Yoruba sorcerer wishes a safe journey to the ghost: 'May the road be open to you; may nothing evil meet you on the way; may you find the road good when you go in peace.' The house of death is abandoned or burned, the deceased is called upon by name, and adjured to depart and not haunt the dwellings of the living (Ellis, *Yoruba-speaking Peoples*, 156, 160). Even in India, a land where the worship of ancestors widely prevails, the Santāl believes that the ghostly crowd of spirits who flit disconsolately among the fields they once tilled, who stand on the banks of the mountain streams in which they fished, and glide in and out of the dwellings where they were born, grew up, and died, require to be pacified in many ways. He dreads, says Hunter, his Lares as much as his Penates (*Annals of Rural Bengal*, 1897, p. 183).

3. *Prevalence of Ancestor-worship.*—In the sectional articles which follow, the character and prevalence of ancestor-worship in various parts of the world will be considered. In Australia it seems to be in little more than an embryonic stage; and the same may be said of New Zealand and Tasmania. Throughout Polynesia and Melanesia the cult is well established. In the Malay Peninsula it appears in the primitive animistic form, influenced by Islām. In the Semitic sphere the evidence for its existence is inconclusive. In Africa it prevails widely among the Bantu tribes, and in W. Africa became the State cult of the kingdoms of Ashanti and Dahomey. The elaborate death cult of the Egyptians was probably largely influenced from the south and west of the continent. In various forms it appears throughout the American region. It is, however, in India and in China, whence it seems to have been carried to Japan, that it appears in the highest vigour.

4. *Worship defined.*—At the outset it is necessary to define with some approach to accuracy what we mean when we speak of the 'worship' of ancestors. There are few races in the world which do not practise what has been called a death cult in some form, that is to say, we notice everywhere in the methods of disposal of the dead, in the funeral rites, and in the solemnities performed either immediately after the removal of the corpse, or subsequently at periodical intervals, one of two predominant ideas. Some people seem to desire to put the dead man out of sight, and thus relieve the survivors from any danger which may result from the hostility of the spirit; in other cases we find the relatives animated by a desire to maintain affectionate or friendly relations with the departed dead, to placate or gratify them, to supply them with food and other necessaries needed to maintain them in the new state of life on which they have entered. The latter is probably the most primitive, and is certainly the most general attitude adopted by the survivors. But even if we admit that the survivors do thus endeavour to secure amicable relations with the spirits of their departed friends, and that on occasion they may, in return, solicit their aid and sympathy, we are as yet far from reaching what may be rightly called 'worship' of the dead. 'Religion,' in its narrowest sense, has been defined by Frazer (*GB*^{2} i. 63) as 'a propitiation or conciliation of powers superior to man which are believed to direct and control the course of nature and of human life.' For our present purpose it is on the words in this definition 'superior to man' that the question depends. Savage or barbaric man usually regards his departed relatives as needing his ministration and aid, rather than thinks that he is dependent upon them for protection and support. He pictures the soul when it leaves the body as a diminutive, feeble entity, which must be carefully protected from injury, and for which a suitable refuge must be provided where it can await the period when it is finally admitted into death-land. Even there, as we see in Homer's Nekuia, the common dead are conceived to pass a weak and passionless existence, a feeble imitation of that which they enjoyed on earth. It is only certain heroic souls who acquire a higher degree of strength and vitality, and even they can be roused to meet and converse with their friends on earth only when they lap the blood of the victim from the sacrificial trench. When this conception of the

helpless life of the departed prevails, it is obvious that the loving sympathy and ministrations of the living to the departed do not rise to the dignity of 'worship.'

The distinction, then, between the worship and the placation, or tendance, of the dead is one of great importance, which many of our travellers and observers have failed to appreciate. There are cases in which the dead are worshipped; but those of placation and ministration to the needs of the departed in the other world are much more numerous. In the accounts which follow of the prevalence of this form of worship in various parts of the world, the evidence upon which they are based must be accepted with this preliminary reservation. This distinction, again, if kept steadily in view, will enable us to account in some degree for the remarkable differences of opinion which prevail regarding this form of belief. Hence we must receive with some degree of caution the accounts of travellers who report that certain tribes are exclusively devoted to the worship of their ancestors, or that this form of belief does not exist among them. Two things are liable to cause misconception. In the first place, the veil which the savage hangs round his most cherished beliefs and ritual is so closely woven that casual visitors to a savage or semi-savage tribe, or even persons who have resided amongst them for some time, and have acquired some considerable knowledge of their language and character, find great difficulty in penetrating the mysteries of their religion. In the second place, the death cultus, which ordinarily takes place at the grave, is of necessity a formal and public act, and is likely to be observed and investigated by the casual inquirer, who may remain in complete ignorance of what is really the vital part of the tribal beliefs.

5. *Ancestor-worship the basis of human religion.*—The theory which suggests that the cult of ancestors is the basis of all human religion is usually associated with the name of H. Spencer. This writer begins his summary of the conclusions at which he has arrived, by dealing with what may he called the hero cult. 'Anything,' he writes, 'which transcends the ordinary, a savage thinks of as supernatural or divine; the remarkable man among the rest. This remarkable man may be simply the remotest ancestor remembered as the founder of the tribe; he may be a chief famed for strength or bravery; he may be a medicine-man of great repute; he may be an inventor of something new. And then, instead of being a member of the tribe, he may be a superior being bringing arts or knowledge; or he may be one of a superior race predominating by conquest. Being at first one or other of these, regarded with awe during his life, he is regarded with increased awe after his death; and the propitiation of his ghost, becoming greater than the propitiation of ghosts less feared, develops into an established worship' (*Principles of Sociology*, i. 411).

This view of the hero cult may be accepted with some reservation. In the first place, there are grounds for believing that fear is not the only, or even the primary, reason for the deification of the hero. The cult of the distinguished dead was often founded, not so much upon awe as upon the desire of the survivors to maintain friendly relations with the spirits of the departed (Jevons, *Introd.* 106). Secondly, in those parts of the world where the hero cult is developed to its highest form, the devotion paid to the hero is of a degree inferior to that of the regular gods, who are often nature spirits, and not necessarily ghosts of the dead. This distinction is clearly marked in Greece, where the cult of Heracles or Asklepios is of a lower grade than that of deities like Athene or Zeus. The ritual of hero-worship is also clearly different from that used in the worship of the gods. The same is the case in India, where heroes like Rāma or Krishna, who have been elevated to the rank of gods, are found sheltering themselves as *avatāras*, or incarnations, of a great nature deity like Vishnu.

But Spencer goes much further than to recognize a cult of the deified hero. Following the passage already quoted, he goes on to say: 'Using the phrase ancestor-worship in its broadest sense as comprehending all worship of the dead, be they of the same blood or not, we conclude that ancestor-worship is the root of every religion.' Even the most downright upholders of the Spencerian hypothesis are unable to accept it when thus extended. Thus Grant Allen (*Evolution of the Idea of God*, 36) observes: 'I do not wish to insist that every particular and individual god, national or naturalistic, must necessarily represent a particular ghost, the dead spirit of a single definite once-living person. It is enough to show, as Mr. Spencer has done, that the idea of the god, and the worship paid to the god, are directly derived from the idea of the ghost, and the offerings made to the ghost, without holding, as Mr. Spencer seems to hold, that every god is, and must be, in ultimate analysis the ghost of a particular human being.' And in another passage (*ib.* 42) he writes: 'Religion has one element within it still older, more fundamental than any mere belief in a god or gods—nay, even than the custom or practice of supplicating and appeasing ghosts or gods by gifts and observance. That element is the conception of the Life of the Dead. On the primitive belief in such life all religion ultimately bases itself. The belief is, in fact, the earliest thing to appear in religion, for there are savage tribes who have nothing worth calling gods, but have still a religion or cult of their dead relatives.' Elsewhere, in discussing the cult of Attis, he seems to suggest that the tree-spirit and the corn-spirit originate in the ghost of the deified ancestor (*Attis*, 33 and *passim*).

Needless to say, these views have not met with general acceptance. Thus Hartland (*Legend of Perseus*, i. 203) regards this Euhemerism of Spencer as 'a child (one among many) of his passion for explaining everything quite clearly, for stopping up all gaps and stubbing up all difficulties in his synthesis, rather than an all-sufficient account of the beginnings of religion.' Lang (*Myth, Ritual and Religion*, ed. 1899, i. 308 f.) attacks what he calls 'the current or popular anthropological theory of the evolution of gods,' on various grounds. He finds in this hypothesis a 'pure Euhemerism. Gods are but ghosts of dead men, raised to a higher and finally to the highest power.' Analogous to this, but not identical, is the theory of Tylor (ii. 334), which suggests that 'man first attains to the idea of spirit by reflexion on various physical, psychological, and psychical experiences, such as sleep, dreams, trances, shadows, hallucinations, breath and death, and he gradually extends the conception of soul or ghost till all nature is peopled with spirits. Of these spirits one is finally promoted to supremacy, where the conception of a supreme being occurs.' To this combined animistic and ghostly theory Lang replies (*ib.* i. 310) that all gods are not necessarily of animistic origin. 'Among certain of the lowest savages, although they believe in ghosts, the animistic conception, the spiritual idea, is not attached to the relatively supreme being of their faith. He is merely a powerful *being*, unborn, and not subject to death. The purely metaphysical question, "Was he a ghost?" does not seem always to have been asked. Consequently there is no logical reason why man's idea of a Maker should not be prior to man's idea that there are such things as souls, ghosts and spirits. Therefore the animistic theory is not necessary as material for the "god-

idea." We cannot, of course, prove that the "god-idea" was historically prior to the "ghost-idea," for we know no savages who have a god and yet are ignorant of ghosts. But we can show that the idea of God may exist, in germ, without explicitly involving the idea of spirit. Thus gods *may* be prior in evolution to ghosts, and therefore the animistic theory of the origin of gods in ghosts need not necessarily be accepted.' Secondly, he urges that, in all known savage theological philosophy, the God, the Maker and Master, is regarded as a being who existed before death came into the world. Everywhere death is looked on as a comparatively late intruder, who entered this world not only after God was active, but after it had been populated by men and beasts. 'Thus the relatively supreme being, or beings, of religion are looked on as prior to Death, therefore, not as ghosts.' Thirdly, the Vui of Melanesia and the Atua of the Tongans are '*beings*, anthropomorphic, or (in myth and fable) very often bestial, "theriomorphic." It is manifest that a divine being envisaged thus need not have been evolved out of the theory of spirits or ghosts, and may even have been prior to the rise of the belief in ghosts.' Fourthly, as among the Andamanese, Fuegians, and Australians, 'these powerful, or omnipotent divine beings are looked on as guardians of morality, punishers of sin, rewarders of righteousness, both in this world and in a future life, in places where ghosts, though believed in, *are not worshipped, nor in receipt of sacrifice*, and where, great-grandfathers being forgotten, ancestral ghosts can scarcely swell into gods.' Such gods, not receiving sacrifice, 'lack the note of descent from hungry food-craving ghosts.' If to this it be replied that the Australians are degenerate and must once have had chiefs or kings whose surviving ghosts have become their gods, he answers that there is no evidence of Australian degeneration. They have, on the contrary, advanced 'when they supersede their beast or other totem by an eponymous human hero.' Lastly, the theory being thus found inadequate to explain the facts of the lowest 'savage' religions, it is equally inapplicable to the 'barbarian' stage of culture. Here we often find a highest deity who is seldom worshipped with sacrifice, who has become otiose, a mere name, finally a jest and a mockery; while 'ancestral ghosts, and gods framed on the same lines as ghosts, receive sacrifice of food and of human victims.' Besides this, the higher barbarian gods are localized, which is not the case with the high gods of low savages. This 'break or flaw in the strata of religion' he explains by 'the evolution through ghosts of "animistic" gods who retained the hunger and selfishness of these ancestral spirits whom the lowest savages are not known to worship.' Such gods, needing constant sacrifices, are easily bribed to overlook the moral delinquencies of their worshippers, or to forgive their sins. Thus animism 'is on its way to supplant or overlay a rude early form of theism,' and thus the current theory, which makes the highest god the latest in evolution from a ghost, breaks down. The tribal or national deity, as latest in evolution, ought to be the most powerful, whereas among barbarians he is 'usually the most disregarded.' This line of argument may be accepted without admitting the implication that monotheism is a primitive form of belief, and it is to this extent valid against the Spencerian hypothesis.

As for the gods of nature, it is difficult to understand how the belief in them could have arisen through an ancestor-cult. It is possibly true, as Ellis (*op. cit.* 282) observes, that they are sometimes blended with ghost-gods; 'the reverence paid to certain rivers, rocks, cliffs, etc., must have often dated from some fatal accident that occurred in connexion with them. It was this which first attracted attention, and primitive man would not be likely to discriminate between the ghost of the victim, which would haunt the spot where the latter lost his life, and the indwelling spirit of the natural feature.' But such cases could never have been common, and the reverence paid to any abnormal feature of natural scenery would generally be quite independent of any association with a ghost. Still more is this the case with gods of sky, sun, moon, wind, or rainbow. The animism which leads to the worship of phenomena like these cannot depend upon, and may be earlier than, the belief in the survival of the soul after death.

6. *Ancestors oracular.*—Ancestral spirits are believed to be able to give oracles to their descendants, who consult them in times of danger or trouble. At certain places deep chasms or openings in the earth were observed, through which the shades could rise from their subterranean home, and give responses to the living. The Greeks called such places oracles of the dead (*νεκυομαντεῖον*, *ψυχομαντεῖον*, *ψυχοπομπαῖον*). The most ancient oracle of this kind was that of Thesprotia, where Periander succeeded in conjuring up and questioning the ghost of his murdered wife, Melissa (Herod. v. 92; Paus. ix. 30. 3). There was another at Phigalia in Arcadia (Paus. iii. 17. 8, 9), and Italy possessed one at Lake Avernus (Diod. iv. 22; Strabo, v. 244). The regular mode of consulting such oracles was to offer up a sacrifice and then to sleep in the sacred place. The soul of the dead man then appeared to the sleeper in a dream, and gave his answer (Frazer, *Paus.* iii. 243). The same belief is found in many forms in other parts of the world. In Melanesia, 'after a burial they would take a bag and put Tahitian chestnut and scraped banana into it. Then a new bamboo some ten feet long was fixed to the bag, and tied with one end in the mouth of it, and the bag was laid upon the grave, the men engaged in the affair holding the bamboo in their hands. The names of the recently dead were then called, and the men holding the bamboo felt the bag become heavy with the entrance of the ghost, which then went up from the bag into the hollow of the bamboo. The bamboo and its contents being carried into the village, the names of the dead were called over to find out whose ghost it was. When wrong names were called, the free end of the bamboo moved from side to side, and the other was held tight. At the right name the end moved briskly round and round. Then questions were put to the enclosed ghost, Who stole such a thing? Who was guilty in such a case? The bamboo pointed of itself at the culprit if present, or made signs as before when names were called. This bamboo, they say, would run about with a man if he had it only lying on the palms of his hands; but it is remarked by my native informants, though it moved in men's hands it never moved when no one touched it' (Codrington, *Melanesians*, 211 f.). Among the Akikuyas of E. Africa, the medicine-man holds converse only with those recently dead, whose lives he had been unable to save. He goes out and visits the corpse when it has been thrown out into the jungle. He pours 'medicine' upon its hands, and calls on it to rise. When it rises, the wizard says: 'Revile your father, mother, and brothers.' It does so, and after the wizard has thrown more 'medicine' upon it, the conversation ceases. Persons so reviled get sick and die (*JAI* xxxiv. 262). In S. Africa the wizard in the same way gets into communication with the spirit world, and delivers oracles in the form of riddles and dark parables (*ib.* xx. 120). The Dayaks sometimes, like the Greeks, seek communion with the ancestral spirits by sleeping at their graves in the hope of getting some benefit from them (Roth, *Natives of Sarawak.*

i. 211). In Australia some specially gifted seers are able to see the disembodied spirit sitting on the spot where its body lies buried, and no longer able to retire into its accustomed habitation (*JAI* xvi. 54). In Lapland, according to Scheffer (Borlase, *Dolmens of Ireland*, ii. 477), the Lapps buried their dead in caves, sacrificed a reindeer in honour of the dead, and fasted for three days after the burial. When offering the sacrifice, they inquired the will of the Sitte or ancestral ghosts. They said: 'O ye Sitte, what will ye have?' Then they used to beat a drum on which a ring was laid, and if the ring fell on any creature pictured on its surface, they understood that this was what the spirit desired. They then took the animal thus selected, ran through its ear and tied round its horn a black woollen thread, and sacrificed it. Sometimes the wizard pretends to go in person to death-land to consult the ancestral spirits. Among the Dayaks he possesses a charm which ensures the aid of a kindly spirit when he goes to Sabayan, the under world, in search of the soul of a sick man (*JAI* xxxiii. 81). The Melanesians tell a similar story of a woman who went to Panoi to consult the dead, and the Australian wizard is able to bring back news from the dead, or he ascends the sky, visits Daramulun, and obtains magical power from him (*ib.* x. 283, xiii. 195). In W. Africa the Yoruba priest takes a young child, bathes his face in the 'water of purification,' and digs a hole in the earth within the sacred grove at midnight. When the child looks into the hole, he is able to see Dead-land, and can tell the priest what he sees. When his face is washed a second time, he forgets all that has happened (Ellis, *op. cit.* 141). Such powers, often gained under the influence of fasting, are claimed by shamans all over the world (Tylor, ii. 410 f.).

7. *Disease, etc., caused by ancestral spirits.*—When the attention of a tribe is fixed on the cultus of ancestors, it becomes a natural inference that disease or other misfortune is due to neglect of their worship. In Celebes, all sickness is ascribed to the ancestral spirits who have carried off the soul of the patient (Frazer, *GB*[2] i. 265). This reminds us of the Greek conception of the Keres and Harpies (Harrison, *Proleg.* 176 ff.). In the same way, wrathful ancestors are supposed to cause tempests; the thunder is their voice. In Peru, when parents who have lost a child hear thunder within three months of the death, they go and dance on the grave, howling in response to each clap, apparently believing that they hear the sighs and groans of their lost child in the rumble of the thunder (Frazer, *Lect. on Kingship*, 206 f.). In some cases the wrath of the spirit is attributed to causes which we can only regard as frivolous. In Natal we hear of a diviner announcing to his people that the spirits had caused disease because they did not approve of some persons living in the kraal of a relative, and wished them to have a house of their own (*JAI* i. 181). Sometimes, again, the spirit is provoked on account of a sin committed by his people. Among the Banyoros of Uganda, the death of a man by lightning is attributed to the anger of the Bachwezi, or ancestral spirits, on account of some sin committed by the dead man, or wrong-doing on the part of members of the clan. To appease them, a sacrifice is demanded (Johnston, *Uganda*, ii. 539 f.). In Florida, according to Codrington, 'it is a *tindalo*, that is, a ghost of power, that causes illness; it is a matter of conjecture which of the known *tindalos* it may be. Sometimes a person has reason to think, or fancies, that he has offended his dead father, uncle, or brother. In that case no special intercession is required; the patient himself or one of the family will sacrifice, and beg the *tindalo* to take the sickness away; it is a family affair.' But if the *tindalo* be that of a stranger, a doctor is called in to identify and propitiate it (Codrington, *Melanesians*, 194 f.). But generally the cause of offence to the spirit is that the relatives have neglected its wants. When a North American Indian fell into the fire, he believed that the spirits of his ancestors pushed him in because their worship was neglected (Schoolcraft, i. 39). Often, again, it is caused by jealousy of the spirits towards the living, or it arises because the ghosts are lonely in Dead-land and desire companionship. For this reason spirits which have recently departed this life are apt to carry off with them to the world of the dead the souls of their surviving relatives (Frazer, *GB*[2] ii. 345 f.). Miss Kingsley was assured that the danger of the ancestral ghost's injuring the members of the family, particularly children, 'comes not from malevolence, but from loneliness and the desire to have their company. . . . This desire for companionship is, of course, immensely greater in the spirit that is not definitely settled in the society of spiritdom, and it is therefore more dangerous to its own belongings, in fact, to all living society, while it is hanging about the other side of the grave, but this side Hades' (*W. African Studies*, 133). Ellis, from whom Miss Kingsley probably borrowed the fact, says that ancestors cause sickness because the ghost wants the services of his relatives in Dead-land, and so hastens their departure from this world (*Ewe-speaking Peoples*, 109). It is a common belief that the spirits of people who have died a violent death may return to earth if they can find a substitute, and hence they are offended with any one who prevents another soul from taking his place by rescuing a person from drowning (Black, *Folk Medicine*, 28 f.). In Ireland, according to Lady Wilde, 'it is believed that the spirit of the dead last buried has to watch in the churchyard until another corpse is laid there, or to perform menial offices in the spirit world, such as carrying wood and water, till the next spirit comes from earth. They are also sent on messages to earth, chiefly to announce the coming death of some relative, and at this they are glad, for their own time of peace and rest will come at last' (*Ancient Legends, etc., of Ireland*, 1887, 82 f.). So in China 'it is commonly believed that if the spirit of a murdered man can secure the violent death of some one else, he returns to earth as if nothing had happened, the spirit of his victim passing into the world below and suffering all the misery of a disembodied spirit in his stead' (Giles, *Strange Stories from a Chinese Studio*, 1880, ii. 365). Fortunately, however, the patient is not always left to the mercy of the spirits of his enraged relatives. In San Cristoval, it was believed that the friendly and unfriendly ghosts fight with spears over the sick man. The patient would suffer, die, or keep his health according to the issue of this unseen spectral battle (Codrington, *op. cit.* 196).

8. *Ancestors appearing in children.*—The belief that the child is nothing more or less than an ancestor re-born on earth is found almost throughout the world. The idea, of course, depends upon the resemblance of members of the same family in successive generations. It is the basis of the extraordinary theory held by the Arunta tribe in Central Australia regarding conception, and among the northern tribes of the same continent every new child is believed to be the incarnation or re-incarnation of spirit children left by remote ancestors (Spencer-Gillen[3], 51 f., 337; *FL* xv. 467). Among the Thlinkets of N. America, the spirit was 'believed to have the option of returning to this life, and generally entered the body of a female relative to form the soul of a coming infant. If the child resembled a deceased friend or rela-

tion, this embodiment was at once recognized, and the name of the dead person was given to it' (Bancroft, *Native Races*, iii. 517). In the same region the Nootkas accounted for the existence of a distant tribe speaking the same language as themselves by declaring them to be the re-incarnated spirits of their dead (*ib.* iii. 514). In W. Africa the Yorubas inquire of their family god which of the deceased ancestors has returned, in order to name the child after him, and its birth is greeted with the words 'Thou art come,' as if addressing some one who has returned; and their neighbours, the Ewe, believe that the only part of its body which a child receives from its mother is the lower jaw, the rest being derived from the ancestral spirit (Ellis, *op. cit.* 120, 131). The same procedure in naming children appears among the Khonds of India, where the priest drops grains of rice into a cup of water, naming with each grain a deceased ancestor. From the movement of the seed in the water and from observation of the child's person he decides which ancestor has reappeared in it, and the name is usually given accordingly. Hence we can explain why in the islands of Watabela, Aaru, and the Sula Archipelago barren women and their husbands visit certain sacred graves to pray for offspring—the spirits of the sainted dead being thus re-incarnated (Ploss, *Das Weib*, 1887, i. 436 ff.). The same belief appears in W. Europe in the habit of young girls in the Pyrenees going to a dolmen to pray for a lover, and young brides for a child; in the erotic superstitions connected with rude stone monuments in Spain, Brittany, and Ireland; and in the cycle of Irish legend connected with the bed of Dermot and Grania (Borlase, *Dolmens of Ireland*, 580, 689, 845 f.). This leads immediately to the theory of metempsychosis, which is generally accepted among primitive races. In India it is doubtful whether this belief appears in the Vedas, but it is admitted in the later Purānic literature, and at the present day in the Panjāb it is quite logically accepted to explain the fact that, as the soul is transmitted from generation to generation, so with the life are transferred all attributes and powers of the progenitor. Hence we have numerous instances here of the transmission of the hereditary powers of curing disease or causing evil which are believed to be found in certain clans and families. 'This principle of inherited supernatural powers or sanctity is much more deeply rooted than that of caste. It is natural and fitting that a man should follow his father's trade, but he may change his occupation. . . . When once sanctity has been acquired by a family, it is next to impossible to shake it off. Social status is much less permanent. The original conception of the metempsychosis appears then to have been that the life or soul, with all its attributes, was transmitted by natural descent. This idea was developed into the doctrine that the soul transmigrated from one body to another independently of such descent, but this doctrine did not regard transmigration as something fitful and uncertain; on the contrary, religion held that it was subject to one set of rules, and magic that it could be regulated, but in neither sense was transmigration a matter of chance' (Rose, *Census Report, Panjāb*, 1901, i. 161 ff.). But, as Hartland remarks (*op. cit.* i. 220), 'the subtlety of savage metaphysics is marvellous. An acute observer points out that among the Tshi-speaking peoples of the Gold Coast and the Ewe-speaking tribes of the Slave Coast, a distinction is drawn between the ghostly self that continues the man's existence after death in the spirit-world, and his *kra* or *ñoli*, which is capable of being born again in a new human body. In the eastern Ewe districts and in Dahomey the soul is, by either an inconsistency or a subtlety, believed to remain in the land of the dead and to animate some new child of the family at one and the same time; but it never animates an embryo in a strange family.'

9. *Ancestor-worship and Totemism.*—The question of the relation of ancestor-worship to totemism has recently been discussed by Tylor, Hartland, and Frazer. Tylor (*JAI* xxviii. 146 f.) quotes from Wilken (*Het Animisme bij de Volken van den Indischen Archipel*, 1884–85, pt. i. p. 74 f.) cases of crocodiles being regarded as kindly and protective beings, to kill which is considered murder, as they may be man's near relatives. Offerings are made to them, and people look forward to the great blessedness of becoming crocodiles when they die. In the same way Sumatrans worship tigers, and call them ancestors. Some of the non-Aryan tribes of the central Indian hills believe that the ancestor is sometimes re-born in a calf, which in consequence of this connexion is well fed and treated with particular respect (Crooke, *Popular Religion*, i. 179). On this Tylor thus comments: 'Wilken sees in this transmigration of souls the link which connects totemism with ancestor-worship, and on considering his suggestion, we may see how much weight is to be given to the remarks made independently by Dr. Codrington as to Melanesia (*op. cit.* 32 f.). He found that the people in Ulawa would not eat or plant bananas, because an influential man had prohibited the eating of the banana after his death because he would be in it; the elder natives would say, we cannot eat so-and-so, and after a few years they would have said, we cannot eat our ancestor. . . . As to such details we may, I think, accept the cautious remark of Dr. Codrington, that in the Solomon Islands there are indeed no totems, but what throws light on them elsewhere. The difficulty in understanding the relation of a clan of men to a species of animals or plants is met by the transmigration of souls, which bridges over the gap between the two, so that the men and the animals become united by kinship and mutual alliance; an ancestor having lineal descendants among men and sharks, or men and owls, is thus the founder of a totem-family, which mere increase may convert into a totem-clan, already provided with its animal name. By thus finding in the world-wide doctrine of soul-transference an actual cause producing the two collateral lines of man and beast which constitute the necessary framework of totemism, we seem to reach at last something analogous to its real cause.'

Following on this discussion, Hartland considers the whole question in connexion with the tribes of S. Africa. He notices that the only branches of the Bantu race among which no certain traces of totemism and but few of mother-right are found are the Amazulus and their kindred tribes, the most advanced of the whole Bantu race. The Bechuanas, on the contrary, exhibit substantial remnants of totemism, and with them traces of mother-right. Thus in the lowest social stage of these races totemism is still flourishing, and patriarchal and pastoral institutions are struggling with it. Totemism is here, in fact, developing into ancestor-worship (Frazer, *Man*, i. 136), and the question is—How has ancestor-worship developed and supplanted totemism? This question Hartland answers by suggesting that it is entirely dependent upon the growth of the patriarchal system. 'The more absolute becomes the power of the head of a nation, and under him of the subordinate chiefs and the heads of families, the more the original totemism superstitions tend to disappear until they are altogether lost and forgotten.'

The same process seems to be going on in other parts of the world. Thus, in Yam, one of the islands in Torres Straits, the animal kindred come

to be replaced by a definite effigy, the soul of which is kept in an external receptacle, and the effigy is further associated with a hero (Haddon, *Cambridge Exped.* v. 377f.; *Head-hunters*, 138). Haddon regards this materialization of a totem as unique; 'so important a development of totemism is practically to place it beyond the realm of pure totemism.' We find something of the same kind in a totem-post from British Columbia, where, as Tylor remarks, 'the figures go beyond mere representations of the totem animals, and depict a mythic incident in which the human ancestor is believed to have come into relation with the animal which was thence adopted as the totem of the clan' (*JAI* xxviii. 136). The development of totemism into ancestor-worship is also illustrated by the case of the Bhuiya tribe in Bengal. They show great reverence for the memory of Rikhmun or Rikhiāsan, whom they regard, some as a patron deity, others as a mythical ancestor, whose name distinguishes one of the divisions of the tribe. Risley believes it possible that in the earliest stage of belief Rikhmun was the bear-totem of a sept of the tribe, that later on he was transformed into an ancestral hero, and finally promoted to the rank of a tribal god (*Tribes and Castes of Bengal*, i. 112).

With our present limited knowledge of the origin and development of totemism, which may at any time be revolutionized by fresh information from the Australian or other primitive tribes, it would be premature here to do more than quote these examples of ancestor-worship developing out of totemism, with the more or less plausible explanations which have been suggested to account for it.

10. *Ancestor-worship and Idolatry.*—We have more satisfactory evidence of the development of ancestor-worship into idolatry, a term not in itself satisfactory, but preferable to that of 'fetishism,' which possesses no scientific value. The practice of erecting carved representations of deceased ancestors is one of the many sources from which the idol was probably evolved. Its analogue is to be found in the primitive stone pillar, in which the god was manifested when blood was sprinkled upon it (Jevons, *Introd.* 133). This custom of erecting memorial images is very common in Melanesia and the adjoining region. At Santa Cruz, 'when a man of distinction dies, his ghost becomes a *duka*. A stock of wood is set up in his house to represent him. This remains, and is from time to time renewed, until the man is forgotten, or the stock neglected by the transference of attention to some newer or more successful *duka*.' Offerings are made to it in times of danger at sea, at the planting of a garden, on recovery from sickness, when fruit is laid before it (Codrington, *op. cit.* 139). In the Solomon Islands, if a person of great consequence dies, 'a figure may be made of him after his death, for the ornamentation of a canoe-house, or of a stage put up at great feasts. These images are hardly idols, though food may sometimes be put before them, though to remove them would be thought to bring down punishment from the dead man upon those who should so insult him' (*ib. JAI* x. 302). In Ambrym, however, the large figures screened with bamboos, which would naturally be taken for idols, are set up in memory of persons of importance at a great feast perhaps a hundred days after death. 'That they do not represent ancestors is fairly certain; the very oldest can be but a few years old' (*JAI* x. 294). They generally represent figures of men, who would be loosely called ancestors by the powerful people of the village, and these would be treated with respect, food being placed before them. 'But these had no sacred character, further than that they were memorials of great men, whose ghosts, visiting their accustomed abodes, would be pleased at marks of memory and affection, and irritated by disrespect. There was no notion of the ghost of the dead man taking up his abode in the image, nor was the image supposed to have any supernatural efficacy in itself.'

In the New Hebrides, a model of the dead chief is made of bamboo; the head is smeared over with clay, shaped and painted so as to be often a fair likeness of the deceased, and placed on the bamboo model, the whole image being set up in the god's house or temple, with the weapons and personal effects of the dead man. Boyd, who describes these images (*JAI* xi. 76, 81), is doubtful whether they are objects of affectionate regard or of worship, and Somerville (*ib.* xxiii. 21, 392) does not ascribe any religious character to them. But it is obvious that an image set up as a memorial and propitiated with offerings of food may very easily develop into an idol. Haddon (*Head-hunters*, 91) describes similar models in wax on skulls of deceased relatives. They seem to be kept mainly for sentimental reasons, as the people are of an affectionate disposition, and like to have memorials of departed friends; but they are employed mainly as *zogos*, or potent instruments of divination by which a thief, stolen goods, or a person who by means of sorcery had made any one sick, should be detected. The model was taken in procession, and was believed to be able to guide him who bore it to the house of the offender. There is much difference of opinion regarding similar images from Easter Island, some denying that they are worshipped; others alleging that they represent chiefs and persons of note, and that they are given a place at feasts and ceremonies; others, again, suggesting that they are used for purposes of divination. In the case of a rude cultus like this it is possible that all three suggestions may represent the varying conditions of the devotion paid to them (*Man*, iv. 73 f.). In New Guinea the explorers found two roughly carved wooden men, with bushy hair on their heads. When asked to sell them, the natives said: 'No. They belong to our ancestors, and we cannot part with them' (Chalmers-Gill, *Work and Adventure*, 229).

In India the use of such images seems to be largely based on the principle of providing a refuge for the ghost during the period which elapses between death and the completion of the funeral rites. Among the lowest castes in North India a reed is very generally fixed for this purpose near a tank, and water libations are poured upon it during the days of mourning. Woodthorpe (*JAI* xi. 65) describes the curious images erected by the Nāgas of the N.E. frontier over their graves. These are sometimes executed with much skill, the wrists and elbow-joints indicated, emerald beetle wings representing the eyes and a row of white seeds the teeth. 'They were clad in all the garments of the deceased, with their shields fixed on the left side, two imitation bamboo spears standing on the right.' The Khariyas, according to Dalton (*Descriptive Ethnology*, 160), make images of the same kind. In South India the Nāyars make an image of the dead man out of palmyra leaf, and to this rice and other things are offered (Fawcett, *Bull. Madras Museum*, iii. 248). Among the Kāfirs of the Hindu-kush the veneration paid to images of this kind seems to amount to actual worship. Sacrifices are made before them, and their descendants, when suffering from sickness, sprinkle blood upon their pedestals. A straw figure of a warrior is venerated at his funeral, and effigies of the honoured dead are erected over their graves (Robertson, *Kafirs of Hindu-kush*, 414, 635, 648).

The Ostiaks of Siberia make similar figures. Among them the effigy is 'worshipped with divine adoration for such a period of time as may be

determined by the Shaman or priest, not exceeding, however, three years, when the image is buried. Offerings of food are set before it at every meal; and if it represents a deceased husband, the widow embraces it from time to time, and lavishes upon it tokens of affectionate and passionate attachment. The image of a deceased Shaman is preserved from generation to generation; and 'by pretended oracular utterances and other artful impositions the priests manage to procure pious offerings as abundant as those laid on the altars of the acknowledged gods' (Featherman, *Ugro-Turanians*, 559, 575).

In America the same practice is well established. Of the Cemis or images raised by the aborigines of Hispaniola, Ferdinand Columbus states: 'They give the image a name, and I believe it is their father's or grandfather's, or both, for they have more than one, and some above ten, all in memory of their forefathers' (*JAI* xvi. 260). The grave-posts, roughly hewn into an image of the dead, appear among many tribes of the American Indians (Dorman, *Prim. Superstition*, 177 ff.). The Simil-kameen Indians of British Columbia place carved figures representing the dead on their graves. These are dressed in the clothes of the dead man, and when decayed are renewed (*JAI* xxi. 313). The Sioux set up a grave-post, recording the totem of the deceased warrior, with a record of his war-like expeditions and of the number of scalps taken by him, of which Schoolcraft gives illustrations (i. 356).

In Africa the Lindu, a forest tribe, have a distinct form of ancestor-worship, and are accustomed to remember the dead by placing roughly-carved dolls, supposed to represent the deceased person, in the abandoned hut in which he is buried (Johnston, *Uganda*, ii. 555). Miss Kingsley (*Travels*, 473) records a case where, on the death of a twin, an image of the child was carried about by the survivor as a habitation for the soul, so that it might not have to wander about, and being lonely call its companion to follow it.

When we come to races in a higher grade of culture, we find survivals of the same practice. The Roman noble exhibited in the wings which opened from his central hall the *imagines* or likenesses of his revered forefathers, which are believed to have been originally portrait-masks to cover the faces of the dead. These at funerals were fitted on to the faces of the actors who represented the dead man's ancestors, and when kept in the house were probably attached to busts (Smith, *Dict. Ant.*[8] ii. 992 ff.). The actors with these masks were seated on chairs of dignity at the funeral rites (Granger, *Worship of the Romans*, 65).

11. *Ancestor-worship in relation to the family.*—Ancestor-worship is primarily a family cult, based on the desire of the survivors to maintain friendly relations with the departed. But the family is a comparatively modern institution, and behind the modern family, organized on the principle of the maintenance of the *patria potestas* and succession in the male line, there is a long past, when possibly promiscuity and certainly polyandry or group-marriage, with the natural accompaniment of succession in the female line, must have prevailed. This is not the place to discuss the priority of father-right and mother-right. In Australia, at any rate, group-marriage is found to prevail where mother-right exists, and it is difficult to imagine how it could have arisen under conditions of father-right. Hence ancestor-worship cannot be regarded as a highly primitive belief. Jevons (*op. cit.* 194) is on less sure ground when he argues that it could not have arisen before the time when agriculture was started as the main industry of the human race. 'Originally,' he urges, 'the dead were supposed to suffer from hunger and thirst as the living do, and to require food—for which they were dependent on the living. Eventually the funeral feasts were interpreted on the analogy of those at which the gods feasted with their worshippers—and the dead were now no longer dependent on the living, but on a level with the gods. . . . It could not therefore have been until agricultural times that the funeral feast came to be interpreted on the analogy of the sacrificial feast.' It would, however, be unsafe to infer that the cult of ancestors is confined to tribes organized on the patriarchal system. Thus in South India the custom of tracing descent through the female seems to have widely prevailed, and the Nāyars, who still maintain this rule, are ancestor-worshippers. This they have not borrowed from the Hindus, but it has been derived by them from the primitive animism (Fawcett, *Bulletins Madras Museum*, iii. 157, 247, 253, 273). The same is the case with many of the lower castes in Northern India, among whom survivals of matriarchy can easily be traced, and with certain Melanesian races, who combine an ancestral cult with descent in the female line; as, for instance, the Pelew Islanders, the Ipalaoos of the Caroline Archipelago, the Chamorres of the Ladrones, and the Biaras of New Britain (Kubary, *Pelauer*, 39; Featherman, *Oc. Mel.* 356, 358, 396, 401, *Pap. Mel.* 52 ff.).

12. *Social Results of Ancestor-worship.*—It remains to consider briefly the effect of ancestor-worship on the social condition of the races which practise it. In the case of Japan, a writer in the *Times* (20th Nov. 1905) remarks: 'It is not difficult even for Europeans to understand how strong is the foundation, both for national and dynastic loyalty, which such a faith affords. It ensures that the whole Japanese people, from the highest to the lowest, shall ever bear in mind the existence and the strength of the innumerable ties which knit the present to the past. It is at once a safeguard against violent revolution and a guarantee of gradual progress. It is a conception which we cannot perhaps easily grasp in its fulness, but we can readily acknowledge its nobility and its simplicity, and we can feel how great and precious a factor it may be in moulding the hearts and minds of a nation.' To the same belief the sanctity of the household and, as a consequence, the inviolability of marriage, have been much indebted. The strong desire of every man to leave a son competent to perform the rites on which the happiness of his ancestors and of himself depended was one of the main foundations of that family life which is the basis of modern society, and, except in countries like India, where it conflicted with the prejudices of the priestly class, tended to raise the status of woman. On the other hand, in the ruder stages of society, the belief that the unappeased and angry soul of the father or kinsman hovered round the family hearth, and could be consoled by no propitiation save by the blood of the murderer slain by a member of the household, tended to foster the desire for revenge, to strengthen the feeling of hostility towards rival tribes, and to confirm the popular belief that 'stranger' and 'enemy' were synonymous terms.

LITERATURE.—The authorities have been freely quoted in the preceding pages. On the general subject see Spencer, *Principles of Sociology* (1877), pt. i. chs. xx. xxv.; Avebury, *Origin of Civilisation* (1870), 364 ff.; Tylor, *Primitive Culture*[3] (1891), ch. xiv.; de la Saussaye, *Manual of the Science of Religion*, 112 ff.; Jevons, *Introduction to the History of Religion* (1896), ch. xv.; Fustel de Coulanges, *La cité antique*; Howard, *History of Matrimonial Institutions* (1904); J. G. Frazer, *GB*[2] (1900), ii. 460, iii. 83; W. R. Smith, *Rel. of Sem.*[2] (1894), 213; Landtmann, *The Origin of Priesthood*, ch. ii.; Karsten, *The Origin of Worship, a Study in Primitive Religion* [the two last being academical dissertations addressed to the Alexander University of Finland]; Carpenter, 'The Gods Embodiments of the Race Memory' in *Hibbert Journal*, ii. 259 ff.

W. CROOKE.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (American).—1. Communion with spirits of the dead.—Perhaps the most marked feature of the religion of the American Indians is the vivid belief in life after death, possessed by nearly all of the many tribes from Alaska to Patagonia.* There can be little doubt that this belief was based upon the equally general belief in communication between mankind and the spirits of the dead.

Whatever may be the true explanation of that modicum of genuine phenomena, which some attribute to the action of spirits, and others to the sub-conscious self, the phenomena were recognized by the Indians long prior to the advent of modern spiritualism, and, at least in many cases, prior to the earliest historical contact with Europeans. The tribes regarded these phenomena as caused by the spirits of the dead. As a rule they were friendly spirits, those of tribal ancestors, relatives, or friends who returned to earth to warn, protect, instruct, or amuse the living. They were treated with reverence and respect, seldom with fear. They could be seen by those who trained their senses above the normal plane, in accordance with methods handed down from the ancestors, or sometimes, under unusual circumstances, by ordinary mortals.

The power of seeing them was believed to be acquired in various ways—by continued solitary meditation, by the use of certain narcotic herbs, by crystal-gazing. Those who acquired this power became mediums, and were respected as the 'Medicine Men' (a term possibly derived from the mysteries of the Meda Societies), magicians, or priests. By the aid of the spirits they were enabled to foretell the future, and to describe events occurring at a distance. Evidently, therefore, the spirits were believed to possess superhuman knowledge and power, and intercourse with them was sought to obtain this, not for purposes of worship. Amongst many tribes those who acquired this power are distinguished by various names, according to the scope of their attainments, but the principal distinction is between those who are controlled by the unseen forces and those who control them. Only the masters were enabled to compel the spirits to do their bidding. No instances are given of the abuse of these powers. Like the spirits themselves, those who were supposed to hold intercourse with them seem to have been regarded only in a favourable light. As to the effect of these practices upon the medium personally, nothing is heard. Besides these methods of obtaining intercourse with spirits, some men were believed to be born gifted with this power, to some others it could be quickly or instantly imparted by masters. In dreams and visions and under unusual circumstances, spirits were believed to appear, without mediumistic interposition, to ordinary mortals.† There is hardly a tribe to-day which does not possess at least one member who believes that he is able to describe distant events at the time of their occurrence, or to perform some other apparently supernatural feat. In the myths of several southern tribes, mortals journey to the land of the dead, and return therefrom to relate their experiences.‡

2. The soul and the double.—'The Iroquois and Algonkins believe that man has two souls—one of a vegetative character, which gives bodily life, and remains with the corpse after death until it is called to enter another body; another of more ethereal texture, which can depart from the body in sleep or trance and wander over the world, and at death goes directly to the land of spirits.'*

The Sioux recognize three souls—one goes to a hot place after death, one to a cold, while a third watches the body. The Dakotas claim four souls.† In most American Indian languages the word for 'soul' is allied to those for 'air,' 'wind,' 'breath,' the breath being thought to represent the animating principle derived from the Cosmic Spirit, or Soul, as amongst Hindus and Romans, though only the system of the Vedas analyzed this relationship.‡

The individual soul was regarded as part of this Cosmic Soul which formed the principal deity of the American Indians. The personified deities in Peru, and probably elsewhere as well, were recognized as special manifestations,§ although the adequate understanding of this concept was doubtless confined to the few, as in all places and times. The unconscious attempt of the missionaries to read monotheism into the concept of the Great Spirit, amongst the northern tribes, naturally prevented appreciation of its true nature, and led to vagueness in their statements.

A wide-spread belief assigned to each individual an attendant guardian spirit, or spiritual companion, independent of, but attached to, the physical self. It warned the self through intuitions of impending dangers, and the like. Such was the *tornak* of the Eskimos; the *oiaron* of the Iroquois, chosen after a period of solitary meditation in the woods, and symbolized by some object seen in a dream or vision; the *ochechag* of the Ojibwas; the *amei-malguen* of the Araucanians; the *huauque* or 'double' of the Peruvians, literally 'brother of a brother,' but also applied to twins and, significantly, to a friend. The Peruvians, moreover, gave this name to the false heads placed upon the mummies to which they expected that the departed spirits would return at some future time. It is probable that the word *huaca*, applied to all sacred objects, referred to the spiritual counterpart, from which, according to the Peruvians, all material objects were derived. Whether accidentally or otherwise, this word is repeated in the sacred Mexican city of *Tcotihuacan*, and in the deities *Wakan* and *Wakonda* of North American tribes, as Brinton has shown.‖ It is possible that *Thunapa pachaca*, 'He who knows himself and all things,' one of the names applied to the Peruvian Cosmic Spirit, may apply to one who has mastered the relation of this double to the physical self. The Guiana tribes also assert that every human being consists of two parts—body, and soul or spirit.¶

3. Methods of communication.—The Micmacs, like the Natchez, Peruvians, and other tribes, kept the bodies of their dead in their homes or temples, believing that this would enable the spirits to warn them of the approach of enemies, and to advise with their priests about the affairs of the tribe. It was once usual for the young men of many tribes, at the approach of puberty, to go alone into the woods to meditate in solitude and without food, until they had visions of visiting spirits, and the like. In Peru a class of hermits dwelt alone upon the mountains, and were consulted as to many things, past, present, and future. The Eskimos also had their hermits, *kavigtok*,** and, according to the Micmacs, there are now several such hermits of their tribe dwelling on the mountains in the almost unexplored wilderness around Cape North, Cape Breton Island.

* Brinton mentions the Pend d'Oreilles of Idaho as the only exception, but others are now known.

† For details of such beliefs amongst Eskimos and Micmacs, see Rink, p. 58; Hagar in *Jour. of Am. Folk-Lore*, vol. ix. p. 170ff.; Bancroft, iii. 147.

** Rink, 45.

4. Folk-lore of communication. — There is a general belief amongst the Indians that if you go into the woods on a calm day and listen, you will hear the light footsteps of the spirits, and sometimes the sound of an axe. Many of the spirits inhabit trees, from which they appear before the solitary traveller. The Brazilian tribes believe that they announce coming death. The Northern Lights represent to the Eskimos and other tribes the dance of the dead, and are thought to occur only when many have died. The origin legend of the Incas relates that Huanacauri having been walled up in a cave by his three brothers, his spirit accompanied them thence to Cuzco, flying through the air. In some parts of Peru the natives scattered flour or maize or quinua about the dwelling to see by the footsteps whether the spirits had been moving about.* The modern Mayas mark a path from the tomb to the hut with chalk, so that the returning spirit may find its pathway thither. The Peruvians seem to have believed that all their laws were revealed to their rulers by spirits who descended from the celestial world.†

5. Seances.—The Pottawatomies had recognized rules for communicating with the dead.‡ The spirits came with a 'sound like that of a distant strong wind sweeping through leafless trees, and intermingling with strange voices.' A Zuñi rain-priest said that a woman member of his fraternity having died in the sword-swallowing rite, 'her spirit troubled us so much with rapping that we placed live coals in the centre of the room and added piñon gum; the room was soon filled with smoke, which effectually rid us of the spirit.' Amongst practically every tribe with which the Spaniards came in contact, their writers describe certain men as talking with the devil, who appeared to them in divers shapes, and imparted supernatural information. Probably they referred to the demonstrations called by us 'seances.' In Cumana, they say, the *piaches*, or priests, informed them as to the exact day when relief ships would arrive from Spain, and as to the number of men, and the amount of supplies they would bring. The priest who made this prophecy

'went into a cave on a very dark night, took with him some bold youth, who stood while he sat. The priest called, cried out, repeated verses, shook rattles, sounded horns dismally, spoke some words of entreaty, and if the devil did not answer, sounded again, sang threats, and grew angry. When the devil came, which was known by the noise, the priest pounded hastily and loud, fell down, and showed that he was taken by the fiend by the faces and gestures that he made.'§

According to Acosta, the Peruvians had conjurers who

'tell what hath passed in the fartherest parts before any news can come. As it has chanced since the Spaniards arrived there that in the distance of two or three hundred leagues, they have known the mutinies, battles, rebellions, and deaths, both of tyrants and those of the king's party, and of private men, the which have been known the same day they chanced or the day after, a thing impossible in the course of nature. To work this divination they shut themselves into a house and become drunk, until they lose their senses. A day after they answered to that which was demanded. They likewise show what has become of things stolen and lost.'‖

In the provinces of Quito the devil in frightful shape appeared to the priests, who were much respected by all the other Indians.

'Among these one gave replies, and heard what the devil had to say, who, in order to preserve his credit, appeared in a threatening form. Then he let them know future events, and no battle or other event has taken place amongst ourselves that the Indians throughout the kingdom have not prophesied beforehand. There can be no doubt but that by an illusion of the devil the figures of persons who were dead, perhaps fathers or relations, appeared to those Indians in the fields in the dresses they wore when living.'¶

Perhaps the most detailed account of a seance in America, recorded, it should be remembered, long before the advent of modern spiritualism, is given by Salcamayhua, an Aymara, of pure blood and noble lineage, who writes as follows:

'It happened one day that the Inca Ccapac Yupanqui wished to witness how the huacas conversed with their friends, so he entered the place selected, which was in a village of the Andes, called Capacnyo. When the young Inca entered among these idolaters, he asked why they closed the doors and windowe, so as to leave them in the dark, and they all replied that in this way they could make the huaca come who was the enemy to God Almighty, and that there must be silence. When they had made an end of calling the Devil, he entered with a rush of wind that put them all into a cold sweat of horror. Then the young Inca ordered the doors and windowe to be opened that he might know the shape of the thing for which they had waited with such veneration. But as soon as it was light, the Devil hid its face, and knew not how to answer. The dauntless Inca Ccapac Yupanqui said, "Tell me what you are called," and with much shame it replied what its name was. It fled out of the house raising shouts like thunder.'*

Seances are also described amongst the Caribs and other tribes.

A special and much venerated class of Peruvian priests, called *mallquit umu*, devoted themselves to communicating to the people information obtained from the spirits which had formerly inhabited the mummies placed in their keeping. They were also called *huaca rimachi*, 'those who make the sacred objects speak,' and *ayatapuc*, 'those who make the dead speak,' as they obliged the devil 'to enter into the corpses which they consult, or into the bodies of those whom they put to sleep by their sorceries.'† The famous temple of Rimac Mallqui, near Lima, seems to have been devoted to communion with the dead.

The suggestion of hypnotism is repeated in the snake-charming of the Zuñis, whose priests claim to be able to insert their own minds into the brains of the reptiles and to learn their ways.

6. Inducing visions. — To induce visions the Peruvians made use of the plant called *villca*.‡ Hernandez says that the Mexicans used an herb called *ololiuhqui*, or 'serpent-plant,' when they wished to consult with the spirits. By means of it they were enabled to behold a thousand visions, and the forms of hovering demons.§ The Micmacs similarly used their *mededeskööoi* or serpent-plant. Amongst the Mayas the *h'menes* or priests were enabled by gazing into the *zaztun*, a crystal of quartz, or other translucent material, to behold reflected therein the past, present, and future, to locate lost articles, to see what was happening to absent ones, to learn by whose witchery sickness and disaster had been caused. Scarcely a village in Yucatan was without one of these stones.‖ The Cherokee magicians by means of their *oolunsade*, or crystals, obtained power to go to the spirit world and back. In them they beheld events anywhere at any time they wished. They also used them to call to their aid the invisible little people, who would accomplish almost anything for them, either good or evil. They would drive out the hostile spirits who caused illness or inflicted death; they would fly on errands over land and sea. One Cherokee, with every indication of good faith, informed the present writer that he possessed a crystal and could use it in all the ways stated. It must be fed by rubbing blood upon it, and if angry would cause injury to its owner. The Zuñi priests used crystals for like purposes. In Peru, though the use of crystals is not affirmed, a legend asserts that the Inca Yupanqui, while gazing into the clear depths of a spring, beheld a messenger from the celestial world, who told him many wonderful things.

7. Belief in life after death. — Whether the general belief in life after death amongst the American Indians was founded on their real or

supposed communion with the spirits of the dead, or *vice versa*, the intensity of this belief amongst the Cahrocs and in Peru is evidenced by the Druid-like custom of whispering in the ears of the dying messages to departed friends.* Algonquin women who desired to become mothers flocked to the couch of those about to die, in the hope that the vital principle, as it passed from the body, would enter them and fertilize their sterile wombs. The Aymara word *mallqui* meaning 'mummy' is also translated 'tree,' 'lord,' 'immortal,' 'a bush for transplanting,' 'a young bird about to leave its nest for life elsewhere.' The conventional expression amongst the Indians at the approach of death is 'My father calls me to rest with him.' Many tribes held the doctrine of re-incarnation. The Chinook says that when a man dies, his spirit passes to his son; the Thlinket, that the soul has the option of returning to life. In that case it generally enters the body of a female relative to form the soul of a coming infant. Some tribes of Southern California supposed that the dead returned to certain verdant isles in the sea while awaiting the birth of infants, whose souls they were to form. The Apaches taught the metempsychosis of souls into animals. The Nootkas, Pueblos, and Mayas also believed in re-incarnation.† The Dakota medicine-men profess to tell things which occurred in bodies previously inhabited for at least half a dozen generations. Many tribes preserved the bones of their dead, believing in the resurrection of the body.‡

8. **Magic.**—Feats of magic in which, however, the participation of spirits is not asserted, are reported amongst many tribes, the Mayas being especially proficient therein. See fully under art. MAGIC.

9. **Mortuary customs.**—The various tribes made use of very diverse methods of burial, including inhumation in natural or artificial cavities, in or on the ground, desiccation by tight wrapping, the remains being afterwards placed in or on the earth, deposition in urns, surface burial in hollow trees or caverns, cremation, aerial sepulture in lodges or elevated platforms, and aquatic burial beneath the water or in canoes which were afterwards turned adrift.§ Mummies, common in Peru, have also been found in many parts of North America, but it is still doubtful whether any artificial process of embalming was resorted to for preserving these bodies. A form of water burial, analogous to the Norse, was once practised by the Micmacs at the funeral of chiefs. It seems not to have been used by any other tribe on the Atlantic coast.

Food, clothing, tools, and cherished objects were generally buried with the body, and food and drink were afterwards left upon the grave, but this was the service of love seeking to provide for the material wants of the soul in the earth above. It was not worship. In Peru, as in India, even the wives and servants of the deceased, together with some of his domestic animals, were once buried with the deceased, but at the time of the conquest it had already become the general custom to substitute images of the required objects.

The Ojibwas believe that, when they partake of visible food at the grave, the spirit at the same time partakes of the spiritual element of that food.‖ The Mexicans had a similar belief.¶ So, often, as in Egypt, the pottery deposited on the grave was broken that its 'spirit' might escape to serve the deceased.** The Algonquins beat the walls near the corpse with a stick to frighten away the lingering ghost. But this was done only by the enemies of the deceased.*

10. **Nature of life after death.**—The land of souls amongst the American Indians was usually located in the sky, the sky-world being regarded as the world of origins, of which the earth is but an echo or counterpart. Life in the sky-world therefore was thought to differ little from life on earth. The soul continued to pursue the same objects that it had sought here. The Happy Hunting Ground was a literal ideal of the northern hunter tribes, but the concept rises amongst the Mayas to a place of eternal repose under the cool umbrageous shade of the sacred tree, *yaxche*.† Certain legends seem to localize the land of souls in or near the sun, and in the Pleiades,‡ but the sun merely represents the dwelling of the ruler of the sky-land.

Journey of souls.—The way thither is long and difficult. For four days and nights the soul toils onwards over a dark and dreary way, lighted only by the fires which are maintained on its grave during that period. First it journeys to the extremities of the earth, to the point where the Milky Way, the path or river of souls, touches the earth. At the entrance to the Galaxy, it passes a dog, or between two mountains which guard the way. Then, guided by the spirit of a dog or by a star, it leaves the earth and advances on this narrow path until it comes to a point where the path forks. Here the spirits of those who have been brave and courageous, and have led praiseworthy lives, reach the broad arm and quickly attain to the celestial goal, while those less commendable pass out upon the narrow arm and struggle on with bitter effort. Such is the real symbolic basis of the journey of souls. Though this symbolism is usually veiled, it is sometimes quite clearly stated, as by the Skidi Pawnees.§ Everywhere the soul must cross water, usually a torrential river, sometimes a series of streams, the ocean or a lake. Sometimes it does this on a narrow hair bridge, as in Peru and Colombia and amongst the Eskimos, sometimes on a slippery log, as amongst the Cherokees, Iroquois, and other northern tribes, on an enormous snake amongst Algonquins and Dakotas, on sea-lions on the Peruvian coast, on dogs in Mexico, in a stone canoe amongst the Ojibwas. The Mexicans, with marked inconsistency in view of their sanguinary rites, translated to heaven at once and without effort the souls of warriors and of women who died in childbirth. The Pawnees conceded to them a comparatively easy journey.

The Zuñis believe that

'the ghost hovers about the village four nights after death, and starts on its journey to Kothluwalawa (Abiding-place of the Council of the Gods) on the fifth morning. During the spirit's stay in the village, the door and hatchway of the house must be left ajar that it may pass in and out at will; should the door be closed the ghost would scratch upon it, and not be satisfied until it was opened. These shadow beings can be observed by seers and by others under certain conditions.'‖

Parents or sisters of a deceased person sleep at the side of the surviving spouse during the four nights that the spirit is supposed to remain in Zuñi. A grain of black corn or a bit of charcoal is put under the head of the women to ensure against dreaming of the lost one, whose ghost would appear should the sleeper awake.

11. **Worship of ancestors and of the dead.**—Strictly speaking, instances of true worship of ancestors or of the dead in America are rare. The dead are seldom confused or identified with the various deities, whose attributes, with

few exceptions, clearly reveal their origin in the personification of natural phenomena. The American Indians as a race are typically nature-worshippers. The sun and moon, and other celestial bodies, the seasons, the six directions, the four supposed elements, all figure prominently and generally in their pantheon, but the cult of the dead, wide-spread though it be, is confined almost entirely to communication with the spirits of the departed. Fear is seldom an element of this cult. Its main motive seems to be merely the renewal of friendly relations with the spirits, who are regarded as leading in another world an individual life very similar to their earthly life, to which they are eventually destined to return. Superhuman knowledge of events distant in time or space is indeed attributed to the spirits, no greater perhaps than that conceded to certain living men, but these men themselves were thought to receive their knowledge from the spirits. It is a long step from such attributes to deification. Honours were paid to the dead individually, similar in degree to those due them when on earth; information was asked of them, seldom anything else. But there is slight evidence that the dead were regarded as superior beings.

The chief when living remained a chief when dead, as much below the deities then as before, except for greater knowledge. In Spanish writings of a period when apostles were asserted to have fought visibly against the heathen in Peru, spirits are said to have helped the Inca Yupanqui to overcome his enemies. If this be a Peruvian tradition, it is a rare example of a native legend which attributes to the spirits active intervention in the affairs of this world. Amongst the civilized tribes who offer elaborate petitions to their nature deities, very few are directed to the spirits. The legend of Manco Ccapac and Mama Oello of Peru, and the deities of the Popol Vuh, who, descending from the sky, after an active life on earth re-ascend to the sky and become stars, clearly reveal nature personification. Amongst a number of legends relating to caciques similarly translated and deified, none which present details can be otherwise classified.

The Paraguayans and the Powhatans of Virginia are said to have worshipped the skeletons of their forefathers,* but may merely have retained them to consult with the spirits which were believed in some sense to remain attached to the bodies. So the people of Comagre worshipped the bejewelled mummies of their ancestors.†

The Eskimo upper world is ruled by the souls of the dead, including those inhabiting the celestial bodies. These were once men, and occasionally returned to earth.‡ In Nayarit, the skeleton of a king received Divine honours, as did Pezelao, god of the dead in Oaxaca.§ But the worship of the deity who governs the dead is quite distinct from the worship of the spirits themselves. The Caribs held regular meetings to propitiate the spirits.‖ The Californian tribes believed that some of the dead became stars,¶ the Iroquois that the stars had all been mortals, or favoured animals, and birds. But the sun and moon existed before them.** In Peru, the malquis, or mummies, were petitioned to grant food, health, and life.†† According to Acosta, each ruling Inca after death was regarded as a god, and had his individual sacrifices, statues, etc.‡‡ Each month the coast people sacrificed children and anointed the tombs with their blood.§§

The Chibchas and Guatemalan tribes buried a corpse in the foundation of each building that it might be protected by the spirit.* The Mexicans called their dead *teotl*, meaning 'divinity.'† Some asserted that their gods had been at first mere men, who had been deified either because of their rank, or some notable thing which they had done.‡ They set up in their temples statues of their victorious generals.§

12. Festival of the dead.—In many parts of America there was an annual or semi-annual festival in honour of the dead who, at this time, as in China, Japan, and many other countries, were believed to return to earth over the Milky Way to participate invisibly in the ceremonies. In Peru the Ayamarca, or Carrying of the Corpse, festival was celebrated annually for three days at the time of our Halloween, All Saints', and All Souls'. The supposed coincidence in time is but one of many similar analogies in the Peruvian ritual that are associated with ceremonials which have reached us from pre-historic times. During this festival the bodies of the deceased rulers of the Incas, with those of their principal wives or *ccoyas*, were clothed in new garments, and were brought forth from the temple in which they were deposited. Each mummy, followed by its special attendants, was then borne in ceremonial procession through the streets of the sacred city of Cuzco, after which food and drink were offered to it with all the honours due in life, in the belief that at this time the spirit did indeed return to the body, and reside therein during the time of the festival. The procession echoed on earth the passage of the sun through the zodiacal sign of the Mummy (Scorpio). At the same time fruits and flowers were placed upon all graves to refresh the returning spirits. The festival is also associated with the imparting of celestial wisdom.‖

The basis of this ritual, however, seems to have been rejoicing over the temporary renewal of intercourse with departed friends and relatives, and its object to welcome and please them with respect and courtesies. The element of worship of the dead as superior beings or the offering of prayers to them for aid is not prominent. The Mexicans held festivals in honour of the dead in August and November, when the souls hovered over and smelt of the food set out for them, sucking out its nutritive quality. The Mayas, Miztecs, Pueblos, and Eskimos performed similar rites in November, the Iroquois in spring and autumn.¶ The Hurons believed that the souls of the dead remained near to the bodies until the feast of the dead was celebrated. They then became free, and at once departed for the land of spirits.** The Chibchas and Peruvians repeated the curious Egyptian custom of introducing a mummy in the midst of a revel to suggest to the feasters the omnipresence of death.††

13. Demons.—The religion of the American Indians is not dualistic; good and evil alike are attributed to the Great Spirit. But the conflict, so far as it is recognized, depends rather upon physical and mental than upon moral qualities. No instance can be found in aboriginal America of a contest between a supreme good and a supreme

evi. power for dominion over souls or even for the control of the world. Mischievous, angry, and hostile spirits are recognized, and two heroes, respectively propitious and adverse to mankind, are sometimes contrasted in traditions, probably of native origin, though modified by Christianity. But there was no Satan in America, and the hostile spirits play a subordinate part. The attempts of the early missionaries to create a Satan in the various native languages are amusing. Generally the word used means simply 'spirit,' but in the list is included the beneficent Araucanian god dwelling in the Pleiades, numerous deities called evil only because associated with the dead, and the Peruvian *Supay*, which is only the name of the under world, shared by Haitians, Quichés, Pueblos, and, apparently, by the South Pacific Islanders and the Dayaks of Borneo.* This under world, as well as the sky-world, was undoubtedly viewed as the home of the spirits; and those who dwell in the former seem to be regarded as inferior and to some extent hostile, but there is no such contrast as between heaven and hell. There was no conception of a place of punishment. Such ideas are of missionary origin.

STANSBURY HAGAR.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Babylonian).

—It is at the outset necessary to inquire how far the Babylonian beliefs and customs relating to the cult of the dead, and pointing to a form or forms of ancestor-worship, were in their origin Semitic. The answer depends on the attitude one takes towards the Sumero-Akkadian problem. The majority of Assyriologists, believing as they do in the existence of a distinctly pre-Semitic Sumero-Akkadian culture and language, naturally hold that the cult connected with the spirits of the departed, which was allowed to flourish by the side of the Babylonian State religion (or rather religions) was in its essence very largely, if not entirely, a popular survival of an ancient non-Semitic form of animism, and Sayce goes so far as to say that the ideas connected with this cult were 'never really assimilated by the Semitic settlers' (*Religions of Ancient Egypt and Babylonia*, 1902, p. 276). An entirely opposite opinion must, of course, be held by the smaller number of Assyriologists, who categorically deny the pre-Semitic civilization here referred to; and even a cautious writer like Jastrow maintains that there is no necessity 'to differentiate or to attempt to differentiate between Semitic and so-called non-Semitic elements' in Babylonian and Assyrian religion (*Religion of Babylonia and Assyria*, 1898, p. 24).

The non-Semitic origin of the cult appears at first sight to be confirmed by the many words of an entirely different linguistic stock that meet us in the texts relating to it, as, *e.g.*, *Ekur* and *Kigallu* (names of the under world), and apparently also *utukku* and *ekimmu* (kinds of ghosts). But Semitic terms are by no means absent, as *e.g.* *Allatu* (name of the goddess of the under world), *Shu'ālu** (one of the names of the under world), and, as it seems, also *Arālu*† (or *Arallu*), which is the most common designation of Hades.

It is, furthermore, safe to assume by analogy that, even on the theory of an early pre-Semitic civilization of Babylonia, the Semites may, on entering the country, have brought with them popular ideas regarding the dead which were not dissimilar from those they found among the natives, and that the adoption of Sumero-Akkadian terms (which, let it be remembered, are frequent in the Semitic state religions themselves) would in the process of adaptation follow as a matter of course. It must also be borne in mind that, historically speaking, we have so far to do almost entirely with Semites. We are therefore in the present state of our knowledge fully justified in—provisionally at any rate—treating the cult and the ideas connected with it as in the full sense of the word Semitic.

Besides the question of origin, many other uncertainties still obscure the problem; for there are so far not enough data for the formulation of a complete system of these ideas and customs. In the interpretation also of a number of facts one has often to rely on inference rather than actual proof. It may be assumed that fuller knowledge will be the result of further excavation and the complete decipherment of extant materials; but for the present it must suffice to systematize the information that has already been gained.

The extant data may be conveniently treated under the following three heads:—(1) deification, (2) sacrifices and offerings to the dead, (3) necromancy. Some cognate matters, which may help to elucidate the problem, can easily be mentioned in connexion with one or other of these three parts.

1. Deification.—The only instance so far known

* S. Hagar, *op. cit.* 'Scorpio' chapter.

* On *Shu'ālu* (Heb. *Shĕ'ōl*) see § 3 below.

† Jeremias (*Bab.-Assyr. Vorstellungen vom Leben nach dem Tode*, p. 123) considers it to be the same as *Ariel* in Is 29[1ff.], both words apparently signifying (1) the mountain of the gods, the Heb. Zion; (2) a place of desolation and woe. The term *Arālu* would thus seem to point to a mountainous country (therefore not Babylonia) as the origin of the ideas connected with the under world. The same result is obtained from the use of the term *Ekur*, which among its various meanings includes that of the mountain of the gods.

in Babylonian mythology of mortals passing to immortality and deification without having previously died and gone down to the under world, is that of Sit-napishtin, the Babylonian Noah,* and his wife (or, according to Berossus, as reported by Alexander Polyhistor, also his daughter and his pilot†). When the deluge was over, Bel, whose wrath had been appeased by a speech of Ea, bestowed divine life on the pair, and assigned to them a dwelling afar off 'at the mouth of the streams.' The case of the hero Gilgamesh and that of Etana, before whose names the determinative for 'god' is always placed, are different; for both of them had first to pass through death, the common fate. Gilgamesh, as the epic bearing the name shows, endeavoured in vain to secure exemption from the fate of mortals by his visit to his ancestor‡ Sit-napishtin; and with regard to Etana, it is only reasonable to assume that he was dashed to pieces when he fell from the heights of heaven with the eagle that bore him. In the case of Adapa, who, having broken the wings of Shūtu, the south-west wind, was summoned to heaven to answer the charge, deification and a place in the company of the gods of heaven would have been his share, if he had not refused to partake of the 'meat of life' and 'the water of life' which Anu had offered him. The ground for deification in the cases mentioned was no doubt the heroic character of the persons concerned; but the element of ancestor-worship was probably not absent, and it is in any case clear that such instances of deification cannot be dissociated from the cult connected with the departed.

Passing from legend (which may, however, be assumed to rest on some actual ancient events) to historic times, we find the names of Dungi and Gudea (probably before the middle of the 3rd millennium B.C.) 'written on tablets that belong to the centuries immediately following their reign, with the determinative that is placed before the names of gods. Festivals were celebrated in honour of these kings, sacrifices were offered to them, and their images were placed in temples. Again, Gimilsin (about 2500 B.C.), of the second dynasty of Ur, appears [like an Egyptian Pharaoh] to have been deified during his lifetime, and there was a temple at Lagash which was named after him' (Jastrow, *op. cit.* p. 561). In paying honour to deified kings and other great personages, the sons and other descendants would both naturally and in accordance with an established rule (see § 2) take the lead, and the people generally would share in the celebrations, so that we have here instances firstly of ancestor-worship in the strict sense of the word, and secondly in its wider, if looser, signification as homage paid to the departed kings and fathers of the people.

Some acts pointing to deification or semi-deification in later times will be mentioned in connexion with sacrifices and offerings to the dead, and it will there also be seen what form the cult of the dead took among the people in general; but it is necessary to inquire whether we are able to form a clear notion of what deification meant among the ancient Babylonians. Did the deified rulers and chiefs stay among the gloomy deities of the under world presided over by Nergal and his consort Allatu, or did they ascend to join the company of the supernal gods? A writer like Jastrow, who strongly emphasizes the impossibility of a disembodied human spirit escaping out of the Babylonian Hades, must adopt the former alternative, notwithstanding the various difficulties connected with this interpretation (as, *e.g.*, the instances of an *utukku* actually finding its way back to earth). The brightest view so far taken of the Babylonian doctrine bearing on this problem is that of A. Jeremias (*op. cit.* pp. 100–105, and elsewhere). With Sayce and others this writer takes the epithet 'raiser from the dead,'* given to Marduk and other deities, in its natural sense (as against the forced interpretation of Jastrow, who takes it in the sense of preventing death from overtaking the living), and attributes to the ancient Babylonians hopes of a much brighter existence than was to be had in the under world; and if this be so, there is nothing to prevent us from thinking that by their deification Gudea and others entered the luminous company of the gods of heaven instead of dwelling for ever in Hades, and that in consequence their descendants had bright and happy visions of the ancestors to whom they addressed worship. Confirmatory of this view is the fact that the 'water of life,' to which reference has already been made in the story of Adapa, is to be found even in Hades. If Ishtar could by the command of Ea be restored to the upper world by being sprinkled with this 'water of life' ('Descent of Ishtar,' reverse, l. 38 ff.), why not also departed mortals who were destined for deification? The truth, however, seems to be that we have here to deal with different streams of belief, some tending one way and some another. But in accepting this opinion it is not necessary at the same time to agree with Sayce, who assigns the gloomier doctrine of Hades to the Sumerians, and the supernal deification to the Semites, for it may well be that there were different streams of tradition among the Semites themselves. Development within the Semitic field is, of course, also an important factor to consider.

2. Sacrifices and offerings to the dead.—Mention has already been made of sacrifices offered to deified kings in early Babylonian history, and of festivals celebrated in their honour. The famous Stele of Vultures, which records the victories of Eannatuna, or Eannadu, an ancient king† of the city of Shirpurla, shows on one of the extant fragments the corpses of departed warriors laid in rows, whilst their surviving comrades are represented with baskets on their heads, which are generally understood to have contained funeral offerings‡ for the dead. The fallen enemies, on the other hand, are refused burial, their remains being the food of struggling vultures (on the terrible meaning of this treatment, see below). An ancient bronze tablet, which represents a funeral scene, apparently watched over from the top by Nergal, and showing below the goddess Allatu in her bark, exhibits the dead person lying on a bier, attended by priests in fish-like garments, with a stand for burning incense not far from the head of the bier.§ 'On

* In reality Sit-napishtin (pronounced by some Par-napishtin, Pir-napishtin, or Ut-napishtim, and named Xisuthros [=Atrakhāsis, or Khāsisatra] by Berossus) appears to be a combination of the Biblical Noah and Enoch, the latter having also escaped death (Gn 5[24]).

† Or, perhaps, the ship's architect; see Euseb. *Chron.*, ed. Schoene, i. p. 22.

‡ In the Gilgamesh Epic, ix., beginning of col. iii., the hero says:—'Sit-napishtin, my father . . . who entered the assembly of the gods,' etc.

* Cf. 1 S 2[6] ('He bringeth down to Sheol and bringeth up').

† Probably before B.C. 4000 (see L. W. King, *Bab. Religion*, p. 48).

‡ The interpretation of the scene is, however, uncertain. The baskets may have contained more earth for the mound raised over the corpses. Jastrow (*op. cit.* p. 599) states that the Stele shows animal sacrifices being offered to the dead, and Maspero (*Dawn of Civilization*, p. 607) says that 'the sovereign deigns to kill with his own hand one of the principal chiefs of the enemy' in honour of the dead. Fragments of the Stele were first made known by de Sarzec, *Découvertes en Chaldée*, plates 3 and 4. For other literature, see Maspero, *loc. cit.*

§ See Jastrow, *op. cit.* p. 579; Maspero, *op. cit.* p. 690 ff.; L. W. King, *op. cit.* p. 37 ff. The exact interpretation of this tablet is also a matter of dispute, but there is no doubt about the burning of incense. The fish-like garments of the attendants or priests have apparently reference to the god Ea in his character as lord of the deep. This and the other bronze plates of the same class are by some supposed to have served as votive tablets in the graves of the dead.

the monuments of later Babylonian and Assyrian kings we do not find any representation of burial ceremonies' (L. W. King, *op. cit.* p. 48), but from a broken inscription of one of the later Assyrian kings, whose name has not been preserved, 'we learn that the king placed vessels of gold and silver in the grave as dedicatory offerings' to his departed father (*ib.* p. 49). Ashurbanipal (king of Assyria, B.C. 668–626), in a still more devout fashion, appears at the tombs of his ancestors with rent garments, pouring out a libation in memory of the dead, and addressing a prayer to them (see, *e.g.*, Jastrow, *op. cit.* p. 605).

It is necessary, however, to distinguish carefully between sacrifices in the proper sense of the word and offerings of various kinds made to the dead by way of providing for their proper maintenance in the under world. The former point to a form of deification and actual worship (though probably in most cases of a secondary kind), whilst the latter, which, roughly speaking, belong to the decidedly popular element of the cult, are generally understood to have had the object of keeping the ghosts of the departed in a sufficiently comfortable condition in the under world, so as not to risk their returning to molest their living relatives and acquaintances. One is inclined to include affection for the departed among the underlying motives, and some of the details to be mentioned presently would seem to support this view; but it is true that the motive of fear was exceedingly strong. The departed human spirit was best known by the dreaded name *ekimmu*. The difference between it and *utukku* cannot be accurately stated. It seems, however, that *utukku* was a general name for demon, for we hear of the *utukku* 'of the field,' 'of the sea,' etc., whilst *ekimmu* was (or became) the proper name for a departed human spirit. Sayce (*op. cit.* p. 284) would limit the meaning of *ekimmu* to the 'spirit of an unburied corpse over whose unsanctified remains the funeral rites had never been performed'; but R. C. Thompson (*The Devils and Evil Spirits of Babylonia*, i. p. xxvii. ff.) has shown that the name was also applied to ghosts who, though properly buried, had no one to provide them with the necessary sustenance in the under world, so that they were forced to return to the earth in order to seek for themselves some sort of maintenance among their former associates. When opportunity offered, the ghost would even enter the body of a living man, tormenting him until it should be exorcized by a priest. In order to guard against these dangers to the living, it was necessary, first of all, to perform the funeral rites, by means of which the human spirit was enabled to reach its destination in the realms of Arālu; and it was, secondly, required of the relatives, and more particularly of the eldest son and direct descendants of the deceased, to make provision for their proper maintenance in a region where, apart from the sustenance provided for them by their friends on earth, 'dust is their nourishment, their food clay,' and where 'over gate and bolt dust is scattered' (opening part of the 'Descent of Ishtar'). Offerings of this kind would, however, naturally assume a propitiatory character of a more or less definite kind, and a sufficiently close affinity with sacrifices proper would be the result.

The provision thus made for the departed differed, of course, in accordance with their condition during their life on earth, and was, besides, dependent on the means possessed by their living relatives. The occupant of the smaller chambers of burial 'was content to have with him his linen, his ornaments, some bronze arrowheads, and metal or clay vessels,' whilst others were provided with 'furniture, which, though not as complete as that found in Egyptian sepulchres, must have ministered to all the needs of the spirit' (Maspero, *op. cit.* p. 686). Special requirements were also thought of. Thus, 'beside the body of a woman or young girl was arranged an abundance of spare ornaments, flowers, scent-bottles, combs, cosmetic pencils, and cakes of the black paste with which they were accustomed to paint the eyebrows and the edges of the eyelids' (Maspero, *ib.*). 'Toys, too, are found in the graves, and we may assume that these were placed in the tombs of children' (Jastrow, *op. cit.* p. 598). Food and drink were, of course, the main requirements, and these all-important offerings were made to the dead not only at the time of burial, but also afterwards by surviving relatives; and the entrances to tombs that have been found (Peters, *Nippur*, ii. 173, and elsewhere) may be explained as an arrangement made for renewing these and other offerings. The son performed the office of pouring out water in memory of his father. The water-jar is indeed 'never absent in the old Babylonian tombs, and by the side of the jar the bowl of clay or bronze is found, which probably served the same purpose as a drinking utensil for the dead' (Jastrow, *op. cit.* p. 599). Remains of food of various kinds are, however, more frequent in the early graves than in those of later times. Among the other objects placed at the disposal of the dead are the staves which the owners carried about in their lifetime, and the seal-cylinders which persons of position were in the habit of using. How far the customary wailing for the dead, not only immediately after their departure, but also subsequently, included terms of homage and adoration, cannot be stated with any certainty; but it appears that the Festival of Tammuz was selected as a kind of 'All Souls' Day,' and some degree of adoration of the dead may have been combined with the ceremonies connected with the homage paid to the annually reviving god.

The grim side of this cycle of ideas is seen in the treatment of the corpses of enemies. By dragging the dead bodies out of their graves, mutilating their remains, and other indignities, their shades were deprived of their comfort and their rest, and their living relatives became at the same time exposed to the terrible molestation of the prowling and suffering ghosts. This explains the violence done to the remains of fallen enemies, as represented on the Stele of Vultures already referred to. In later times, Ashurbanipal expressly states that by destroying the graves of Elamite kings and dragging their bodies to Assyria he had made sure that no food should be tendered to them, and no sacrifices offered in their honour (see *e.g.* Jastrow, *op. cit.* p. 602; L. W. King, *op. cit.* p. 44). Similar revenge upon his enemies was taken by Sennacherib.

3. Necromancy.—Necromancy, which is an essential part of the cult of the dead, and which must also have been connected with the presentation of offerings to the shades consulted, undoubtedly held a prominent place among the magic arts of the Babylonians. 'A series of mythological texts shows that scenes such as that between Saul and the witch of Endor were familiar to Babylonian fancy also. Among the lists of the various orders of priests we find the offices of "exorcist of the spirits of the dead," the priest "who raises the Spirit of the dead," and the *Sha'ilu*, the "inquirer of the dead"' * (A. Jeremias, *Bab. Conception of Heaven and Hell*, p. 28). The argument, however, that

* Jeremias himself, however, states that the literature so far known to us has no example of the 'inquiry of the dead.' The case of Eabani was different, for Gilgamesh conversed with him like one person with another (see further on). It is to be noted here that in Ezk 21[26] [Eng. 21] Nebuchadnezzar is represented as inquiring of the Terāphim, which some writers regard as images of ancestors. (See § 2 of the 'Hebrew' article).

has been urged by Jastrow (*op. cit.* p. 559) and others, that the name *Shu'ālu* (Heb. *Śhe'ōl*) itself proves that inquiry of the dead was inseparable from the very notion of the under world thus designated, is by no means convincing; for the root *sha'al* (שׁאל) may be connected with *sha'al* (שׁעל), thus giving to *Shu'ālu* the meaning of 'hollowed out place' rather than that of 'place of inquiry' * (see *Oxf. Heb. Lex. s.v.*).

The classical, and so far solitary, clear instance of raising a dead person and conversing with him (analogous to the famous Biblical instance of Saul and Samuel) is that of the hero Gilgamesh and the shade of his friend Eabani, as related in the closing tablet of the Gilgamesh Epic. The help of Nergal himself had to be obtained in order to secure the desired effect. The god of Hades 'opened the hole of the earth, and let the *utukku* of Eabani come forth out of the earth like a wind' (Gilgamesh Epic, xii. col. 3, ll. 27–8). The conversation of the two friends turns on the condition of the departed in the regions of Hades.

As connected with this part of the subject omens may be mentioned. Mr. R. C. Thompson, in the work already referred to, writes as follows:—

'The belief in the *ekimmu* spirit had obtained such a hold over the Assyrians that they even went to the length of deducing omens from the appearance of such a ghost in a house. As a rule, it was held to be an evil omen, whether it was merely a silent apparition or whether it gibbered or uttered some words or awaited some response. . . . The threat that is held over the heads of all spectres of this class is that no rite shall be paid to them until they have departed' (vol. i. p. xxxv).

To sum up: the evidence, so far as it goes, shows clearly that even in historic times the cult of the dead and elements of ancestor-worship formed, more or less distinctly, part of Babylonian religious observances. As regards deification of deceased ancestors, sacrifices in the proper sense of the word, and festivals held in honour of the dead, the clear evidence, as was to be expected, relates to the ruling families only. It may, by analogy with the religious development of other races, be assumed that ancestor-worship and the cult of the dead were more prevalent in pre-historic times than later on. But whether this cult was in very ancient times the only or even the chief religious worship of the Babylonians—whether Sumerians or Semites, or a combination of both—is quite a different question. It surely is not improbable that it was but one among a variety of cults, and that the various *numina loci*, the heavenly bodies, the storm, the lightning, and other powers of nature played at least as great a part in the earliest Babylonian religion as the worship of the departed. There is at any rate nothing in the Babylonian cult to confirm the theory of Herbert Spencer, that ancestor-worship was the sole original worship of humanity, and that animism in its wider sense was developed out of it.

LITERATURE.—The principal literature used has been frequently quoted. The part relating to the subject in the German edition of Jastrow's *Religion of Babylonia and Assyria* had not come to hand when the article was written. The bibliography at the end of that edition will no doubt be the fullest. In the quotations from the 'Descent of Ishtar' and the 'Epic of Gilgamesh,' Jensen's edition (Schrader's *KB* vi.) has been followed.

G. MARGOLIOUTH.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Celtic).

—The meagre data preserved concerning the Celtic religions contain little evidence to show that the worship of ancestors prevailed in Gaul or the British Isles. The general existence of this cult throughout the Indo-Germanic peoples (see Schrader, *Reallexikon der indogermanischen Alterthumskunde*, Strassburg, 1901, pp. 21–33), however, renders it practically certain that the Celts, like the kindred stocks, worshipped their ancestors. The Druids are known to have tanght not only immortality but also metempsychosis (Cæsar, *de Bello Gallico*, vi. 14; Lucan, *Pharsalia*, i. 454–458). Yet the only passages which in any way sanction the hypothesis of ancestor-worship are Cæsar, *de Bello Gallico*, vi. 19, and Pomponius Mela, *Chorographia*, iii. 19. The former author states that, 'in keeping with the cult of the Gauls, funerals are magnificent and sumptnous, and they cast upon the pyre all that they suppose pleasing to the living; even animals and, a short time ago, slaves and dependants who were evidently especially dear to the deceased were burned with them after the funeral rites had been duly performed.' Pomponius adds that, in consequence of the Gallic belief in immortality, 'they burn and bury with the dead things proper for the living,' and says that the human victims who were burned were either messengers (like the slaves killed to carry tidings to a deceased king in Dahomey) or faithful retainers who desired to continue life in the future world with their patrons. It is questionable, however, whether all this can be construed as ancestor-worship in the strict sense of the term.

LOUIS H. GRAY.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Egyptian).

—*A.* **Ancestor-worship.**—Of a developed ancestor-worship, like that of the Far East, there is in Egyptian religion little trace. Their knowledge of their long history disposed the Egyptians to revere the memory of their ancestors (*ṭepu-āui*), and we often hear 'the time of the ancestors' referred to with respect: such-and-such a temple was rebuilt 'as it had been in the time of the ancestors'; so wonderful a thing had never happened 'since the time of the ancestors,' and so forth. The kings naturally regarded their predecessors in the royal line with respect, and are depicted making offerings to their names, as at Abydos, where Seti I. and his son, the Prince Rameses (afterwards Rameses II.), offer incense before the two long rows of cartouches, each of which contains the name of a king whom Seti considered worthy of special honour. Incense is being offered much as it might be offered before Japanese *ihai*. But Egyptian ancestor-worship went little farther than this. The ordinary person did not specially venerate the names of his ancestors. He often commemorated them, but never as gods, except in so far that every dead man was a god in that he 'became Osiris.' But as a proof of his loyalty to the reigning dynasty, he venerated the ancient royal names which his king delighted to honour: at Saḳḳâra we find a private person, Tunur, offering to a series of kings' names, which is almost identical with that reverenced by Seti I. at Abydos. Such lists were purely commemorative. Seti I. did not regard his ancestors as gods because they were his ancestors, but because, as kings of Egypt, they had been gods; every king during his life was the 'good god' as the successor and representative on earth of the sky-god Horus, the oldest ruler of Egypt. Tunur regarded the ancient kings as gods for the same reason. He would never have represented himself offering to the *ihai* of his own ancestors as gods, because they never had been gods, nor did he regard them as gods except in so far as each was an Osiris.

Osiris-worship was not ancestor-worship. It is not probable that the Egyptians regarded even Osiris, the great god of the dead, with whom every dead man was identified, as a sort of original ancestor of the race, in spite of the belief that he had once reigned over Egypt as king. This Euhemeristic view is probably late, and was certainly of local origin, probably at Busiris in the Delta (see below). The older Egyptians had feared the

* Jeremias, *Leben nach dem Tode*, p. 62 renders 'place of decision' (*Entscheidungsort*), but the synonym *Mala-akki* which he quotes may itself be a mere guess of Babylonian etymologists.

magical power of the dead man, and had regarded him as a deity; every dead man was Osiris. So they worshipped him as Osiris and in the form of the god of the dead; not under his own name or in his own shape. Thus no real cult of ancestors as gods under their own names and in their own shapes ever grew up in Egypt. To venerate one's ancestors as Osirises was a very different thing from venerating them as ancestors. Filial piety demanded the mention of mother and father, perhaps of grand-parents, on one's gravestone; the son could put up a *stele* in memory of his parents 'as making their names to live upon earth.' But so also could a brother make the name of his brother or sister to live. No worship is implied.

Religious duty demanded the proper observance of certain ceremonies at the tomb by the hand of the 'servant of the ghost' (*ḫen-ka*), but these were not intended as worship of the ghost; they were meant to ensure his happy transit through all the terrors of the under world and the final reunion of the parts of his body and soul in the celestial boat of the sun-god. The religious texts inscribed upon the walls of the tombs had a similar signification. They are all magical spells designed to keep the spirit of the dead man from harm and wandering; and to enable him, by means of formulæ asserting his divine dignity, to win his way past all opposition to his position as a god and the equal of the gods. But no prayers are addressed to him as a god; and if they were, they would only be addressed to him as the god Osiris, not as an ancestor-god protecting his family and tribe. Of this conception we find no trace in Egyptian religion, except the position assigned to Horus, who, like his father Osiris, had reigned in Egypt, and was the predecessor, if not the progenitor, of its kings. But here again, as in the case of Osiris, the kings venerated their ancestor Horus, not because he was their ancestor and the founder of the monarchy, but because he was himself one of the great gods, and was also implicitly divine because he had been a king.

Thus it would appear that the deification of every dead man, or rather his identification with one particular deity, allowed no room for ancestor-worship, in the true sense, in Egyptian religion. No doubt possible traces of it may be discerned here and there in local beliefs, but in the main scheme of the national religion it had no place.

B. Cult of the dead.—As has been shown above, the deification of every dead man as himself the god Osiris resulted in the absence of any regular form of ancestor-worship in Egypt. The dead man was venerated as Osiris, not as an ancestor. Originally, however, this 'Osirian' doctrine was not common to the whole of Egypt. It seems to have originated at Dedu or Busiris, 'Osiris' town,' the modern Abusîr near Samanûd, in the Delta. Here Osiris, far back in the primitive period, must have been simply the protector-god of the local necropolis, as the god Ptah-Seker, or Sokari, was the protector of the necropolis of Memphis, and Anubis, the jackal (confused at a very early period with Upuaut, 'Opener of the Ways,' the wolf war-god of Siût), was the protector of that of Abydos. Anubis of Abydos was also identified with a shadowy deity, Khentamentiu, 'the Chief of the Westerners,' the latter being the dead, who were usually buried on the west bank of the Nile. Whether there was any idea among the primitive Egyptians that the Libyans of the western oases, who sometimes came within their ken, were the spirits of their dead in the West, and that the ruler of the dead was their chief, we cannot tell, but it seems probable that it was so. Khentamentiu, however, is never pictured, so we cannot tell what he was supposed to be like; he had already become identified with the jackal Anubis before the dawn of history.

While, however, the protector of the necropolis of Abydos was regarded as a jackal, because the jackal had his abode among the tombs and prowled around them at night, so that the childlike mind of the primitive Egyptian, in fear of him as the ravager of the graveyards, easily came to venerate him, and to desire to placate him by worship as its protector, the Memphite and Busirite gods of the dead were conceived of as dead men; in the northern view the dead were ruled by the dead. The Busirite and Memphite deities, Osiris and Ptah, were closely related. Both were represented as human mummies, the first carrying the whip and flail, emblems of sovereignty, and the second the symbols of power, stability, and life. If the legend of the foundation of Memphis at the beginning of the First Dynasty has a historical basis, it may be that the resemblance of the form of Ptah to that of Osiris is due simply to the fact that the worship of Busiris had penetrated so far southward at that time that, when the necropolis of Memphis was constituted, its protective deity was given a shape differing but little from that of Osiris. However this may be, the Osiride Ptah seems very soon to have come to be regarded as the god of the living city of Memphis rather than that of its necropolis, though his mummy form shows that he was originally a god of the dead almost identical with the Busirite Osiris. Then he was conceived as exercising his function of protector of the necropolis in the form of a dead and mummied hawk, placed upon a coffin. Hence, perhaps, his name of Ptah-Sekri, 'the coffined Ptah.' The hawk was an ancient symbol of divinity, and a dead hawk naturally symbolized a dead god. Later on, the peculiar Kabiric form of Ptah, which may really be older at Memphis than either the mummied man or the mummied hawk, and may, indeed, be the original form of the city-god before the Osiride form prevailed, was revered as 'Ptah-Socharis-Osiris.' This triple name combined Ptah, 'the coffined one,' and the Busirite Osiris proper, in one deity of the Memphite necropolis (now known as that of Saḳḳâra, the village whose name is that of the ancient god). At Memphis this Socharis-form of Osiris was never replaced by the regular Busirite form, which prevailed elsewhere in Egypt. Doubtless this was because, at Memphis, Osiris was entirely identified with Ptah-Seker, while at Abydos he was introduced from the north and merely displaced Anubis, the latter preserving his name and individuality, and only ceding his title of *Khentamentiu* to his superseder.

Thus at Abydos and everywhere else in Egypt, except at Memphis, Osiris was figured in his original Busirite form, as wearing the royal crown in his capacity of king of the dead, just as the living Pharaoh was king of the living. Indeed, as has been noted above, an Euhemeristic view regarded him as a very ancient dead king, who now ruled the shades as he had once ruled the living, and his wife and sister, Isis and Nephthys, as having been his actual wife and sister in life, who bewailed him as he lay on his bier after his death at the hands of his wicked brother Set, the half-foreign deity of the wild desert. Gradually the worship of Osiris spread southwards over all Egypt, and at Siût and Abydos the guardian wolf and jackal diminished into his sons and servants, preserving their individuality, but ceding to him their local sovereignty. At Abydos the title of *Khentamentiu* did not finally pass from Anubis to Osiris till about the time of the Twelfth Dynasty. Thenceforward Abydos became the great centre of Osiris-worship, and

Busiris degenerated into comparative unimportance. The only real rival of Abydos as the headquarters of Osiris was the northern city of Mendes, in the Delta, only a few miles east of Busiris, where the god had at an early period become identified with the local animal-deity, a goat, who was called 'Soul of the Lord of Dedu,' *Bi-neb-ded*, afterwards pronounced Bindidi, Mindid, whence Mendes and the modern Mendîd or Amdîd. It is uncertain whether the goat of Mendes was originally a god of the dead or not; probably he was not. The 'Lord of Dedu,' whose 'soul' he was called, is, of course, Osiris, lord of Busiris. This title of *Neb-Dedet* was recognized throughout Egypt as one of the chief titles of Osiris, and on the stelæ at Abydos it is always accorded to him side by side with the old appellation of the Abydene Anubis, *Khentamentiu*.

With the worship of Osiris went the peculiar doctrines associated with his cult: the belief in resurrection, in the springing of life out of death, which made him a deity of renewed life as well as of death, and so identified him with the green corn-bearing Nile land as opposed to the waste deserts of his brother Set; and, most important of all, the peculiar doctrine of the identification of every dead man with the god, which became at a very early period the cardinal tenet of Egyptian belief with regard to the dead. This Busirite dogma was held even under the Old Kingdom by every Egyptian, and we may find his *credo* in this regard in the well-known '*suten-di-ḥetep*' formula of prayer for the welfare of the dead man, which appears on every sarcophagus, and on every stele or gravestone, and in which the god, whether Anubis 'on the Serpent-Mountain, Lord of Sepa,' or Osiris, 'Lord of Dedet, Khentamentiu, Lord of Abydos,' is besought to give a 'king's offering' (*ḥetep-suten*) of 'thousands of flesh, fowl, and everything good and pure on which *the god there* liveth, to the *ka* of the venerated N, the justified.' The venerated and justified dead man is the *god there*, the deified Osiris N in the tomb, though he may not definitely be called 'the Osiris N.'

Even when other deities were invoked to give the offering, as Amen-Rā or Hathor in the Theban necropolis over which they ruled, or Geb the god of the earth and the Circle of the Nine Gods, the dead man is still Osiris; he is not identified with Amen-Rā, Hathor, or Geb, although the fact that he is Osiris is not always mentioned. On the *ushabtis* (see DEATH AND THE DISPOSAL OF THE DEAD [Egyptian]) he is always called Osiris, and in later times we find the formula definitely phrased thus, 'May Osiris . . . give a king's offering . . . to the Osiris N.' Osiris is asked to give an offering such as a king would give to himself, for every dead man was himself. The dead man was venerated, therefore, not as the dead N, a god because he was a dead ancestor, but as being one with Osiris. In this sense he was worshipped, and only in this sense may the Egyptians be said to have possessed a cult of the dead. Their cult of the dead was the cult of Osiris, and it was to Osiris that the *ḥen-ka*, or 'servant of the ghost' (usually a near relative of the deceased), made the offerings at the tomb, 'seeking to do honour to those there' [a polite periphrasis for the dead]. These offerings consist, in the words of the very interesting inscription on the stele put up by King Aahmes to the memory of his grandmother, Queen Teta-shera, 'in the pouring of water, the offering upon the altar, and the painting of the stele at the beginning of each season, at the Festival of the New Moon, at the feast of the month, the feast of the goingforth of the Sem-priest, the Ceremonies of the Night, the Feasts of the Fifth Day of the Month, and of the Sixth, the *Hak*-festival, the *Uag*-festival, the feast of Thoth, the beginning of every season of heaven and of earth.'

Originally, of course, these honours (see DEATH AND THE DISPOSAL OF THE DEAD [Egyptian]) were paid primarily to the *ka*, or 'double,' of the deceased, which was supposed to reside in the tomb, and, had it not been for the universal adoption of the Osirian doctrine, they would undoubtedly have developed into a regular form of ancestor-worship, the *ka* of each person 'there' being worshipped as a god. We may perhaps even say that before the general adoption of the Osirian doctrine, the southern Egyptians did worship the *kas* of the dead, or even the *sahus* (see DEATH, etc.). We do not know how ancient the beliefs in the other spiritual parts of the dead man, the *ba*, or soul proper, and the *khu*, or intelligence, are. In any case, these other spiritual portions of the man never were specially venerated. They required no sustenance, therefore no offerings were made to them, such as were made to the *ka*. These offerings were made by the members of the family of the deceased persons, whose names were commemorated on stelæ, together with those of their living descendants 'who make their name to live upon earth' (*se'ankh renusen tep ta*). Several generations of the dead are often thus 'made to live' on the stelæ (see DEATH, etc. [Egyptian]). The Egyptian 'cult of the dead' amounted to no more than this.

The worship of the supreme god of the dead, Osiris himself, as apart from the offerings made to the individual Osirises, the dead, was carried on in the usual manner. He had two great temples, at Abydos and Busiris, which disputed the possession of his most holy relic, supposed to be his actual body; and at Abydos he was supposed to be buried in a tomb which, by a misunderstanding of a hieroglyph, was identified with the tomb of the early monarch Tjer, the sign of his name being misread as *Khent*, 'chief,' and so identified with 'Khentamentiu.' He was worshipped also as the ram at Mendes, and as the bull Apis and in the Kabiric form at Memphis. The temple at Abydos was originally not his. In its lowest strata we find that his predecessor Anubis is the sole deity mentioned. Later on, as we have seen, Anubis and his 'brother' Upuaut, the wolf of Siût (the 'Makedôn' of Diodorus), accompany him as his 'sons' and attendants. The wolf was originally not a god of the dead or of Abydos at all, but was a war-god, of whom the wolf was a good symbol, as the 'opener of the ways' to the pack. But the kinship of the wolf to the jackal soon caused Upuaut to be regarded also as a fellow-protector of the tombs with Anubis at Abydos, and in later times he is exclusively a god of the dead, the double of Anubis. Isis and Nephthys, with the child Horus, naturally accompanied Osiris from the Delta, where they also had their origin. But they did not come much forward till a comparatively late period, when the triad Osiris, Isis, and Harpocrates took the place of the Theban triad Amen, Mut, and Khensu, which had become somewhat discredited everywhere except at Thebes after the end of the Theban domination. During that period Osiris had degenerated from the position of king of the dead to that of merely their judge; his kingly functions were usurped by Amen-Rā, the Theban 'king of the gods,' who during the night was supposed to sail in his solar bark through the under world, giving light to the spirits and accompanied by them in his course. But in the Saïte period Osiris not only returned to his position as king of the dead, but became king of the living also, for he took the place of Amen-Rā as supreme deity of Egypt, and the whole set

of myths connected with his name and those of Isis and Horus became the most important part of Egyptian religious belief. It was natural that this should be so then, when the centre of political gravity had shifted to the Delta, the original home of the Osirian religion. Later the Memphite sacred bull Apis, originally the animal of Ptah, but, on account of the confusion of the city-god with Socharis, also regarded as an incarnation of Osiris, came very much to the front, and the Ptolemaic Egyptians evolved a Græco-Egyptian deity, Sarapis (from *Asar-Hapi*, Osiris-Apis), out of the old Osiris, whose name now disappears. Finally, in the Roman period, Sarapis becomes identified with the old Nubian god of the dance and of music, Bes, and this godling, the most disreputable of the whole Egyptian pantheon, is venerated on the walls of ancient Abydos as the successor of Osiris, of Anubis, and of the primeval Khentamentiu.

(1904), 97–107 [with regard to the origin and relations of the Osirian doctrine, and the history of Anubis and Upuaut]; Budge, *Hist. Eg.* i. p. 19 [on the identification of the 'Tomb of Osiris' at Abydos]; Petrie, *Abydos ii.* [on the temple of Osiris there]; Currelly and Gardiner in *Abydos iii.* [on the stele of Tetashera]; Hall in *PSBA*, Jan. 1908 [on the *Suten-di-ḥetep* formula, etc.]. Generally, on the cult of the dead, the works of Budge, Erman, and Wiedemann on Egyptian religion.

H. R. HALL.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Fijian).—The Fijian divinities fall naturally into two divisions—the *Kalou-vu* ('Root gods') and the *Kalou-yalo* ('Spirit gods,' *i.e.* deified mortals). There is much truth in Waterhouse's suggestion that the Kalou-vu were of Polynesian origin, carried into Fiji by immigrants from the east and imposed upon the conquered Melanesian tribes in addition to their own pantheon of deified ancestors; and that Ndengei, who was undoubtedly a Melanesian ancestor, was adopted by the immigrants, as the Etruscan gods were by the Romans. The Fijian's belief in his own tribal divinity did not entail denial of the gods of other tribes. To the Hebrew prophets the cult of Baal-peor was not so much a false as an impious creed. In giving their allegiance to the chiefs who conquered them, it was natural that the Fijians should admit the supremacy of their conquerors' gods, who, by giving the victory to their adherents, had proved themselves to be the more powerful. Wainua, the great war-god of Rewa, is said to have drifted from Tonga; and his priest, when inspired, gave his answers in the Tongan language. The Rewans had given the chief place in their pantheon to the god of mere visitors.

First among the Kalou-vu was Ndengei, primarily a god of Rakiraki on the north coast of Viti Levu, but known throughout Fiji except in the eastern islands of the Lau group. This god, evolving from the ancestor and tutelary deity of a joint family into a symbol of Creation and Eternity in serpent form, is a counterpart of Jupiter, the god of a Latin tribe, inflated with Etruscan and Greek myth until he overshadowed the ancient world as Jupiter Optimus Maximus. Ndengei and the personages associated with him are proved by the earliest myths of their home on the Ra coast to have been mortals deified as the first immigrants and founders of the race. If the Polynesian gods were originally deified ancestors, their deification took place at a period so remote that their descendants cannot be identified.

Ancestor-worship is the key to the Melanesian system of government. The Fijian's conception of human authority was based upon his religion. Patriarchy, if not the oldest, is certainly the most natural shape into which the religious instinct of primitive man would crystallize. First there was the family—and the Pacific islands were probably peopled by single families—ruled absolutely by the father, with his store of traditions brought from the land from which he came. His sons, knowing no laws but those which he had taught them, planting their crops, building their huts and their canoes under his direction, bringing their disputes to him for judgment, came to trust him for guidance in every detail of their lives. Suddenly he left them. They could not believe that he, whose anger they had feared but yesterday, had vanished like the flame of yesterday's fire. His spirit had left his body; yet somewhere it must still be watching them. In life he had threatened them with punishment for disobedience, and, even now, when they did the things of which he disapproved, punishment was sure to follow—the crops failed; a hurricane unroofed the hut; floods swept away the canoe. If an enemy prevailed against them, it was because they had neglected him; when the yams ripened to abundant harvest, he was rewarding their piety. In this natural creed was the germ of government. Each son of the dead father founded his own family, but still owed allegiance to the earthly representative—the eldest son—in whom dwelt a portion of the father's godhead. Generations came and went; the tribe increased from tens to hundreds, but still the eldest son of the eldest, who carried in his veins the purest blood of the ancestor, was venerated almost like a god. The ancestor was now regarded as a Kalou-vu, and had his temple and his priests, who became a hereditary caste, with the strong motive of self-interest for keeping his memory green. Priest and chief tacitly agreed to give one another mutual support, the one by threatening divine punishment for disobedience, the other by insisting upon regular offerings to the temple.

That the cult of a common ancestor persisted for many generations is shown by the custom of *tauvu*, which means literally 'sprung from the same root,' *i.e.* of a common origin. It is applied to two or more tribes who may live in different islands, speak different dialects, and have nothing in common but their god. They do not necessarily intermarry; they may have held no intercourse for generations; each may have forgotten the names of its chiefs of five generations back, the site of its ancient home, and the traditions of its migrations; and yet it never forgets the tribe with which it is *tauvu*. Members of that tribe may run riot in its village, slaughter its pigs, and ravage its plantations, while it sits smiling by, for the spoilers are its brothers, worshippers of a common ancestor, and are therefore entitled in the fullest sense to the 'freedom of the city.' Sometimes the bond can be traced back to its origin, the marriage of the daughter of a high chief with the head of a distant clan. Her rank was so transcendent that she brought into her husband's family a measure of the godhead of her ancestors, and her descendants have thenceforth reverenced her forefathers in preference to those of her husband. Generally the bond is so remote that the common ancestor is known by the name of an animal or of a natural object, and the fact that his worshippers may not eat the animal suggests a trace of totemism of a bygone age. In such cases a young band from an overcrowded island may have crossed the water to seek wider planting lands.

Among the Viti Levu tribes of Melanesian origin there was a peculiar ancestral cult known as the *mbaki*, primarily devoted to a thanksgiving for the first-fruits and to initiation. The rites were held in rectangular stone enclosures, called *nanga* ('bed,' *i.e.* of the ancestors). These were built close to

the graves of dead chiefs, who were invoked to shower blessings on the tribe in ceremonies which degenerated into orgies of a sexual character. The rites were said to have been introduced by two old men who were found wandering on the sea-shore—strangers cast up by the sea, for they could not speak a word of Fijian. The initiated were sworn to secrecy, and the peculiarity of the rites was that initiated members of tribes with whom the owners of the *nanga* happened to be at war might attend the rites unharmed, and invoke the aid of spirits from whom they were not themselves descended.

The Fijians had a well-peopled mythology of the after life. The spirits of the dead had neither temples nor priests, for, as they left the living unmolested, the living were not called upon to make propitiatory sacrifices to them. They were kept alive by the professional story-tellers, who revived them after funerals, when men's thoughts were directed to the mystery of death. In a land where every stranger is an enemy, the idea of the naked shade, turned out friendless into eternity to find his own way to Bulotu, conjured up images of the perils that beset the lone wayfarer on earth, and the shade was made to run the gauntlet of fiends that were the incarnations of such perils. Though the story of the soul's last journey agreed in outline, the details were filled in by each tribe to suit its geographical position. There was generally water to cross, and a ghostly ferryman who treated his passengers with scant courtesy. There was Ghost-scatterer who stoned the shade, and Reed-spear who impaled him. Goddesses of frightful aspect peered at him and gnashed their teeth; Ravuravu, the god of murder, fell upon him; the Dismisser sifted out the real dead from the trance-smitten; fisher-fiends entangled cowards in their net; at every turn of the Long Road there was some malevolent being to put the shade to the ordeal; so that none but brave warriors who had died a violent death—the only sure passport to Bulotu—passed through unscathed. The shades of all Viti Levu and the contiguous islands and of a large part of Vanua Levu took the nearest road, either to the dwelling of Ndengei or to Naithombothombo, the 'jumping-off-place,' in Bua, and thence passed over the western ocean to Bulotu, the birthplace of the race. No belief was more natural for a primitive people than that the land of which their fathers had told them, where the air was warmer, the yams larger, and the soil more fruitful, was the goal of their spirits after death.

When a chief died, his body was washed and shrouded in bark-cloth. A whale's tooth was laid on his breast to throw at the ghostly pandanus tree. If he hit the mark, he sat down to wait for his wife, who he now knew would be strangled to his manes; but if he missed, he went forward weeping, for it proved that she had been unfaithful to him in life. His tomb became his shrine. A roof was built over it to protect him from the sun and the rain. Kava roots and cooked food were laid upon it, that his spirit might feed upon their spiritual essence. And with each presentation, prayers for his protection were repeated. Indolent or ignoble chiefs were soon forgotten, and in times of prosperity the grass began to grow rank even over the bones of a doughty and masterful chief, but at the first breath of adversity his tomb was carefully weeded, and the offerings became regular. Some member of the priestly family would then become possessed by his spirit, and would squeak oracles in a high falsetto. The process of evolution from the tomb to the temple would now be very short. The peculiarity of ancestor-worship in Fiji is that men worshipped not their own, but their chief's ancestors, to whom they themselves might have but a slender blood relationship.

BASIL THOMSON.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Hebrew).—The latest portions of the Hebrew Canon are, roughly speaking, contemporary with the earlier Jewish apocryphal writings; but it will for the present purpose be convenient to include the evidence of all the canonical writings of the OT under the heading 'Hebrew,' and to reserve the data found in the OT apocrypha, the Talmud, and other later works for the 'Jewish' section of the subject here dealt with. Probable dates of later Scriptures quoted in the section will, however, usually be given.

The question of ancestor-worship among the ancient Hebrews has been much discussed in recent times, the most systematic treatise on the affirmative side so far being Friedrich Schwally's *Das Leben nach dem Tode* (Giessen, 1892), which in the main follows the views previously laid down by Stade and Oort (see the literature at the end). A decisively negative answer is given in *Der Ahnenkultus und die Urreligion Israels* by Carl Grüneisen (Halle, 1900), who, whilst utilizing the arguments advanced in J. Frey's *Tod, Seelenglaube und Seelenkult in alten Israel* (Leipzig, 1889), attempts to establish his thesis on a more scientific basis than had been done before. This divergency of views rests, of course, not so much on questions of fact as on diverse modes of interpreting the many references to the departed found in the OT. The Hebrew Scriptures have, thanks partly to the relation they bear to all phases of life, and partly, no doubt, also to the judgment emphatically pronounced by Jahwism on other cults, preserved for us a far larger number of details connected with mourning and cognate matters than have so far come to light in the inscriptions of Babylonia and Assyria. It is highly probable, however, that a common stock of ideas underlies both these branches of early Semitic beliefs and customs; for it is becoming more and more clear that pre-Mosaic Hebraism was thoroughly rooted—not by borrowing, but by original affinities—in the widely spread traditions of the general Semitic family.

This branch of the subject will be treated under the following heads: (1) Translation to heaven; (2) Teraphim; (3) Sacrifices and offerings to the dead; (4) Sanctity of graves; (5) Mourning customs; (6) Levirate law; (7) Laws of uncleanness; (8) Necromancy.

1. Translation to heaven.—Deification, if the term were here allowed at all,* could not possibly mean the same in the religion of Jahweh as in the polytheistic Babylonian religion; and yet it seems impossible to resist the conclusion that the translation of Enoch recorded in Gn 5^{24} originally belonged to the same class of beliefs as the transference of the Babylonian Sit-napishtin to the society of the gods. It has already been remarked (see § 1 of 'Babylonian,' art. above) that Sit-napishtin is in reality a combination of the Biblical Noah and Enoch; or, more probably, Noah and Enoch represent a splitting up of the one original personality of Sit-napishtin. However this may be, Enoch, like Sit-napishtin, was spared death and the descent into Sheol, which are the common fate of mortals; and the legitimate meaning of the phrase 'Elohim took him' is that he was transferred to a condition of close association with the Deity. Under the Jahwistic system of religion this would mean that he joined

* The use of the term might seem justified by the designation *elohim* applied to the ghost of Samuel in 1 S 28^{13}, but it is there used only by the witch of Endor. Whether *elohim* = 'the dead' in Is 8^{19} is very doubtful. The idea of deification or semi-deification is, however, implied in a passage like Ps 82^{6}, though *elohim* is there used of the living.

the company of angelic beings (cherubim, seraphim, etc.) which in prophetic imagery * (sec Is 6 ; Ezk 1 and 10) surrounded the throne of Jahweh.

Another clear instance of the translation of a mortal to the company of heavenly beings, without having died and gone down to Sheol, is Elijah,† who passed from earth to heaven in a whirlwind (2 K 2^{11}); and a veiled example of transference to heaven immediately after death (*i.e.* without having previously gone down to Sheol) is, according to Rabbinic tradition (see *Deut. Rabba*, xi. 6), contained in Dt 34^{6}, where the burial of Moses is apparently stated (see Driver, *in loco*) to have been undertaken by Jahweh Himself. Viewed in the light afforded by the translation of Enoch and Elijah, it seems likely that the Midrashic statements of the high favour accorded to Moses‡ are based on a tradition of great antiquity.

Different from the above-named instances, because pointing to an anti-Jahwistic stratum of belief in deification or semi-deification, is Is 63^{16}, where the supremacy of Jahweh is emphasized by the admission made by the prophet on his own behalf or on that of the nation, that 'Abraham knoweth us not, and Israel doth not acknowledge us.' The clear inference is that Abraham and Israel (or Jacob) were, as the departed ancestors of the race, regarded, by at any rate a portion of the nation, as tutelary deities who interested themselves in the condition of the people, and on whom one could call for succour in times of distress (see, *e.g.*, Cheyne, *The Prophecies of Isaiah, in loco*, and *Last Words* ; Ed. Meyer,§ *Die Israeliten und ihre Nachbarstämme*, 1906, p. 285). The ideas connected with the term 'Abraham's bosom' used in the parable of Dives and Lazarus (Lk $16^{22.23}$) may not unfairly be regarded as a development from the deification of Abraham implied in the Isaianic passage quoted (see R. Winterbotham, 'The Cultus of Father Abraham,' in *Expositor*, 1896, ii. pp. 177–186).

2. Teraphim.—It has been suggested (see, *e.g.*, Schwally, *op. cit.* p. 35 ff. ; Charles, *Eschatology*, p. 21 ff.) that the Teraphim, of which pretty frequent mention is made in the OT, were originally images of ancestors. But there is, so far, nothing to prove the correctness of this proposition. The word itself is of uncertain origin. Schwally's suggestion that *Teraphim* comes from the same root as *Rephaim* ('shades') fails to recommend itself on philological or other grounds. Sayce‖ connects it with a Babylonian word *tarpu* ('ghost'). Perhaps equally admissible would be a connexion with the Ethiopic *terāf* (pl. *terāfāt*), which among other meanings has that of *excellentia, præstantia*. The plural *Teraphim* in the sense of *excellentiæ* would then be analogous to that of *Elohim* in its original plural signification, but it would at the same time afford no clue¶ as to what kind of exalted beings it represented. From 1 S $19^{13.\ 18}$ (where Michal employs Teraphim to personate David on a sick-bed) we learn that the word was in the plural form used to denote a single image (thus lending itself, like *Elohim*, to a *pluralis majestatis*). The same passage shows that it bore a human form, but this fact by no means demonstrates its identity with an ancestral figure.* In Jg 17^{5} $18^{17ff.}$, at any rate, the Teraphim cannot denote a mere family deity, but the national God (Jahweh) Himself ; for the image there spoken of belonged first to an Ephraimite and then to Danites, with a Levite as ministering priest in both cases (see the emphatic reference to a general cult in 18^{19}). Nor does the testimony borne by 1 S 19 to the fact of the Teraphim having formed part of the usual equipment of a well-to-do family ['observe *the* Teraphim,' Charles, *op. cit.* p. 22] necessarily imply a connexion with ancestor-worship ; for it is quite as likely that the national God Himself was thus represented in houses of private families.† Still less decisive is the consultation of Teraphim as oracles (with the sanction of the prevalent religion, as, *e.g.*, Hos 3^{4} ; or without it, as, *e.g.*, 2 K 23^{24}); for Jahweh Himself or any other deity could thus be consulted.

The *Elohim* before whom a Hebrew servant who wished to remain perpetually in his master's service was brought, in connexion with the ceremony of having his ear pierced with an awl at his master's door‡ (Ex 21^{6}), have also been regarded by a number of scholars as images of ancestors and identified with the Teraphim. The momentary fixing of the servant's ear to his employer's door looks, indeed, like 'admission to the family cult with all its obligations and privileges,'§ and it is from this consideration that the idea of ancestral gods (or an ancestral god), being here represented by *Elohim*, derives its strength. But certain the conclusion is not ; for the tutelary deity of the family need not necessarily be an ancestor, and may, in fact (as has already been remarked), be the national God Himself. Nor is it certain that images of any kind are here meant ; for the term *Elohim* may bear the meaning of 'judges' (cf. Ex $22^{7.8.27}$ (Eng. vv.$^{8.9.28}$), and see LXX, Dillmann and the Rabbinical Commentaries, *in loco*), and the piercing of the ear may have been a symbol of obedience (for illustrations, see Dillmann, *in loco*). If, however, the *Elohim* in Ex 21^{6} were images of ancestors, either the Mosaic legislator must have felt no antagonism between Jahwism and this form of the ancestral cult, or the images must at the time in question have come to be regarded as representatives of Jahweh Himself. On the former supposition the omission of the *Elohim* in the parallel Deuteronomic passage (Dt 15^{12-18}) would point to a later effort made to eliminate the ancestral idea from the ceremony. On the latter supposition the Deuteronomist would have aimed at discarding images generally (even of Jahweh Himself).‖

There remain two references in the OT to Teraphim in connexion with non-Israelites, namely, the stealing of Laban's Teraphim by Rachel recorded in Gn 31, and the consultation of Teraphim by Nebuchadnezzar mentioned in Ezk 21^{26} (Eng. v.^{21}). From the fact of the apparent common worship of the Teraphim by Hebrews, Aramæans, and Babylonians, the conclusion has been drawn that ancestor-worship must be meant (see Schwally, *op. cit.* pp. 36, 37) ; for it would, so it has been argued, be difficult to find another cult that possessed the international character implied. Another such basis could, however, be easily imagined (any of the great powers of nature would indeed satisfy this requirement), and it is furthermore possible that the Teraphim (especially if the general meaning, *excellentiæ*, be adopted ; see above) represented different kinds of deities among different nations. In the case of Ezk 21^{26} there is also the possibility that the prophet merely expressed Nebuchadnezzar's manner of consulting oracles in terms of Hebrew speech, and that

* These prophetic ideas were probably grounded on much earlier modes of religious contemplation. Isaiah and Ezekiel need only have given a special Jahwistic finish to certain more or less known forms of Divine imagery. In the case of Ezekiel, the influence of his Babylonian surroundings is clearly discernible.

† Charles (*Eschatology*, p. 56) regards the translation of Enoch and Elijah as a step preparatory to the higher doctrine of the soul developed by Jahwism ; but an analogous higher belief probably existed also among the Babylonians (see A. Jeremias referred to in § 1 of Babylonian art.). The tradition regarding Enoch is, moreover, in all probability far too early to fall in with Charles's theory. The truth seems to be that diverse theories and beliefs existed side by side among both the Babylonians and the ancient Hebrews.

‡ In the Midrash referred to, as also elsewhere, the spirit of Moses is said to have been separated from the body, not by the intervention of the angel of death, but by a kiss of Jahweh. Immediately after death he was placed under the throne of glory amidst cherubim, seraphim, and other angelic beings.

§ This inference from Is 63^{18} is, of course, independent of Ed. Meyer's general theory regarding the original divinity of some of the patriarchs.

‖ See *Oxf. Heb. Lex.*, *s.v.*

¶ It would be too venturesome to base a theory on the root-meaning of the Ethiopic verb *tarafa : reliquum esse vel fieri*, so as to make it refer to the continued existence of the departed.

* The argument that an ancestral image must here be excluded by the very fact of David's firm adherence to Jahweh (Charles, *loc. cit.*) is not sufficiently convincing, for a certain degree of veneration paid to departed forefathers may be quite compatible with monotheism or (as in David's case) with henotheism.

† For illustrations, see Grüneisen, *op. cit.* p. 181.

‡ This interpretation goes with the theory that the Elohim were household gods ; if (see farther on) judges are meant, the door or doorpost would be that of the sanctuary or court where they sat.

§ So Charles, *loc. cit.* ; it would, however, be more correct to omit the word *all* from the sentence. The perpetual servant still continued in the status of a dependent, and fell short of the privileges of a son of the house (except, perhaps, under special circumstances, when there was no son ; see Gn 15^{3}).

‖ If judges were meant by *Elohim*, their omission by the Deuteronomist might have been due to the use of the word in that sense having become obsolete, although it might be urged that *shōphĕṭim* would in that case have been employed instead.

Teraphim in the usual OT meaning of the word were not actually used by him.

It would seem, therefore, that so far we have no clear indication as to what deity or deities the Teraphim represented. All that can be said is that they may originally have been images of ancestors, and the fact of their having been (in many cases at least) household gods would be in consonance with the idea, though it cannot be adduced as a proof of its correctness.

3. **Sacrifices and offerings to the dead.**—As a clear reference * to the offering of food to the dead Dt 26^{14} may be claimed; the tithe-giver there makes the following declaration: 'I have not eaten thereof in my mourning, neither have I put away thereof being unclean, *nor given thereof to the dead.*'† Oort, Stade, Schwally, and others see in this declaration a prohibition (and therefore an evidence of the custom) of sacrificial offerings to the dead, understanding the text to mean that the tithe sacred to Jahweh was not to be perverted to idolatrous practices connected with the worship of the dead; but the general bearing of the entire declaration suggests only the provision of sustenance. The evidence for sacrifices offered to the dead must therefore rest on other grounds (see farther on). The fact, however, that every single tithe-giver had to make the statement in question proves that the practice of feeding the dead, or a strong disposition towards it, was wide-spread among the people, and perhaps also in the higher grades of society.

This is one of the indications showing that the ancient Hebrews shared with their Babylonian kinsmen the belief in the continuance of the human personality after death, and in its need of sustenance in Sheol, the Hebrew equivalent of the Babylonian *Shu'ālu* or *Arālu*. But whilst in Babylonia and Assyria the early customs connected with the belief were allowed to flourish by the side of the State religions, Jahwism strove with all its might to suppress them. In a measure it succeeded; but popular ideas are not easily rooted out, and the practice continued for a considerable period of time in different parts of the country. The various and partly conflicting references to the dead met with in the OT are largely to be explained by this conflict of Jahwism with the ancient cult and the frequent recrudescence of heathen ideas in all their original force. That, however, Jahwism made substantial progress in the course of time, is shown by the fact that Jahweh, who was originally only a territorial God, gradually acquired authority even over Sheol, as is evidenced by His power of bringing up the dead from the under world mentioned in 1 S 2^6 (hardly later than *c.* 700 B.C. [Driver]), and by the belief in His presence there recorded in Ps 139^8 (close of Persian age [Cheyne]). There is here another point of contact with the (probably likewise later) Babylonian belief which regarded Marduk and other deities as 'raisers from the dead' (see § 1 of 'Babylonian' art.); but the chief interest of the fact lies in the slow but sure preparation for the higher Hebrew doctrine of monotheism and the later Jewish belief in the resurrection as taught in Dn 12 (probably Maccabæan) (see Charles, *op. cit.* p. 132 *passim*).

Of direct evidence for the presentation of sacrificial offerings to the dead there is not much. The reference to a family sacrifice in 1 S 20^{29} is not conclusive; for although there is much to be said in favour of the idea that the blood-relationship with an ancestral god lay at the base of such a family offering,* it is conceivable that a deity other than ancestral was in the case mentioned the object of common worship (see what has been said in § 2 on the family deity). The treasures found in the sepulchre of King David (Jos. *Ant.* XIII. viii. 4, XVI. vii. 1; *BJ* I. ii. 5), and doubtless also in those of other kings, may originally have had the character of a sacrificial offering (Schwally, *op. cit.* p. 24); but it is also possible that they were merely intended to serve as an ample provision for the dead monarch's needs. The divers kinds of spices with which the grave of King Asa was filled (2 Ch 16^{14}) might have been nothing but an extension of the use of spices in the preparation of the body for burial; but the 'very great burning' which was made for the same king would seem to point at least to the offering of incense† to the departed. The prevalence of the practice in the case of kings is attested by Jer 34^5; and its spread among the people is in all probability proved by the term *mᵉsārᶜphō* (מְסָרְפוֹ, 'he that makes a burning for him,' rather than 'he who burns him'; see *Oxf. Heb. Lex.*, *s.v.* שׂרף) in Am 6^{10}. Ezk 43^{7-9} offers very strong evidence of the idolatrous worship of departed kings (see § 7), and the offering of sacrificial gifts must have formed part of such worship.‡ The evidence from oracles (see § 8) points in the same direction, for an offering of some kind would naturally precede the consultation of the dead. On the probable offering of hair made to the dead, see § 5; and there is, besides, the tendency to connect a propitiatory purpose with the ordinary presentation of sustenance to the departed; and if the analogy from the Babylonian custom be taken into account, it becomes pretty certain that among the ancient (pre-Mosaic and anti-Jahwistic) Hebrews also sacrifices to the dead were, to say the least of it, not uncommon.

4. **Sanctity of graves.**—The question concerning the veneration of graves is closely connected with that of sacrifices to the dead; for if the latter question be answered in the affirmative, the graves of ancestors would have to be regarded as the places where the sacrificial offerings were made. Viewed in this light, there is much in favour of the opinion that the *maṣṣēbah* set up by Jacob on the grave of Rachel (Gn 35^{20}) was intended to mark it as a spot devoted to her worship.§ The name *Allon-bacuth* ('oak of weeping') given to the tree under which Rebekah's nurse, Deborah, was buried (Gn 35^8), proves nothing; and Cornill's conjecture (*ZATW* xi. pp. 15–21) that the erection of a *maṣṣēbah* and the libation of oil poured on it recorded in Gn 35^{14} referred in the original form of the text to Deborah's grave, cannot, of course, be treated as an ascertained fact. Nor can the circumstance mentioned by Schwally (*op. cit.* p. 58), that graves, like the sanctuaries of Jahweh Himself, were put on heights, be cited in favour of intended sacrificial worship there; for the same writer records the well-known fact that tombs in Palestine were, apparently for other reasons, generally rock-hewn.

The stress laid on family graves (as more especially the cave of Machpelah, Gn $23^{3ff.}$ etc.), with

* Schwally's attempt (*op. cit.* p. 22) to construe Jer 16⁷ into an evidence to the offering of sustenance, and even of sacrificial gifts to the dead, is not convincing (see Grüneisen, *op. cit.* p. 130); but so far as sustenance is concerned, the evidence of Dt 26^{14} is quite sufficient.

† Driver (*in loco*) does not decide between the claims of this rendering and that of '*for* the dead,' which might then be taken to refer to funeral repasts offered to the mourners by their friends. But the phrase would hardly be natural in that sense. Among the Rabbinic commentators, Abraham ibn Ezra suggested an idolatrous intention, introducing this explanation by 'and some say.'

* See W. R. Smith, *Rel. of Sem.*², Lect. ii., *passim*.

† Unless it was merely intended to render the passage to Hades pleasant.

‡ The eating of sacrifices to the dead mentioned in Ps 106^{28} is brought in as a foreign custom (connected by parallelism with Baal-peor), but at the same time it shows a tendency among the Hebrews to adopt it.

§ Cf. the *maṣṣēbah* set up by Jacob at Bethel for the worship of Jahweh (Gn 28^{18}). The worship paid to Rachel would no doubt be of a secondary kind.

which the phrase 'being gathered to one's fathers' has been connected, may legitimately be regarded as a desire 'to introduce the departed into the society of his ancestors' (Charles, *op. cit.* p. 12); but the passages relating to these sepulchres contain (in the form at any rate in which the texts have been handed down to us) no reference to sacrifices or offerings of any kind.

There is, however, apart from family graves, the strong testimony of Is 65[4] ('who remain among the graves, and lodge in the monuments'), which, as an evidence of necromancy practised at graves (see § 8), demands not only the supposition that offerings were there made in order to obtain a hearing from the dead, but also that from the general idolatrous point of view such graves (declared doubly unclean by Jahwism; see § 7) were regarded as sacred. At least as strong is the evidence from Ezk 43[7-9]. On both passages, see § 7.

5. Mourning customs.—Several of the mourning customs of ancient Israel are very obscure, and a careful scrutiny is required before anything like a decision can be arrived at on any single point. It will therefore be best to consider these customs separately.

(*a*) *The mourner put on sackcloth.*—The sackcloth, with which the application of ashes or earth is sometimes mentioned, was in very early times in all probability a loin-cloth only, the tearing and entire putting off of the usual garments having preceded the 'girding on' of it (see esp. Is 32[11]). Mic 1[8] ('I will go stripped and naked'), especially if taken in conjunction with the phrase, 'in nakedness and shame' of v.[11], points to a still earlier custom, when the mourner went quite naked; but the general practice of putting on sackcloth as a substitute for all other garments must have set in pretty early, and considerable modifications * both in the form of the sackcloth and in the direction of putting on other apparel may have been gradually, though not universally, made in later Biblical times.

The putting on of sackcloth has been claimed as a mark of submission to a superior (cf. 1 K 20[31. 32]), and the fact of Isaiah having apparently worn it as his usual garment † (Is 20[2]) has been taken to show that it was also considered a holy garment (see Schwally, *op. cit.* p. 12). The practice would on either explanation point to one form or another of ancestor-worship. Jer 48[37], where the putting on of sackcloth is mentioned together with cuttings in the hands, etc., places it in the category of usages which have been claimed to possess a ritual value (see farther on). But it is, on the other hand, psychologically very probable that the meaning lying at the base of the practice is that of self-humiliation,‡—a sentiment which would equally accompany the attitude of submission to a superior, and the marks of grief at losing a beloved relative or companion, and which might also suit the prophet attending on Jahweh. The primitive entire nakedness of the mourner, to which reference has been made, reminds one of the fact that on the Stele of Vultures (see § 2 of the 'Babylonian' art.) the dead are shown to have been buried naked.§ The mourner might therefore have desired not to appear at greater advantage than the mourned dead. Later on, sackcloth would be assumed by the mourner in deference to the altered public sense of decency, and the modifications referred to would gradually follow. If this view be correct, the close association of the sackcloth with ritual usages (Jer 48[37]) may belong to later times. On the suggestion that the practice of wearing sackcloth was adopted with the object of deceiving the dead as to the identity of the mourner, see farther on.

(*b*) *The mourner put off his sandals.*—The putting off of one's sandals in connexion with mourning is not so frequently mentioned as the girding on of sackcloth, but it was no doubt meant to accompany it regularly (see, *e.g.*, Ezk 24[17], 2 S 15[30]). Passages like Ex 3[5], Jos 5[15] show that no sandals were to be worn at sacred places. Hence the supposition that it was essentially a ritual practice. But here again the original meaning was probably self-humiliation, which would suit both the grief of mourners and the attendance at sacred places.

(*c*) *The mourner cut off his hair, or beard, or both.*—The cutting off of the hair in connexion with mourning is mentioned, *e.g.*, in Mic 1[16] ('make thee bald and poll thee for the children of thy delight'); the removal of the beard as a sign of mourning for the destruction of Jerusalem is recorded in Jer 41[5]; the two together are found in Is 15[2]. The characteristic feature in cutting off hair on these occasions consisted in making a baldness 'between the eyes' (Dt 14[1]), which must mean over the middle part of the forehead (see Driver, *in loco*), although in different parts of the country hair from other parts of the head was probably also cut away. The beard was apparently cut off entirely.*

Tylor, Oort, W. R. Smith, and others favour the idea that the hair so cut off was designed as an offering to the dead—a theory which is strongly supported by numerous analogies from the customs of the Arabs † and other races. The offering of hair in the ritual of Jahweh is clearly attested in the case of the Nazirite (Nu 6[18]), and the practice would seem less strange in the ritual of the dead, who, according to old ideas, stood in need of all the things that appertained to the living.

Another plausible explanation would be that the cutting off of the hair from head and chin was a kind of adjunct to the removal of one's clothes. Everything, it may have been held, was to be discarded that served as an ornament or protection to the body, not only the clothes, but also the hair. The idea of self-humiliation, which might have been involved in the act, is supported by the fact that the cutting off of the beard (see 2 S 10[4], and the parallel passage I Ch 19[4]) was regarded as an indignity. This idea would, however, not be incompatible with the simultaneous sacrifice of the hair. The dead might be benefited, and the living at the same time humiliated.

A third explanation that has been offered of this and, in fact, of all the mourning customs connected with apparel and bodily mutilation, is that these rites had the object of deceiving the dead as to the identity of the living, so as to escape any evil which recognition might bring with it.‡ This idea seems, however, un-Semitic, and it certainly does not fit in with other notions regarding the dead in early Hebrew times. Beings who could be called *yidde'ōnīm* (יִדְּעֹנִים 'knowing ones'§), and to whom one resorted for oracles, could hardly be deceived by a change of garments or other disguise on the part of the living. They certainly could not be deceived by taking off one's sandals, which is also pressed into the service. The examples, moreover, from the customs of other races (including the Romans), quoted by the supporters of this theory, are for the most part capable of another explanation. The opposite

* This supposition is borne out by the somewhat conflicting data regarding the wearing of sackcloth. The verb *ḥagar* which is used with *saḳ* appears to show that a loin-cloth was originally meant (cf. *ḥagōrah* in Gn 3[7]), and the word *mothnaïm* ('loins') is expressly employed where *ḥagar* is not used. In as late a work as the Ascension of Isaiah (1st cent. A.D.) the prophets spoken of in 2[10] are said to be naked, notwithstanding the sackcloth that was on them. On the other hand, the verbs *lavash* and *kasah* are also used with *saḳ*, and *ḥagar* is also employed with *ēphod*, etc.; and a passage like 'to spread sackcloth and ashes under him' (Is 58[5]), clearly points to a different kind of cloth from that put round the loins. For a fuller discussion on this point, see on the one side Schwally (*op. cit.* p. 11 ff.), and on the other Grüneisen (*op. cit.* p. 79 ff.). Whether in any case the *saḳ* ever had the form of a cornsack with a slit at the top (see Kamphausen in Riehm's *HWB*, art. 'Sack'), is a different question.

† Cheyne (*Prophecies of Isaiah, in loco*) regards it as an 'outer garment,' and explains the word 'naked' in, *e.g.*, 1 S 19[24] to mean 'without the outer garment.' But one can hardly accept this as a natural explanation of the term.

‡ See J. Frey, *Tod, Seelenglaube*, etc. p. 42.

§ It is, of course, possible that the circumstance was there due to the exigencies of war.

* This is required by the verbs *galaḥ* and *gada'* used in the passages quoted. In 2 S 10[4] the verb *karath* is used, and *half* the beard is expressly mentioned (in 1 Ch 19[4] [parallel passage] the verb *galaḥ* is, however, used, and apparently the entire beard meant).

† See esp. W. R. Smith, pp. 323–326.

‡ For a full exposition of this view (adopted also by Kautzsch in Hastings' *DB*, Ext. Vol. 614[b]), see Grüneisen, *op. cit.* p. 95 ff. J. G. Frazer (*JAI* xv. p. 73 ff.), on whose remarks regarding Bohemian and other customs Grüneisen and others primarily based the theory, expresses himself, however, doubtful as to the meaning of the cutting off of the hair spoken of here (*ib.* p. 73).

§ The Biblical statements affirming the impotence and shadowy character of the dead are mainly due to the weakening influence exercised by Jahwism on the ancient cult; so in Job (probably time of Bab. captivity [Driver]) 14[21.22], the dead are affirmed to know of nothing but their own pains, and in Ec 9[10] (*c.* 200 B.C. [Nöldeke and others]) Sheol is stated to be devoid of work, device, knowledge, and wisdom. Allowance must, of course also be made for different streams of thought in very early times

treatment of the hair by men and women in times of mourning (each adopting the unusual course, men, *e.g.*, covering their heads at funeral ceremonies, and women letting their hair fly loose about them) may surely be explained as a species of self-neglect expressive in each case of self-humiliation induced by grief; and a similar explanation would be applicable to several other customs.

The Jahwistic prohibition in Dt 14[1] of making a baldness between the eyes for the dead furnishes a strong presumption in favour of regarding the act as a ritual observance connected with the worship of the dead; and the ground of the prohibition ('ye are children of Jahweh,' and a 'holy people' to Him) strengthens the theory that it was directed against an opposing religious cult. The place described as lying between the eyes may have for this very reason been chosen for the *ṭôṭāphôth* * (Dt 11[18] etc.), by which every Israelite was to be marked as a devotee of Jahweh, unless it was independently chosen as the most conspicuous part of the head. The absence of a prohibition regarding the removal of hair from other parts of the head and from the beard in connexion with mourning is probably owing to the fact that, according to Lv 19[27], it was prohibited under all circumstances.†

(*d*) *The mourner made cuttings in his flesh.*—Cuttings in the flesh, accompanied by removal of the beard and tearing of garments, appear as a general custom in Jer 41[5], notwithstanding its distinct prohibition in Dt 14[1], thus showing that the Deuteronomic legislation could make its way only very gradually. Instead of the verb *hithgōdēd* used in the two passages mentioned, and the form *gᵉdūdōth* found in Jer 48[37], there is in Lv 19[28] the command not to make a *śereṭ* (also tr. 'cutting') for a dead person, or to print any marks (writing of *ḳaʿaḳaʿ*) on the flesh, the latter being evidently a kind of tatu. If the theory of making oneself unrecognizable by these disfigurements be discarded, there remains only the idea of thereby 'making an enduring covenant with the dead' (W. R. Smith, *Rel. of Sem.*[2] p. 322 f.).‡

That cuttings in the flesh were parts of religious ritual is, moreover, proved by the action of the priests of Baal recorded in 1 K 18[28]. The fact that these incisions, as also the making of a baldness between the eyes, were prohibited by Jahwism, whilst the wearing of sackcloth, etc. was never interfered with, would seem to show that these groups of acts belonged to different categories, thus forming another reason for rejecting the theory that they had all the purpose of making the living unrecognizable to the dead.

(*e*) *The mourner covered his head or beard.*—The covering of the head (*e.g.* 2 S 15[30], Est 6[12]) and the beard (Mic 3[7], Ezk 24[17]) as a mark of mourning on account of death or other calamity might be explained, with Schwally and others, as a substitute for cutting off hair from head and beard. But the covering of the face in 2 S 19[5] [Eng. v.[4]] (the clearest instance of actual mourning) reminds one of the same act performed in the presence of Jahweh (Ex 3[6], 1 K 19[13]). As the covering of the face was there prompted by the fear of beholding the Deity (cf. Ex 33[18ff.]), it seems likely that the mourner was also afraid of seeing the ghost of the departed (which is, of course, different from deceiving the ghost by a disguise). It is possible, however, that the covering of the face was merely an extension of covering the hair, and the idea that the latter act was a substitute for removing the hair might therefore be maintained. As the hair of the head and beard was regarded as a personal ornament, the covering of it might, in any case, be expressive of self-neglect or self-humiliation occasioned by grief.

No evidence of ancestor-worship can be derived from the extant accounts of the two remaining * customs, namely, (*f*) the *lamentation over the dead*, with its accompaniment of weeping and striking different parts of the body with the hand; and (*g*) the *partaking of food and drink by the mourners* † in connexion with funeral ceremonies. The lamentations were natural or professional (see Jer 9[18] [Eng. v.[17]] expressions of grief, and need—so far as the texts in their present form go—neither have been ritually addressed in worship to the dead (Schwally, *op. cit.* p. 20 f.) nor intended to scare away the ghosts of the departed by much howling (Grüneisen, *op. cit.* p. 100). The lamentations of David over Saul and Jonathan and over Abner (2 S 1[17ff.] 3[33. 34]) certainly show no trace of either intention. With regard to funeral repasts, Schwally's attempt to construe Jer 16[7] into a decidedly ritual act has already been referred to (§ 3). The text, as it stands, speaks only of food and drink offered to the mourners by way of comfort. On the uncleanness connected with the 'bread of mourning' in Hos 9[4], see § 7.

6. Levirate law.‡—A close relationship has been claimed between ancestor-worship and the law of levirate, which, in the form given to it in Dt 25[5-10], enacts that when brothers 'dwell together,' and one of them dies without leaving male issue, the surviving brother (no doubt the eldest, if more than one) was to marry the widow, and that the first-born son of this union was to be considered the son of the departed brother, so 'that his name be not put out of Israel.' The supposition is that the original object of the institution was to provide the dead man with a son to carry on his cult (so, *e.g.*, Stade, Schwally, Charles)—an object which must be assumed to have been entirely forgotten in the time of the Deuteronomic legislator. In the case of Ruth (where the law is found to extend over the whole clan), the object is 'to raise up the name of the dead upon his inheritance' (Ru 4[5]). Absalom (2 S 18[18]) puts up for himself a pillar in his lifetime, because he had no son to keep his name in remembrance. In Gn 38 (where, under an older form of the law, all the children would have apparently belonged to the departed) the ground stated is merely that of raising up a posterity to the departed.§ But if the institution—as it is quite reasonable to suppose—had from the first, besides the desire of leaving a memorial of one's name, a close connexion with the law of inheritance, it is impossible to eliminate the idea of the cult of the departed altogether, as the son or sons thus provided for the dead man, as inheritors of his property, would, under pre-Mosaic religious notions, be expected to charge themselves with the sustenance (and probably also sacrificial offerings) due to the departed. This broader basis of the levirate law would seem to be required by the extant data and the considerations arising from them, and it also

* Usually translated 'frontlets'; see *Oxf. Heb. Lex.*, *s.v.* טֹטָפֹת. The modern *tephillim* (known as phylacteries) consist of a part for the left arm, and another to be placed over the middle part of the forehead.

† For the probable ground of this general prohibition, see Dillmann, *in loco*.

‡ Driver explains that 'the Israelites, being Jehovah's children, are not to disfigure their persons in passionate or extravagant grief' (on Dt 14[1. 2]). But it is doubtful whether grief would have generally gone the length of these mutilations, and the ground assigned for the prohibition (see the text above) appears to indicate an opposing religious cult.

* An attempt has been made to connect the festival of Purim with the Persian *Farvardīgān*, which was a kind of All Souls' Day; but if so, the story of Esther must have been purposely altered beyond ordinary recognition. See, on the one side, Schwally, *op. cit.* p. 42 ff.; on the other, Grüneisen, *op. cit.* p. 188 ff. The other literature will be found in these works.

† The supposition that sympathizing friends and neighbours provided the mourners with this nourishment is strengthened by the fact of the same custom obtaining among the Jews at the present day.

‡ For the custom, under partly different rules, among other races, see esp. Westermarck, *Hist. of Human Marriage*, p. 510 f.

§ On J. F. M'Lennan's theory that the law originally rested on a polyandrous system of marriage, see Driver, *Deut.* p. 284.

does justice to the fairly complex state of society which already obtained in those early days. So far as the element of the cult of the dead is concerned, it is important to mention that the *Kaddish* (see § 3 in the 'Jewish' article), which, like acts of Jewish public worship in general, is to the present day confined to males, also seems to bear traces of a survival (in a much modified form) of the religious services rendered to the departed by his surviving sons.

7. Laws of uncleanness.—The laws of uncleanness relating to dead human bodies (see esp. Nu 19^{14-16}) can be satisfactorily explained by the almost universal fear of contamination * arising from the contact or close vicinity of decaying bodies that obtained in ancient times. The ancient Egyptians,† it is true, busied themselves much with corpses, but then they took every possible care to prevent decay setting in. In the Mosaic law the abhorrence of dissolution also affected not only animals that were forbidden as food, but also clean ones if not slain in proper ritual fashion (Lv 11). Leprosy, which was similarly loathed, is also ritually unclean (Lv 13), though here the fear of contagion must have been an important factor.

It is likely that this fear of contamination was in early times merged into the general notion of savage races, that everything connected with birth, disease, and death involved the action of superhuman agencies of a dangerous kind (see W. R. Smith, *Rel. Sem.*[2] 444 f.), analysis and differentiation of causes being a product of gradual mental development; but it would be rash to identify these agencies with ancestral spirits. On the contrary, the fact that dead human bodies are regarded as unclean among a number of races with a strongly developed system of ancestor-worship (see Grüneisen, *op. cit.* p. 114) proves that the two are independent of each other. Worship may be given to the departed spirits of ancestors, and contamination may at the same time attach to their dead bodies. The regulation of Nu 19^{15}, that an open vessel with no covering round it, which has stood in the tent of a dead person, is unclean, whilst covered vessels remain clean, can be suitably explained by the idea that the covering protects the vessel from contracting contamination, and need not point to the fear that the ghost might take up its abode in the open vessel.

The pollution connected with the bread of mourners (לֶחֶם אוֹנִים) referred to in Hos 9^4 is also explicable without a reference to a Jahwistic opposition to ancestor-worship. For the meal offered to mourners by way of comfort may be all that is meant; and if so, the uncleanness would only be that of ordinary contamination contracted by contact with dissolution.

An additional tahu, arising from opposition to the religion of Jahweh, would come in only in cases where a sufficiently recognizable element of ancestor-worship or some other heathen form of the cult of the dead showed itself; and as such practices were demonstrably not uncommon among the ancient Hebrews (see esp. § 3), the additional tahu would be of a correspondingly wide application. But the dead body itself would probably in such cases be affected only in so far as the spirit may have been supposed to linger about it, for, as has already been remarked, the cult of the dead was not necessarily connected with the notions entertained of the body.

In the case of priests (Lv $21^{1ff.}$) greater restrictions against contact with dead bodies are imposed, because the contamination would make them for a time unfit for Jahweh's service. The ground of the main ordinance there given cannot be opposition to ancestor-worship, for the persons whose obsequies priests may attend (father, mother, etc.) are just those to whom the heathen cult of the dead would chiefly apply (see Grüneisen, *op. cit.* p. 112). The order, however, not to remove the hair from head and beard, or make cuttings in the flesh, appears (unless v.[5] be regarded as unconnected with the rule regarding obsequies) to have the meaning that, although priests may take part in the funeral rites of very near relatives, they must abstain from anything connected with heathen mourning ceremonies, more particularly as in their case this additional tahu, like that of uncleanness *per se*, would naturally be of greater stringency than in the case of laymen.

The strongest instance of the combined tahu of ordinary contamination and heathen worship appears in Ezk 43^{7-9}, where tombs of kings erected quite close to the sanctuary of Jahweh are clearly stated to have been places of a rival worship (note their *zenûth*, a usual term of unfaithfulness to Jahweh, borrowed from the relationship of marriage), whereby the 'holy name' of God is defiled. A similar double tahu is presented by Is 65^4, where graves, which are unclean in themselves (Nu 19^{16}), are used for purposes of necromancy.

8. Necromancy.—Though the Teraphim cannot be demonstrated to have been originally images of ancestors (see § 2), there is ample independent evidence of the practice of necromancy among the ancient Hebrews. The spirits of the departed were called *yidde'ônîm* ('knowing ones') by those addicted to the practice, and the *'ôbôth* (usually rendered 'familiar spirits') also represent a form of necromancy, the calling up of the spirit of Samuel on behalf of Saul (analogous to the calling up of Eabani by Gilgamesh) having been effected by a woman possessed of an *'ôb* (*ba'ălath-'ôb*, 1 S 28^7).* In Isaiah 8^{19} the people are distinctly charged with inquiring of the dead on behalf of the living; and Is 65^4 may safely be regarded as a strong evidence of necromancy practised at graves.†

The practice was decidedly anti-Jahwistic, and is everywhere forbidden (whereas the inquiry of Teraphim is not always prohibited, see § 2). As has already been remarked, necromancy, which is in itself an important part of the cult of the dead, is, at the same time, an indirect evidence to the offering of propitiatory gifts to the spirits consulted.

Summary.—In summing up all the extant evidence, the same result is, in the main, obtained as in the Babylonian section. The OT embodies indubitable traces not only of the popular cult of the dead, but also of a certain degree of actual worship paid to ancestors and departed kings and heroes. But the importance of these practices has been much exaggerated. There is no ground for thinking that ancestor-worship was the only or even the chief religion of pre-Mosaic Israel. On the contrary, various parts of the OT show clearly that Jahwism had to maintain at least as keen a struggle against the worship of the heavenly bodies and of various other powers of nature as against the cult of the dead. It is also true that in a certain modified form the exaltation of departed heroes, more especially of the spiritual type, was from the first quite compatible with the religion of Jahweh; and the final monotheistic development of Mosaism left still more room for the glorification of great human personalities in one form or another.

LITERATURE.—Works of F. Schwally, C. Grüneisen, R. H. Charles, and others have been more or less frequently quoted A very full bibliography will be found in Grüneisen's book. Ad A. Lods, *La Croyance à la vie future et le culte des morts dans l'antiq. Isr.* (1906). Of earlier works in favour of ancestor-worship, notice esp. Oort, 'De doodenvereering bij de Israëliten,' *ThT* xv p. 350 ff.; Stade, *GVI* i. pp. 387-427. W. R. Smith, *Rel. Sem.*[2] and other publications contain much that bears on the problem. J. Frey (*Tod, Seelenglaube*, etc.) tries to prove that though there was a belief in the soul, no cult of the dead (in the sense of paying homage to them) existed among the ancient Hebrews. Kautzsch (Hastings' *DB*, Ext. Vol. pp. 614-615) agrees in the main with Grüneisen [animism, but no ancestor-worship]. Among com-

* See Dillmann (*Die Bücher Ex. u. Lev.* p. 479), who also brings in the idea that Jahweh was a God of life, not of death. On the far-spread fear of contamination connected with death, see, *e.g.*, A. P. Bender in *JQR* viii. 109, 110. The removal of a corpse to the 'tower of silence,' lest it should pollute the sacred earth, is one of the most necessary duties of Parsiism.

† In the New World the Peruvians offered a fairly close parallel to the Egyptians in this respect (see Prescott, *Conquest of Peru*, book i. beg. of ch. iii.).

* The fact of Saul bowing to the ground at the appearance of the spirit of Samuel (1 S 28^{14}) might be regarded as an evidence of worship paid to the dead, though perhaps it was still the prophet who was thus honoured.

mentators (some of the leading modern commentaries have, as occasion required, been referred to), Solomon Yiṣḥāḳi, Abraham ibn Ezra, and David Ḳimḥi will on a number of points still be found helpful. G. MARGOLIOUTH.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Indian).—1. In India the worship of ancestors lies at the root of all the funeral rites. As now explained by official Brāhmanism, the object of these is to provide the departed spirit with a kind of 'intermediate body interposed, as it were parenthetically, between the terrestrial gross body which has just been destroyed by fire, and the new terrestrial body which it is compelled ultimately to assume' (Monier-Williams, *Brāhmanism and Hinduism*[4], 277). This writer goes on to say that this intervenient body, composed of gross elements, though less gross than those of earth, 'becomes necessary, because the individualized spirit of man, after cremation of the terrestrial body, has nothing left to withhold it from re-absorption into the universal soul except its incombustible subtle body, which, as composed of the subtle elements, is not only proof against the fire of the funeral pile, but is incapable of any sensations in the temporary heaven or temporary hell, through one or other of which every separate human spirit is forced to pass before returning to earth and becoming re-invested with a terrestrial gross body.' Unless it be provided with this new body, the soul must, like the ghosts of the unburied Homeric dead (Homer, *Od.* xi. 54; *Il.* xxiii. 72), wander about as an impure *preta*, or ghost, on the earth or in the air, among demons and other evil spirits, into the state of which it will eventually pass unless it be protected by the performance of the Śrāddha provided by its relatives on earth. Further than this, the new body thus created for the spirit must be nourished and supported, and the spirit must be aided in its progress from lower to higher worlds and back to earth by the performance of the periodical Śrāddha rites. This duty of the relatives is among orthodox Hindus supposed to be finally discharged only when the rite is performed at some specially sacred place. Gayā in Bihār is the most appropriate place for these rites, while the Hindus of the west, for the obsequies of a mother, prefer Sidhpur in the Baroda State. Hence also arises the necessity of begetting a male heir, which is urgently felt by all Hindus, as is also the case in China. Using a folk-etymology, Manu (*Institutes*, ix. 138) derives the Skr. name of a son, *putra*, as if it were *puttra*, 'he that delivers his father from the hell called Put.'

2. *Feeding the dead.*—This orthodox conception of the Śrāddha—that it is intended to provide an 'intermediate' body for the departed soul—is a later development. The Śrāddha was really evolved from the custom of feeding the dead, a rite common among all savage and semi-savage races. 'Like the habit of dressing the dead in his best clothes, it probably originated in the selfish but not unkindly desire to induce the perturbed spirit to rest in the grave and not come plaguing the living for food and raiment' (Frazer, *JAI* xv. 74 f.). The custom is well established among many of the Indian tribes. Thus, among the Nāgas of Assam, the corpse is watched with great care, and when decomposition sets in, quantities of spirits are thrown over it. Whatever the deceased was in the habit of eating and drinking in his lifetime (such as rice, vegetables, and spirits) is placed once a month on the ground before the dead body. At the end of the period of mourning, a great feast, consisting of liquor, rice, and flesh of cows and buffaloes, is prepared, and the members of the clan in war dress partake of it. Among the Luhupa sept of the same tribe the cattle sacrificed are eaten, with the exception of one leg, which is buried under the head of the dead man to serve as food for him in the grave. Among the Angāmi sept, on the first day after a death, meat is distributed among the relatives and friends of the deceased. The next day they assemble at the house of the dead man, eat part of the meat, and each member of the sept of the deceased throws a piece of liver out of the house to the distance of some eight paces. On the third day portions of the cooked rice are tied up in leaves, and buried outside the house on the fourth day. On the fifth day the platter and cup of the dead man are hung up in the house and left there till thirty days have passed, when they are given to a friend of their former owner. The funeral rites end with the sacrifice of a cock, the flesh of which is eaten by all the members of the family (*JAI* xxvi. 196 f.).

Among a more civilized race, the Nāyars of Malabar, the Seshakriyā, or rite of making offerings to the spirit of the dead, commences on the day after the cremation ceremony, and continues for seven days. All male members of the Taravād, or sept of the deceased, bathe, and the eldest mourner taking with him a strip of cloth which he has torn from the dead man's shroud (probably in order to maintain communion with the dead), and a piece of iron (to scare evil spirits), brings some half-boiled rice, curds, and other articles of food, and places them in the north-east corner of the courtyard, which is believed to be the abode of the spirit. A lamp, which is also probably intended to drive off demons, is lighted beside the food. A piece of palmyra leaf, about a foot long and a finger broad, is taken, and one end of it is knotted. The knotted end is placed in the ground, and the other left standing up. This represents the deceased, and to it the food is offered. 'The place where the piece of leaf is to be fixed has been cleaned carefully, and the leaf is placed in the centre of the prepared surface. The offerings made to it go direct to the spirit of the deceased, and the peace of the Taravād is secured' (Fawcett, *Bulletin Madras Museum*, iii. No. iii. 247 f.).

The custom of providing food for the dead is common among the lower castes in Northern India. In Bengal the funeral rites of the Gonds last for three days, after which the mourners purify themselves by bathing and shaving, and make offerings of bread and milk to the spirit of the departed. Among the Kāmis, the blacksmith caste of Nepāl, 'on the eleventh day a feast is prepared for the relatives of the deceased; but before they can partake of it a small portion of every dish must be put on a leaf-plate and taken out into the jungle for the spirit of the dead man, and carefully watched until a fly or other insect settles on it. The watcher then covers up the plate with a slab of stone, eats his own food, which he brings with him to the place, and returns to tell the relatives that the dead man's spirit has received the offering set for him. The feast can then begin.' The Bhakat Orāons preserve the bones of the dead, to be interred in the tribal cemetery. 'At this festival pigs and great quantities of rice are offered for the benefit of departed ancestors, who are also held in continual remembrance by fragments of rice or dāl [pulse] cast on the ground at every meal, and by a pinch of tobacco sprinkled whenever a man prepares his pipe' (Risley, *Tribes and Castes*, i. 293, 395, 92).

The Māl Pahāriās, who identify the Lares, or ancestors, with Gūmo Gosāin or Gūmo Deota, the gods of the wooden pillar which supports the main rafters of the house, perform the same rite in another way. 'Around this centre are grouped a number of balls of hardened clay, representing the ancestors of the family, to whom the first-fruits of the earth are offered, and the blood of goats or fowls

poured forth at the foot of the pillar that the souls may not hunger in the world of the dead' (Risley, ii. 71). The custom of offering first-fruits to the ancestral spirits is very common, and has been fully illustrated by Frazer (*GB*[2] ii. 460, 462 ff.). The Mechs, again, adopt another method to secure that the offering may reach the etherealized souls of the dead. When the corpse is buried, 'a small fire is kindled upon the grave, in which food and drink are burned for the benefit of the deceased' (Risley, ii. 89 f.). The Māls provide for the needs of the departed in another way, by lighting on the night of the worship of the goddess Kālī, in the month of October-November, dried jute stems in honour of their deceased ancestors, 'and some even say that this is done to show their spirits the road to heaven' (*ib.* ii. 50).

In other parts of Northern India rites of the same kind are performed. The degraded Ghasiyas of Mirzapur, at the annual mind-rite for the dead, lay out five leaf-platters containing the usual food of the family, with the prayer: 'O ancestors, take this and be kind to our children and cattle' (Crooke, *Tribes and Castes*, ii. 417). The Kols, whenever there is a tribal feast, offer a fowl to the spirits of the dead, and pour a little liquor on the ground, with the prayer: 'Do not injure us or our children' (*ib.* iii. 311). The Rājis, who are perhaps the most degraded people in this part of India, content themselves with shaving the heads, beards, and moustaches of the sons and younger brothers of the dead man, and throwing the hair on the grave as an offering to the spirit (*ib.* iv. 213). The ritual of the Nats, a tribe of wandering acrobats, is more remarkable. The mourners cook food on a river-bank, and spread a cloth on which the ghost is supposed to sit. The nearest relative, taking an earthen cup and a knife in his hand, plunges into the water. The cup he places on his head with the knife upon the mouth of it, and then dives until the cup becomes filled with water. This he deposits under the cloth on which the spirit is supposed to sit, and lays a cup of water at each corner of the cloth. Within the enclosure thus made food is laid for the refreshment of the spirit, who is invited to partake of the meal. When the spirit is supposed to have done eating, they say: 'Go and join those who have departed before you' (*ib.* iv. 63 f.). Even more elaborate than this is the rite performed by the Musahars, a tribe which has hardly risen above the condition of wanderers in the jungle. After the corpse is flung into a river (which is their usual mode of disposing of the dead), a tree near the spot is selected as a refuge for the spirit, and food and water are laid at its foot for nine days in succession. At the time of presenting these offerings, the chief mourner invokes the dead: 'Come, O dead one, from the palace of Indra! Come and eat the food of this world! Take it and return to thy palace.' These offerings are allowed to lie for some time on the place where they were deposited, and are then removed by the mourner, who cooks and eats the food, throwing a morsel on the fire for the use of the dead, and repeating the invocation already made at the tree. The offerings are changed daily during the period of mourning, and the rite ends with a clan feast of the dead (*ib.* iv. 31 f.).

In the United Provinces, among the various branches of the outcast Dom tribe, the idea of feeding or propitiating the spirits of the dead is combined with that of barring or preventing the return of the ghost, which is believed to afflict the survivors. Thus, among the Basors, some sacrifice a hog in the name of the dead man, with the object of providing the spirit with food; while others kill the animal, cut off its legs, and bury the trunk in the courtyard of the house of death, as a sort of sympathetic charm to prevent the spirit from rising out of its grave and afflicting the family (Crooke, *op. cit.* i. 226). Very similar is the custom of the Dhāngars, among whom, on the tenth day after death, the mourner sacrifices a pig in the name of the deceased, and, cutting off its feet and snout, buries them under a stone in the courtyard, with the invocation to the spirit: 'I have buried you here, never to come out; you must rest here in spite of the spells of an exorcist, or of any one else who may try to wake you' (*ib.* ii. 269).

3. *Vicarious feeding of the dead.* — From this crude belief in the possibility of feeding the spirits of the dead, the transition to the theory that this can be done vicariously is easy. Among some of the Indian castes survivals of the primitive matriarchy are found in the custom of providing for the feeding of the spirits by the bestowal of food on relatives in the female line. The Bhoksas of the sub-Himalayan Tarāī, every year in the month set apart for mourning, feed the descendants of their daughters in order to propitiate the ghosts of the dead; and, for the same reason, the Juāngs of Bengal and other menial tribes of Northern India employ the maternal uncle of the person making the offering as priest (Crooke, *op. cit.* ii. 58; Risley, *op. cit.* i. 353). The next stage appears when the Paṭāri, or tribal priest of the non-Aryan peoples of the Vindhyan and Kaimūr ranges in the centre of the peninsula, is invited, as a right attaching to his office, to share in the funeral feast. When we reach the higher castes of Hindus in the Plains, we find the custom of feeding Brāhmans prevalent. The belief is that food consumed by them passes on to the spirits. In fact, all through Northern India, large numbers of Brāhmans, generally drawn from the younger members of the families which provide *purohits*, or family priests, or from those branches of the caste which have settled down to an agricultural life and have no body of religious clients, exist only to be fed. These people flock in numbers to attend the death rites of wealthy people. At places like Gayā, whither the pious journey to perform the final death rites of their friends, a special class of Brāhmans has the monopoly of attending to be fed on such occasions.

4. *Annual rites for the dead.* — The establishment of an annual celebration, like the All Souls' Day of Christendom, when the dead are specially remembered and offerings of food are provided for them, appears among the most primitive tribes. Thus the Luhupa Nāgas of Assam, once every year in the month of December, hold a solemn festival in each village in honour of those members of the community who have died during the preceding year. The village priests conduct the rites, which culminate on the night of the new moon. On this occasion, they believe, the spirits of the dead appear at a distance from the village in the faint moonlight, wending their way slowly over the hills, and driving before them the victims slain for them or the cattle which they have stolen during their lives. Finally, the procession disappears over the distant hills, amidst the wailing of those who have lost relatives during the year (*JAI* xxvi. 194). The period consecrated by orthodox Hindu usage to the propitiation of the spirits of the dead is known as the *Kanāgat*, so called because it takes place in the sign of Kanyā, or Virgo, or *pitra-paksha*, 'ancestors' fortnight,' occurring in the moonless half of the month Kuār (August-September). This fortnight is specially devoted to the death cult, and the pious offer sacred balls (*piṇḍa*) in memory of their ancestors. During this time the pious fast; others abstain only from meat, or eat fish instead of it.

5. *Ancestor-worship among the non-Aryan tribes* —The cult of the dead, so far as it extends to the provision of food for the spirits of the dead, is thus

not confined to the higher castes, but is widespread among the non-Aryan part of the population. Sometimes, as in the case of the wild Kurubārus of Mysore, this worship is one of fear, and is devoted to the propitiation of the Vīrika, or spirits of ancestors who have died unmarried, and are thus supposed to be malignant (Buchanan, *Journey*, i. 397). The Yerukalas, one of the forest tribes of the Nīlgirī Hills, sacrifice, in conjunction with other gods, to the Pitris, or Manes of their ancestors (Oppert, *Orig. Inhabit.* 204). In the Bombay Presidency many of the ruder Hindu tribes, such as the Dhor Kāthkaris and Vaitis of Thāna, the Kunbis of the Konkan, Atte Kunbis, and Halvakki Vakkals of Kānara, worship their ancestors, usually in the form of an unhusked coconut (*Gazetteer*, xiii. 165, 182, xv. 217, 249, 203). The Bhīls of Khāndesh combine the cult of their ancestors with that of the Mātās, or Divine Mothers, and the same is the case with the Central Indian branch of the tribe (*ib.* xii. 93; Malcolm, *Trans. Roy. As. Soc.* i. 72). Gonds in the Central Provinces worship the family dead on the third day after a death, and on every Saturday and feast day (Hislop, *Aboriginal Tribes*, 25; *Gazetteer*, 278). In Chota Nagpur the Kisāns and Bhuiyars adore their ancestors, 'but they have no notion that the latter are now spirits, or that there are spirits and ghosts, or a future state, or anything'; the Bhuiyas revere their ancestors under the name of Bīr or Vīra, 'hero,' a title which, as we have seen, is often applied to malignant spirits; the Kharrias put the ashes of their dead into an earthen pot and fling it into a river; afterwards they set up in the vicinity slabs of stone as a resting-place for them, and to these they make daily oblations; the only worship performed by the Korwas is to their dead relatives, but this statement of Dalton is more than doubtful (Dalton, *Descript. Ethnol.* 132 f., 139, 160, 229). Among the Khonds the cult is very highly developed. 'The beatified souls of men enjoy immediate communion with all the gods; they are in rank little inferior to minor gods, live with them, and much after their fashion. Every tribe invokes the souls of deceased ancestors in endless array at every ceremonial, after invoking the minor gods; and they especially remember those of men renowned for great or good actions, as for reclaiming waste lands, for extraordinary bravery, for wisdom in council, or for remarkable integrity of life. They believe that beatified souls, although wholly without power, may act as intercessors with some of the gods, as with Dinga Pennu, on the one point of inducing him to restore lost relations speedily to their homes' (Macpherson, *Memorials of Service*, 95).

Among that remarkable people the Kāfirs of the Hindu-kush, though the fact is denied by them, there are distinct traces of ancestor-worship. They have the custom of making straw effigies of the honoured dead, which are paraded at their funerals, and one year after his death an effigy is erected to the memory of every Kāfir of adult age. These images are of various kinds, carved out of wood with axes and knives on conventional models. 'The more ponderous kinds,' says Robertson, 'are roughly fashioned in the forest, and are then brought into the village to be finished. Some of the best images have a manikin seated on the left arm holding a pipe; others have similar little images perched on the chair-handle. Several of the large images have all manner of quaint designs and carving over their bodies. Some even look as if the carving were intended to imitate tatuing, such as the Burmese are so fond of. The people have a good deal of superstition about these effigies. Bad weather which occurred while a slave was carving some images for me to take to India, was ascribed to the fact that images were being taken from the country. . . . The images are often decorated with wisps of cloth bound round the head, and, where the juniper-cedar is easily obtainable, by sprigs of that tree fastened to the brows. The faces of the effigies are carved precisely like the idols, and similarly white round stones are used for the eyes, and vertical cuts for the mouth, or rather the teeth. The effigies are provided with matchlocks, or bows and arrows, axes and daggers, carefully but grotesquely carved, and commonly have a cart-wheel-shaped ornament in the middle of the back. The effigies of males are given turbans, while those of females have a peculiar headdress, which is possibly a rough imitation of a horned cap. Before these images of the eminent dead sacrifices are made, and their pedestals are sprinkled with blood by their descendants when they are suffering from sickness. Long stones are also erected to serve as a kind of cenotaph, and a goat is always killed when the pillar is erected. The Kāfirs also celebrate a festival, known as Marnma, in honour of the illustrious dead; and the last two days of the Duban feast are devoted to dancing, feasting, and singing ballads in honour of the departed heroes of the tribe' (Robertson, *Kafirs of the Hindu-kush*, 636 ff., 414 f.).

6. *The Śrāddha.*—The mind-rite of orthodox Hindus, known as the Śrāddha (Sanskrit *śrat*, 'faith,' 'trust,' 'belief'), is a more highly developed form of the primitive funeral feast and of the custom of feeding the dead. Even so late as the time of Manu (*Institutes*, iii. 267–271) the idea of providing food for the dead was recognized. 'The ancestors of men,' he writes, 'are satisfied a whole month with sesamum, rice, barley, black lentils or vetches, water, roots, and fruit, given with prescribed ceremonies: two months with fish, three months with venison, four with mutton, five with the flesh of such birds as the twice-born may eat, six months with the flesh of kids, seven with that of spotted deer, eight with that of the deer or antelope called Eṇa, nine with that of the Ruru deer; ten months are they satisfied with the flesh of wild boars and wild buffaloes, eleven with that of hares and of tortoises, a whole year with the milk of cows and food made of that milk; from the flesh of the long-eared white goat their satisfaction endures twelve years. The pot-herb *Ocimum sanctum*, the prawn, the flesh of a rhinoceros or of the iron-coloured kid, honey, and all such forest grains as are eaten by hermits, are formed for their satisfaction without end.' He further directs (iii. 205 ff.) that an offering to the gods should be made at the beginning and end of a Śrāddha. 'It must not begin and end with an offering to ancestors; for he who begins and ends with an oblation to the Pitris quickly perishes with his progeny.' The Brāhman is directed to smear with cow-dung a purified and sequestered piece of ground, with a declivity towards the south. 'The divine manes are always pleased with an oblation in empty glades, naturally clear, on the banks of rivers, and in solitary spots.' The officiant is then to seat the assembled Brāhmans, and he is to honour them, 'having first honoured the gods with fragrant garlands and sweet odours.' The feeding of Brāhmans at the mind-rite was thus customary. As another lawgiver directs, 'Whatever mouthfuls at a Havyakavya (or Śrāddha) are eaten by the Brāhmans are eaten by the ancestors' (Wilson, *Indian Caste*, i. 366). To drop the oblation into the hands of a Brāhman is, Manu lays down, equivalent to putting it into fire. 'If his father be alive, let him offer the Śrāddha to his ancestors in three higher degrees; or let him cause his own father to eat as a Brāhman at the obsequies. Should his father be dead, and his grandfather be

living, let him, in performing the obsequies of his father, celebrate also his paternal grandfather. Having poured water with holy Kuśa grass and sesamum into the hands of the Brāhmans, let him give them the upper part of the cakes, saying, "Śrāddha to the Manes." That fool who, having eaten of the Śrāddha, gives the residue of it to a man of the servile class, falls headlong down to the hell named Kālasūtra. The superfluous Piṇḍas, or holy balls, may be given to a Brāhman, to a cow, to a kid, or consigned to fire' (iii. 220 f., 223, 249, 261).

The form of the modern Śrāddha rite is most intricate, and includes a number of minute observances, the ritual of which is elaborately prescribed. In the form of the rite known as Ekoddishṭa, which is performed for the benefit of a single deceased individual, for ten days after the cremation lamps are kept lighted for the benefit of the Manes, to light the ghost during its progress to join the Pitris or sainted dead, either in a temple, or under a sacred fig-tree, or on the spot where the obsequial rites are to be performed. These, technically called *Kriya-karma*, should take place near running water; and the spot is hence known as the *ghāṭ*, the usual term applied to the steps used for bathing at a river or tank. One condition is that it must not lie to the west of the house of death. This place, when selected, is carefully smeared with clay and cow-dung, a fireplace is erected, and beside it an altar of white clay, also smeared with the dung of the cow. The officiant, with his top-knot tied up, first bathes, and then standing with his face to the south, the land of spirits, offers a lamp, sesamum, barley, water, and sprigs of the sacred Kuśa grass (*Poa cynosuroides*), with a dedication to the Manes. The object of this rite is to allay the extreme heat and thirst which the spirit must undergo during cremation. This ends the ceremonies of the first day, and during the next ten days, either once or twice daily, the rite of feeding the spirit is performed. For Brāhmans rice, the original sacred grain, and for Kshatriyas, and the illegitimate sons of Brāhmans, barley-flour, are prescribed. These grains are boiled in a jar of copper, the old sacred metal, mixed with honey, milk, and sesamum, and then made into a small ball (*piṇḍa*), which is offered to the spirit with the invocation that it may obtain liberation, and reach the abodes of the blessed after crossing the hell called Rāurava (Manu, *Institutes*, iv. 88). By this rite the creation of a new body for the disembodied soul begins. On the first day one ball is offered, on the second two, and so on until during the observances of the ten days fifty-five balls have been offered.

The motive of the offerings appears in the numerous invocations which are made at various times in the service. One runs thus: 'Thou hast been burnt in the fire of the pyre and hast become severed from thy brethren; bathe in this water and drink this milk, thou that dwellest in the ether without stay or support, troubled by storms and malignant spirits; bathe and drink here, and having done so be happy.' Another hymn is as follows: 'Let the lower, the upper, the middle fathers, the offerers of soma, arise! May those fathers who have attained the higher life protect us in the invocations! Let this reverence be paid to-day to the fathers who departed first, to those who departed last, who are situated in the terrestrial sphere, or who are now among the powerful races, the gods. Do us no injury, O Father, on account of any offence which we, after the manner of men, may commit against you. Fathers! bestow this wealth upon your sons, now grant them sustenance. Do thou, O resplendent God, along with the fathers who, whether they have undergone cremation or not, are gladdened by our oblation, bless us' (Muir, *Original Sanskrit Texts*, v. 297).

By these ten days' rites the spirit has been enabled to escape from the same number of different hells, and gradually a new body with all its members has been created. The order in which the members of this new body are formed is sometimes thus defined. On the first day the dead man gains his head; on the second his ears, eyes, and nose; on the third his hands, breast, and neck; on the fourth his middle parts; on the fifth his legs and feet; on the sixth his vital organs; on the seventh his bones, marrow, veins, and arteries; on the eighth his nails, hair, and teeth; on the ninth all remaining limbs and organs and his manly strength. The rites of the tenth day are usually specially devoted to the task of removing the sensations of hunger and thirst which the new body then begins to experience. The house and the vessels which it contains are purified so as to remove the last taint of the death pollution; the fireplace at the scene of the obsequies is broken, and a handful of water is offered to the ether to assuage the thirst of the spirit. After bathing at a spot higher up the stream than that where the obsequies were performed, the officiant and other relatives go homewards, first being sprinkled with the five products of the sacred cow (*pañcha-gāvya*), and taking care to lay a ball of uncooked meal on the road behind them, so as to attract the attention of the ghost and dissuade it from returning in their company.

On the eleventh day the chief rites consist in the gift of a cow (*kapila-dāna*) to the chief Brāhman, and the loosing of a scape-bullock (*vṛṣotsarga*) in the name of the deceased. This seems to be partly a survival of the ancient rite of animal sacrifice, and partly a means of removing the tabu of death (Frazer, *GB*² iii. 13 ff.). It is released with the dedications: 'To father, mother, and relatives on the father's and mother's side, to the family priest (*purohita*), wife's relatives, those who have died without rites, and who have not had the due obsequial ceremonies performed, may salvation come by the loosing of the bullock!' At the present day the animal is usually branded with the divine emblems of the discus and trident, and henceforth is allowed to wander free in the village lands. Food is again cooked, and offered to the Manes, with the invocation: 'You have finished your course, and have reached the abodes of bliss. Be present, though invisible, at this rite.' The general effect of the ceremony is that the spirit ceases to be a disembodied ghost, and becomes enrolled among the sainted dead. On the twelfth day food is again offered, and water poured at the root of a sacred fig-tree for the refreshment of the spirit.

The rite done for the benefit of one individual person (*Ekoddishṭa Śrāddha*) is quite distinct from the annual propitiation of the Manes of the family. On the last day of this feast all ancestors are named and propitiated, but sacred food balls (*piṇḍa*) are offered only for the three male ancestors on the father's side—the father, grandfather, and great-grandfather. The idea prevails that the ancestor, once united with the sainted dead, needs no further special propitiation. The non-Aryan tribes believe that, like themselves, the spirits of the dead are mortal. What becomes of them after a couple of generations no one cares to say. But when that period has elapsed, they are supposed to be finally disposed of, and, being no longer objects of fear to the survivors, their worship is neglected, and attention is paid only to the more recent dead, whose powers of mischief are recognized. The Gonds propitiate only for one year the souls of their departed friends, and this is done even if they have been persons of no note in their lifetime.

But with worthies of the tribe the case is different, and if one of them has founded a village or been its headman or priest, he is regarded as a god for many years, and a small shrine of earth is erected to his memory, at which sacrifices are annually offered (Hislop, *op. cit.* 16 f.).

No Śrāddha is performed for girls who die unmarried, and for boys only if they have undergone initiation and investiture with the sacred thread. Special rites are performed in the case of those whose ghosts are universally regarded as malignant. Such cases are those of a woman dying in childbirth or in a state of impurity. Her corpse is generally anointed with the five products of the cow, sprinkled with water, a little fire is placed on the chest, and it is then either cremated or flung into running water. In such cases it is a common rule that no rites are performed until the ninth day after death, when, if the family can afford the cost, the ceremonies of the last few days, as already described, are performed. To these are added a special rite of expiation, which is intended to free the household from pollution. Similar rites of a special kind are performed when a man is drowned, dies on an unlucky day, or in the case of one originally a Hindu who becomes an outcast, a Christian, or a Musalmān. In this rite, which is known as Nārāyaṇa-bali, 'oblation to the god Nārāyaṇa,' the Śrāddha of expiation is usually performed over an image of the deceased, made of barley or some other grain (*Bombay Gazetteer*, xx. 522 f.; Risley, *op. cit.* i. 266, ii. 191; Crooke, *op. cit.* i. 90, 210, ii. 465).

The Śrāddha is performed throughout India with more or less variety of practice by all orthodox Hindus. Among the castes of a lower grade the primitive custom of feeding the dead has been to some degree extended after the example of their Hindu neighbours. The main point of difference is the abbreviation of the rite, which does not extend over a period so long protracted as in the case of the orthodox, and the ceremonial is very often limited to the last few days of the mourning season.

7. *Hindu worship of the Pitris.*—The question remains — how far the Hindus can be said to 'worship' the Pitris. In the earliest Vedic period the worship paid to the Manes was distinct from that of natural phenomena. 'It is not denied that the Hindus made gods of departed men. They did this long after the Vedic period. But there is no proof that all the Vedic gods, as claims Spencer, were the worshipped souls of the dead. No *argumentum a fero* can show in a Vedic dawn-hymn anything other than a hymn to personified Dawn, or make it probable that this dawn was ever a mortal's name' (Hopkins, *Religions of India*, p. 10). The general theory seems to have been that ancestors are of a class different from that of the gods, and that though they are divine and possessed of many godlike powers, so that the Vedic poet thus invokes them, 'O Fathers, may the sky-people grant us life; may we follow the course of the living,' yet they are distinct from the gods, and never confounded with them (*ib.* 143, 145). Hence, in the Vedic ritual of the Śrāddha, when the officiant invites the gods and ancestors to the feast, he does so with two separate invocations (Colebrooke, *Essays*, 114). Speaking of the Vedic conception of Yama, the god of death, Barth thus writes: 'It is there, at the remotest extremities of the heavens, the abode of light and the eternal waters, that he reigns henceforward in peace and in union with Varuṇa. There, by the sound of his flute, under the branches of the mythic tree, he assembles around him the dead who have lived nobly. They reach him in a crowd, conveyed by Agni, guided by Pūshan, and grimly scanned as they pass by the two monstrous dogs who are the guardians of the road. Clothed in a glorious body, and made to drink of the celestial soma, which renders them immortal, they enjoy henceforward by his side an endless felicity, seated at the same tables with the gods, gods themselves, and adored here below under the name of Pitris, or fathers' (*Religions of India*, Eng. tr. 22 ff.). When we come to the Atharva Veda, we first encounter the specific doctrine of the elevation of the Pitris. The due performance of rites raises them, we are told, to a higher state; in fact, if offerings are not given, the spirits do not go to heaven. This view was still further extended in a later period. It is when we reach the Epic period that we find a progressive identification of the gods and the Pitris. 'The divinities and the Manes are satisfied with the oblation in fire. The hosts of gods are waters; so, too, are the Manes. . . . They are both of one being' (*Mahābhārata* i. 7. 7 ff.). The poet speaks also of the Manes worshipping the Creator, Prajāpati Brahmā, in his Paradise. It is in the Purāṇic period, when the Indian religious imagination ran riot, and produced that vague and complex system which is the basis of modern Hinduism, that we find them mixed up with Vedic gods and a host of other objects of devotion, like the bird Garuḍa and the world-snake Śesha. But throughout this progressive development the Pitris seem invariably to lack that criterion of worship which we have already fixed. They are never regarded as independent divine beings; on the contrary, stress is always laid upon the fact that they depend upon their friends on earth for continuous aid and maintenance, and that their advancement to a higher stage is impossible without the due performance of rites done by their pious descendants.

LITERATURE.—The authorities have been freely quoted in the course of this article. The best authority on the funeral rites of Hindus is still Colebrooke's essay in *Asiatic Researches* (1801), vii. 232 ff.; reprinted in *Essays on the Religion and Philosophy of the Hindus*, ed. 1858, 93 ff. A good account of the modern rites will be found in Atkinson, *Gazetteer of the Himalayan Districts* (1882–84), ii. 853 f., 917 ff.; Grierson, *Bihār Peasant Life* (1885), 391 ff. Full details are given in the caste articles in the *Bombay Gazetteer*, edited by Sir J. Campbell.

W. CROOKE.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Iranian).

—The Zarathushtrian religion, as known from the Avesta, comprises an elaborate system of religious thoughts and moral habits founded on the idea of two universal powers, one heavenly and pure, the world of Ahura Mazda (Ormazd), and its contrast, the bad and impure world of the devils, the head of whom is Angra Mainyu (Ahriman). In this religion, according to its theoretical scheme, the ancestors, or the souls of the dead, play no part; but practically, in the popular customs and beliefs, the cult of the dead still survives. Parsism not only permits this popular worship, but even finds room for it in the official ritual, so that in the Yashts of the later Avesta we read a voluminous litany to angels or ghosts, in whom, no doubt, are to be recognized the souls of the dead, especially those of the ancestors. But it must be observed that these primitive ghosts are difficult to recognize in the shape that is given them in this Avestan composition, being often placed in the epical evolution as heroes or kings of old, as patrons or protectors of persons, families, or provinces, or as heavenly angels or genii, fashioned after the national and religious ideas of the Iranians.

These ghosts are in the Avesta called Fravashis (Pahlavi *Farvardîn*), and are invoked in the 13th, or *Fravardîn*-Yasht. The word Fravashi means in the Avestan language 'confession,' the Fravashi being a personification of the belief of the pious, his genius or his *alter ego*, who protects him and takes care of him during his lifetime, and who

will, in time, receive him in the other world. Under this theological fabric is no doubt concealed a more primitive idea of a being which in some way belongs to human nature as part of his soul or as the principle of his life, nourishing him and giving him growth. These original functions of the Fravashis may be traced in the Avesta itself, when it tells that Ormazd, through these angels, makes all plants and herbs spring out of the earth, gives offspring to the herds, shapes the child in the mother's womb, gives it all its limbs, lets it be born, and grants the mothers many children. Originally these beings may have conferred these boons themselves without the direction of any supreme god, thus fulfilling the functions that ordinarily belong to the province of the ancestors.

This character of ancestral patronage becomes yet more conspicuous when we read Yasht xiii. 64 ff. Here we see how the Fravashis, when drought menaces the land, hurry to the heavenly lake Vourukasha, and how they quarrel in order to procure water, 'each for his own family, his own village, his own tribe, his own country.'

That the Persians themselves looked upon the Fravashis as souls, we learn from Yasna xxvi. 7: 'We invoke the souls of the dead (*iristhānām urvano*), the Fravashis of the righteous, the Fravashis of all our kinsmen that have died in this house, the Fravashis of men and women, of both sexes we invoke' (similarly Yasna lxxi. 23). The little we know of the exterior of the Fravashis fits in with this definition. 'They come flying like a well-winged bird,' we read in Yasht xiii. 70. The souls, then, were imagined in the shape of birds; as the Egyptian *ba* and as the souls in the Assyrian hell are described; as the souls, according to Greek beliefs, left the bodies on the point of death under the guise of birds—the same idea as still confronts us in European folklore (cf. von Negelein, 'Seele als Vogel' in *Globus*, lxxix. 357–361, 381–384; Goldziher, *ib.* lxxxiii. 301–304).

The *cult* of the Fravashis has had its fixed place and its special time in Zoroastrianism; the time was the period Hamaspathmaêdaya, March 10th–20th, *i.e.* the five last days of the year plus the five intercalary days, which days the Indo-European peoples always were wont to consecrate to the souls of the dead. Further, the Fravashis are always invoked in the evening, viz. in the Aiwisrūthrima Aibigaya (cf. Yasna i. 6; Gāh. iv. 1–2), being the first part of the night from 6 to 12,—the usual time reserved for the cult of the dead by kindred nations. We derive our information about the customs of this cult from Yasht xiii. 49–52: 'We invoke the good, the mighty, the holy Fravashis of the righteous, who descend to the villages at the time of the Hamaspathmaêdaya and return thither every night for ten nights to ask for help. Will anybody praise us? Will anybody pay homage to us? Who will accept us amongst his own? Who will bless us? Who will receive us with a handful of meat and a garment, and with sacred reverence?' Everybody who fulfils his duty to these Fravashis—we are told in the same Yasht—shall have his house filled with good things during the coming year (Yasht xiii. 51 f.).

This custom survived far into the Middle Ages; the Arabian chronologist al-Bîrûnî testifies that the Persians during these days placed the meat in the rooms of the deceased, or on the roofs of the houses, believing that the dead conversed with the family; then they burnt juniper as incense in their honour (*i.e.* in reality to keep them away) (al-Bîrûnî, *Chronology*, transl. Sachau, London, 1879, p. 210 ff.).*

* Cf. also the metrical *Sad-dar*, dating probably from the end of the 15th cent., xiii., xxii., xli., tr. Hyde, *Hist. relig. veterum Persarum*, Oxford, 1700, pp. 444, 447 f., 456. There is likewise a record of the celebration of the feast in 538 (Hoffmann, *Auszüge aus syrischen Akten persischer Märtyrer*, Leipzig, 1880, p. 78 ff.); while in 565 Chosroës spent ten days at Nisibis to celebrate the Fravardagân: τὴν ἑορτὴν τὴν Φουρδίγαν προσαγορευομένην, ὅ ἐστιν ἑλληνιστὶ νεκυία (Menander, ed. Niebuhr, Bonn, 1829, p. 374).

The Fravashis are not only invoked during the Hamaspathmaêdaya-period, but also commemorated on the 19th of every month; in the Persian calendar (see art. CALENDAR [Persian]) they have, further, their place as the protectors of the first month of the year (*Fravardîn*; cf. the Armenian loan-name of the twelfth month, *Hrotiç*; Hübschmann, *Armenische Grammatik*, 1895, i. 184 f.). Corresponding to this official position of the Fravashis, the Persian imagination elevated them into higher and higher spheres; and we often meet with them as the genii of the stars (*e.g.* Yasht xiii. 5–7; Maînôg-î Khrat xlix. 22 f.). Altogether they seem in later times to have taken up a place in the Persian cosmology similar to the δαίμονες in Greece.

Besides their place in the ritual, the Fravashis play a prominent part in the private cult of the Persians, especially in the funeral ceremony called *âfrîngân* ('homage'). It was a common meal to which the survivors invited both rich and poor; the priests attended the feast and performed several symbolical ceremonies. On that occasion cakes of meat and flour were offered to the spirit of the recently deceased. The origin of this feast seems to be a meal to the nourishment of the deceased. The same oblation is repeated at the festival in memory of the deceased, or the *Srōsh Darūn*, where cakes are offered to the angel of Death, *Srōsh*.

In *Armenia* the Persian ideas on the Fravashis and their cult have continued into modern times. They are commemorated on the Saturdays before the five great festivals of the year, and, upon the whole, every Saturday. They are imagined to dwell in the neighbourhood of the tombs and in the houses of their kinsmen, and the survivors burn incense and light candles in honour of them. At the tombs the Armenians celebrate a special commemoration of the dead, on which occasion they burn quantities of incense. The Manes dwell three days on earth; then they fly away to heaven, leaving behind their blessings to their descendants. Especially between fathers and sons there is a vivid communication at that time. The Armenians as well as the Persians imagine that souls are connected with the stars.

LITERATURE.—J. Darmesteter, *Le Zend-Avesta*, Paris, 1892–1893, ii. 152 ff., 500 ff.; N. Söderblom, 'Les Fravashis,' *RHR*, 1899; Manuk Abeghian, *Der armenische Volksglaube*, Leipzig, 1899, 23 ff.

ED. LEHMANN.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Japanese).

—In order to understand what the worship of ancestors and of the dead actually amounts to in Japan, we must distinguish clearly the true national religion, that is to say, the native primitive Shinto, as it existed during the first centuries of the Christian era, from the Shinto subsequently modified under the influence of Chinese ideas. This transformed Shinto indeed is of very little interest here, as it is only a shadow cast over Japan from the continent. Our task is to distinguish and emphasize the ideas that are really Japanese, original, and prior to this foreign influence; and to accomplish it we must examine only the most ancient documents, such as the *Kojiki* (*Records of Ancient Matters*, A.D. 712), the *Nihongi* (*Chronicles of Japan*, A.D. 720), the *Norito* (rituals which were not published until the beginning of the 10th cent., but were undoubtedly composed at a much earlier date), etc., being careful to eliminate, even in these documents, any traces of Chinese ideas which they may contain.

It is on account of the neglect of these necessary precautions that Japanese writers, especially the great native philologians of the 18th and the beginning of the 19th cent., have represented their national religion as being mainly an ancestor-cult, while in reality it is mainly a cult of nature. For instance, the famous theologian Hirata (1776–1843), while claiming to restore the primitive Shinto, calls into existence a fanciful religion, into which he introduces, in an artificial way, ancestor-worship as practised by the Chinese: the worshippers must pray to the whole succession of their family ancestors in order that these Manes may protect their descendants and see to their happiness (*Tamadasuki*, vol. x.). From Japan this erroneous conception spread into Europe, where the writers have, one after another, repeated the statement that Shinto was chiefly an ancestor-cult. Even the most conscientious scholars have not escaped the influence of this prevailing idea. Sir Ernest Satow maintained in Murray's *Handbook for Japan*[2] (Introd. pp. 62, 69) that 'in its very earliest beginnings Shinto appears to have been ancestor-worship.' This eminent Japanese scholar has now, however, given up that theory. But more recently, Prof. B. H. Chamberlain wrote (*Things Japanese*[3], 1898, p. 358): 'Shinto is the name given to the mythology and vague ancestor- and nature-worship which preceded the introduction of Buddhism into Japan.' Dr. W. E. Griffis (*Religions of Japan*, 1895, p. 88) emphasizes the idea, saying that 'from the Emperor to the humblest believer, the God-way is founded on ancestor-worship, and has had grafted upon its ritual system nature-worship.' Capt. Brinkley sums up the whole in the very concise statement: 'Ancestor-worship was the basis of Shinto.'

This theory is, in the present writer's opinion, the reverse of the historical evolution as it actually took place. It is evident that at a certain period ancestor-worship was seen to be the dominant cult of Shinto, and when people in our time visit the temples which are dedicated for ever to illustrious ancestors or to certain nature-gods confounded with Imperial ancestors, they are tempted to see in them a confirmation of the general theory of Herbert Spencer. But if we get rid of these modern impressions, and also lay aside the conventional opinions of native commentators, and if we confine our attention simply to the ancient writings, we find that the oldest and most interesting parts of the *Kojiki* and the *Nihongi*, those relating to the 'age of the gods,' are essentially devoted to nature myths; that, moreover, the most important *Norito* celebrate the glory of the gods of nature, and that it is not animism but naturism that in Japan, as in so many other countries, constitutes the real basis of the primitive religion. Does this, however, mean that, as Dr. W. G. Aston maintains at the present time, 'Shinto, the old native religion of Japan, had no cult of true ancestors' (*Man*, 1906, No. 23, cf. his *Shinto*, 1905, p. 44 and *passim*; K. Florenz, *Nihongi, Zeitalter der Götter*, Tokio, 1901, p. 253, and art. SHINTO)? The present writer thinks rather that the truth lies between these two extremes, and that, if ancestor-worship did not appear until after nature-worship, and if it was then developed chiefly under the influence of Chinese ideas, it nevertheless existed in germ in the original Shinto as in the majority of primitive religions.

We shall not discuss the question as to whether cannibalism existed in pre-historic Japan, and if so, whether it was followed by a ceremonial anthropophagy, which is then explained by the desire to offer to certain ancestral gods the food they would most appreciate (see N. Gordon Munro, 'Primitive Culture in Japan,' in *Trans. of the Asiat. Soc. of Japan*, Dec. 1906, vol. xxxiv. pt. 2, pp. 73 ff. and 133 ff.). As a matter of fact, from the time that primitive man invests all the gods, if not with his own form, at least with his feelings, this moral anthropomorphism must lead him to offer to the gods, whoever they may be, the things which appear most precious to himself, and the gods for whom these sacrifices are intended may be gods of nature quite as well as ancestral spirits. We shall therefore dismiss this questionable interpretation of customs which are themselves doubtful, and confine ourselves wholly to the written documents.

These documents show us, in the first place, that the primitive Japanese had a vague belief in the immortality of the soul, without having, however, any precise or absolute idea on the subject. The *Nihongi*, when relating the story of the hero Tamichi, who appeared one day as a serpent with glaring eyes to punish the violators of his tomb, ascribes to the men of that time the thought: 'Although dead, Tamichi at last had his revenge. How can it be said that the dead have no knowledge?' This passage alone is sufficient to prove that there were supporters of another opinion, who doubted the sentient immortality of the dead. In general, however, they believed that the dead survived this life. The common people descended through the opening of the grave to a dark lower region, *Yomi*, *i.e.* 'the Land of Darkness,' where there were neither rewards nor punishments, but where all, good and bad alike, continued to lead a vague existence, regretting the life and light of the upper region. This is the dark kingdom, which swarms with the fierce deities of disease and death, the 'hideous and polluted land' where Izanagi, horror-stricken, found his wife Izanami in a state of putrefaction. Other persons, such as Izanagi himself, do not share this general destiny: it is on a terrestrial island amidst the living that this god chooses his resting-place. Lastly, many divine heroes and illustrious persons were translated to the 'Plain of High Heaven' (*Takama no hara*). Just as the first parents had sent the most beautiful of their children, the Sun and the Moon, to that upper region to illumine it with their brilliance, so men raised the objects of their admiration up to the stars. Like the deified Roman Emperors, they were 'sideribus recepti.' The dead whose brilliant career terminated in this final assumption were not, however, the most virtuous; they were the most illustrious, and their apotheosis was only the natural continuation of their former power. Thus, the particular abode of the dead depended chiefly upon their earthly dignity. Their future life, with which no moral consideration had to do, rested upon an idea that was purely aristocratic. The ladder of the ranks of men had a top which was lost in the clouds and leaned against the floor of the gods. In a word, the spirits of men found a place very readily in the society of the gods of nature. The heroic glory of the one corresponded to the physical brilliance of the other. They took up their abode in the same places, and in virtue of the same inherent sovereignty.

This being so, it follows that the cult of the dead was of a somewhat vague character, and that ancestors were worshipped mainly in proportion to the social position they had held during life. One old mythical account, in which there is a description of the burial of the god Ame-waka-hiko ('heaven-young-prince') by a flock of birds, which perform the various duties of the funeral ceremony, shows us clearly that the Japanese must have practised very complicated rites on such occasions. The existence of funeral sacrifices also shows that they rendered to their ancestors a worship intended to ensure their welfare, providing them with the

objects, animals, and companions which they would require in the other life. The most important writing on this subject is one which relates how human sacrifices were suppressed — an event which the *Chronicles of Japan* place at a time corresponding to that of the birth of Christ, but which probably should be brought down to a more recent date, of the actual occurrence of which, however, there can be no doubt. One passage explains, first of all, why they thought of this suppression:

'28th year [of the reign of Suinin = 2 B.C.], 10th month, 5th day. Yamato-hiko no Mikoto, the Mikado's younger brother by the mother's side, died.

'11th month, 2nd day. Yamato-hiko was buried at Tsukizaka in Musa. Thereupon his personal attendants were assembled, and were all buried alive upright in the precinct of the tomb. For several days they died not, but wept and wailed day and night. At last they died and rotted. Dogs and crows gathered and ate them.

'The Emperor, hearing the sound of their weeping and wailing, was grieved at heart, and commanded his high officers, saying: "It is a very painful thing to force those whom one has loved in life to follow him in death. Though it be an ancient custom, why follow it if it is bad? From this time forward, take counsel so as to put a stop to the following of the dead."'

Another passage then tells how the reform was accomplished:

'32nd year [= 3 A.D.], 7th month, 6th day. The Empress Hibasu-hime no Mikoto died. Some time before the burial, the Emperor commanded his Ministers, saying: "We have already recognized that the following of the dead is not good. What should now be done in performing this burial?" Thereupon Nomi no Sukune came forward and said: "It is not good to bury living men upright at the tumulus of a prince. How can such a practice be handed down to posterity? I beg leave to propose an expedient which I will submit to your Majesty." So he sent messengers to summon up from the Land of Idzumo a hundred men of the clay-workers' Be [hereditary corporation]. He himself directed the men of the clay-workers' Be to take clay and form therewith shapes of men, horses, and various objects, which he presented to the Emperor, saying: "Henceforward let it be the law for future ages to substitute things of clay for living men, and to set them up at tumuli." Then the Emperor was greatly rejoiced, and commended Nomi no Sukune, saying: "Thy expedient hath greatly pleased Our heart." So the things of clay were first set up at the tomb of Hibasu-hime no Mikoto. And a name was given to these clay objects. They were called *haniwa*, or clay rings.

'Then a decree was issued, saying: "Henceforth these clay figures must be set up at tumuli: let not men be harmed." The Emperor bountifully rewarded Nomi no Sukune for this service, and also bestowed on him a kneading-place, and appointed him to the official charge of the clay-workers' Be. His original title was therefore changed, and he was called Hashi no Omi. This is how it came to pass that the Hashi no Muraji superintend the burials of the Emperors' (*Nihongi*, tr. by Aston, 1896, vol. I. p. 178 f.).

With regard to the other funeral offerings, we are sufficiently enlightened by the pottery, weapons, and ornaments brought to light by excavations in the ancient Japanese tombs. Aston interprets these customs as being 'partly a symbolical language addressed to the deceased, and partly . . . an appeal for sympathy by the mourners and a response by their friends.' The present writer thinks rather that we should see in them the proof of a belief in the continued sentient existence of the dead, and in the necessity for satisfying the needs which they still experience in the other world, *i.e.*, in a word, the existence of a real cult of the dead. Even to-day the majority of the Japanese scarcely think of a future life, and the conception of the immortality of the soul seems almost foreign to them; and yet towards their ancestors they perform no less rigorously the minute rites of the ancestor-worship borrowed by them from China. It is probable that the primitive Japanese also, who, as the ancient writings testify, were even at the hour of death not in the least concerned about a future life, felt none the less the desire to do all that they thought might still be useful for their dead relatives. It is true that the ancient documents do not make any direct reference to this point; but the fact must not be lost sight of that these are annals in which scarcely any but famous persons are described, and in which we could hardly expect to find information regarding the obscure life of the common people. They mention the human sacrifices offered at the tomb of an Imperial prince more readily than the humble offering of rice and water which poor families might make. But, on the other hand, with regard to heroes and illustrious personages, we find very clear cases of deification and of worship rendered to the far-off ancestors, gods of nature or human beings, who were regarded as the household gods (*ujigami*) of the great families of the 8th century. (For further details on this last point see the present writer's book, *Le Shinntoïsme*, Paris, 1907, p. 276 f.).

This cult of ancestors, which we can assert with certainty in some illustrious cases, and logically infer also among the poor people who were unknown to the court historiographers, was speedily developed and systematized under the influence of continental ideas. Then Chinese ancestor-worship came to be established with all the ceremonies which it involves and all the consequences it entails, beginning with the very important practice of adoption, which was intended to ensure the continuance of family sacrifices. But this evolution, which is quite distinct from real Japanese religious ideas, is beyond our subject. See CHINA.

MICHEL REVON.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Jewish).

—As was to be expected, the final victory of monotheism made the conscious practice of forbidden or doubtful rites in connexion with the dead impossible to those who strictly followed the sober development of pure Mosaism in early post-Biblical times and the various periods of Rabbinism that followed. Ancient occultism retained, however, a hold on the minds of not a few in each generation; and the confluence of Eastern and Western mystical ideas which in mediæval times produced the theosophical systems of the Kabbalah, gave a further impetus to various essentially un-Mosaic notions about the dead, and even succeeded in partially invading the liturgical form of synagogue-worship.

The literary evidence, which is on some important points supported by practices prevalent at the present day, has here to be collected from (1) the Apocryphal and Pseudepigraphical writings attached to the OT; (2) the Talmudic and Midrashic literature; (3) the Liturgy; (4) the Kabbalah. Only the salient features need, however, be mentioned in each part.

1. **Apocryphal and Pseudepigraphical literature.***—Taking the different parts of the subject, in so far as sufficiently important data exist, in the order followed in the 'Hebrew' article above, it must first be mentioned that the garden or Paradise assigned to Enoch and the other elect is, according to the *Book of Enoch* (32^2 65^2 106^8), imagined to be at the end of the earth towards the east. In it is the tree of wisdom ($32^{3,6}$), whose fruit the holy ones eat and attain high knowledge. In 47^2 'the holy ones who dwell in the heavens' are, however, spoken of. The well of righteousness mentioned in 48^1 is perhaps a reminiscence of the 'water of life' which is to be found in the Babylonian heaven and other mythical localities. Whether the pseudepigraphical work known as the *Assumption of Moses* originally contained in the lost portions at the end an account of the translation of Moses to heaven still remains doubtful, though a negative answer would seem to accord best with the facts of the case (see the introduction to that book in Kautzsch's edition). Josephus, however, clearly implies a belief in it (*Ant.* IV. viii. 48), and 11^8 in the *Ass. Mos.*

* The books contained in the *Variorum Apocrypha* (ed. C. J. Ball) are here quoted in the usual English form. For the other books, *Die Apokryphen und Pseudepigraphen des AT* (ed. Kautzsch, 1900) has been followed. The dates of the books range from about B.C. 200 (Sirach) to the earlier Christian period.

itself (ending, 'the whole world is thy grave') would seem to be in consonance with the idea. Concerning Baruch, the friend and disciple of Jeremiah, we are informed that he was to be preserved alive 'to the end of the times' (*Apoc. Bar.* 13^3 76^2), — a favour which appears to stand in some relation to the translation of the earlier saints.

In the ridicule of Babylonian idol-worship contained in the *Epistle of Jeremiah* is found the statement that they set gifts before the idols 'as unto dead men' (v.[27]); but the practice of offering gifts to the dead thus implied may be understood to have been as purely Babylonian as the idol-worship itself. A direct warning against the heathen worship of the dead is contained in *Jubilees* 22^{17} ('Their sacrifices they slay to the dead, and pray to the demons, and eat upon the graves'); and it is natural to suppose that the warning would not have been needed, if there had been no tendency to adopt these practices among the Jews. The supposed reference to offerings made to the dead in Sir 30^{18} has been disproved by the Cairo Hebrew text (if here correct); for instead of 'messes of meat set upon *a grave*,' the Hebrew has 'heave-offerings placed before *an idol*' (*gillūl*).* The treatment of the dead spoken of in Sir 7^{33} and To 4^{17} may possibly refer to offerings made to the departed, but it is not unlikely that funeral rites only are meant in the former passage and funeral feasts in the latter (see the notes to the *Variorum Apocrypha*). It would seem indeed that the progress of monotheism had by that time made habitual offerings to the dead impossible, and that the transformation of the practice into what has not inaptly been called 'the new sacrificial cult of the dead' ('Das neue Totenopfer' [Schwally, *Das Leben nach dem Tode*, p. 188]) had already set in. In 2 Mac. $12^{42.\ 43}$, Judas Maccabæus is reported to have ordered the Jews under his command to offer up prayers and to send a large sum of money as a gift to Jerusalem, in order to effect an atonement for the Jewish soldiers killed in battle, under whose coats objects consecrated to idols—no doubt intended to serve as a magical protection—had been found. It has been suggested that the prayers and offerings of money were in reality intended by Judas and his companions to clear the survivors rather than the dead from the pollution of idolatry; but as the author or compiler of 2 Mac. interpreted the act as having been performed on behalf of the dead (see vv.[43b.\ 44.\ 45]), the practice of trying to benefit the dead rather than paying homage to them must have been in vogue when the narrative assumed its present form (some time in the 1st cent. B.C.).

The references to *mourning customs* found here and there in the Old Test. Apocrypha and Pseudepigraphical writings in the main support the view that the objectionable practices mentioned in the 'Hebrew' article lay outside the range of topics contemplated by the authors. Even the picture of priests having 'their clothes rent, and their heads and beards shaven,' and roaring and crying before their gods 'as men do at the feast when one is dead' (*Ep. Jer.* vv.[31.\ 32]), is taken from Babylonian idol-worship, and does not necessarily point to exactly similar practices among the Jews. With regard to the number of days given up to mourning, it is remarkable that, whilst Jth 16^{24} and Sir 22^{12} show that the practice of keeping seven days was usually continued, the *Life of Adam and Eve* speaks of six days' mourning, the seventh being (like a Sabbath) reserved for rest and joy. Ben-Sira (apparently inconsistent with himself) furthermore recommends (38^{17}) a day or two, 'lest thou be evil spoken of.'* If, therefore, Schwally's suggestion (*op. cit.* p. 41), that the seven days' mourning corresponds to the number of days assigned to great religious festivals, were adopted, it would at the same time follow that in the times to which the apocryphal books belong this idea had lost its hold upon the popular mind.

Necromancy in its ordinary form also lies outside the range of topics dealt with by the writers of this literature. But the appearance of the high priest Onias and the prophet Jeremiah to Judas Maccabæus in a dream on the eve of his battle against Nicanor (2 Mac $15^{12ff.}$) represents a form of oneiromancy that is pretty closely related to necromancy (cf. the appearance of Alexander to his thrice married widow Glaphyra, recorded in Jos. *Ant.* XVII. xiii. 4; *BJ* II. vii. 4). Ben-Sira, representing, as he did, Hebraism pure and simple, declares, however, that 'divinations, and soothsayings, and dreams are vain' (Sir 34^5). The call addressed to the 'spirits and souls of the righteous' (Song of the three Children [64]) to join in the universal hymn of praise to the Creator has a poetic ring about it, but the whole Song might be brought into relation with animistic conceptions.

2. Talmudic and Midrashic literature.—It may at first sight seem strange that the number of persons who gained the distinction of being translated to heaven without having died and gone down to Sheol, is considerably increased in some of the later additions belonging to Talmudic, Midrashic, and allied literature. This advance is, however, in reality quite in keeping with the greater facility for the glorification of distinguished human personalities under the final monotheistic development of Mosaism referred to at the end of the 'Hebrew' article. In the minor Talmudical tractate *Derekh Ereṣ Zuṭṭa* (7th or 8th cent.), ch. i., seven (or, according to others, eight) others, besides Enoch and Elijah (including the Messiah; Eliezer, the servant of Abraham; Hiram, king of Tyre, etc.),† are accorded this honour. In *Yalḳuṭ Ezekiel*, § 367 (about 11th cent.), thirteen such translations are enumerated, the name of Methuselah being among those added to the preceding list. The *Alphabetum Siracidis* (ed. Steinschneider, Berlin, 1858) occupies a middle position between the two lists named, the number of translations being eleven (one of the number, however, being the posterity of the phœnix). Specially developed in Talmudic and Midrashic literature is what may fairly be called the cult of Elijah, who, according to Mal 4^5, was to be the herald of a new order of things, and whose expected appearance as the forerunner of the Messiah is referred to in the NT (*e.g.* Mt $17^{10ff.}$). Quite in keeping with this expectation is, for instance, the conversation of Elijah with R. Yōsē related in *Berākhōth*, 3*a*, where the grief caused to the Deity by Israel's captivity is so forcibly and characteristically described. On the Midrashic statements regarding the high favour accorded to Moses at his death, see § 1 in the 'Hebrew' article.

A very important concession to popular habits of thought is made in the minor Talmudical tractate *Semāḥōth* (prob. 7th or 8th cent.), ch. viii., where the custom of placing the dead person's pen (or reed) and ink as well as his key and writing-tablet by his side in the grave is countenanced, although the belief in the ability of the departed to use these things might be considered to be perpetuated thereby. The concession is indeed ex-

* In the OT, however, the plural only of this word is used. The Greek ἐπὶ (or ἐν) τάφῳ appears to rest on a misreading (*gōlēl* for *gillūl*); so also the Syriac.

* The suggestion that mourning for distant relatives only is here meant does not seem to suit the context (see note in Kautzsch's edition).

† For the full enumeration of this and the following lists see A. P. Bender, 'Death, Burial, and Mourning,' etc., in *JQR* vi. (1894) 341 f.

pressly granted, notwithstanding its known approximation to 'Amorite' customs. In the *Shulḥān 'Arūkh* of Joseph Caro (*ob.* Safed, 1575), which is the accepted guide of strictly orthodox Judaism at the present day, the same practice is tolerated (see *Hilkhoth 'Abheluth*, § 350). Merely academic is, of course, the permission to make burnings for kings, but not for persons of inferior rank (*ib.* § 348; *Semāḥōth*, ch. viii.; cf. the 'Hebrew' article, § 3). One of the explanations suggested to account for the pouring away of all the water found in a house in which a death has taken place, is that an offering to the dead, or, at any rate, a provision of drink for them, was thereby intended (see A. P. Bender, *JQR* vii. [1895] p. 106 ff.). It is, however, more likely that the water was poured away because it was believed to have contracted contamination * (see § 7 in the 'Hebrew' article). A Karaite writer of the 10th cent. (Abu's-Sari b. Maṣliaḥ) declares that a number of Rabbinite Jews of his day were in the habit of burning candles and offering incense on the graves of the righteous.† A transformation of this custom similar to that noticed in 2 Mac. (see § 1) is found, *e.g.*, in *Midrash Tanḥūmah* on *Ha'ăzīnū* (the last weekly pericope but one in Deuteronomy), where the religious commemoration of the dead on the Sabbath is recommended in order to prevent their returning to Gehenna (cf. the remarks on *Ḳaddīsh* and *Hazkārath Neshāmōth* in the next §).

Not much that can be regarded as significant is here to be noted in connexion with *mourning customs*. The repast provided in modern times for mourners by their neighbours after a funeral is clearly understood to have the object of thus offering sympathy and consolation to the bereaved, who are, besides, naturally unable to make satisfactory provision for their own wants at such a time. The rending of the garments on the part of mourners is now generally but a slight ceremonial act, consisting in tearing the (left) lapel of the coat one is wearing. In Talmudical and subsequent times there was a custom of baring the shoulder and arm (see Bab. *Baba Qāma*, 17*a*, and cf. *Semāḥōth* ix.). A. Büchler (*ZATW*, 1901, pp. 81–92) regards this act as a sign of subjection of the living to the dead (see § 5 (*a*) in the 'Hebrew' article). If so, there would here be a survival of the cult of the dead in the old sense of the word.‡

Jastrow (*ZATW*, 1902, pp. 117–120) tries to controvert Büchler's opinion by showing that practices of this kind are a return to ancient habits of life, entire nakedness having, in fact, originally obtained in connexion with mourning (see § 5 (*a*) in the 'Hebrew' article), because a state of nudity was the primitive condition of man. In reality, however, the two explanations do not clash with each other, for the sense of self-humiliation and subjection to the departed spirit would be quite compatible with a reversion to an older and less dignified mode of existence.

All trace of ancestor-worship (supposing that there ever was any in it) has disappeared from the rather precarious working of the levirate law in modern times. Nor is there now any trace of a ritual tabu in the Rabbinical ideas bearing on the uncleanness of dead bodies, fear of contamination through contact with a decaying human organism being the explanation adopted. A certain kind of necromancy, on the other hand, reappears in, *e.g.*, Bab. *Berākhōth*, 18*b* (parallel passage in *'Abōth de-Rabbi Nathan*, ch. iii.), where a certain pietist, having on some occasions taken up his lodging at the cemetery, is reported to have overheard the conversation of two spirits regarding the success or failure of crops sown at different times of the year.

3. The Liturgy.—The high veneration, almost amounting to a cult, paid to Moses and Elijah, also finds expression in some parts of the Jewish ritual. A cup of wine is at the present time in many places reserved for Elijah in the Passover-night Service,* which, though celebrated in commemoration of the release from Egypt, also emphasizes the hope of future redemption by the Messiah, whose forerunner was to be Elijah. The same prophet is also assumed to preside at the ceremony of circumcision, the chair in which the actual operator sits being designated the 'chair of Elijah' † in the German and other forms of the ritual. In the *Pirḳē de-Rabbi Eliezer* (latter half of the 8th cent.), end of ch. xxix., this idea is brought into connexion with Elijah's well-known zeal for Jahweh, the child being by the rite of circumcision initiated into Israel's covenant with Jahweh. Moses, his work and his death, are the subject of a number of hymns in the *Maḥzōr* (extended Service Book) for the Feast of Weeks (in connexion with the giving of the Law on Sinai) and the Passover. The liturgical elaboration of the life and work of Moses is specially prominent in the ritual of the Karaites (sect founded about the middle of the 8th century).

The most important portions of the synagogue services to be noted here are, however, the *Ḳaddīsh* and *Hazkārath Neshāmōth*.

(*a*) The *Ḳaddīsh*, which is of the nature of a doxology and embodies the Messianic hope, but contains no mention of the dead, was primarily instituted for recitation after completing the study of a section of the Talmud and at the end of a Talmudic discourse or lecture. But as the merit of the study of the Torah (by which the Talmud as the authoritative exposition of the Torah was mainly understood) was considered exceedingly potent, the idea must have arisen early that the living might thereby benefit even the departed; and it probably thus came about that the doxology concluding such study was assigned to mourners. In *Massekheth Sōpherīm* (prob. 6th or 7th cent.), xix. 12, its use in this connexion appears firmly established, though its recitation is assigned to the cantor. Later on its recital was ordered to follow every burial (see Moses b. Naḥmān [*ob.* 1268 or 1269], *Tōrath ha-Adam*, ed. Venice, 1595, fol. 50*a*); and the mourners' *Ḳaddish* in the full modern sense of the word is mentioned in the French ritual known as *Maḥzōr Vitry* (A.D. 1208). The *Ḳaddish* thus gradually became, though never exclusively so, an indirect prayer for the departed. Its original connexion with the study of the Torah was in this use of it (as indeed in several other of its uses) lost sight of, and the idea of benefiting the dead by the special act of worship on the part of the surviving son or sons became very prominent.‡

The practice thus connects itself in idea with the new or inverted cult of the dead which was

* Mr. Israel Abrahams, on the authority of Nissim Gerondi (*ob.* shortly after 1374), favours the view that the pouring away of water was a method of making known the occurrence of a death (*Jewish Life in the Middle Ages*, p. 334); but if so, what need was there of pouring away *all* the water in the house? The likelihood is that the practice, though primarily pointing to quite a different principle, naturally got to serve in a secondary way to indicate death by a kind of association of ideas.

† See Perles, *MGWJ*, 1861, p. 389.

‡ The report found in *Semāḳōth* ix., of R. 'Aḳiba striking his breast at the death of R. Eliezer until the blood gushed out, has apparently no ritual significance, the act having been merely an expression of great personal grief.

* This custom, of which no trace has so far been found in mediæval MSS and early printed liturgical books, is probably due to the influences of later Kabbalism, though—as stated in the text—it is capable of being reasonably based on an old tradition.

† It is possible that the 'chair of Moses' in the now demolished Jewish synagogue at Kai-feng-fu in China (see *JQR*, Oct. 1900, p. 29) was intended to serve the same purpose.

‡ Compare the development of the custom as stated in L. N. Dembitz, *Jewish Services in Synagogue and Home*, pp. 109–110; see also the art. 'Kaddish' in Hamburger's *RE* ii. A statement on the different forms of the *Ḳaddish* will also be found in these works.

already in vogue in Maccabæan times, or, at any rate, at the time to which the composition of 2 Mac. belongs (see § 1). Instead of seeking to obtain benefits through the agency of the dead, the living engage in actions calculated to improve the condition of the departed; and as the surviving son or sons are the most approved agents of this form of the cult, it is only natural for those who see in the law of levirate (see § 6 in the 'Hebrew' article) an original connexion with the ancient sacrificial cult of the dead, to bring this use of the *Ḳaddish* into relation with that law, and to refer the religious function obligatory on the descendants to the same motive in both sets of regulations. The objection that might be raised is that, if the *Ḳaddish* were really connected with the idea underlying the law of levirate and the ancient sacrificial ritual of the dead, one would have expected to find it in use in much earlier times than can be attested by the existing literary evidence, continuity in essence being one of the marks of gradual development. But it is, on the other hand, not against analogy to suppose that if —as is very likely to have been the case—the idea itself was never eradicated from the popular mind, it should, under certain favourable influences,* have been later on fully revived under the form of the *Ḳaddish Yāthōm* (orphan's *Ḳaddish*). Such a use of the doxology would be merely one more instance of the embodiment of old forms of thought in fresh and later shapes.

(*b*) The same may also be said of the most solemn office connected with the departed, *i.e.* the *Hazkārath Neshāmōth* ('remembrance of souls'), which forms part of the Ashkenāzi ritual for the eighth day of the Passover, the second day of Pentecost, the eighth day of the Feast of Tabernacles, and the Day of Atonement. In this office direct petitions for the well-being of departed parents and other relatives are offered,† thus more explicitly attesting the revival (though in a much modified form), since mediæval times, of an earlier idea that the living are capable of rendering substantial service to the departed. In the Spanish ritual the same idea, in the form of direct petitions, is embodied in the *Hashkabah* ('laying to rest') which forms part of the Burial Service, and is also —under certain special regulations—recited during the synagogue services.‡

Mention should also here be made of the 'Jahrzeit,' or annual commemoration of departed parents, at which the *Ḳaddish* forms the most important feature, a candle being also kept burning for twenty-four hours.§ But the Jewish Liturgy also embodies petitions in which the merit of the departed is, *vice versa*, pleaded on behalf of the living, thus coming nearer to the old idea of seeking support from the spirits of the dead rather than offering help to them. In the famous prayer *Abīnū Malkēnū* ('Our Father, our King'), the merit of the martyrs is claimed as a ground for obtaining favour from the Almighty. The frequently occurring idea of *Zekūth 'Abōth*‖ ('merit of the fathers') may indeed not unreasonably be attached to the invocation, in the ancient 'prayer of eighteen' (1st to 2nd cent. A.D. at the latest), of the God of Abraham, the God of Isaac, and the God of Jacob. In conclusion, the practice of asking pardon of the dead in a ceremony at the grave (see *Shulḥān 'Arūkh*, i. § 606) may be mentioned. The mystical or spiritual union of the living with the dead and the possibility of interaction between the two states of being are clearly expressed in this interesting ritual.

4. The Kabbalah.—The cult of Elijah is very prominent in Kabbalistic literature. The founders (12th cent.) of the developed form of mysticism which is more particularly designated by the term 'Kabbalah' claimed to have received their instruction from the prophet in person. In the *Zōhar* (a work compiled in the latter part of the 13th cent., but attributed to the Tanna Rabbi Simeon b. Yoḥai (2nd cent.), which is the great text-book of the Kabbalah, Elijah also often appears as instructor under the title *Sabha* (*i.e.* 'the ancient one'). Moses, under the title *Ra'ya Mehēmna* (*i.e.* 'faithful shepherd'), appears, in a section bearing the same title, in conference with Elijah and R. Simeon b. Yoḥai; Abraham, Isaac, Jacob, and other worthies being also present at the deliberations, which are honoured by the appearance of the Deity Himself. Meṭaṭrōn, who very frequently figures in the Kabbalah, but whose exact nature and origin have not yet been satisfactorily explained, is in many places identified with Enoch.* R. Simeon b. Yoḥai himself, designated *Būṣina Ḳaddisha* ('sacred light'), is almost deified, and great veneration is also paid to leaders of later Kabbalistic schools, more particularly Isaac Luria (*ob.* 1572) and Baal-shem (*ob.* 1761).

Connected with the honours paid to departed worthies is the doctrine of metempsychosis, which, though in origin and essence entirely foreign to Mosaism,† and indeed to Semitic thought in general, succeeded about the 8th cent. in passing from Greek (and Indian) thought into the tenets of certain Jewish sectaries, through the medium of Muhammadan mysticism. Sa'adyah Gaon (*ob.* 942), who appears to be the first to make mention of it in orthodox Jewish literature, protests strongly against it.‡ But it nevertheless gained a firm footing in the Kabbalah, and attained an extraordinary development in the comparatively modern Kabbalistic system of Isaac Luria, the works on *gilgūlīm* ('transmigrations') composed by himself and his followers, containing long lists of identifications of ancient personages with men and women of later date.§ An addition to the doctrine of metempsychosis made by the Kabbalists is the principle of *'ibbūr* ('impregnation'). If two souls (who may, of course, be spirits of the dead) do not separately feel equal to their several tasks, God unites them in one body, so that they may support and complete each other. This doctrine may have been suggested by the theory of incubation (see farther on), which is itself clearly connected with the belief in demoniacal possession, taking the term 'demon' in this instance to denote a spirit, without reference to its origin or moral qualities.

Pilgrimages to graves‖ are much encouraged by the later Kabbalists. The tomb of Simeon b.

* It may thus well be that, as some have thought, the *Ḳaddish* is in a way the Jewish counterpart of certain practices in the Roman Church; but the idea underlying it would at the same time go back to ancient truly Semitic habits of thought.

† For further details see, *e.g.*, L. N. Dembitz, *op. cit.* pp. 219–220.

‡ See Dr. Gaster's edition of the Spanish Services, vol. i. p. 200 ff.; L. N. Demhitz, *Jewish Encyclopedia*, vol. vi. p. 283 f.

§ The article 'Jahrzeit' in the *JE* (vol. vii.) will he found instructive, for both the modern and the ancient manner of observing it.

‖ The Samaritans often use the formula בעכל משה ('by the merit of Mosea').

* See especially the passage in *Massekheth 'Aṣīlūth* (ed. Jellinek, *Ginzē*, etc. p. 3), where Metatron is stated to have been originally human (flesh and blood). For various attempts to explain the name and office of Metatron see *Literaturblatt des Orients*, 1847, coll. 282–283; Oesterley and Box, *Religion and Worship of the Synagogue* (1907), pp. 107–178.

† See A. Schmiedl, *Studien über jüdische Religionsphilosophie* (Vienna, 1869), pp. 159–166. The phrase μεταβαίνειν εἰς ἕτερον σῶμα, u ed by Josephus in connexion with the belief of the Pharisees (*BJ* II. viii. 14), must refer to the resurrection (comp. the parallel passage in *Ant.* XVIII. i. 3).

‡ *Emūnōth we-Dē'ōth*, ch. vi.

§ Compare the belief implied (though not countenanced in its literary sense) in Mt 11^{14}, Lk 1^{17}.

‖ On pilgrimages generally the art. 'Pilgrimage' in the *JE* (vol. x.) should be consulted.

Yohai at Meron near Safed is thus devoutly resorted to on the 33rd of 'Omar (*i.e.* the 33rd day from the 2nd day of Passover), when a great popular festival, at which illuminations are an important feature, is held in honour of the saint. Pilgrimages to the grave of Isaac Luria at Safed are made each new moon, and the persistence in many places of the popular custom of praying at stated times (as, *e.g.*, on the 9th of Ab) at the graves of departed relatives is probably also partly due to the influence of Kabbalistic ideas.

The efforts of 16th cent. and later Kabbalists to obtain inspiration from the souls of the departed by clinging with outstretched bodies to their graves, and thus in a manner to become incubated with the spirits of the dead, remind one of the practice of necromancy at graves condemned in Is 65[4] (see § 8 in the 'Hebrew' art.); but as the Kabbalists evidently arrived at this method by a new and largely borrowed line of thought, and as, furthermore, their object was not necromancy, but what they regarded as spiritual illumination, the custom cannot be regarded as a revival of the ancient practice. A species of oneiromancy is the same Kabbalists' belief that information of high import can be obtained through dream-visions of the departed.

Summary.—The general result obtained from a study of the Jewish part of the subject is, owing to the diverse forms of development undergone by the thoughts and practices of the people in different periods and widely scattered countries, far from homogeneous. The Talmudic and Midrashic literature thus exhibits a larger amount of reminiscence of, or reversion to, ancient thought than the Apocryphal and Pseudepigraphical writings, though these latter stood nearer in point of time to earlier Hebraism; and the Liturgy, influenced partly by the Kabbalah, and partly—as is not unlikely—by Christian practices, shows some interesting instances of the revival of old ideas in a much modified form. The Kabbalah itself, as has been shown, has added the doctrine of metempsychosis to the original Jewish and Hebrew stock of ideas, and it has in connexion with it furthermore introduced the theory of dual psychic personality in one body, thereby affecting the spirits of the departed in a manner previously unheard of in Judaism.

LITERATURE.—Besides the passages of the original sources (Apocrypha, etc.) referred to in the article, the following books, essays, or articles may be consulted with advantage. For Apocryphal and Pseudepigraphical literature, ch. iii. in F. Schwally's *Leben nach dem Tode*, 1892. From the Rabbinic point of view, J. Perles, 'Die Leichenfeierlichkeiten im nachbiblischen Judenthum' in *MGWJ* x. [1861] pp. 345 ff., 376 ff.; A. P. Bender, 'Beliefs, Rites, and Customs of the Jews, connected with Death, Burial, and Mourning' in *JQR* vi. [1894–5] 317 ff., 664, vii. 101 ff., 259 ff. [also discusses modern points of view]; A. Büchler, 'Das Entblössen der Schulter und des Armes als Zeichen der Trauer' in *ZATW*, 1901, pp. 81–92. For points in the Liturgy, the articles 'Seelenfeier,' 'Kaddish,' etc., in Hamburger's *RE*; L. N. Dembitz, *Jewish Services in Synagogue and Home* [the same author wrote the art. 'Kaddish,' etc., in the *JE*]. For metempsychosis, etc., L. Ginzberg's instructive art. 'Cabala' in *JE* iii. [requires, however, to be supplemented from other sources]; also I. Broydé's 'Transmigration of Souls' in *JE* xii. 231–234. Some other works dealing with the subject will be found in the literature given at the beginning of C. Grüneisen's *Der Ahnenkultus und die Urreligion Israels*, 1900. G. MARGOLIOUTH.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Polynesian and Tasmanian).—

In Polynesia, ancestor-worship was far less important than in Melanesia or Micronesia. Throughout this group, moreover, it was only the nobles who retained an existence after death, the souls of the common people perishing immediately after dissolution (Waitz-Gerland, *Anthropologie der Naturvölker*, Leipzig, 1872, vi. 302; Dillon, *Narrative of a Voyage in the South Sea*, London, 1829, ii. 10–11). The ghosts of the dead might appear to the living and might work them either weal or woe, but they were in the main maleficent, and were accordingly, for the most part, objects of dread (Waitz-Gerland, pp. 315–316, 330, 332). Between the general worship of ghosts and the cult of ancestors a distinction should be drawn, evanescent though the line of demarcation often becomes. Ellis (*Polynesian Researches*, 2nd ed., London, 1832–1836, i. 334–336) expressly postulates the existence of *oramatuas*, or 'ancestors,' who ranked next to the *atuas*, or gods, and were often the spirits of deceased fathers, mothers, brothers, sisters, children, and other relatives, as well as of departed warriors who had been conspicuous for bravery. Although the *oramatuas* frequently helped in time of need, and opposed the malevolence of other ghosts or of hostile magic, they were, as a rule, cruel and irritable. It was thus necessary to place the corpse of the dead at a considerable height above the ground, this being apparently the origin of the *fata tupapau*, or altar for the dead (Moerenhout, *Voyages aux îles du Grand Océan*, Paris, 1837, i. 470–471). Food was brought daily to the dead for six weeks or two months, and if the deceased had been a man of eminence, a special priest, termed *haivatupapau*, visited the body for several weeks and offered it food. It was believed that the *oramatua* could smell the spiritual part of this offering, and, in case it returned, it would therefore be gratified and content, so that it would not desire to resume earthly life (Ellis, i. 404–405; Moerenhout, i. 547; Wilson, *Missionary Voyage to the Southern Pacific Ocean*, London, 1799, p. 345). At the burial of a chief a hole was often dug in which the hostility of the deceased against his family for their supposed malevolence, which had resulted in his death, was buried, thus obviating the possibility of his maleficent return to his surviving kinsmen (Moerenhout, i. 552). Connected in a sense with the cult of ancestors was the mourning for the dead, together with the self-mutilations practised by the survivors (Waitz-Gerland, vi. 401–404); and here, too, belong the human sacrifices of wives, slaves, and favourites at graves in New Zealand, Hawaii (Waitz-Gerland, vi. 404–405), and the Fiji Islands (Russel, *Polynesia*, Edinburgh, 1843, p. 72). The motive for both these latter features was either the gratification of the *oramatua* at the sight of the grief which his death had caused, or a provision for his needs in the future life.

The religion of the Tasmanians was at a much lower stage of development than that of the Polynesians; yet it is clear that they, too, believed in a life beyond the grave, and thought that the souls of the dead might return to bless or curse them. They accordingly carried a bone of the deceased as a charm; yet the 'shades' (*warawali*) of dead relatives and friends were regarded, on the whole, as more kindly than the gods. Of an actual cult of ancestors, however, little seems to be known (Ling Roth, *Aborigines of Tasmania*, 2nd ed., Halifax, 1899, pp. 54–55). LOUIS H. GRAY.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Roman).—

The great extent of ancestor-worship among the Romans, and its equally great limitations, make it not only one of the most interesting problems in the field of Roman religion, but also a subject the understanding of which brings with it a grasp of the fundamental principles which governed the formation and the development of the religion of the Romans. As it is in the main a private worship (*sacra privata*) rather than a public one (*sacra publica*; for the distinction, cf. Wissowa, p. 334; Marquardt, p. 120 ff.), our sources for the Kingdom and the Republic are limited, and it is only in the

Empire, with its vast number of sepulchral inscriptions (*CIL* vi., *CIG* xiv., over 40,000 for Rome alone) that we have any extensive contemporary sources. For the earlier period, however, we have a sufficient number of literary sources to enable us to form a definite idea of the cult, inasmuch as the stereotyped character of all religious ceremonial justifies us in combining testimonies from various historical periods; and, though the underlying ideas did undoubtedly change somewhat from generation to generation, there was a certain conservative force at work too. It will be most convenient, therefore, to treat of the underlying ideas and the expressions of them in cult acts, first during the general period of the Republic, and then, secondly, to sketch the development of these ideas from the close of the Republic onwards during the course of the Empire.

I. From the Earliest Period to the Close of the Republic.

1. The first and most fundamental question which requires an answer is this, Are any of the Roman gods to be traced back to ancestor-worship as their origin? From Euhemerus (cf. Rohde, *Gr. Roman*, 220 ff.) down to Herbert Spencer (*Principles of Sociology*) it has been a favourite contention that many great deities were in origin nothing but deified ancestors. An examination of Roman religion in its earliest state shows that this was not the case in Rome. The religion of the earliest period reveals distinct traces of animism (cf. Tylor, *Primitive Culture*, i. 377 ff., ii. 1–377)—that belief common to all primitive peoples, which posits for all things, animate and inanimate, living and dead, a 'double,' or psychic parallel, which has an effect on the thing itself and must therefore be propitiated. These doubles are potentialities rather than individualities. They are interesting not so much for what they are as for what they do. Now, Roman religion is peculiarly interesting in this respect, because in it we see a development of animism one step further. Certain of these powers have advanced sufficiently towards individuality to acquire a name, but they are none of them as yet individuals thought of in the fashion of man (on the importance of names cf. Frazer, *Golden Bough*[2], i. 403 ff.); hence there was not, could not be, a native Roman mythology. They were advancing towards it when Greek influence placed her myths at Rome's disposal, so that she never developed any of her own. On the other hand, a great number of the gods of the earliest period were still mere potentialities, thought of in groups rather than as individuals, *e.g.* the *Di Penates*, powers who guarded the storeroom, the *Di Agrestes*, powers who looked after the crops. It was into one of these groups that the dead went, into the *Di Manes*, the 'good gods' (*manus* = 'good'; cf. Roscher, ii. 2316). It will be readily seen, therefore, that, far from its being the case that the dead were ever made great individual gods, they received such divinity as they had by the same processes of thought which made all gods, great and small.

If further proof is needed, it may be found in the total absence of hero-worship in Roman religion, as it was before Greek influence came; and in the significant fact that, when under Greek influence two great characters of Græco-Roman mythology, Æneas and Romulus, were elevated to the rank of gods, theologians found nothing better to do than to identify them with two already existing old Roman deities, Numicius and Quirinus respectively (for Æneas = Numicius, cf. Rossbach in Pauly-Wissowa, i. 1015; Aust in Roscher, iii. 475. For Romulus = Quirinus, cf. Wissowa, p. 141). Every attempt to make even the *Di Manes* the source of other deities has been a failure. It has been tried repeatedly, but in vain, in the case of the *Lar Familiaris* or protecting spirit of the house (cf. Fustel de Coulanges, *La Cité antique*, p. 20; Nissen, *Templum*, p. 148; Rohde, *Psyche*[3], i. p. 254).

2. Having rid our discussion of any connexion between the deified dead and other individual deities of Rome, we must now try to make clear to ourselves what the concept of the Di Manes was, and how the Romans felt towards them. It has often been asserted that the Romans had from the beginning a persistent and continuous belief in the immortality of the soul. This statement is absolutely misleading. We have seen that the habit of thought of the early Romans posited a double for everything; the dead must therefore have a double as well as the living. This double, even though it was the double of the dead, was thought of as possessing a certain sort of life—it could at certain times return to earth and exercise an influence for ill upon the living. This potentiality, however, was simply one of a vast number of similar potentialities; there was nothing individual about it, except its relation to its own family represented by the living members. Subsequent centuries, saturated with Greek philosophy and filled with an idea of individuality which was totally lacking in the earlier days of Rome, identified this poor shadowy potentiality with the human soul, and read into the whole matter a belief in immortality.

In the presence of the mystery of death, a mystery which even the light of Christianity has not wished fully to remove, men's minds do not work logically, and there is no part of religious beliefs where contradictions are more abundant than in the beliefs concerning the dead. Roman religion, in spite of its generally logical character, is no exception to the rule. It will never be possible for us, even with all the sepulchral inscriptions in the world, to establish one formula which will cover all cases—for the simple reason that no such formula ever existed. We are, however, able to make a general statement which will represent fairly well the normal concept, apart from the very numerous and very contradictory deviations.

When a man died, he went over into the *Di Manes*,—the good gods,—entering their ranks and losing all individuality and all specific earthly relations, except that when the *Manes* returned to earth, they visited the living members of the family to which they had belonged on earth; and thus the family idea, so fundamental in the social structure of Rome, triumphed over the grave, and possessed an immortality which the individual failed to obtain. The inclusiveness of the term *Di Manes* is seen in the fact that the gods who ruled over the dead, as well as their subjects, the dead themselves as gods, were all included in the phrase, though it is equally significant of the mass-idea that the actual gods of the dead, though demonstrably present, never rose to great individual prominence until the Greek Pluto-Persephone came into Rome as *Dis-Proserpina*.

3. Upon this theory of the *Manes* the cult followed inevitably. If the dead were able to influence the affairs of the living, they must be propitiated, and inasmuch as their interference was primarily with the affairs of the family to which they had originally belonged, and still did belong, it was incumbent upon the living members of that family to see that they were propitiated. Thus the cult of the dead was in its origin an ancestor-worship, and may well have been originally a family matter exclusively. Further, it was incumbent upon each living member of the family not only to perform these sacrifices, but also to

provide those who would succeed to the sacrifices after his death, in other words, to propagate the family. As for the State itself, it was also a family; and thus in that macrocosm of family life which the early State religion shows,—with its Vesta and its Penates,—there might come also sacrifices for the dead, not only for the dead already provided for by their own families, but also for that ever-increasing number of 'ancestors' whose descendants, in spite of all precautions, had ceased, that homeless throng of spirits whose immediate claims on the world of the living had been removed, and who therefore all the more readily would turn their ill-will against the State at large, unless she gave them satisfaction. Thus it was that both the *sacra privata* and the *sacra publica* were in part a worship of the dead.

There are sufficient suggestions and recollections in the body of Roman law to warrant the assumption of this theory, which, as one readily recognizes, is a close parallel to the Hindu law; but there is also this distinction, that, whereas Hindu law is based directly upon a sacral foundation, Roman law, when we first meet it, is already in the dual stage of *jus divinum* and *jus humanum*, with their intricate interlocking, so that we have merely the shadow picture of what once was. But even the shadow picture is tolerably complete, and the *jus Manium* formed one of the regular topics of Roman law, especially in relation to heirs and inheritances. The cardinal principle was the continuity of family worship (*perpetua sacra sunto*). Thus Cicero (*de Legibus*, ii. 22) quotes an old law: 'Let private sacrifices continue forever,' 'Keep sacred the laws concerning the divine dead.' The heir was under obligations to continue the sacrifices, and this was a prior lien on any money which the inheritance might bring him. Similarly, cases of adoption were often motived by the desire of the adopter to obtain an heir to care for the sacrifices; and, though the process was a civil one, it was necessary, inasmuch as it involved the giving up of one set of sacrifices and the taking of another on the part of the adopted person, to discuss it in the oldest and most primitive of all the assemblies—the Comitia Curiata—and to obtain the consent of the Pontifex Maximus to the giving up of the one set of *sacra* (the so-called *detestatio sacrorum*, cf. Hunter, p. 766), a consent which was never given if the transfer left the one set of *sacra* destitute of an earthly representative (for a similar precaution in Hindu law, cf. Hunter, p. 205, note 2). We may also compare the old law ascribed to Romulus (Plut. *Rom.* 22), whereby whoever sells his wife is given over to the *Manes*, probably because this was a blow to the stability of the family, and hence to the continuity of sacrifices to the dead. The actuating motive underlying all the *jura Manium*, all the enactments concerning the dead, was neither a chivalrous pity nor primarily a regard for the comfort of the dead, but first and foremost a self-protective action on the part of the living. So fearful were men lest they might in some way have offended the gods of the other world, and lest the powers under the earth might hinder the gathering of the crops which had come out of the earth, that every year before the beginning of harvest a sow (*porca præcidanea*) was sacrificed to Tellus (and probably also to Ceres) 'by him who had not given the dead his due' (Paul. p. 223); later, by all men to Ceres and Tellus together, for fear they might have offended, so that eventually it began to be thought of merely as a sacrifice to Ceres for a good harvest (Wissowa, p. 160).

4. In its earlier stages the cult of the dead belonged to the religion of fear rather than the religion of love. The spirits of the dead were capable of doing injury; they must first be brought to rest in the lower world. There they were incapable of doing harm, and they could rise from there only on certain occasions, and on those occasions religion provided for their pacification. All the cult acts pertaining to the dead may be grouped, therefore, under these two ideas, the bringing of the spirits to rest, which must be done immediately after death, and the placating of the spirits on the regular annual occasions when they returned to earth again. Around this crude religion of fear the religion of love wound itself, breathing a new and better spirit into these old forms, and possibly instituting one or two festivals of its own. But we must deal first with the self-protective apotropaic side.

The ceremonies connected with death and burial do not as a whole concern us here, but merely those festivals which were strictly religious in character. These features seem, all of them, to go back to two ideas which are so intertwined that for us they are practically inseparable—possibly they always were. One is the offerings given to the dead as a newly formed member of the *Manes*, including a proper burial, as giving him a home, and the offerings of food, etc.; and the other is the ceremonies of purification which were necessary for the living, after their close contact with this lower world at the edge of the open grave (cf. the idea of the *Manes* coming for the dead, which occurs occasionally in inscriptions, *e.g. CIL* ii. 2255 [Corduba]: 'the Manes have taken Abullia'). There is a considerable degree of uncertainty attaching to the exact order and names for the various ceremonies connected with and following the funeral; writers of the Empire, who are practically our only authorities, seem to be confusing Greek and Roman ideas, and older with newer Roman customs, and possibly the details will never be fully straightened out. But in general the matter was as follows. The supreme duty towards the dead was burial. Doubtless an ethical motive of piety, a desire to give the dead a home for his own sake, often re-inforced this duty; but the fundamental motive was one of self-protection, on the principle that the ghost of the dead would continue to haunt the living until a place was provided for it (Tertullian, *de Anim.* 56: 'It was believed that the unburied did not descend to the world below before they had received their due,' *i.e.* burial). Curiously enough, in certain cases it seems to have been felt that the dead had forfeited the right of burial, *e.g.* in the case of suicides, of those lawfully put to death, and of those struck by lightning. Here it was an equally great duty to abstain from burial, and there seems to have been no fear of evil consequences from their shades. But in all other cases burial was an ethical imperative (Quintilian, *Decl.* v. 6: 'Because even upon unknown dead we heap earth, and no one ever is in too great a hurry to honour an unburied body by putting earth, be it ever so little, on it'). The question of burial *versus* cremation in the various epochs of Roman history does not concern us here, for in either case the grave was sacred; but burial seems always to have held at least a symbolic supremacy—owing to the *os resectum*, or the custom of burying at least a portion of the body, *e.g.* a finger, when the rest was cremated. The burial was the most important self-protective act; in comparison with it the other acts were of relatively minor importance; and most of these acts seem to have had more to do with the purification of the surviving members of the family than with the dead himself. One sacrifice of purification took place before the body was carried out for burial: the sacrifice to Ceres of a sow (*porca præsentanea*, not to be confused with the *porca præcidanea* above), 'for the sake of purifying the family' (Festus, p. 250; cf. Mar. Victor. p. 25). In all probability Tellus, Mother Earth, and not Ceres, was the original recipient of the sacrifice, which was transferred to Ceres under the influence of the Greek Demeter cult (cf. Wissowa, p. 161); and hence the sacrifice was probably originally a purification of the living by means of an additional propitiation for the dead. On the day of the funeral and at the grave itself a sacrificial banquet seems to have been offered to the dead (*silicernium*, cf. Marquardt, *Privatleben*, p. 378). It consisted probably of very much the same things as were offered at the regular annual celebration of the *Parentalia* (see below). The nine days immediately following the funeral were days of mourning and purification, the *sacrum novemdiale*, the same term that was decreed by the State for its extraordinary periods of devotion occasioned by some great calamity (on the number nine as a sacred number cf. Diels, *Sibyll. Blätter*, p. 41). On some of these days the *Feriæ Denicales* occurred, a celebration about which we know little, except that

the attendance of the members of the family was considered so necessary that the military authorities recognized it as a valid excuse for the absence of a recruit from the enlistment inspection, 'provided it had not been set on that day for the purpose of serving as an excuse' (Gell. xvi. 4. 3 ff.). The period of mourning ceased on the ninth day with a final banquet, with offerings to the dead, the *cena novemdialis*; and if funeral games were celebrated at all, as they often were, they occurred on this day (*ludi novemdiales*). The spirit of the dead was now safely housed in the lower world, whence he could not return, except on stated occasions; and the Roman could go about his daily business, mindful only of these stated occasions when they arrived.

5. As regards the lower world itself, the Romans seem originally to have interested themselves very little in it. Every bit of description is given us by writers under Greek influence, and the details are identical with those of the lower world of the Greeks. Now, it is not likely that a strong Roman tradition could thus have been totally destroyed; we should certainly find traces of it somewhere. Hence it is probable that the Roman lower world was not furnished with the fittings of imagination until Greek mythology provided the models. There is nothing strange about this, when we realize that the half-animistic character of the Roman pantheon precluded the growth of mythology for both the greater and the lesser gods. From the time of the Punic wars onwards the Romans pictured to themselves the lower world in just the same form as the Greeks had done (cf. Rohde, *Psyche*[3], vol. i.); and before that time, if they thought of it at all, and inevitably they must have done so to some slight extent, it was merely as a place of shadows and darkness. Their practical concern was the question of the eventual return of the spirits to trouble them; and hence their attention was concentrated not on the lower world in pleasant poetic fancies, but on the door between it and the upper world, the passage through which these divine dead came up. This entrance was the *mundus*, about which the Romans possessed original beliefs strong enough to remain even under the pressure of Greek thought. The *mundus* was the opening of the lower world; it was in the form of a trench into which sacrifices to the gods of the lower world, and to the dead as gods, could be thrown. In the centre of every town, at its foundation, such a trench was dug and sacrifices performed. The oldest *mundus* of Rome was that of the Palatine city (for its location cf. Richter, *Die älteste Wohnstätte des röm. Volkes*, Berlin, 1891, p. 7 ff.; Hülsen, *Röm. Mitt.* v. 76 ff., xi. 202 ff.). It was opened three days in the year: August 24, October 5, and November 8; probably the stone, and possibly some earth was removed (cf. Festus, p. 142; Macrobius, *Sat.* i. 16, 17 ff.). 'When,' as Varro says (cf. Macr. i. 1), 'the *mundus* is open, the door of the sad gods of the lower world is open, therefore it is not proper on those days for a battle to be fought, troops to be levied, the army to march forth, a ship to set sail, or a man to marry.' There were other sacred trenches of the same sort in Rome: one in the Forum, the Lacus Curtius, connected with the story of M. Curtius (recently discovered; cf. Hülsen, *Rom. Forum*, p. 139; and, in general, Gilbert, *Top.* i. 334 ff.), another the so-called 'grave of Tarpeia,' which was evidently opened on Feb. 13, when one of the Vestals made sacrifice there (cf. Mommsen, *CIL* i.[2] p. 309; Schwegler, *Röm. Gesch.* i. 486; and, in general, on Tarpeia as a forgotten goddess of the lower world, Wissowa, *Rel. der Röm.* 187 188), and still another at the 'grave of Larenta' in the Velabrum, to which on Dec. 23 the Pontifices and the Flamen Quirinalis brought offerings (Varro, *Ling. Lat.* vi. 23 ff.; *Fast. Præn.* to Dec. 23; cf. Wissowa, p. 188 and note 1).

6. Apart from these special occasions for each particular *mundus*, there were two general occasions in the year when all the spirits of the dead were supposed to return to earth again, the nine days from Feb. 13-21, and the three days, May 9, 11, 13. The first was called the *Parentalia*, the second the *Lemuria*. These two occasions were so entirely different, and the *Parentalia* is on such an infinitely higher plane ethically than the *Lemuria*, that it is difficult to think of them as having the same origin; yet, when we compare All-souls' Day with Hallowe'en, we see the same divergence. The *Parentalia* kept pace with Rome's increase in culture, whereas all that was crudest in old folk-lore clung to the *Lemuria*.

Since the *Lemuria* represents a more primitive stage, it had better be discussed first. The most picturesque account is that given by Ovid (*Fasti*, v. 419 ff.), but we must be on our guard in using it, remembering that Greek ideas and a poetical imagination are present in everything that Ovid writes. The ceremony takes place at midnight. The father of the household, barefooted, passes through the house, throws black beans behind his back, and says nine times, 'These I give, and with these I redeem myself and my family.' Then he shakes cymbals and says again nine times, '*Manes exite paterni*,' 'Go forth, ye divine shades of my fathers.' The comparison of this ceremony with the 'driving out of the ghosts,' so common among primitive peoples of to-day, suggests itself immediately (cf. Frazer, *Golden Bough*[2], iii. 83 ff. Here, as everywhere else in this interesting and valuable book, the reader must exercise great care in examining the sources given, as they differ widely in scientific value; cf. also Rohde, *Psyche*[3], i. p. 239).

The *Parentalia* presents quite a different picture. As its name implies, it is the festival of the *parentes*, or the making of offerings to one's ancestors. It began at noon of Feb. 13 and continued for nine days. The first eight days belonged only to the sphere of private worship, but the ninth day (Feb. 21) was also a public celebration, the *Feralia* (Varro, *op. cit.* 13; Paul. p. 85; cf. Marquardt, iii. 310 ff.). During all these nine days marriages were forbidden, the temples were shut, and the magistrates laid aside their official dress. Every family decorated the graves of its ancestors and made offerings there. Most appropriately, on the day after the close of the celebration, Feb. 22, a family festival, the *Caristia*, or *Cara Cognatio*, was held, when family quarrels were adjusted, and the peace which the individual member of the family had just made with the dead was now extended to the living members among themselves (cf. Ovid, *Fasti*, ii. 617; Val. Max. ii. 1, 8; *Calend. Philocal.*; cf. *CIL* i.[2] p. 258).

The attempt has been made to distinguish between the *Lemuria* and the *Parentalia* by considering the former as the festival of the unburied, and therefore hostile, dead, and the latter as the festival of the buried, and therefore friendly, dead (cf. Warde Fowler, *Roman Festivals*, p. 108). The idea of fear is certainly more prominent in the former than in the latter; but the *Lemures* are just the same ancestors as the *Di Parentes*, and the very fact that their interference, either for good or for ill, is confined to stated seasons, proves that they were buried, i.e. admitted into the lower world and resident there ordinarily.

Of the other yearly festivals of the dead we know but little: we hear of a festival of the *Carnaria* on the first of June, the 'Bean Calends' (*Calendæ Fabariæ*, Varro in Non. p. 341; Macr. *Sat.* i. 12, 31; Ovid, *Fasti*, vi. 101 ff.), so called from the offering of beans to the dead; but roses were also offered (*CIL* iii. 3893).

7. In one respect the spirit-worship of the Romans was in distinct contrast to that of the Greeks and of most other ancient peoples. The dead had the

power of returning to earth again on stated occasions, but they could not be called up and consulted. 'Necromancy' was an altogether imported idea, and wherever we meet with references to it, foreign influence is present. The absence of this custom is no accident. The idea of prophecy was hardly present in any form in native Roman religion; their science of augury and of the *haruspices* was simply a means of ascertaining the approval or non-approval of the gods in regard to a certain action, merely of obtaining an answer to a categorical question. But if the dead might not be called up arbitrarily to give information, it was possible for certain individuals to be given over to them for punishment, as in the *consecratio*, or for certain individuals voluntarily to give themselves over to them, as in the *devotio*. *Consecratio* is the transfer of a person or thing out of the realm of the *jus humanum* into that of the *jus divinum*. Where a person is involved, it is, of course, a punishment. Persons or things might thus be given over to any deity or group of deities, and the *Di Manes* formed no exception; *e.g.* a man who sold his wife was *dis manibus sacer* (Plut. *Rom.* 22); also a child who struck his parent (Fest. p. 230); and the violator of a grave (*CIL* x. 4255). The characteristics of the *devotio*, on the other hand, are these. It is in the nature of a vow, made to the *Di Manes*, or Tellus and the *Di Manes*, whereby a man's life is given to the *Di Manes* in advance in order that other men's lives may be destroyed. We have semi-legendary accounts of three generals who offered their own lives that the enemy of the State might be destroyed: the first the case of Decius, the father, in the battle of Vesuvius, B.C. 340 (cf. esp. Livy, viii. 6. 8–16; 9. 1–11, and, in general, Münzer in Pauly-Wissowa, iv. 2280); the second that of Decius, the son, in the battle of Sentinum, B.C. 295; and the third that of Decius, the grandson, in the battle of Asculum, B.C. 279 (cf. Münzer, *ib.* iv. 2285; on the *devotio* proper cf. Panly-Wissowa, *ib.*, *s.v.*). The *devotio*, as a curse directed against private individuals, does not belong to this period, as it arose entirely under Greek influence, and does not seem to have been prevalent until the Empire.

II. From the Close of the Republic until the Establishment of Christianity.

1. In the earliest periods of Roman religion the *Di Manes* were quite as truly gods as any of the other gods of Rome, and quite as unlike the later god-concept as any other of the gods. They were all alike thought of animistically as mere potentialities; but the other gods were destined to develop and to obtain an individuality, whereas the *Di Manes* remained an unindividualized mass of spirits, into which the dead man went at death, losing, so far as the cult was concerned, all his individuality except merely his family relationship. To be sure, under Greek influence certain gods of the dead were adopted by the Romans, namely Dis and Proserpina, formed on the analogy of the gods of the upper world; but this had the effect of only emphasizing the more the undeveloped dense mass of the *Di Manes*. On the other hand, during these centuries of the Republic, another idea had been slowly developing—the idea of the Genius (or if a woman, the Juno), or divine double of the individual, accompanying him during all his lifetime. In the question as to what became of the *Genius* at the death of the individual, and in the answering of that question by ascribing to him a life after death, the idea of personal immortality had its rise in Rome. The statements of later writers are obscured, partly by purely philosophical ideas foreign to the real beliefs of the many, and partly by a desire to identify and generally systematize all forms of Roman belief; but we can dimly recognize the following development. Originally the *Genius* and the *Di Manes* had no connexion whatsoever, except the mere matter of sequence; so long as a man lived he had a *Genius*, an individuality, at first thought of as merely physical, later as psychological; but when he died, his individuality ceased, he was gathered to the majority (not the divine doubles of the individuals in it), the *Di Manes*. Now, in the course of time one of the effects of Greece on Rome was the development of individuality and of the idea of individuality. All these ideas centred in the *Genius*, and hence it was natural to think of the *Genius* as existing after death. It must, however, in that case stand in some relation to the *Manes*, it must be identical with at least a part of them, that part contributed by the individual at his death. It is not surprising then, that, beginning with the Augustan age (cf. Hühner, in Müller's *Handbuch*, i. p. 529, § 47), the idea of the individual makes itself felt in connexion with the *Manes*, and we have the form (which soon becomes the ordinary form), 'To the *Manes* of, or belonging to, such a man,' emphasized occasionally by the addition of the *Genius* (cf. *CIL* v. 246, etc.). Sometimes the *Manes* are left out entirely, and we have merely the *Genius* or the Juno of such a person (for the *Genius*, cf. *CIL* v. 246, ix. 5794; for the Juno, v. 160, x. 1009, 1023, 6597). This reinforcement by the *Genius* was the salvation of the *Manes*; it gave new life to the concept, and the *Di Manes* began to develop out of a mere mass of spirits into a host of individual protecting deities. The cult went on in its old forms, but a new spirit, a new idea, had been brought into it. It is along this line that the *Di Manes* had their effect on the two great religious developments of the Empire—the emperor-worship of the first two centuries, and Christianity in its later centuries.

2. *The worship of the dead and emperor-worship.*—The elevation of the Roman emperors into gods was caused by two entirely distinct sets of tendencies; the one coming from the Orient, a tendency which, in so far as it was not checked (as it always was by all the better emperors), made the emperors into gods during their lifetime as well as after death; the other a thoroughly Roman concept, the idea that during life not the man but only his *Genius* was divine, but that after death, when the *Genius* still lived as the individualized *Manes*, the offerings might be made to the individual as a god. The difference, therefore, between an emperor, who allowed himself to be worshipped merely within the limits authorized by Roman ideas, and an ordinary Roman citizen was this: during lifetime the *Genius* of each was an object of worship, but the emperor's *Genius* was always, in all cases, one of the regular gods of the State cult, whereas the *Genius* of the individual belonged purely to the private cult, usually confined to a man's household. After death, both the emperor and the private citizen were worshipped as gods, with a similar distinction, namely, that in the case of certain emperors the Senate, after examining their acts, decreed that they should be included among the regular gods of the State. The only real distinction, therefore, was the inclusion of the emperor's *Genius* among the gods of the State in every case, during life, and the inclusion of the emperor himself, *i.e.* his *Manes*, among the State gods in certain cases after death. There can be little doubt that emperor-worship had the effect of strengthening the worship of the dead in general.

3. *The worship of the dead and Christianity.*—Among the many difficult problems which the teachers of the Christian religion had to solve in

the Roman world, perhaps none was more difficult than that presented by the developed concept of the worship of the dead as protecting and helping deities. Polytheism, so far as the greater gods were concerned, had among the educated classes gone over into monotheism without the aid of Christianity, merely by the doctrine of a philosophical syncretism; but it was with inborn, almost instinctive beliefs, bred in the bone, such as the divinity of the dead, that the Church's real battle had to be fought. Her method was one of compromise; it was the authorization, nay the encouragement, of the worship of certain individuals, men and women who as martyrs had by one act set the seal upon their faith, or whose life had been holy to such a degree as to merit certain miraculous manifestations. The worship of these martyrs and saints was intended primarily to keep them as ensamples in the minds of the living. But this was not enough for a people who had worshipped the dead not so much because they had been good during their lives, as because these gods of the dead were useful to them, protecting and helping them in their hours of danger and need. The saints, too, must accomplish something for them. This also was granted by the Church, but merely in the sense that the saints acted as intermediaries, whose intercession with God would increase the probability of obtaining one's petition. Theology stopped there, but humanity went further. By that facile transfer of the means into the end, of the intermediary into the final, which is so characteristic of simple minds, aided too as they were in this case by a habit of thought which had made the dead into gods like other gods, these saintly intercessors soon became gods on their own account, and the legend of each became a cult-legend, indicating the circumstances in which each was especially powerful. Thus there arose, literally from the dead, a host of minor gods, a myriad of potentialities, like the old gods of the so-called *Indigitamenta*. Human frailty had, at least in the lower classes, triumphed over theology, and the real religious world of the Roman's latest descendants bore a startling resemblance to that of his peasant ancestors in the days of Romulus. See also art. ROMAN RELIGION.

JESSE BENEDICT CARTER.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Slavonic).—We have only very few references to the cult of the dead among the pagan Slavs. The German chronicler Thietmar, who had not much sympathy with the Slavs, says (in the first Book of his Chronicles, § 14), 'They believe that everything ends with death' ('Omnia cum morte temporali putant finiri'). The Russian chronicler known by the name of Nestor, in the chapter in which he relates the conversion of the Russian prince Vladimir, puts into his mouth the words, 'The Greek priests say that there is another world,' which would seem to imply that the pagan Russians did not believe in that other world. On the other hand, the Bohemian chronicler, Cosmas of Prague, declares that the Christian prince Bretislav II., by an edict in 1092, suppressed 'sepulturas quæ fiebant in silvis et campis, atque scenas (or cœnas) quas ex gentili ritu faciebant in biviis et in triviis quasi ob animarum pausationem, item et iocos profanos quos super mortuos inanes cientes manes . . . exercebant.' This most probably refers to rites and festivals in honour of the dead. The phrase 'ob animarum pausationem' seems to have been influenced by the Christian idea of purgatory.

The idea of death is expressed in the Slav languages by the root *mer, mor*, which is common throughout the Indo-Germanic languages. The place to which people go after death is called by the name of *nav*, which is connected with a root meaning 'die' (Lettic *nāve*, 'dead'; Gothic *naus*, 'corpse'; Greek *νέκυς*, etc.). The Polish chronicler Dlugosz, speaking of the pagan Slavs, says that they called Pluto 'Nya,' and that they asked of him 'post mortem in meliores inferni sedes deduci.' Dlugosz, as well as Cosmas of Prague, admits that the Slavs believed in the immortality of the soul.

The ancient Russians held banquets, called *tryzna* or 'festivals,' in honour of the dead. The ancient Slavs had no places used expressly as burying-grounds. They practised both burial and cremation.

We have no definite texts on ancestor-worship, but folk-lore gives valuable hints regarding it. The Russian peasants believe in the existence of a *dědushka domovoi* ('grandfather of the house'), which evidently represents the soul of an ancestor. In White Russia, one of the most primitive parts of the Slav world, ancestor-worship is prevalent at the present day. In the 16th cent. the Polish poet Klonowicz, in a Latin poem entitled 'Roxolania,' described the offerings which were brought to the graves:

> '. . . Mos est morientum poscere Manes.
> Portari tepidos ad monumenta cibos.
> Creduntur volucres vesci nidoribus umbræ
> Ridiculaque fide carne putantur ali.'

The peasants of White Russia give the name of *dziady* ('ancestors') to the souls of dead relatives, even in the case of children who died in infancy. Feasts of an absolutely pagan kind are held in their honour. They are invited to eat, and a spoonful or a part of each dish is taken and put into a special vessel. This vessel is placed on the ledge of the window. The meal ends with an address to the ancestors, who are then advised to go back to the sky (see art. ARYAN RELIGION). It is these rites that the Polish poet Mickiewicz has described so well in his poem on the *Dziady* ('The Ancestors'). On the other hand, in Bohemia, vessels which must have contained food have been found in pagan (probably Slav) graves. These had evidently been placed there for the use of the dead in the life beyond the tomb. The kindred Letto-Lithuanians also had special deities of the dead—Kapu mâte and Wella mâte amongst the Letts, and Vielona amongst the Lithuanians. Sacrifices were offered not only to Vielona as goddess of the dead, but also to Žemyna, the Lithuanian earth-goddess (cf. Usener, *Götternamen*, Bonn, 1896, pp. 104–105, 107–108). It is furthermore noteworthy that the Lithuanians offered sacrifices to the dead on the anniversary of their decease, when, after a formal prayer to them, water and food were cast beneath the table of the feast in their honour, and lights were placed on it even at midday (Brückner, *Archiv für slavische Philologie*, ix. 33). See also art. ARYAN RELIGION.

L. LEGER.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Teutonic).—There is abundant evidence for Manes-worship among all Teutonic peoples. As a rule, however, the authorities give no indication that participation in the rites was confined to descendants and relatives of the deceased, though it is not unlikely that the worship referred to in such passages as *Indic. Superstitionum*, Tit. 1 ('De sacrilegio ad sepulchra mortuorum'), was generally of this variety. In Scandi-

navian lands also we hear of worship paid to kings and other distinguished men, apparently at or near their tombs, but here again the cult appears to have been shared by the dead man's subjects or dependants.

Perhaps the nearest approach to strict ancestor-worship is to be found in the records of the colonists of Iceland, who believed that all members of their families would pass after death into certain hills. They regarded these places with special reverence, and constructed sacrificial shrines there. Again, the element of ancestor-worship may be said to enter into the cult of certain gods, from whom most royal families, in England as well as in the North, claimed descent. Yet in the case of deities whose cult was wide-spread, such as that of Woden-Othin (by far the most frequent case), it would be unsafe to assume that this was the original element. On the other hand, deities whose worship was more or less local, like Thórgerðr Hölgabrúðr, may very well have been regarded originally as ancestral spirits. In this connexion account is to be taken also of the *hamingiur*, or guardian-spirits of families, who are represented as similar to valkyries or warrior maidens.

Lastly, mention must be made of the *erfi*—a word which in other Teutonic languages means inherited property, but in Scandinavian a wake or feast in honour of a dead person, especially the head of the house. Such feasts were often held on an immense scale, and many hundreds of persons invited. Large quantities of ale were then drunk in memory of the deceased—whence the banquet was also called *erfi-öl*, a name which survived until recently in the northern English word *arval*. Towards the close of the feast the heir was for the first time allowed to occupy the vacant high seat. At religious festivals also it was customary to drink to departed relatives as well as to the gods.

The Cult of the Dead among the Teutons will be fully described under art. ARYAN RELIGION.

ANCESTOR-WORSHIP AND CULT OF THE DEAD (Ugro-Finnic). — Ancestor-worship and cult of the dead is, so far as we can judge, the oldest form of religion among the Ugro-Finnic peoples. It is almost the only form common to them all. Their places of sacrifice frequently stand in close proximity to their places of burial; their images are chiefly representations of the dead; their offerings are to be explained by the needs (food, clothes, etc.) of the dead; and their whole system of magic seems in the main to aim at a union with the spirits of the dead. See artt. FINNS, LAPPS, MORDVINIANS, OSTIAKS.

KAARLE KROHN.

ANDAMANS.—1. *The Country and the People.*—The Andamans form the Northern portion of a string of islands, seven hundred miles long (the Nicobars forming the Southern portion), stretching across the Eastern side of the Bay of Bengal, between Cape Negrais in Burma and Achin Head in Sumatra. Certain physiological facts, in combination with phenomena exhibited by the fauna and flora of the respective terminal countries, have long been held to point to the former existence of a continuous range of mountains, thought to be sub-aerial, between these two points. Assuming this opinion to be correct, the Andamans are, in their present condition, the summits of a submarine range, connected with the Arakan Yoma range of Burma, which has, at some time or other, become almost wholly submerged by a volcanic subsidence. This range need not have been more than the physically possible one of two hundred fathoms, to connect a long narrow peninsula jutting out from the Burma coast with the present Andaman group of islands.

These considerations are of importance for the present purpose, as, according to Portman (see Literature below), the tradition of the South Andaman, or Bojigngiji, group of tribes is that Maia Tomola, the ancestral chief of the nation from which they all sprang, dispersed them after a cataclysm, which caused a subsidence of parts of a great island, divided it up into the present Andaman Islands, and drowned large numbers of the old inhabitants, together with many large and fierce beasts that have since disappeared. He also notes, as tending to show the junction of the Andaman Islands with the mainland, that, besides the South Andaman tradition, the people of the Little Andaman have names for animals that do not now exist and which they cannot describe.

Lying as they do in the track of a great commerce, which has gone on for at least two thousand years, both from China and Japan westwards and from the Levant and India eastwards, the existence of the Andamans has been reported probably from the days of Ptolemy (McCrindle, *Ancient India as described by Ptolemy*, 1885, p. 236) under a variety of names, representing some form of *Andaman*, meaning a 'monkey' people, and indicating the savage aboriginal antagonists of the more civilized early population of India. As early as the 9th cent. the inhabitants of the islands were quite untruly described by Arab travellers as cannibals (Reinaud, *Relation des voyages*, 1845, i. 8)—a mistake that seems to have arisen from three observations of the old mariners. The Andamanese attacked and murdered without provocation every stranger they could seize on his landing, as one of the tribes does still; they burnt his body (as they did in fact that of every enemy); and they had weird all-night dances round fires. Combine these three observations with the unprovoked murder of one of themselves and the fear aroused in ignorant mariners' minds by such occurrences in a far land, century after century, and a persistent charge of cannibalism is almost certain to be the result. This is a consideration of cardinal importance, as this false charge led to the Andamans being left severely alone until 1857 (except for a brief period between 1789 and 1796), when the British Government was forced to take steps to put a stop to murders of shipwrecked crews by occupying the islands. The result is that there exists in the Andamans an aboriginal people uncontaminated by outside influences, whose religious ideas are of native growth and exhibit the phenomena of a truly untutored philosophy.

The Andamanese are naked pigmy savages, as low in civilization as almost any known upon earth, though close observation of them discloses the immense distance in mental development between them and the highest of the brute beasts, one most notable fact being that they eat nothing raw, cooking all their food, however slightly, and making pots for the purpose, and this from time immemorial. Their various tribes belong to one race, speaking varieties of one fundamental isolated language. They are the relics of a bygone Negrito population now represented by themselves, the Semangs of the Malay Peninsula, and the Aetas of the Philippines (these last two being much mixed with the surrounding peoples), who in very ancient times occupied the south-eastern portion of the Asiatic Continent and its outlying islands before the irruptions of the oldest of peoples whose existence, or traces of it, can now be found there. In this view the Andamanese are of extreme interest, as preserving in their persons and customs, owing to an indefinite number of centuries of complete isolation, the last pure remnant of the oldest kind of man in existence.

2. *Character of the People.*—In childhood the Andamanese are possessed of a bright intelligence, which, however, soon reaches its climax; and the adult may be compared in this respect with the civilized child of ten or twelve. He has never had any sort of agriculture, nor, until the English taught him the use of dogs, did he ever domesticate any kind of animal or bird, nor did he teach himself to turn turtle or to use hook and line in fishing. He cannot count, and all his ideas are hazy, inaccurate, and ill-defined. He has never developed, unaided, any idea of drawing or making a tally or record for any purpose, but he readily understands a sketch or plan when shown him. He soon becomes mentally tired, and is apt to break down physically under mental training.

He retains throughout life the main characteristics of the child: of very short but strong memory; suspicious of, but hospitable to, strangers; ungrateful, imitative, and watchful of his companions and neighbours; vain and, under the spur of vanity, industrious and persevering; teachable up to a quickly reached limit; fond of undefined games and practical jokes; too happy and careless to be affected in temperament by his superstitions; too careless, indeed, to store water even for a voyage; plucky but not courageous; reckless only from ignorance or inappreciation of danger; selfish, but not without generosity, chivalry, or a sense of honour; petulant, hasty of temper, entirely irresponsible and childish in action in his wrath, and equally quick to forget; affectionate, lively in his movements, and exceedingly taking in his moments of good temper. At these times the Andamanese are gentle and pleasant to each other, considerate to the aged, the weakly or the helpless, and to captives; kind to their wives and proud of their children, whom they often over-pet; but when angered, cruel, jealous, treacherous, and vindictive, and always unstable. They are bright and merry companions, talkative, inquisitive, and restless, busy in their own pursuits, keen sportsmen, and naturally independent, absorbed in the chase for sheer love of it and other physical occupations, and not lustful, indecent, or obscenely abusive.

As the years advance they are apt to become intractable, masterful, and quarrelsome—a people to like but not to trust. Exceedingly conservative and bound up in ancestral custom, and not amenable to civilization, all the teaching of years bestowed on some of them has introduced no abstract ideas among the tribesmen, and changed no habit in practical matters affecting comfort, health, and mode of life. Irresponsibility is a characteristic, though instances of a keen sense of responsibility are not wanting. The intelligence of the women is good, though not, as a rule, equal to that of the men. In old age, however, they frequently exhibit a considerable mental capacity which is respected.

There is no idea of government, but to each tribe and to every sept of it belongs a recognized chief, who commands a limited respect and such obedience as the self-interest of the other individual men of the tribe or sept dictates. There is no social status that is not personally acquired on account of some admitted superiority, mental or physical. Property is communal, as is all the land; and the ideas as to individual possessions, even as to children, are but rudimentary, and are accompanied by an incipient tabu of the property belonging to a chief. Custom is the only law, and the only explanation of social actions or of the form and adornment of manufactured articles. In the religious ideas of such a people as this, religion is seen in its most primitive form.

3. *Religion.*—The religion is simple animism, and consists of fear of the evil spirits of the wood, the sea, disease, and ancestors, and of avoidance of acts traditionally displeasing to them, and this in spite of an abundance of mythological tales told in a confused, disjointed manner. There is neither ceremonial worship nor propitiation. There is an anthropomorphic deity, Puluga, the cause of all things, whom it is not, however, necessary to propitiate, though sins, *i.e.* acts displeasing to him, are avoided for fear of damage to the products of the jungle. Puluga now dwells in the sky, but used to live on the top of Saddle Peak, their highest mountain. The Andamanese have an idea that the 'soul' after death will go under the earth by an aerial bridge, but there is no heaven or hell, nor any idea of a bodily resurrection in a religious sense. There is much active faith in dreams, which sometimes control subsequent conduct, and in the utterances of 'wise men,' dreamers of prophetic dreams, gifted with second sight and power to communicate with spirits and to bring about good and bad fortune. These practise an embryonic magic and witchcraft to such personal profit, by means of good things tabued to themselves, as these people appreciate. There are no oaths, covenants, or ordeals, nor are there any forms of appeal to supernatural powers.

Puluga, who is fundamentally identifiable with some definiteness with the storm (*wuluga*), despite his confusion with ancestral chiefs, has so many attributes of the Deity that it is fair to translate the term by 'God.' He has, however, a wife and a family of one son and many daughters. He transmits his orders through his son to his daughters the Morowin, who are his messengers. He has no authority over the evil spirits, and contents himself with pointing out to them offenders against himself. The two great evil, *i.e.* harmful, spirits are Erem-chauga of the forest and Juruwin of the sea. Like Puluga, both have wives and families. The minor evil spirits are Nila, and a numerous class, the Chol, who are practically spirits of disease. The sun is the wife of the moon, and the stars are their children, dwelling near Puluga; but there is no trace of sun-worship, though the Andamanese twang their bows and 'chaff' the moon during an eclipse; and a solar eclipse frightens them, keeping them silent.

The Andamanese idea of a soul arises out of his reflexion in water, and not out of his shadow which follows him about. His reflexion is his spirit, which goes after death to another jungle world (*chaitan*) under the earth, which is flat and supported on an immense palm tree. There the spirit repeats the life here, visits the earth occasionally, and has a distinct tendency to transmigration into other beings and creatures. Every child conceived has had a prior existence, and the theory of metempsychosis appears in many other superstitions, notably in naming a second child after a previous dead one (because the spirit of the former babe has been transferred to the present one), and in the recognition of all natives of India and the Far East as *chauga*, or persons endowed with the spirits of their ancestors.

4. *Superstitions.*—The superstitions and mythology of the Andamanese are the direct outcome of their beliefs in relation to spirits. Thus fire frightens Erem-chauga, *lit.* 'Forest-ghost,' so it is *always* carried (the practical reason is that the Andamanese are the only people known who have never been able to 'make' fire). To avoid offending the sun and the moon, they keep silence at their rise. Puluga shows himself in the storm, and so they appease him by throwing explosive leaves on the fire, and deter him by burning beeswax, because he does not like the smell. Earthquakes are the sport of the ancestors. There are lucky

and unlucky actions, but not many, and a few omens and charms. Animals and birds are credited with human capacities. For instance, murdered persons have been found with heavy stones placed on them, and with stones placed along the pathway. Every Andamanese knows that this is a warning to the birds not to tell the English that the men have been murdered, but that the murderers have passed along the path in front. Primitive simplicity here comes to the surface, as the presence of the stones tells an Englishman who understands the signs exactly what has happened.

5. *Mythology.*—The great bulk of the Andamanese mythology turns on Puluga and his doings with Tomo, the first ancestor; to him and his wife Puluga brought fire and taught all the arts, and for them he created everything. This line of belief is still alive, and everything natural that is new is attributed to Puluga. Thus, when the Andamanese were introduced to the volcano on Barren Island, seeing the smoke from the top, they at once named it *Molatarchona*, 'Smoke Island,' and said the fire was Puluga's. The next most important element in their mythology is the story of the cataclysm which engulfed the islands, and was, of course, caused by Puluga. It separated the population and destroyed the fire, which was afterwards stolen by Luratut, the kingfisher, and restored to the people. The population previous to the cataclysm became the *chauga*, or 'ghostly ancestors.' Other stories relate in a fanciful way the origin of customs (*e.g.* tatuing and dancing), the arts, articles of food, harmful spirits, and so on. An important ethnological item in these stories is the constant presence of the ideas of metempsychosis, and of metamorphosis into animals, fish, birds, stones, and other objects in nature. Indeed, the fauna chiefly known to the Andamanese are ancestors changed supernaturally into animals.

6. *Customs.*—There are rudimentary initiatory ceremonies for both males and females connected with arrival at puberty and marriageability, and pointing to a limited tabu, but they are not accompanied by the communication of any secrets or by any religious ceremony. The women also practise a limited tabu as to food during menstruation and pregnancy. The idea of tabu does undoubtedly exist as to food, and every man has through life his own tabued article. This is, however, usually something observed to disagree with him in childhood or to be unpalatable. Tatuing is partly ceremonial, and the perpetual evening dancing also becomes ceremonial on occasion. Neither has any religious significance, and the songs accompanying the dances rarely relate to beliefs and superstitions. Among the games, mock burials and 'ghost' hunts are favourites. Religion does not enter into the naming customs, except possibly into the 'flower' names for girls, which are bestowed after some one of sixteen selected trees which happen to be in flower at the time they reach puberty.

The Andamanese are monogamous, and by preference, but not necessarily, exogamous as regards sept, and endogamous as regards tribe, or more strictly, group. Marriages are not religious, but are attended with distinct ceremonies. Betrothal accounted as marriage is recognized, and the marriage relations are somewhat complicated, and quite as strictly observed as among civilized communities. Deaths occasion loud lamentations from all connected with the deceased. Burial in the ground and exposure in trees, as an honour, are practised. A death causes an encampment to be ceremonially marked, and to be deserted for about three months, and burial spots are also marked and avoided. Mourning is observed by smearing the head with grey clay and refraining from dancing for the above period. After some months the bones of the deceased are washed, broken up, and made into ornaments. To these great importance is attached as mementoes of the deceased, and they are believed to stop pain and cure diseases by simple application to the diseased part. The skull is tied round the neck and worn down the back, usually, but not always, by the widow, widower, or nearest relative. Mourning closes with a ceremonial dance and the removal of the clay. The ceremonies connected with the disposal of the dead are conventional, reverential, and by no means without elaboration in detail.

R. C. TEMPLE.

ANDEANS.—1. The pre-Inca people.—For the study of the Andean religions it is necessary to take account of a civilization which flourished long before the rise of the Incas; because the later power inherited some of the names, and with them the religious belief, of the more ancient people. Near the south shore of Lake Titicaca, now over 12,000 feet above the sea-level, there are very extensive ruins of a most remarkable character. They are of such great extent that there must have been a very large population in the vicinity; the stones are of such size, and any possible quarry so distant, that the people must have been possessed of very remarkable mechanical skill; and they are cut and carved with such accuracy and precision that the workers must have been skilful masons. The mouldings and symmetrical ornamentation show most accurate measurements, and no want of artistic taste. There were numerous statues, and much detailed carving. The monoliths are so enormous, one of them 36 feet by 7, another 26 feet by 16 by 6, that they are excelled in size only by the obelisks and statues of Egypt.* The ancient people who built them may well receive the name of the monolithic people, forming a monolithic empire.† Universal tradition points to the south as the direction whence they came. The building of Tiahuanacu, as the ruins are now called, necessitated a great population, mechanical skill—the result of long ages of civilization—and abundant supplies of food.‡ It appears certain that the region could not have been at its present elevation. At 12,500 feet no corn will ripen, and the country can sustain only a very sparse population. The monolithic builders cannot have worked at that elevation, or anything like it. The early Spanish writers give unanimous evidence that the ruins of Tiahuanacu were built long before the time of the Incas.§

2. Pre-Inca religion.—The only clue to the religion of the monolithic people is to be found in a famous doorway cut out of one enormous stone. 'The masonry is excellent throughout, and all the lines are as straight, the angles as square, and the surfaces as level as could be produced by any good workman of the present day.'‖ The length of the

* *The Megalithic Age of Peru*, by Sir Clements Markham, American Congress, Stuttgart, 1904.

† The best recent accounts are by Richard Inwards, *The Temple of the Andes* (1889), and by Le Comte de Crequi Montfort, *Mission Scientifique Française, Travaux et Fouilles de Tiahuanaco*, 1903.

‡ See *Archæologia*, vol. lviii. (2nd series, p. 73), on the transport of monoliths for Stonehenge and in Egypt. All needful appliances existed in the Stone Age, but a large population or command of men was essential. The date of Stonehenge is now placed at 1800 B.C., or 3700 years ago.

§ Cieza de Leon, cap. cv. pp. 374–379; Garcilasso de la Vega, i. pp. 71, 75, 210, 212, ii. 307; Acosta, pp. 71, 416. These references are to the present writer's translations (Hakluyt Society). See also *Relaciones Geograficas de Indias*, ii. p. 56.

‖ Inwards *The Temple of the Andes*, p. 21.

monolith is over 13 ft., and the opening of the doorway 4 ft. 6 in. by 2 ft. 9 in. Above the doorway there is much carving. There is a central figure with many symbols and accessories. There are rays round the head; in each hand there is a sort of sceptre ending with heads of birds, the marks on the dress are the same as those round a golden representation of the sun of the Incarial times, denoting the Inca months *Camay* and *Ccapac Raymi*. It is the work of a highly skilled mason, but not of a sculptor. On each side of the central figure there are three rows of kneeling figures, eight in each row. They all hold sceptres, and are crowned. Those on one side have the heads of men, and on the other those of birds. Underneath there is a beautifully designed ornament running along the length of the stone, consisting of rectangular patterns, ending with birds' heads, and three human heads similarly ornamented. This central figure may, the present writer thinks, be assumed to represent the deity worshipped by all the chiefs of the people and all the animal creation. But there must have been an interval of many centuries between the fall of the monolithic empire, caused by the region becoming uninhabitable for a large population, and the rise of that of the Incas. When the old empire fell to pieces, the Andean region must have been occupied by many tribes, and the old language naturally broken up into dialects. One, spoken in the basin of Lake Titicaca, received the name of *Aymara* from the Jesuit missionaries of Juli; another spoken in the region of the Incas was called Quichua by the first Spaniard who wrote its grammar; another dialect was spoken further north. Eventually, some five centuries before the arrival of the Spaniards, the Incas began to form another great empire, and their language prevailed over the others.

3. The Incas.—There had been a long interval of disintegration. Nevertheless, all memory of the monolithic empire had not been lost. There were myths telling how the great God first made Himself known at Lake Titicaca, how the sun first appeared there, and how the first man was created there.* But the main tradition was the revelation of the almighty God, named Viracocha, who is carved with his adoring worshippers on the monolithic doorway. His worship was maintained by chiefs and learned men, after the old empire had disappeared, and was inherited by the Incas. Some other names were handed down as attributes of the almighty God. The chief of these were *Con, Illa, Ticsi, Pachayachachi, Pachacamac*. The meaning of *Con* is unknown. *Illa* means light. *Ticsi* is said to be a founder. The anonymous Jesuit explains the word as *Principium rerum sine principio*. The derivation of *Viracocha* is lost to us. Two authorities† say that the first part of the word is a corruption of *pirua*, a depositary or abode. The primary meaning of *cocha* is a lake, but here it is said to mean an abyss, profundity, space—'Dweller in space.' *Pachayachachi* and *Pachacamac* are attributes of the deity. *Pacha* means time or place, also the universe, *yachachi* a teacher, *camac* to rule or govern—'The teacher and ruler of the universe.' The name Viracocha sufficed to convey to the minds of the Incas the idea of a Supreme Creator, yet they added other terms to it, intended to express some of the attributes of the deity.‡

4. Viracocha.—The Incas, with their *Amautas* (wise men) and *Quipucamayocs* (registrars), certainly worshipped the Supreme Being under the name of Viracocha, having received the tradition from remote ages, and they looked upon all other deities as his servants, ordained to do his will. An Inca Indian, named Pachacuti Yamqui Salcamayhua, who wrote early in the 17th cent., mentions another being as having been made known in the early times, whose fame was handed down by tradition. This was Tonapa, also called Tarapaca and Pachaccan. He is also mentioned by Sarmiento as a servant of Viracocha. The details about him are puerile. It is possible that Tonapa represents a solar myth. The name occurs with that of the creator in some of the Inca hymns.

The Incas certainly worshipped Viracocha, the supreme creator of all things, but they approached him as an unknown god, who to them was shrouded in mystery. They cried to him to be taught where he was, that they might know and understand him; and they recognized that the sun, the moon, and the seasons were ordained and ordered by him. They sought to know the will of the Deity, and prayed for comfort and support.

5. Some hymns of the Incas have been preserved by Salcamayhua, but in a very corrupt form, and it is difficult to make out their exact meaning in English;* but they are so important for a correct estimate of the Peruvian religion that it seems desirable to give English versions of two of the hymns.

I.

'O Viracocha! Lord of the Universe,
Now art thou male,
Now art thou female,
Lord of heat! Lord of generation!†
Can divination be employed
To learn where thou art?
If away, where art thou?
Whether thou art above,
Whether thou art below,
Whether thou art around
Thy royal throne and sceptre,
O hear me!
From the heaven above,
From the sea below,
Where'er thou art,
O Creator of the world,
O Maker of man,
Lord of all lords,
To thee alone,
With eyes that fail,
With longing to know thee,
I come to thee
To know thee,
To understand thee.
Thou seest me,
Thou knowest me.
The Sun, the Moon,
The day, the night,
Spring and winter,
They all travel,
Not ordained in vain,
From appointed places
To their destinations;
They duly arrive
Whithersoever may be ordained.
Thou holdest them
Under thy sceptre,
Thou holdest them.
O hear me!
Let me be thy chosen:
Do not suffer
That I should tire,
That I should die.'

* The Titicaca myths are related by Garcilasso de la Vega, Cieza de Leon, Molina, Betanzos, Salcamayhua, and the anonymous Jesuit, and in the official history of Sarmiento. They are not mentioned by Balboa, Montesinos, Acosta, or Santillana.

† Montesinos and the anonymous Jesuit.

‡ The best essay on the word *Viracocha* is by Don Leonardo Villar (Lima, 1887).

* They were originally printed in the corrupt Quichua, exactly as in the manuscript, in the present writer's translation of Salcamayhua (Hakluyt Society, 1873). Ximenez de la Espada brought out a Spanish edition in 1879, printing the hymns in Quichua in the same way. Don Samuel A. Lafone Quevedo then took the Quichua in hand, and, with the able assistance of Padre Mossi, the author of one of the latest Quichua dictionaries, numerous emendations were made, and still more corrections in the separations of words. The text was thus made sufficiently intelligible to bear translation into Spanish (*Ensayo Mitologico. Los Himnos sagrados de los Reyes del Cuzcos*, from S. A. Lafone Quevedo, Talleres del Museo de La Plata, 1892).

† Are these lines, conceivably, intended to convey an idea analogous to the Hindu *Linga* and *Yoni*?

II.

'Come, then,
Grand as the heavens,
Lord over the earth,
Creator of all things,
Creator of man!
Ever I adore thee;
Fainting, with my eyes
Hid under the lashes,
Thee am I seeking,
To look upon thee,
Like as on a river,*
Like as on the springs,
Gasping with thirst.
Comfort me, O Lord!
Acclaim thy will,
Help me, O Lord!
I raise my voice
With all praise,
Thinking on thy will
And doing it.
We will rejoice,
We will be glad,
So be it for evermore.'

6. Huacas.—Subordinate to Viracocha, to whom a temple was dedicated in the great square of Cuzco, the worship of the Sun, Moon, Lightning, and of certain deities, called *Huacas*, was ordained. When the empire of the Incas rose to greatness, there was a complicated ritual, with special ceremonies, festivals, and sacrifices for each month. Our information is mainly derived from the first Spaniards who came to Peru and wrote narratives. They were soldiers, lawyers, in two instances natives, but chiefly priests who were full of pre-conceived ideas.† It is not always easy to separate their pre-conceptions and the results of their leading questions from the actual facts they were told. It is still more difficult to reach the exact nature of the beliefs of a people, when we have reports only of their ceremonies and of their outward worship.

The people were divided into *ayllus* or tribes, which had a close analogy to the Roman *gens*. Every *ayllu* had a common *huaca* or sacred object of worship, which was called *paccarina*. The chief *paccarina* of the Inca *ayllu* was the Sun. The Incas were children of the Sun. But there was another very sacred *huaca*, which is often mentioned in Inca history, and to which a legend was attached.‡

The origin of the Incas is connected with this *huaca*. Four brothers and four sisters are said to have issued from 'windows' at a place called *Paccari-tampu* (some leagues south of Cuzco), two words meaning 'the tavern of the dawn.' Their leader was Manco Capac, the first sovereign Inca. They had many followers, and they advanced northwards to occupy the valley of Cuzco. During the march one of the brothers was turned to stone at a place called Huanacauri. This is the legend. Next to the celestial bodies, this *huaca* of Huanacauri became the most sacred object of worship. It was three miles from Cuzco. Very elaborate sacrifices were offered to it, and it was at Huanacauri that the great festival was celebrated, when the Inca youths went through their ordeals previous to receiving knighthood. But the exact position of the Huanacauri *huaca* in the Inca religion is not clear. It was certainly a very important one in the traditions of the Inca *ayllu*.

7. Ancestor-worship. — The other *ayllus* had various beasts or birds, natural objects or mummies, as their *paccarinas*. It was the worship of ancestors by the side of the worship of celestial bodies. The *mallquis*, or bodies of the dead, were preserved, and treated with the greatest respect. In the mountains round Cuzco and in the Yucay valley they were kept in caves faced with masonry. In the basin of Lake Titicaca they were preserved in towers called *chulpas*. Those at Sillustani are circular, and carefully built with ashlar masonry. In Quito the dead were interred in mounds called *tola*.

The bodies of the Incas were preserved with extreme care, and it is stated, in the official report of Sarmiento, that the special *huaca* or idol of each Inca was kept with the mummy (Sarmiento, *Hist.*). There were servants for the mummies of the sovereigns, and estates for their maintenance. The names of seven of the so-called idols have been preserved; and they do not support the idea that they were idols in our sense of the word, but rather insignia or commemorative ornaments, perhaps in the nature of *penates*, used by each sovereign in his lifetime. It was a custom, not only as regards the Inca *mallquis* but among all classes of the people, to place with the dead, offerings of food and other things required by them when living. This custom has never been eradicated, and even now it is practised secretly in many parts of Peru. The belief which originated this custom, and which has caused its continuance even to the present day, must have been very deeply seated. It is exceedingly difficult to acquire a complete understanding of the ideas of another race of people which give rise to special customs. But the present writer was well acquainted with an old priest, Dr. Pablo P. Justiniani, a lineal descendant of the Incas,* whose intense sympathy for his people enabled him to comprehend their ideas, if any one ever did so. He told the present writer that they felt a certainty that their dead continued to exist apart from their bodies, and that they had needs, but spiritual, not corporeal needs. They were certain of this because many of them had seen their dead. Don Pablo attributed this conviction to appearances in dreams and visions. Of a future state of rewards and punishments they do not appear to have had any idea in the time of the Incas, only the conviction that their ancestors continued to exist after death. In this state they were souls without bodies, but still with needs and requirements, not corporeal, but spiritual. Thence arose the strange belief that all things had souls as well as their material parts, and that the spirits of the dead needed the souls or spiritual parts of food, chicha, coca, llamas, even clothing. By placing the corporeal parts of these things with the dead, it was believed that their souls or spiritual essences were conveyed, through prayer and certain ceremonies, to the souls of the dead. This belief was so deeply impressed on the Inca people that it survived all subsequent persecution. The practice existed

* The same idea as in the 42nd Psalm.

† The most important work on the religion of Peru was written about 1575 by a priest named Cristoval de Molina, who lived at Cuzco, and was a master of the Quichua language. The present writer's translation, from the original manuscript, was printed for the Hakluyt Society in 1872.

In August, 1906, Dr. Pietschmann, the librarian of the Göttingen University, published the official history of the Incas, by Sarmiento. It was written in 1572 from information received from over 80 members of the Inca family, to whom the history was read, and whose suggestions and corrections were adopted. The manuscript had been in the Göttingen library since 1780. This work will be found to be the most authentic and valuable history of the Incas in existence.

‡ According to Arriaga, the word *paccarina* means 'worshipped.' It comes from *paccari*, 'the dawn,' whence *pacarisca*, 'birth' or 'origin'; and *paccarina* would be the 'original ancestor.'

Dr. Don Pablo Policarpo Justiniani.

secretly fifty years ago to some extent, as Don Pablo informed us. The present writer is told by Baron Erland Nordenskiöld, who returned from Peru in the year 1906, that the practice still exists. This appears to have been the position of the Inca worship of their ancestors, possibly accompanied by some idea of intercession. Like the sovereign Incas, each *ayllu* had a *paccarina* or so-called idol, represented by a hill or other natural object, occasionally by an image. This was apart from the household *conopa*, to be noticed presently.

8. Priesthood.—The complicated ceremonial worship of the Incas necessitated a great body of priests and ministers. The *Villac umu* (lit. 'the head giving counsel') was the chief of the Inca hierarchy. Next in rank were the *Villcas*. Then there were the sacrificing priests, or *Harpaycuna*, special priests and virgins of the Sun, the priests and servants of the *huacas*, the soothsayers and wizards, the *Huacap Rimachi*, or receiver of oracles, and a host of recorders and servants. For the support of this hierarchy large revenues were assigned.

9. Festivals.—The Peruvian ceremonial system was very closely connected with the course of the year, the sowing and planting seasons, the irrigation, the harvest, and consequently with the course of the sun. The year was a solar year, divided into twelve months and some intercalary days, and it was necessary to ascertain the times of the equinoxes and solstices. Pillars were erected to determine the time of the solstices, and the time of the equinoxes was observed by a stone column in the centre of a circular level platform called Inti-huatana. There was one in the square before the Temple of the Sun at Cuzco, another at Pisac, and others in different parts of Peru. Each month had its special festival.

The first month, 22 June to 22 July, was called *Intip Raymi*. Many llamas were sacrificed to the Sun, amid ceremonies of great magnificence. The next month was called *Chahuarquiz*, the season of ploughing the land. It was also called *Tarpuy-quilla* or the sowing month. Prayers were made for a good harvest. The people chanted a song called *Yahuayra*, and sacrifices were offered. Next came the month *Yapaquis*, the season of sowing the land, when the *Situa* festival was solemnized. The rains commenced, and it was a time of sickness. Four hundred warriors stood in the great square, a hundred facing each of the cardinal points. The priests shouted, 'Go forth, all evils,' and the four parties started in four directions, shouting, 'Go forth, all evils.' They ran until they came to rivers, where they bathed and washed their arms. The Inca and the people also bathed, and there were ceremonies for driving away sickness at the doors of all the houses.

Ccoya-raymi was the Moon festival, the expiatory feast being at night. It was a time for weaving fine cloth. *Uma-raymi* was the month in which one of the great *huaca* festivals was celebrated for the initiation of aspirants. It took place at Huanacauri. The youths, after going through certain exercises and penances, were admitted to knighthood. The month of *Ayamarca* was in November and December. Next followed *Ccapac-raymi*, one of the three principal festivals of the year. There was another ceremony of admitting youths to manhood at Huanacauri, which was conducted with great magnificence. *Camay* was the month of martial exercises, and also the *hatun-poccoy*, or great ripening. The next month was *Pacha-poccoy*, or the small ripening, when the festival of the *mosoc nina* was celebrated, and the new fire for the altar before the Sun was kindled. The *Ayrihua* came next, being the beginning of harvest. The offerings of maize were brought to the temples of the Creator and of the Sun, youths and maidens, in procession, singing a harvest song called *yaravi*. The harvesting month was *Aymuray* in May and June.

10. Human sacrifice.—The religious ceremonies included burnt-offerings in great profusion. The present writer formerly held that the weight of evidence was, on the whole, that there were no human sacrifices. He felt this to be remarkable, for the idea of propitiatory sacrifice is to offer the best and most loved, as in the cases of Isaac and Jephthah's daughter. He held that the Peruvian sacrifices were more in the nature of thanksgiving than of propitiatory offerings. But the authoritative evidence of Molina and Sarmiento has led him to modify this view. On extraordinary occasions, two children, a male and a female, were first strangled and then included in the burnt-offerings. Such occasions were the celebration of great victories, or the commencement of wars, and the *Huaca* festival at Huanacauri.

11. Sun-worship. — Nearly all the ceremonies were connected with agriculture and with the course of the sun, so that it was natural that the sun should be the chief object of adoration with the people. But some shrewd remarks on the subject are recorded of one or two of the Incas (by Garcilasso de la Vega, *Comm. Real.*). Seeing that the Sun had to accomplish its circle every year, they concluded that it must have a master. It was the same thought as that of Omar Khayyam:

> 'And that inverted Bowl they call the Sky,
> Whereunder crawling coop'd, we live and die,
> Lift not your hands to *It* for help—for It
> As impotently moves as you or I.'

So they turned to Viracocha, the Creator obeyed by the sun and all living things, as the chief object of their adoration.

12. Government. — The religious beliefs of the people away from Cuzco were connected with their mode of life and their environment. It seems desirable to give a short account of the rural life of the people, and of the administrative organization of Inca rule. It was, in fact, pure socialism —a system which can exist only under a despotism. Several very able Spanish lawyers, notably Polo de Ondegardo and Santillana, were employed, soon after the conquest, to investigate and report upon the Incarial system of government. Reliance may be placed upon the correctness of the details they collected. It appears that the whole of the peoples were divided into ten classes, according to their ages and ability to work.

1. *Mosoc aparic* (baby), 'newly begun,' just born.
2. *Saya huarma* (child), 'standing boy,' age 2 to 6.
3. *Macta puric* (child that can walk), age 6 to 8.
4. *Ttanta requisic* (bread receiver), about 8.
5. *Pucllac huarma* (playing boy), 8 to 15.
6. *Cuca pellec* (coca picker), very light work, 15 to 20.
7. *Yma huayna* (as a youth), light work, 20 to 28.
8. *Puric* (able-bodied), tribute service, 28 to 50.
9. *Chaupi ruccu* (elderly), light work, 50 to 60.
10. *Puñuc ruccu* (dotage), no work, over 60.

The *Puric* was the unit of administration, the other classes being dependent on him. A *Pachaca* was 100 *Purics* under a *Pachaca-camayoc* or Centurion. 1000 *Purics* were under a *Huaranca-camayoc*, or officer over a thousand, and the *Hunu-camayoc* governed the whole *ayllu* or *gens* of 10,000 *Purics*. There were four Viceroys over the four provinces, who were called *Tucuyricoc* ('He who sees all'). There were also a reporter on vital statistics and an officer to investigate and report upon charges and accidents, one to each *ayllu*. The land belonged to the people in their *ayllus*. The produce was divided between the *Inca* (government), the *Huaca* (church), and the *Huaccha* (people). The flocks were divided between *Inca* (government) and *Huaccha* (the people). When the people worked for the Government, they were fed by the Inca, and not from their own share of the produce.

Thus the land belonged to the whole *ayllu*, and each able-bodied member, or *Puric*, had a right to his share of the harvest, provided that he had been present at the sowing. No one who had been absent at the sowing could receive a share of the harvest. The population was very great, and increased rapidly; but the evils of minute sub-division were avoided by the system of *Mitimaes*, or colonists.*

13. Various cults.—The worship of Viracocha, the Supreme Being, was restricted mainly to the Incas and learned men. The worship of the Sun was more extended, and was the religion of all who took part in the festivals of the Incas; but the religion of the mass of the people was different. Each *ayllu* had its *paccarina*, with its festival and worship. But each *Puric*, or head of a family, believed that all things in nature had an ideal or soul which ruled and guided them, and to which they might pray for help. Thus there was a soul or ideal of the maize and other harvests, of the llamas, and of all things that influenced their daily life. They made statues or other representations of these objects, and prayed and sacrificed to them for healthy flocks and abundant harvests. The statues were made of pottery or stone, sometimes of the precious metals, and were called *huaca* or *conopa*. In Huarochiri, and, no doubt, in other provinces, the people had mythological stories of great interest in the study of their folk-lore; and the discovery of the remaining reports on the extirpation of idolatry will throw further light on the religion of the Peruvian people.†

14. Oracles.—The valleys on the coast, from Nasca to the Rimac, were occupied by people of the same race and language as the Incas, and at Nasca there are marvellous irrigation works. Here the ocean and its inhabitants received the worship that was given to other powers of nature in the Sierra; and there were two or more famous oracles to which people resorted from great distances. One was at Rimac, whence the name of Lima, the modern capital of Peru. Another famous temple was on the coast, at a place called Pachacamac. Raised on an eminence, with an extensive city at its feet, the oracle itself appears to have been a fish *conopa*, which was supposed to give answers to the questions of pilgrims.

There was no temple to the Supreme Being at Pachacamac. The word is that of an attribute of the Almighty Creator. But in this case it was merely the name of the place. Many other places received names from deities or festivals. There was another *Pachacamac* near Tumipampa. *Vilca* (sacred), *Huaca* (church), and *Raymi* (festival) form parts of the names of several places in Peru. The great temple at Pachacamac on the coast was dedicated to two *conopas* of the coast people, a fish-deity and a fox-deity, which became famous oracles. Pilgrims came from great distances, and an extensive town rose up at the foot of the temple. It was falling to ruin when the Spaniards arrived.

15. An unknown civilized people conquered by the Incas.—There was another civilized people along the northern part of the coast of Peru, quite distinct from the Andean tribes, but finally conquered by the Incas. We have evidence of their civilization from the contents of the tombs examined by Reiss and Stübel at Ancon. We have further evidence in the great palace of the 'Gran Chimu' near Truxillo, and Balboa has preserved a tradition of their arrival by sea and landing at Lambayeque, which also throws a little light on their superstitions.‡ There is a grammar of their language, which is totally unlike any Andean dialect.* But there is no account of the religion of this strange civilized nation of the Peruvian coast, now practically extinct.

Quito was conquered by the last great and undisputed sovereign of the Inca dynasty; but though there is a work on the former Scyris rulers of Quito, the accounts in it are comparatively modern and of doubtful authority. We have no narratives giving details respecting the religious belief of the Quito people previous to the conquest by the Inca Huayna Ccapac. It is stated that they worshipped the Sun.†

16. The Chibchas.—Farther north there was a civilized people, the Chibchas, of whose religion there is some account. Their land is where the Andes divide into three cordilleras, with the three great rivers of Magdalena, Cauca, and Atrato flowing northwards between them into the Caribbean Sea. The Chibchas dwelt on the table-lands of Bogota and Tunja, with their river Funza flowing to the Magdalena, their eastern drainage being carried by the Meta to the Orinoco. This territory is about 150 miles in length, by 40 to 50 broad. It was ruled by two principal chiefs, the Zipa of Bogota and the Zaque of Tunja. The Zipa was striving for a paramount position before the arrival of the Spaniards, and had subjugated the chief of Guatavita. It is of this chief that the story is told that he held a great annual festival on the banks of the Lake of Guatavita, when he covered himself with grease, and then rolled in gold dust. Gilded and resplendent, he then entered a canoe, and was taken to the centre of the lake. Before all his people, he plunged into the water, and his bath was followed by feasting and dancing. This was the origin of the story of El Dorado.

The *religious beliefs* of the Chibchas are thus stated by the earliest writers. Light was originally enclosed in a receptacle called *chiminigagua*, and this receptacle appears to have been, in the conception of these people, the Supreme Creator. The Chibchas are said to have worshipped this almighty deity, but none the less they also worshipped the sun, the moon, the rainbow (called *cuchairra*), hills, lakes, rivers, trees, and many idols.‡ Human sacrifices appear to have been offered only to the Sun, as a deity to be feared and propitiated. The Chibchas had a tradition of a beneficent being named Bochica having appeared amongst them, and having taught them all they knew. He also was worshipped. He is said to have opened a channel for the river Funza, and to have formed the famous falls of Tequendama. The people had several curious myths, and they appear to have conducted their ceremonial worship with some magnificence. There was a procession in which the Zipa joined at the time of sowing, and another at harvest time. There is certainly a superficial resemblance between the religions of the Incas and that of the Chibchas.

There are two early authorities for Chibcha civilization. Padre Fray Pedro Simon wrote his *Noticias Historiales* in 1623, and the work was published at Cuenca in 1627. Dr. Don Lucas Fernandez Piedrahita, the Bishop of Santa Marta, wrote his *Historia General de las conquistas del nuevo reyno de Granada* in 1676. Simon is the best authority, being nearest to the time; but Piedrahita wrote well, and gives a brief but clear account of the Chibchas. He was descended from the Incas of Peru. There is a grammar of the Chibcha language by Fray Bernardo de Lugo, 1624. It is not now spoken. The best modern works on the subject are Humboldt in his *Vues des Cordillères*, Acosta in his *Compendio Historico* (Paris, 1848), and E. Uricacochea in his *Memoria sobre las antiguedades neo-granadinas* (Berlin, 1850).

The Chibcha language prevailed among all the

* Polo de Ondegardo, 162; Santillana.

† *Extirpacion de la idolatria del Peru*, por el Padre Pedro Pablo Joseph de Arriaga (Lima, 1621). Arriaga says he destroyed 600 *huacas* and 3418 *conopas* in one province. *Narratives of the False Gods and Superstitions of the Indians of the Province of Huarochiri*, by Dr. Francisco de Avila, 1608 (see the present writer's tr. for the Hakluyt Society).

‡ *Miscellanea Austral*, por Miguel Cavello Balboa, written between 1576 and 1586. Translated into French, and published in the series of Ternaux-Compans, 1840.

* *Arte de la lengua Yunga de los valles del Obispado de Truxillo*, por Don Fernando de la Carrera (Lima, 1644).

† *Historia del Reino de Quito*, por Juan de Velasco; also in the Ternaux-Compans series, 1840.

‡ *Ceuychi* is the Quichua for a rainbow. There may have been intercourse between the Incas and Chibchas, but there is no evidence beyond the identity of a few words.

tribes of the highlands, and they had all made advances in civilization, although those of Bogota and Tunja were far in advance of the rest. The general movement of the Chibcha tribes had been from south to north, and this race appears to have advanced its settlements beyond Panama, as far as Chiriqui. There is no evidence that any people of Aztec or Maya affinities ever entered South America or had relations with South American peoples.

17. Originality of the Andean religion.—The Andean races moved from the south northwards. Their civilization was of spontaneous growth, without any foreign aid, and uninfluenced by communication with other races. Elaborate attempts have been made to establish identity between Quichua words and words of similar meaning in Aryan languages, but a careful study of the subject cannot fail to produce the conviction that they are fanciful, and based on an insufficient knowledge of the Quichua language. The South American race naturally reached its highest development in the Andean region, where agriculture and the textile and other arts were necessary for the support and well-being of the people, and where a temperate climate conduced to the development of various civilizing influences and to a reasoning contemplation of the powers of nature, guided by religious instincts. It was in this way, and not by any foreign influences, that the Andean religions were developed by the races inhabiting the cordilleras of the Andes. In their highest form the Andean religions recognized the existence of a Supreme Creator of the universe, and sought to know his will by prayer and praise. The celestial bodies, the thunder and the rainbow, were revered as bringing good to man, but only as inferior deities obeying the mandates of the Creator. In the worship of the *paccarinas* and of ancestors there is a clear indication of a belief in a future existence; and the power attributed to the souls of animals and crops, and of inanimate objects, among the mass of the people, is peculiar to the Andean races in the form in which it prevailed amongst them. In whatever comparative position the Andean religion may be placed among the religions of the world, it must stand by itself as the unaided conception of the Andean people, uninfluenced by any communication with other races.

LITERATURE.—The works which give detailed accounts of the Andean religions do not include all the earlier works on the civilization and history of the native races. The first account is contained in the second part of the *Chronicle* of Cieza de Leon, tr. by Sir Clements R. Markham for the Hakluyt Society. The Spanish text was afterwards printed and edited by Ximenes de la Espada at Madrid. Juan José de Betanzos wrote his *Summary Narration* in 1551. He knew the Quichua language, and married an Inca princess. His work has been printed and edited at Madrid in 1880, but has not been translated. The two *Relaciones* of the learned lawyer Polo de Ondegardo are still in manuscript. But one of his reports has been translated and edited for the Hakluyt Society by Sir Clements R. Markham, 1872. Fernando de Santillana was a Judge of the Lima Audience in 1550. His valuable *Relacion* remained in manuscript until it was edited and printed by Ximenes de la Espada in 1879. The most detailed and best work on the religion of the Incas was written in about 1575 by a priest at Cuzco named Cristoval de Molina. The manuscript has been translated and edited for the Hakluyt Society by Sir Clements R. Markham in 1872. Miguel Cavello Balboa is the authority for the civilized people of the coast of Peru. He wrote his *Miscellanea Austral* at Quito between 1576 and 1586. It has been translated into French, and forms a volume of the Ternaux-Compans series (1840). José de Acosta's *Historia de las Indias* appeared in 1588. It was translated in 1604, and the Eng. tr. was edited by Sir Clements R. Markham for the Hakluyt Society (2 vols.), 1872. The works of Fernando Montesinos, entitled *Anales* and *Memorias Nuevas del Peru*, have a peculiar interest from the long list of sovereigns he gives, to be found nowhere else. He came to Peru in 1629. His work remained in manuscript until it was translated by Ternaux-Compans in 1840. The Spanish text was edited by Ximenes de la Espada in 1882. The *Relacion de los Costumbres Antiquas de los Naturales del Peru*, by an anonymous Jesuit, is a most valuable work. It remained in manuscript until it was edited by Ximenes de la Espada in 1879. The works on the extirpation of idolatry, by Francisco de Avila, written in 1608 (MS.), and Pablo José de Arriaga (Lima, 1621), are very important. Avila's report has been translated by Sir Clements R. Markham from the manuscript, for the Hakluyt Society, 1872. There is also information in the history of the order of St. Augustine in Peru (1638–1653), by Antonio de la Calancha. The *Commentarios Reales* by the Inca Garcilasso de la Vega are well known (1st ed. Lisbon, 1609, last ed. Madrid, 1723). Their value is much increased by the extracts from the lost work of the Jesuit Blas Valera. The work of Garcilasso de la Vega has been translated and edited for the Hakluyt Society by Sir Clements R. Markham, 1869. Bernabé Cobo's *Historia del Nuevo Mundo* (4 vols., Seville, 1890) was written in 1653. Pachacuti Yamqui Salcamayhua, an Indian of the Collao, wrote (*c.* 1620) a work entitled *Relacion de Antiguedades deste Reyno de Peru*. The manuscript was translated and edited by Sir Clements R. Markham (1872). The Spanish text was afterwards edited by Ximenes de la Espada (1879). By far the most valuable history of the Incas was written by Pedro de Sarmiento. The manuscript has been in the library of the University of Göttingen since 1780. The text was first printed by the librarian, Dr. Pietschmann, in August, 1906, with a learned introduction and notes. The work has been translated by Sir Clements R. Markham. The best essay on the word *Viracocha* is by Don Leonardo Villar (Lima, 1887). There are two authorities on the religion of the Chibchas of Bogota. Fray Pedro Simon wrote his *Noticias Historiales* in 1627. The *Historia General de las conquistas del nuevo regno de Granada*, by Bishop Lucas Fernandez Piedrahita, appeared in 1676. The work on the antiquities of New Granada by Uriacochea (Berlin, 1850) may also be consulted.

CLEMENTS R. MARKHAM.

ANGEL.—See SPIRITS.

ANGEL DANCERS.—A religious sect of Methodist origin, founded in Hackensack, New Jersey, about 1890, by Huntsman T. Mnason, with the aid of John M'Clintock ('John the Baptist'), Daniel Haines ('Silas the Pure'), Mary Stewart ('Thecla'), Jane Howell ('Phoebe'), Elias Berry, and Herman Storms, with his wife and their children, Mary and Richard (the latter a graduate of Rutgers College). At the age of fifty, Mnason, after a somewhat dissolute life, became converted at a Methodist revival meeting in New York City in 1888. On the night of his conversion he believed that he had a vision of Heaven and Hell, seeing both the Lord and the Devil. He chose the Lord and Heaven, and claimed direct Divine guidance in all his acts. After many privations, he wandered to Park Ridge, N.J. Here he claimed to have received the power of healing by the laying on of hands. His strange appearance, in which he sought to imitate the traditional portraits of Christ, and his wonderfully magnetic will power, aided by a musical voice, evident sincerity, and easy flow of speech, made a strong impression upon men and women alike. He next appeared in Hackensack, N.J., where he commenced the preaching of his new doctrine, which he and his followers still maintain.

Mnason and his followers have everything in common, and believe they shall be judged by their works, and not by their faith. They are careful to harm no living thing, and they adhere to a strict vegetarian diet. They do not believe in any form of marriage, whether civil or religious, and hold the most extreme ideas of free love. Their dress has no decoration of any kind. At the house of a farmer in Hackensack, named Herman Storms, Mnason gathered some followers, and gave the place the name of the 'Lord's Farm.' The house is open at any hour of the day or night, and any one is welcome, and may share food and clothing. This was carried to such an extreme that vagrants were entertained 'in the Lord's name,' thus constituting a menace to the neighbourhood.

Locally the sect is known as 'the Lord's Farm,' never as 'Angel Dancers.' When at the height of their influence, they used to hold outdoor meetings in neighbouring towns. It was during these meetings that the dancing occurred from which the name of 'Angel Dancers' was derived. The dance is a species of religious frenzy, brought on by the

belief that the Devil is in their midst. It finds a ready parallel in many forms of religious ecstasy. It commonly begins after grace has been said before a meal, and a sign that the Devil is being vanquished lies in the ability to jump over the table! When directly questioned as to his denominational standing, Mnason claims to be an 'Old Style Methodist,' being opposed to all forms, and declares his religion to be based on the Book of Acts.

In May 1893, Mnason and some of his followers were arrested and put in jail for malicious mischief and maintaining a disorderly house. They refused, however, to defend themselves, and when speaking of each other styled themselves martyrs. At their trial in October of the same year, Mnason was sentenced to one year's hard labour. After his release the Storms took him back, and the 'Angel Dancers' continued their practices, their demeanour during their imprisonment having won them sympathy. Most of their time is spent in raising farm produce, which Mnason personally takes to market. They are noted for their industry and for their scrupulously honest dealings. Mnason never allows an angry word to be spoken to man or beast; and during both winter and summer he does a great deal of charitable work, going miles to carry aid, 'in the Lord's name,' to all who ask for it. At present only about twelve followers are left at the farm, where they quietly attend to their own affairs.

F. D. VAN ARSDALE.

ANGER (Psychological and Ethical).—i. *PSYCHOLOGICAL.*—There are two ways, according to Aristotle (*de Anima*, i. 1), in which anger may be characterized. By the dialectician or speculative philosopher (διαλεκτικός), it may be defined as 'the desire of retaliation, or such like'; by the natural philosopher (φυσικός), as 'the boiling of blood about the heart, or of heat.' Neither of these two ways, taken by itself, does he regard as adequate; for the one has respect only to the 'form,' while the other takes account solely of the 'matter,' and the complete view requires that both form and matter be attended to. In other words, Aristotle is here exemplifying in a concrete instance the great psychological truth that the emotions are 'materialized notions' (λόγοι ἔνυλοι), that they have both an inward or psychical side and an outward or corporeal expression; and that each of these requires to be reckoned with, if the phenomenon is to be satisfactorily explained. We may even go a step farther, and maintain, with Darwin (*The Expression of the Emotions in Man and Animals*, p. 239), that 'most of our emotions are so closely connected with their expression, that they hardly exist if the body remains passive.' Certainly, the control of anger consists very much in conscious abstraction from the modes in which it physically embodies itself.

(1) *On the physical side*, anger, in the individual, manifests itself in marked disturbance of the bodily organism: *e.g.* the movements of hands and jaws become pronounced, respiration is quickened, the nostrils are dilated, the action of the heart is accelerated, the face changes colour, the eyes flash, the eyebrows are knit, the voice waxes loud, harsh, and discordant; and, in that species of anger which we know as rage, there is wild 'striking out,' vehement and uncontrolled, so that anger may not inaptly be designated (as by Horace, *Epist.* I. ii. 62) 'a brief madness' (*ira furor brevis est*).

These changes in the body are obvious to the spectator. But there are others that are invisible, which take place in the internal organs, giving rise to organic sensations which play a distinct part in the process, inasmuch as they react on the emotion, modifying, accentuating, or intensifying it, as the case may be. Hence, the organism has been likened by psychologists (*e.g.*, Bain, James, Stout) to a 'sounding-board,' on which the nervous excitement correlated with the emotion 'plays,' and which is in turn affected and modified by the organic 'resonance.' This organic factor is highly important; but we must not make too much of it, as has been done by Professor James, who, in his theory of emotion, reduces emotion to a kind of sensation begotten of organic disturbance.

'Our natural way of thinking about these coarser emotions [grief, fear, rage, love],' he says (*The Principles of Psychology*, ii. 449), 'is that the mental perception of some fact excites the mental affection called the emotion, and that this latter state of mind gives rise to the bodily expression. My theory, on the contrary, is that *the bodily changes follow directly the perception of the exciting fact, and that our feeling of the same changes as they occur* is *the emotion*. Common sense says, we lose our fortune, are sorry, and weep; we meet a bear, are frightened, and run; we are insulted by a rival, are angry, and strike. The hypothesis here to be defended says that this order of sequence is incorrect, that the one mental state is not immediately induced by the other, that the bodily manifestations must first be interposed between, and that the more rational statement is that we feel sorry because we cry, angry because we strike, afraid because we tremble, and not that we cry, strike, or tremble, because we are sorry, angry, or fearful, as the case may be.'

'Angry because we strike!' That, surely, is to put the cart before the horse; for why do we strike at all? Is it not because the emotion of anger is already aroused, through perception of the kind of act that affects us, though there is no doubt that the organic sensations react upon the emotion and fan it—the 'resonance' has a real effect? If we are angry because we are insulted, it is because we first *feel* the insult; without this feeling, we should, in all likelihood, remain indifferent, and it is the function of delay and deliberation to calm the feeling and to produce indifference.

(2) Taken *on the psychical side*, anger is mental disturbance, displeasure, or discomposure, of a painful kind, arising from opposition, hurt, or harm received, operating like a reflex act, viz., by immediate active response, or reaction without deliberation, on recognition of the unacceptable or offending fact that arouses it. It has thus a necessary relation to the conative, as well as to the emotive, side of our being. What induces anger is something that has to be got rid of; and, in the angry state, our activity is strongly put forth, so that the riddance may be readily secured. Moreover, if the real cause of the offence cannot be reached at the moment, the ebullition vents itself on something else (thing or person) within reach—stool, chair, book: the pent-up energy must find discharge somehow—an 'explosion' is inevitable. 'Young children, when in a violent rage, roll on the ground on their backs or bellies, screaming, kicking, scratching, or biting everything within reach' (Darwin, *op. cit.*, p. 241). Thus anger may be said to be instinctive. It does not wait for reason (though it may be brought under the control of reason), and is, in itself, regardless of results. It is aroused in us by what opposes us, or thwarts us, by what we object to, by what offends and pains us (all such we *resent*); and it aims at repressing or suppressing the opposition, and at preventing its future operation. It is not, however, in itself *malignant* or *malevolent*, and, consequently, is not really a synonym for retaliation, as Aristotle's 'dialectician' would make it to be. Hence, such a definition as Locke's (*An Essay concerning Human Understanding*, ii. 20) must be rejected: 'Anger is uneasiness or discomposure of the mind, upon the receipt of an injury, with a present purpose of revenge.' The 'present purpose' is not of revenge, but simply of rebutting the offence or getting rid of it, and does not primarily intend to repay or injure the doer at all, although revenge may easily follow in the wake of it. Thus it is that we may very well be angry with a man without bearing him ill-will; and thus it is that anger is only of brief duration (thereby differing

from wrath, which is a settled disposition), although the choleric man is liable to repeated fits of it.

Like other 'passions,' anger lacks in moderation —transgresses limits, defies proportion. This indicates its danger as a motive power. When it acts like the wind, it exercises a useful function; when it becomes the whirlwind, it may do serious damage. On this account, its effects on the irate individual himself may be unsatisfactory; when the passion has ceased, depression frequently ensues, exhaustion thus taking its revenge.

Anger is a primary emotion of the human mind, and needs to be experienced in order to be known. It has a distinct quality of its own, different from that of every other emotion; and no one could, by mere description, make it intelligible to a man who had never himself been angry. Not only is it not derived from other emotions, it does not even presuppose experience of other emotions to give it being. Yet it enters itself into other emotions, — sometimes as their basis, sometimes as a subsidiary factor, — and so may be allied with 'affects' that are distinctly malevolent. It is an *egoistic* emotion, which may quite easily be transformed into one of *selfishness*; hence its ethical significance, to be considered presently.

The varieties of anger are irascibility and peevishness. Irascibility is the susceptibility to anger of a nervously excitable subject; and peevishness is undue sensibility to trifles, annoyance at them far beyond what their real value or significance warrants.

ii. *ETHICAL.*—Anger, as has just been said, is not in itself malevolent: it is simply a protection or defence against harm or hurt, and may be directed against things as well as against persons. It is a species of resentment, and operates instinctively, and, therefore, without due regard to consequences; hence the need of direction and restraint, and hence the ethical bearings of the emotion. As instinctive resentment, it is neither to be praised nor to be blamed, but is to be accepted as a part of the human constitution necessary to the welfare of the individual, and therefore ultimately to the good of the community. But inasmuch as the causes of anger are frequently human beings, and inasmuch as anger is apt to expend itself in excessive measure, and, in cases where the causes of it cannot be immediately reached, on objects that had no share in arousing it, it has to be brought under the control of reason. This is necessary, if anger is to be (as it ought to be) a help to justice. But, in thus rationalizing it, we are giving it a distinctively moral character, and are taking it in a wider signification than is accorded it by the psychologist. We are now estimating it in relation to its consequences, and assigning it a place in an ethical scheme of values. This means (to use Butler's famous analysis) that we are distinguishing between resentment that is sudden or instinctive and resentment that is deliberate, and appraising each in connexion with its social bearings.

Sudden or instinctive resentment, on the ethical side, is directed against injury, as discriminated from mere hurt or harm: it presupposes a conscious agent, intentionally doing an offending act for the purpose of injuring us. It consequently assumes the form of moral indignation, which is the spontaneous reaction of the conscience against what is wrong or evil, when the wrong or evil is designedly effected. It is the resentment of a healthy mind sensitive to injustice, and responding unreflectingly or immediately on the perception of the offence. Without this kind of anger, it is hardly conceivable how the moral nature could be effective at all.

When, on the other hand, we turn to deliberate resentment, we find that we are giving anger a different complexion, and are bringing it into relation with other phenomena of human nature that may or may not be conducive to men's highest interests. In so far as deliberate resentment means simply restraining the act that would naturally follow from the instinctive perception of the injury inflicted, till we have assured ourselves (in cases where some doubt may be possible) whether our resentment is just or not, and whether the consequences of our action may not be out of all proportion to the offence, it can only be right and commendable. But when, as is so frequently the case, deliberate resentment allies itself with our malevolent inclinations (with the savage or the fiend within us), then it becomes morally reprehensible, often in the highest degree. It is the nature of anger voluntarily nursed to magnify the offence that caused it: vanity and offended dignity come in to intensify and transform the emotion,—a grudge rankling in the bosom naturally exaggerates. Further, there can be little question that anger readily associates itself with that desire to injure others or to inflict pain on them that seems to be native to human beings, and so is easily changed into hatred, or retaliation, or revenge, or, keener still, vindictiveness. It is now exclusively aimed at persons, and is in its nature diametrically opposed to the sympathetic and humane sentiments, the tender emotions, that bind men together; it is the very antithesis of love, and, instead of attracting and cementing, alienates and repels. It is not only that the angry person, full of hate, is estranged from his fellow or resents his action; he also desires to inflict injury on him, to cause him pain, and gloats over and delights in his suffering. If he longs simply to pay him back or to requite him for the offence committed, his emotion is retaliation, proceeding on the principle of equivalents, the *lex talionis*—'an eye for an eye, and a tooth for a tooth,'—oblivious altogether of the promptings of generosity and mercy. When he harbours ill-will and cherishes his wrath, refusing to be pacified, meditating unmeasured requital and waiting for the favourable opportunity, it is revenge. Revenge is in its very nature inequitable and relentless, bloodthirsty and cruel, satisfied with nothing less than 'the head of John the Baptist in a charger.' When revenge pursues its object spitefully with unremitting persistence, and finds zest in every petty infliction of evil on him, it is vindictiveness. The spitefulness gives it a very despicable character.

Various questions concerning anger suggest themselves:

(1) A point that the earlier British psychologists (Butler, Thomas Reid, Dugald Stewart, Thomas Brown, etc.) delighted to investigate regarding anger and the malevolent affections, was their *use* or *final cause*. Accepting human nature as a given hierarchy of principles and faculties, and intending their philosophy to have practical value, they asked what end these seemingly destructive and objectionable forces served in the economy of man's being. They had little difficulty in showing that, given man and given his present circumstances, these forces minister both to the protection or self-preservation of the individual and to the good of the community. Sudden anger clearly conduces to the defence of the irate person against hurt or harm; and when the cause of the harm is another living person, it serves as a warning to him to desist: it is the Scottish Thistle fully displayed, with the significant motto, '*Nemo me impune lacessit.*' Even more strikingly is this purpose served by retaliation and revenge, when the vengeful person has to deal with others of like vengeful disposition as his own. His anger, being fierce, is both punitive and deterrent.

(2) In more recent times, another question has come prominently forward, viz. : *Whether the malevolence of human nature* (which nobody denies as a fact) *is really native to it?* The negative was ably upheld in *Mind*, a few years ago, by Mr. F. H. Bradley, who tried to reduce malevolence to excitement, or love of power, or self-assertion, or suchlike. This was strenuously opposed by Professor Bain, who insisted that, making all allowance for self-assertion and the love of power and similar strong emotions, there is a certain residuum that is unaccounted for, and this residuum is simply innate malevolence.

'Let us take, then, the examples where we are witnesses to suffering inflicted by others, and where we ourselves are noways concerned, or, at all events, very remotely. Why do multitudes delight in being spectators of punishments, including the gallows? In former days, when executions were public, when whippings, the pillory, and the stocks were open to everybody's gaze, what was the source of the fascination attending the spectacles? They were remotely connected with the security of the people generally, but they were most frequented by those that thought least of public security. . . . We can go a step farther. There are abundance of examples of delight in mischief of the most absolutely gratuitous kind, beginning in tender years, and continuing more or less until maturity. The love of teasing, of practical joking, of giving trouble and annoyance, without any cause whatever, is too manifest to be denied. . . . The demand for excitement of itself proves nothing. What we are to look at are the forms that it takes by preference, inasmuch as these are probably something more than mere excitement: they involve real and unambiguous pleasure. If the votaries of excitement are in the habit of seeking it by molesting, annoying, chaffing other people, the inference is that the excitement is a mere cover for a definite pleasure, the pleasure of malevolence. To sit on a road fence, and pass insulting and jeering remarks upon the innocent passers-by, is not to be slurred over as mere love of excitement: it arises from the deeper fountains of malignity. We may easily procure excitement in forms that hurt nobody; we may even find excitement, and pleasure too, in bestowing benefits; when we habitually seek it in the shape of inflicting pain, we must be credited with delighting in the pain. . . . The question ever recurs—Why is hatred such a source of consolatory feeling, if there be not a fountain of pleasure in connexion with the sufferings of others?' (Bain, *Dissertations on Leading Philosophical Topics*, pp. 84–104).

The strength of the argument seems to lie on the side of the affirmative; and, however unacceptable it may be, the fact must be recognized that man has an original tendency to inflict suffering on others, and derives real satisfaction and delight from contemplating the suffering that he inflicts.

(3) Our repugnance to this position may perhaps be mitigated, if we accept the explanation of the origin or source of the malevolent affections offered by the theory of Evolution. In his masterly work on *The Expression of the Emotions*, and elsewhere, Darwin has amassed materials to show that these affections originated, æons ago, in the predatory habits of the race, taken in connexion with those of the lower animals. They are the result of the necessity for combat and mutual warfare in the early struggle for existence. It was in these far back times that anger, retaliation, and revenge, with all the ways of giving outward expression to them, so significant of their animal origin, arose; and they are a heritage to us from the past. By this hypothesis, the wolf in man receives an explanation of a scientific kind, which, whether fully adequate or not, throws light on many points connected with malevolence that otherwise remain dark and puzzling. The philosophies of some countries (Oriental in particular) have tried to explain the phenomenon by the supposition of metempsychosis or transmigration of souls, especially the passage of the soul of a brute into the body of a man. The lower impulses and passions seem thereby to be accounted for, and man's baser nature to be so far justified. That is but the imaginative and non-scientific way of solving the problem; over against which has to be placed the scientific and reasoned mode of solution offered by Evolution.

LITERATURE.—Aristotle, *de Anima*, i. 1, and *Eth. Nic.* iv. 5; Seneca, *de Ira*; Butler, *Sermons*, viii. and ix.; Hume, *A Treatise of Human Nature*, Bk. ii. and Bk. iii. pt. 3; Thomas Reid, *Works* (Hamilton's ed.), pp. 568–570; Adam Smith, *The Theory of Moral Sentiments*, pt. ii. sec. 1; Dugald Stewart, *The Philosophy of the Active and Moral Powers of Man*, Bk. i. ch. iii. sec. 6; Thomas Brown, *Lectures on the Philosophy of the Human Mind*, Lect. lxiii.; Alexander Bain, *The Emotions and the Will*[4], chs. ii. and ix., and *Dissertations on Leading Philosophical Topics* (1903), pp. 84–104; Herbert Spencer, *The Principles of Psychology*, vol. i. pt. iv. ch. 8, and vol. ii. pt. viii. ch. 4; Darwin, *The Expression of the Emotions in Man and Animals*, ch. x.; John Grote, *A Treatise on the Moral Ideals*, ch. xi., Appendix; W. James, *The Principles of Psychology*, vol. ii. ch. xxv.; G. F. Stout, *A Manual of Psychology* (1899), pp. 307–311, and *The Groundwork of Psychology* (1903), pp. 188–197; David Irons, *A Study in the Psychology of Ethics* (1903), pp. 78–83.

WILLIAM L. DAVIDSON.

ANGER (WRATH) OF GOD.—I. *THE DIVINE ANGER AS PRESENTED IN THE OT.*—God is revealed in the OT as a living Being, who has a merciful purpose toward the universe which He has made. During all the ages of human history, He is seeking to carry out this purpose to its consummation. In doing so, He is confronted by the ignorance and slowness of men, by their self-will and their hostility. These awaken in Him such feelings as would be stirred in the heart of a wise and good man, in view of the hindrances and oppositions with which he met in the course of some great and beneficent enterprise. The OT speaks freely of the grief, and jealousy, and anger of God. There are doubtless very grave difficulties in attributing these emotions, and, indeed, emotions of any kind, to One whose thoughts are not as the thoughts of men. But the writers of the OT, while guarding against an obvious abuse of this anthropomorphic method of conceiving the Divine nature (1 S 15[29]), do not stop to discuss such problems. They are chiefly concerned to make vivid and real the thought of God, as a living Person in whose image human beings have been made. Human qualities, accordingly, are attributed to God, because human nature is homogeneous with the Divine nature. In man these attributes and affections are marked by finitude and imperfection. In God they exist in absolute perfection. This makes a great difference between what is found in man and what is attributed to God, as the OT writers are well aware. But there is an identity deeper than the difference; and therefore even the latest and most spiritual of the prophets and psalmists make fearless use of anthropomorphic language. Had they failed to do so, they would have endangered, in the minds of their readers, the personality and the moral nature of God. Anger, accordingly, is found in the Divine character, as it is always found in any strong human character.

1. The nature of the Divine anger.—The OT describes it in terms which are laden with terror. What created thing can stand before the flame of that great anger (Dt 32[22]; cf. He 12[29], Ps 78[21] 88[16] 90[7. 9. 11])? The Divine anger, described in these and many other passages, is not to be confounded with the causeless and capricious fury which men have been wont to attribute to the objects of their ignorant and slavish fear. It is always to be understood by reference to the central truth of Jahweh's self-revelation. He is the covenant God of His people. He seeks their salvation. If He is angry, it is when the conditions under which alone He can work out that salvation are infringed, and His purpose of mercy is imperilled. The relation in which He stands to Israel necessarily implies that His holiness, *i.e.* His Godhead, be not violated in any of its manifestations. A God who is not holy and inviolable cannot be a Saviour To invade His sanctity is to defeat His purpose. The anger of God is aroused, therefore, by any act which stands between Him and the end which He has in view.

Incidents are recorded which seem to bring the anger of Jahweh down to the level of the inexplicable rage of an unethical heathen god (*e.g.* 1 S 6^{19}, 2 S 6^{6-8}). Regulations are made which seem to connect the Divine anger with matters that are wholly outward, and, therefore, not fit occasions of wrath in a perfectly moral being (*e.g.* Lv 10^{6}, Nu 1^{53} 18^{5}; cf. Ex 12^{13} 30^{12}). All such cases, however, are to be understood by reference to the Divine purpose. It is endangered when the pride and self-will of man invade the sphere of the Divine holiness. What is at stake is not a ceremonial regulation as such, but the holiness, *i.e.* the very Divinity, of God Himself. By such acts as those referred to, therefore, the anger of God is kindled, and upon the perpetrators of them it descends in crushing might.

2. Its objects.—The objects of the Divine anger, accordingly, are men who oppose themselves to the Divine will. Such are all who are hostile to Israel, the people of God's choice, the realm wherein He rules:—the nations who rage, and the peoples who imagine a vain thing (Ps 2^{1}), the enemies that reproach, and the foolish people who blaspheme His name (Ps 74^{18}). Not these alone, however, nor these chiefly, provoke Him to anger. When Israel breaks the laws of righteousness, upon which the commonwealth of God is founded, or does dishonour to Him who redeemed His people, His heart is hot within Him; and He punishes, not with cold, unemotional, judicial exactitude, but with an intensity of indignation which, to an awakened conscience, is the most awful element in the penalty (Ps 5^{5}, Hab 1^{13}, Lv 26^{14-45}, Dt 12^{31}, Is 61^{8}). The long education of Israel, culminating in the teaching of the prophets, has burned into the conscience of men that sin is a reality for God, and that towards it He is moved with a just and terrible anger (Ps 11^{5}). The depth of God's feeling with regard to sin can be fathomed only by estimating aright the relation in which He stands to His people. He is their Saviour, and the tenderest and most sacred relation in which two human beings can stand to one another is not too close to figure forth His relation to them. He is their husband and Lord; they are His spouse. Sin on their part is conjugal infidelity, the most awful outrage that can be committed against love. In such figures the prophets depict the grief and jealousy of God, and seek to measure the fierceness of His wrath (Ezk 23, Am 3^{2}, Dt 4^{24} 5^{9}, Zeph 1^{18}, Ps 78^{58}).

3. Its manifestation.—The Divine anger, therefore, is an affection awakened in the Divine nature by the presence of evil. It is manifested in judgments following upon wicked deeds. Its instruments are to be found in the forces of nature, which are under the control of God, and in men, whose selfish pride or ambition may be made subservient to the will of God, so that it may, unconsciously, be the rod of Jahweh's anger (Is $10^{5f.}$). The prophets, however, clearly discern that God's operations, alike in mercy and in judgment, cannot be carried to completion in the state of the world as they know it. Not in any of these common days, which succeed one another with uncompleted significance, can the work of God be finished, but only in a Day, which completes the series, and at once reveals and fulfils the whole design of God. This Day of the Lord will be both the crown of salvation and the ultimate stroke of judgment. The unimaginable terrors of that Day haunt the visions of the prophets, confounding the self-righteousness of those who had expected it to bring them the gratification of their national and personal pride (Am 5^{18-20}, Zeph 1^{7-12}, Mal $3^{2.\ 3}$). Thus the wrath of God gains a predominantly eschatological sense, not, however, to the exclusion of the view that it is a present quality of the Divine nature, and is continuously manifest in His attitude toward sin.

4. The turning away of the Divine anger.—Being under the control of the ultimate Divine purpose, which is love, the wrath of God may be restrained, or even entirely turned away, and give place to the unhindered outpourings of loving kindness. It is, indeed, plain that, if God gave free vent to His anger, the objects of it would immediately be destroyed (Ps 130^{3}). Such an action on His part, however, would defeat His own ends. During the historic period, throughout which God is pursuing His aim, His wrath cannot be fully executed (Ps $78^{38.\ 39}$). One consideration is paramount—the honour of His Name, *i.e.* the success of His design of mercy to Israel. God cannot submit to be taunted with failure (Ezk 20^{22}, Is 48^{9-11}). He is angry, and He punishes. But he waits to see if, by punishments restrained and controlled by mercy, sinners may learn, and turn to Him, and live. Beyond this period of discipline there lies an awful possibility of exhausted forbearance, and final and measureless doom. What, then, will avert this doom, and turn anger into acceptance and delight? The OT has no clear or full answer to give. The sacrifices, obviously, could not atone for sin, in its real spiritual significance; and their symbolism cannot have conveyed exact dogmatic teaching. The prophets, however, had grasped one great and fruitful thought: if a representative of the people be found who, standing in living relation to the nation, yet separating himself from the national trespass, shall deeply apprehend the sinfulness of the nation's sin, and the terror of the Divine judgment upon it, and shall make profound acknowledgment before God, in the name of the people, of their guilt and ill-desert, the Divine anger will be appeased, and God will return to His people in mercy (Gn 18^{23-33}, Ex 32^{8-14}, Nu 25^{10-13}). It is true that no perfectly competent representative can be found among the people themselves. Even a Moses or a Samuel would be insufficient for so great a work (Jer 15^{1}). Yet the principle of atonement through sin-bearing remained deep in the prophetic consciousness (Ezk 22^{30}, Jer 5^{1}, Is 65^{8}), and, in the great vision of Is 53, one is depicted capable of undertaking even this vocation of unspeakable suffering, and, through his faithful discharge of it, procuring deliverance for the transgressors.

II. *THE DIVINE ANGER AS PRESENTED IN THE NT.*—The OT and the NT are at one in their intense conviction that God is 'a Person, with ethical attributes,' a living Being, having moral powers and qualities, which are reflected and reproduced in man. They agree also in their presentation of the character of God. That full ethicizing of the idea of God which is seen in the prophets of the OT is assumed as fundamental truth by the teachers of the NT. Love and mercy, holiness and righteousness, are qualities which believing men, alike before and after the coming of Christ, discern in the character of God, and adore with reverence and joy.

So also the NT, like the OT, has no hesitation in attributing emotions to God. Peace, and pleasure, and gladness are all to be found in Him, and, through their effects in the hearts of believers, are part of the Christian's heritage of blessedness. The reality of these Divine emotions is so wrought into Christian experience, as expressed in the NT, that to question it or explain it away would deprive the experience itself of its life and joy.

1. It may be urged, however, that while it is true that the NT, like the OT, attributes emotions to God, it differs in not attributing to Him the emotion of anger. Is this true? Does anger disappear in NT teaching as an element in the character of God? It is well known that Ritschl and some theologians of his school maintain that the only NT use of the Divine anger is eschatological. Is this correct? (*a*) It is true that the NT usage is prevailingly eschatological. NT believers, like the prophets of the OT, had the Day of Wrath full in view. The Baptist made it the burden of his warning and appeal (Mt 3^{7}). However difficult the exegetical questions may be in connexion with certain portions of the tradition, it is certain that eschatology occupied a large place in the teaching of Jesus, and

that He used GT figures in describing the terrors of the Judgment. In the Apocalypse of St. John that final outpouring of the wrath of God weighs upon the soul with an awful sense of doom (*e.g.* $6^{16f.}$ 14^{10}). The preaching of the Apostles is full of the terror of the Lord. To them and to their hearers the impending wrath was a terrible reality; and one element, not the greatest, yet very precious and wonderful, in the gospel, is that the Messiah saves from this unspeakable Judgment (1 Th 1^{10}, Ro 5^{9}). (*b*) It is not true, however, that the usage is exclusively eschatological. It is to be observed, moreover, that while feelings of terror are readily awakened by references to the ultimate Judgment and its dread accompaniments, a deeper awe is aroused by the contemplation of a Judgment that is present and continuous, and an anger that is awake and abiding even now. This more solemn view of the wrath of God is not awanting in the NT. The teaching of Jesus is very far from depicting a God who is undisturbed at the sight of human pride and self-will. Sin is a reality for God, and there is one sin, which itself is the ultimate product of sin, which hath never forgiveness. Some of the parables are heavy with the weight of the Divine indignation (*e.g.* Mt 25^{14-30}). More significant still than the words of Jesus were His own feelings and their outcome in act. He who said, 'He that hath seen me hath seen the Father' (Jn 14^{9}), was not stoically cold or sublimely unmoved in presence of evil. Once and again He was filled with a great anger (Mk 3^{5} 8^{33} 11^{15-17}, Mt $23^{13ff.}$). In allowing Himself this emotion and its utterance, Jesus certainly did not regard Himself as out of harmony with the feeling and attitude of God toward the evils that so moved Him. This teaching is echoed throughout the NT. Sin always attracts to itself the wrath of God (Ro 1^{18} 4^{15} 9^{22}, Eph 2^{3} 5^{6}). Sin, in its inmost significance, is equivalent to rejection of the Divine mercy incarnate in the Son of God. 'He,' therefore, 'that obeyeth not the Son shall not see life, but the wrath of God abideth on him' (Jn 3^{36}). When we remember what 'life' means, in the vocabulary of the Old and New Testaments, viz. the favour and fellowship of God, we are compelled to put into this saying the profoundest sense of a weight of holy indignation now resting upon the soul which is not standing in the obedience of Christ. It is possible to deny the doctrine thus conveyed, and to rid our hearts of the fear it conveys; but it is not possible to deny that NT writers held this doctrine, and owned this overwhelming terror.

2. The wrath of God, then, rests on the soul that rejects Christ; but upon the soul that is 'in Christ' no such awful load remains. The NT writers are at one in attributing this great deliverance to the saving work of Christ, and specifically to His death, which they regard as a sacrifice for sin. When Christ was raised from the dead, 'the cloud of Divine wrath—the ὀργή so long suspended and threatening to break (Ro $3^{25.\ 26}$)—had passed away. This is the thought which lies at the bottom of Ro 6^{7-10}' (Sanday on Ro $4^{23ff.}$ in *ICC*). The penitent believer, looking to the cross of Christ, is certified, by the witness of the Spirit within him, that the anger of God, which once rested upon him, is now turned away from him. *Is it then the intention of the Biblical writers to convey the idea that Christ bore the wrath of God, that He endured the outpouring of the Divine anger?* Is it fitting for the redeemed to say:

'The Father lifted up His rod:
O Christ, it fell on Thee'?

It is a remarkable fact that the NT never does, in words, connect the death of Christ with the Divine anger, even in passages where the line of argument might have seemed to culminate in such a thought. It seems as though the writers deliberately refrained from any language which might suggest that the Son became the subject of the Father's anger, or that His death was due to an ebullition of the Divine wrath, which, flashing forth in lightning stroke, smote the holy breast of Jesus. At the same time it is to be noted that experiences which are themselves expressions of the wrath of God are attributed to Christ, and our salvation is traced to them. In Gal 3^{13} Christ is described as having become 'a curse for us,' and in 2 Co 5^{21} as having been made 'sin' on our behalf. Whatever these mysterious expressions, 'become a curse,' 'made sin,' may mean, they cannot mean less than an actual experience, by the sinless One, of what sin involves; and that, without doubt, is the wrath of God. Yet the actual phrase is not used. It must be remembered, also, that Jesus, in dying, experienced an agony, whose source and bitterness we can never fully know; which, as it broke from Him in the cry of desertion, cannot have meant less than an unspeakable sense of the Divine judgment upon human sin (cf. Principal Garvie in *Studies in the Inner Life of Jesus*, London, 1908, p. 417 ff.). Yet it does not appear, even in that cry of infinite pain, that He felt that God was angry with Him. Descriptions are given, implying that Jesus in death bore sin, through a profound realization of what it means, and of what the Divine attitude and feeling toward it, and the Divine judgment upon it, really are. In these very descriptions, however, phrases which might lead to inferences regarding the anger of God being endured by the Son of His love are carefully avoided. Christian faith is directed to One who was the Son of God, in whom the Father was well pleased, who hung upon the cross in fulfilment of the mission to which the Father summoned Him, and who must therefore have been, in that hour, the object of the Father's deep satisfaction and most tender love, who yet surrendered the comforts of the Father's fellowship, identified Himself with sinful men, and passed, Himself sinless, through the apprehension of God's sentence upon sin, acknowledging its justice, and approving, as in the holy life, so in the sacrificial death, the righteousness of God. The believer, when he commits himself to the crucified and risen Lord, receives from Him salvation, and enters upon the joy of those from whom the Divine anger is turned away, and who live in the Divine favour and fellowship. At the same time, being spiritually one with his Lord, he enters into the experiences in which Christ won his deliverance, realizes and acknowledges God's judgment upon sin, dies to sin as a power over him, and begins to live the new life of victory over sin; and in these experiences, which strangely reproduce both the passion and the glory of the Redeemer, the salvation, which he receives as a gift, is wrought out in a growing assimilation to Christ. He combines, in his own experience, what he has seen combined upon the Cross, the wrath of God against sin and the Divine mercy toward sinners. The terror of the Lord and the love of Christ are the two powers which operate within his soul, to make him flee from sin, and live unto Him who for his sake died and rose again. It may be possible to have a religious experience in which a sense of the wrath of God has no place; but it ought to be acknowledged that it would not be an experience which has the cross of Christ for its starting-point and the NT for its rule and guide.

III. *DOCTRINAL CONCLUSIONS.*—The Biblical usage warrants certain inferences, which require to have their place in any theology whose guiding principles are found in the Scriptures.

1. The reality of the Divine anger.—The passion of anger is implanted in man, and has for its end the prevention and remedy of injury and the miseries arising out of it. 'It is to be considered,' in the words of Bishop Butler in his famous Sermon on *Resentment* (§ 11), 'as a weapon, put into our hands by nature, against injury, injustice, and cruelty'; and 'it may be innocently employed and made use of.' We ascribe human qualities to God, not because we think of Him as a magnified man, but because we necessarily regard men as reflecting, under conditions of finitude and limitation, the qualities of the Divine nature. Human anger shares in the imperfection and sinfulness of man. The 'weapon put into our hands' we often use unwisely, forgetting, as we wield it, the claims of both righteousness and love. Divine anger is far removed from any such defect. It is an affection of One who is at once loving and righteous. It is completely under the control of

attributes which are themselves combined, without any opposition, in the harmony of the Divine character. But it is in God essentially what it is in man. In Him, also, it is a 'weapon' against injury; and its keen edge is turned against those who, in pride and self-will, seek to injure God. The classical theological statement of this position is to be found in Lactantius' *de Ira Dei*. The gods of Epicurus inhabit 'the lucid interspace of world and world,' where no 'sound of human sorrow mounts, to mar their sacred everlasting calm.' The God of Stoicism is another name for the Universal Reason embodied in the universe, and is lifted far above the throb of feeling. Against any such views of the apathy of the Divine nature, Lactantius sets the Christian conviction of the character of God as love, and announces the principle 'qui non odit, nec diligit.' 'If God is not angry with the impious and the unrighteous, it is clear that He does not love the pious and the righteous. Therefore the error of those is more consistent who take away at once both anger and kindness.' This line of argument has been often followed, *e.g.*, by Trench (*Synonyms*, p. 129): 'There is a wrath of God, who would not be good unless He hated evil, the two being inseparable, so that He must do both or neither.'

Objections to the reality of the Divine anger have arisen mainly from an intrusion of philosophical theory into the sphere of Christian thought; and for this, in the history of theology, Augustine is chiefly responsible. He is still very largely under the control of Neo-Platonism, and shares the dread, always entertained by mystical piety, of lowering the Divine nature, by connecting it with finite things, or of breaking in upon the ineffable bliss of God, by the impertinence of predicates taken from human experience. Thus in the *City of God* (bk. xv. ch. 25) he speaks of 'the anger of God, which does not inflame His mind, nor disturb His unchangeable tranquillity,' and identifies it with the sentence which God pronounces upon sin. 'The anger of God is not a disturbing emotion of His mind, but a judgment by which punishment is inflicted upon sin.' The language which in Scripture attributes anger to God, he regards as anthropopathic, and explains it as 'a condescension to man's finitude, insinuating itself into the minds of all classes of men, alarming the proud, arousing the careless, exercising the inquisitive, and satisfying the intelligent.' We may even trace something of the same hesitation in Dr. John Caird's estimate of the value and the defects of anthropomorphic language: '. . . when we are told of His wrath as being aroused or abated . . . the religious mind passes beyond the anthropomorphic figure to seize, in an indefinite but not unreal way, the hidden spiritual meaning. The representation conveys a general impression which is of the nature of knowledge, though, literally construed, it expresses what is untrue' (*Introd. to the Philosophy of Religion*, p. 174 f.). It is true that the religious mind refuses to take literally figurative descriptions, which seem to ascribe to God 'the ignorance and changefulness, even the desires and passions, of our finite sensuous nature.' But it is certain, also, that the religious mind, instructed by Scripture and by experience, will not permit a speculative construction to imperil the conception of the Divine personality. The difficulty of conceiving how God can be both the 'Absolute' and a living Person is, of course, very great. Probably we ought to direct our thoughts to a fresh study of the conception of the Absolute, particularly with the aim of freeing it from the immobility and sterility which an exclusive use of the category of Substance has imported into it. In any case, we must seek to do justice in our thinking to an absolute will of love, which determines the whole counsel and action of God; and, also, to His attitude toward that which conflicts with this will—an attitude which can be construed only as condemnation and wrath.

2. Sin and the Divine anger.—(1) The indignation of God against sin is real; and the passing away of wrath and the unhindered manifestation of love are real also. Theology, accordingly, in its effort to give reflective expression to the facts of Christian experience, cannot neglect the idea of the wrath of God, and the problems connected with it.

Ritschl, indeed, refuses to allow any theological value to the idea of the wrath of God. He speaks of it in his great work on *Justification and Reconciliation* as 'ein ebenso heimatloses wie gestaltloses Theologumenon' (vol. ii. p. 154). In vol. iii. p. 323 [Eng. tr.] he says: 'From the point of view of theology, no validity can be assigned to the idea of the wrath of God and His curse upon sinners as yet unreconciled; still less, from this theological standpoint, is any special mediation between the wrath and the love of God conceivable or necessary in order to explain the reconciliation of sinners with Him.' This view depends (*a*) on an interpretation of the Biblical usage, viz. that 'wrath' has a uniformly eschatological meaning, which is surely unsound; (*b*) on a conception of God as being absolutely and exclusively love, justice being excluded from the Divine essence, which imperils the ultimate distinctions of Good and Evil. 'When the Divine reason, clothed with omnipotence, has created morally free beings, the right of punitive justice cannot be refused to it without exposing the moral world to the danger of falling a prey to chaos' (Dorner, *System of Christian Doctrine*, vol. iv. p. 65). Guilt is more than a guilty feeling; and 'the impression of a change from Divine wrath to Divine mercy' (Ritschl, vol. iii. p. 323) is more than subjective. It is the reflexion, within the subject of redeeming grace, of an actual difference of attitude and feeling on the part of the personal Source and Author of redemption. Such an experience is real, and must not be so explained by theology, in its effort to maintain 'the view-point of eternity,' as to be explained away.

(2) The wrath of God against sin stands in the closest relation to all His ethical attributes, particularly to His holiness and His love. *His holy character* is outraged by the presence of moral evil. If it were not so, He would not be a God to worship, as the impersonation and the guardian of righteousness. A trained conscience bows before this righteous wrath of God against evil, recognizing it as an element in ideal excellence. That nature alone whose insight is blurred and whose judgment is perverted, fails to be angry at the sight of moral evil. 'A sinner,' says Dr. A. B. Davidson, 'is an ill judge of sin' (*Com. on Hebrews*, p. 108, on 4^{15}). God, knowing sin to its root, hates it with a perfect hatred. *His love* is not less affronted than His holiness. The welfare of men, which is the aim of His love, is ruined by moral evil. The highest good of men depends on the conquest of sin in them, and their conformity to the holy character of God. His love for men, therefore, intensifies the heat of His indignation against that in them which opposes the realization of His loving purpose for them.

Some theologians have pressed this close connexion between love and anger to the point of identifying them.

So Martensen: 'This wrath is holy love itself,' feeling itself 'restrained, hindered, and stayed through unrighteousness'; Oosterzee: 'Not without reason has this wrath been termed "the extreme burning point of the flame of love"'; and many modern writers, *e.g.*, Scott Lidgett: 'The manifestation of the Fatherhood of God is shut out, and because shut out, is turned to wrath; for the wrath of God is simply the love of the Fatherhood denied its purpose by rebellion'; and Stevens: 'The wrath of God is the reaction of His holy love against sin. It is not the opposite of love; it is a part or aspect of love.'

It may be doubted, however, whether this identification serves the purpose of clear thinking. Love, while incompatible with revenge, is certainly not inconsistent with resentment (cf. Butler, Sermon ix. § 10). It is possible to love those who have injured us, while feeling a deep and just indignation at the moral turpitude of their conduct. But our anger is certainly not a part or aspect of our love. Even a parent's anger at the evil conduct of a beloved child is not to be identified with his love for his child; though it is closely related to his love, being intensified by his desire to secure for his son the very highest moral results, and being, at the same time, controlled and directed by love in its manifestations. Anger is connected primarily with the attitude which a righteous man necessarily takes toward evil. He condemns it, and does so with a passion which is pure in proportion to the soundness of his moral character. To make it simply the impulse of disappointed love is to lower its moral quality, and make it selfish and unethical. A righteous man feels resentment toward evil, and is impelled to make that resentment clearly known and profoundly felt by the wrong-doer. He is constrained to do this not by revenge, but by his sense of the duty he owes to the principle of right itself, and to him who has invaded it. And this duty is not less binding, if the wrong-doer be a beloved child. The father's love and anger are real and distinct.

Their relations to each other constitute a problem the solution of which will tax his utmost wisdom.

It is after this analogy that the Biblical usage presents the Divine anger; and by it theological thought must be guided. God is full of love to the sinner, while at the same time He burns with just and awful resentment against his sin. His love and His wrath are alike real, and each has its distinctive place in the character of God. Their relations constitute a problem whose solution cannot be adequately set forth in terms of thought; while yet Christian faith grasps the solution in the cross of Christ.

Even Martensen, who identifies love and wrath, dwells upon 'the tension or apparent variance' which sin has produced between the Divine love and the Divine righteousness, and defines the idea of the Atonement as 'the solution of a certain antithesis in the very life of God as revealed to man, or of the apparent opposition between God's love and God's righteousness' (*Christian Dogmatics*, p. 303).

3. **The turning away of wrath.**—Scripture never suggests that there is any antagonism between the Divine love and the Divine anger, and nowhere countenances the idea that God was so angry with sinners that He felt it necessary to pour out His fury on someone before He could begin to love anyone. Theologians, who have kept close to Scripture, even while maintaining on scriptural grounds an 'objective' theory of the Atonement, have not failed to protest against this outrageous perversion of the truth. Calvin, whose expressions may often be criticised for their gloom and terror, is absolutely explicit upon this point: 'Our being reconciled by the death of Christ must not be understood as if the Son reconciled us, in order that the Father, then hating, might begin to love us, but that we were reconciled to Him, already loving, though at enmity with us because of sin' (*Institutes*, bk. ii. ch. xvi. § 4). The Divine love, accordingly, is the original impulse and the continual inspiration of the whole redemptive activity of God. Yet the Divine love cannot expunge and obliterate the Divine anger by a mere overflow of sentiment. The Divine anger can be turned away only when those against whom it is directed enter, with profound insight and entire assent, into its grounds and reasons, and submit themselves, with unmurmuring surrender, to the experiences in which the awful displeasure of the Holy One is manifested and realized. To say this, however, is to make the problem insoluble, and to seal upon sinners the unspeakable terrors of the Divine judgment. Suppose, however, that, in the centre of the human race, there should appear One so related to men that He was able to take upon Himself a service which no sinner can render for his brother, and no sinner can discharge in his own interests. Suppose that He should enter, without one shade of disparity or inadequacy, into the mind of God regarding sin, and submit Himself freely to the whole experience in which that mind is expressed, feeling, as He did so, an extremity of spiritual anguish for which no sinful soul has any complete measurement. Would not His suffering be a sacrifice for sin which the Divine love could accept without any infringement of its holiness, while the cloud of the Divine wrath would roll away for ever? Suppose, further, that such an One were the gift of God's love to the race, as indeed He would need to be, seeing that the race could not produce Him, and were in Himself the very Word of God, the express image of His Person, as He would need to be if He were to reveal God's mind toward sinners. Would He not be the living personal meeting-point of the Divine love and the Divine anger? But this is the message of the NT. In the sufferings of Christ, the love of God reaches its consummation, and by them the wrath of God is stilled for evermore. To the question whether the Son endured the wrath of God, we must, following the usage of Scripture and the obvious truth of the situation, give a negative answer. 'We do not,' says Calvin, commenting on the cry of desertion wrung from the anguish of Christ's inmost soul, 'insinuate that God was ever hostile to Him or angry with Him. How could He be angry with the beloved Son, with whom His soul was well pleased? Or how could He have appeased the Father by His intercession for others if He were hostile to Himself? But this we say, that He bore the weight of the Divine anger, that, smitten and afflicted, He experienced all the signs of an angry and avenging God' (*Institutes*, bk. ii. ch. xvi. § 11). The last phrase in this sentence is ill chosen. But the deep truth remains, that the Redeemer knew, in that hour of lonely and unknown agony, the whole meaning of sin, and apprehended it as the object of God's just condemnation and infinite resentment. Thus He bore our sin, and thus He turned away from us the wrath which was our due. The discussion of theories of Atonement is not here in place; but it is certain that no theory will be adequate which fails to give due weight to the fact which is presented in the narrative of the Passion, and in the teaching of the NT—that Christ in dying had laid upon His soul the very judgments of God (cf. Dorner, *System of Christian Doctrine*, iv. 114, 116).

The faith which apprehends Christ as Saviour means the transition from a condition which involves the hostility of God, while yet His love is devising means for the restoration of the sinner, to a state in which the Divine love may satisfy itself in accepting the penitent and crowning him with goodness. But it is to be noted that this spiritual act has for its object Christ in His experience of sin-bearing, and implies spiritual oneness with Christ in it. The penitent, as he first comes to Christ, will know but little of what was involved in that experience. But the most rudimentary faith implies that the sinner identifies himself with Christ, as Christ had identified Himself with him; that the Divine judgment upon sin which Christ bore and so vindicated for ever, the sinner accepts and ratifies, and thus, under the constraint of the love of Christ, dies to sin in its principle and power. Thus, though the sinner does not bear the anger of God in its outpouring upon sin, yet, taught by the suffering of Christ, he knows what that righteous indignation is from which he has been delivered, and enters with purged conscience upon the new life of fellowship and obedience.

4. **The day of wrath.**—The NT is occupied mainly with the proclamation of the gospel, and with opening to believers the wealth of opportunity and blessedness which is theirs in Christ. It has, accordingly, comparatively little material for a doctrine of the Last Things on its negative side. Yet the conclusion to which we are led admits of no doubt. If there remain, after the full period of probation is ended, those who persist in their opposition to God and their rejection of the Divine mercy, whose characters have attained a final fixity, the NT leaves no doubt as to what their condition must be. They have sinned an eternal sin (Mk 3^{29}). They must endure the utmost visitation of the wrath of God (1 Th 5^{9}, Ro $2^{5.8}$ 5^{9}). We are not called on to decide the question whether there shall be many such lost souls, or even whether any such shall be found at the time of the consummation. We are warned against attempted descriptions of what is, in its nature, unimaginable, the loss and the misery of such a state. But any serious consideration of human nature, and of the relations of God and

man, leads to the conclusion that such fixity of opposition to God must be included in the possibilities of the development of human character, and that, if this possibility is ever realized, it must involve none other than this overwhelming judgment.

LITERATURE.—Monographs: Lactantius, *de Ira Dei*; Ritschl, *de Ira Dei* (1859); Weber, *Vom Zorne Gottes* (1862). Discussions in the Biblical Theologies, specially Davidson, Oehler, Schultz, Stevens; and in the Systematic Theologies, *e.g.* Martensen, Dorner, Kaftan, W. Adams Brown. Discussions in works on Atonement and Redemption: Ritschl, *Justification and Reconciliation* (Eng. tr. 1900); Dale, *The Atonement*[7] (1878); Simon, *The Redemption of Man*[2] (1906); M'Leod Campbell, *The Nature of the Atonement*[4] (1873); Moberly, *Atonement and Personality* (1901); Stevens, *The Christian Doctrine of Salvation* (1905); articles in *PRE*, and in Hastings' *DB* and *DCG*.

T. B. KILPATRICK.

ANGLO-ISRAELISM.—The theory that the inhabitants of England are the descendants of the 'lost' (?) Ten Tribes of Israel is held somewhat widely, and is said to have two million adherents in Great Britain and the United States. The Anglo-Israelites are, at any rate, sufficiently numerous to support one publisher, who devotes his business entirely to publications dealing with the subject. There are also several periodicals published in furtherance of the views of the Anglo-Israelites.

The earliest suggestions of an Israelitish ancestry of the English are to be found in John Sadler's *Rights of the Kingdom* (1649). These take the form of a series of parallels between English law and customs and those of the Hebrews and Jews. The name 'Britain' itself is traced to a Phœnician source, *Berat Anak* ('The Field of Tin and Lead'). Many of the legends attached to the Coronation Stone have also a Jewish tinge, and are traced back to a landing of fugitive Israelites, under the lead of Jeremiah and Baruch, in Ireland.

The modern movement owes its foundation to Richard Brothers (1757–1824), a half-pay officer of eccentric habits in the English navy. According to his account he was a Divinely appointed prophet. He described himself as a 'nephew of the Almighty,' and claimed descent from David. Among his prophecies were those of the imminent restoration of Israel to the Holy Land, and the elevation of himself as prince of the Hebrews and ruler of the world. Brothers was confined as a lunatic, but succeeded in obtaining many admirers, among them Nathaniel Brassey Halket, M.P. for Lymington. The non-fulfilment of his prophecies sorely tried the faith of the believers, but through good and ill repute he retained the loyalty of John Finlayson, previously a Scotch lawyer with an extensive and lucrative practice. According to the *Dictionary of National Biography*, Brothers printed in all fifteen volumes, chiefly in support of his theory of the Israelitish descent of most of the inhabitants of England. The more important of the volumes are *Revealed Knowledge of the Prophecies and Times* (1794), and *A Correct Account of the Invasion and Conquest of this Island by the Saxons* (1822). Prominent among the literature that followed upon Brothers' announcements were Finlayson's writings. In 1840 the theory was adopted by John Wilson, who lectured and wrote widely on the subject. His *Our Israelitish Origin* is the first coherent exposition of the theory. Other advocates in the nineteenth century were W. Carpenter (*Israelites Found*), F. R. A. Glover (*England the Remnant of Judah*), and C. Piazzi Smyth, the Astronomer-Royal for Scotland, who deduced from certain measurements of the Great Pyramid that the English were descended from the Lost Tribes. In 1871, Edward Hine published his *Identification of the British Nation with Lost Israel*, of which a quarter of a million copies are said to have been sold. In the United States the leaders of the movement have been W. H. Poole and G. W. Greenwood. The theory has also been adopted to a slight extent on the Continent, where, for instance, the hostility of the English to Napoleon and Russia, and the sympathy aroused by the Dreyfus case are attributed to this cause.

The advocates of the theory identify Israel with the *Khumri* of the Assyrians, the *Cimmerioi* of the Greeks, the *Cimbri* of the Romans, and the *Cymri*. All these forms, it is said, are variations of the same name, and traces of it are to be found in 'Crimea,' 'Cumberland,' 'Cambria,' and 'Gumri' (a Russian fortress on the banks of the Araxes, the place of the Israelitish exile). The Ten Tribes of the Assyrian Captivity on leaving the land of their sojourn are supposed to have wandered towards the west, while those of the Babylonian Captivity passed eastwards towards Afghanistan and India. It is claimed that evidence of the journey towards the north-west is to be found in the tombs, alleged to be of Israelitish origin, that stretch from the Caucasus westwards round the Euxine. The further passage westwards can be traced, we are told, in the river nomenclature of Russia: the *Don*, *Danez*, *D(a)nieper*, *D(a)niester*, and *Danube*. The theory goes on to state that these migrants were driven by Alexander over the Danube and settled in Dacia. There they were attacked by the Romans, whom they ultimately repulsed. Many of them, however, were driven farther north, and founded republics, on the Israelitish pattern, in the north and west of Europe. The Goths, who were also of Israelitish descent (Goth = Getæ = Gad) were driven by the Huns into the dominions of Rome, in which and beyond which they spread. In consequence of these events, almost the whole of Europe, as well as her colonies in other continents, is held to be peopled by descendants of Israel. Among the local identifications are the tribes of Simeon and Levi among the Ionians, Asher in the Etruscans, Dan in the Danes, Judah in the Jutes, and Manasseh in the Celts. The Lacedæmonians are also stated to have been descendants of Judah.

The Khumri are divided into the Scuthæ or Scythians — whence *Scots* — and the Sacæ — afterwards *Saxons* (sons of Isaac). The former, it is said, composed the migration of B.C. 670, when the tribes of Reuben and Gad, and half that of Manasseh, started on their wanderings. The latter consisted of the remainder of the victims of the captivity of nineteen years later. One branch of the tribe of Dan, however, escaped on ships, and ultimately settled in Spain and Ireland, where they were known as the *Tuatha-dé-Danann*. They arrived in Ireland under the lead of the scribe Baruch and possibly also of Jeremiah. Accompanying them, we are told, was an Israelitish princess who subsequently married a local chieftain, the couple being crowned on the Bethel stone, rescued from the ruins of the Temple. This stone, the *Lia-Fail*, it is claimed, accompanied the Scots to Scotland, was invariably made use of at coronations, was removed by Edward I. from Scone to Westminster, and is identical with that now used at English coronations. There is in reality considerable doubt whether the Coronation Stone is identical with the *Lia-Fail*.

In support of the theory many alleged identifications in respect of customs, traditions, beliefs, etc., have been adduced. These, without exception, depend upon very inadequate support. Similarities as authentic have been discovered between the various languages of the British Isles and Hebrew. The theorists choose safer ground when they point to England's influence and success, and suggest as a cause God's covenant with Abraham, fulfilled in

the persons of his descendants, the English. It is also argued that the English must be the representatives of Israel, as otherwise the many Divine promises made to that race would be unfulfilled.

The theory relies to a very considerable extent on a very literal interpretation of certain passages in the Old Testament (Authorized Version). It is pointed out that Israel was to change his name (Hos 1^9), increase beyond number, dwell in islands (Is 24^{15}) to the north (Jer 3^{12}) and the west, and be a great nation (Mic 5^8). Israel would also extend beyond his new limits and found colonies (Is $49^{19.\ 20}$ 54^3, Dt 28^1 and 32^{7-8}). One of the tribes, Manasseh, was to become an independent nation (Gn 48^{19}). From this tribe, we are told, the United States was derived. Reference is found to the lion and the unicorn in Nu $24^{8.\ 9}$, and to the American eagle in Ezk 17^8. The promise that Israel shall possess the gates of her enemies (Gn 22^{17} 24^{60}) is fulfilled in the case of Britain by the possession of Gibraltar, Aden, Singapore, etc.

LITERATURE.—The literature on the subject is enormous. The many works of Brothers and Hine are hardly readable. The most coherent account is to be found in John Wilson's *Our Israelitish Origin*[3] (1845). Other works explaining the theory, in addition to those already mentioned, are H. W. J. Senior's *British Israelites* and *The Ten Tribes* (1885); T. R. Howlett's *Anglo-Israel and the Jewish Problem* (1892); J. M. Williams' *The Sakai, Our Ancestors* (1882); H. H. Pain's *Englishmen Israelites* (1896); Oxonian's *Israel's Wanderings* (1881); H. A. Smith's *The Ten Tribes* (1887); C. A. L. Totten's *Our Race* (1896)'; and H. W. Poole's *Anglo-Israel* (1889). Other books that should be consulted are: C. Piazzi Smyth's *Our Inheritance in the Great Pyramid* (1864); R. Gorell's *English derived from Hebrew*, and *Identity of the Religions called Druidical and Hebrew* (London, 1829); F. C. Danvers' *Israel Redivivus* (1905). Cf. also Jacobs in *JE* i. 600 f. A very large number of books and pamphlets on this subject is published by Banks, Racquet Court, Fleet Street, London, E.C.

ANGRA MAINYU.—See AHRIMAN.

AṄGUTTARA NIKĀYA.—The fourth of the five *Nikāyas*, or collections, which constitute the *Sutta Piṭaka*, the Basket of the tradition as to doctrine, the second of the three *Piṭakas* in the canon of the early Buddhists. The standing calculation in Buddhist books on the subject is that it consists of 9557 *suttas* or short passages.* Modern computations would be different. This large number is arrived at by counting as three separate *suttas* such a statement as: 'Earnestness, industry, and intellectual effort are necessary to progress in good things,' and so on. Thus in the first chapter, section 14, occurs the sentence: 'The following is the chief, brethren, of the brethren my disciples, in seniority, to wit, *Aññā Kondañña*.' The sentence is then repeated eighty times, giving the pre-eminence, in different ways, of eighty of the early followers of the Buddha, who were either brethren or sisters in the Order, or laymen or laywomen. In each case the necessary alterations in the main sentence are made. We should call it one *sutta*, giving a list of eighty persons pre-eminent, in one way or another, among the early disciples. According to the native method of repeating by rote, and therefore also of computation, it is eighty *suttas*. Making allowance for this, there are between two and three thousand *suttas*.† The work has been published in full by the Pāli Text Society, vols. i. and ii. edited by Morris, and vols. iii., iv., and v. by E. Hardy (London, 1885–1900).

The *suttas* vary in length from one line to three or four pages, the majority of them being very short; and in them all those points of Buddhist doctrine capable of being expressed in classes are set out in order. This practically includes most of the psychology and ethics of Buddhism, and the details of its system of self-training. For it is a distinguishing mark of the Dialogues themselves, which form the first two of the *Nikāyas*, to arrange the results arrived at in carefully systematized groups. We are familiar enough in the West with similar groups, summed up in such phrases as the Seven Deadly Sins, the Ten Commandments, the Thirty-nine Articles, the Twelve Apostles, the Four Cardinal Virtues, the Seven Sacraments, and a host of others. These numbered lists are, it is true, going out of fashion. The aid which they afford to memory is no longer required in an age in which books of reference abound. It was precisely as a help to memory that they were found so useful in the early Buddhist days, when the books were all learnt by heart and had never yet been written. And in the *Aṅguttara* we find set out in order first all the units, then all the pairs, then all the trios, and so on up to the eleven qualities necessary to reach Nirvāṇa, the eleven mental habits the culture of which leads to the best life, or the eleven conditions precedent to a knowledge of human passion.

The form, therefore, is conditioned by the necessities of the time. The matter also is influenced, to a large degree, by the same necessities. In a work that had to be learnt by heart it was not possible to have any reasoned argument, such as we should expect in a modern ethical treatise. The lists are curtly given, and sometimes curtly explained. But the explanations were mostly reserved for the oral comment of the teacher, and were handed down also by tradition. That traditional explanation has been preserved for us in the *Manoratha Pūraṇī* ('wish-fulfiller'), written down, in Pāli, by Buddhaghoṣa in the 5th cent. A.D. This has not yet been published.

The original book—for we must call it a book, though it is not a book in the modern sense of the word—was composed in North India by the early Buddhists shortly after the Buddha's death. How soon after we do not know. And the question of its age can be adequately discussed only in connexion with that of the age of the rest of the canonical works, which will be dealt with together in the art. LITERATURE (Buddhist).

LITERATURE.—An analysis of the contents of each *sutta*, in English, has been given by Edmund Hardy in vol. v. of his edition, pp. 371–416. A few *suttas* have been translated into English by H. C. Warren, *Buddhism in Translations*, Cambridge, Mass. 1896; and into German by K. E. Neumann, *Buddhistische Anthologie*, Leyden, 1882.

T. W. RHYS DAVIDS.

ANIMALS.

[NORTHCOTE W. THOMAS.]

Introduction.—It is a well-established fact that the complexity of the mental processes of animals is apt to be exaggerated even by professional psychologists, and this, though civilization, or perhaps rather education, has brought with it a sense of the great gulf that exists between man and the lower animals, not excluding those to which exceptional intelligence is, rightly or wrongly, attributed, such as the elephant and the anthropoid ape. In the lower stages of culture, whether they be found in races which are, as a whole, below the European level, or in the uncultured portion of civilized communities, the distinction between men and animals is not adequately, if at all, recognized, and more than one cause has contributed to this state of things. Just as we overestimate the complexity of the mental processes of animals, the savage, though for a different reason, attributes to the animal a vastly more complex set of thoughts and feelings, and a much greater range of knowledge and power, than it actually possesses. We are accustomed to show respect to the lifeless corpse of a human

* See *Aṅguttara*, v. 361; *Sumaṅgala Vilāsinī*, ed. Rhys Davids and Carpenter, London, 1886, p. 23; and *Gandha Vaṁsa*, p. 56.

† Professor Edmund Hardy (*Aṅguttara*, Part 5, vi.) makes the number 'about 2344.'

being; the savage, in his treatment of the game which has fallen a victim to the prowess of the hunter, shows evidence of a similar state of mind; he attributes to the soul of the slain beast an anxiety as to, and a knowledge of, the good or bad treatment of its mortal remains. When the animal is still alive, he regards it as open to argument; he will reproach the crocodile with having slain those who have done it no harm, and point out that the crocodiles, having been the aggressors, have only themselves to thank when man takes the offensive and exacts vengeance for his lost relatives and friends. He attributes to animals the power of speech, a power which in the case of the monkey is said to be put to no use, owing to the animal's fear that he might be made to work if he once began to talk. Both in fables and folk-tales, animals are represented as carrying on conversations and as being moved by the same motives as the human beings who narrate the stories (MacCulloch, *Childhood of Fiction*, pp. 38–41, 247–278); so much so, in fact, that in Africa the arguments in a judicial process not uncommonly turn on the question of what the crocodile said to the hen—in which form the negro embodies his precedents and leading cases. Even in Europe it is not hard to find traces of this primitive attitude of mind; there is a well-known custom of telling the bees when the master of the house dies; and few beliefs are more firmly rooted in the minds of country people than that neglect of this precaution will offend the insects, and deprive the new master or mistress of their labours. So, too, a knowledge of the moral character of those about them is attributed to the bees, with a corresponding influence on their activity. There is therefore no line of demarcation between man and beast, so that the North American Micmacs say: 'In the beginning of things, men were as animals and animals as men' (Leland, *Algonquin Legends*, p. 31). To the uncultured the difference is in the form, not in the nature, of things. The Indians of Guiana do not see any sharp line of distinction between man and other animals, between one kind of animal and another, or even between animals—man included—and inanimate objects. On the contrary, to the Indian all objects, animate and inanimate, seem exactly of the same nature, except that they differ in the accident of bodily form. Every object in the whole world is a being consisting of body and spirit, and differs from every other object in no respect save that of bodily form, and in the greater or less degree of brute cunning and brute power, consequent on the difference of bodily form and bodily habits (Im Thurn, *Among the Indians of Guiana*, p. 350).

But this doctrine of the essential similarity of all things, in spite of differences of form, does not embody the whole of the savage's creed. Perhaps still more essential is his belief in the impermanence of form. We find this exemplified even in Europe; few tales are more common than those of the transformation of an old witch into a cat or a hare. But magical powers are by no means essential to this change of form. To take only one example. There is a wide-spread belief that certain migratory birds, and especially the stork, assume human form in other lands; and no sense of incongruity is felt when the story is told of a traveller in foreign lands, being one day approached by an unknown man who displays great familiarity with his family affairs, inquires after the health of his children, and takes a general interest in what is going on in the distant Fatherland. The traveller's astonishment is allayed only when he learns that the stranger obtained his knowledge on the spot. His request for an explanation is met by the simple reply that the stranger is the stork who nests on the good man's roof. All the world over we find the same belief in the power of men, animals, plants, and even inanimate objects, to assume another form at will (cf. MacCulloch, pp. 149–187). It is therefore no wonder if the savage attitude towards nature is widely different from our own.

These transformations can take place during life. Of a slightly different nature, but almost equally important for the comprehension of the beliefs and customs of the uncultured, is the idea that death simply means the assumption of another form quite as material as the former. One of the great sources of the respect paid to animals is the belief that certain species are the embodiments of the souls of the dead, or even the very souls of the dead (for the view varies), and that these souls must receive respect, not only because they are ancestors or relatives, but also because their anger would mean the anger of the species of animals which their souls inhabit. Thus a kind of alliance springs up between certain human kins and certain species of animals, in which some writers have sought the germ of totemism. Less important, because more temporary, is the alliance sought at the initiation ceremony; here an individual provides himself with a tutelary genius, sometimes conceived as a spirit, sometimes as a living animal, on whose aid he relies in the battle of life.

Again, to the superior knowledge of animals, to their magical powers, or sometimes, and as a later development, to their position as messengers of a deity, are to be attributed the wide-spread augural beliefs and practices. To sum up, the savage has a very real sense of his kinship with animals; they are not merely his brothers, but his elder brothers; to them he looks for help and guidance. Not only so, but on them he depends for a great part of his subsistence—a fact which is far more vividly brought home to him than to the meat-eating human being of civilized societies, and in like manner he is far more liable than more cultured peoples to meet his death beneath the claws of a lion or a bear, or to succumb to the venom of the serpent. It is therefore small wonder that his attitude towards the animal creation is one of reverence rather than superiority.

1. *AGRICULTURE.*—The researches of Mannhardt have shown that the European peasant of to-day conceives that the life of the corn exists in the shape of an animal or human being apart from the corn itself. The animal **corn-spirit** is believed to take various forms,—pig, horse, dog, cat, goat, cow, etc.,—and is often conceived to lie in the last ears to be cut, the reaping of which is termed in some parts 'cutting the neck.' The corn-spirit is found not only in the harvest field, but also in the barn and the threshing-floor; the corn-spirit is killed in beating out the last grains from the ears. As a rite of sacralization of the eater, or of desacralization of the corn, the animal incarnation of the corn-spirit is eaten in a ritual meal at the harvest supper, at seedtime, or at other periods; the bones or parts of the flesh of this ritual food are used in magic to promote the fertility of the new crop. Sometimes the actual animal is not itself eaten; in its place we find the cake in animal form; but we cannot assume that this cake has taken the place of a former sacrifice of the animal, for it is made of the corn; the eating of the corn in the form of the animal is as effective a sacrament as the eating of the animal itself.

In Greece and other parts of the ancient world we find traces of the conception of the corn-spirit as an animal. Demeter was closely related to the pig, and was actually represented at Phigalia in the form of a horse, while her priests were called horses. In the case of Attis and other *prima facie*

corn-deities a similar connexion with animals can be traced. Among the American Indians the corn-spirit is occasionally conceived in animal form (bison, deer, goat; see below). In other parts of the world an anthropomorphic or simply animistic conception is the rule.

Various theories have been advanced to account for the animal form of the corn-spirit. Frazer (*Golden Bough*[2], ii. 289) suggests that the animals which are driven into the last corn in the process of reaping may have suggested the idea. Marillier (*RHR* xxxvii. 381) holds, with more probability, that the animal form of the soul and of spirits generally was so familiar a conception that it was sufficient to suggest that the life of the corn must be in the form of an animal. Preuss explains some cases of the connexion of animals with corn or other vegetables, as their tutelary deities, on the ground that they were originally held to influence the supply of heat (*Am. Anth.*, N.S. iv. 40; *19th Ann. Rep. Bur. Ethn.* p. 308, etc.), from which, like other magical animals (*Globus*, lxxxvi. 116; *Arch. Anth.*, N.S. i. 142 f.), they become tutelary deities. Possibly, too, the belief in soul-animals (see p. 493[b]) may have had some influence; it is not uncommon to make offerings to ancestors in connexion with agriculture; these ancestors are sometimes conceived in the form of animals; it is therefore no long step to the concept of a corn-spirit in animal form. In Indo-China the ancestor is actually believed to guard the fields in the form of a toad at seedtime (*Miss. Cath.* 1894, p. 143). In Yucatan, spirits in the form of lynxes were believed to protect the cornfields (Brinton, *Essays*, p. 172). In central Java the wer-tiger is held to guard the plantations against wild pigs (*Tijdschr.* xli. 570).

Vegetation spirits generally are conceived in Europe to be in animal form; but in other parts of the world this idea is seldom found.

2. *ART (DECORATIVE).*—It is an almost universal custom to decorate weapons, pottery, clothing, etc., with designs, often so highly conventionalized as to be recognizable only on comparison with less stylicized forms. One of the main sources of decorative design is the animal world, and the object was, it may be assumed, magical in the first instance. In its later forms there is a combination of purposes, but this is usually where the animal has come to be associated with a god. In this case the use of the animal as an art *motif* is a form of worship; at the same time, if the animal is the emblem, for example, of rain, its use is equivalent to a prayer for rain. There are, however, innumerable instances of the use of animals in art, both in connexion with totemism and otherwise, for magical or non-theistic purposes. The totem posts of the Haidas have all sorts of decorative animal carvings, sometimes of genealogical significance; in New Guinea the totem is delineated on drums and pipes. The lizard (see below) is largely used in Africa and the Pacific, and the frigate bird in Melanesia. In Central Australia the sand is covered with delineations of animals; animals are figured at Australian and South African initiation ceremonies; and many Australian decorative designs are totemic, or at least animal *motifs*. Probably the skin markings (see 'Tatu' below) of the Australian and other peoples are largely conventionalized forms of similar motives. Where a religious significance has once attached to a design, the art *motif* may continue to be largely used merely for magical purposes and finally for luck. In Europe we are familiar with the use of animals in heraldry. See articles on ART.

3. *COLOUR.*—The colour of animals is highly important, both in magic (wh. see) and otherwise. In Europe the king of the snakes is said to be white. White horses (see below) were especially sacred. In Indo-China the cult of the white elephant is well known. In Japan white animals have a high importance (*Globus*, lxii. 272), and good fortune for the reigning house is inferred from their appearance. The daughter of a man who feeds 1000 white hares in his house will marry a prince. In Patagonia white cassowaries are sacrosanct; the Patagonians believe that the species would die out if they were to kill such white specimens; white horses and cows enjoy an equal respect (*ib.* lxi. 63). The white animal is often preferred as a victim. The Woguls offer a white horse in autumn; the officiants dance round it and stab it with their knives till it falls dead (*ib.* liv. 332). So, too, the Tcheremiss offer white animals (Erman, *Archiv*, i. 415). Among the Shans of Annam a white buffalo is sacrificed annually (*Miss. Cath.* 1896, 59), and the Battas also select white victims (Marsden, *Sumatra*, p. 385). In August or September the Situa festival was held in Peru; the priests received for sacrifice one of the holy white llamas, which were never shorn (*Ausland*, lxiv. 951). See also 'Bear,' etc., below.

For special purposes distinctive colours must be used. Thus the rain-cloud is black; in a sacrifice for rain, therefore, the victim must be in imitation of it. The Wambugwes of East Africa offer a black sheep and a black calf when they want rain; the Garos of Assam offer a black goat on the top of a very high mountain in time of drought; in Sumatra a black cat is thrown into a river and allowed to escape after swimming about for a time; the ancient Hindus set a black horse with its face to the west and rubbed it with a cloth till it neighed (*Golden Bough*[2], i. 101–2); and in the same way white animals must be sacrificed for sunshine (*ib.* p. 103). For an agricultural sacrifice at Rome red-haired puppies were chosen, in imitation of the colour of ripe corn (*ib.* ii. 311). In the same way in Egypt red-haired oxen were the chosen victims (*ib.* p. 142). The Iroquois sacrifice of the white dog (see below) may perhaps be set down as another example; for although white is not everywhere the emblem of purity, it is natural to connect with this idea the selection of a white dog for a piacular sacrifice.

4. *CREATOR.*—It is by no means self-evident to the savage mind that the functions of the Creator of the universe or of some part of it are necessarily united with those of its sustainer, or of a moral ruler of mankind, or even of a god. Hence, though we find cases in which the Creator is an object of worship, or at any rate respect (see 'Crow' below), we also find a share in creation assigned to animals which are not even specially sacred.

The Gros Ventre account of the origin of the world is that the world was once all water, inhabited only by a swan, which in some unaccountable way produced a crow, a wolf, and a water-hen. One day the crow proposed to the wolf to send down the water-hen to look for earth, for they would be so much happier if they had a little ground under their feet. The earth was brought, and while the wolf sang and performed on a rattle, the crow sprinkled the earth about on the waters and formed the globe as we have it to-day. Subsequently man was created, and the crow turned herself into an Indian (Coues, *Henry and Thompson, MS Jls.* p. 351). According to the Guaycurus of South America, they were called into existence after all the other nations by a decree of the caracara bird, but they show it no special respect (*Patriota*, 1814, p. 26). In some cases chance seems to have caused an animal to figure as Creator; in S. Australia the islands were said to have resulted from a blow of a great serpent's tail, but Noorels created other things (Eyre, *Expeditions*, ii. 356).

5. *CULT.*—Anthropological data are supplied in many cases by the chance remarks of a traveller, who, if he understands the true nature of the phenomena he is describing, does not always appreciate their importance, and consequently leaves us in the dark on points which are indispensable to the correct understanding of his information. This is especially the case when the information relates to the worship or supposed worship of animals; not only are the sources of such a cult extremely various, but it may be possible for actions which spring from purely utilitarian motives to wear the appearances which elsewhere characterize the ritual of an animal cult. We find, for example, that in ancient Egypt it was the practice to feed the sacred crocodiles, which were associated with the god Souchos (Sebek); in modern days we have a similar practice recorded in West Africa; but in the absence of information from those who give them food we can hardly inter-

pret the custom without fear of error. Prudence is a faculty commonly denied to the peoples in lower stages of culture; but it may well have happened that accident, if not reflexion, suggested to some one that a hungry crocodile is a far more dangerous neighbour than one which is in no need of food. We cannot, therefore, explain the modern custom, without more ado, as crocodile-worship; the possibility of the utilitarian explanation must also be kept in mind. Quite apart from this, there is a difficulty in the interpretation of the data which arises from the indefinite nature of many of the observances. Savage ritual is well-established, but the savage creed is often vague and fluctuating. At any rate, in the hands of European questioners, it is not uncommon for one native to assert one thing while another will maintain exactly the reverse; or one and the same man will put forward contradictory propositions either after an interval of time or even during a single interview. Where the ritual is unmistakably religious or magical, we can dispense with the commentary of the officiating priest or magician; but where there is room for doubt we can ill afford to do without this guidance, even though we know that the explanation given is not necessarily the original one.

The terms 'worship' and 'cult' are used, especially in dealing with animal superstitions, with extreme vagueness; and, moreover, the interpretation of the facts to which they are applied is in itself uncertain. At one end of the scale we find the real divine animal, commonly conceived as a 'god-body,' *i.e.* the temporary incarnation of a superior being, with a circle of worshippers. At the other end, separated from the real cult by imperceptible transitions, we find such practices as respect for the bones of slain animals, or the use of a respectful name for the living animal. The question is one with the general problem of the definition of religion; it cannot profitably be discussed in connexion with a single species of cult, and it is the less necessary to do so here, as we are concerned only with general principles and broad outlines.

Animal cults may be classified on two principles: (*a*) according to their outward form; (*b*) according to their genesis. The first kind of classification is important chiefly for the comprehension of the principles which underlie the evolution of animal worship into anthropomorphic cults; the second is primarily concerned with an earlier stage—that of the actual beginnings, it may be, of the religious sentiment or its manifestation.

(*a*) *Formal Classification.*—Animal cults may be broadly divided into two classes: (i.) the whole species without exception is sacred; (ii.) one or a fixed number of a species is sacred. In a certain number of cases the second class may be indistinguishable from the first; this is the case in the Bornean cult of the hawk; there were only thirty-three real omen birds among the Ibans of Borneo in olden days, but they were indistinguishable from their fellows.

Although it is by no means axiomatic that the cult of the species has in every case preceded the cult of the individual animal, it seems probable that we may regard this as the normal course of evolution. The transition may be effected in more than one way. (1) As in the case of the hawk (see below) among the Bornean peoples, *a simple progress from theriomorphic to anthropomorphic ideas* may suffice to explain the change. There is no reason to doubt that such a process may take place both without foreign influence and without any internal impulse due to the rise of sun-, moon-, or other cults of single deities, which would naturally tend to produce a species of syncretism in previously existing multiple cults. Among more than one Australian tribe, for example, the eagle-hawk seems to have been transformed into an anthropomorphic deity; but there is no reason to suspect either foreign influence or assimilation to other native cults, for the latter are admittedly non-existent. So, too, in Central Australia the Wollunqua totem animal is a mythical serpent; the totemic ceremonies are performed to keep him in a good humour, and not, as is the case with the other totems of the same tribe, to promote their increase; but when we reach acts intended to propitiate a single animal, mythical or otherwise, we are on the verge of worship, if indeed the boundary between totemism and animal cults proper has not long been overpassed. At the same time, not only may the rise of individual cults, such as those of the heavenly bodies, exert a deep influence on the multiple cults, but a specialization of function may, where multiple cults alone are present, aid to bring about the same result. The chief purpose for which the Bornean peoples require omens is to get directions for the conduct of their head-hunting expeditions; in other words, the conditions themselves made for the specialization of a war-god, either multiple or unified. Intertribal war tends to increase, if it does not call into existence, the power of the chief; from the human leadership on the war-path to the predominance of one individual among the omen birds is not a long step; and we actually find evidence that it was taken by the Ibans, while the Kayans have gone far in the same direction. Evidence of similar tendencies can readily be produced from many other areas; the Amerinds had, in the very early days of the Jesuit missions, already attained the conception of an 'Elder Brother' of each species, marvellously great and powerful (*Rel. des Jés.* 1634, p. 13). In California the Acagchemens worshipped the *panes* bird; each village sacrificed a different bird, and the sacrifice was annual; but the view which the worshippers took was that only one bird was sacrificed, each year the same, and the same in each village. In Samoa the process had not gone quite so far; the gods of the villages were incarnate in animals; each god was incarnate in all the animals of the species; consequently although respect was shown to the individual dead animal, the life of the god was in no way affected by its decease; he continued to survive in the remainder of the species (Turner, *Polynesia*, p. 242). Other examples will be found in Tylor (*Prim. Cult.*[3] ii. 243 ff.).

(2) The process of unification, as in the case of the Acagchemens, where mystical ideas have also played their part, may be hastened by *a custom of sacrificing the sacred animal annually.* The doctrines of reincarnation and identity of the sacrificial animal would undoubtedly be highly important for the history of this case of evolution, if it were not probable that they were later developments, if not actually due to the influence of European ideas. For an example of a stage in cult where the importance of sacrifice pure and simple is manifest we may turn to the Woguls. Once in each year they go in crowds into the woods and kill one of each species of animals, preferring the horse and the tiger as best; they flay off their skins, hang up the carcases on a tree, and in their way pray to them, falling prostrate on the earth; after which they eat the flesh together (Ides, *Three Years' Travels*, p. 7). In this example we are not, it is true, told what is done with the skins. But another traveller tells us (Strauss, *Reise*, pp. 93, 119) that the Crim Tatars and others hang the skin of the sacrificial animal on a pole and worship it. We find that the Egyptians clothed the image of Ammon in the

fleece of the ram which was sacrificed to him once a year. Intermediate stages are given by the Californian custom of preserving the *panes* skin and using it as the *tobet*, or cloak, of Chinigchinnich; and by the Floridian sacrifice of the goat (see below), whose skin was preserved for a year, until its place was taken by that of the next victim.

(3) In the folk-lore of modern Europe the corn-spirit is conceived to bear sometimes human, sometimes animal form; but in neither case has anything like unification made its way into the minds of the peasants who are the repositories of these primitive ideas. In Greece and Rome, on the other hand, we find the corn-spirit, as recorded in literature, no longer an undifferentiated, multiple divinity, who resides equally in every field and on every farm. A process of synthesis has unified the anonymous rustic animal and human gods, though in Greece we can still trace their features in survivals. How far this unification corresponded to anything in the nature of anthropomorphization and unification in the minds of the peasants whose gods they originally were, we do not know; but it may be suspected that the process did not go far. It may, of course, be true that the corn-spirit in modern Europe is but a degenerate descendant of Wodan, Ceridwen, Demeter, or whatever the name of the corn-deity was; but this explanation leaves us without a hint of how the former god came to be conceived as an animal. However this may be, it seems clear that the passage from multiplicity to unity may have come about by a process which implies a certain amount of philosophizing. Just as in Egypt there was a tendency to identify all the gods with Ra, so in Greece, in a minor degree, went on the process of identifying the local corn-gods with more central and systematized cults. The natural tendency was for the cult of a deity to spread beyond its original area and to swallow up less important or nameless objects of worship, and this went on in the case of animal no less than of other cults. At the same time, we must not overestimate the importance of the movement, which may have penetrated but slightly the lower strata of the population. It may be noted in passing that it is possible to have two distinct kinds of syncretism: (*a*) where one deity swallows up his fellows, all being of the same species, which probably occurred in the case of Demeter, complicated, however, by the fact that the horse as well as the pig was associated with her, thus leading to a double movement of synthesis—the unification of many local homogeneous corn-spirits, plus the unification of the different species of animals, the heterogeneous corn-spirits — from which we get Demeter as she is presented to us by classical authors; and (*β*) where there is no underlying unity of function. If the cult of Apollo Smintheus developed from an older cult of the mouse, we can indeed explain why the mouse-god should also be the sun-god, by saying that the mice devastate the fields under cover of darkness, and that the sun-god is the natural protector of the farmer against the plague of mice. But though we can explain syncretic movements on semi-rational lines in this case, it by no means follows that we have given the real explanation; and it would be far from easy to hit upon similarly obvious explanations of other syncretic processes.

(4) Side by side with the immolation of the victim, and sometimes supplementing the annual sacrifice as a cause of the sanctity of a special animal, may be placed *the custom of selecting an animal for special honour*. We find two types of this practice. The first, among pastoral peoples, consists in consecrating an animal which is thenceforth inviolate. Perhaps we may see in a custom of this sort the source of the Egyptian cult of the bull, which later came to be regarded as a 'god-body,' and was recognized by special marks. In the second type, the animal, so far from remaining inviolate, is sacrificed at the end of the year or after a certain period of time; but, unlike the cases referred to in a previous section, its sanctity terminates with its death, and its place is taken by another living animal. This form of worship may perhaps be due in the first instance to the commonly felt wish to apologize and do honour to the animal about to be slain, in order that its comrades, honoured in its person, may show no disinclination to fall victims to the hunter's dart.

(*b*) *Genetic Classification.* — In dealing with animal cults from *the genetic point of view*, it must not be forgotten that, while changes in ritual are at most but gradual, the explanations which are given of the acts are liable to change in a much greater degree. Foreign influences apart, development in creeds is often a slow process; but it may be taken as axiomatic, at any rate for the lower stages of culture, that belief changes far more rapidly than ritual. If, therefore, we find that at the present day a species of animals is held in reverence, it by no means follows that the explanation is the one which would have been given in pre-European days; yet even this more primitive interpretation may not throw any light on the real origin of the cult. The ætiological myth is particularly characteristic of savages, and the ætiological myth is not history but guesswork. To take a concrete example, the Barotse explain the fact that they have the baboon as their totem by a myth which involves the supposition, if it is to be regarded as real history, that they developed totemism after their passage from savagery to barbarism, marked by their acquisition of cultivated plants (*Folklore*, xv. 110). Not only is this highly improbable in itself, but the myth throws no light on the genesis of totemism in other parts of the world or among other South African kins, if indeed it be totemism with which we are confronted among the southern Bantus. Again, the southern Bantus as a whole explain their respect for the totem (?) animal, or *siboko*, by the story that the souls of their ancestors go to reside after death in the species which they respect. It does not follow that this is an original trait of their creed. True totemism seems to exist among other Bantu tribes, uncontaminated by any eschatological theories. It is by no means impossible that with the southern Bantus true totemism existed in the first instance; with the development of ancestor-worship, possibly a result of the change from female to male descent, there would be a tendency to bring other cults into relation with the predominant form of worship. The belief, but rarely found in other parts of the world, of transmigration into the totem animal may have taken the place of the belief in transmigration pure and simple, which is found in Australia without any connexion with totemism (*Man*, 1905, No. 28).

Again, the cults of pastoral tribes are commonly explained on the ground that they do honour to the species on which they depend for their subsistence. That may be so at the present day; but there is no proof that the cult of the animal in question does not date back to the days before it was domesticated or when it was only in process of domestication, which obviously must have been for reasons unconnected with its future usefulness. If, as is not impossible, the cult of the animal led to its domestication, the modern explanation is obviously late, and we can only guess at the causes which made the animal an object of worship in the first place.

Animal cults may be conveniently classified under ten specific heads, with another class for non-

descript forms of unknown origin or meaning: (1) pastoral cults; (2) hunting cults; (3) cults of dangerous or noxious animals; (4) cults of animals conceived as human souls or their embodiment; (5) totemistic cults; (6) cults of secret societies, individual cults of tutelary animals; (7) tree and vegetation cults; (8) cults of ominous animals; (9) cults, probably derivative, of animals associated with certain deities; (10) cults of animals used in magic. Broadly speaking, it may be said that in the cases of (1), (2), and perhaps (7), the motive is mainly the material benefits which the animal confers on its worshippers; (3) and to some extent (5) and (10) are connected with fear of the consequences of refusing respect; (6) and (8) are connected with the assistance derived from the animal; and (9) with the fear of the wrath of a god; while (4) seems to be compounded of fear of the wrath of ancestors and desire for their help.

(1) The characteristics of the *pastoral* type are that a domestic animal, (*a*) is spared as a species, or (*b*) receives special honour in the person of an individual animal. (*a*) As an example of the first sub-type may be taken the Hindu respect for cattle, and, as a modified form, the attitude of the South African Bantus towards their herds. The latter are losing their respect for cattle; but whereas in pre-European days the sacrifice of cattle was permitted to the Hindu, at the present day he is absolutely forbidden to kill an animal of the species, though the prohibition is certainly of late development. (*b*) As an example of the second sub-type may be taken the Toda cult of the buffalo (see below), the Madi cult of the sheep (see below), and perhaps the West Asiatic cult of the camel (unless we should regard the rite described by Nilus in *PL* lxxi. as astral in its nature), since they fairly represent the class of pastoral cults in which honour is done to the species by sacrificing one of its members with special ceremony. In another class of pastoral cult the honour is done to the species by selecting one animal as its representative and letting it go free. As an example of this type may be taken the Kalmuk custom of setting free a ram lamb. But it may be noted that even here it is the practice to sacrifice the sacred animal eventually. This is only, however, when it is growing old, and Frazer explains it, like many other customs of a similar kind, as due to a wish that the god or divine animal may not grow old and thus lose, with the decay of his powers, the strength needed for the fulfilment of his functions.

(2) In *hunting* cults, on the other hand, the species which receives honour is habitually killed, and, in order to atone for the loss of individual members, (*a*) the species is considered to be represented by a single individual, which is itself finally killed, but not until it has, like the bear (see below) among the Ainus, received divine honours, and (*b*) each individual of the species at its death by the hand of the hunter is propitiated and receives offerings, or whatever treatment is conceived to be proper to make its feelings predominantly those of satisfaction, in order that its surviving fellows may show no unwillingness to present themselves in their turn. As examples of this sub-type may be taken the buffalo, and the bear (see below) among some peoples (cf. *Golden Bough*², ii. 404 ff.), and, in fact, most animals on which hunting or fishing tribes largely depend. In some cases the propitiation does not go farther than forbidding misuse of the bones of the dead animals, such as giving them to dogs, breaking them, etc., which may be a purely practical measure based on savage ideas of reproduction, rather than cult properly so called.

(3) The cult of *dangerous* animals is generally characterized by tabus before, during, and after the hunt, and by ceremonies intended to propitiate the slain animal. They are mainly practised in Africa and South Asia; as examples may be taken the cult of the leopard, lion, and tiger (see below). The dangers to be avoided are twofold: in the first place, the soul of the slain beast may take vengeance on the hunter, who therefore submits to the same tabus as are imposed on him during a season of mourning, with the idea of either deceiving or keeping at a distance the malevolent ghost; in the second place, as in the previous sections, the remainder of the species has to be kept in good humour or prevented from learning of the death of their comrade. To this end, in Sumatra, a magician is employed when a crocodile is to be hunted, and elaborate explanations are frequently given that the animal is to be or has been killed because it attacked a human being and thus broke the truce normally subsisting between man and the species. In Japan, a man who kills a snake should crush its head, or more will come; this seems to be intended as a means of preventing it from calling its fellows to avenge its death. Again, after hunting the leopard, it is the custom for the hunter to imitate the voice or the habits of the leopard; if this is not intended to deceive the spirit of the slain animal, it may be intended as a propitiatory act to appease the remainder of the species. Vermin are propitiated in various ways, and many of the practices are applied to mice (see below). In the Baltic island of Oesel an offering is made to a weevil, and they think less damage will then be done to the corn. In the island of Nias in the Dutch East Indies the ant is very destructive; at harvest time it is propitiated by being called Sibaia—the name of a good spirit which is supposed to protect the crop from harm. With the position of this spirit may be compared that of Apollo Smintheus (see 'Mouse' below), Dionysus Bassareus (see 'Fox' below), Baalzebub, and other deities whose names are associated with vermin. It is open to question how far we are justified in assuming that any cult of vermin is implied which has subsequently developed into the cult of a god or been united with it by a process of syncretism. In Central India the Waralis worship a stone which they call the lord of tigers (see below; see also 'Horse'), but there is no reason to suppose that they believe the stone to have been a tiger or to contain the spirit of a tiger; nor is any cult of the living tiger recorded among them. It does not necessarily follow that Apollo Smintheus must have been a mouse, or that a mouse cult must have been amalgamated with an independent cult unconnected with mice.

(4) We come to an entirely different set of ideas, in the respect shown to animals because they are regarded as the *abode of the souls of the dead*, or sometimes as *the actual souls of the dead, and even of the living* (*Rev. de l'H. des Rel.* xxxvii. 385; *Golden Bough*², iii. 409 f., 430 ff.; van Gennep, *Tabou, pass.*; *Folklore*, xi. 235; von den Steinen, *Unter den Naturvölkern*, pp. 512, 353, etc.) Some of the Celebes tribes perform a periodical ceremony in honour of the crocodiles, on the ground that their departed relatives take that form; they take provisions and musical instruments in a boat and row up and down, playing on the instruments, till a crocodile appears; they offer food to it and hope thereby to recommend themselves to their kindred (Hawkesworth, iii. 759). More especially among the Bantu tribes of South Africa and the Malagasy is the belief found that the dead pass into certain animals, which among the Bechuanas differ for each clan. What is sometimes regarded as totemism, is at the present day a system of ancestor-worship (*Man*, 1901, No. 111). With the South African facts should be compared the Madagascar beliefs (v. Gennep, *Tabou, pass.*). In the Solomon

Islands it appears to be the custom for a dying man to inform his family into what species of animal he proposes to migrate (*JAI* xxviii. 147). The abode thus taken up in an animal is commonly regarded as permanent, the soul of the dead man passing into another of the same species, if his particular animal is killed (*Man*, 1904, No. 118), but occasionally the soul is believed to pass on after a time to its final abode (*Folklore*, xii. 342). The belief is occasionally found in Africa that a chief has put his soul for safe keeping into an animal, which is therefore respected (*Golden Bough*², iii. 407; *JAI* xx. 13; see below, 'Goat,' 'Cattle').

If we are entitled to assume that the *sibok*oism of the South African Bantus is totemism, or has replaced an earlier stage of pure totemism, the soul-animal occupies a specially important place in the history of savage religion. In any case, the worship or respect for the soul-animal has probably been the starting-point of other cults; thus the Zulu and Masai respect for the serpent may represent the beginnings of serpent-worship. The association of the dog with the Lar at Rome probably points to a time when the dog was regarded as a form of the soul; at the same time it should not be forgotten that the Lar was also a household god, and that the dog might with special appropriateness be associated with it; the dog was likewise associated with Hecate, also apparently a family goddess.

(5) One of the most widely distributed animal cults is that known as *totemism*; it is, however, rather negative, consisting in abstinence from injuring the totem animal, than positive, showing itself in acts of worship. There are, however, exceptions; the Wollunqua totem is a single mythical animal; the Warramunga ceremonies with regard to it are at the present day devoted entirely to placating it, an attitude which can hardly be distinguished from the propitiation of a god. Among certain Central Australian tribes the totem animal is required to be eaten on certain occasions, although this is to be regarded as an aberrant form of totemism (Lang, *JAI* xxxv. 315–336). In America, too, we hear of sacrifices to the totem (Loskiel, *History*, i. 40; Maclean, *Twenty-five Years*, p. 186), unless, indeed, totem is here used in the sense of individual totem, offerings to which are frequent (Frazer, *Totemism*, p. 54). Under this head may be noticed the cult of certain animals in Australia, which are associated with all the males or all the females of a given tribe. They are frequently termed 'sex totems,' but 'animal brothers' would be a more intelligible term. Their real meaning may be said to be unknown. How far totemism tends to evolve into other forms of cult is a disputed question, but it seems probable that the totem of the chief, where the office is hereditary, will come to be respected by the whole tribe (*Miss. Cath.* 1888, 262; cf. *Tour du Monde*, 1895, p. 100). The segregation of totem kins leads to certain districts holding certain animals sacred, and may open the way to higher cults.

(6) In the case of the totem kin, the association of a human being with a species of animals is hereditary, and no choice in the matter is permitted to him. Of a more voluntary nature are *secret societies*. Even here inheritance has much to do with the acquisition of membership in a society, especially in N.W. America. At the same time, initiation seems to play a considerable rôle in the case of the secret society; in the absence of initiation ceremonies a man remains outside the society, but this can hardly be the case with a totem kin, for women, too, belong to it, though their initiation ceremonies, if performed at all, do not seem, any more than those of the males, and probably much less, to bear any relation to the totem. The fundamental idea of many secret societies is the acquisition of a tutelary animal. In the same way the individual gains an animal genius by his initiation fast. Closely connected with these 'naguals,' as they may conveniently be termed, are the familiars of witches and the wer-wolves, or other animal forms of wer-men.

(7) More especially in Greek and Roman mythology we find a number of woodland deities, which are very clearly *spirits of the woods in animal or partly animal form*. Bearing in mind the possibility of syncretism, it may be recognized that even if Dionysus and other deities commonly associated with vegetation cults are sometimes conceived in animal form, this is no proof that they were so conceived *qua* vegetation spirits; but this objection applies in a much less degree to Pan, the Satyrs, and Silenuses, while in the case of the Fauns there is a general agreement that they are spirits of the woods (Mannhardt, *Ant. Wald- u. Feldkulte*, p. 113). We have a parallel to them in modern European folklore; Lêshi, the wood-spirit, is believed in Russia to appear partly in human shape, but with the horns, ears, and legs of a goat (Mannhardt, *Baumkultus*, p. 138).

The frequent conception of the corn-spirit as an animal, and particularly as a pig, makes it highly probable that Frazer is correct in arguing that Proserpine, Attis, and Adonis were originally conceived as pigs, or, at any rate, that their cult developed from that of a corn-spirit in pig form. In European folklore there is little that can be termed worship or cult in the attitude towards the animal under whose form the corn-spirit is believed to appear; few or no ceremonies are performed, save those whose object is to placate the spirit injured by the reaping of the crop and to ensure the proper growth of the new crops when they are sown in the spring. More definite acts of worship are recorded of the Pawnees on the Upper Missouri (see 'Bison' below), and of some of the tribes in Florida.

(8) *Omens* are drawn from the cries and actions of birds, mammals, etc., all the world over; but developments like the cult of the hawk (see below) in Sarawak are probably rare. If we may assume that the present-day conditions in the tribes referred to represent three stages in the evolution of a god, there is no doubt that from an omen-giving bird has been evolved a specialized anthropomorphic deity, especially associated with warlike operations.

(9) The question of *the association of certain animals with certain deities* is a very difficult one. On the one hand, it is certainly impossible to prove that all such animals were sacred before they became connected with the god; and equally impossible to show that the god has actually been crystallized out of one or more sacred animals. On the other hand, we cannot point to any clear case of respect for an animal paid to it wholly and solely because it is associated with a certain deity. If the jackal was respected in Egypt because it was associated with Anubis, it may be argued, on the one hand, that this association was due to the fact that the jackal was formerly regarded as a soul-animal; on the other hand, we may with apparently equal justice argue that the jackal was frequently seen about the tombs, and that this led to its being associated with the god of tombs. The question seems to be in most cases insoluble.

(10) It can hardly be said that there is any cult proper of animals used in *magic*. Among the southern Bantus, however, the crocodile (see below) is sacrosanct. The explanation of this is not far to seek: the crocodile is used for evil by magicians; to kill a crocodile, therefore, would be to incur the suspicion of being a magician and possibly the penalty of death. It is therefore easy to see how the association of an animal with evil magic can lead to its being respected (for the view that magical animals become gods, see Preuss's articles in *Globus*, vol. lxxxvii. *passim*).

(11) In a comparatively large number of cases we are unable to trace the origin of a cult of

animals. First and foremost the facts of serpent-worship—the most widely spread of animal cults—are far from having been explained. The serpent is, in many cases, associated with a cult of ancestors; this is readily comprehensible where the species is a harmless one; the very fact of its harmlessness would mark it out as different from its fellows; so, too, where the snake inhabits the house or its immediate neighbourhood, we have an adequate cause for its association with the worship of the dead; among the Zulus, for example, not every snake is an *idhlozi*, but only those which are found in the neighbourhood of the kraal. Some part of serpent-worship may be put down to their association with water; one of the commonest forms of water-monster is the serpent. The water-snake is specially honoured among the Xosa-Kafirs, in order that cases of drowning may not be frequent (Merensky, *Erinnerungen*, p. 38). But these facts are far from sufficient to explain the wide distribution of serpent-worship. On the other hand, its cult is much more than the cult of a dangerous animal, as is readily seen by comparing serpent-worship with the cult of the wolf or the crocodile, and it seems doubtful if the mysterious nature of the serpent, which is sometimes invoked as an explanation, is sufficiently important to account for the preference given to the reptile. Probably a multiple origin may be assigned to it.

The relations of animals and gods in Australian religion are by no means clear. Baiame seems in some eastern tribes to occupy the same position which the bell-bird holds in the mythology of the central tribes; his opponent, Mudgegong, is conceived under the form of an eagle-hawk, thus reproducing the familiar mythical conflict which in other parts of Australia is narrated of the eagle-hawk and the crow. Farther south the eagle-hawk, under the name of Mullion, again figures as an evil spirit. The name of the god of some Victorian tribes is Pundjel, and the same name is applied to the eagle-hawk; possibly, however, both receive it simply as a title of respect. However that may be, it seems clear that a certain amount of anthropomorphization has gone on in Australia. What is not clear is the position of the animals from which the anthropomorphic gods or evil spirits seem to have been evolved. Both eagle-hawk and crow are phratry names; but, while the crow (see below) is respected, possibly as a soul-animal, there are few traces of a similar respect for the eagle-hawk. Yet we cannot find that the crow has been anthropomorphized into a deity, and the deities and demons are connected with animals in areas where the phratry names, at least at the present day, have nothing to do with these animals. On the other hand, the eagle-hawk is a common form of the wizard (Spencer and Gillen, *Native Tribes of Central Australia*, p. 533).

Howitt has maintained that Koin and other spirits which the European observers have regarded as demons are really gods. If this be so, if the god of the Australian is no more than a magnified medicine-man, we have a sufficient explanation of the position of the eagle-hawk. Even if Howitt's theory is not generally applicable, the fact that the medicine-man of one tribe may be erected into a god by them, and into a demon by their neighbours who suffer from his machinations, gives a not improbable explanation of the facts. It does not, of course, follow that any one medicine-man has been deified; just as the Ihaus have deified a generalized hawk (see below), the Australians may have apotheosized a generalized eagle-hawk-medicine-man.

In view of the position of the eagle-hawk as head of one of the phratries, it is of some importance that on the north-west coast of America we find among the Thlinkets two deities, Yehl and Khanukh, whose names mean 'raven' and 'wolf'; at the same time they are divided into two phratries, which are also named after the raven and the wolf. It is true that Tylor has denied (*JAI* xxviii. 144) that Khanukh ever appears in wolf form; Yehl, on the other hand, assumes the bird form in many of his adventures. This does not, however, seem fatal to the view that the presiding animals of the phratries have somehow been developed into deities or demi-gods, for Yehl is little more than a culture hero; at the same time this theory leaves unexplained the spread of the two cults into the opposite phratry. For neither in America nor in Australia is there any trace of uni-phratriac deities, as there should be on the supposition that the presiding animal has become a god. It should not be forgotten that in some of the central tribes of Australia there are traces of species deities (*R.G.S.Aust.*, *S. Aust. Br.* ii. 80). It is true that animal form is not expressly attributed to them; on the other hand, emu feet are attributed to the chief god of the southern Aruntas (MS note). It may therefore be that the deification of the eagle-hawk is due neither to its importance in magic nor to its position as a phratry animal, though these facts may have had influence in bringing about its preferred position.

Even were it established that phratry animals have been promoted to godship, it by no means follows that this is equivalent to the erection of a totem into a god. That phratry animals have ever been totems is a pure hypothesis, and no consistent account has yet been given of the process by which they became more than totems.

Another animal god of unexplained origin, whose importance marks him out for notice, is the Great Hare of the Algonquins (Strachey, *Historie of Travaile*, p. 98; Lang, *Myth*[2], ii. 79; Brinton, *Myths*[3], p. 193), who, in his human form of Michabou or Manibosho, was the culture-hero of this important family of Amerinds. Brinton, emphasizing the connexion of the Great Hare with the East, has, on etymological grounds, explained it as the dawn. Meteorological explanations have ceased to be convincing; moreover, according to one form of the myth, the rabbit (which is Brinton's translation of the latter half of *Michabou=Manibosho*) was not in the east but in the north (Brinton, p. 196). To speak of the cult of the Great Hare as animal-worship is, according to Brinton, to make it senseless, meaningless brute-worship; but this is to view it from the point of view of Europe in A.D. 1900 rather than in the light of other primitive cults. It may safely be said that no attempt to explain away animal-cults on these lines can be successful in more than very small measure. Brinton's preference for a dawn myth cannot therefore carry the day against the natural meaning of the Algonquin legends. Moreover, no adequate account has ever been given of the process by which men came, on the score of a simple etymological misunderstanding, to turn a god in human shape into an animal.

Less important is the Bushman god Ikaggen or Cagn (see 'Mantis' below), who, according to the latest account, was believed to manifest himself in the form of the mantis (*ikaggen*), or the caterpillar (*ngo*). From this duplex form we may perhaps assume that he had made some progress in the direction of anthropomorphization. The problem of how one god comes to manifest himself in several animals is a complicated one, when it is a phenomenon of the religion of savage or barbarous peoples, among whom the syncretic processes, the working of which in Greece or Egypt is fairly obvious, cannot be assumed to have played a large part, if indeed they played any at all. We see the same phenomenon in Samoa, where one village-god was believed to be incarnate in two or three kinds of animals. In the latter case it is perhaps to local causes, such as the aggregation of villages under one chief, or the coming together of more than one clan in a single village, that we must look for the explanation. But such an explanation can hardly be applied to the god of the Bushmen, who are on the very lowest nomadic plane of culture. The question is complicated by problems of Bushman origin and history; for if they were once a more settled folk, who suffered dispersal and disorganization when the Bantu stream overflowed South Africa, it may well be due to their disintegration that the hypothesis of syncretism, as an explanation of the cult of Cagn, seems inappropriate. Perhaps material for the solution of the problem may be found in the still unpublished mass of

material relating to the Bushmen collected by Dr. Bleek and Miss Lloyd.

Prominent among animal gods is the Hindu monkey-deity, Hanuman, who figures largely in the Rāmāyana. It has been argued that his cult is not primitive, but has been borrowed from some wild tribe; and this conclusion is based on the fact that there are no traces of worship of the monkey in the Veda, save so far as Vrishākapi (Rigveda, x. 86) may be regarded as the object of such (cf. the conflicting views of Bergaigne, *Religion védique*, ii. 270–272; Oldenberg, *Religion des Veda*, 172–174; Geldner, *Vedische Studien*, ii. 22–42; and Hillebrandt, *Vedische Mythologie*, iii. 278). But this line of proof overlooks the fact that the Veda is concerned with official religion, and that Hanuman may have been worshipped unofficially without any record of the fact being available. At the same time it is by no means improbable that the cult is to some extent based on an aboriginal predecessor, for we can hardly suppose that the Aryan-speaking invaders brought it with them from regions where the monkey is less prominent, if not non-existent. Hanuman is distinctly a species god; but we cannot discover the origin of the cult. The resemblance of the monkey to man, which has been suggested as the origin, has not produced the same effect elsewhere, and seems inadequate to account for a cult, however satisfactory it may be as an explanation of a rich monkey mythology.

6. *DELUGE, EARTH-FINDING.*—In legends of a deluge, animals figure in two capacities. In the first place, they are simple messengers, like the raven in the Book of Genesis; the crow, hare, dog, pigeon, and other animals go out to see if the waters are abated or how large the new earth is, sometimes causing it to increase magically in size by making the circuit of it. In other cases the waters show no signs of abating, and the water birds or animals are made to dive, and bring up mud, sand, or earth; from this the new earth is formed and laid on the waters; it grows to the size of the present world. This form of the *terre pêchée* is especially common in America, where it also occurs as a cosmogonic myth. Among the Mordvins and in the Altai the incident figures in a Creation myth. Among the Yorubas a hen plays a somewhat similar part in producing the earth from beneath the waters. See DELUGE.

7. *DIVINATION.*—For the purpose of divination, the entrails, the liver, and frequently the shoulder-blade of dead animals are used. Animals also serve to give indications which are more properly classifiable under 'divination' than under 'omens.' Ashes were strewn on the floor in Peru, and from the character of the tracks found on them was inferred the kind of animal into which the soul of a dead person had passed. In Mexico snuff was spilt on the altar, and inferences were drawn from the footprints of eagles, etc. (Tschudi, *Reisen*, p. 337; Bancroft, iii. 438). In Australia the ground near a corpse is carefully smoothed; if a track is found on it, they infer from it the totem of the person who caused the death of the man. In other cases a watch is kept, and the movements of an insect or its flight decide the direction in which the malevolent magician resides. Another method of using animals in divination is to make dice or other instruments of their bones; knuckle bones are especially used for this purpose.

8. *DOMESTICATION.*—The problem of the history of the domestication of animals has seldom been attacked, and up to the present no satisfactory solution has been propounded; we are in complete uncertainty as to why or how man in the first instance came to tame animals, bring them up in captivity, and induce them to perpetuate their species. In the Pacific the frigate bird is often tamed. The Indians of South America frequently keep tame animals in their huts. But in neither of these cases can we properly speak of domestication. In the New World the domestic animals known before the advent of Europeans were few; the dog is, of course, nearly universal, but with this exception domestic animals were found only in Mexico and Peru, and then only the turkey, llama, alpaca, and perhaps one or two more, of which the llama and alpaca alone were economically important. In the Old World the main centre of domestication seems to have been Asiatic; but little, however, is known as to the localities in which the domesticated species first came under the dominion of man.

Probably the dog (see below) attached itself to man, but in other cases a process of domestication seems to be a necessary assumption. Totemism by itself seems inadequate, even when we make allowance for the additional leverage of the segregation of totem kins. Probably some form of cult (see 'Cattle' below) was in many cases the determining factor.

9. *EARTH-CARRIER.*—The problem of the stability of the earth has been solved, more especially by the people of Southern Asia and the Asiatic Islands, thanks in some degree to Hindu and Muhammadan influence, by the hypothesis that some great animal supports the world; the myth is also found in other areas, but only sporadically.

Among the Iroquois the world-turtle who received Aataentsic on his back, before the world was brought into existence, is clearly a mythical animal of this description; the Winnebagoes too, according to Knortz, made the earth rest on four animals and four snakes, which were in the end unequal to their task; but since a bison has joined his forces with theirs, the safety of the earth is assured. In India we find various myths; one account gives the snake, another the elephant, as the world-bearing beast (Ward, *View*, i. 3; Pinkerton, vii. 369); another view is that eight elephants bear the world on their backs (Monier-Williams, *Indian Wisdom*[3], p. 430), and the Lushai (Soppitt, *Short Account*, p. 26) and Daphlas (Bastian, *Völker am Brahm.* p. 16) make the world rest on the same animal. Another Hindu myth makes both turtle and serpent (dragon) rest upon an elephant (*Calc. Rev.* xi. 407), while a later myth gives the boar as the supporter. In Ceylon the world-carrying giant rests on a serpent, which rests on a turtle; the turtle rests on a frog, and beneath the frog is air (*Miss. Herald*, xviii. 365). The Indian boar recurs in Celebes (*Journ. Ind. Arch.* ii. 837; *Med. Ned. Zend.* vii. 114). Another account gives the buffalo (*ib.* x. 285), which recurs in the Moluccas (De Clercq, in *Bijdr.* 1890, p. 132). In Arabia and Egypt are found the cow and bull (Andree, *Ethnog. Par.* p. 102; Lane, *1001 Nights*, i. 21), which are also said to rest on a rock, and that on a fish. Probably as a result of Muhammadan influence, the bull or ox is found in Bulgaria (Strausz, *Bulg.* p. 36); Sumatra (Hasselt, *Volksbes.* p. 71), where it rests on an egg, this on a fish, which is in the sea; and in Java (Caolsma, *Voorlez.* p. 73). The turtle in a Kalmuk myth seems to play the part of the world-carrier (Bastian, *Geog. Bilder*, p. 357); the snake in Nias (*Tijdschr. T. L. V.* xxvi. 113), Sumatra (*Allg. Missz.* xii. 404, etc.), and Java (*Tijdschr. Ned. Ind.* 1893, i. 10); the fish in Sumatra (see above), among the Ainus (Batchelor, p. 278), and in Europe in the Middle Ages (Mone, *Anzeiger*, viii. 614). The frog recurs among the Mongol Lamas (Tylor, *Prim. Cult.* i. 365). Among the Slavs four whales are said to support the world (*Berl. Lesekabinett*, 1844, 210), and among the Temnes of West Africa a trace of Muslim influence may be seen in the undescribed animal who bears all on his back (*Ausland*, 1850, 189). In many cases the movements of the earth-carrier are alleged to be the cause of earthquakes (see below).

10. *EARTHQUAKES.*—Most of the peoples enumerated in the preceding section account for earthquakes by the movements of the animal supporting the earth. In addition we find the snake in the Moluccas (Bastian, *Indonesien*, i. 81), interchangeably with the ox, in Bali (*Globus*, lxv. 98), Roti (Müller, *Reisen*, ii. 345), Flores (Jacobsen, *Reise*, p. 51), Mindanao (*ZE* xvii. 47), and among the Dayaks of Borneo (Perelaer, *Ethn. Bes.* p. 8). In Flores a dragon myth is also found (*loc. cit.*). The earthquake fish of Japan is placed sometimes under the earth, sometimes in the sea (*Natur*, 1878, 551; Brauns, *Jap. Märchen*, p. 154; Chamberlain, *Things Jap.* p. 120). In Sumatra the crab is found as a variant to the snake, Naga-padoka, whose horns are perhaps due to Muslim influence

(v. Brenner, *Besuch*, p. 524). In Flores (Jacobsen, *loc. cit.*), and Persia (Ritter, *Asien*, vi. 563), the dragon is the cause. In Kamtchatka the earthquake is said to be due to the dog of Touila, whose name is Kozei; the snow collects on his coat and he shakes himself to get it off (Krachenninikow, *Descr.* i. 94). The movements of the other animals are put down to a bee or mosquito stinging them.

11. *ECLIPSES.*—Animals figure in some of the primitive explanations of eclipses. Among the Potawattomies they are caused by the combat of the dog with the old woman who makes the basket (*Ann. Prop. Foi*, xii. 490). The dog plays the part of a protector, as does probably the bird in a Mongol myth (*Ausland*, 1873, 534), and possibly in the Lules myth (Lozano, *Desc. Corog.* p. 91). More commonly it is said that the moon is swallowed or attacked by an animal. In Burma the Karens say that wild goats are devouring the moon, and they make a noise to drive them away, or that frogs are eating it (*Miss. Cath.* 1877, 455). In Eastern Asia the dragon myth is common; it is found in China (Grimm, *Deut. Myth.* ii. 589), Siam (Bastian, *Reise*, p. 243), Sumatra (Marsden, *Hist.* p. 194), and Tidore (De Clercq, *op. cit.* p. 73). This form of the myth is not far removed from that which makes a giant or undescribed monster attack the moon or sun.

The dragon myth is found sporadically in Asia Minor (Naumann, *Vom Goldenen Horn*, p. 75), in Carinthia (*Zts. d. Myth*, iv. 411), and among the southern Slavs (v. Wlislocki, *Volksgl.* p. 54); among the latter a bird myth is also found (*ib.*). In Sumatra (*Globus*, lxv. 96), and Celebes (*Med. Ned. Zend.* xi. 248; *Zts. Ges. Erdk. Berlin*, xxxi. 370), it is the snake that produces an eclipse, among the Nagas the tiger (Bastian, *Völker am Brahm.* p. 30), among the Chiquitos the dog (Tylor, *Prim. Cult.* i. 328), who tears the flesh of the moon and reddens her light with the blood which flows. Among the Tupis the jaguar was the animal which was believed to attack the sun (*ib.* p. 329), and the Peruvians held it to be some monstrous beast (*ib.*). The jaguar recurs among the Manaos (Martius, *Beitr.* i. 585), and the Guaranis (Ruiz de Montoya, *Conquista*, p. 12 ff.). The Taghanuas tell a myth of a huge crab (Worcester, *Philippine Isl.* p. 497). The old Norse (Grimm, i. 202; ii. 588, iii. 207) held that a wolf attacked the sun or moon; and the same idea is found in France (*ib.* ii. 404). In many cases the dogs are beaten or incited to attack the monster which is assailing the heavenly body.

12. *FABLES.*—Animals figure largely in the folk-tales, no less than in the myths or sagas of primitive peoples (see Bleek, *Reynard the Fox*; Dennett, *Folklore of the Fjort*; MacCulloch, *op. cit.* etc.). In these they think and act and move like human beings, so much so that a lawsuit on the Congo turns on such questions as what the hare said to the elephant, instead of on legal procedure. At a later stage the beast story is complicated with a moral (Æsop's *Fables*). Beast stories are found in most collections of *Märchen*; for India, see especially the Pañchatantra.

13. *FAMILIAR.*—All the world over the witch or wizard is associated with an animal, termed 'the familiar,' which is sometimes conceived as real, sometimes as a spirit which stands at the beck and call of the human being. Just as the injury to the *nagual*, or bush-soul, has fatal results for its possessor, so the familiar's life is bound up with that of the witch; if a witch-animal is wounded, the owner will be found to have suffered an injury at the corresponding part of the body. Sometimes magical powers are attributed to whole classes, such as the Boudas, *i.e.* blacksmiths and workers in clay of Abyssinia, who are believed to have the power of turning into leopards or hyænas, instead of simply having the animals or their spirits at their command.

In the Malay Peninsula the alliance between the *pawang* (priest) and the tiger is said to be the result of a compact entered into long ago between the species and mankind; the office is hereditary, and the son must perform certain ceremonies to prevent the familiar from being for ever lost to the tribe. In Siberia the *ye-keela* (witch-animal) is said to be sent out by a shaman to do battle with the ye-keela of a hostile shaman, and the fate of the man depends on the fate of his ye-keela, which refuses the fight if it thinks it cannot beat its adversary.

In curative magic the wizard carries figures of his familiar and imitates them; sometimes his familiar is said to appear before he meets with success.

14. *FASCINATION.*—The power of fascination actually possessed by the serpent has been attributed to many other animals, among them the lion (Aelian, *de Nat. An.* xii. vii.; cf. Maspero, *Études*, ii. 415), μάντις (*Schol. ad Theoc.* x. xviii.), basilisk (see below), toucan (Smith, *Brazil*, p. 559), and, naturally, above all the serpent (*Mélusine*, iv. 570, v. 18, 41). The power of fascination is attributed to the wer-wolf in the East Indies (*Tijdschr.* xli. 548 f.). Something similar is believed of the ordinary wolf in Norway (Liebrecht, *Zur Volkskunde*, p. 335). See EVIL EYE.

15. *FOOD TABUS.*—The use of animals as food is prohibited for many different reasons. The totem kin usually abstains from eating the totem, the *nagual* is sacrosanct to the man with whom it is associated, and certain animals, like the cow in India, or in fact cattle generally among pastoral tribes, are never or only very seldom eaten. But whereas the totem is absolutely tabu, cattle, on the other hand, supply the pastoral peoples with a large part of their subsistence. Another class of animals which is commonly tabu, at any rate for those who claim kinship with them, are soul-animals (see below).

Sometimes special persons, by virtue of their position or occupation, are forbidden the use of certain meats. In Fernando Po the king may not eat deer and porcupine, which are the ordinary food of the people. Egyptian kings were restricted to a diet of veal and goose. Certain tabus are also imposed on mourners; in Patagonia the widow may not eat horse flesh, guanaco, or cassowary. Certain foods are tabu to men but not to women; among the South African Bantus men may not eat fish, fowl, or pig. Other foods are forbidden to women but not to men; on the island of Nias, in the Dutch East Indies, the former may not eat monkey flesh. Especially in Australia there is an extensive system of food tabus in connexion with initiation; as one gets older, these are abrogated one by one; emu flesh is usually reserved for old men. Similarly girls may not eat various meats at puberty; among the Dénés their sole non-vegetable diet is dogfish. Sometimes marriage removes some of the tabus. On the Murrumbidgee, ducks are the food of married people only.

In many cases only certain parts of an animal are tabu to certain persons: a Déné girl may not eat moose nose or reindeer head; among the Ottawas blood is tabu to the unmarried; the heart, liver, etc., are tabu to a Dakota after initiation till he has killed an enemy. The female animal is frequently tabu; in sickness the female animal only might be eaten by some of the New England peoples.

During pregnancy and after the birth of a child many kinds of food are prohibited to one or both parents; in New South Wales the woman does not eat eel or kangaroo; in Martinique both parents abstain from turtle and manatee. The reason generally given is that the nature of the food influences the offspring. Thus a turtle is deaf, and eating a turtle would make the child deaf too; a manatee has small eyes, and the child would have small eyes too if the parents did not abstain from it. Just as animals are eaten to gain their qualities, so their use as food is prohibited in order to avoid incurring them; this is the explanation often given for abstinence from the flesh of deer, the hare, and other timid animals.

Especially in West Africa food tabus are im-

posed upon members of a certain family by a priest, and the tabu is sometimes thenceforth hereditary. Among the Andamanese some food is prohibited to every individual, generally some kind which, in the opinion of the mother, disagrees with the child; but if it is not selected in this way, each person is free to determine what food is to be tabu for himself.

Other food tabus are connected rather with seasons than with anything else. It is not uncommon in south-east Europe to find a prejudice against eating lamb before a certain day.

In connexion with food tabus may be mentioned the prohibition against cooking certain kinds of animals together. In Kamtchatka different kinds of meat may not be stewed in the same pot; the Saponas of the Eastern States of America would not cook venison and turkey together, on the ground that they would have ill success in hunting if they did. See TABU.

16. *FUTURE LIFE:* (1) CERBERUS.—It is a common belief that the soul has to traverse a river on its journey into the other world. Sometimes the bridge over which it passes is said to be an animal; the Ojibwas said that a great serpent served as a bridge, and that he threatened to devour those who were in a trance (Keating, *Expedition*, ii. 154). In New Caledonia a serpent serves as a bridge from Morou to Tum, and allows to pass only such as find grace in his eyes, in other words, those who are tatued in due form (*Ann. Prop. Foi*, xxiii. 369). In other cases an animal guards the passage; in North Borneo the belief is that a fiery dog watches at the gate of Paradise and takes possession of all virgins (Forster and Sprengel, *Beiträge*, ii. 239). The idea of a dog at the end of the soul-bridge is also found among the Iroquois (Le Beau, *Aventures*, i. 359). Sometimes the river contains fish which devour the souls which fall in (*Globus*, xlvii. 108, among the Dayaks). In other cases the function of the animal is to turn back the souls of those who are to live; the Assiniboines held that a person in a trance went as far as the river, but was driven back by a red bull (Coues, *Henry and Thompson, MS. Journ.* ii. 521). The Senels of California also made a bull obstruct the path of the soul; but it was the bad who fell victims to him (*Cont. Am. Ethn.* iii. 169). In the Dayak mythology figures a bird, who lives aside from the direct road of the soul; if the soul turns aside, however, the bird sends it back (Ling Roth, *Natives of Sarawak*, i. 210). In the Solomon Islands the function of the bird is quite different; the natives of San Cristoval say that the soul becomes a ghost (*'ataro*) when it leaves the body, but that it fails to recognize that it is dead; a kingfisher strikes it on the head after two or three days, whereupon it becomes a real spirit (Codrington, *Melanesians*, p. 257).

The soul pursues in the other world the same occupations as it followed in this life. Consequently it is commonly represented as chasing the animals on which the living man depended for his sustenance on earth. The belief is especially common among the American Indians, whose 'happy hunting grounds' are proverbial (Matthews, *Hidatsa*, p. 49; *Rev. Hist. Rel.* xxx., xlii. 9f.).

Sagard, one of the early Jesuit missionaries in Canada, tells us: 'The Indians say that the souls of dogs and other animals follow the road of souls; . . . the souls of the dogs serve the souls of their masters in the other life; the souls of men go hunting with the souls of their tools and arms' (*Histoire du Canada*, pp. 497, 498).

To this idea of the functions of animals and the lot of the soul in the other world is due in great part the custom of burial sacrifice (for the horse see *Teutonia*, ii. 148–162). Sometimes the object of the sacrifice is only to bear witness to the importance of the deceased in this life and thus influence his future lot (Abinal and Vaissière, *Vingt ans à Madagascar*, p. 221).

17. *FUTURE LIFE:* (2) SOUL-ANIMALS.—Few beliefs are more common than that the souls of the dead pass into animals. In South Africa it is the prevailing belief, but it is found in Europe (*Folk-lore*, xi. 234), America (Tylor, ii. 6–8), and Asia (*ib.* p. 9f.; *Mission Life*, N.S. i. 459; *T'Oung Pao*, ii. 11, etc.). Especially in the form of the doctrine of transmigration, as a punishment for evil done in this life, the belief prevails not only in India (see, *e.g.*, Manu, ii. 201, xii. 55–69), but also in Oceania and New Guinea (*Golden Bough*[2], iii. 432–4) and Australia (*Man*, 1905, No. 28; for a collection of references, see *Rev. Hist. Rel.* xxxvii. 385; see also below, 'Bat,' 'Crocodile,' 'Lion,' 'Lizard,' 'Tiger,' etc.).

The causes which are supposed to lead to this re-incarnation are various. Among the Mokis it is the form of the totem animal that a man assumes at death (Frazer, *Tot.* p. 36). In South Africa the different clans believe that their members pass into the animals which they venerate (*Man*, 1901, No. 111). The Zulus believe that their dead pass into snakes, called *amadhlozi* (*Golden Bough*[2], iii. 411); according to another account, the chiefs inhabit one kind of snake, the common people another, while the old women are re-incarnated in lizards (Callaway, *Religious System*, p. 200). According to the Masai, the souls pass into different kinds of snakes, one of which receives the souls of each clan or family (Hollis, *Masai*, p. 307). In Madagascar the body is thrown into a sacred lake, and the eel that gets the first bite at the body is the abode of the soul (v. Gennep, *Tabou*, p. 291). In China the soul of the drowned man is held to make a rush for the nearest living being; consequently they take the first crab seen in the mud to be the receptacle of the soul (*Mission Life*, *loc. cit.*). The Barotse hold that they can choose into which animal they shall pass (Bertrand, *Au Pays*, p. 300). In the Solomon Islands a man tells his family which animal will be his re-incarnation (*Golden Bough*[2], ii. 433). In the Argentine Republic it is the animals which are seen about the grave that come in for respect as soul-animals (*Bol. Inst. Geog. Arg.* xv. 740). In Brazil a kind of hawk is believed to inoculate with the souls of the dead the animals on which it perches to extract maggots from their flesh (Spix and Martius, p. 1084). It is a common belief in Europe, that if a cat jumps over a corpse, it becomes a vampire; in other words, the soul of the deceased passes into the cat. The Macusis believe that souls which are unable to rest come back to earth and pass into the bodies of animals (Waterton, *Wanderings*, p. 177). In Paumotu it was also believed that the wicked found refuge in the bodies of birds, which the priests accounted holy (Arbousset, *Tahiti*, p. 289).

In many cases the lodgment of the soul in an animal is held to end the matter. If the animal is killed, the soul passes into another beast of the same species (*Man*, 1904, No. 118). In Madagascar, however, the death of the animal is held to set free the soul lodged in it (*Miss. Cath.* 1880, p. 551). The Chiriguanos, on the other hand, hold that the soul enjoys a few years of liberty and then passes into the body of a fox or a jaguar (*Globus*, xlviii. 37).

Some tribes can describe in more or less detail the process of transmigration. The Amandabele of South Africa believe that the souls of chiefs pass into lions, but that the process takes place underground; for which reason the corpse does not remain long unburied. The body is put into a large wooden trough and hidden away in a cavern; some time afterwards it is found to have become a

lion's whelp, which grows rapidly (Thomas, *Eleven Years*, p. 279). The Betsileos are more explicit. The *fanany* (soul-animal) is in the form of a lizard, which comes to the surface after burial; the family approach it and ask if it is really the relative they have lost; if it moves its head they make offerings to it. It then returns to the tomb and grows to a large size; it is the tutelary spirit of the family (v. Gennep, *Tabou*, p. 272). According to another account, the corpse is attached to the central pillar of the hut until decomposition sets in; whereupon a large worm develops, which becomes a boa at the end of several months (*ib.* p. 278).

In several of these accounts the soul seems to become an animal rather than to enter into an animal; this is notably the case with the Amandabele belief; the Betsileos seem to waver between two opinions, if we take account of all the data. In other cases the belief is more explicit. In the Solomon Islands the common people turn into white ants in Marapa, the island of the dead, and in this form serve as food for the spirits of the chiefs, the warriors, and the successful men, who, however, in the long run suffer the same fate as the common people (Codrington, *Melanesians*, p. 260). Sometimes the change is regarded as the result of evil-doing; the Chins believe that the bad go to dark caverns, in which are the entrails of all sorts of animals; they are hungry, and stretch out their hands to find food; but as soon as they touch the entrails they themselves are transformed into the shape of the animal whose entrails they have grasped (*Miss. Cath.* 1884, p. 468). On the other hand, among the Montagnais, of whom P. le Jeune writes, the transformation of the soul is the result of simple misfortune or carelessness; the souls go to the extremity of the earth, which is flat with a great precipice beyond, at the foot of which is water; they dance at the edge of the abyss and some fall over; these are forthwith turned into fish (*Rel. des Jés.* 1637, p. 53).

The soul-animal is usually respected, for which two reasons are assigned. The injuring of the animal is the injuring of a relative or of a friend, for it is believed that the animals into which the souls pass do not injure those with whom they were allied on earth as men. By eating the animal, men may even eat the soul of a relative, and perhaps inflict unmerited hardship on it in its non-human existence. On the other hand, the eating of the animal may be an insult rather than an injury; but it may provoke the wrath of the dead man or of his fellows, and thus recoil upon the living. As a rule, however, the objection to injuring a relative is the prevailing feeling; for we find that, though a man will not injure his own family animal, he will not hesitate to kill the family animal of another man (*Golden Bough*[2], ii. 433). In the same way a man does not injure his own totem, but will kill that of another.

18. *FUTURE LIFE:* (3) PSYCHOPOMP.—The duty of convoying souls to the other world is sometimes assigned to animals. The Araucanians believe that Tempuleague, an old woman, appears in the form of a whale and carries off the soul of the dead man (Molina, *Historia*, p. 70). On the Orinoco huge snakes are said to carry off the souls in their belly to a land where they entertain themselves by dancing and other delights (Rniz Blanco, *Conversion del Piritu*, p. 63). In Brazil the duty was assigned to the humming-bird (Alencar, *O Guarany*, ii. 321). Among the Saponas, the soul, after an old hag had condemned it, was delivered over to a huge turkey buzzard, which flew away with it to a dark and barren country where it was always winter (Byrd, *History of the Dividing Line*, p. 96 f.).

Sometimes the animal is not a mythical one. The object of some burial sacrifices is to provide the dead man with a conductor. In Mexico the dog (see below), according to one account, fulfilled this office. Among the Yorubas of West Africa the young men who attend a funeral kill a fowl and throw its feathers in the air as they walk, subsequently cooking and eating the flesh. This fowl they call Adie-Irana, 'the fowl which purchases the road'; its function is to precede the dead man on his road (*Miss. Cath.* 1884, p. 342).
